Q. What is your opinion about the method of licensing canneries?—A. Well, I think the more canneries and the more buyers the better price we will get. That is the reason the lobsters have kept at such a price, there is nobody else competing.

Q. Would the lobsters stand the drain if there were many more canneries and fishermen?—A. There could not be many more fishermen.

Q. They are not here to fish?—A. They are not here to fish. That is just the way it is.

Q. What do you think of the practice of issuing co-operative licenses to groups of fishermen?—A. I don't know much about that. It may be all right.

Q. What price did you get for lobsters when you first began to fish?—A. I think it was \$1.75.

Q. What has been the practice here in the past, have the fishermen expected the canners to take everything they brought ashore, undersized and berried lobsters and everything?—A. No, I don't think so. They would not take the spawn lobster.

Q. The canner would not take the spawn lobster?—A. No, sir, that has been the rule from the first, nor lobsters too small. Well, I don't know whether they will take lobsters too small. They will kick about it, sometimes they will take them and sometimes they won't.

Q. Has the practice been adopted among the fishermen here of brushing the eggs off the female lobster outside?—A. No, I don't think so.

Q. Do you think it would be possible to induce the fishermen by any means you know of to put the berried lobster back in the water?—A. That would be the best.

Q. Why do they not do it?—A. If everybody would do it that would be the best thing to do.

Q. How are we going to get everybody to do it?—A. That is where the trouble comes in. If everybody would do that it would be all right.

Q. I suppose one man says: 'If I throw the berried lobsters away some one else will catch them'?—A. That is just it. They won't fire her away, everybody does not do that.

Q. Has it always been the same with regard to undersized and berried lobsters or do you think the fishermen are getting more careful than they used to be?—A. I think they are getting more careful.

Q. Do you think they are beginning to understand that if they want the lobster fishery to last they must protect the berried lobster?—A. They are more particular.

Q. In taking berried lobsters out of the trap what was the smallest you saw with berries on?—A. I don't know, 7 inches, something like that.

Q. Do you think you have seen a berried lobster as small as 7 inches?—A. Yes, sometimes.

Q. What will be the average run of the spawn lobsters?—A. 9 inches, I suppose.

Q. They are generally good sized fish are they not?—A. Yes, 9 or 10 inches.

Q. You say the canner does object to receiving them at this factory?—A. He refuses to take them.

Q. Since how long has that been the case?—A. Well, that has mostly been the rule, but at the same time they are liable to pass one or two.

Q. What do you think would be the best way to get the fishermen to save the berried lobster; you are a fisherman and you know how they feel about it, what do you think would be the best way to protect her?—A. I would think let the lobster go when you catch her and let every man do the same thing.

9-10 EDWARD VII., A. 1910

Q. As to the matter of fish hatcheries, do you know anything at all about them?—

A. I think they are a very fine thing if they hatch them all right and if the beam trawl don't come along and smash them up.

Q. Has the beam trawl been used here?—A. All last fall.

Q. In St. George's bay?—A. Sure, right up to the buoy you passed last night. That is close enough up to the ground. Of course I could not swear to it myself but they often told me they saw that fellow from their vessels pass across small fish on the water, destroying all the fish, codfish.

Q. What is the bottom like in the bay?—A. Rock and mud. The best part of it is mud, I think.

Q. Did you ever see any of the fish the beam trawl took?—A. I did not happen to be where he landed his fish in Mulgrave, but I happened to know that what he does not catch are smashed up.

Q. The beam trawl has not been there this season?—A. I don't think so.

Q. There has been a regulation passed keeping him out of the three mile limit, I do not think the beam trawl will be allowed to fish in the bay now. Do you ship any live lobsters from here?—A. We never had any market here. We never tried very hard to get them.

Q. But you are close to Mulgrave where they could be shipped from?—A. That is right.

Q. Have you any idea which is the most profitable branch of the industry for the fishermen, selling live lobsters to the market or to the canner?—A. I suppose that by shipping everything we would make better money out of it if there were buyers.

Q. Would you get enough live lobsters over 9 inches to make it pay?—A. If the fishermen joined together we could get a good many lobsters when lobsters are plentiful.

Q. What would you do with the small lobsters?—A. That is where the trouble comes in.

Q. The canner would not like to buy them if you shipped away the large ones?—A. Very likely not.

Q. There have been a number of suggestions made with a view of bringing the lobster fishery back to its old condition?—A. Nobody would fish at all if they were paid \$1.25, \$1.60 and \$1.75. There would be nobody go fishing.

Q. One proposition is to stop the fishing of lobsters, and issue no licenses to can for three or four years in order to give the lobsters a chance to grow; what would you think of that?—A. I don't know, that might be all right.

Q. That would be one way of improving the conditions; what would become of the fishermen?—A. Their gear would all go to h——l and when they started up again there would be nobody to fish because there would be no gear.

Q. A recommendation made by the last Lobster Commission was that the fishery should be shut down in sections, and the location of those sections should be moved from time to time; how would that appeal to you?—A. I don't know how that would do. That would knock off some places, they would not fish at all. Lobster gear, especially traps, is gear that you cannot put away very well, it takes a lot of room. Some of them have given up already. Their gear is so high too, rope and everything.

Q. What do you consider a trap to be worth?—A. A parlour trap when well made will be worth 50 cents, all of that too.

Q. I mean apart from the trawl and lines?—A. I don't know. There is rope and line and everything.

Q. Another thing that has been suggested is to enforce the law, insist upon the fishermen putting berried and undersized lobsters back in the water and shortening the season by ten days; how would that do?—A. Shortening the season would be all right. That would not hurt us any, we are all through ten days before the time.

Q. Why is that, because the lobsters are not there?—A. The lobsters are not plentiful enough to keep us going. We can go on to some other kind of fishing that will pay us better and save our gear, it is expensive gear, and so on.

SESSIONAL PAPER No. 22a

Q. Do you think it is possible to insist upon leaving a wide enough space between the slats to allow the smaller lobsters to escape?—A. Well, by gosh I don't know about that. You cannot tell how a lobster is going——

Q. Some people claim that we could, by regulating the size of the mesh and the space between the slats, protect the small lobsters and let everything under 6 and 7 inches go out of the trap?—A. I don't think that can be done very easily.

Q. Why not?—A. Because there is nobody can tell you what space a lobster will get out of. Maybe they will flatten their shell through an inch, you cannot tell.

Q. Do you think the lobster can flatten its shell?—A. Well, I don't know if anybody has seen that. They might crawl through a closer space than we think.

Q. Do you not think the slats are put much closer together than they were at the beginning?—A. I don't think so. I think they are about the same, I don't see any difference.

Q. We used to put the slats an inch and a half apart. To-day, along the greater part of the coast we have gone over, the mesh and the slats are only half an inch apart?—A. Oh, heavens, I don't see what they do that for.

Q. To hold the small lobsters?—A. Well, I don't see what they do with them. Are they allowed to take all they get?

Q. Do they not do that everywhere?—A. Well, I hate to see small lobsters taken and then if you are caught by the——

Q. We have not found anybody that has ever been caught, the law is not enforced I am afraid.—A. Well, by gosh, the inspectors are around often enough. I would not want him to catch me.

Q. At some places visited by us where they are canning lobsters it takes 12, 14 and even 16 lobsters to the pound can; unless they narrowed the space between slats they would not hold those lobsters, would they?—A. No, sir. That is not right.

Q. Do you think there is any combination on the part of the canners to keep down the price?—A. If they keep it down very low there will soon be none fishing.

Q. Yes, but do you think there is any arrangement among the packers on this coast to keep the price down?—A. They were saying that all right. I myself think it is when they cut down \$1.25 in a year. By gosh, that is quite a knock down.

Q. What reason do they give for doing that?—A. What reason? They want to make more money. They do not find they are making enough. They want to make poor people die and have all for themselves, that is what I think, and they will soon do it.

Q. Do the packers not give as a reason for the reduced price that the market has dropped?—A. That is what they say, that the market has dropped. I allow that too.

Q. I think you told us you believed an increase in the number of hatcheries would be a good thing?—A. Yes, sir.

Q. What do you think about establishing pounds?—A. That would be all right I think.

Q. It has been suggested that the fishermen should be compelled to register and take out a license. The idea is that if the fishermen are licensed they will be more careful about observing the law because if they were found to be violating it they would not be given a license and would not be allowed to fish lobsters; what do you think about that proposition?—A. Well, I don't know about that, that would be so much more he would have to pay.

Q. No, it would not be anything serious and he might not have to pay a fee at all. I suppose you will admit it is right that berried and very small lobsters should not be taken?—A. Yes, because if they keep on doing that the lobsters cannot be increasing, they cannot stand their ground.

Q. Do you think that method of licensing the fishermen would have any effect at all, would it work?—A. It might work, I don't know. It might be all right.

Q. Has any attempt been made to fish lobsters in the fall in your recollection?—A. No, sir.

9-10 EDWARD VII., A. 1910

Q. What is the shoalest water you have ever known anybody to fish lobsters in here? We find the fishermen in some places fishing lobsters where the traps almost dry out.—A. A couple of fathoms is the closest.

Q. Do you think we should prohibit fishing in too shoal water?—A. Oh, I don't know.

Q. Do you think that in very shoal water in the last part of the season you are apt to get too many small and spawning lobsters?—A. Sometimes at the last of the season when the water gets warm, all kinds of lobsters fall in, big and small.

Q. Whatever is left?—A. Yes, sir, whatever is left comes inshore.

Q. Then do you think there would be any advantage in prohibiting fishing in too shoal water?—A. I don't think it. Some springs a school of lobsters hauls right in, some warm springs.

Q. You do not think that closing down the fishing on the 1st of July instead of the 10th would be a serious interference with the fishery?—A. That would not hurt us any.

Q. Would it be a means of saving the small lobsters?—A. It would.

Q. Do you think the live lobster trade would be more profitable for the fisherman, if it could be carried on?—A. Yes, sir, he would get a better price, but what would you do with the small lobsters?

By Mr. Corbett, M.P.P.:

Q. I suppose those shipped alive must be over 9 inches?—A. Yes, sir, over 9 inches.

By the Commissioner:—

Q. Is there any matter you would like to suggest yourself?—A. I don't think of anything else. You have asked me all that could be asked.

Witness discharged.

JOSEPH CRISPO, fisherman, Harbour Bouche, called and sworn:—

By the Commissioner:—

Q. How long have you been engaged in lobster fishing?—A. I guess about 20 years.

Q. You own your own boat and gear?—A. Yes, sir. These late years we have a little schooner between the two of us.

Q. Where do you fish?—A. Out on the Pomquet Bank.

Q. That is out in the centre of the bay?—A. Yes, sir.

Q. What depth of water is there on the bank?—A. From 8 to 12 and 13 fathoms.

Q. Is there much deeper water around it?—A. 14, 15 and 17 fathoms.

Q. What number of traps do you fish out there?—A. 450.

Q. How many of you fish?—A. Three of us. We take another man with us when we start in the spring.

Q. How often do you come in?—A. Every day when we can.

Q. Have you a tank for your lobsters, or do you keep them in bulk?—A. We generally put them in the vessel. Sometimes we take them in the boat when we have a chance to come in.

Q. How long have you been carrying on that kind of fishing?—A. This last six years.

Q. What run of lobsters do you find out on the bank?—A. Well a pretty good run.

Q. Do you get a better run than you could inshore?—A. Yes, sir, far better. We don't get many lobsters there under 9 inches.

SESSIONAL PAPER No. 22a

Q. When do you begin to fish generally?—A. As soon as the season opens, around about the 10th of May.

Q. How late do you fish?—A. We don't fish any later than the last of June. We did not go to the last of June this last two or three years.

Q. What is your reason for knocking off at the close of the season?—A. The fish get slack and we look for other fishing.

Q. What other fishing?—A. Mackerel, cod and herring fishing, anything we can get.

Q. How do you find the conditions on that bank to-day compared with when you first began fishing?—A. Well to tell the truth there has not been very much difference in the last six years with us, I think we got fully more lobsters this year than any year.

Q. And as good a size?—A. Yes, and as good a size.

Q. Is there anybody else fishing out there?—A. There are other boats fishing out there. Not from here, from Bayfield up the Bay. Some come up from Canso.

Q. Do you sell your lobsters to the cannery here?—A. Well the same company runs here and at Bayfield. Sometimes when we have a chance to get up to Bayfield why we go there, but on the average we come here most of the time.

Q. There is no station of the Fishermen's Union here?—A. No, sir.

Q. After all the years you have been fishing, what do you think of the present condition of the lobster fishery compared with its state at the time of your first recollection; have the lobsters run down in size?—A. Well I don't find that they have run down.

Q. I do not mean on that bank, but speaking generally?—A. I don't find that they have run down very much in size. The first year that I started fishing of course they were plentiful. They ran a little larger, a little shade larger.

Q. Then there has been a decrease?—A. Yes, there has been some since that time.

Q. Do you think that decrease is still going on?—A. Oh, well, I don't know. This last six years I don't know that there has been any difference at all. That is with us out there.

Q. What is your practice, do you expect the canner to take everything you bring him in the shape of lobsters?—A. No, sir, we don't expect him to, or we don't bring in everything very small, we never do. In fact this year, and since we have been fishing there the last few years, we don't get very many out there and we generally fire them away, let them go as fast as we catch them. That is the berried lobsters.

Q. And what about the undersized lobsters?—A. We don't have many there.

Q. What percentage would you have?—A. I don't think we would get four or five pounds to the hundred.

Q. Your run of lobsters then you say is good?—A. Yes, is good.

Q. Are you fishing more traps now than you used to when you began to fish?—A. Oh, yes, sir, I commenced fishing with only 40 traps.

Q. And can you keep up the same catch to-day with 40 traps?—A. I could do better with 40 traps when I started years ago than I can now with 100.

Q. In what proportion has the number of traps increased within your recollection, are there three times as many?—A. There are three times as many, I guess.

Q. Will you say it requires more gear now to keep up the supply?—A. It requires more gear to keep up the supply, I think.

Q. What style of trap do you fish?—A. We fish the common traps mostly.

Q. The old double ender?—A. The old double ender. We have a few of the parlour traps this last few years but not a great many.

Q. Do you find you get more fish in the parlour trap?—A. Well, it is this way: If you can attend your traps every day I find the common trap is just as good as the parlour trap. That is with us.

- 9-10 EDWARD VII., A. 1910

Q. The general experience is that the parlour trap holds the fish?—A. They hold the fish better if you are two or three days without hauling them.

Q. You heard the evidence of the previous witness, do you agree with what he stated pretty well?—A. Yes.

Q. The policy of the department has been to restrict the number of canneries, what is your idea about it?—A. Well, I think the more canneries the better, certainly. We would have more competition and the fishermen would have a great deal better chance.

Q. Do you not think that if you had a good many more canneries the fishery would be exhausted faster?—A. No, sir, I don't think it would be.

Q. Would there not be more fishermen?—A. No, sir, I don't think there would be more fishermen. There is the same number as when I started some years ago or very few more.

Q. Complaints have been made by fishermen that they have not been getting enough for their lobsters, and to try and put things right in that direction the department have adopted the policy of granting a license to can to a number of fishermen who combine together on the co-operative plan?—A. I think that will be a good thing.

Q. You have none of that here?—A. No, sir.

Q. Do you think that is a fair way of putting the fishermen in an independent position?—A. I think so. It will be a good thing.

Q. Do you think the fishermen, one with another, would make more money if they were allowed to can for themselves?—A. They would make double the money, sir.

Q. Do you think they all have the ability, capital and the means necessary to conduct canning?—A. Well, I think if the men get to work they will do it.

Q. How is the price arranged now; is there any competition or are you obliged to take what is offered you?—A. We have to take what is offered to us, that is just how it is. We cannot say anything about it; they are the monied men and we have to abide by whatever they do. Last year on account of a few fishermen coming in and having a union among themselves at Cape Breton, across the bay here, the canners got their heads together. This year I was told by a certain man—that is Smith in Port Hood, who was informed by a canner—the canners put their heads together and decided to pay only so much to the fishermen, and they did so. They fixed the price at \$2.25. Now, they could afford to pay a good deal more this year for lobsters. Of course the market went down, we know that, but the cut in price to the fishermen was a great deal. We got \$3.50 last year and only \$2.25 this year. That was a big cut down.

Q. Have you any idea of the prospects for next year?—A. Well, according to my idea it will be the same thing, they will offer the same thing. That is just what I think about it.

Q. When do you think the lobsters spawn?—A. The spawning season of the lobster I think is along about from the middle to the last of June.

Q. You see more spawn lobsters at that time, do you think?—A. Well, I think that is about the spawning time. Yes, sir, there are more about that time.

Q. Do you think they go into shoal water to spawn?—A. Oh, yes, sir, they do.

Q. Do you notice any difference in fishing in deep water from fishing in shoal?—A. Where we fished this last six years I don't think we get five pounds to the hundred of spawn lobsters.

Q. What is the smallest size at which you have ever know a lobster to have spawn on her?—A. I never saw anything under 10 inches, at from 10 inches up.

Q. They are generally a good fair lobster?—A. Yes, sir, a lobster of good size. It is very seldom you find a 9 inch lobster with spawn.

Q. Do you think that the regulations as to size, spawn lobsters and the close of the season have ever been strictly enforced?—A. At this place here there has not been much difference, I don't think. Of course we were not allowed to catch the 9 inch lobster years ago.

SESSIONAL PAPER No. 22a

Q. Then the size limit was reduced to 8 inches?—A. And as to the spawn lobsters I do not know that the law was always enforced, but of late years they are pretty strict as to not taking them.

Q. At the cannery?—A. Yes.

Q. At the same time have you ever known of anybody having been fined or punished for violating the law?—A. They have been fined here.

Q. The canner?—A. Yes, the canner.

Q. How long ago?—A. Not very long ago. This last four or five years they were fined I guess.

Q. What was that for?—A. For taking lobsters.

Q. Undersized or berried lobsters?—A. It was undersized I think.

Q. Do you think there is any packing done after the close of the season, I don't mean in canneries but on the shore?—A. None that I know of.

Q. There is no fishing done after the season closes?—A. No, sir, not after the season. I don't think there is a trap goes in the water after the 10th July, they generally take them ashore before that time.

Q. Do you think it would be possible by any means to induce the fishermen to return the berried lobsters to the water?—A. Well it would be a good thing if they could be induced to do so, but the majority of them—one man may heave them over and another one take them, that is just about the way it is done. Last year every seed lobster that came into my hands I fired away and let go. We all did it. Of course we don't get a great many. Even if the fishermen brought them ashore it does not amount to a great deal, what seed lobsters they get, and if they let them go it would be far better.

Q. They would have an enormous number of eggs?—A. Yes, sir, you would hardly ever run them out.

Q. If the proportion of berried lobsters is small in general, as compared with the total catch, it is funny the fishermen do not understand it would be better to put them back in the water?—A. It would be far better if they did that.

Q. Have you had any experience in the matter of hatcheries?—A. I have had no experience, there have been none handy to us. The nearest has been at Canso.

Q. How long has the hatchery been running at Canso?—A. For the last six or seven years.

Q. Do they sometimes come up here for eggs?—A. They did this year.

Q. What led to that, did they not get enough down below?—A. I don't know I am sure.

Q. This place is a long way up?—A. Yes, it is quite a way up.

Q. What distance are you from the Canso hatchery, here?—A. About sixty miles, between fifty and sixty miles.

Q. What is your idea about shortening the season by ten days?—A. I don't think that it would matter very much, that is around the shores here. As far as I know most of them shut down before the last of June. I think there is very few of them that run past that time and I think a good many of the packers that run to that time would be far better pleased to haul up before then. Some of them have to run on account of the fishermen.

Q. Do you know anything about the live lobster trade, have you ever thought of going into it?—A. I have thought of going into it but some way or other I have never tried it.

Q. Fishing where you do and catching a large run of fish and with a vessel at your command it ought to be possible?—A. Oh, yes, sir, we could put them up there according as we got them, take them right out of the water and put them up so that they would not suffer any.

Q. Do you think there is more money in that branch of the lobster industry?—A. Certainly, sir, I think there is more money.

9-10 EDWARD VII., A. 1910

Q. If canning were stopped do you think the fishermen would go into the live lobster business?—A. I don't know I am sure, they might do it. Before they allowed the 9 inch lobsters to go to the United States, the market was far better but it has run down a good deal.

Q. The market has been glutted, but you see there is the Canadian as well as the American market available?—A. Yes, certainly there is the Canadian market to ship to, but I see the price was reduced on a big lot of lobsters that were shipped to the United States last year and this year also.

Q. Are there any places about this coast where pounds could be established?—A. I think so.

Q. You want a certain depth of water, not less than two fathoms, because heat or hot water will kill the lobster faster than anything?—A. Yes, sir, it will. No there would not be any place in this harbour.

Q. You understand of course the lobsters must not have very much fresh water.—A. There would be a suitable place if there were any parts of the harbour with hard bottom, but there is too much mud in this harbour.

Q. Are there any other parts of the coast that would be suitable?—A. Probably up at Blue Rock would be a good place. There is good water there and a hard bottom. There would also be shelter enough there during the lobster fishing season.

Q. The idea would be to buy the female lobster from the fishermen and place her in a pound, where she would remain and be fed during the season, and hatch out her eggs herself; where it can be done it seems to be the only way of saving the female lobster?—A. That is the only way she could be protected. To stop the fishermen from taking these lobsters is a pretty hard thing, because they will wash the spawn off pretty clean so that you will not see it on them, that is some of them will. I have seen that myself. This year we fired them out. Once in a while you would see them when they washed the berries off. You can tell that when you see the lobster because there are always a few seeds left on them. If you are very sharp you can tell them.

Q. The only way to save the berried lobster is to take her when she comes out of the trap?—A. Oh, yes, sir.

Q. It is pretty late in the day when she goes to the cannery and is dumped into a barrow with a whole lot of others?—A. This year the canner would not take them. At the last of the season they were sending them on to Canso. If he saw one spawn lobster at the cannery he would have it taken out.

Q. Did they come up from Canso for the spawn?—A. They used to take them and put them on the car and ship them off. The canner told me at different times not to bring in spawn lobsters, but supposing he would tell me and tell the fishermen they would always bring some in. Of course there would be an odd one slip in unknown to us.

Q. How would it affect the canner if the 8-inch size limit were strictly enforced, would it put him out of business?—A. I don't know that it would. I don't think there are very many 8-inch lobsters brought in here. There might be a few odd ones but not very many. An 8-inch lobster is pretty small. It does not take a very big space for an 8-inch lobster to crawl through a trap. I have often hauled a trap up and you will see them half way out and they will slip out through the bottom. Some of the lobster traps are lathed very close at the bottom and there is a place on top where the lobster will crawl out.

Q. When do you have your best fishing?—A. The best fishing is geenrally from the start.

Q. Is there any statement you would like to make yourself?—A. No, sir, I do not think it. Only what we were speaking about, that is about more packers. I believe it would be a good thing if there were more. The more competition we have the more money there is for the fishermen, that is the way I look at it. Of course here we have always been kept down, we have never had any opposition. When we did have it, three or four years ago, they used to send smacks up from the southward

SESSIONAL PAPER No. 22a

to take the lobsters. That is the only thing that raised the price. We got \$3.50 and the year before \$3.25. Before that they kept us down and I guess they intend to keep us down. I know that this year, and next year if they come here they will not offer us a cent more than \$2.25.

Q. You think it will be well to issue licenses to fishermen to can on the co-operative plan?—A. I think it would be a good thing. If the fishermen club together they could manage to do it, and put up their own lobsters. We got 15,000 lobsters this year, and if we had put up our own lobsters we would have trebled the money that we got. We would have cleared money anyway and doubled what we did get.

Q. You took 15,000 pounds?—A. Yes, sir.

Q. That is good fishing; is that as good a year as you ever did?—A. That is as good a year as we ever did.

Q. What do you think of the idea of licensing fishermen to fish for lobsters?—A. I think it would be a good thing as long as the license would not be too severe.

Q. The idea would be that if the fishermen violated the law their license would be cancelled and they would not be allowed to fish lobsters any more?—A. It would be a very good thing for the seed lobsters anyhow, but it would not make very much difference to the small ones.

Witness discharged.

Commission adjourned.

GRAND ETANG, August 16, 1909.

VINCENT P. DOUCETTE, manager, Grand Etang, called and sworn:—

By the Commissioner:

Q. How long have you been engaged in the lobster packing business?—A. About 7 years as well as I can remember.

Q. You have charge of the cannery here belonging to Mr. Forham?—A. Yes, sir.

Q. Have you charge of more than one cannery?—A. No, I have just the charge of this one.

Q. What number of cases do you generally pack in that cannery?—A. From 300 to 400.

Q. What did you pack this year?—A. 252 cases, last year 350 cases.

Q. How many boats do you employ?—A. From 18 to 20.

Q. Do the fishermen own their own boats and gear?—A. Yes, sir.

Q. In every case?—A. Yes, sir.

Q. How far off shore do they fish generally?—A. A mile, or a mile and a half.

Q. Have you noticed any difference in the run of lobsters since you began your connection with the cannery here?—A. Well as far as I know the best run of lobsters was last year, that is since I have been here.

Q. What has been the practice here with regard to the regulations; you begin to fish 20th April and close 10th July?—A. Yes.

Q. You are not supposed to take any berried lobsters or any lobsters under 8 inches; has that regulation ever been enforced?—A. Well it has been enforced here with regard to spawn lobsters.

Q. You never take the spawn lobsters?—A. No, we never did.

Q. What about the undersized lobsters?—A. We are packing everything.

Q. But you have been strict—A. Very strict about the spawn lobsters.

9-10 EDWARD VII., A. 1910

Q. Is there any particular time in the season when berried lobsters are more numerous than at others; of course if berried lobsters are not brought into the cannery you do not see them?—A. We do not see them. They are more numerous about the beginning of the season.

Q. As a rule about what time do you begin to pack?—A. It depends upon the ice. We generally start about the 1st of May.

Q. The ice is generally clear by that time?—A. Yes.

Q. Out of every hundred lobsters how many would be below the 8-inch limit do you think?—A. That is more than I can tell.

Q. Would there be one-half or one-third?—A. About one-half, I believe.

Q. Do you think the fishermen, owing to your refusal to take berried lobsters, put them back in the water?—A. They are put back in the water because if they were washing them off, you could notice it when they brought them ashore. Then they would be dead.

Q. What style of trap do you use here?—A. That is what I do not know.

Q. Where does the proprietor of this cannery live?—A. Portland, Maine.

Q. What do you think is the cause of the decrease in the run of lobsters, to what do you attribute it?—A. Well I think at first before I got in the business myself, it was taking in the spawn lobsters, but since they have not been taking in those lobsters I do not think they have been destroying——

Q. Do you think that things are not getting any worse than they were?—A. No, last year was the best year we have had since I have been there.

Q. Was that because you got a larger number of lobsters?—A. A larger number of lobsters and they were of better size.

Q. To what do you attribute the failure of the fishery this season?—A. I think it was the season. It was very rough and windy.

Q. Did the fishermen miss a good many days fishing?—A. Yes, a good many.

Q. Do you think there are canneries enough?—A. I think so.

Q. Is there a station of the Fishermen's Union here?—A. No.

Q. Are there any groups of fishermen in this neighbourhood canning on the co-operative plan?—A. Yes, but not here, a little way from us.

Q. Do you think the policy of granting co-operative licenses is a wise one and in the interest of the fisherman?—A. I don't know indeed.

Q. Have you any idea how many lobsters it takes to fill a pound can in your factory?—A. I could not tell you that.

Q. Do you know how many it takes to fill a case?—A. No, I do not.

Q. What is the best time in your factory, when do you get the most lobsters?—A. In May.

Q. Do the fishermen fish right up to the end of the season?—A. Yes, they generally do.

Q. You do not close down before the end of the season?—A. No.

Q. Are most of the men who are catching lobsters regular fishermen, or are they farmers who merely fish for lobsters?—A. No, they are regular fishermen.

Q. If the 8-inch size limit were strictly enforced, how would it affect you?—A. We could not can at all.

Q. What price do you pay for lobsters here?—A. We paid the fishermen \$2.50 this year, and last year \$3.25 per hundred pounds.

Q. The fishermen did not complain about that, it is a better price than they got in some other places?—A. I guess not. They are not complaining here, I don't hear any complaints.

Q. How often does the fishery officer here visit you?—A. Once or twice a week.

Q. Where does he live?—A. In Margaree Forks.

Q. There is no lobster hatchery in this neighbourhood?—A. No, sir.

Q. Do you think there would be any opportunity for establishing one here?—I think it would be a good thing.

SESSIONAL PAPER No. 22a

Q. How many canneries are there within a radius of 20 miles?—A. Eight factories, I suppose.

Q. Are they mostly small factories?—A. Pretty large factories. Some of them are small.

Q. What will their pack average in cases?—A. They would average 300 cases I think.

Q. Various remedies for the improvement of the lobster fishery have been suggested. One is to close down altogether for a term of years and allow the lobsters to increase; what do you think of that?—A. I don't know.

Q. Is there any other fishery the lobster fishermen could turn their attention to?—A. I think it would be pretty hard for the fishermen.

Q. What is the average earnings of a good fisherman in a season, \$2.50 a day?—A. Some of them make more than that.

Q. The Lobster Commission of 1898 recommended that the fishery should close down by sections. What could you think of that as a remedy?—A. If you closed down and they should smack the lobsters from one place to the other, that would be the same thing.

Q. You think that would be done?—A. I would think so.

Q. It has been furthermore suggested that we should strictly protect the berried lobster—either taking the eggs, to a hatchery or placing the lobster herself in a pound—and so arrange the slats of the traps as to allow the smaller lobsters to escape, and shorten the season by ten days; how would you regard that as a remedy?—A. Well I think if there was a hatchery somewhere around.

Q. It would not seriously interfere with you here if the last ten days in July were taken off?—A. Oh no.

Q. The fishermen have other fishing to take up?—A. Oh yes.

Q. There is no chance here for shipping live lobsters to market?—A. No.

Q. I suppose it would be too rough to fish for lobsters here in the fall?—A. Yes.

Q. In your opinion would the fishermen make more money if they were allowed to can for themselves?—A. Not much.

Q. How does the price paid the fishermen compare with the price when you first took charge of the factory; what did you pay when you began?—A. I think it was \$2. Last year we paid \$3.25 and this year \$2.50 but I remember when they used to pay \$1.10 I think.

Q. Is there any opportunity here to establish a pound?—A. There is a pound here and the lobsters get in it.

Q. Do the lobsters go into it?—A. Yes, the fishermen used to set traps in there.

Q. Do they still set traps there?—A. No, sir, not this summer. There are lobsters there because I know one fisherman present here has got them there.

Q. What depth of water is there at that place?—A. 15 and 20 to 30 fathoms at the deepest place. It is only the entrance that is shallow.

Witness discharged.

FREDERICK M. CORMIER, fisherman, Grand Etang, called and sworn:—

By the Commissioner:

Q. How long have you been engaged in fishing lobsters?—A. About 15 years.

Q. Did you begin to fish when this cannery was first established?—A. Yes.

Q. And you have always fished from this place?—A. Yes, sir.

Q. You own your own boats and gear?—A. Yes, sir.

Q. What number of traps do you fish?—A. 150 probably.

Q. Does any one else fish with you in your boat?—A. Only one little boy.

9-10 EDWARD VII., A. 1910

Q. Have you always fished about the same number of traps, or do you fish more now than you did when you began?—A. I am fishing more this year.

Q. In what depth of water do you fish?—A. 15 fathoms.

Q. What is the bottom like where you fish?—A. It is rock and sand.

Q. Do you prefer fishing on a hard bottom rather than on mud?—A. It is better on a hard bottom.

Q. How far off shore does 15 fathoms take you?—A. About a quarter of a mile.

Q. Do you fish the whole season in the same depth of water?—A. Yes, sir.

Q. You do not move closer inshore?—A. Sometimes.

Q. About what time do you get your traps out, one year with another?—A. As soon as the ice goes, about the 1st of May.

Q. And how long do you fish?—A. Up to the 10th July. I fish the whole season.

Q. At what time of the season do you get the best fishing?—A. In May.

Q. When do you see the most lobsters with eggs on?—A. About the 15th of May.

Q. You find them all through the season do you not?—A. Some.

Q. Are the female lobsters with the eggs on small or large lobsters?—A. They are about 8 inches in size.

Q. And larger?—A. Yes, sir.

Q. They are generally pretty good sized lobsters are they not?—A. Yes.

Q. What has been the practice of the fishermen here with regard to berried lobsters; what do you do with them?—A. I throw them overboard.

Q. Have you always done that?—A. Yes.

Q. As to the size of the lobster, how many lobsters you bring to the cannery are below 8 inches?—A. About one half.

Q. Are the lobsters as good now as when you first began to fish?—A. About the same I suppose.

Q. Do you think they are as large today as when you began to fish a few years ago?—A. I think they are about the same. Last year there was good fishing.

Q. Was it as good as you ever made?—A. Yes, about the same.

Q. Do all the fishermen here own their own boats and traps?—A. Yes, sir.

Q. How does the price paid for lobsters today compare with what you got when you first began to fish; what did you get when you first fished?—A. \$1 a hundred weight. Last year \$3.25 and this year \$2.50.

Q. How is the price fixed, is it a matter of arrangement between you and the packer; did you have an understanding when you began to fish that you were to get so much for your lobsters?—A. It is understood what we are going to get.

Q. Have the fishermen here ever adopted the practice of brushing off the eggs from the female lobsters?—A. No.

Q. Does the canner object to taking berried lobsters?—A. Yes.

Q. Has he always done so?—A. Yes.

Q. Do you use the old fashioned trap with two ends?—A. Yes, with two ends.

Q. Are there many using the parlour trap?—A. Only a few.

Q. Tell us the difference between the two traps?—A. Working them everyday they are just about the same, but the lobsters stay in the parlour trap.

Q. What distance do you leave between the slats in the trap?—A. Three quarters of an inch.

Q. Do you think the fishermen would make more money if they were allowed to can for themselves?—A. No, I don't think so.

Q. Is there any fishing done here after the close of the season?—A. No.

Witness discharged.

SESSIONAL PAPER No. 22a

GABRIEL CHIASSE, fisherman, Grand Etang, called and sworn:—

By the Commissioner:

Q. How long have you been engaged in fishing lobsters?—A. 15 or 16 years. Since Mr. Forham opened his factory here.

Q. Was that the first factory that was opened here?—A. Yes, in Grand Etang.

Q. You have always fished in this place?—A. Yes.

Q. You own your own boat and gear?—A. Yes.

Q. You do not fish alone, there are two in the boat?—A. No, only one.

Q. How many traps do you fish?—A. About 130 I would say.

Q. What depth of water do you fish in?—A. There are different depths.

Q. I mean when you begin in the spring?—A. Well there are at various times 10, 12, 15 and 18 fathoms.

Q. As deep as 18 fathoms?—A. Yes.

Q. How far off shore?—A. Close to the shore there is deep water here.

Q. When do you begin to fish generally?—A. As early as we can, we start on the 20th April and sometimes in May.

Q. Your opening time depends on the ice I suppose?—A. It depends on the ice, but we could not go any sooner than the 20th of April.

Q. Have you ever fished earlier than the 20th April?—A. No.

Q. Do you find the lobsters there when you first set out your trap?—A. Yes.

Q. What is the best time of the fishing with you?—A. It is May.

Q. Do you find that you get a better run of lobsters in May than you do in July?

A. It is according to how the spring has set. When the big ice has gone out, May is the month. When it is late, June is the month. It depends on the ice.

Q. Do you get a larger run of fish in the beginning of the fishery than you do towards the end?—A. Yes a bigger run of fish when we begin than when we knock off.

Q. And you get better fish in deep water than in shallow? A good many fishermen move into shallow water as the season advances?—A. That is what we are doing here.

Q. Do you notice any difference in the run of fish?—A. I suppose the fish are a little better when the traps are first set out.

Q. At what time of the season do you see most of the lobsters with eggs on them?—A. I suppose in the last part of June.

Q. What proportion of the lobsters you catch will be below the legal size limit of 8 inches?—A. Oh, well there would be about a half.

Q. How small do you bring the lobsters in?—A. We are bringing in all that we catch.

Q. Down to how small do you catch them?—A. Of course when they are getting small it is hard to get the measure of them.

Q. Would they be four or three inches?—A. They are hardly ever that size.

Q. Have you any idea how many lobsters it takes to fill a pound can?—A. No, because I don't work in the cannery.

Q. How is the fishing now compared with what it was when you began your connection with the industry?—A. This summer it is low, but before then the factory was packing about an equal number of cases.

Q. Did you find the lobsters as good the summer before this last one as they were when you began to fish?—A. About the same.

Q. Do you think there was as good a run of fish?—A. They might not be as big but the quantity was more.

Q. Are you fishing more traps now than when you began to fish?—A. Just about the same. Some might have more traps and some less.

Q. Have you any difficulty in getting your ground in the spring; do the fishermen all understand pretty well where their grounds are, and consequently no trouble

9-10 EDWARD VII., A. 1910

arises?—A. There is no trouble here. The first that goes out gets the chance as far as I know myself.

Q. On what sort of bottom do you like to fish best?—A. On rocky bottom or the ledges.

Q. Along the edge of a reef?—A. Yes.

Q. Do you expect the man at the cannery to take everything you bring him?—A. Yes.

Q. What has been your practice with regard to berried lobsters?—A. To throw them overboard.

Q. How long have you been doing that?—A. Ever since I have been fishing.

Q. Do the fishermen about there do that generally do you think?—A. That is what I think. That is what they ought to do. Where I am fishing myself there are four or five boats and I don't see any spawn lobsters taken ashore at all. They tell me they put them overboard.

Q. And you think that practice has been followed?—A. That is my opinion.

Q. You do not think the fishermen brush the eggs off the berried lobsters and take them in that way?—A. My opinion is there is not much of that work done.

Q. How does the price paid for lobsters compare with what you got when you first started to fish?—A. When we first began to fish we were promised \$1 and we were paid \$1.10. It kept going up all the time. Last summer it was up to \$3.50. This year it is down to \$2.50.

Q. What was the cause of the reduction?—A. The market I suppose was bad.

Q. Are the fishermen generally satisfied with the price paid?—A. In the spring they were anxious to get what they were receiving last summer, but when they saw they could not get it they were very glad to accept that price.

Q. Do the fishermen generally understand the necessity for putting the berried lobster back in the water?—A. They understand it. If they do not do it it is not because they do not understand the necessity. They understand what destroying the berried lobster means.

Q. It means ruin to the fishery?—A. Yes.

Q. Are the berried lobsters generally good fish?—A. Generally good fish.

Q. What is the smallest berried lobster you ever saw?—A. I never saw any fish with spawn on them that were not middling good sized lobsters.

Q. What was the smallest you ever saw with eggs on her?—A. They are not less than 8 or 9 inches.

Q. Do you think you would do better at canning than fishing?—A. That is pretty hard to say. For my part I would sooner have others can than can myself, as long as I get a fair price for my lobsters, as long as we have got a man that we can depend on. If everybody was canning there would be no market in no time, that is my opinion.

Q. As to the various remedies for the improvement of the fishery that have been suggested, such as closing down or a term of years and so on, would they mean a serious loss to the fishermen?—A. I would think so. Lobster fishing is good money for the fishermen down here in the spring.

Q. There is no other fishery that will pay them for their time in the spring?—A. No.

Q. Another suggestion was that the fishery should be closed down by sections?—A. I don't see how it could be done.

Q. Another suggestion, and one that seems reasonable, is that we should regulate the space between the slats of the trap so as to allow the small lobsters to escape, protect the berried lobster in every possible way, and shorten the season by knocking off at the 1st of July instead of the 10th; what would you think of that proposition?—A. I guess the fishermen here would agree to shorten it at the beginning and put the opening time on the 1st of May instead of the 20th of April. For you know there are lots of years we are bothered with ice in May.

SESSIONAL PAPER No. 22a

Q. Is there any other market the fishermen would find for their lobsters here if the canneries were closed?—A. I do not think it.

Q. In some places they can ship their lobsters to the market alive?—A. The packer we have here does that sometimes too. I heard he was making a place up on the Atlantic coast of Nova Scotia.

Q. You have no chance to carry on the live lobster trade here?—A. No.

Q. Would you be in favour of establishing a hatchery in this neighbourhood?—A. If they were to build a hatchery to protect the spawn or breeding lobsters I guess it would be a good thing.

Q. Another way of protecting the berried lobster is to place her in a pound; do you think there is any place here where a pound could be established?—A. I should think it would be a good thing. I don't see any place where there could be that kind of pound around here, unless above the bridge here, lobsters are getting in there now.

Q. To what do you attribute the decline in the catch of lobsters, do you think they have been overfished?—A. May be so.

Q. Can you give me any other reason for it?—A. That is the only reason I can give.

Q. Do you lose much gear owing to the bad weather?—A. Sometimes. This spring was a pretty hard spring but not in this factory. Here it was all right, but the factory down below from us had a big loss.

Q. Do you fish the same kind of traps as when you began?—A. Yes, I do.

Q. Do you allow the same space between the slats as when you began fishing, or are you putting them closer?—A. I might put them a little closer.

Q. What do you think about the parlour trap, in your opinion is it catching too many small lobsters?—A. I don't think they are any worse to catch small lobsters than the other traps.

Q. Except that they hold the small lobsters better?—A. Hold them better.

Q. Fall fishing would be of no use to you here?—A. I hardly think it, it is too rough.

Q. Is there any suggestion you would like to make?—A. You have got me to say all that I know all right.

Mr. DOUCETTE.—As far as I can understand all the fishermen want to open the season a little later. It is too early to start on the 20th April. They have got to start then when the ice is out and the weather is so cold, and the water and everything.

The COMMISSIONER.—They need not start out then unless they like to.

Mr. DOUCETTE.—Yes, but if they do not, two or three take all the pretty good places on the fishing ground.

Witness discharged.

Messrs. Eusebe Leblanc, Joseph Ancoin, Joseph Cormier, Joseph Chiasson, fishermen, stated that having heard the evidence of the previous witnesses as given above they concurred in it.

The Commission adjourned.

9-10 EDWARD VII., A. 1910

ARICHAT, August 17, 1909.

GAPTISTE CIRETTO, packer, called and sworn:—

Q. How long have you been engaged in the lobster business?—A. 18 years.

Q. Always at this place?—A. Always in the same spot.

Q. How many canneries do you control?—A. Only one.

Q. Where is it situated?—A. Cape Auget.

Q. How many boats do you employ?—A. 40.

Q. Do the fishermen fish their own boats?—A. Yes. We have more or less every year, we cannot tell exactly.

Q. The boats and the traps are owned by the fishermen themselves?—A. Yes, everything.

Q. Is there a station of the Fishermen's Union here?—A. No, sir.

Q. Have you always fished about the same number of boats?—A. Pretty near always. Formerly there used to be more factories here, they were divided up, but in the last ten or fifteen years I have been canning alone.

Q. What other canneries are there in your neighbourhood?—A. There are none.

Q. How far off are they on each side of you?—A. There is only one at Petit Degras and one at West Arichat.

Q. What is the capacity of your cannery, how many cases of lobsters do you pack?—A. It is not very big. This year we only packed 76 cases.

Q. That is full cases?—A. Yes.

Q. Your principal industry is what?—A. Live lobsters.

Q. Where do your boats fish, how far off shore?—A. They go far off early in the spring and come in closer. They commence at 14 fathoms.

Q. What is the condition of the lobster fishery today compared with what it was when you began to fish?—A. Well it is only about one-tenth, well about that, of what it was when I began to fish, because I remember putting up 1,400 boxes and there were four or five packers. Now we put up from 70 to 80 only.

Q. To what do you attribute that decrease?—A. I believe myself the seed lobsters were consumed.

Q. Due to the destruction of the female lobster?—A. Yes. I canned lobsters with no eggs as well as the others.

Q. Were the lobsters a larger and better run in those days than they are now?—A. No, they are better now.

Q. The lobsters are a better run?—A. Yes, the fish are getting better.

Q. What district are you in?—A. District No. 6.

Q. And your season begins and ends when?—A. It begins on the 1st of April and ends on the 30th June.

Q. And your size limit is 8 inches?—A. 8 inches.

Q. Have the regulations as regards the protection of the seed lobster and the size limit ever been enforced here?—A. Not much. Of course I must tell you the truth.

Q. How long has the hatchery been in operation?—A. 6 years.

Q. Since that time have you been saving the berried lobsters?—A. We saved it for a year or two, and then the steamer got orders from the department not to come here. This year they could not get enough spawn elsewhere, and the steamer had orders to come here again. This year I think they could not get eggs because they had to go everywhere.

Q. What proportion of the catch are seed lobsters?—A. One-half.

Q. That is one-half are female lobsters?—A. Yes, sir.

SESSIONAL PAPER No. 22a

Q. What proportion of the female lobsters have the eggs outside?—A. There is only one this year to about every 200.

Q. Only one in 200 have the eggs extruded?—A. Not that many. I only had 23 in 4,000.

Q. Have you ever remarked what was the smallest lobster you ever saw carrying eggs outside?—A. Yes, about 8 inches I think. At one time we saw one. Everyone took particular notice how small she was.

Q. As a general rule how are the seed lobsters in size?—A. They are pretty good, especially here, I am only talking for myself of course. If you go even six or seven miles from here it is different, the lobsters are not the same.

Q. What is the cause of the difference?—A. Deeper water. In shallow water they have no chance.

Q. Do you think they are caught up more quickly in shallow water?—A. Oh yes, caught every year.

Q. Do you think you get more seed lobsters in shallow water than in deep water?—A. Yes, a good deal.

Q. At what season did you see the most seed lobsters?—A. Here it is about the last of May.

Q. Have you come to any conclusion as to how often the lobster spawns; some people say she spawns once every year, some twice a year and others again that she only spawns every two years; what do you think about it?—A. The lobster in the water is something like a hen on land. Those lobsters that they have in the spring, next spring will be four inches long. They say it takes four or five years to grow that size, not at all. For 18 years I have told my fishermen if they catch a lobster two inches long to bring it in. Not one is ever brought in, the smallest was five inches. You would think that during 18 years they would try to get one, that you would get one somewhere.

Q. Where does the small lobster stay?—A. Those lobsters are four inches now, they grow that size in the first year.

Q. Do you think that the female lobster goes into shallow water to hatch out her eggs?—A. Sure. I can prove that because I got four in one trap in two fathoms of water.

Q. Have the fishermen here ever practised the habit of rubbing the eggs off the berried lobsters?—A. Sometimes. Then we can only tell them when they are coming from the boiler. If you have cooked such a lobster they are no good for anything, you have to throw them away.

Q. When you did not save the eggs for the hatchery what was the practice with regard to the berried lobster?—A. We never used to take them.

Q. You always refused to accept them?—A. Always, but sometimes we would find a few amongst the catch.

Q. From your experience, and you seem to have devoted some time to this, what do you think is the best way of protecting the berried lobster?—A. I believe by means of pounds. Build a pound here, there are plenty of places for that, and put the lobsters there to hatch themselves. All you would have to do would be to build a place outside, and put whatever quantity of lobsters you want, 300 or 400 or a thousand or two in there.

Q. Do you think it would be better to have one large pound or a number of small ones?—A. No, one large pound would not do.

Q. You would prefer to have a pound attached, as far as possible, to every group of factories?—A. Let every factory have one.

Q. What do you think of hatcheries?—A. For 18 years they brought young lobsters here but we did not see them. They brought ten millions the other day.

Q. They have not been doing that for 18 years?—A. Well for six years, and the hatchery from Pictou came two or three times.

9-10 EDWARD VII., A. 1910

Q. Then you have not experienced any noticeable increase in the supply of lobsters from the operation of the hatchery?—A. Not that I have noticed.

Q. In Prince Edward Island there has been an increase which they think is due to the hatchery and the same around Pictou?—A. In Pictou and other places there are a lot of spawning places where the lobster goes to spawn, it is not the hatchery. There are three or four spawning places where the government should not allow them to fish or take the eggs from. Here there are none of those places.

Q. Do you think the eggs are properly taken off the female lobster when they are removed for transportation to the hatchery?—A. I took them all off myself this year.

Q. If they are roughly handled are they destroyed do you think?—A. When you destroy the eggs you kill the lobster.

Q. You told me you had been carrying on the live lobster industry for a number of years?—A. Yes.

Q. To what markets do you ship?—A. I ship to New York, Newport and Boston, different parts.

Q. Which way do you ship them?—A. I used to ship them by steamer from here and then by railway to Halifax.

Q. By steamer from here to where?—A. To Mulgrave.

Q. And then by railway to Halifax?—A. Yes, and sometimes take the steamer.

Q. You sent those lobsters by express?—A. By express.

Q. How did you put them up?—A. In boxes in ice.

Q. Did you put seaweed in, or anything of that kind?—A. Oh, no.

Q. You just put the boxes into ice; what has been the result, how have they turned out?—A. They turned out all right when the weather was not hot.

Q. You think the lobsters will live comfortably that way if the weather is not too hot?—A. The last shipment of lobsters I had about half a crate alive. I put ice on them and took them home. You see it was Friday and I kept them at home to see what would happen. Next Monday when the steamer arrived from Boston I went and looked, and out of 40 there was 8 dead. I put them in the water and kept them 11 days longer.

Q. Did you put them in the water here?—A. Here at home. Eleven days after they were half dead, they were beginning to die.

Q. What time of the year was that —A. That was in June.

Q. When the weather was getting warm?—A. Yes.

Q. None of the lobsters you shipped in that way would be below 9 inches?—A. No.

Q. Were there some large lobsters among them?—A. Yes, some very big. Some 14 inches and some 10 inches.

Q. Are there any others prosecuting the same business here?—A. No.

Q. It has been said that in some places no canner could continue packing if the size limit of 8 inches were strictly enforced; how would that be here?—A. It would not make a bit of difference here. I will tell you how they run: In the spring there will be about 10 or 15 per cent, and then coming on later there will be very few.

Q. Were you the first to begin the canning in this district?—A. No.

Q. The canning had been established here for years before you began?—A. Yes.

Q. Now as to the matter of different size limits and different seasons: What do you think about the season as it is here, and as it is in the neighbouring coast to the west of here; what is the reason for having a different season?—A. I suppose it is better as long as you deem it necessary to begin fishing in January to keep the thing going. The quantity would not make any difference because the quantity goes down.

Q. Would it not make any difference here if you were given from the 1st of January to fish?—A. We had that, and we did not want it. We tried to fish in the winter, and it was no good, not with us. Mr. Whitman built a steamer and got boats, and he could not do it.

Q. On account of the ice?—A. On account of the ice and rough weather.

SESSIONAL PAPER No. 22a

Q. As to the closing of the season, what reason is there for having that date?—

A. They fish to the last of June, the same as us, in some parts, and they begin in January.

Q. What is your idea about that?—A. Well, let them begin in January but finish the last of April or the 15th of May. Give them to the 15th of May.

Q. You think their season is so much earlier and, having the cream of the market, they should knock off earlier?—A. They fish 98 days and we only fish 52.

Q. Do you mean to say those are the actual number of fishing days?—A. That is the total length of time for the six months.

Q. But during that length of time there must be a good part of the season when they cannot do much?—A. Well, six months, you know, is more than 98 days.

Q. From Halifax harbour east to Red Point they fish from April 1 to June 30, and you think that to the westward of you the time should be changed to when?—A. Give them to the 15th of May; that is giving them a good time.

Q. Where would you make the division line?—A. Those five districts that go as far as Halifax; take 15 days off each one. Make some end June 15 and some end a little earlier.

Q. And let you stand as you are?—A. As we are, or take it off in April and put it on in July.

Q. At what time do you think the lobsters spawn?—A. This year they spawned late; the season was over mostly then.

Q. Are they later some seasons than others?—A. I suppose it is on account of the weather and the ice.

Q. Was there a greater quantity of ice off here this spring?—A. Yes, sir.

Q. And you tell me that it would not make any difference to the canners here if the law were strictly enforced?—A. Not to me. I don't know about the rest, because, as I told you, there would be only 10 per cent lobsters of that size in the spring, and coming on to the last there would be 2 or 3 per cent. The number would only be in the spring early.

Q. Would the fishermen continue to fish; would they not object?—A. Oh, yes; I suppose they would.

Q. Do the fishermen expect you to take everything they bring?—A. I suppose they do.

Q. How do they fish, by the hundred pounds?—A. Yes, sir.

Q. At what rate per hundred pounds?—A. Sometimes \$4, sometimes \$3, and sometimes \$2.

Q. What was it this year?—A. \$2.50.

Q. Is it the same rate all through the season?—A. It was this year.

Q. What was the reason for the price being lower this season?—A. Well, the packers could not sell the lobsters. I have got some yet.

Q. That is canned lobsters?—A. Yes.

Q. Has it been the case that you have been compelled to accept undersized or berried lobsters for fear of losing your fishermen, who would in case of objection, go to other canners less scrupulous?—A. Oh, no; I never heard a fisherman saying that.

Q. With the size you take, what would be the run of lobsters to the pound tin?—A. It takes 6 and 7.

Q. What would be the average size of those lobsters; you only can the small ones and ship the large fellows?—A. Sometimes when the price is any good we can them all, but the majority of the lobsters this year went off. I did not can them. Loss or not, I used to let them go. Some weeks we used to lose \$40 or \$50, but that was the quickest way you could sell them.

Q. It has been suggested that for the better regulation and protection of the fishery, it would be well to license the fisherman as well as the canner—compel the lobster fisherman to take out a license at a nominal fee—perhaps he would not be

9-10 EDWARD VII., A. 1910

charged anything for it; do you think that would have any effect upon the fishermen; would it make them more careful about observing the law?—A. Oh, no; there would be war here right away if they had to take out a license. It might mean a fee of 20 cents.

Q. You have told us that if the regulations were strictly enforced here it would not make any difference to you?—A. No. The last month of the fishing here our fishery overseer came down two or three days to the factory and stayed down until the fishermen came in. We had orders to take the lobsters as they caught them. He is here to-day, and can tell you.

Q. There have been various remedies suggested to the department for the improvement of the lobster fishery. The first and most severe remedy proposed is to stop the canning of lobsters universally?—A. That would not do.

Q. What would be the trouble there?—A. What are the people going to do then? How many people are there here that depend upon that fishery?

Q. Are most of the men who fish lobsters regular fishermen engaged in fishing the year around?—A. Here they are all fishermen. We have all kinds of fishermen here.

Q. In a great many places we find the men fishing lobsters are mostly farmers?—A. Not here in my district.

Q. The Lobster Commission of 1898 recommended that the fishery should be shut down by sections, and that the closing down should continue gradually around the coast?—A. That would never do.

Q. What would be your remedy for the condition of affairs, what would you suggest yourself as the best thing to do?—A. One half the lobsters are female lobsters. Take a part of them and put them away and let them go when you are done fishing. If you want a thousand or two thousand, build one of these pounds for the factory. Now this year I gave the hatchery at Canso three hundred and some odd spawn lobsters or rather I took the eggs off those lobsters and gave them to the hatchery and I threw the lobsters away; they were no good to me. They promised to pay me for them. It is just as well for the government to pay for them and save them.

Q. And you say those lobsters were no good to you?—A. They would not live eight days.

Q. Could you not can them?—A. We do not cook lobsters every day. I don't get enough to cook every day and all the other factories do not this last few years, so it is just as well to take the whole thing.

Q. There are many places where it would be impossible to establish pounds.—A. Well build at the nearest place suitable for a pound for two or three hundred dollars. You can put the lobsters in for about \$50, you can put a thousand lobsters in. All you have to do is to keep them six weeks. I kept them eight weeks myself and they did well. You could keep them as long as you wanted to.

Q. And do you lose many by the lobsters attacking each other?—A. Not if the space is big and they are well fed. In the spring of the year you can get plenty for them to eat for nothing. All you have to do is to keep them six weeks. The lobsters don't all hatch at the same time. You take two lobsters and put them in the pound and in two or three weeks you may have young lobsters. Put the two lobsters together and one will hatch out today and the other not for three weeks.

Q. Do you think the spawn lobsters hatch out very quickly?—A. That is my opinion. I proved it this summer. The steamer from the hatchery brought ten million young lobsters the other day.

Q. It has been suggested by Professor Prince, I think, that we should have a universal close season for the whole Atlantic from the 15th of July to the 1st of January?—A. Well that would not suit us very well because we are too far from the market. It would not suit for me and all the rest that are in the same business.

Q. What part of the season would not suit you, the early part or the last part?—A. It would not suit all hands to be under the same season because we are all too far from market.

SESSIONAL PAPER No. 22a

Q. You mean that the market would be gone before you could get in?—A. Yes.

Q. Fall fishing I suppose is out of the question here?—A. If we could get a month now is the time.

Q. Do you think the lobsters are in good order now?—A. Yes.

Q. Have they recovered from shelling?—A. Not now but in two or three weeks.

Q. That would be the month of September. Now as to the matter of licenses you know the policy of the department has been to restrict the number; what do you think of that?—A. Well that was a good thing in one way because everybody wished to go into canning lobsters, and after a time they were no good and used to spoil the good packs. I know some experienced men that went in ten years ago and lost all. It would not be right for everybody to go into the business.

Q. Do you think there is any good reason why one man should be granted a license and another man refused?—A. No, everybody should get a license if they are qualified.

Q. What qualification would you insist on?—A. Anybody that has had experience and been canning lobsters before.

Q. The fishermen might not possibly agree with the canner as to the price they were getting; do you think it would be right in that event for the fishermen to be allowed to can for themselves if they could get a license?—A. Yes, if they could.

Q. They might not have experience, but they might have sufficient capital and could get a man with experience to do the work for them?—A. Yes.

Q. Within the last few years the department have been granting what are called co-operative licenses where a number of fishermen club together and apply for them?—A. Yes.

Q. Do you think that is a right policy to follow?—A. Well if those lobsters turn out as good as the rest. But we bought lobsters from some of the fishermen and had to throw them away.

Q. You could not ship them?—A. No.

Q. Do you think it would be proper to insist upon an inspection in the cannery?—A. No.

Q. Why would it not be proper to have the canned lobster inspected; you know that practically all other food products are inspected today?—A. As long as the man you appointed would know the business. Maybe I might think I knew more than he did.

Q. Do you generally sell your cases of lobster?—A. No. Mr. Duff sells them for me.

Q. Do you think the fishermen would make more money if they were allowed to can for themselves?—A. No, they would lose. They tried it but could not do it successfully.

Q. Are you aware of fishermen ever having complained that they were not getting a fair price for their lobsters?—A. Oh, yes, every year.

Q. Is it to your knowledge that any fisherman has lost his catch of lobsters owing to the canner having refused to accept them?—A. No.

Q. What would happen here if the canneries were closed?—A. It would be bad for all hands. That is all they depend upon in the spring, there is no farming here.

Q. And at that time you have no other fishery they can turn their attention to?—A. No.

Q. Which branch of the lobster industry do you think is more remunerative to the fishermen, the live lobster trade or the canning?—A. The canning here.

Q. Do you think that the shipment of live lobsters should be favoured in preference to the canning industry?—A. No.

Q. Why not?—A. Because there is not a standard price. Today you may get \$8, tomorrow \$14, and the next day \$6.

9-10 EDWARD VII., A. 1910

Q. In the case of the canned lobsters you know just what you are getting, it is a fixed price from the start?—A. Pretty near it. It would not be much out, only 50 cents or \$1.

Q. Are the present facilities adequate for the proper handling of the live lobster trade?—A. No.

Q. What more would you require?—A. In the first place I would require to have connection from Cape Auget to Arichat which I have not got. This year many days it has cost more to take the lobsters from Auget to Arichat rather than from Canso to Halifax. You see I had to track these lobsters eight miles.

Q. From your experience can you say whether the hatcheries have helped to maintain the supply of lobsters or not?—A. Not to my knowledge, I never saw them.

Q. Have you anything to suggest which in your opinion would make the hatcheries more useful?—A. No.

Q. Would you prefer a system of pounds to hatcheries?—A. Yes, I believe pounds are the best small pounds, not the big ones.

Q. Have you any experience as to pounds yourself?—A. Yes, sir.

Q. Would you tell us what it was?—A. I told you we used to keep the lobsters six or seven weeks. It is very easy to keep them for that length of time in a pound if you feed them, not a big quantity, four or five thousand would be enough.

Q. How long would you propose to hold them in the pounds?—A. Six weeks. The last you put in will be only one week. When you came to the last if you had not the quantity you could put in more——

Q. Would you hold them until the close of the season?—A. Yes. At the last you could put in the female lobster with no eggs outside to make the number up.

Q. Your idea is that you should not only protect the berried lobster but all the females?—A. Of course. What is the use of 300 lobsters for a summer when there are 300,000. It is only a matter of a few weeks and those same lobsters would have eggs on.

Q. Is there any fishing done here after the season closes?—A. No, not that I know of.

Q. Do the fishermen suffer much loss of gear?—A. They do in the spring more or less.

Q. What do you think of the method of stamping the cases?—A. It is pretty good.

Q. But there is no fishing after the season here?—A. Oh no.

Q. What do you think about fishing in bays, lagoons and shoal water places? In many places on the coast we find that the lobsters late in the season go into these places. In my opinion there is no doubt they go into spawn?—A. Yes, they should stop that.

Q. Have you put female lobsters into your pounds that had no berries outside?—A. Yes, a good many.

Q. With what result?—A. The result was that the eggs came out after a week or so.

Q. Have you ever held her until she hatched?—A. No, we were not allowed you know. I suppose some would hatch during the time but you would not be able to tell.

Q. What style of trap do your people fish?—A. Traps made with laths.

Q. Yes, I know, but there are two or three varieties.—A. They have all kinds here.

Q. Is the old fashioned trap used?—A. They have traps with five heads, some with four and some with three.

Q. Do you think that any of those traps are too destructive, that they capture too many small lobsters?—A. No.

Q. Do you think it is possible to so arrange the space between the laths of the trap that a larger proportion of small lobsters will escape?—A. Well as to the small lobster here there are very few that——

SESSIONAL PAPER No. 22a

Q. I am not speaking particularly with regard to here.—A. The lobster that goes into the trap is held for 24 hours. Even if the laths were far apart the lobster would fall in a corner.

Q. You think they would not go out of the trap?—A. They might, some.

Q. We find in many places traps that have only half an inch of space between the laths and hold everything that goes in; do you not think it would be right to insist that the space should be very much farther apart?—A. No, not here. You would have to break all the traps.

Q. But in the case of future traps?—A. You would have to watch every fisherman when he makes them.

Q. Do you think if we insisted upon the traps being made in that way, it would be the means of allowing the very small lobsters to escape?—A. If they had the traps as you mentioned they would not be able to get any.

Q. Do you not think the small lobster should be allowed to escape?—A. Well, maybe there are none bigger in places.

Q. Then let them shut up and wait till they grow bigger?—A. They would never grow bigger, not in those places. On sandy bottom there is not much to feed on, they just crawl from one end to the other.

Q. Have you any statements that you can lay before us as to how your shipments have turned out?—A. I have none with me here.

The COMMISSIONER.—Mr. Kyte, do you desire to ask any questions?

Mr. KYTE, M.P.—I must say I feel like congratulating the witness upon the readiness and conciseness of his answers.

The WITNESS.—I made a lobster grow three pounds. I kept him for about six weeks. Mr. Loveless brought it to me. It weighed nine pounds, and had been caught in the harbour somewhere. I said: 'I will keep him and feed him and see what I get from him.' I used to put in six herring, and he ate them all in one day.

By the Commissioner:

Q. Where did you keep him?—A. Inshore. There was one time he was eight days without food, and lived all the same. Then I put codfish in, and he ate all of that meat. I took him out after a while and brought it to the convent and gave it to the sisters. When I put it on the floor they were all scared. They had to break him to cook him. When weighed he was three pounds heavier than when put into the pound. I have seen them get a lobster of 10 inches and keep him three or four weeks, and he grew half an inch if you fed him.

Q. They are supposed to grow two inches in a year?—A. Maybe this was the season they would grow more.

Q. I suppose they will grow more than that?—A. You would not believe it, but a lobster will eat six herring in twenty-four hours. I kept him several days without anything to eat, and he was just as heavy. Of course, the food he takes in he digests it afterwards.

Witness discharged.

CASIMIR VIGNEAULT, fisherman, Arichat, called and sworn:—

By the Commissioner:

Q. How long have you been engaged in the lobster fishery?—A. Twenty years.

Q. Have you always carried on your fishing in this neighbourhood?—A. Yes, sir; that is lobster fishing.

9-10 EDWARD VII., A. 1910

Q. Do you carry on your fishing off shore?—A. Back of Jerseyman island.

Q. Right out into the Gut?—R. No; that is the island off here, the southwest part of it.

Q. At what time of the year do you begin to fish?—A. As soon as the ice has passed.

Q. When would that be, one year with the other?—A. Some years we commence the 1st of April, but I must say the 1st of April is no good to us here, because these last years we cannot fish until coming on the last of that month.

Q. What is that owing to?—A. Owing to the ice and bad weather. Sometimes the harbour is frozen in April.

Q. Easterly winds prevail in the spring?—A. Yes, and the easterly winds bring the ice in from the east.

Q. What is your fishing season here?—A. From the 1st of April till the last of June.

Q. As a rule, then, you do not begin to fish before the 1st of April?—A. This year I made nothing until the last of April.

Q. You own your own boat and gear?—A. Yes, sir.

Q. Are there two in the boat?—A. Yes.

Q. What number of traps do you fish?—A. 100 is quite easy for a man. This year I ran less, because I was going to give up fishing lobsters.

Q. Is that the general rule; do the fishermen here not fish more traps than that?—A. It takes a big man, because all the fishermen have got other gear besides, nets and so on.

Q. They do other fishing at the same time?—A. Yes, there are only a few fishermen that run 100 traps.

Q. How often do you fish?—A. Every morning.

Q. Do you bait the traps afresh every morning?—A. Yes, sir.

Q. What bait do you use?—A. Sculpin and flat fish.

Q. In what depth of water do you begin to fish?—A. I fish some years in 14 fathoms of water and we stop in two so the sea won't break on them.

Q. How far off would 14 fathoms be?—A. Some years we fish at the Sable Rock. It lies three miles from Jerseyman island, about four miles from our shore.

Q. In what part of the season do you make your best fishing?—A. In May.

Q. Do you find a larger run or more fish then?—A. No, they are no larger in May, but you can fish them better. You cannot get to them every day on account of the water being so rough. Some days you will be three days without seeing a trap at all.

Q. But there is the best run of fish then?—A. Yes.

Q. What proportion of the fish you get out there will be under the 8 inch size?—A. We don't get very small lobsters here, there are very few small ones. Our head on the trap, the mesh, is three inches. If there was a small lobster he would have a chance to swim through.

Q. What style of trap do you fish?—A. They are nearly all what we call parlour traps. They are about three and a half feet long.

Q. Is the 3-inch measure on the head extension measure?—A. Yes, sir.

Q. Do you think the parlour trap is any more destructive to the lobster than the old fashioned trap?—A. Well, the parlour trap holds the lobsters better after they are in.

Q. If you happen to miss a day's fishing the lobsters will not get out of the parlour trap as they will out of the old fashioned trap?—A. No, sir. In the old fashioned trap the lobster has a better chance to swim out.

Q. What space do you leave between the slats of these traps?—A. About an inch I guess.

Q. Do you continue fishing in the same depth of water?—A. When it comes to the last of May we commence to haul in to shore, because the lobster crawls in more.

SESSIONAL PAPER No. 22a

Q. You follow the lobster inside?—A. Yes.

Q. At what time of the fishing season do you find the female lobsters with berries most numerous?—A. In May when the water gets warmer we get more.

Q. What has been the practice with regard to berried lobsters in the past, have they always been brought to the cannery?—A. Well, yes. When I first commenced fishing about 30 years ago there were a great many lobsters and we used to fire the berried lobsters out. I would fire them out and the other man would bring them in, and I guess after that they were all brought in or washed off. I washed a lot off myself.

Q. Is it an easy thing to wash the berries off?—A. Yes. Take the lobsters and slap them on the water. Give them three or four shakes that way (illustrating by a gesture) and all the eggs fall off.

Q. Does that injure the lobster?—A. I guess they are no good to can. The canner says they are no good to can.

Q. Those lobsters will not live long?—A. No.

Q. How are they for shipping away alive?—A. I don't believe they are any too good.

Q. What sort of lobsters are they generally, a good run?—A. These last years the lobsters are very scarce, but I think they are bigger than they were about five years ago although we were catching a great deal less. When I commenced fishing about 30 years ago I had only seven traps and I got 14,000 lobsters by count. This year I only got 2,000 weight. They have been decreasing every year.

Q. In number?—A. In number.

Q. But you say they are nearly as large?—A. Since three or four years I find they are bigger in size.

Q. But not so many of them?—A. No.

Q. What was the smallest lobster you ever saw with eggs attached to her?—A. About 8 or 9 inches. I don't believe I got any less than 9 inches with eggs.

Q. They are generally a good run of lobsters?—A. Yes.

Q. Do you fish right up to the close of the season always?—A. Yes, sir, I fished to the last day this year.

Q. What do you think about this matter of licensing the fishermen?—A. Well I don't see that it would be any good. I don't see why they would put a license on the fisherman.

Q. It is not proposed to charge any heavy fee?—A. It is to give a man a job that is all I suppose.

Q. The same fishery officer that has the job now would be expected to look after the licensing?—A. Oh no, there would be somebody else.

Q. The idea on the part of those who made the suggestion is, that the fishermen who have taken out a license would be more careful to observe the law, and if any were found violating it systematically their license would be withdrawn and they would not be allowed to fish lobsters?—A. I don't believe it would be of any value here because I do not think the law is violated any here in regard to small lobsters I don't believe there are any.

Q. How does the price paid for lobsters at present compare with what you received when you first began to fish?—A. This year it was low. Last year and the year before the price was good. This year we got \$2.50 and the year before we got \$4.

Q. And what was the price when you first began to fish?—A. When I first began we were doing better because there was more lobsters. The price was \$3 then. I got 14,000 count and \$3 per hundred weight. No, by count, there was no weight at that time. They are only weighing them now.

Q. You mean to say you got \$3 per hundred when you began to fish first?—A. Yes, sir, 18 or 20 years ago.

Q. In the inner Gulf at that time they were only worth about 50 cents a hundred?—A. We own our gear you know.

9-10 EDWARD VII., A. 1910

Q. How is the price fixed as between the fishermen and the canner?—A. They fix the price in the spring. They offer so much and we have to fish for that I suppose.

Q. Do you think there is any competition at all in the matter?—A. There may be with the canner, I don't know. There is none with the fishermen.

Q. Do you think there is any combination on the part of the canners to keep the price at a fixed rate?—A. I am not in a position to know that.

Q. You expect the canner to take everything you bring in to him?—A. Yes, sir.

Q. Do you think there is any disposition on the part of the fishermen now to protect the berried lobster better than they used to?—A. No, there is no more protection for the she lobster than when I began.

Q. How could we get at the fishermen to make them understand the necessity for saving and protecting that lobster?—A. Have the government buy them, I don't see any other way. It would be cheaper than to have those cutters out I think. Here there were only about three or four she lobsters caught that the canner got.

Q. Out of every hundred lobsters you catch how many are female lobsters with berries?—A. The canner goes over them every second day. Some mornings when I go to the factory—I do not go every morning because I live three miles away—I will have two, some mornings one, and some mornings none at all.

Q. How many would you say there would be in every hundred lobsters taken?—A. That carries the eggs on? There might be two or three, perhaps more.

Q. Is there any one time in the season when there are more female lobsters with eggs than at other times?—A. As the lobster fishing goes on there are more. In May when we get our traps inshore there are more she lobsters.

Q. When you go into shoal water?—A. Oh, yes.

Q. Has the practice of stripping the eggs off the female lobster been followed by the fishermen here?—A. Yes, I believe so.

Q. As far as you know have the canners ever objected to receiving berried or undersized lobsters?—A. No, they take whatever we bring them.

Q. Seeing that there are only two or three female lobsters with eggs, per hundred, would it not be possible to induce the fishermen to put them in the water outside?—A. Heave them over after you get them?

Q. Yes?—A. You will have them every morning then.

Q. Very well, heave them over again if there are not more than two or three per hundred?—A. If all the fishermen were honest. One may heave them out and perhaps his neighbour alongside may wash the eggs off.

Q. Do you think that preaching to them would do any good?—A. No. If you had the Almighty he would not.

Q. It has been suggested that we might send some person around in the winter time to meet the fishermen and explain to them the necessity for observing the law?—A. You could not do that.

Q. You think that would not work?—A. Not until they all combined to put these lobsters in the water.

Q. Then we would have to pay them for doing it?—A. Yes.

Q. We would have to pay them to observe the law?—A. If there was a man to receive the she lobsters and take care of them.

Q. What would you think of establishing hatcheries?—A. Since I have been fishing lobsters they have got hatcheries all around us here.

Q. No. There is one at Caribou and on at Canso?—A. They say they are doing very good work at Caribou. The lobster fishing has been decreasing here every year. They come and get our spawn and they land the young lobsters over on the Halifax shore or somewhere else. This year they were landed here. I never heard of any young lobsters being put in our bay until this year.

Q. This year they did put them there?—A. Yes.

Q. What do you think of the system of pounds?—A. I believe it ought to work very good.

SESSIONAL PAPER No. 22a

Q. There must be opportunities all around here for the establishment of pounds?
—A. Sure.

Q. You want lots of salt water of good depth and a chance to bar the lobsters in?
—A. There are lots of such places here.

Q. What about closing down the fishery for two or three years; would you not approve of that?—A. I would not myself.

Q. You are going to give up fishing though?—A. We will have to give it up if this continues because we cannot make it pay.

Q. The only remedy you have to suggest is saving the lobsters and putting them into pounds or hatcheries?—A. Yes.

Q. What do you think about the matter of licenses; the policy of the department of late has been to restrict the number issued?—A. I was in the canning business one year. We took it into our heads that we were not getting enough from the packer and started canning. It was the biggest mistake that ever we made.

Q. Did you start alone or were other fishermen associated with you?—A. We were eight fishermen.

Q. What did you do?—A. We got cans from Halifax. We were the leaders of it and Messrs. Stairs & Morrow fitted us out. We went into the business and the price of lobsters was very low. We could have done twice as much if we had sold our lobsters to the cannery here.

Q. You struck a bad market?—A. Yes.

Q. Do you think the fishermen are better off as they are, or would they make more money if they went into canning?—A. I suppose the fishermen are better off the way they are selling to the canneries.

Q. I have no doubt there may be exceptional cases now and then, where fishermen may go into the business and do well?—A. This canning business takes a man that understands the thing properly. There are lots of fishermen like myself that do not understand canning. They understand fishing, but not canning.

Q. And furthermore it would require some business training to carry on the business successfully?—A. Yes, and you have got to have a market.

Q. With a view of giving the fishermen no cause to complain that they have not a fair show, the policy of the department at present is to issue a canning license to a number of fishermen—from 15 up—who club together and demonstrate that they are able to carry on the business; do you think that is a wise policy and that it gives the fishermen no cause to complain that they are not getting fair treatment?—A. I don't know that it would work here. The worst of it here is that they have too long a season to the westward of us. They are fishing too long for us. That is what injures our Boston market.

Q. That is as regards your live lobster trade?—A. And it is pretty well all.

Q. Is there more money in the live lobster trade for the fishermen than there is in canning?—A. Yes, twice as much. One year I made \$400 fishing lobsters and I don't suppose there was \$100 out of that that was canned.

Q. What is the average catch of a boat here per season in pounds weight?—A. This year I got 2,000, that is all.

Q. What is the best catch you ever had?—A. Fourteen thousand in count.

Q. What would that represent in pounds?—A. They would go over a pound a piece then.

Q. Do you think the department should encourage the live lobster industry in preference to canning?—A. Yes, I believe the live lobsters should be protected more. There is more money to us here if we can sell to the States, but they fish so long to the westward. In April the Boston boat does not run here, we cannot ship live lobsters.

Q. What do you think of the present size limit of 8 inches, would you advise any change in it?—A. No, I don't think so. Supposing we get the small lobster you only destroy one, but if you catch the she lobster and destroy it there are lots of lobsters gone.

9-10 EDWARD VII., A. 1910

Q. What would you think of raising the size limit to 9 inches; if you are in favour of encouraging the live lobster trade a 9-inch limit is all you want for that?—A. They are not so particular in the States anyway now, they will take them any size.

Q. Do you think lobsters less than that size are being shipped?—A. I could not say that.

Q. What would be the effect of fixing the size limit at 9 inches?—A. I don't believe it would——

Q. How would it affect the canner?—A. It would affect him in some way. He would lose some by it.

Q. It would not affect the live lobster trade?—A. No, perhaps it would not affect it here as in some places it would.

Q. I understand that what you object to—and I suppose you represent the opinions of most of the fishermen here—is that they have too long a season to the westward of you?—A. Too long a season.

Q. That they continue fishing too late?—A. Too late for us. If they were going to stop the 1st of May or the 15th of May——

Q. Instead of the 30th June?—A. It would give us a chance here to trade with the Boston people, we could ship our live lobsters to Boston then. Here, if we could get a month or five weeks in the fall, it would be a great advantage to the fishermen.

Q. Do you think it would be possible to keep the fishing outside at a certain depth of water? We find that elsewhere great destruction goes on by fishing in very shoal water—in a fathom in some places, and the traps are practically dried out at low water—and we find them catching there a great many small and berried lobsters; what do you think of that kind of fishing?—A. Here we cannot fish that shoal water, because we lose our traps; they would break up. We are losing a great many traps as it is.

Q. And your losses occur in shoal water?—A. Yes.

Q. What sort of bottom do you fish on generally?—A. On rocky bottom.

Q. Is it to your knowledge that fishermen have ever lost their catch of lobsters by the canners refusing to accept them?—A. No; we have never been troubled that way.

Q. Have any troubles occurred at all?—A. Troubles about the price; but they would not last long.

Q. Is there any statement you would like to make of your own accord?—A. No.

Witness discharged.

JOHN R. MACDONALD, fisherman, Janvrin Island, called and sworn:—

By the Commissioner:

Q. How long have you been engaged in the lobster fishery?—A. About 26 years, as near as I can remember.

Q. Where do you carry on your fishing?—A. On Hastings shoals, western part of Madam island, entrance to the Strait of Canso.

Q. Have you always fished in the same place?—A. Within a radius of two miles I made a shift.

Q. But during those 26 years you have been fishing on about the same ground?—A. The same ground.

Q. What is the state of the fishing now?—A. It is dwindling down, getting less.

Q. Has it been that way all the time?—A. It has been dwindling the whole time. The season has got a good deal to do with it. We are hampered and bothered with the ice, so that very often we don't get our traps out until May.

SESSIONAL PAPER No. 22a

Q. On the whole, in spite of the season, you think the fishing is undoubtedly decreasing?—A. Decreasing.

Q. What was it like when you began; how many traps did you fish?—A. 60 the first year.

Q. And what did you catch?—A. I averaged about \$1 a trap. The lobsters were very low—I think it was 80 cents a hundred, between 60 and 80 cents a hundred by count.

Q. And you did not make more than \$1 a trap?—A. \$1 a trap, but we hove away a lot of the small ones.

Q. You had a great many big lobsters, and you did not need to save the small ones?—A. They would not buy them.

Q. What canner did you sell to in those early days?—I think Mr. Duff was the first one. He packed in the Strait of Canso.

Q. How many traps do you fish to-day?—A. Between 80 and 100.

Q. When do you begin fishing, one season with another?—A. I generally begin about the 15th of April.

Q. Do you find lobsters there as soon as you begin?—A. Yes.

Q. When do you have your best fishing?—A. I have my best fishing about the month of May.

Q. What depth of water do you fish in?—A. I generally commence in between six and seven fathoms of water.

Q. When do you move in?—A. I move in just as soon as the weather gets settled up and the ice moves away.

Q. Then you move into shoaler water?—A. Yes, between two and three fathoms.

Q. What run of lobsters do you get in shoal water as compared with deeper water?—A. About the same average; about the same quality of lobsters.

Q. Where do you sell your lobsters to-day?—A. Baxter's factory, West Arichat.

Q. What has been your practice; do you expect to sell to the packer everything you get, big and little, berried and non-berried?—A. Years ago we could not, but these late years they are packing them.

Q. Why could you not in the early years?—A. Because they would not buy the small lobsters then; they would not buy anything under nine inches.

Q. But now they are not so careful, they take anything they can get?—A. Yes, they take anything they can get.

Q. Does anybody come to that locality to collect eggs for the hatchery?—No, sir; not up there.

Q. Is there any station of the Fishermen's Union where you are?—A. No, sir.

Q. Are there many other boats fishing in the locality where you fish?—A. There are as many as 15 boats, I think.

Q. Fishing on that ground?—A. In the vicinity of that ground.

Q. You fish close inshore?—A. Pretty close.

Q. You do not lose much gear from rough weather?—A. Sometimes we do, we lose considerable some years.

Q. From ice or rough weather?—A. Some years from ice. More years from easterly gales. When we get into shoal water the traps break up and go ashore.

Q. Do you fish right up to the close of the season?—A. Yes, sir, we generally do.

Q. Your season there is the same as here? 1st April to the end of June?—A. Yes, when we can get April.

Q. What is your opinion about that season, is it the one that suits the best?—A. I think not because the month of April is no season on account of us always being bothered with the ice. I think if we could get a few months in the fall of the year, September and October, it would be of great advantage to the fishermen.

Q. I suppose where you fish you are sheltered in the fall, the winds are mostly from the west and northwest?—A. Yes, we are mostly sheltered.

9-10 EDWARD VII., A. 1910

Q. It would be smooth water with you?—A. Not so much that but better in every way.

Q. Do you think it would be better for the lobsters?—A. Better for the lobsters and better for the fishermen, and I think it would be more satisfactory to the packers too, because very often in the spring of the year, say the last of May, when the mackerel come on the fishermen drop their traps and go catching mackerel.

Q. How would it do to knock off altogether in the spring and fish in the fall only?—A. I think it would be a very good idea so far as my opinion goes.

Q. It would suit you?—A. Yes, it would suit me.

Q. What style of trap do you fish?—A. The parlour trap I fish these late years, but I used to fish the common trap.

Q. Why did you adopt the parlour trap?—A. I found the parlour trap would hold the lobsters much better.

Q. What size mesh do you put in the ends?—A. About three inches.

Q. And what space between the slats?—A. About an inch and a half I think, that is as near as I can go to it.

Q. That is a very wide space?—A. That is what I find is the best. I generally put a lath as a measure. I don't take the widest, I take a narrow lath. I find the pots do better.

Q. What size lobster do you think will go out between that space?—A. It is a very small lobster, I cannot say altogether. I did not take great notice of that; when a lobster goes out between an inch and a half space I think they should be let go.

Q. Do you think the large lobsters chase the small ones out of the traps?—A. Yes, sir, I am of that opinion, they crush them up in the trap.

Q. Do you think it right to make a trap with only half an inch space between the slats?—A. I do not, I think not.

Q. I suppose all the fishermen up your way own their own boats and gear?—A. All of them so far as I know.

Q. What do you think of the proposition to have the fishermen take out a license?—A. I don't know how it would ever work. It might work very well.

Q. The object of the department, of course, is to have the law observed; you understand that?—A. I understand.

Q. And the fact appears to be that the law is not observed at all and never has been?—A. No, I do not think so.

Q. The idea of those who suggest licensing the fishermen is that if they took out a license, even if they did not pay for it, they would feel they were obligated to observe the law?—A. Yes, I understand that.

Q. And they would perhaps inform on others who did not observe it. If a man in possession of a license was known to violate the law that license would be cancelled and he would not be allowed to fish lobsters in future; do you think that scheme would work?—A. I don't know whether it would. I think it would be a sort of protection.

Q. Now as to the matter of payment for lobsters, how do you arrange for that?—A. Well the packer generally sets the price in the spring and we have to abide by it.

Q. And are you generally satisfied with it?—A. Some years we are. This past season we were not.

Q. Next year if the price goes up again you will be happy once more?—A. It is likely.

Q. Is there any competition in the matter or are you obliged to accept a certain price?—A. I think there is competition between some of the packers because some will come in and offer a better price sometimes for lobsters.

Q. Are you bound by your agreement?—A. We are not bound by any agreement, we are independent.

Q. You can sell to whom you please?—A. Sell to whom we please. We generally stick to the man who fits us out in the spring.

SESSIONAL PAPER No. 22a

Q. What has been your practice with regard to seed lobsters, do you brush the eggs off and bring the lobsters to the factory or throw the fish overboard?—A. I have thrown them overboard and have brushed them off.

Q. And brought them in?—A. I never bring them to the factory except at rare times because the smack always calls on us. My smack man would weigh them these late years and throw them overboard. In a morning I would only have one or two seed lobsters. I used to heave them overboard myself. If I saw three or four large lobsters I might save them.

Q. You understand though that these lobsters should be preserved?—A. I do.

Q. You are aware that it is wrong to destroy the berried lobsters?—A. I am aware of that but it is foolish for one man to heave them overboard and his next neighbour catch them and wash them off.

Q. Do you think that the fishermen would be better off if the season to the west of you were shortened a little?—A. I think it would be to our advantage a little.

Q. In what way?—A. On account of filling up the markets before we get any in. What the fishermen should get around here—that is as far as my opinion goes and I believe I am right—is a couple of months in the fall and a shorter time in the spring. If they never had any in the spring it would pay them better because they would not be hampered by the ice.

Q. That would be all right for the immediate locality but how would it suit the rest of them on the northern shore of Cape Breton?—A. I should think it would work as well up there as here, because they have more ice than here.

Q. Is the weather not rougher in the fall?—A. Perhaps it is. Perhaps the weather might make a difference. It would not be half as hard though on traps as the ice.

Q. What would you yourself suggest as the best way to protect the berried lobster?—A. To have some hatcheries placed on the shore would be the best protection I know of.

Q. Have you not a hatchery at Canso?—A. I don't think any of our lobsters caught up west of here where I belong go to that hatchery.

Q. And do they never come down from Caribou for eggs for the hatchery there?—A. I have never seen them collecting any.

Q. As to the matter of pounds, what do you think; you have heard what the other gentlemen have stated and what has been said about pounds here?—A. I don't know much about these pounds. In fact I don't know anything about hatcheries either.

Q. But you understand what a pound means: It is merely a place you pen the lobsters in. You would buy the berried lobster from the fisherman and hold her in the pound. If she spawns out, well and good, and if she did not we would release her at the close of the season. Are there places in your neighbourhood where pounds could be established do you think?—A. I think the water is too shoal.

Q. You must have a certain depth of water?—A. I think the lobsters would die. On the outer part of the shore they would get broken up with storms.

Q. What do you think of the department's policy in limiting the number of canneries?—A. It is not a matter that I know anything about. For the fishermen's part I think the more factories opened the better.

Q. The more competition there would be?—A. Yes.

Q. What do you think about the policy of issuing a license to fishermen who club together and allowing them to can?—A. It might suit in some localities. It would not suit where the fishermen are so far apart as where I live.

Q. Are live lobsters shipped from your locality?—A. From West Arichat, from the factory I sell my lobsters to. They ship them alive.

Do you think they ship a considerable part of the catch, all the large lobsters?—A. I think they do. They did years before, I don't know what they did this year. I think they shipped some.

9-10 EDWARD VII., A. 1910

Q. Of the two branches of the lobster industry which do you think is the one that should be favoured, the live lobster trade or the canning?—A. I cannot give you much of an opinion as to which would be the best.

Q. Would it be possible for the fishermen to ship lobsters direct to the market themselves?—A. In some places it would, in other places it would not. Where the fishermen are scattered on different parts of the shore it would not suit them at all, because a boat would have to meet them along the shore end and would have to pick them up.

Q. Is it to your knowledge that any fisherman has lost his catch of lobsters by the canner refusing to take them?—A. No, sir, it is very seldom they can get enough.

Q. What would be the effect, do you think, if the regulations were strictly enforced, if we compelled all the berried lobsters to be put back in the water and adhered absolutely to the 8-inch size limit?—A. I cannot tell you.

Q. Would you be able to continue fishing?—A. Well, I think I would continue fishing. Of course in the vicinity where I fish I get very large lobsters.

Q. What is the average run of lobsters?—A. From 8 to 10 and 14 inches that I catch. Some are under that.

Q. You have such a small proportion of small lobsters that it would not cripple you if you had to throw them out?—A. No, if I were to heave away the 8-inch lobsters I don't think it would hardly cripple me. But I know fishermen who do not live far from me that it would cripple. It depends on the kind of bottom you fish on.

Q. Speaking generally, how would it affect the fishermen in your neighbourhood?—A. I think it would affect them to a great extent.

Q. How would it affect the canner?—A. I have no idea of that.

Q. In a great many places they have told us that they could not continue to can but they would have to give up the business?—A. I know a great many fishermen in the Strait of Canso that would have to give up, it would not pay them at all.

Q. Have you any idea how many out of every hundred you catch are berried lobsters?—A. Well there are different days. Some days after a heavy storm and the seaweed is all kicked around, there would be more. In calm moderate weather we would find less of them. Some days we find two to a hundred. Perhaps some days we would get five, and perhaps other days we will not see one.

Q. You think you are more apt to get them after a storm?—A. I think so.

Q. That is because they have been disturbed in their nests?—A. Yes.

Q. Have you told us when you make your best fishing?—A. In the month of May. That is in a season when we can fish in the month of May and are not troubled by the ice.

Q. Does the ice sometimes interfere with you in the month of May?—A. Yes, very often late in May. In fact I have seen it interfering with us in June.

Q. Is there anything you would like to say of your own accord?—A. I would like to make the suggestion that we should get a couple of months in the fall and have less time in the spring.

Q. Is that feeling general where you come from?—A. I would think that is general among the men I have seen, among all my neighbours around, all the fishermen except one or two. I have seen 10 or 12 men and they were all of that impression.

Witness discharged.

HENRY DUFF, canner, Petit Degras, called and sworn:—

By the Commissioner:

Q. How long have you been engaged in the lobster canning industry?—A. This was my 26th summer in Petit Degras.

SESSIONAL PAPER No. 22a

Q. Have you carried on canning anywhere else before that?—A. Very little. Up in New Brunswick, in the Miramichi, but very little there. It was principally salmon there then.

Q. Were there any other canneries in operation when you came down here?—A. Yes, an American firm—Lewis.

Q. Your cannery is at Petit Degras, where you reside?—A. Yes

Q. Do you run more than one cannery?—A. No, just the one.

Q. I understand that you are engaged in other branches of the fishery?—A. Yes; a general fishing business.

Q. What number of boats do you fish?—A. We do not own any. It is different there from other places. The fishermen supply their own boats and traps and all the gear.

Q. You outfit in what way?—A. They get the supplies, but they outfit themselves.

Q. What is the total number of boats that would be fishing lobsters for you, one year with the other; I suppose it varies?—A. There would be 10 or 12, perhaps a little more.

Q. What number of cases did you pack this season?—A. 395.

Q. From 10 to 12 boats?—A. Yes.

Q. How does that fishing compare with preceding years?—A. It is slacker, not so much fish. They have got to go farther for them

Q. Have you to fish more gear to get the same quantity of lobsters?—A. We have to fish more gear to get the quantity.

Q. What were the conditions when you first began to pack as to quantity, the distance of the fishing ground and the run of fish?—A. They got them right close to the shore then, that is compared to now.

Q. And there was a better run of fish?—A. Yes; no question about it.

Q. What were the regulations in force then?—A. We had a close season in the month of August, I think it was.

Q. There was no size limit?—A. Yes, 9 inches.

Q. Where do those fishermen who sell their catch to you fish?—A. Outside the harbour and in among the islands—the Green islands.

Q. What is the average depth of water they would be fishing in?—A. Ten or twelve fathoms.

Q. Do they follow the same practice as other fishermen of setting their traps in deep water and moving in as the season advances?—A. I think so.

Q. Have the regulations as to size limit and berried lobsters ever been enforced?—A. I know there is a certain amount of fear with the fishermen or the packer that the local officers are coming. They have got to watch them, and it keeps them back some.

Q. Has the amount of gear increased very greatly?—A. Yes, I think so. They fish more traps to the man.

Q. From your observation, what do you think is the principal spawning month of the lobster?—A. July and August.

Q. Could you give me any idea of the percentage of berried lobsters per hundred that your fishermen take?—A. No, I could not.

Q. As to your lobsters, how many do they run to the pound tin?—A. Ours take 500 pounds, very close to it, of green lobsters to make 100 cans—100 pounds of meat, of shelled lobster. That is just about as close as it can be. That is the full hundred pound cans.

Q. Has the quantity varied greatly since the beginning of your experience?—A. Take it from the beginning, and 200 pounds of green lobsters would give 100 pounds of meat.

Q. How do you think the department can best proceed in order to save the berried lobster?—A. I have a good deal of faith in these pounds if they are placed suitably by the factory, even if it was only a small pound. In the case of even small

9-10 EDWARD VII., A. 1910

pounds containing two or three hundred lobsters, according to the way they figure it out, does it not mean millions of eggs? There are places suitable all around the shore.

Q. Are there suitable places in your neighbourhood?—A. There is a place out there. The idea would be to have a place that a man of experience, who had an idea of what was required, would consider suitable.

Q. Do you think if the canners generally refused to accept berried lobsters, the fishermen would return them to the water?—A. That is a question pretty hard for me to get at.

Q. What do you think of the proposition to license the fishermen?—A. As far as giving those licenses, on account of my being a packer, I would not like to see somebody else packing, but outside of that we had the evidence awhile ago, since I have been here, saying that canning by fishermen did them harm.

Q. We have had a good many instances?—A. Well, if that was the case, it was not wise to give them a license.

Q. It requires a certain amount of business capacity?—A. The man in question admitted that he would have done better selling his lobsters to the factory.

Q. But where the fishermen are disgruntled or disappointed, what do you think of the policy of allowing them to combine and try the packing for themselves?—A. I would say yes.

Q. It is necessary for them to do something?—A. I would say yes, in case they understood it better. They would then know there is not so much money made in packing lobsters. And then as to the price. They speak about the price this season being a low price. Was it not equal to the price of canned lobster in the English and American market and everywhere else? Was it not the same with canned goods?

Q. What is your experience, do you think the fishermen are getting a fair return for their work?—A. Yes, I do.

Q. As to giving fishermen a license to fish how would that work out?—A. I don't know.

Q. The idea of those who propose it is, that the fishermen having a license would feel himself more or less a fishery officer and obligated to obey the law and lodge complaints against those who did not?—A. Do you think he would feel that way? If he were drawing part of the fishery officer's salary he might.

Q. Do you think the parlour trap is any more destructive than the old fashioned one?—A. I don't know how it is, I don't think so.

Q. As to the matter of allowing a space between the slats, do you think it would be possible to insist upon a regulation governing that; we have seen a great many traps with only half an inch between the slats and that seems to us unnecessarily destructive to small lobsters?—A. I suppose the trouble would be then it is so hard to get at the traps. That would be the trouble.

Q. Do you think that a space of an inch between the slats would be unfair to insist upon?—A. I don't know.

Q. They used to put the slats farther apart in the early days than they do now?—A. But then they had bigger fish to hold in.

Q. As to the matter of undersized lobsters, how would a strict enforcement of the 8-inch limit affect the canners in this neighbourhood, would it force them to shut down?—A. It would in the case of the smaller packer.

Q. For a short time?—A. Yes.

Q. But ultimately, do you not think, it would have the effect of improving the catch?—A. That may be.

Q. Do you take any part in the live lobster industry?—A. No.

Q. The facilities where you are do not exist?—A. No, we have not got the facilities now.

Q. Where the facilities do exist do you think it would be wise on the part of the department to encourage that trade rather than the canning?—A. Well, if the parties

SESSIONAL PAPER No. 22a

in the different districts were engaged in it and did better with it—made more money—I suppose it would.

Q. In Charlotte county and up the Bay of Fundy where they are close to the live lobster market, the department's policy is to increase the size limit and in that way develop the live lobster trade; here the conditions do not exist for anything of that kind and the same policy would not be justified?—A. No. The factory at Cape Auget ships live lobsters. We used to some years ago at Petit Degras but not this last few years.

Q. That is because the facilities do not exist I suppose?—A. Everything seems to be unhandy about it.

Q. Do you think the present size limit of 8 inches is a fair one to insist on?—A. I do.

Q. Would you advise the department to enforce it strictly, do you think that could be done?—A. That is the question. I don't know whether it could or not.

Q. It would be difficult to do it?—A. Certainly.

Q. Do you remember when an attempt was made to enforce the 9-inch limit strictly; that was in Sir Hibbert Tupper's time?—A. Yes.

Q. Do you think that the decrease is still going on in the lobster fishery? We hear in a great many places that the greater part of this decrease took place some years ago and that it seems to be at a standstill, that there has been no striking decrease within the five or eight years?—A. I think that for the little fishing that was done this year the lobsters were more plentiful than for the last four or five years. I have heard different fishermen say the same on that same shore.

Q. Your small fishing this year was due to a natural cause, the rough weather?—A. Yes, sir, and the fishermen did not rig out, so we could not get the fish. But for the traps that were out I think it has been a little better than for some years.

Q. Is it the case that the low price prevented a good many men going out?—A. Certainly it did.

Q. The fishery was not as actively carried on as last year when the price was higher?—A. Not at all.

Q. To what do you attribute the failure in the fishery or rather the decrease in the quantity of lobsters?—A. Well, I suppose we have to come down and say it is the destruction of the female lobster.

Q. It is due to overfishing?—A. Something like that.

Q. Do you think it is due to that rather than overfishing generally?—A. Oh, I think so.

Q. It has been suggested that a minimum size for lobsters of 9 inches should be established for the waters north of Cape Canso, and of ten or ten and a half inches for the waters south and west of that point; what would you think of establishing such size limits?—A. I think that would be very good. That would be something like the 9-inch limit we had here before, coming back to the same thing.

Q. And the effect of a ten or a ten and a half inch limit would be to cripple the canning industry south of Cape Canso?—A. Certainly.

Q. And develop the fresh lobster trade?—A. That would be all right enough. The biggest trade is the live lobster trade.

Q. On the other hand it has been recommended that the size limit should be reduced to 7 inches and the season proportionately shortened, in each case of course strictly enforcing the berried lobster regulation; how would that appeal to you?—A. Well, the season is very short here now. It is called three months, but we have not got that time, two months is more like it.

Q. April is no good to you?—A. Not at all, it does not count at all. There are a great many think—I think so sometimes myself—that if May and June were given and then have September and October, it would be better. Why? Because the spawn lobsters have shed all their spawn then and they are just getting nice for us to take and can, or ship them alive. The spawning season we consider is all over then.

9-10 EDWARD VII., A. 1910

Q. And the spawning season if you only fish in May and June will not have begun?—A. They are protected enough then. If you only fish May and June the lobsters have got all the protection they want I consider.

Q. Is it the case that the canners are compelled to accept undersized and berried lobsters for fear of losing their fishermen who would in case of refusal go to other canners less scrupulous?—A. I don't think the fishermen are as bad as that, there are very few if they are.

Q. Is it the case that it would take 30 per cent more lobsters in number in the fall to fill a pound can than it does in May and June?—A. I don't think it would in the experience I have had. Some years I think they would be just as good.

Q. I think you have told us that if the present regulations were strictly enforced it would not make any great difference here?—A. No.

Q. Are the existing penalties sufficient to deter packers from violating the law if they were enforced?—A. Yes.

Q. In the event of persistent violation of the regulations should a canner's license be cancelled?—A. I don't know.

Q. Has the number of canneries reached a maximum compatible with the preservation of the lobster industry and should the issuance of further licenses be discouraged?—A. I don't think so here. There is only one factory running at Petit Degras this season.

Q. Do you think the amount of gear fished by any cannery should be limited?—A. No.

Q. It seems odd to limit the number of canneries and yet not restrict the amount of gear in any way where the gear is doing the damage?—A. Yes, but the way it is here there is not any overcrowded ground.

Q. What do you think of the various propositions that have been spoken of, for instance, shutting down altogether for a term of years?—A. I don't go in for that at all.

Q. You would not approve of shutting down by sections either?—A. No.

Q. It has been suggested further that we should abolish the size limit, shorten the season and carefully protect the berried lobster; what would you think of that?—A. One of the reasons I don't think anything of it is because I consider the lobsters have got protection enough now. We only fish two months really, May and June.

Q. Yes?—A. Well, in July we consider they spawn and the lobster is swimming around now clear of the spawn. If we could pack in September and October we would be putting up just as good lobsters as in May and June, and why should we be kept without them?

Q. You do not think that having two season of that kind, practically fishing for four months, would be unnecessarily exhaustive?—A. No, I do not under the circumstances.

Q. What do you think of the matter of lobster hatcheries, is it within your knowledge that they have done any good?—A. To speak directly I don't know that they have, but this pound business—

Q. Appeals to you more?—A. Appeals to me more, even if only small.

Q. Where pounds could not be established would you erect hatcheries?—A. There is something in that of course.

Q. The hatchery at Canso sends over to this side and gets the spawn or did so this year; did they take any from you?—A. Once or twice, but it was very little.

Q. Where have they been in the habit of distributing the young fish?—A. I could not tell you. They say this year they put a lot of them on this side.

Q. Is that the first time they have done so?—A. I don't know, I could not say.

Q. Now, as to the matter of inspection, do you think it would be right to expect the cannery to be up to a certain standard of fitness?—A. In the matter of the quality of the pack?

SESSIONAL PAPER No. 22a

Q. I mean in regard to the equipment of the cannery, having suitable tables and all that sort of thing?—A. I don't know that that would be necessary. I would think that the packers would do that themselves, they would look after that. There might be something in it, but of course they have an inducement to have the canned lobster clean and good, because the pack gets a good name, it will sell ahead of a poor pack.

Q. Is there a good deal of inferior canned lobster thrown on the market that interferes with the sale?—A. It was supposed that that was the general trouble last year both in the United States and in England.

Q. There was supposed to be a lot of it?—A. There was supposed to be a lot of it. I have heard men who are supposed to know all about it speak of it in that way.

Q. We do see canneries where things look very slipshod and the tables inside are rough, sour and evil smelling. I do not think the conditions exist there for putting up a healthy pack.—A. I am not one that has them that way. We have ours pretty clean but that lies with the man himself. He cannot sell his pack as well if he does not have it good.

Q. Apart altogether from the cannery do you think it would be wise to have the pack inspected as in the case of other foodstuffs?—A. There may be something in that. It may not do any harm to the man that makes a good pack. It may put his name up on the market.

Q. Other food products are inspected and bear a stamp denoting their quality?—A. It might be an advantage in this case too.

Q. Would you refuse a canning license to an alien?—A. I have never considered that much.

Q. As between two applicants I suppose you would no doubt say that the alien should not have the first chance?—A. Oh yes, I would likely go that far.

Q. What do you think of the policy of encouraging fishermen to co-operate in canning?—A. Well I don't see that it will do any harm. Of course if there is a group of fishermen and the factory were dependent upon them for fish, it would probably have to shut down altogether or pack less.

Q. Are you aware of any complaints by fishermen that the price paid by canners is not altogether satisfactory?—A. Oh yes, this year it was considered not satisfactory, but the last three or four years it was the canner that considered he was paying too much.

Q. It has been alleged that in some cases the fishermen have suffered injury by the failure of canners to operate their factories although a sufficient supply of lobsters was available; do you know of any instance of that kind?—A. No, sir, I do not.

Q. What market would the fishermen in your district find for lobsters if the canneries were closed?—A. I don't know of any except they would have to have smacks from every place.

Q. The policy contemplated by the department's regulations is the taking of large lobsters and permitting the small ones to escape; is there any kind of trap better adapted than others for that purpose?—A. I don't know of any particular trap.

Q. Do you think that insisting upon a moderate space between the slats would effect that object?—A. That would certainly have something to do with it.

Q. The creation of an advisory board in connection with the administration of the lobster and other fisheries in the Maritime Provinces, has been suggested, would you approve of that idea?—A. Yes, I think that would be a good one.

Q. How do you think such a board should be constituted?—A. That would be for the province, would it?

Q. For the whole of the maritime provinces?—A. There would have to be some one connected with the lobster business as representative upon it. The different interests connected with it should be represented.

Q. I suppose the fishermen in some way should, if possible, be represented?—A. It would not do any harm at all and perhaps it might be a very good thing.

9-10 EDWARD VII., A. 1910

Q. That would be following the Scotch example, would it not?—A. Yes, such a thing would make them feel interested.

Q. Is there any fishing or packing done here out of season?—A. No, I don't think there is any done here at all. That is not attempted here at all.

Q. Is there much gear abandoned in the water?—A. No, there is not. People generally get their gear out.

Q. Do you think that labelling the cases of lobsters answers any good purpose?—A. Do you mean to say would it be just as good without it?

Q. Do you think it prevents fraud in any way?—A. I don't know whether it does. Still it may.

Q. If there is no illegal fishing the system cannot be abused here?—A. No.

Q. It was with the idea of preventing illegal fishing and packing that the stamping system was introduced?—A. Yes. I think it is kept very straight here.

Q. I do not think there is anything else I desire to ask unless there is anything you wish to suggest yourself?—A. No, there is nothing.

STANAGE BINET, merchant, Arichat, called and sworn:—

By the Commissioner:

Q. What particular branch of the lobster industry do you represent?—A. Well I have been in the fishing business for 22 years.

Q. That is the general fishing business?—A. The general fishing business and the fresh fish trade, and I have been head man in a lobster concern for two years all around the coast from Saint Esprit to Madam Island.

Q. As a buyer of canned lobsters?—A. As the head boss. I had care of the system all round, buying for the markets.

Q. That is for the live lobster trade?—A. Canned and live—both.

Q. How many years were you engaged in that do you say?—A. I was two years in charge for them. My business here would not allow me to go any more.

Q. What particular matter is it that we can get evidence from you concerning?—A. Well, it is a communication regarding the shipment of fresh fish, and then I would like to speak as to the seasons.

Q. Which of the two branches of the lobster industry do you think is the most profitable to the fishermen?—A. The live lobster trade certainly.

Q. Do the facilities exist here for carrying on that trade?—A. Not exactly, but they can easily exist.

Q. How can they be provided?—A. By having the Plant line call here and providing a government wharf. The Plant Line steamship has to pass here to go to Hawkesbury and the company are satisfied to call. I hold letters from Mr. Perry on that subject.

Q. The Plant Line will call here if sufficient inducements are offered them?—A. Yes.

Q. In what way?—A. They don't want any inducement. All they want is the business and they want accommodation.

Q. In the shape of a wharf?—A. In the shape of a wharf.

Q. To which they can go?—A. Yes.

Q. If the wharf were provided they would come here?—A. Yes, I have Mr. Perry's word for it.

Q. And that would provide a very good means of placing the live lobsters from here on the market?—A. It would put the fishermen in this position: To sell to the canner or ship as he pleased. It is the whole we want benefited, and not merely a part.

Q. There is no doubt that branch of the fishery would be the most profitable one, especially if such good facilities were afforded?—A. Yes.

SESSIONAL PAPER No. 22a

Q. You wish to state something as to the season, what is your idea about it?—A. Well, we give the men on the western shore seven months and our men here only three months. Why make fish of one and flesh of another?

Q. You know the natural conditions differ?—A. I know pretty well the conditions where they differ. They differ because there is more money in the western man's market. He has got the whole of five months and the better part of our time.

Q. He is more favoured by nature?—A. Naturally he is, and he gets big dollars out of it.

Q. It is only reasonable and natural that he should?—A. It is not reasonable and natural that he should get seven months of it. I would start him in January 1.

Q. And let him knock off when?—A. He would have January, February, March and April. He would have time. That gives him one month for bad weather.

Q. And here what would you say the season should be?—A. The fishermen here think that from May 1st is better than April 1st.

Q. You would wipe April out and knock off when?—A. Knock off the last day of July. That is what I think the fishermen want.

Q. You would give the fishermen here three months?—A. Give them three months and a month in the fall if you are going to give other parts of the coast a month in the fall. I don't think the government should open up any fall seasons unless they made it general, and if it were made general we would be entitled to our fall season as well as the rest.

Do you think in view of the evidently diminished condition of the fishery?—A. The fishery has not diminished any.

Q. It has not diminished?—A. No.

Q. Are there as many lobsters yet to be found as were obtained formerly?—A. Certainly. You put some men on the same ground and they will get the lobsters quicker than the others. You take down at Kempt Point, about 12 miles below Point Michaud, where they have got fishermen on a large territory equal to Petit Degras, they have seven or eight miles. Well, the Smith boys alone sold me \$1,800 worth of fish from there.

Q. Are they from Lunenburg?—A. They belong westward of Halifax but came up here fishing. On the same ground there might be a great many other boats fishing, but these men got the lobster up quicker, that is all the difference. They weighed to the smack 1,200 to 1,500 pounds of lobsters in ten days.

Q. How do they fish?—A. With the common pots.

Q. They do not fish with trawls?—A. No single pots, and a full length of line.

Q. How long have they been fishing here?—A. These men fish there every season. They went in there early and fished on the right system. The other fellows commenced after they were through their planting. Farther down where Baker comes from, it is like our shore, too many pots on the same ground.

Q. Do you think the amount of gear fished should be limited?—A. No.

Q. How are you going to restrict the number of pots on the ground?—A. Give every man a chance that is willing to work. If one man is willing to put out 150 pots and the other is not willing to do it, I don't see how you can restrict that man. The season is the only thing you can restrict him on.

Q. To limit the number of canneries is the present policy of the department?—A. That is radically wrong and has always been wrong.

Q. What should be done?—A. Let every man go into the business who feels like putting in his capital. My business is one into which everybody enters. They do not restrict anybody going into my business.

Q. Would you insist on having a standard cannery?—A. Yes, the goods should be inspected like anybody else's.

Q. How about the cannery itself?—A. It should be kept tidy and clean. There should be a sanitary inspection the same as for anything else. All bad fish that is

9-10 EDWARD VII., A. 1910

canned goes against the packer. The next season he will have a low price for the pack if it turns out bad.

Q. Do you think that if a license were given to every man who applied for it, the pack would be put up better?—A. He has got to take his chance in the business the same as the rest. Why should he be protected?

Q. Should he not be protected?—A. Not against the fishermen. You should give the fishermen the privilege of the market if they can get it. There are lots of business that fellows go into where they have got to take their chance. That is talking from the standpoint of the fishermen. Let the fishermen have all they can. The more men he can sell to the more competition there is, and it is better for the fishermen and the country at large.

Q. Do you not think the lobsters require some protection too?—A. They have got lots of protection in the present close season. The fishermen only fish 78 out of 365 days.

Q. In the face of that the fishery is decreasing?—A. I don't know as to that. Last year we had too many canned goods in the country. The market was flooded with canned goods that could not be sold, so there must have been more fish caught than the country wanted.

Q. Do you not think the general bad time the world over had something to do with it?—A. Not exactly, it would not make that overplus.

Q. Is there any other matter you desire to bring forward?—A. The providing of communication is a matter that serves the interest of the fisherman, because it will put him on an independent footing where he can either ship his lobsters or sell them to the canner as he pleases. That is the condition westward of Halifax and the men there are all prosperous. I do not see why our conditions here are not equally as good.

Q. Do you think two boats would come or only one in the spring?—A. In the spring one, and in the summer season two. The shipments made to Hawkesbury will lie on the wharf all day. From there they have got to go to Halifax and then on to Boston. Those 20 or 24 hours the lobsters lie on the wharf at Hawkesbury will have done the damage. If the fish come into this port they will take the boat from here and they will only have been packed an hour before that.

Q. What is the advantage of the live lobster trade over the frozen lobster trade; do you not think the lobsters would reach the market in a better condition if cooked on the spot than simply chilled and sent in cold storage?—A. I suppose that would be altogether left to the man who is running it.

Q. My own opinion is that the lobster which has been kept so long and no doubt exposed to the sun, is not in perfect condition when it goes into the pot.—A. Oh no, certainly not. Any live fish would depreciate thirty three and a third per cent in twenty-four hours, and mackerel in the same way. I shipped the first mackerel that ever went into Boston from here in the year 1887, when they did not have a refrigerator car on the Intercolonial. They sent me cattle cars from Truro to put them in. They did not know what a refrigerator car was.

Q. If the practice could be encouraged of cooking the lobster on the spot the moment he is taken out of the water, he would reach the consumer in much better condition?—A. The freight rate on a crate of lobsters indirect is \$2. Direct from here it would be only \$1.

Q. But supposing they shipped them cold storage already cooked?—A. Well, the cold storage would have to be at this end. It is an expensive business. Still there are a good many people like to have lobsters alive to eat in the restaurants.

Q. I do not think they would be as good as if cooked immediately they left the water?—A. I am told that live lobsters get to Boston in pretty good order.

Q. In a good many localities fall fishing could not be carried on—for example, on the north side of Prince Edward Island and the west shore of Cape Breton—because they are exposed to rough weather from the west?—A. Well, you see our men got two

SESSIONAL PAPER No. 22a

breaks this spring which made the fishing not successful. A man has got to look out and be ready for it. To a man round that coast the gear costs more because he wants more room. Now, in the matter of communication, the Plant line offered to take \$1 off the fare and so much off the freight if the communication were established. They would be only too glad to call here if the necessary facilities were provided. We want the same communication and the same power for our fishermen as the fishermen to the westward as near as we can.

Q. The percentage of berried lobsters to the hundred here is small?—A. My smack to the eastward of Point Michaud was getting 28 pounds of berried lobsters out of 5,000 pounds, but we were paid for them from Fourchu pound. My smack man took every berried lobster that came, and compelled Baker to take them. That man got 120,000 pounds of lobsters for me in that season, and I think there were over 24,000 pounds of berried lobsters. My opinion is they spawn two months, from the end of May to August.

Witness discharged.

CHARLES MAJOR, packer, Cape Delaronde, called and sworn:—

By the Commissioner:

Q. How long have you been engaged in the lobster packing business?—A. Twenty-one years.

Q. Always in the same place?—A. Always in the same place. I am 21 years in this place.

Q. Before that where were you established?—A. I had three or four factories and I was there at the same time.

Q. How many factories are you operating now?—A. One.

Q. What number of cases did you pack this year?—A. 288.

Q. How does that compare with what you have done in other years?—A. We find it a little better. Last year was a little better, but it was owing to the fine season.

Q. The fishermen were able to fish uninterruptedly?—A. Yes.

Q. Was this year a very rough season?—A. Very rough. It was five or six years ago, but I find it rather better this couple of years.

Q. What number of boats fish for you?—A. About 18 boats. The fishermen fish their own gear.

Q. Sometimes there are more and sometimes less?—A. Yes.

Q. Where do they fish?—A. Right in the open sea, a rough place.

Q. When do you begin to fish?—A. It was May 6 in 1906; 8th of May, 1907; 28th April, 1908; and 26th April in 1909.

Q. Those are the dates of opening?—A. Yes.

Q. Did they find fish at once?—A. Yes.

Q. Are those the dates you began packing or when fishing commenced?—A. Those are the dates they began to fish.

Q. What depth of water do they generally fish in?—A. From 7 to 15 fathoms.

Q. And I suppose they do the same as everywhere else, move in as the season advances?—A. Yes.

Q. When do you have your best fishing?—A. Well, in May and June.

Q. Have the regulations ever been strictly observed, or do the fishermen expect you to take everything they bring in?—A. We don't take everything but they have a way of washing the female lobsters outside. We might see an odd one.

Q. And how is the 8-inch size limit observed?—A. Very good, but being that the season is so short a little lobster can do.

Q. You mean a little smaller lobster?—A. Yes, they are very good for canning, those lobsters.

9-10 EDWARD VII., A. 1910

Q. How many do you run to the pound tin?—A. Well, I think it is about 500 to the 100 pounds.

Q. 500 pounds of green lobsters go to the hundred pounds of meat?—A. Yes.

Q. How was it when you began to fish?—A. When we began we paid for them by count, and so I could not tell you exactly.

Q. When did you begin paying by weight?—A. Since about ten years.

Q. What led to the change?—A. Well, the way it was, there were several reasons. Sometimes they would not give us the whole hundred. Some bosses would take 90 for 100 and such things, as that and it brought on weight. In bays there are lots of small lobsters.

Q. Do you find that you get a lot more small lobsters in bays than in deep water?—A. Yes.

Q. And are they generally caught towards the close of the season?—A. There is not much over where I am myself because it is an open sea, a rough place.

Q. In your locality are there any bays or lagoons where the lobsters go in?—A. There is a bay called Descousse where the lobsters go. They go all along there for thirty miles, past Hawkesbury.

Q. Do the fishermen fish with traps in there?—A. Very few.

Q. How is it they do not go in there, would it not pay the fishermen to fish there?—A. I do not think so, there are so many pots out in the spring. In the season they go there.

Q. You think they go in there to spawn?—A. Well, I would say something like that. Of course it is impossible for a person to know exactly.

Q. Still you are very apt to form an opinion?—A. It is my opinion they must spawn in some quiet water.

Q. What is your general experience; is the lobster fishery going down?—A. Not as much as people think. Where there used to be 6 fishermen there are 12 now, but they do not catch as much, it is more divided.

Q. There is a much greater amount of gear in the water, is there not?—A. Yes.

Q. How much more?—A. Four times.

Q. Four times as much gear in the water than when you began?—A. Yes, and five times. That is the reason the lobsters look less. There is less for every man but at the same time the price is more.

Q. What price was paid this year?—A. \$2.25, last year \$4.00.

Q. Per hundred pounds?—A. We made more last year than we did this year but the market was good then.

Q. In the matter of licensing canneries, do you think the department are wise in restricting the number?—A. I would rather leave that to the government.

Q. On the other hand if the fishermen think they are not getting enough out of the lobster fishery they want to be allowed to can for themselves in the hope that they will make more money?—A. Perhaps they would make a mistake.

Q. Do you think the policy of the department in allowing what they call co-operative licenses is a good one?—A. I suppose it would be a good policy enough. Let them try it anyway. After a couple of years they might find out.

Q. What is your opinion about the best method of protecting the berried lobster. how would you go to work if you had the making of the regulations yourself?—A. I think if they had pounds it would be better, I think we would save 50 per cent more lobsters in that way. Let the lobster go out into the pound. We used to fish them in the pound at Cape Delaronde, we used to catch lobsters that way. I think it would be a very good place to set out.

Q. How long is the place you refer to?—A. A mile long and a quarter of a mile wide, with from 7 to 8 fathoms of water.

Q. Is it narrow at the mouth?—A. Very narrow. It could be made less than 100 feet at the mouth.

Q. That looks like a good place; does the tide rise and fall in it?—A. Oh, yes. we have two pounds there. The pound where the factory is would be suitable, I think.

SESSIONAL PAPER No. 22a

Q. Of the lobsters that are brought to you, how many out of every hundred are under 8 inches in length?—A. Not very many.

Q. How would a strict enforcement of the 8-inch limit affect you; a great many canners have told us that it would put them out of business?—A. It would not be a great damage to me, but at the same time we have to look to the others. I think that having such a short time to set out, may be 7 or 7½ inches would do. Of course we do not see very many.

Q. You heard the other witnesses speak about the proportion of berried lobsters they got, what is the percentage in your case, do you think?—A. Out where we are we do not see many anywhere. I don't know how it is that we do not see many, whether it is that they are coming in towards that bay. But it is very seldom I see one.

Q. As to the matter of the lobster fishing season. You heard what the other gentlemen said about curtailing the season to the westward of you; what is your opinion about that, do you think it is unfairly longer?—A. I think if they would be satisfied—the way it is now it would be more of a protection for the future than to have fall fishing. That would be my opinion. In the next place I think they would lose all their gear. I know where we are we could not do it at all.

Q. Do you think that to the westward of here, across the Straits of Canso and down on the south side, their season is too long?—A. Well, I don't know.

Q. You are not interested in the live lobster business?—A. No, sir.

Q. You are only interested in the canning?—A. Of course up the bay, from Arichat west to Canso, fall fishing might suit.

Q. Is it the case that canners are compelled to accept undersized and berried lobsters for fear of losing their fishermen who would go to other canners that would not hesitate to buy them?—A. They never troubled me much in that way. Of course I believe if there was very much opposition they would try that all right.

Q. What do you think of the proposition to require the fishermen to take out a license and register; do you think it would make any difference?—A. Do you know I think that would be rather a good thing.

Q. In what way?—A. They would look after the spawn lobsters in a way. Then if they were caught violating the law they would lose the right to fish.

Q. Do you think it would make them more careful?—A. I think it would.

Q. What do you think about the matter of inspecting the product of the canneries?—A. I think it is a very good idea. Those that put up bad goods would suffer for it.

Q. They suffer now, but they also make others suffer?—A. That is it.

Q. Is there any station of the Fishermen's Union where you are?—A. No, sir.

Q. Are you aware that any fishermen have complained they were not getting a satisfactory price from the canner?—A. I was paying \$4, as I told you, last year, and they were not satisfied. The market had been bad for canned goods and that is how the price had to come down, but when we paid as high as \$4.50 they were not satisfied, they thought we should pay \$5.

Q. I suppose we are all alike in that respect?—A. Yes.

Q. The fishermen are not any worse than the rest of us?—A. No, I am not saying they are worse.

Q. Is it to your knowledge that fishermen have ever suffered loss by the packer refusing to take their fish?—A. No, unless it would be this way: If they would keep their lobsters in tubs or anything else and would be too lazy to protect them and try to pass bad lobsters off on us.

Q. Fishermen have complained that the canner, with a view of keeping them down, has refused to take their lobsters and they have lost their catch?—A. I never heard of that.

Q. Have you any idea which branch of the business is the more profitable, the shipment of live lobsters or the canning?—A. Well, sometimes the live lobster trade

9-10 EDWARD VII., A. 1910

is very profitable. Then when there is a glut the price amounts to nothing and the canners have got to can them. That is the way it is. If there were no canneries it would be all live lobsters.

Q. Is there any fishing after the season has closed where you are?—A. Not that I know of, there is none.

Q. There is no illegal canning?—A. Not since these factories have been licensed.

Q. Before that was there any?—A. There might have been a little at Point Michaud, but it never amounted to anything.

Q. Is there any other matter you would like to offer an opinion on?—A. As far as my part I think the way the season is where we are on the eastern shore would be about right.

Q. Just as it is now?—A. We have got two months anyway and I think the lobsters then are far ahead of the fall lobsters. They say they are darker. There was a time long ago when they used to pack in the fall and they say it was hard to put up good lobsters then because the claws were soft.

Q. We know there are some parts of the coast where you could fish in the fall and there are a great many places where they could not attempt to put out gear because they are too exposed to the fall winds?—A. No, they could not do anything.

Witness discharged.

ANGUS MACDONALD, manager, West Arichat, called and sworn:—

By the Commissioner:

Q. Are you a packer?—A. No, sir, not a packer exactly, but working under a packer.

Q. What cannery are you connected with?—A. H. C. Baxter and others.

Q. Who are they?—A. An American company.

Q. Have they more than one factory on this shore?—A. Not this present summer. They used to have one at Petit Degras, and one at West Arichat, and some in Inverness County, but this summer they have only the one.

Q. Why are they not operating the other factories?—A. I suppose they did not find any money in the business, there was too much opposition against them.

Q. What number of cases did you pack this year?—A. About 375, I think.

Q. How does that compare with last year and the year before?—A. Well, we ship part of our lobsters as live lobsters, we ship to market the largest lobsters in the catch.

Q. All above 9 inches?—A. All above 9 inches.

Q. What proportion would that be of your total catch?—A. That would be about one-third.

Q. Have you done that every year?—A. We did not ship any last summer at all.

Q. For what reason?—A. I suppose the reason was there was a difference made in the size of lobsters in the United States. Formerly, I understand, 10½ inches was the size limit, but lately they dropped down to 9 inches and the market was so glutted we were not able to ship at a profit. That is what I understand.

Q. What number of boats fish for you?—A. We have about 40 boats, I guess.

Q. Do the fishermen own their own boats and gear?—A. Yes, pretty well.

Q. Are they two handed boats?—A. Sometimes there is a man and a boy.

Q. What number of traps do they generally fish?—A. Well, possibly on an average they might fish—I would say 75.

Q. We find you fish much fewer traps than they do elsewhere. At other places there are men fishing 400 traps, how is it you have so much fewer traps here?—A. It may be for this reason: Some districts where they fish their traps are all on trawls.

Q. You fish single traps?—A. We fish single traps so that a man cannot very well fish any more than 75 to 100 to a boat.

SESSIONAL PAPER No. 22a

Q. What style of trap do you fish?—A. As I understand it, some of them are parlour traps with five heads.

Q. How do you find the run of lobsters now compared with what it used to be?—A. It is about the same run. I have run the shop for the last six years and I don't see any difference.

Q. Would you say that the lobsters are not decreasing any more now, that the decline has been arrested?—A. I would say that the weather has a good deal to do with it. Some springs it would so happen that we would get the month of April to work on.

Q. You would have a longer fishing season?—A. Sure.

Q. What is your best fishing time, when do you bring in most lobsters?—A. I would say that owing to the way the ice has been working around these last years we cannot fish in April. The month of May is the best month.

Q. Do you get a better run of lobsters in May, or does it run about the same all through the season?—A. Pretty well. There is of course a larger quantity in the month of May.

Q. And a larger run of lobsters? What proportion of lobsters that you take at your cannery will be under the 8-inch limit?—A. The lobsters range from 10 inches down. There is a larger proportion under 8 inches in the Strait of Canso.

Q. Are the fish taken as early inside as outside, are the lobsters there?—A. They are, but we cannot fish outside.

Q. Do they winter there?—A. I suppose they do, but the ice bothers them so that the fishermen cannot fish any sooner than about the 1st of May, the 8th or 10th of May.

Q. What has been your practice at your cannery, do you take everything the fishermen bring you?—A. Outside of the spawn lobsters.

Q. Have you always refused to take them or only recently?—A. Always refused. When we do get any on the wharf we chuck them overboard.

Q. Have the fishermen ever adopted the practice of stripping the eggs off the berried lobster?—A. I believe they do. Sometimes when they come in some of them are very scared looking.

Q. You have heard these various propositions as to the best way of re-establishing the lobster fishery. One is to shut down altogether for a term of years; what would you think of that?—A. It would not suit the district here very well, where they are looking for lobster fishing as a living.

Q. Are they paid cash for their lobsters?—A. Yes.

Q. Do they begin the fishery free of debt or do they get advances?—A. They used to before now, but at the present time they cannot get advances from the packer because he seems to think that they are not saving, but giving too many dollars in advance in that way.

Q. Then as a rule, the packer prefers to pay cash?—A. To pay cash.

Q. What would be the average earnings of a fisherman?—A. A lobster fisherman about \$75, I guess.

Q. For two months' fishing. That is at the rate of how much a hundred?—A. \$2.50 last season.

Q. What is your idea about protecting the berried lobster?—A. I think I would pay the fishermen for the spawn lobsters, separate them from the rest of the catch, get the fishermen to bring them to the wharf and let the packer at such a place take care of them—put them in a hatchery or pound or something of that sort to protect them.

Q. You think that is the best way?—A. That is the only way I can see. I believe the government can buy them to-day as cheap as the packer, and the fishermen would not destroy any of them. When the packer goes to work and says: 'We don't want them,' then the poor fisherman who is trying to make a few dollars, if there is a lobster that weighs three or four pounds, he is going to wash it and the consequence is you will get that lobster in bad shape.

9-10 EDWARD VII., A. 1910

Q. What do you think of the matter of licensing canneries? Is the department acting wisely in your opinion in keeping down the number?—A. I think that protection is good.

Q. You would not give a license to everybody who asked for it?—A. No.

Q. The fishermen all claim they should be allowed to can for themselves in order to make more money?—A. I don't think so. If the canner is willing to pay a fair price and give them justice they will be better off than they are to-day.

Q. Do you think the fishermen have had a fair price?—A. Up to this last summer they had, because otherwise a man would not come in at all, a man of means would not bother with the thing, and the fishermen themselves might some day fall through and the thing come to nothing.

Q. How many of your lobsters does it take to the pound tin?—A. I don't know exactly.

Q. What weight of green lobsters does it take to fill a case, have you any idea of that?—A. 250 or something like that.

Q. As I understand, you think the duty devolves upon the department or the government to buy the berried lobsters from the fishermen?—A. Sure.

Q. And protect her as well as can be done under the circumstances?—A. That will be all right. The fishermen would save their lobsters.

Q. What do you think of the present fishing season; April does not count for much, but May and June how would you improve on that?—A. Well as far as April goes it is no use to the people on this island at all.

Q. How would fall fishing affect you?—A. I would not say more than a month or a month and a half. I would say fish during the month of September, or to the 15th of October, and cut the month of April out altogether. Then if the American buyers would not like to open their shops, we could arrange with the local buyers in this district to take our fish.

Q. Have you ever heard of any fisherman losing his catch of lobsters by the canner refusing to buy them?—A. I don't think so. Sometimes they may hold their fish for better prices and lose them by their own fault. We are always willing to pay for whatever fish we can get.

Q. Is there any particular point you want to call attention to?—A. I have nothing to say except that if the berried lobster is protected in that way it would improve the fishery and by doing that things would work better.

Q. Is there any illegal fishing going on after the season?—A. No, we are not smart enough for that in this country, we are too slow.

Witness discharged.

REMY LEBLANC, fishermen, Cape Auget, called and sworn:—

By the Commissioner:

Q. You are a fisherman altogether?—A. Yes.

Q. When the lobster fishery is over you fish for cod and mackerel?—A. Yes.

Q. How long have you been fishing lobsters?—A. About fifteen years.

Q. Have you always fished in about the same place?—A. Yes.

Q. What time do you generally begin fishing?—A. We never begin before the month of May.

Q. You do not fish in April?—A. No, it is too rough.

Q. And very often the ice prevents you I suppose?—A. Yes.

Q. Did the ice ever prevent you from fishing in May?—A. Some years.

Q. What number of traps do you fish?—A. Sometimes about 60, sometimes 40.

Q. I find you fish a very small number of traps here; do you haul them often?—A. I haul them every morning.

SESSIONAL PAPER No. 22a

Q. Do you fish them on trawls or independent lines?—A. One by one.

Q. How is it they do not fish trawls here?—A. It is too rough and you could not haul.

Q. What depth of water do you begin to fish in in the spring?—A. We begin in 10 or 11 fathoms of water.

Q. How far off shore does that take you?—A. About twenty yards from the shore.

Q. It is bold water?—A. Yes.

Q. What is the best time for fishing?—A. The best time is the last month. We never do anything before the last month.

Q. That is the end of June?—A. Yes.

Q. How do you find the fishing now compared with when you began to fish some years ago?—A. It is not quite so good as it was at the beginning.

Q. Are there any fishermen fishing in that same ground as you?—A. Only three. There are only four houses there in a little cove.

Q. Who is the packer?—A. Mr. Ciretto.

Q. Have you always fished for him?—A. No, Mr. Powers before that.

Q. Do you sell your fish by weight or by count?—A. By weight.

Q. At how much per hundred?—A. We sold it for \$2.25 this year.

Q. That is a little less than you got last year?—A. Yes, we got \$4.25 last year.

Q. The regulations are that you shall not take any lobsters under 8 inches or any berried fish; have these regulations ever been lived up to very strictly?—A. Yes, sir.

Q. Do you put all the berried lobsters you catch back in the water?—A. Yes, sir.

Q. How about the small lobsters?—A. The small lobsters, we never take any. They are all big lobsters because it is in deep water.

Q. What sort of trap do you fish?—A. We call it the parlour trap.

Q. Do you fish parlour traps altogether now?—A. Yes.

Q. What is the advantage of that trap over the other kind?—A. They are more lucky.

That is the parlour trap holds the fish better?—A. Yes, sir.

Q. If you are not able to fish one day you find the lobsters there the next day; they cannot go out?—A. No, they cannot go out.

Q. That is the only difference?—A. Yes, sir.

Q. Do you think the lobsters are as big now as when you first began to fish?—A. About the same size; well, they are a little bigger.

Q. You have a small number of fishermen occupying the same ground?—A. There were only two this year.

Q. And there are not too many traps in that place?—A. There are only about 60 traps.

Q. How is it that other people have not come in there to help you to fish?—A. They have no traps the other people.

Q. But if it is good ground to fish?—A. It is too rough. Some years we lose all the traps.

Q. What is a trap worth with its line and everything?—A. Forty or fifty cents.

Q. A parlour trap is worth more than the old-fashioned one?—A. Yes, the parlour traps are worth a little more.

Q. On what bottom do you fish, pretty hard bottom?—A. Yes, rocky bottom.

Q. Out of every hundred lobsters that you take how many are berried lobsters?—A. Sometimes it is very hard for me to tell. About 8 or 10 out of a hundred.

Q. Would there be as much as that all season?—A. No, we never see more than that.

Q. Do you not think that is a good deal; you do not get that average?—A. Oh, no.

Q. What would you put the average at; it would not be as much as that all the season through?—A. It would not be more than five or six.

Q. As much as that you think?—A. Yes.

9-10 EDWARD VII., A. 1910

Q. At what time of the year do you see most of them?—A. About when we haul the traps.

Q. And at the end of June?—A. Yes.

Q. Has it been your practice to put the berried lobsters back in the water generally?—A. Yes, sir.

Q. Have you ever tried to rub the eggs off?—A. Sometimes. We try the best we can to make a living you know.

Q. Would you expect Mr. Ciretto to take everything you brought him?—A. Yes, sir.

Q. Big and little and every thing else?—A. I will be satisfied to do that.

Q. Have the fishermen complained, to your knowledge, about the price of lobsters not being big enough?—A. We complain sure. We complained this year, but we could not get more.

Q. What was the reason you could not get more this year?—A. That is hard to tell. They had no profit they said on the lobsters last year.

Q. A great many cans of lobsters packed last year are not sold yet?—A. Yes.

Q. How do you think we could manage to get the fishermen to put the berried lobsters back into the water; is there any way by which that might be done?—A. I suppose so.

Q. In what way; you know it is wrong to destroy them?—A. Yes, sir.

Q. Would it be advisable to get the fishermen to take out a license and then, if he violated the law, take away that license and stop him from fishing?—A. I don't know what to say about that.

Q. What do you think about it?—A. Maybe it would be better for ourselves.

Q. It would be better for those that always observe the law?—A. Yes.

Q. Some people say that if we get the fishermen together and explain to them the wrong they are doing and ask them to try and do better in the future, it would likely result in improved behaviour on their part. Do you think we could make any impression on them in that way?—A. You might, yes. You might get older fishermen than me to speak about it; I am not very old and don't know much about it.

Q. What is the best way to save the berried lobster; purchase her from the fisherman and get him to bring her in?—A. Yes.

Q. And then what could we do with her, put her back in the water and allow her to be caught again?—A. If you put those lobsters back into the water the fishermen will catch them again.

Q. And we would pay for them twice over?—A. Yes.

Q. What would we do when we did get hold of a berried lobster, take her to a hatchery or place her in a pound?—A. I think to put them in a hatchery would be the best way.

Q. Do you think the fishermen would make more money if he were allowed to can for himself?—A. I think so. A great many people could not can for themselves.

Q. It would take some money and a good business knowledge; I don't think the average fisherman would be capable of canning successfully without capital and experience?—A. There are not a great many.

Q. Do you think that if there were more canneries the fishermen could get a better price; would there be more competition then?—A. Yes.

Q. Is selling to the live lobster market or to the canners the most profitable to the fisherman?—A. I think selling them alive for the market.

Q. What do you think about the present season for fishing from the 1st April to the last of June, do you think it is about the best you could have?—A. Yes, I think it is about the best season. Well, if we could have the last month, the month of June, it would be the better way. Some people have done better in May, but if we can fish all the month of June it would be better for us.

Q. Do you not fish all the month of June?—A. No.

SESSIONAL PAPER No. 22a

Q. How would it be if you fished in July, would you destroy more spawning lobsters?—A. Not in the month of July, I don't think.

Q. In what month would you destroy more spawning lobsters, do you think?—A. From the 20th to the last of August, I think.

Q. What do you think about fishing in the fall?—A. In our place we have got no idea of that because it would be too rough.

Q. Then you don't want any fall fishing?—A. No.

Q. Do you think there is any fishing done after the close of the season, or do all knock off and bring their traps ashore at the end of June?—A. Yes, sir.

Q. There is no fishing done in July?—A. No, sir, and that would be the best time for lobsters.

Q. Is there anything you would like to say of your own accord?—A. You have got about all I want to say. I am sure that when we haul up the traps would the best time for us.

Q. That is with reference to your own place?—A. There are two or three other places the same.

Q. Down in that neighbourhood?—A. Yes.

Witness discharged.

WALTER GEORGE, fisherman, Janvrin Island, called and sworn:—

By the Commissioner:

Q. How long have you been in lobster fishing?—A. Since I was 12 years old. I am 37 years old now.

Q. When you began to fish was there much lobster fishing going on?—A. Lots of fishing.

Q. There was lots of fishing before that time?—A. Lots before that time.

Q. Had the lobsters begun to fail when you began to fish?—A. Well, when I began the lobsters were pretty fair.

Q. How it is compared with what they are to-day?—A. Oh, more.

Q. Would you describe the fishery as having failed?—A. Well, sure.

Q. In what way?—A. Well, I suppose the lobsters have been destroyed so much that they could not increase.

Q. Are you getting a smaller run of lobsters than when you began to fish, or less of them?—A. Well, they are smaller and less.

Q. What number of traps do you fish?—A. I only run 50 traps. I fish alone.

Q. You fish a single trap to a line?—A. Yes, a single trap.

Q. What trap do you use?—A. I use the parlour trap.

Q. When did you begin to use that trap?—A. It is about three years since I commenced to use it.

Q. Previous to that you fished the old double ender?—A. Yes.

Q. Are the slats in the trap put as far apart as they were when you began to fish?—A. Yes, just about the same.

Q. What distance do you allow?—A. I allow the width of a lath, that is a little over an inch.

Q. Do you think that style of trap allows a fair proportion of small fish to escape; a good sized fish will go through that space will it not?—A. I should think so.

Q. How big a lobster will you say will get through an inch opening?—A. A five inch lobster.

Q. Do you think the small lobsters do go through the slats?—A. They must.

Q. In your opinion do the big lobsters chase the little ones out of the trap?—A. If there are two or three big ones the little ones must get out.

Q. Do you notice that if there are two or three big lobsters you are not likely to have any small ones?—A. That is right, we don't have any small ones.

9-10 EDWARD VII., A. 1910

Q. What size is the mesh at the end of the trap?—A. I make my mesh about three inches.

Q. When do you begin to fish?—A. About the 1st of April.

Q. Do you get out as soon as you can?—A. As soon as we possibly can and the ice allows.

Q. How do you find the fish there when you get out?—A. Not too plentiful.

Q. Not plentiful at first?—A. No, sir.

Q. When is the best time of your fishing?—A. About the month of May is our best fishing.

Q. In what depth of water do you fish at the opening part of the season?—A. I generally set in six fathoms first and I reduce down to three.

Q. As the season advances?—A. Yes, sir.

Q. How are the fish caught in three fathoms of water compared with those taken in six fathoms?—A. They are better.

Q. They are better inshore?—A. Yes, sir, bigger lobsters.

Q. What proportion of the total number of lobsters you catch are berried?—A. Well, there would not be over three or four to the hundred.

Q. And in what particular time in the season do you find them most numerous?—A. It is all owing to a storm. If there comes a storm when you set inshore you get more berried lobsters.

Q. That would look as though they were disturbed in their nests?—A. Yes, sir, that is just what is the matter.

Q. How do the seed lobsters run as to size?—A. Oh, well they run from 10 to 11 and 12 inches.

Q. They are generally a good lobster?—A. Yes, they are always good lobsters you know, the seed lobsters.

Q. Can you tell me as to the condition of the eggs; do you notice that the eggs late in the season are riper and more nearly hatched out?—A. Yes, sir.

Q. Did you ever notice the eye of the little lobster in the egg?—A. Yes, sir.

Q. I suppose all the fishermen in your neighbourhood own their own boats and gear?—A. Yes, sir.

Q. To what extent, would you say, the number of traps has increased within your recollection?—A. Oh, well, I don't rightly know. Some years they run big gear and other years they run small gear, so you cannot know.

Q. Is there more gear in the water than there used to be on the whole?—A. Indeed there is.

Q. When you knock off lobster fishing do you devote your attention to any other branch of the fishery?—A. Yes, sir, I am fishing the whole season.

Q. How late do you fish here?—A. Well, we fish until December. We have all kinds of fish you know.

Q. How late do you get mackerel on this shore?—A. The last of November.

Q. Do you do much with fall mackerel here?—A. Well, some falls, and some falls we do nothing.

Q. What do you think of the proposition to license the fishermen as well as the canner?—A. I don't know whether that would suit at all, I don't think it.

Q. The idea is that a fisherman carrying a license would feel that he was more or less bound to live up to the law?—A. Well, I don't know.

Q. And that he would be more likely to inform on other fishermen who did not observe the law and make it hot for them?—A. And perhaps he would be one of the worst himself.

Q. Who fixes the price paid for lobsters?—A. I suppose it is the packers, we have got to go by them.

Q. You have got to take what they offer?—A. We have got to take what they offer or else take nothing.

SESSIONAL PAPER No. 22a

Q. Is there any other fishery going on at that time that you can fall back on?—A. Well, during the month of June of course we are looking out for mackerel, spring mackerel, with our nets, and haddock and codfish.

Q. Then you are not absolutely on your beam ends, if you do not fish lobsters you can devote yourself to something else?—A. Sure, and there is lots on land we can do something at if we are not at the lobster fishing in the spring.

Q. Is it safe to say that the fishermen here are not entirely dependent on the lobster fishery?—A. Of course they are not.

Q. We hear at a great many places that if they did not have the lobster fishery they would be done and would have to leave the country?—A. They are all right. As long as they are fishing they are eating. After they are done fishing they are done eating. They don't look at that.

Q. What has been your practice with regard to the berried lobster?—A. I generally save them here and when the smack man comes along he weighs them and chucks them over so that the fisherman loses nothing.

Q. Who is supposed to pay for them, the canner?—A. He is supposed to pay for them.

Q. I suppose you see that he does?—A. Yes, and he has got a full right to pay for them too.

Q. Do you think we can say as a general rule that you find more spawn lobsters towards the end of the season and close inshore than you do outside?—A. Yes, sir.

Q. Of course there are exceptions, I suppose?—A. Yes, sir.

Q. And there are new fish, they are not the same every year?—A. No, they are not the same every year sure.

Q. Out of every hundred fish you catch how many would be under the 8 inch limit?—A. Well I could not rightly give you that because I never bothered much with it you see.

Q. Would it be a large proportion?—A. I don't think it would be large.

Q. How does the season as it exists now from the 1st of April to the end of June suit your locality?—A. Well it is this way: In April we do nothing at all. Not one half of the men have got five traps out then.

Q. So you have only two months fishing?—A. We have only two months fishing. We exclude April. That month is a loss and we don't make a dollar.

Q. You might just as well begin on the 1st of May?—A. Better.

Q. Would you change those dates in any way at all if the matter were left to you?—A. If the matter was left to me I will tell you what I would do: I would take one month in the spring, and then I would put the two months in the fall.

Q. What two months in the fall?—A. September and October. You take it in July and August and the lobsters you get then have berries on them, but if you commence to fish the 1st of September you won't get one. According as they shed their shell they do not destroy any lobsters.

Q. And after they have shed their shell do they soon fatten up again?—A. Certainly. After a week they are all right to catch.

Q. The shell begins to harden up very quickly?—A. Yes, after three or four days it is very hard.

Q. I suppose after they have shed their shell they have always grown a little?—A. Yes, certainly.

Q. On the greater part of the coast it would not be possible to fish in the fall would it?—A. I don't know. I don't see what is the difference. We have just as rough weather in the spring as in the fall and more so.

Q. In some places they complain they cannot fish in the fall owing to the prevalence of westerly and northwesterly winds, they are more heavy then?—A. That may be too.

Q. Where are you fishing, how would it do?—A. Where we are fishing it would suit us all right.

9-10 EDWARD VII., A. 1910

Q. You are sheltered in that kind of weather?—A. Yes, certainly.

Q. Are the fishermen generally satisfied with the price they get?—A. Well, they have to be satisfied. What are they to do, eh? They cannot ship their lobsters.

Q. Why can they not ship their lobsters?—A. Where are they going to ship them from?

Q. You mean to say that the facilities do not exist generally for carrying it on?—A. No of course not, we have no chance here to ship live lobsters.

Q. Where they have a chance to ship lobsters do you think there is more money in it than in the canning?—A. I suppose there is. There should be.

Q. I think that is the experience in western Nova Scotia. Did you ever fish down there at all?—A. No, I never did.

Q. What do you think is the best way to protect the berried lobster; there is no doubt I suppose that she should be protected?—A. So she should be, mister, and not only now but it should have been years ago.

Q. They are only now waking up to the necessity of preserving the berried lobster?—A. To open their eyes. Blest if I know which way to protect her.

Q. Some people have told us that if we could get the fishermen to meet and explain to them the great harm that we are doing, that perhaps they would change their ways and would decide to save the berried lobster in future?—A. Yes, they would change their ways a h—— of a lot. One might and ten won't.

Q. And I suppose one does not care about throwing the berried lobsters away because he thinks another would gather them up and sell them?—A. That is how it is you see.

Q. What do you think about hatcheries?—A. Well, mister, I don't think they are a bit of good on the coast here because I don't believe they ever sowed the young lobsters here.

Q. Were they over here from the hatchery distributing lobsters this year for the first time?—A. Yes, we hear a lot of things but is it true?

Q. They brought young lobsters over here?—A. They might have said they brought them over but where did they sow them? That is hard for a man to find out.

Q. Supposing you had a hatchery on this shore are there berries enough to be found over here to keep the hatchery going?—A. I suppose with all the fishermen there would be.

Q. What do you think of the other alternative, of saving the berried lobsters and putting them in small pounds? Of course it is not everywhere you can establish a pound. You must have salt water and a chance to fence it in. There must be suitable places on a coast cut up like this?—A. There are some places certainly.

Q. The berried lobsters must be brought to the pounds and the conditions there should be as nearly natural as possible and the lobster permitted to hatch out, herself; do you think that would be as good a way as any other?—A. I don't know but what it would be.

Q. How would it affect you if the fishermen and canners were not allowed to take any lobsters under 8 inches, but every effort made to save all the berried lobsters?—A. I don't know, it might suit some and it might not suit others.

Q. How would it suit you?—A. A great many times I have put 8-inch lobsters in too.

Q. An 8-inch lobster you are allowed to put in. Do you think there is any combination on the part of the packers to keep down the price?—A. It looks a good deal like it.

Q. Do you know of any instance where a fisherman has lost his catch of lobsters by the packers refusing to accept them, that is when the lobsters were in good order?—A. No, sir.

Q. Do you know of any instance where a packer has closed his cannery with a view of preventing the fishermen finding any market for their lobsters?—A. No, I never did.

SESSIONAL PAPER No. 22a

Q. Do you think that inshore fishing in bays and lagoons, and similar places where the lobsters seem to go in to spawn, should be closed to fishing and that it should be allowed only in the larger bays in the open sea?—A. I don't think there is any use of that, because some people have to set in those places, they have no other place to set.

Q. What do you think of doing away with the size limit altogether; it has never been strictly enforced and it is hard to enforce, is it not?—A. I suppose it never was enforced.

Q. What would you think of abolishing the size limit and shortening the season?—A. What is the idea of shortening the season?

Q. Because if we let you take the small lobsters we suppose you will make a larger catch and in return for that there should be some further limitation of the time?—A. Do you not suppose the season is short enough already?

Q. The proposition is to shorten the season by ten days, or something like that, to make up for abolishing the size limit?—A. Ten days would not make a h—— of a lot of difference to us fellows because we lose ten times ten.

Q. Which of the propositions advanced do you think the most feasible and the most reasonable, to close down the fishery altogether, to stop fishing by sections—A. I am only one man, I am not all hands.

Q. It is the opinion of one man here and one man there by which we hope to get the necessary information. We want to save the lobster and we want to do it in a way that will be the least hurtful to the business and the industry?—A. Well, that is the only thing that I can see, give them one month in the spring and two months in the fall.

Q. You would not meddle with the spawning season of the lobsters at all?—A. No, sir.

Q. And you would not catch many spawn lobsters?—A. No, sir, you would not catch a dozen spawn lobsters the whole season and you would get better lobsters.

Q. Do you think it takes more lobsters in the fall than in the spring to fill a pound tin?—A. No, sir, not as many.

Q. Some people say it would take thirty per cent more?—A. I would like to see them try it.

Q. Is there anything else you would like to say?—A. No, that is about all I have to say.

Q. We have heard a good deal about the unfairness of having such a very long fishing season to the westward?—A. I don't see that is right. They take about seven months and we have only three. I don't see that is right.

Witness discharged.

The COMMISSIONER.—We have heard the evidence of fishermen and canners. I do not see we are likely to gather much else of value. Other fishermen are present here, and I would like to ask if they concur in the testimony which has been presented by their colleagues.

A VOICE.—Yes, it is all right.

The COMMISSIONER.—Very good then, I think we will now adjourn this sitting.

The Commission adjourned.

9-10 EDWARD VII., A. 1910

L'ARDOISE, August 18, 1909.

ALEXANDER MONBOURQUETTE, fisherman, L'Ardoise, called and sworn:—

By the Commissioner:

Q. What sort of fishing are you engaged in just now?—A. Mackerel fishing.

Q. And after that?—A. And codfish after that.

Q. You engage in deep sea fishing?—A. Yes.

Q. How long did you fish lobsters, and when?—A. I fished lobsters with my father. When I first remember fishing lobsters I was about 15.

Q. How was lobster fishing then?—A. They were plentiful. The price was low but there were plenty of lobsters.

Q. More than there are now?—A. Yes.

Q. What is the difference between then and now, would you say?—A. Well, for a hundred in those days you would not get twenty now.

Q. Were the lobsters very much larger then than they are now?—A. No, sir, not a bit larger.

Q. Are they good large lobsters now or were they always small?—A. I have not seen them for a couple of years but when I did see them they were a pretty good sized lobster.

Q. How many traps used you to fish when you were catching lobsters?—A. About 20 and 40 traps.

Q. Did you not fish more than 40 traps?—A. No.

Q. Single traps or trawls?—A. On trawls.

Q. How do they fish now?—A. Single traps.

Q. What sort of a trap did you fish in the old days?—A. The plain trap with a head in each end.

Q. What distance did you used to leave between the slats then?—A. They used leave the width of a lath.

Q. Do they leave the same width now?—A. Yes, sir.

Q. There were no parlour traps in your days?—A. Not in those days.

Q. You fished with your father for how many years?—A. For about 12 years, I fished with my father, and then I fished about two for myself.

Q. And then what happened?—A. At the last the season was too short here. The time to start here was the 1st of April, but we could not set any traps before the last of April, and then we only had May, and when June would come in there was so much bait around the shore it was no use to set the traps because it did not pay to fish.

Q. And you gave it up?—A. Gave it up altogether.

Q. And you went to what?—A. Mackerel fishing.

Q. Have you found out since that there is more money in fishing for mackerel than in lobster fishing?—A. Yes, sir.

Q. It has paid you better?—A. Yes, sir.

Q. Supposing there were no lobster fishing at all would the fishermen have other fisheries to turn to, do you think?—A. I suppose some poor men, it would be pretty hard for them if they had to turn around and prepare themselves for mackerel fishing, it would cost a great lot.

Q. That is, cost a lot to outfit?—A. Yes.

Q. Do the men own their own boats and gear?—A. They own everything themselves.

Q. Do those fishing lobsters go in for any other fishing or are they farmers?—A. Some of them only fish lobsters in the spring.

SESSIONAL PAPER No. 22a

Q. And do not do any other fishing?—A. No, sir.

Q. Is there any station of the Fishermen's Union here?—A. No, sir.

Q. In what depth of water do you commence to fish in?—A. Eight fathoms.

Q. What depth of water do they fish now?—A. They go out to 15 fathoms.

Q. How far will that take them?—A. About three miles.

Q. What sort of bottom did you have when you were fishing?—A. Rocky bottom.

Q. And reefs?—A. Yes. In some places there is mud, but we don't set traps on that.

Q. Can you give me any idea of the price you used to get for lobsters in the old days?—A. Yes, I remember getting 60 cents a hundred when I began.

Q. And what did you get when you knocked off?—A. \$3.50 a hundred pounds when I knocked off.

Q. How did the change from count to weight come to be made, were not the lobsters getting too small?—A. Perhaps that was the reason, I could not tell you anything about that.

Q. It must have been; it was not profitable to pay them by the hundred and they took to paying by weight?—A. By weight.

Q. What is the best time in your fishing here; you only begin to fish about the 1st of May, and you fish up to the 30th of June?—A. I suppose they do not go to the last of June here at all.

Q. Yes, 1st of April to the 30th of June?—A. They don't go to the last of June, they always knock off some time in that month.

Q. And begin to fit out for other fishing?—A. Yes.

Q. When does mackerel fishing begin?—A. It begins about the last of May.

Q. Do you know what the regulations were when you began to fish?—A. They would not take any spawn lobsters in those days or any small ones.

Q. How long did you fish then?—A. In those days we could fish three months, May, June and July.

Q. Then the law was changed and you had a 9-inch limit I think?—A. Yes, sir. Then the season was made April, May and June.

Q. Could you tell me how many out of every hundred lobsters caught have eggs on them?—A. It is pretty hard to tell.

Q. There is not a very large quantity?—A. No, there is not.

Q. What do you think would be the best time to carry on the lobster fishing here?—A. What I think would be from the 1st of May to the 1st of August.

Q. What time do the eggs of the lobster hatch out?—A. It must be in August because that is the time you will get those soft shell lobsters.

Q. That is the time they cast their shell, but I think they spawn a little before that do they not?—A. Yes, but you get the spawn lobsters at any time, I think you will get them in March.

Q. Is there any particular period when you will get more than at other times?—A. I don't know about that.

Q. You say you did not bring in any small or berried lobsters when you were fishing; were they very strict about the regulations then?—A. Yes, they were pretty strict, you had to chuck the small ones overboard.

Q. And were the berried lobsters chucked overboard?—A. Sometimes they were, and sometimes they washed them off.

Q. The same thing that you used to do in those days is done to-day is it not?—A. I suppose so.

Q. You understand it is wrong to destroy the berried lobster?—A. Yes.

Q. What do you think is the best way to save them?—A. I suppose if they were all saved and put in a place where they could live. You could save them like that.

Q. What sort of a place would you put them in?—A. I suppose it would be a salt water place somewhere.

9-10 EDWARD VII., A. 1910

Q. You think that is the best way to care for them?—A. I should think they would be all right like that.

Q. You would get the fishermen to bring them in and then save them?—A. Yes, sir.

Q. Is there any way to get the fishermen to throw them overboard?—A. I suppose if you paid them what the lobsters are worth they would put them back.

Q. How many times would you have to pay for them; you would get those lobsters back again to-morrow would you not?—A. Yes.

Q. Or would you put a chalk mark on a particular one and say he is already paid for?—A. I suppose if the fisherman was to get fifteen in a day and chuck them overboard he would want a little for them.

Q. Do you think the fishermen would get them at the rate of fifteen a day?—A. Not in those days I speak of.

Q. Do the fishermen not understand that these lobsters ought to be saved?—A. Yes.

Q. That it is in their interest to do that?—A. Yes, I suppose so.

Q. Well, then why does he want to get paid for them?—A. You mean when he chucks them overboard again?

Q. Yes. Even if every fisherman did it the percentage of berried lobsters per hundred is very small. There are very few fishermen that get anything like fifteen in a day. As early as you remember the practice of stripping eggs was carried on, that has always been done?—A. Yes.

Q. How is the price paid for lobsters to the fishermen arranged?—A. The canner, or whoever starts the factory, fixes the price and you have got to come to it.

Q. Do the cannery all have the same price?—A. Sometimes one will go a little better.

Q. So that you have some competition in the matter?—A. Yes, sir, sometimes.

Q. That is your experience, you will find one canner will give you a little more than another?—A. This year I don't know anything about it.

Q. Were there more factories formerly than now?—A. Yes, sir.

Q. How was it they came to close up?—A. I don't know I am sure.

Q. At any rate they went out of business and gave it up?—A. Yes.

Q. Have you had any experience in shipping live lobsters?—A. No, sir.

Q. Are any live lobsters shipped from here?—A. There were a couple of years ago from L'Ardoise.

Q. You don't know how it turned out?—A. No.

Q. Are there any live lobsters shipped from here now?—A. No, sir.

Q. You do not think there is any regular understanding or combination on the part of the packers to keep the price down, there was some competition when you were connected with the industry?—A. I don't think there was. Whatever the one gave the other was satisfied to give. One packer might give ten cents more than another and perhaps the other fellow would come up to his price.

Q. Did you ever fish for lobsters in the fall?—A. No.

Q. Would it be possible to fish here in the fall or is the weather too rough?—A. It is pretty rough sometimes. But sometimes the month of September is just as good as the month of May.

Witness discharged.

FRANK D. PATÉ, fisherman, L'Ardoise, called and sworn:—

By the Commissioner:

Q. How long have you been fishing lobsters?—A. I was fishing lobsters for thirteen years.

SESSIONAL PAPER No. 22a

Q. You began with your father when you were a small boy?—A. Yes, sir, and they were more plentiful than they are now.

Q. When did you knock off fishing?—A. I knocked off nine years ago.

Q. Since that time have you fished any lobsters?—A. No, sir.

Q. What was your reason for knocking off?—A. Well, I saw that the lobsters were getting scarce and I could not get any man to fish with and could not fish alone, so I turned to mackerel fishing.

Q. And cod fishing also?—A. Yes, sir.

Q. And are you satisfied with the change?—A. Of course I have got to put up with it.

Q. Do you think you have done better since you gave up lobster fishing?—A. Well, no, not where I am for I could not start at the time they start now.

Q. Do you mean to say that the season as it is now does not suit?—A. No, it does not suit me at all.

Q. When you fished what was the season?—A. It was from the 1st of May to the last of July, and sometimes the packer would ask for an extension to the 15th of August. Some years he got it and other years he did not get it.

Q. Was that the principal reason for your giving up, because you considered the season too short?—A. Yes, sir.

Q. What are most of the men who fish lobsters now, are they regular fishermen who fish all the year round?—A. Well certainly, they have gear to fish the whole season, but when they lose their gear in April they have got to give up and go into something else. That was done in our cove this year, and last year, and the year before.

Q. What was done?—A. Losing our gear in April.

Q. It was carried away by the ice?—A. Yes, and by bad weather. It is not every year we get ice here.

Q. Would you consider the month of April is of any use to you as a fishing month for lobsters?—A. I don't think it is good for them up in the bay. But it is not any trouble, they are in a pond. The bait is the worst thing down here.

Q. You cannot get bait here?—A. It is no use for us to try when people from the westward are three or four miles ahead of us.

Q. What bait do you use?—A. Herring.

Q. Herring in the spring; you cannot get bait at that season?—A. No, sir.

Q. What depth of water did you use to fish in?—A. The deepest was 12 fathoms.

Q. What number of traps did you fish?—A. Sometimes 160, sometimes 175. The last year I fished I had 160.

Q. How did you do with that number of traps?—A. I did not do very bad.

Q. Could you give me any idea how many thousand pounds you took?—A. No. Of course, the packer told me how much I had caught but I cannot keep it in my mind.

Q. How did you sell your fish?—A. By weight.

Q. Did you always sell by weight?—A. No, sir. At one time the price was 60 cents per hundred lobsters.

Q. And then they changed it to the hundred weight?—A. Yes.

Q. What brought about the change?—A. It was the packers that did that.

Q. And when payment came by weight what did you get?—A. We got as high as \$4.50.

Q. And did you bring into the packer everything you caught, big and little?—A. Certainly, I did not like to lose any, I brought all I could get.

Q. Did you fish more gear, when you knocked off, to get the same quantity of fish that you had in the beginning?—A. I had to get more traps. Before that they were plentiful.

Q. Was there much difference in size, did they get smaller too?—A. Yes, sir, they did.

9-10 EDWARD VII., A. 1910

Q. Do you remember at all how many berried lobsters you used to see out of every hundred fish you caught?—A. No, sir.

Q. Or how many lobsters it took to fill a pound tin?—A. No, sir.

Q. What is your opinion as to the best way to save the berried lobster; you understand—I think all the fishermen understand—that that lobster should be saved?—A. Oh certainly, but we have no place to put them in. Mr. Baker on the south side had a place to put them perhaps.

Q. You were too far away?—Yes, sir. I fished there two or three summers.

Q. Then you know all about a pound?—A. Yes, sir.

Q. When did Mr. Baker begin to establish his pound?—A. Two or three years before I got there, that was ten or eleven years ago.

Q. Have you any idea how it worked out, did you ever see the lobsters in it?—A. No, sir, he would not allow any man there but the one who had charge of it.

Q. What was he afraid of?—A. I don't know.

Q. Was he afraid you would put your traps in there?—A. Perhaps so.

Q. Is that your idea of the best way to save the berried lobster: Put her in a pound?—A. Where they can be put in pounds and the small ones allowed to grow, because I know if they go into the big boiler they won't grow; they will be cooked.

Q. Do you think the same practice goes on still; do the berried and small lobsters still go into the pot?—A. Yes, certainly.

Q. Have you any idea at what particular part of the season you see the most berried lobsters?—A. It is in August.

Q. Of berried lobsters, how many do you see per hundred?—A. It is hard to tell; I could not remember.

Q. Was it the practice when you were fishing to wash the eggs off from the berried lobsters?—A. We never looked at them.

Q. You brought them in as they were?—A. Yes, sir.

Q. Were there may more canneries around the coast in those days than there are to-day?—A. Yes, sir. There was only one factory this year.

Q. What were you paid for lobsters then?—A. 60 cents a hundred lobsters.

Q. And that price changed after awhile?—A. It was changed to \$1.10, and we had an increase every year.

Q. And the packer commenced to pay for them by weight, not by count?—A. Yes, they changed it.

Q. When you got \$1.10 what was it for?—A. By the hundred from Mr. Neville.

Q. Did you sell any lobsters for the live lobster trade?—A. Yes, sir, one summer. Mr. Mills was buying them at 9 inches and up.

Q. And you sold live lobsters to him?—A. Yes.

Q. What price did you get in that instance?—A. \$5.50 per hundred weight.

Q. That was more than you got from the canner?—A. Yes.

Q. Were you required to have them in better order than when you brought them to the cannery?—A. No.

Q. You simply got live lobsters for him?—A. Yes, sir.

Q. With the understanding that they must be all over 9 inches?—A. Yes, sir.

Q. Is that business going on yet?—A. I don't think so; not since I left fishing.

Q. Do you ever hear how the business turned out?—A. No. I don't know that there is anybody doing it since then.

Q. How did the buyer ship them off?—A. He shipped them up the Strait to Mulgrave.

Q. Do you think there is any competition in the matter of price; if one canner does not give you what is satisfactory can you go to another?—A. Certainly.

Q. A man is the master of his own lobsters; there is no hard and fast arrangement among the canners by which they are bound to the one price?—A. There was one year Mr. Dixon was getting all, so Mr. Mills put the price 25 cents over that.

SESSIONAL PAPER No. 22a

Q. So there was some competition and Mr. Dixon had to come up to the 25 cents?
—A. Certainly he had to.

Q. Has that happened often?—A. It happened here for a few years.

Q. What sort of a trap did you use when you began to fish first?—A. The big traps, four feet long.

Q. With an opening at each end?—A. Yes, sir.

Q. What distance did you allow between the slats?—A. An inch.

Q. The width of a slat?—A. That is what we were giving, the width of one lath.

Q. Is not that more than an inch?—A. We used not to take the widest one because we would lose too many small lobsters.

Q. If we insisted upon the space of an inch between the slats would that allow the small lobsters to escape?—A. No, sir, he would not go through, not through an inch.

Q. They tell us in many places that many big lobsters will go through an inch; what has been your experience?—A. It is a small lobster that goes through an inch. It is all right in the head of the trap when you stretch the twine, but not between two pieces of wood. Two pieces of wood are not going to stretch.

Q. If we insisted upon the space of an inch between the slats would it allow a certain proportion of the very small lobsters to escape; do you not think a four or five-inch lobster would get through that space?—A. Oh, yes.

Q. In many places they are canning lobsters four or five inches long?—A. We don't do it down here. A lobster four or five inches is a very small one. I got one of three inches, and Mr. Baker told me that if I could catch three at that size he would pay me well for them.

Q. Do you think fall fishing could be carried on here, that is in September and October?—A. I don't know about October. September is a pretty good month.

Witness discharged.

ELIAS PATÉ, fisherman, Chapel Cove, called and sworn:—

By the Commissioner:

Q. How long have you been fishing lobsters?—A. About 26 years.

Q. How many canneries were there here when you began?—A. Only two factories in this place.

Q. What was the largest number you have ever had here?—A. Three.

Q. How many cannerys are there now?—A. Only one this year on this side of Point Michaud.

Q. When you began to fish 26 years ago what kind of a trap did you use?—A. The big traps, all the length of the lath.

Q. And a hoop in each end?—A. Yes, sir.

Q. What space used you to leave between the slats of the trap?—A. Between the two laths? Just about an inch or a little over.

Q. How did you measure it, with a lath?—A. With a lath.

Q. How many of those traps did you use to fish?—A. We used to fish 25, sometimes 50.

Q. Was that the means you used when you began?—A. Yes, sir.

Q. Did you fish them on a single line or a trawl?—A. On a trawl the first going off.

Q. How was the fishing then?—A. Good fishing the first year.

Q. What was the best you ever did in any one season, do you remember?—A. Well, I remember the first year I had 25 traps I made, I think, it was \$35. I made that with the lobsters.

Q. You cleared that much?—A. No, that was with the expenses.

Q. That was not very big fishing?—A. No.

9-10 EDWARD VII., A. 1910

Q. What was the best you ever did in one year?—A. I cannot tell you the best. I never kept a book, but with some 40 to 50 traps the best was about \$50.

Q. You never cleared more than \$50?—A. No.

Q. That was for fishing how long?—A. All the season sometimes. I never fished all along. Sometimes of course we tried to fish for other kinds of fish.

Q. You were fishing mackerel and cod at the same time?—A. Exactly at the same time.

Q. Where the lobsters then much larger than they are now?—A. At the first going off they were larger, but there were plenty of small ones too.

Q. What did you do with the small lobsters in your case?—A. Some saved them a lot. I saved all I could.

Q. Did the cannery in those days take all you got?—A. I mean at the first going off they were not very small but there were some small even then.

Q. You are still fishing; do you get more small ones than at first?—A. Yes.

Q. You always brought what you caught to the canner and he accepted them?—A. He took them I suppose, I don't know what he did with them.

Q. What did you do with the berried lobster in the old days, was she brought in too?—A. The smacker weighed them and threw them overboard.

Q. Has that always been the practice?—A. They have done it often with me.

Q. Has it been the practice to do it from the beginning, since 26 years ago?—A. No, 26 years ago we brought out lobsters right into the factory.

Q. The lobsters were not smacked then, you had to deliver them?—A. Yes. We had no gear at that time.

Q. How far off shore used you to fish then?—A. At that time? From half a mile I should think.

Q. In what depth of water?—A. We had from 10 fathoms to 8.

Q. And did you fish all the season in the same place?—A. No, we would trap inside later on.

Q. What was the best month of the fishing; in those days you used to fish May, June and July, I suppose?—A. Yes. For my part I used to find May, the last of May, or about the 15th, just as good as any.

Q. And is it the best time yet?—A. I think so. Earlier in the season it is too rough.

Q. What do you think is the best way to try and save the berried lobster; if you had the making of the law for her preservation, what would you do?—A. I would let the lobster go, or put her in some place where you would save her, so that she would not die.

Q. There are plenty of places where we can save them, but in other districts there is no chance; how can we induce the fishermen in those places to put the berried lobster overboard, not wash the eggs off her or bring her in at all?—A. Not to bring her in at all is the best way.

Q. She should be saved without the loss of her eggs?—A. I suppose, or she will soon die.

Q. When?—A. After you take the eggs.

Q. They die then very quickly?—A. Yes, sir. If you wash the eggs off the she lobster, she is just as though she had been half a day in the sun.

Q. You have noticed that?—A. I am sure of that. As soon as you wash the eggs, they are gone. It is true always. I am not here to tell you any lies, but what I know.

Q. Have you always fished your own traps and your own boat?—A. Yes, always.

Q. What price used you to get for your lobsters when you began fishing?—A. At that time I had 80 cents a hundred lobsters.

Q. How long did that last?—A. It lasted for a few years. Then they began to have more factories and later on we had \$1.50. The price came to \$1.25 and \$1.50 and so on.

SESSIONAL PAPER No. 22a

Q. After a time they began to take the lobsters by weight instead of count?—
A. Yes.

Q. Have they been taking them by weight many years now?—A. Not very many.

Q. When they began to do that, what price did they give you?—A. They gave us \$2.50 or \$2.25 I think at the first go off.

Q. What is the highest price you ever obtained by weight?—A. As high as \$4.

Q. And this summer what did you get?—A. \$2.25.

Q. Who fixes the price?—A. Indeed I cannot tell you. They fix the price themselves I suppose.

Q. Has the fishermen anything to say about it?—A. Not at all.

Q. When you had a lot of canners did some of them give a different price?—
A. Oh, yes, sometimes you know, one might say the lobsters were worth \$3.25. By and by a packer might give \$3.50. Then we told the packer we heard the lobsters were to be \$3.50. I always gave him my lobsters except a few live ones.

Q. You always sent your lobsters to the same smack—A. Except that summer. Mr. Grady used to buy them.

Q. Are you generally satisfied with the price you get?—A. Except this year I find it very low.

Q. Do you know the reason why it is low this year?—A. No, because I have not read anything about it. I suppose it is owing to the market.

Q. Out of every hundred lobsters how many will be females with eggs?—A. Not a great deal where I fish. Sometimes we see one or two, but not very often, because I never fish very far off. As I told you awhile ago half a mile or a mile at least.

Q. Would you expect to get more berried lobsters in deep water than in shoal?—
A. Sometimes you will get more in deep water all right. When it comes later on the lobster crawls ashore and you will find more. But I never fish at that time.

Q. That is after you have done fishing, you think?—A. Yes, perhaps in August.

Q. Is that the time the female lobster hatches her eggs, do you think?—A. I don't know, but they crawl ashore.

Q. Do they go into very shoal water?—A. Yes, right close.

Q. How does the present fishing season from the 1st of April to the 1st July, suit you?—A. The 1st of April does not suit us at all, because we never fish here at that time, it is too early for us. This year it was very late in opening.

Q. You can always fish in May?—A. Always fish in May.

Q. Do you lose many traps here?—A. A good many sometimes.

Q. That is when you put them out early?—A. Yes. Two years ago I lost 30 or 35.

Q. The ice came back on you?—A. Yes, the season is rough you know, sometimes early in April the season is very rough and in May too.

Q. What do you do when you knock off lobster fishing?—A. Fish for codfish and other kinds.

Q. Do you continue right to the end of June with lobster fishing?—A. Oh, yes.

Q. Is it better fishing at that season than with any other branch of the fishery?—
A. Oh, yes, I suppose for those who have the big gear, but for me it is not. I suppose if I had a hundred traps I would get a lot. At that time there is money coming to me because everything is clear.

Q. Do you always get cash for your lobsters?—A. There is no trouble to get cash for our lobsters.

Q. Is it not the same with mackerel and cod?—A. Sometimes not. Sometimes it is hard enough to get the money. I saved a few barrels of mackerel and it was very late when I got the money. I had to go and look for it in Halifax. This year it is all right, there was no complaint.

Q. Do you think the fishermen could make more money if they were allowed to can for themselves?—A. I think so. They have made more money at some other places.

Q. It needs some experience to carry on canning successfully?—A. Yes, but they could find some man of experience.

9-10 EDWARD VII., A. 1910

Q. Do you think the present regulation keeping down the number of licenses is a good one, or should every man that applies for a license to can lobsters be given one?—A. I have no idea as to that at all.

Q. You have had no ambition yourself to can?—A. No.

Q. Did you ever sell any fish for the live lobster trade?—A. No.

Q. You have always sold to the canner?—A. Yes.

Q. Have you any idea which is the best market for the fishermen to sell his lobsters in, the live export trade or the canning?—A. They used to give a big price for them.

Q. Yes, but they want large lobsters?—A. Yes, nine inches and up.

Q. Is there anything you would like to say of your own accord?—A. No, there may be other fishermen here who have had more experience than I have had.

By Mr. Kyte, M.P.:

Q. I think you said you sold some live lobsters one year that were shipped alive?—A. No, I sold some to Martin.

Q. They were all large lobsters, were they?—A. Yes, good sized lobsters I sold to Martin.

Q. Were they to be shipped alive?—A. Oh, yes, I suppose they would be shipped.

Q. What did you get for those large lobsters do you remember?—A. I don't remember. It was the same price.

By the Commissioner:

Q. Is there any fishing after the season is over; when 30th June arrives, does everybody knock off?—A. Yes, around here.

Q. There is no more canning after that?—A. No, sir.

Witness discharged.

ISIDORE PATÉ, fisherman, L'Ardoise West, called and sworn:—

By the Commissioner:

Q. How long have you been fishing lobsters?—A. I have been fishing about ten years I suppose. I have been fishing before, but that is since I have been fishing right along.

Q. How far back did you begin?—A. I suppose twenty years ago.

Q. You did not fish steady?—A. Oh, no. There was about sixteen years I did not fish at all. I have been on the Banks.

Q. For the last ten years you have been fishing lobsters steady?—A. Yes, sir.

Q. Do you fish right off here?—A. Yes, sir.

Q. Into what depth of water do you go?—A. Sometimes 14 fathoms, 12 fathoms and 8 fathoms.

Q. How far off shore does that take you?—A. I suppose it takes me about three and a half miles.

Q. Do you always fish all the season in the same water?—A. Well, sometimes we take them in nearer the shore.

Q. When do you take them in there?—A. About the 15th of June.

Q. What number of traps do you fish?—A. Well, I used to fish 90 and 80. This year I had only about 35.

Q. You fish them on single lines, not on trawls?—A. No, sir, single traps.

Q. Did you always fish in the same way?—A. Well, yes, since ten years. Before that we used to fish them with trawls.

Q. Why did you give up fishing with trawls?—A. We got more lobsters.

SESSIONAL PAPER No. 22a

Q. More lobsters with single traps?—A. Yes, sir. A man will have a chance to change them often.

Q. Without changing the whole trawl?—A. Yes.

Q. Are there many other fishermen fishing lobsters where you fish?—A. Most everybody there fishes lobsters.

Q. How many boats are there?—A. About ten boats just in the cove where I live.

Q. To what canner do you take them?—A. To Mr. Dixon. I have been selling some to Mr. Mills, but he is gone now.

Q. And the factory is closed?—A. Yes.

Q. That is the reason you always sell to Mr. Dixon?—A. Yes.

Q. In what time of the season do you get the most fish?—A. In May.

Q. Are the lobsters a better run of fish in May than in June?—A. Oh, I don't know. Most of the time it is the same. We will get large lobsters all the time at the first going off and then they will get smaller.

Q. You seem to catch off the big ones?—A. I don't know what is the reason of that. The big ones might get wiser and keep away from the traps, that is all I can say about that.

Q. What style of trap do you fish?—A. Parlour traps they call them.

Q. What is the advantage of the parlour trap over the other style?—A. All I can say is that if the parlour traps are two or three nights without being overhauled, the lobsters will remain.

Q. Do you put the slats in the trap closer together now than when you began to fish?—A. About the same.

Q. How far apart are they?—A. About an inch and a half or two inches, about the size of the laths. It takes about an inch and a half.

Q. That is the gauge used?—A. Yes.

Q. Is there any station of the Fishermen's Union here?—A. Not that I know of.

Q. What has been the practice, within your experience, have you taken to the cannery everything you caught?—A. Yes.

Q. Big and little?—A. Well not in the first going off. When they are too small we chuck them away. When they are spawn lobsters we are not allowed to take them, but I would like to get paid for them just the same. Whatever I catch first I would like to get paid for them. I don't like to save it because it destroys the fish.

Q. How do you deliver your fish to the smack?—A. Sometimes the smack man comes to our cove.

Q. You do not bring the lobsters to the factory yourself?—A. Once in a while if I need to go I will take them down, but generally the smacker comes to our cove.

Q. During the fishing season what number of lobsters do you catch in a day?—A. It is according to the number of traps you have. If you have a big lot of traps you will catch about 200 lobsters.

Q. Well speaking of your own output?—A. I used to get 70 or 80 lobsters this spring, sometimes 100. It was when the fishing was good and the weather was fine.

Q. Have you any idea what 100 of your lobsters will weigh?—A. Some will weigh 100 or 110 pounds.

Q. That is per hundred lobsters?—A. Yes. That is as near as I can go.

Q. You own your own boat and gear; all the fishermen do about here?—A. Yes, sir.

Q. Do you think there is anything to be gained by having the slats of the traps a good distance apart; will some of the small lobsters escape?—A. I suppose they will if the laths are two inches apart.

Q. That will let a very big lobster out?—A. The small ones will get away sure. At the first going off I did not know much about fishing lobsters but we used to put the laths pretty near two inches, about an inch and a half. Now it is an inch and a half. Sometimes they put them closer for all I know but that is the general size.

9-10 EDWARD VII., A. 1910

Q. What is the size of the hoop at the end?—A. Just about four feet long.

Q. That is the trap?—A. No the length of the hoop around.

Q. I meant the little ring in the end?—A. 6 inches, sometimes 5 inches, according to how people like to put it.

Q. What is the size of the mesh?—A. A 3 inch mesh, that is about the size right along.

Q. That is extension measure?—A. Yes. When they open it that way (illustrating by a gesture) it is about 3 inches.

Q. At what time of the season do you see most of the berried lobsters?—A. When I see them most it is coming on the last of June, in June some time. In August you may find an odd one but not often.

Q. You say not often?—A. Not often you will find them with the spawn on.

Q. How many would there be out of every hundred lobsters?—A. I suppose you will catch two, three or four hundred before you will find one. This summer I only found one with the spawn on.

Q. Are the spawn lobsters a good size generally?—A. Yes, they are a good size.

Q. You have never seen any small ones with eggs?—A. No, sir, I have never seen any small ones with eggs, not less than 9 inches.

Q. Do you think the present season, from the 1st of April to the last of June, is about right?—A. I would not favour it myself because in April the weather is very rough and we have not got much time to fish in that month. Sometimes it is too rough and the ice is around. A man loses his gear and the bait is scarce. A man has got to look around for bait.

Q. The herring has not struck in then?—A. If a man could get his bait inshore in May. April is a poor month for fishing. I would not favour that month at all speaking for myself.

Q. Do you think closing at the end of June is about right?—A. Yes, June is all right.

Q. Would you favour a date later than June?—A. Well if we could, because we might get a fortnight then, or a month, when we have the time when we might gather up a few dollars.

Q. Are there not other fisheries?—A. Yes, but the mackerel come in June. When a man has time he overhauls his traps. Then there are the mackerel nets to look after. If there are two men one man will stay ashore and the other man overhauls the traps. When it is fine that is the way they generally do.

Q. Has the practice of rubbing the eggs off the female lobster ever been followed here?—A. Not that I know of.

Q. How do you arrange about the matter of the price, who fixes that?—A. It is always the packer as far as I know. The packer always makes his own price and we have got to abide by it.

Q. You have nothing to say as to that?—A. What can we do? We have to obey orders.

Q. Have you ever found one packer give a little more than another?—A. Sometimes they go around when they want to get the lobsters.

Q. When they want them very badly they will give a little more money?—A. Sure, but it comes to the same thing because when it is found out the other packer will come up too.

Q. Well there is a little competition then?—A. Yes.

Q. Do you think it will be possible to get the fishermen to put all the berried lobsters back into the water?—A. Well it would be better because otherwise it destroys the fish of course.

Q. How can we get the fishermen to do that?—A. When they get them I suppose to let them go as quickly as they can without taking them into the boat.

SESSIONAL PAPER No. 22a

Q. How can you make them do that?—A. It is more than I know. I suppose if they found there was a fine, but sometimes I suppose they are taken in ashore. I have not seen any, to tell you the truth, taken to the factory since eight or ten years.

Q. Does the smack man throw them overboard?—A. I suppose so.

Q. Have you ever seen a smack man pick them out and throw them over?—A. Yes, sir, I saw that this summer. The lobsters were right alive when he put them over.

Q. Do the fishermen get paid for those lobsters?—A. Not at the last. If he did it is at the first.

Q. How can we save the berried lobsters and put them in pounds?—A. I don't know. As to a hatchery I never was around one. I suppose if it was fixed up in a way they could do it just as well as they do it in Gloucester. I hear often they have a hatchery there for codfish. I suppose they could do the same thing for lobsters if the hatchery was rigged for it.

Q. Is there not a hatchery at Canso?—A. Not that I know of.

Q. There is one at Canso and one at Caribou?—A. I heard there was one at L'Archeveque, but I never saw it.

Q. As to the matter of licenses to canners, do you think it is right to keep down the number of canneries?—A. I suppose it would be.

Q. Do you think it would be bad to have too many canneries?—A. Well, I don't know. I suppose the more there are around, the more money you will get, because they will be opposing one another, and we might get a chance to sell our lobsters at a high price. If there is only one he will do as he pleases.

Q. Do you think the fisherman would make more money if allowed to can for himself?—A. That is more than I can say. He might make more money and he might not.

Q. There is some risk of course?—A. It is according to what chance a man might get. If he would get a good packer to buy his lobsters he might do well, but you are not sure of that.

Q. It is like any other business, I suppose; it needs some experience?—A. Yes.

Q. It has been proposed by some people to make the fisherman take out a license to fish for lobsters, the idea being that he would then be more careful about observing the law?—A. I wonder if a man would get more for his lobsters then?

Q. Do you think that if we do not use the small and the seed lobsters, in a very few years the fishermen would get bigger lobsters?—A. I don't know as to that. I would like to know how long it takes the lobster to grow in the run of a year.

Q. Two inches?—A. It would take four years for the lobster to reach 8 inches.

Q. It must be wrong to destroy the small lobsters and it brings no profit to the fishermen?—A. No. The fishermen generally when he gets the codfish saves everything and herring the same, and whenever he notices an illegal lobster he tries to save it because that is all he is going to get for his summer's work, whatever he catches. I don't know but that in the run of a good many years we could save by it. It does not take a very big lobster to reach 8 inches in size.

Q. Do you think the lobsters are running smaller now than they were when you began to fish?—A. Yes, they are. A good many years ago they were all large. I suppose the small ones then had no chance to get into the trap.

Q. Do you think the big ones drive the small ones out of the trap?—A. I don't know about that. If there is a big one in the trap I don't suppose the small one has a chance to get near the bait. I cannot tell what the fish are doing on the bottom.

Q. Is there any chance here to fish in the fall?—A. Yes. I suppose September is a good month for fishing in the fall.

Q. In some places they have asked to have fall fishing?—A. It would be pretty good here, too. In 12 or 15 fathoms of water a man would get some money to make

9-10 EDWARD VII., A. 1910

up for his taxes or rates. Sometimes that is the way they would get it; they can't raise money in any other way.

Is there any fishing done in the fall at present?—A. Not lobster fishing, not around here.

Q. Did you ever have anything to do with the exportation of live lobsters?—A. No, sir.

Q. You have never shipped any yourself?—A. No.

Q. Where that is possible have you any idea which is the most profitable for the fisherman, exporting live lobsters or selling them to the canner?—A. It is more than I can say. I know they will get a better price because they will sell large ones with two claws on them.

Q. Have you anything you desire to add to what you have already said?—A. No. I always wished to have the month of July in place of the month of April. The man that is through with his mackerel fishing might get a chance to fish lobsters for a fortnight or so. He has no chance of doing so these years. If he had July fishing he might not do much, but he might pick up a few dollars.

Q. Can you give me any idea what the average earning of a good lobster fisherman would be one year with another?—A. A good fisherman that is only doing that in the run of the season will earn \$150, \$180 or \$200 I suppose if he fished right along. That is if he has got good gear.

Q. Out of that has to come the cost of his gear?—A. I don't know how much he is going to lose in the run of the year, sometimes he loses one-half and more too.

Q. What is the trap worth?—A. I never figured that up.

Q. Do you make it up yourself?—A. Yes, sir. I suppose they are worth pretty well 25 cents apiece.

Q. I think the parlour trap ought to be worth more?—A. When you come to 15 fathoms you have got to pay 14 cents for rope, sometimes 16, and the trap is then worth more than 25 cents. It is according to the depth of water. The parlour trap is worth twice as much.

Q. Do you use the same boat for lobster fishing that you do for other work?—A. Away off shore you might use the same boat, but you have got to get a big boat for codfish and mackerel.

Q. Then you use a smaller boat for lobster fishing?—A. Yes.

Witness discharged.

THOMAS C. GRADY, fisherman, Rockdale, called and sworn:—

By the Commissioner:

Q. How long have you been connected with lobster fishing?—A. I have fished for lobsters about 8 years.

Q. Have you done any other fishing?—A. Yes, sir. These last few years I have fished for mackerel and cod.

Q. How is the run of codfish up here?—A. It is a poor fishing business.

Q. Have you noticed much change in the cod fishery, is it as good as it used to be?—A. I don't see much difference. It is not as good as it used to be, the codfish are scarcer.

Q. Have you fished for lobsters off this part of the coast?—A. Right off my own place.

Q. What number of traps did you fish in your time?—A. Well, I fished as high as 100, from that down to 50. One hundred is the largest number I ever fished, and 50 to 60 the smallest.

Q. When you began fishing first were lobsters more plentiful than when you knocked off?—A. Far more plentiful. They were larger and more plentiful.

SESSIONAL PAPER No. 22a

Q. What do you attribute the decrease to?—A. Well, I suppose there are so many fishermen catching them.

Q. They are fished out?—A. They are fished out.

Q. Was that decrease a gradual one do you think?—A. It was a gradual one, they decreased from year to year.

Q. I suppose the fishermen are obliged to fish more gear now to keep up their catch?—A. Far more, and they do not realize as much with the double quantity of gear.

Q. Although the price has risen?—A. Although the price has risen.

Q. What was the price when you began to fish?—A. When I began to fish, as far as I can recollect, it was \$1.50 a hundred, we were getting paid by count. I remember getting as high as \$2 a hundred by count. After that they commenced weighing.

Q. Why did they make that change?—A. I suppose it was on account of—at least some of them told me it was on account of the small lobsters.

Q. The lobsters were running small?—A. The lobsters were running small.

Q. And they were not worth as much for canning purposes?—A. Not worth as much for canning purposes.

Q. Have you any idea how many lobsters it takes to make a pound tin here?—A. Well, I have heard it but it has escaped my memory just now.

Q. What percentage of the lobsters taken in the traps here will be below 8 inches?—A. I should say there would be pretty nearly half of them.

Q. Pretty nearly half would be under the 8-inch limit?—A. I think so.

Q. I suppose the canner is in the habit of taking pretty nearly anything that is brought to him?—A. They did in my time. I have not fished the last two years.

Q. What was the practice up to the time you fished?—A. Up to the time I fished they were taking everything that came along.

Q. Did you give it up because it ceased to be profitable?—A. That was my reason for giving it up.

Q. In your time what was the practice with regard to berried lobsters?—A. Oh, well, they did not make much difference. A couple of the last years I fished they objected to take them. I fished for Mr. Leviscompte. I think he had a pound here, in which he used to put the females.

Q. Do you know how that turned out?—A. I could not say. I have been there and looked at it. I only saw a couple of lobsters there.

Q. What was the size of the pound?—A. Well, I could not rightly say, it was large enough.

Q. Was there deep water in it?—A. Yes, I think there was six or seven feet of water where I saw. Probably it was deeper outside.

Q. Had he the pound barred across at the mouth?—A. He had it barred across at the mouth.

Q. With wire netting?—A. Some kind of netting, I could not say whether it was wire or not.

Q. Was it his practice to let the lobsters go at the end of the season?—A. I think so.

Q. Did he put the berried lobsters in there?—A. He put the berried lobsters in there. He did not object to taking them because he put them all in there.

Q. Is that gentleman still running a factory?—A. I think so. I think he was packing this year.

Q. What style of trap did you fish in your time?—A. When I first started I fished the old fashioned trap. I used to cut about a foot off the lath.

Q. Was it a double ended trap?—A. Yes.

Q. How did you gauge your space between the slats?—A. The width of a narrow lath.

9-10 EDWARD VII., A. 1910

Q. Which was about an inch?—A. A little over an inch I guess, that was at the first of it. After that we commenced to put them closer together.

Q. That was with a view of holding smaller lobsters?—A. Well, it was not altogether that. No. I put them closer together and make our headings smaller. First we used to make the headings large and then we made them smaller.

Q. Have you narrowed down the space between the slats?—A. It must have had the effect of holding the smaller lobsters, yes.

Q. Do you think we could avoid the capture of small lobsters by having the space between the slats of a certain standard width?—A. You could to a certain degree, but there will always be some remaining in the trap.

Q. But do you not think a considerable percentage of small lobsters would escape?—A. I think so.

Q. We find that in a great many places the space between the slats is only half an inch?—A. There is no lobster could get out of an inch space itself.

Q. They tell us they lose all their big lobsters if they leave the slats an inch apart?—A. I never had a lath closer than an inch together and I used to get lobsters I would not carry to the factory.

Q. In your opinion what is the best way to save the berried lobster; there seems to have been a very general destruction of the female with eggs?—A. There has been, I am aware of that.

Q. And there is no doubt taking berried lobsters and the young ones is the cause of the trouble?—A. The cause of the trouble it must be.

Q. What is the best thing for the department to do to counteract that?—A. It would be a very easy matter if everybody was honest. Then it would be done.

Q. One proposition is to prohibit all lobster fishing for a term of years; there is no doubt that would hit the nail on the head?—A. Yes, there is no doubt.

Q. But a great many people would suffer in the meantime?—A. Suffer in the meantime.

Q. Another recommendation is to close down the fishing by sections, but that appears to be regarded by many as impracticable?—A. No, it is not practicable. I think if they close down at all it ought to be general.

Q. In many places you can understand that would cripple a great many people?—A. It would, there is no doubt. I think to have restrictions and continue the fishing would be far better. That is for the inhabitants of those places where they fish lobsters.

Q. The restrictions can only assume certain shapes?—A. There is no doubt of that.

Q. We must try to protect the small lobster, because in some places they are canning lobsters that are only three or four inches long and require 13 or 14 to the pound can; the industry cannot stand that long?—A. I think the average here is 7 lobsters to the pound. That is what I hear. I have never been in the packing business myself.

Q. It takes nine 7-inch lobsters to fill a pound can, that is by actual measurement?—A. I suppose the average would be seven, that is between seven and eight.

Q. Another proposition is to do away with the size limit altogether, it seems a very difficult regulation to enforce?—A. Well, it is.

Q. Here it would not be, because you have got a larger run of lobsters, but in some places it appears to be almost impossible to enforce it. Another proposition is to abolish the size limit, but protect the berried lobster as effectively as possible, either through the medium of pounds or hatcheries, and where that cannot be done educate the fishermen up to the advantage of throwing her overboard?—A. I think that would be the only thing that could be done, because when you come to put the lobsters in your boat you chuck them among a pile of others. The consequence is another lobster may cut the shell of the berried lobster and that berried lobster is going to die. Once the shell is broken she is going to die. Another thing,

SESSIONAL PAPER No. 22a

the fishermen are not to provided with pounds and I don't see how they can be established along this rough shore. We have no places where the fishermen can make pounds to put those spawn lobsters in.

Q. I suppose the idea would be for the government to provide the pounds and buy the lobsters from the fishermen; you could not do it?—A. You could do it if the government would buy the lobster and have it chucked over the moment she is taken out of the fisherman's trap.

Q. How are you going to keep any check on the thing?—A. That is the next question.

Q. You would be paying for that lobster a good many times over?—A. Yes.

Q. If the fishermen were all of one mind it would be a simple matter to put the berried lobster back into the water because the percentage of them is not very large?—A. It is not, and I find that outside in deep water you seldom get berried lobsters. Where the berried lobsters are taken is in shore among the rocks.

Q. Late in the season?—A. Late in the season. There is no doubt of it. I have been fishing there myself and that is where I used to get berried lobsters, right among the rocks.

Q. The fishermen will not understand it, but there is no doubt it is in shoal water and late in the season that most of the damage is done?—A. That is where it is done.

Q. If we could cut the fishing off during the last few weeks of the season it would be a better way of protecting the lobsters than by any other method, and yet the fishermen complain the season is too short already. They say: 'Give us a month's more fishing.'—A. The month of April is no good at all.

Q. What is the time, do you think, the lobsters are spawning inshore and want to be protected?—A. If they want to keep alive the fishery, the last of June would be the time for them to knock off fishing and then commence in September again. That would give a fishing season from the 1st of May to the last of June as well as fishing in September.

Q. Would it pay the packer to reopen his factory for a month in the fall after closing down?—A. That is a question I cannot answer.

Q. And there is another question besides and that is the market. They cannot tell what to give for lobsters in the spring if they do not know what is going to happen in the fall.—A. If there is only to be one season the fishermen ought to have a little time in July.

Q. But that is the dangerous time?—A. That is the dangerous time, that is when there is inshore fishing.

Q. As to the matter of price, how does that stand between the fishermen and the packer?—A. That is all left to the packers, they make the price of lobsters. I suppose they go according to the price and the market.

Q. Where there is a number of canners do you think some competition prevails?—A. There has been in my time of fishing.

Q. It is not a hard and fast arrangement then?—A. It is not hard and fast, but I understand this last couple of years there is a combine and they keep the price just to suit themselves I suppose.

Q. As to the live lobster industry, do you think that where it can be established it is the most profitable for the fisherman?—A. Yes, I think so.

Q. Are there any facilities here for carrying it on, you want rapid transportation and quick connection?—A. That is the worst of it, there are none just here.

Q. Has it ever been tried here to any extent?—A. There have been boats running here where the firm have owned the boats themselves.

Q. You mean smacks, collecting lobsters?—A. Smacks, collecting lobsters.

Q. What price did they give for lobsters?—A. I never had any dealings with them. This other man who has sold them would know more about it than I do.

9-10 EDWARD VII., A. 1910

Q. Have you ever formed any idea of the number of spawn lobsters to every hundred fish?—A. Out in the deep water sometimes out of a couple of hundred you might get one or two and sometimes probably you would not get that number.

Q. How about shoal water?—A. In shoal water they have as high as three in one trap of spawn lobsters. But certainly that would not occur often.

Q. Is there any time of the season when the lobster is not fit for food?—A. Not that I know of.

Q. There is a time when the lobster is soft shelled?—A. There is an odd one soft shelled, they are not all soft shelled at the same time.

Q. Do you think the practice of stripping or washing the eggs from the female lobster is followed here?—A. I could not say whether it is followed now or not, but I know it was when I was fishing.

Q. What is your impression as to the policy of the department in limiting the number of canning licenses?—A. I should judge that the canners themselves would say wherever there was no room it would not be a very paying thing for too many canners to get into a small space.

Q. Do you think the number of canneries should be kept down?—A. I don't see that that would make any difference with the lobsters.

Q. Do you think that if you had more canneries you would have more fishermen and more lobsters would be taken?—A. I do not know.

Q. Do you think that everybody that can fish lobsters is doing it now?—A. I don't know; if there was anything paying in it.

Q. The department's policy has been to restrict the number of canning licenses, except where the fishermen group themselves together and ask to be allowed to can on the co-operative plan; do you think that is a wise policy?—A. I think that is a very wise policy if the fishermen wish to pack their own lobsters.

Q. Do you think the fishermen will make more money in canning, one thing with another?—A. There is no doubt he will. The fishermen that can their own lobsters will make more money.

Q. Could they do it?—A. I suppose they could do it if they would only try, but most of the fishermen have got the notion they could not attend to the packing, and fish the nets and take care of their fish.

Q. There are no co-operative canneries here?—A. No, none. I see by the papers they have got them down in Gabarus or Louisburg somewhere.

Q. Is there anything you think of yourself that you wish to add?—A. There is nothing, I am out of the business, I have not much interest in it.

Q. Then you are apt to speak more independently?—A. Yes, what I have said is an independent statement. I never intend to go lobster fishing again because I am getting too old. I would make one suggestion and that is that the month of April is no good to the fishermen here. I am aware of that.

Q. They mostly begin the 1st of May?—A. They mostly begin the 1st of May, they hardly ever begin before the 1st of May anyway. April is no good to the fishermen, they are all aware of that.

Witness discharged.

HILAIRE PATÉ, fisherman, L'Ardoise, called and sworn:—

By the Commissioner:

Q. You have heard the evidence of the previous witnesses?—A. Yes.

Q. In a general way do you agree with what they have said?—A. I do. I can give no better evidence than they have given.

Q. How long have you been fishing?—A. I have been fishing since seven or eight years, a small gear from 35 to 40 pots. That was what I fished this year.

SESSIONAL PAPER No. 22a

Q. Are you a fisherman?—A. A net fisherman and in the spring I generally fish lobsters.

Q. How do you find the fishing of lobsters now compared with what it was?—A. Well, the lobsters are a little smaller than they used to be, that is inshore. I fish outside in 13 or 14 fathoms of water and I suppose they would run pretty fair—about 120 to the hundred pounds and 130 and 110 and so on. Early in the spring they don't take so much for the hundredweight.

Q. They are fuller then?—A. It does not take so much of those lobsters because they are larger early in the season when we start to fish. As the boats go out they kind of decrease a little.

Q. I suppose the big fish get in first and they are caught?—A. Yes, I suppose so.

Q. Do you always fish in the same depth of water?—A. No, sir, sometimes in 10 fathoms. Where we find there are more lobsters we generally change our pots here and there.

Q. I suppose one season with the other you move in?—A. Yes, sir.

Q. The lobsters come ashore and you move in after them?—A. A. This year I did not. Instead of coming in I was going out with my pots, and I found it better because there were more traps inside, and outside there were less, and I had a better chance outside.

Q. There was more ground available?—A. More ground for me.

Q. Do you fish with trawls?—A. No, sir, single pots.

Q. What is the advantage of the single pot over the trawl?—A. It used to be before—I remember we used to trawl inshore but we did not find it so good. Now everybody takes the single pot. It is easier for a man to change one or two pots, or five pots, than to take the whole trawl. Then he would have to move the trawl and everything.

Q. What is your idea about the matter of the trap? In some places they have traps with the net down to an inch and a quarter in the end and the slats only half an inch apart; do you not think that kind of trap is destructive, that it takes too many small lobsters?—A. Yes, sir, where the man makes a trap like that. But I always measure with a lath. I always leave the space of a lath between.

Q. That is an inch at least?—A. And over an inch. That is my measure when I make the pot.

Q. And what is your net in the end?—A. The net in the end is over two inches.

Q. What has been the practice here among the fishermen generally with regard to berried and small lobsters; have they saved them, or have they given them to the smack?—A. I could not tell. I know what they did this year. I caught a couple of berried lobsters this year and the smacker would not take them. They were alive and he let them go overboard in the harbour. The smacker said he was not allowed to take them. But the rest of the lobsters—

Q. The smacker took everything else?—A. Took everything else.

Q. In the years past they used to take berried lobsters too?—A. When I fished first they used to in some places. I was fishing in L'Archeveque some years ago. They used to handtrap them. Well, not fishing in the spring, but they used to take them.

Q. As to the matter of price how is that settled?—A. We have got to take the price the packer is giving or else not to fish at all.

Q. There is no choice in the matter?—A. No choice. Last year, or a year ago this year, they gave as high as \$4 a hundredweight and this year they were \$2.25.

Q. That is a big drop?—A. Yes, a big drop.

Q. Has there been any competition, has one packer given a little more than another, or do they fix that?—A. Not that I know, because if we heard that we would give our lobsters to the man paying the highest price. We do that because when our expenses are paid we can give them to whoever pays us the most.

9-10 EDWARD VII., A. 1910

Q. Have you any idea what proportion of the lobsters out of every hundred are below eight inches in length?—A. There is a good many below eight inches. From seven up they generally measure. A six-inch lobster would be a very small one.

Q. Do you think a six-inch lobster would get out through an inch space in the slats?—A. I think it would, for I know I got a lobster this spring that did not get into the pot. I caught it in my slats when I was hauling the pot. He happened to be on the head. He had only one claw and he weighed nine pounds. He could not get into the hoop. I happened to look and I saw the fellow and caught him by the claw. He happened to weigh nine pounds, eight ounces. I took it ashore and weighed it, out of curiosity.

Q. You don't often see that size now?—A. No, sir.

Q. Although formerly you would often see them?—A. Not since I have been fishing. They used to get an odd one of these big fellows I have heard them say.

Q. What do you think is the best way to save the berried lobster?—A. I don't know exactly. If you throw it overboard when you take it out of the pot it will go into another man's pot. It is a hard thing to save them from your pot and see them in another man's pot next morning. I think there ought to be a pound to put them in so as to keep them clear of the fishing ground. This year I have been fishing until about the 24th or 25th of June. I used to go every day when I had a chance to our pots and in that time I only took two berried lobsters. The smacker would not take them and we let them go into the harbour.

Q. Is there anything you would like to add to the evidence which has been given by the other witnesses?—A. No, it is about as good as I could give it. April is a month I don't favour fishing in. I had to risk my gear three times this spring on account of the ice, because I started on the 22nd of April. There was good fishing of lobsters but we could not keep the gear there on account of the ice, it was only trouble for nothing. To begin the 1st of May would be a short season, but a man would not have so much trouble.

Q. Then we might as well do away with the month of April and the fishermen would not lose anything?—A. No, sir. I know one day I had 30 pots caught in the ice and I had to go and get them out.

Witness discharged.

JOHN McGRATH, fisherman, Point Michaud, called and sworn:—

By the Commssioner:

Q. How long have you been engaged in lobster fishing?—A. Along for 20 years.

Q. Are you carrying on your fishing from Point Michaud?—A. Yes, in that district.

Q. What depth of water do you go out to?—A. Sometimes 14 fathoms in the spring, and 15.

Q. How far off shore will it take you?—A. I suppose three-quarters of a mile.

Q. That is pretty bold water?—A. We have to go there in the spring to get the lobsters.

Q. What is your fishing season?—A. We begin the 1st of May and end the last of July.

Q. How does that season work with you?—A. It works well with us, it is about the right time. It is, I think, about as well fixed as it could be. I don't know that the department could fix it any better.

Q. Does the ice bother you?—A. More so than it does these other men who have given evidence. We are out more on the border. These other men are in bays more than we are.

Q. The ice that strikes you will pass them?—A. Yes.

SESSIONAL PAPER No. 22a

Q. What number of traps do you fish?—A. I started with 80 in the spring but I was left with 10 or 15.

Q. Within your experience how is the fishing to-day compared with its condition when you began?—A. The lobsters have decreased.

Q. In size or in quantity?—A. Well, in quantity. In size I would not say. They seem to hold their own pretty much, that is since we started weighing them. It is a system that has got up here within a few years that the packer weighs the lobsters instead of paying by count.

Q. I suppose they adopted that system because the lobsters got smaller?—A. There were some other complications that started between them. These market lobsters were going in and the fishermen culled the small ones. That led to this system.

Q. Are live lobsters shipped from your place?—A. No, sir.

Q. You have no facilities there?—A. No, there are none only to the east of us where Mr. Baker is in Fourchu.

Q. Did he start the shipment?—A. Yes, by boat to Mulgrave.

Q. Of the two branches of the fishery which is the most profitable, the marketing of live lobsters or selling to the canner?—A. I guess selling to the canner.

Q. Is there much more gear fished now than when you began to fish?—A. There is not more.

Q. How does the number of canneries compare with former years?—A. It is pretty much of an average.

Q. The number has not decreased?—A. No, but the fishermen have decreased. They do not can as many, but there are not as many fishermen.

Q. What has become of the fishermen?—A. They have gone into other fisheries.

Q. Because they have not found lobster fishing profitable?—A. No.

Q. What canner do you do business with?—A. Chiefly Dixon. In the month of July we used to fish for Leslie. We were out on the borders you see, we were outside the limit. We did not start until the limit was open that year.

Q. Do all the fishermen in your case own their own boats and gear?—A. Yes.

Q. That is a general rule here?—A. Yes.

Q. Out of every hundred lobsters you catch how many would be berried?—A. There would not be over two or three or four per hundred. That is as far as my observations go.

Q. Is the number greater at one season than at another?—A. Not that I know of. I have them pretty much the same all the way through.

Q. As to the price received by the fisherman, how is it fixed?—A. They brought us down to a big reduction this year. The packer said there had been a fall in the market, but I understand there was a combination between them to keep the price down. Possibly the fall in the market was the cause too. I believe that was the case too. As far as we learned the price had only fallen 18 cents on a case.

Q. What is the practice in your neighbourhood with regard to undersized and berried lobsters; does the packer take them all?—A. Yes.

Q. Berried lobsters too?—A. Yes, he did up to this year.

Q. And this year what happened?—A. This year there was a system got up by the fishermen. They were supposed to throw away the lobsters and while I am aware of some having done it, I would like to see the law a little stricter because some fishermen will do it and others will not. The fishermen are standing in their own light if they do not see that it is to their advantage to throw those lobsters away.

Q. Is the practice of brushing off the eggs followed at all?—A. I believe it is, I am under that impression.

Q. Is it the case that the lobsters that have had the berries brushed off are more apt to die?—A. They are sick, they won't stand it. The fact of the matter is when the fisherman gets the berried lobster he wants to handle her as cannily as he possibly can.

9-10 EDWARD VII., A. 1910

Q. You heard the evidence of the other witnesses?—A. I did in the case of Mr. Paté.

Q. Does it tally with your own experience?—A. I would agree with it.

Q. In your opinion can we adopt a trap that will prevent the capture of lobsters that are too small?—A. I think the average number of traps that the fishermen have now are fairly good as regards small lobsters. He won't need to be a terribly small lobster to get out of the traps because a lobster will go through a terribly small hole. It is only the man that has had experience that will believe it. Why if I showed you the hole lobsters went through, you would doubt it.

Q. Do you think that an inch space between the slats would be too small?—A. I guess it would. I use a lath myself as a guage for the slats.

Q. That would be a little more than an inch?—A. Well some of them.

Q. I suppose the parlour trap is not any more destructive than the others, provided the slats are that far apart?—A. No.

Q. It is only the fact that it holds for a spell?—A. That is all. My suggestion would be for the government to try to protect the mother lobster, the spawning lobster, above all other things.

Q. How do you think we can best get at that?—A. There was a packer that ran here by the name of Andrew. He bought the spawn lobsters just as they came from the fishermen and had a tank in which he placed them. If there could be a contribution from the government to the packer for the spawn lobsters and let him put them over, it would be the best protection we could get. I would approve of that instead of the hatchery, because it is more natural for the berried lobster to go away to spawn as it suits herself. I don't believe the government can establish a hatchery to suit.

Q. I believe if the lobsters were delivered at the factory and set free some distance from the spawning ground they would not be liable to be caught right away?—A. No, not right away.

Q. Is there anything else you would want to state?—A. Nothing else. That is all the suggestion I would make because I am interested in the spawning lobsters. As to the size of trap I believe that the traps we have are all right.

Q. I think it ought to be everywhere the same?—A. I saw the inspector down in Sydney in the spring, and he was looking at some traps my brother had there. For instance, he said: 'I can smash the traps.' The ice was taking them then as fast as they could go. One man said: 'You might just as well smash them as the ice.'

Q. There is no standard trap, is there?—A. He came to find out. He was talking through his hat at the time.

Witness discharged.

Commission adjourned.

LOBSTER FISHERY

EVIDENCE

TAKEN BEFORE

COMMANDER WILLIAM WAKEHAM, M.D.

OFFICER IN CHARGE OF THE GULF FISHERIES DIVISION,
IN QUEBEC AND THE MARITIME PROVINCES

PURSUANT TO

ORDER IN COUNCIL DATED JUNE 21, 1909

VOL. II.

OTTAWA

PRINTED BY C. H. PARMELEE, PRINTER TO THE KING'S MOST
EXCELLENT MAJESTY

1910

QUEBEC AND MARITIME PROVINCES.

LOUISBURG, C.B., August 20, 1909.

CHARLES TUTTY, fisherman, Louisburg, C.B., called and sworn:—

By the Commissioner:

Q. How long have you been engaged in lobster fishing?—A. I have fished now ten seasons here.

Q. Is that consecutively?—A. Well, I fished four years out at different times.

Q. Then you began here ten years ago?—A. I have fished here ten years in Louisburg and four years outside of it.

Q. Where were those four years spent?—A. Two years in the State of Connecticut and two years in Rhode Island.

Q. We will take up the United States side of it afterwards. Do you fish your own boat and gear here?—A. Yes, my own fishing boat and gear.

Q. What particular canneries do you fish for?—A. I have fished for Mitchell, Baker & Co., and this year the Cape Breton Lobster Company, I think it was, Robert Simpson is the agent—the ‘Cape Breton Packing Company,’ I think it is.

Q. What distance do you generally fish off shore here for lobsters?—A. The first six weeks, in the month of May?

Q. You begin here on the 1st of May, do you not?—A. That is when the season commences, but this season I landed the first lobsters at the factory on the 20th of May, and they were taken off the shore a short distance, not outside 300 yards from the shore. Of course we go out, up the coast.

Q. To what depth of water will that take you?—A. Fifteen to sixteen fathoms is about the deepest.

Q. What number of traps do you fish?—A. I generally fish about sixty to sixty-five traps.

Q. Do you fish them as single traps or on a trawl?—A. As single traps.

Q. You begin fishing in the depth of water you have mentioned? Do you move any further in as the season advances, or do you fish in that depth of water all through the season?—A. In the same place until about the middle of June, and then we move the traps to shoal water.

Q. How shoal?—A. Perhaps four fathoms, well, the shoal is three fathoms.

Q. Now, as to the condition of the fishery, when is your best fishery? When do you find the lobsters at the best?—A. In the month of May.

Q. What is the average run of your lobsters here, are there many below the size limit?—A. A. Yes, sir, quite a number. This year they have run fully 25 to the hundred.

Q. That is 25 below the size limit?—A. Below.

Q. What has been the practice here—of course, you know about the regulations as to the size limit, the protection of the berried lobster, and all that sort of thing—what has been the practice on this part of the coast? Of course, we find that the practice nearly everywhere is that the regulations have not been observed rigidly, some places more so than others, but especially the size limit has not been observed?—A. It happened here that there are some fishermen that observed the regulations, but, of course, this last year or two matters have been going so that the fishermen do not care; they have been getting the lobsters in to the factories.

9-10 EDWARD VII., A. 1910

Q. Do the factories make any objection to receiving the illegal lobsters, or do they take all they get?—A. The packers made a kind of objection, but I do not think they ever rejected any; I have never known them to reject them.

Q. As to the berried lobster, what disposition is generally made of the berried lobster?—A. Do you mean the seed lobster?

Q. The seed lobster?—A. The berried lobster has been looked after pretty well since they commenced taking those lobsters to the pound. As far as the fishermen are concerned, the seed lobsters have all been delivered to the pound.

Q. How long have you been taking those berried lobsters to Mr. Baker?—A. About five seasons, I think; but I am not quite certain about that.

Q. Do the fishermen get any more for the berried lobsters than for the ordinary run?—A. Yes.

Q. Does Mr. Baker's boat come around and collect them?—A. Yes, he collects them in his smack. *The Sea Bird* collects them.

Q. What percentage of female lobsters would you say there is to the hundred, that is of proper size?—A. This year there has not been five per cent.

Q. Was the percentage less this year than usual?—A. Yes, sir.

Q. At what particular part of the season would you expect to get most of those seed lobsters?—A. In the month of July.

Q. That is when you are fishing in pretty shoal water?—A. Yes.

Q. You get them in the deep water outside, do you?—A. Oh, yes; at the first of the season we get some.

Q. Have you noticed yourself whether the eggs are as far advanced at that time as they are later in the season?—A. No, sir.

Q. They are not as ripe?—A. Not as ripe. Another thing I have noticed in the seed lobster the last two seasons is that they run much smaller in size.

Q. Usually the seed lobster is a fair sized lobster?—A. Yes, a fair lobster.

Q. Have you ever remarked what was the smallest lobster bearing seed?—A. I did this season. It has been talked over quite a lot, and I got a seed lobster this season and I made the remark that it was not worth while delivering her to Baker and I was going to put her overboard; that lobster did not go eight inches.

Q. They have some specimens in Ottawa $7\frac{1}{2}$ inches, but it is very, very rare, to find berries on lobsters of that size?—A. Well, that is very rare, although this season I got five or six that were nine inches, but $7\frac{1}{2}$ inches is a very small one.

Q. Now, from your own experience, how does the lobster fishery stand to-day as compared with the conditions when you began fishing here?—A. It is away back.

Q. You mean it is going down?—A. Oh, it has gone down a great deal. I could get in an average season now 2,000 pounds of lobster, when I was fishing nine years ago in a similar season, with the same amount of traps, I could get 7,000 pounds.

Q. That is with the same gear in a similar season?—A. Yes, fully that.

Q. What is a fisherman's average catch in a season, what does it amount to?—A. This season I do not think the average catch—taking it right through—

Q. Of course you were late in beginning?—A. We were late in beginning, but if we had got the month of May with an average about the same as the last ten days of it. I suppose that with 100 traps they would average about 2,000 pounds, for the month of May.

Q. And for the month of June?—A. Well, of course for the month of June they would have again very nearly that.

Q. And July?—A. There were no lobsters this year in July.

Q. There was nothing done in July?—A. You might say there was no lobster fishing in that month, the heavy gale in the first part of July destroyed all the gear and most of the fishermen knocked off. I did not. I fixed up twenty-five old traps, and I had the coast nearly to myself, and did fairly well, but there were no lobsters, they would not average two lobsters per trap.

SESSIONAL PAPER No. 22a

Q. How do you account for that, did they back off, do you think?—A. Well, they did, before the breeze they appeared to be very fair, but after that the lobsters apparently went off shore; it was the heaviest gale we had for years, and I think the lobsters went off the shore.

Q. What time in July was that?—A. Somewhere about the 8th or 9th of July.

Q. We had the same breeze at the Magdalen Islands and they knocked off there at that time, a great many that had traps out lost them altogether.—A. We had moved the traps into shoal water and everything was destroyed.

Q. Has it ever been the practice here to wash the berried lobsters?—A. Before the Baker pound was established what was generally done with the berried lobsters?—A. There were some fishermen who let the seed lobsters go, but there were some who washed the berries off and sold them to the factories.

Q. Has the number of traps increased at all in the last ten years?—A. It has.

Q. Are there more people fishing lobsters now than there used to be?—A. I think there were more fishing in Louisburg this year than for a number of years.

Q. Are the most of those who do fish lobsters here regular fishermen, or are they men who only fish lobsters and then go to the farm or some other occupation?—A. Most of them are regular fishermen.

Q. What other fisheries are carried on here?—A. The cod fishery, the herring and the mackerel, those are the principal fisheries.

Q. Are those fisheries carried on during the lobster season—A. The mackerel fishery commences about the 10th of June.

Q. That is a gill net fishery altogether?—A. Yes.

Q. How long does that last with you?—A. About three weeks.

Q. Beginning about the 10th of June?—A. Yes, this year they were a little later than that.

Q. What sort of a run of mackerel are they?—A. Pretty large, the largest mackerel that has been caught for years were caught this year.

Q. Do most of the fishermen who fish here own their own boats and gear?—A. Yes, they own their own boats and gear.

Q. Now, in regard to the future of the lobster fishery various propositions have been made to the Department and to the Committee of the House as to the remedy for the condition of affairs which exists in the lobster fishery, which, in some places, is very much more exhausted than it is here. Some people have said that the best remedy is to shut down altogether for a term of years.—A. That is a pretty severe course.

Q. That would mean that the canneries would go to pieces and all of the gear at present in use would be lost, and the fishermen, many of them, would be knocked out altogether, because in many places there is nothing else for them to go to, the great majority of those engaged in the lobster fishery in some places are not regular deep sea fishermen, they are farmers who go out and fish lobsters. The regular deep sea fishermen could perhaps find something else to do. Then the Lobster Commission of 1898 took evidence and made a report advising the closing down by sections, shutting off certain sections of the coast each year, and allowing fishing in the other sections during that period until the whole coast had been covered in that way by a close season. What would you think of that scheme?—A. Well, I don't know; I would not approve of it.

Q. Then it has been suggested that we should strictly enforce everywhere the regulations with regard to the preservation of the berried lobster, and where it was possible to have pounds to have them, and where hatcheries seemed to meet the case better than pounds to have hatcheries, or where you could not do either to get the fishermen to return the seed lobster to the water, and to somewhat shorten the season so that the late fish, which are undoubtedly the smaller run of fish, and which undoubtedly have the larger proportion of berried lobsters among them, should escape, and

9-10 EDWARD VII., A. 1910

perhaps we could in that case do away with the size limit altogether, because it is very difficult to enforce it?—A. That is what it is.

Q. In your own experience as a lobster fisherman what would you suggest as the best thing to do for this particular neighbourhood; of course you realize something has to be done?—. There is no doubt about it.

Q. Of course it might cause a little inconvenience and hardship for a few years, but ultimately we would hope to gain something for it and to be recouped for that loss.—A. Well, in my own opinion, to protect the berried lobster I think that there should be a month, the month of July, anyway the latter part of it, I think is the month that the seed lobster should be let alone. I do believe myself that where the seed lobster is taken out of the water and shipped to a different water the seed does not mature; I believe it is a hurt to them, and I think a lot of them die. I would say that, in my opinion, I would like to see—it used to be the rule I understand a number of years ago, before I came here, that in the month of July and the month of August there was a close season, and if the fishermen wanted to fish again in the months of September and October it was open to them to do so; and while it cut their season short in the one end, it gave it to them afterwards and the seed lobsters were protected in the months in which they should be protected.

Q. But in those days I think we had a 9 inch limit did we not?—A. Yes.

Q. I think in the beginning the lobsters were more abundant, and as far as I remember the size limit was fairly well observed in those days, and it was only when the lobsters began to get scarce and the packer had to take anything he could get hold of that they began to ignore that regulation?—A. Yes, and it is becoming harder each season to observe it. If you take the illegal lobsters out the catch would be very small.

Q. The consensus of opinion nearly everywhere is that if we enforce the size limit regularly it would knock a great many fishermen out and shut the canneries down?—A. I think so myself; it is not altogether here, but in Mira Bay they get very small lobsters, and if they had a size limit, and it was enforced, I do not believe there would be very many fishermen fish. I cannot see the idea of putting a size limit on and not enforcing it. I do not approve of this business of putting the seed lobster in the pound, although the pound may be all right if the right men are handling it, but it is a pretty hard thing to do these days, putting a pound there and putting a man there that will do what is right; if all men would really look at what is to the fishermen's benefit in years to come, in the future, they would do what is right now, but there are very few people nowadays who look that far ahead.

Q. And unfortunately a great many fishermen are careless about that?—A. A great many are far too careless.

Q. What would be your idea of pounds?—A. Well, sir, if you are speaking about the plan that I saw practiced in Connecticut, and of what we had to do there, I approve of it, but I have not seen anything I approved of in connection with the pounds since I have been lobster fishing here.

Q. What was the practice there?—A. The practice was that there was a man appointed—

Q. By the government?—A. Yes, by the State Fishery Commission, to look after the seed lobster, generally one of the fishermen. The fishermen brought the seed lobsters in and delivered them to that man and he simply kept an account of them and gave you a record; he had a ticket punch, and in the middle of the tail he punched three small holes and then put the lobster overboard right there. Every week end he had to send returns to the State Fishery Commission, and the fisherman received his money direct from the State at the market price. I know the market price was 16 cents that season. It was no good for the fisherman to take that lobster because he could not sell it in the market or to anybody; it was privately marked, and the mark remained there long enough for the lobster to be protected.

Q. Was there any size limit there at all?—A. Nine inches.

SESSIONAL PAPER No. 22a

Q. And how about the close season?—A. There was no close season.

Q. When you fished in Rhode Island how were things run there; what close season did you have there?—A. The open season was from the 15th of March until the 15th of November, and they were supposed to throw the seed lobsters away; the size limit was 9 inches, but the law was not enforced there as strictly as it was in Connecticut.

Q. You never fished in Maine?—A. No, I never fished in the State of Maine.

Q. Now, as to the matter of traps, what trap is used here?—A. We use the ——

Q. The parlour trap?—A. The parlour trap they call it, different makes, some 4 bow traps and some 3; some with four ends and some three ends.

Q. The old double ender trap has gone out of fashion?—A. Altogether.

Q. I think the advantage of the parlour trap is not that it catches more lobsters but that the lobsters that do get in it cannot get out?—A. That is it, the lobsters are there when you haul the trap.

Q. Now, as to the space between the slats—when we began lobster fishing in our country the fishermen used to leave an inch and a half space between the slats, they used the lath itself for a gauge; but this space has been gradually narrowed down until in some of the places we have visited it is not more than half an inch. Do you think it is possible to so regulate the traps as to leave a sufficient space between the slats for the undersized lobsters to get out, or will they go out once they get in the trap?—A. Oh yes, they will go out all right if the space is left wide enough.

Q. Now supposing the size limit were done away with?—A. I think any lobster under eight inches—of course we get some lobsters bigger bodied, but I think an inch space is plenty.

Q. Is that what you usually leave here?—A. Our space is not that wide, I have traps that I think $\frac{3}{4}$ of an inch will cover the space.

Q. We generally used a slat as a guage and the width of a slat is I think $1\frac{1}{4}$ inch or an inch and one-eighth. Would an inch be a fair space to insist on?—A. I think it would.

Q. And how about the mesh of the net in the end of the trap? A good many lobsters will get out through that if they get a chance.—A. Well, I would say about—I knit the nets for my traps with a mesh of, I guess, about $2\frac{3}{4}$ inches.

Q. That is extension measure?—A. Extension measure; a three-inch mesh is pretty large, you see it would let quite a large fish get out; it does not seem very big to look at, but a large lobster would squeeze through it.

Q. As to the matter of price, who fixes the price that the fisherman gets for his lobsters?—A. The packer does.

Q. The packer fixes it—what was the price paid here this year?—A. We started at \$2.25.

Q. Did they raise the price?—A. On the first of July they raised to \$2.50; we had eight cents apiece for seed lobsters at the start, and on the first of July they raised to six cents a pound for them.

Q. To six cents a pound?—A. Yes.

Q. But after all the quantity of seed lobsters that a man gets in a season is not so very, very great, is it?—A. No, I forget exactly the number I got this season, but I think it was 20 or 24.

Q. It does not seem to me that the number is so large that it would make any great difference to the fishermen if they could all be induced to put the seed lobsters back in the water as soon as they are taken out of the trap?—A. I think so myself, I have done that this season, I have not delivered all the seed lobsters I had to the factory, and I think there are a great many fishermen in Louisburg who would agree with me on that; that is one of the agreements they signed themselves this year—to throw away the seed lobsters.

Q. Is there a fishermen's union here?—A. No, there is one in Gabarus and another at Main-a-dieu.

9-10 EDWARD VII., A. 1910

Q. It has been suggested that it would be a good thing to send somebody around to induce the fishermen to throw away the seed lobsters. Would there be anything in that proposition? Do you think the bulk of the fishermen could be induced to do it?—A. I believe it would be a good thing. I tell you the way it is with the seed lobsters that Mr. Baker has not been giving the fishermen what the fishermen think they should have. The fishermen claim that the money the government pays for the lobsters they should get and a good many of the fishermen are better satisfied to throw the seed lobsters away than to give them to Mr. Baker at the price he has been giving them; he has been making money out of them.

Q. Is there any objection to a pound of that kind being under the control of a private individual?—A. Yes, certainly, that is what the fishermen have been kicking about more than anything else; it should be under the control of the government, there is no doubt about that.

Q. As to the matter of lobster hatcheries, have you any experience in that connection, or any knowledge about them?—A. No, I have not.

Q. How does the price paid for lobsters today compare with the price paid last year—last year you got what?—A. We got $3\frac{1}{2}$, the price is away ahead of what it used to be, the first year I fished for 75 cents per hundred count.

Q. Now it is all by weight?—A. Yes, and our lobsters this spring did not average 100 pounds per hundred.

Q. What would they average, do you know?—A. My lobsters averaged from 85 to 90 lbs. for the whole season. In the spring they went a little heavier.

Q. Do you know how they averaged in the canneries?—A. I had Mr. Lamont explain the whole matter to me this spring, during the trouble; he had managed the Mitchell factory for years, and he told me how many it took for the case, and if I can remember he said it took 140 lbs. of lobsters from the fishermen—

Q. That is green lobsters?—A. Yes, to make a case.

Q. It took 140 lbs. of green lobsters to make a case, that is 48 lbs. to the case?—A. Yes.

Q. But there is not really 48 lbs. of meat in a case of canned lobsters, because they allow a great deal of water in the tin?—A. That is what they average.

Q. Is there any competition at all in the matter of price, or is the fisherman forced to accept whatever the canner offers?—A. A fisherman is forced to accept it. We had a case in point last spring. \$2.25 was offered, and the fishermen kept their traps on the shore for a week and made out an agreement which they sent to the packers for a higher price. The packers told them that they would not pay any more than \$2.25, and they made the fishermen an offer in Gabarus; they didn't do it here; but Mr. Williams told them there that any man who did not want to fish for that could haul his gear for another year.

Q. What did the packers assign as a reason for that drop in price?—A. That the market was down, and that they could not give the higher price that the fishermen asked. Of course, I think our fishermen, in asking \$3.25, were asking too much; and I think that taking the price of \$16 a case in the market that the packers could not afford to give \$3.25, because it will cost \$11 to pack; last season, at the price they gave for cans, solder and all that, it cost Mitchell here \$11 per case.

Q. It cost that much to put them up?—A. Yes.

Q. Of course, the price of materials has gone up as compared with the early days when they were paying 50 cents per hundred for lobsters; the material was cheaper then, although they did not get as much for the lobsters, which, I think, were sold at the beginning at from \$6 to \$8 per case?—A. I have seen them sold here at from \$7.50 to \$8 per case. I know that Mr. Williams told us the other day when settling up that he could almost guarantee us we would get our \$3 next season.

Q. There is an upward tendency, I think, in the market?—A. Yes, it is looking up.

Q. The market was down last year, no doubt?—A. Oh, it was down. Mr. Baker

SESSIONAL PAPER No. 22a

was a good man, and yet in one way he was a poor man; he was a man who did not look ahead enough, and he ran the price up a little too high.

Q. He was not alone in that, I suppose; it was general?—A. He was not alone; he ran it up, and he came down here and got control of Mitchell's factory, and the price went down.

Q. Is there anything at all done here in shipping lobsters alive to market?—A. Mr. Baker has shipped until this season; there was not any this season.

Q. And I suppose he only shipped——?—A. All over the 10½ inches.

Q. How did he get them to market?—A. His smack, the *Sea Bird*, took them to Hawkesbury, and they went from there by steamer; they put them in the pound at Forchu first and made their different trips gathering them up. The last two years they shipped they took them to Mulgrave and shipped them in refrigerator cars.

Q. Have you any idea how they reached the market?—A. In poor condition. I don't think he ever made any money out of it.

Q. So that favourable conditions do not exist for carrying on any considerable trade in live lobsters here?—A. No, sir; not by that route. The only way it could be done here would be by using tank boats.

Q. What do you think, is there more money in the live lobster industry, where it can be carried on, than there is by selling to the canneries?—A. Oh, yes, much more.

Q. Now, as to the matter of licensing canneries, do you think there is a sufficient number of canneries in existence?—A. Oh, I think so.

Q. What do you think of the present system of licensing canneries? The department, in the early years, used to give every one a license, and then it was found that the thing was overdone—a great many people dropped money; people went into canning who knew nothing about it, and then there came a time when the department restricted the number of licenses, and for years past would not grant any new licenses, but since this friction in Cape Breton between the packers and the Fishermen's Union the department have decided to grant what they call 'co-operative licenses.' A number of those co-operative licenses have been granted in various parts of the coast, enabling the fishermen to pack lobsters themselves where they have banded together to do so. Do you think that those licenses fill the bill, and that the fishermen are given an opportunity to compete with the other canneries when they are not satisfied with the price which the canners offer?—A. I think so. I think the fishermen should have the privilege, and I do not think it will interfere with the canners, because if they will give a fair price for the lobsters the fishermen will not want to get a license to can themselves.

Q. What do you say, supposing the price was a fair one, would the ordinary fisherman do better at fishing and selling his lobsters to the cannery than by canning himself?—A. Certainly.

Q. Of course, it requires some business experience to operate a cannery successfully?—A. That is the way it was here last spring; supposing you took out a license, the lobster fisherman could go out and catch lobsters; we all know where to set our traps and how to set them; but when it comes to packing lobsters, we do not know how to do it. A man has to know something about it in order to pack lobsters properly. Of course, there are a few in Louisburg who could pack their own lobsters, but the majority of them could not, so that the majority do not want a license.

Q. They are satisfied to continue fishing if they can get a fair price?—A. If they can get a reasonable price for the lobsters; and I think we have a good man now, so that another season it will be better. I think it was a little the fault of the fishermen this season; they carried things a little too far. If they had asked a reasonable price, I think we would have got it. I know I was one of the strike breakers this spring; I would not go into it. There were 28 fishermen here, and 9 of us would not go into it.

Q. Are you aware of any fisherman having lost his catch of lobsters by reason of the canners having refused to accept them?—A. No, sir.

9-10 EDWARD VII., A. 1910

Q. Now, as to the matter of canneries, do you not think that it would be reasonable to expect a cannery to be up to a certain standard? I have seen a good many canneries that are putting up a very inferior article, they must be doing so, because they were equipped with dirty tables and were unclean and unsanitary in other respects. Do you not think we have a right to insist upon a certain standard of cannery, that the meat should be opened and broken on a table of certain pattern, covered with marble or some other covering of a kind that could be easily cleansed?—

A. I think so, I was going to make that remark some time ago and I believe that is something that is coming very quickly; some provision of that kind will have to come. When the ordinary fishermen see that it is necessary to have that kind of equipment to pack lobsters, they will not be so anxious to go into it.

Q. I think it is perfectly legitimate to insist upon a standard of that kind, because we must protect the people who eat the product?—A. Certainly. they should be protected.

Q. I think it would be of benefit to the industry, because with such inspection the price which the good canner will receive under such conditions will be better, and he will consequently be in a better position to compensate the fisherman for his raw material?—A. I would think so.

Q. Then there is another question in that connection, that of inspecting the product of the factory. The tendency of the present day is to have all food products inspected, we inspect all meats put up for food; all butter, cheese and everything of that sort that enters largely into the food consumption of the people is inspected nowadays. Is there, in your opinion, any reason why the canned lobster should not be inspected in the same way?—A. I think it should be inspected; take the lobster from the time it is caught until it is sold in the can, there is lots of room for inspection. There was a Mr. Mitchell and I was speaking to him a great many times before he died, we had quite a grievance about some fishermen not using the proper kind of bait. It makes a lot of difference in the meat of the lobster. There was a rumour some time ago that some of the fishermen were using blubber which attracts the fish to the traps and Mr. Mitchell made quite a kick about it because he thought some of the fishermen were using that, he told me last winter that he was almost certain some of them were using it.

Q. Do you think it makes any difference with the lobster whether you use good fresh bait or old bait?—A. It makes a lot of difference.

Q. What bait do you prefer?—A. The best bait that we use here is the gibbs of the mackerel, there is nothing like it, and if you can put a trap out there with the fresh cod gibb that is good bait.

Q. Do you think the fresh bait will take the lobster away from the old bait?—A. Yes, all the time.

Q. Do you think there is a regular combination on the part of the packers to keep down the price?—A. I do so; I am not prejudiced against them, but from what I have seen down about Cape Breton I think there is.

Q. How would it affect the fishermen here if ten days or a fortnight were cut off the tag end of the season?—A. Of course that is a matter that will depend on the season. With a season like this, when we did not get fishing until the 20th of May, it would give us a pretty short season. Of course the latter part of the season was no good to us, but if it had been good in the latter part of July it might possibly have made up for the loss in the month of May.

Q. But there are other fisheries here that the fishermen could go into if the season were shortened?—A. Oh yes, I was sorry myself that I hadn't broken it off on the 15th of July and gone into other fishing. I think that cutting off the last 15 days of July would be quite a help to the lobsters.

Q. I think so myself.—A. They talked about the matter of extension of the season this year, but the fishermen did not want it.

SESSIONAL PAPER No. 22a

Q. Tell me about this matter of 'extension.' Do you not think it would have been better in the past to have had fixed seasons? Have the extensions in the past worked harm to the lobster fishery? That is the question?—A. Yes, sir, they have, because the extensions have come in the very worst season for the lobster. Now, this year, I notice we have had more soft-shell lobsters than we have had for years, and I believe that the lobsters this season shed earlier than usual.

Q. What was the cause of that, do you think? Was the temperature higher, did the water get warm?—A. It may have been, I do not hardly know how to account for it.

Q. Do you think the lobsters come inshore to spawn?—A. Yes, there are a few follow up the 'handpulls' late in the season.

Q. They are only used in the month of July?—A. Yes, but most of the lobster fishermen are down on them.

Q. In New Brunswick they call them "curleys" and they are used only in very shoal water.—A. And when you get five or six seed lobsters in the hundred in the lobster trap you will get ten or a dozen in them.

Q. And you say the regular lobster fishermen are opposed to them?—A. Yes, I know that a few years ago there were many of them used.

Q. How is the season observed here, is the close season observed, or is there any fishing or canning done here outside the season?—A. No, sir, I think that is one thing that is strictly observed.

Q. Is there any other statement you would like to make, because we will be glad to record it if there is anything I have not covered?—A. I do not know of anything other than I have stated, of course I would like to have some other lobster fishermen heard, there are matters that should be talked over, and certainly these matters that you have asked me about have been talked over.

Q. You have discussed these matters with other fishermen?—A. Yes, these matters have been discussed for a long time. There was a meeting held this last spring at Louisburg to fix a price on the lobsters; I did not go to the meeting, but it was talked over, and when I saw the agreement that was drawn up to be signed, I said I would not have anything to do with it. The question was asked in that meeting about the price of lobsters in the market, and what it cost per case to pack them, and there was not a man there of those who were ready to sign this agreement to force the packers to pay the price demanded by the fishermen that could tell us anything about it. The fishermen at Main-a-dieu had to get the factory here to take their lobsters. You will find lots of fishermen down at Main-a-dieu, and I think you will get a lot of evidence there on that subject, and, I believe myself, that the evidence you will get there will be against the packers, because the fishermen there have had a lot of trouble with the packers during the last season. I do not blame the packers altogether, I do not think the fishermen used the packers right, and on the other hand I do not think that the packers used the fishermen altogether right; I do not see how they could pay the price demanded, we know what it costs to pack a case and I do not think the packers can afford to give \$3.25, but I do think that they could afford to pay \$2.50 or \$2.75 last spring.

Q. Well, they did come up to \$2.50 in some cases, and in others I think they came up to \$2.75, so that there really was some little competition because the canners were anxious to get the lobsters?—A. We have a fairly good man to deal with here now, and I think it has been as satisfactory as in other years in that respect.

Q. When was this price settled, was it just before the fishing season or during the winter—when do you know what you are going to get for your lobsters? In some places they tell us that they do not know until the fishing season is over?—A. We generally know along about March, two months before the season opens. This spring we did not know until some time in April when we learned that the price was \$2.25, and of course the fishermen hung out for more.

9-10 EDWARD VII., A. 1910

Q. You are bothered here considerably with the ice are you not in some seasons—there have been seasons when it has bothered you all through the month of May has it not?—A. Yes, sir, last year until the 7th of June and this last season it was here somewhere about the 17th or 18th of May. I put my traps out on the 10th of May and had to bring them in and I think it was on the 19th or the 18th of May that I put them out again, the ice was off shore then, and on the 20th the first lobster was delivered at the factory, then we did not know whether the factories would run, it was the 25th of May before we knew whether they would run or not. I do not know how it is, but our lobsters fail in different sections along the shore; in from the lighthouse, down the shore east is a pretty good lobster ground, but it failed a few years ago and the western side of the harbour held its own, but the dredge was working here a few years ago, and they took all the mud, &c. from around the piers and dumped it at the light house, and after the season in which they dumped the mud along the shore the lobsters were not there.

There is one thing I would like to speak about and that is with regard to the bait that is used. It is only within the last few years they commenced to use the mackerel gibbs, and some of the fishermen are not very particular about the kind they put in the bag. I think myself that these entrails should not be used in the lobster traps at all. Then again many more fishermen do not mind where they dump the old stale bait; they throw it overboard, and it is, in my opinion, the fishermen's own fault, to a great extent, if the lobsters have failed along this shore. We were speaking about that here a couple of days ago, about some of the herring fisheries. It has, of course, got to be the habit within the past five or six years—

Q. Is there much herring put up for market here?—A. A pretty good lot, the best shoal of herring all around, but the dog fish are troublesome here.

Q. Are they numerous here now?—A. Very numerous. A fisherman this morning had from 100 to 200 in the nets.

Q. How do they pack this herring here, have any of them adopted the Scotch method?—A. No, sir, they adopt the old method but they take more trouble with them. They scrape all the blood off the backbone of the herring and that makes a much nicer fish, it is cleaned better; our herring is worth about \$4.75 now, and we expect to realize about \$5 per barrel for them. It has been a fairly good season for the fishermen outside the lobsters, but it has been the worst lobster season ever known here. There has been a great scarcity of fish, last year I think the high catch was 7,000 lbs. and this year I do not believe it will go above 3,000. The lobster fishery is an industry that I expect to follow and I would welcome any regulations or anything that can possibly be done to improve it.

Q. Do you think there is a growing disposition on the part of the fishermen to protect the seed lobster?—A. I think there is.

Q. We have found that there is, we have heard a great deal about it everywhere that the fishermen are beginning to see the necessity for saving the seed lobster, and I do not see why they should not because the number of them he gets during the season is not so great that the fisherman would lose a great deal by putting them back in the water. Of course I know that one man says, 'I would put them back, but it is no use my doing so if my neighbour would take them, wash the eggs off them and sell them to the factory. If he does it why should I not take those seed lobsters in the first instance instead of putting them back for my neighbour to catch.' But I think if there was a universal agreement among the fishermen to put the seed lobsters back into the water as soon as they were taken out of the traps I do not think there would be any difficulty about it?—A. I think it would be very easy to carry out that arrangement. I think I know almost every fisherman in Louisburg, and I do not know of any that I would have any doubt of. I think that next season, or any time in the future, if they were simply asked to put the seed lobsters back in the sea and shut down the pound, every fisherman would do it. I

SESSIONAL PAPER No. 22a

know that this season there has not been over 100 seed lobsters taken to the pound from here, the fishermen have agreed among themselves and put them back in the water. I have been in the *Sea Bird* and helped dump the seed lobsters into the pound, and certainly the lobsters went overboard all right, in very good condition, at the same time I do not think that the seed will amount to anything.

Q. What is the extent of that pound, how far inland does it run?—A. I do not know hardly, it is about half a mile inside.

Q. And how wide is it?—A. I hardly know the width of it, it is only a very small pound though.

Q. And the depth of the water?—A. There is not over two fathoms of water.

Q. And what is the bottom?—A. Mostly a mud bottom.

Q. With eel grass?—A. Eel grass. There is another pound connected with it for the live lobsters. I think when in the pound the lobsters are all right, but they have to undergo a lot of handling; you see we get those seed lobsters here in the traps and they are taken out of the traps and delivered at the factory by the fishing boats. At the factory they are put into the crates and lie there sometimes for a couple of days waiting for the smacks, and then perhaps they may be a whole day on the smacks before reaching the pound, and then they are taken out of the crates and put into the pound.

Q. And I suppose when the season is over they open the pound and let them go?—A. No, they dip them out of the pound with dip nets, and take them down east as far as Scatari and west as far as St. Peters. I have seen the fishermen distribute them mostly at Fourchu, and the fishermen down east claim that the lobsters going to Fourchu remain there. The fishermen at Main-a-Dieu would not give any lobsters to the pound this year but put them back in the sea. I think the last few seasons the law has been well observed around here. I do not know how it has been at other places, but if the law has been as well observed elsewhere as it has been here it would be all right. I think that the fishermen, as regards the seed lobster, have themselves done a pile of good, because there have been very few caught that they did not throw overboard.

Q. You said that there was 5 per cent of seed lobsters; I would consider that a pretty heavy estimate?—A. Five seed lobsters to the hundred.

Q. Yes, five seed lobsters to the hundred; do you think they run that much? Of course they are more numerous in some places than in others?—A. It usually takes 85 lobsters to make a hundredweight, and if you get two seed lobsters, that is a pretty small average. I may get six or seven to-day, and then perhaps for several days I will not see any. I have been that way this season; for four or five days I would get no seed lobsters, and then I would get quite a few. If you have a good smooth night and have your traps among the rocks you will get four or five, but if it is a rough night you will not get any. I do not know whether next year we will have the same packer, but if we do have the same packer here it looks as if there will be more satisfaction for the fishermen next year. Of course, I do not think that another season there will be many engaged at the lobster fishery in Louisburg.

Q. There doesn't seem to be many at it now?—A. There were 28 fitted out this spring, but many got disgusted when they lost their traps and quit. I do not suppose that to-day you will find eight men here who fished lobsters this season; they have gone away to the mines.

Q. These are all Canadian, not American, packers here?—A. All Canadian.

Q. Is it true that Mr. Baker has left the country?—A. Yes, sir; he left rather unexpectedly to his fishermen. Lots of them found Mr. Baker a pretty good man, and he was doing pretty well up to the time he left; but I do not think that if he came back to Cape Breton the fishermen would take so much stock in him. I think he is the man who caused the first trouble with the lobster fishermen. Mr. Mitchell is a good man with the fishermen; one day he would try to keep the price down all he could, but when the time came to put up the price he would put it up.

9-10 EDWARD VII., A. 1910

Q. Where does he belong?—A. He was an American at first, but has been here many years. I have seen Mr. Baker give as much as \$15 per hundred for lobsters. First he came in opposition to Mitchell here, sent a boat here and bought Mitchell's lobsters. Baker and Greely then went together, and that caused trouble. He sent the *Sea Bird* down to Mira bay to buy lobsters, and paid as high as \$15 there to buy Greely's lobsters; that is why he is not a good man for the fishermen. He ran the prices up to get the lobsters, and when they put the prices down again it seemed pretty hard for the fishermen to come down. He is the man who did a lot for the fishermen at Gabarus, Fourchu and other places. I guess Mr. Baker had about 120 boats.

Q. Had he a large cannery there?—A. He had one at Gabarus, one at Fourchu and one at L'Archeveque. He packed a large quantity of lobsters.

Witness discharged.

Commission adjourned.

MAIN-À-DIEU, C.B., August 21, 1909.

DANIEL MARTEL, fisherman, Main-à-Dieu, called and sworn:—

By the Commissioner:

Q. How long have you been engaged lobster fishing?—A. I do not really know. I suppose it is about thirty years off and on.

Q. Have you always fished in the same place?—A. Yes.

Q. That is off Main-à-Dieu?—A. Yes.

Q. When not lobster fishing, in what other industry do you occupy your time?—A. Fishing, and I have been to sea a little.

Q. You carry on other fisheries?—A. Yes; cod——

Q. Herring, mackerel, and whatever is going on in the way of fishing, I suppose?—A. Yes.

Q. What is the practice here among the fishermen, do they own their own boats and gear?—A. Yes.

Q. What lobster canneries have you in this neighbourhood?—A. We have two here, but only one operated this year.

Q. Who are they owned by?—A. W. F. Greely is the man who ran the factory that Burnham & Morrell owned.

Q. And the other?—A. Baker & Company own the other.

Q. How long have these canneries been in operation here?—A. This cannery here. I do not rightly know; it is quite a number of years, but I have not the slightest idea.

Q. Have any other canneries been in operation here?—A. Yes, there was one before this, owned by the Portland Packing Company, but that is long years ago—in my boyhood days.

Q. They gave up and moved away?—A. Yes.

Q. In what direction do you carry on your lobster fishing from here?—A. I fish over in Mira bay.

Q. About what time does the fishery usually begin?—A. It is supposed to begin on the first of May but we very seldom get out much before the 10th or 15th, and sometimes not until June.

Q. That is due to the ice I suppose?—A. It commences according to the time the ice moves out.

SESSIONAL PAPER No. 22a

Q. How far off shore do you begin to fish generally?—A. We generally fish quite a way off, perhaps $\frac{3}{4}$ of a mile.

Q. And what depth of water do you get there?—A. Ten fathoms, eight fathoms and so on, and when you get close in to shore two fathoms and one fathom.

Q. But you begin far out?—A. Yes.

Q. And do you move in as the season advances?—A. Yes.

Q. That is to say, you follow the lobsters?—A. Yes.

Q. What number of traps do you usually fish?—A. I can hardly say, sometimes we have 200, sometimes more and sometimes less.

Q. You have two men to a boat, I suppose?—A. Yes, and then we generally fish 200 traps.

Q. Are they on trawls or do you fish them singly?—A. Some each way.

Q. What is the best part of the lobster fishing season?—A. When we first begin in the spring.

Q. Do you get larger lobsters or more as the season advances?—A. In the first few days ago we get larger lobsters, and then they begin to get small, and then as you get into the shore among the rocks you begin to get larger ones again.

Q. What proportion of the lobsters taken here will be under the legal size limit of 8 inches?—A. That is a question I can hardly answer, but I would say that about 25 per cent are below 8 inches.

Q. What has been the practice, have these small lobsters usually been brought to the cannery?—A. Yes, always, most always, with one exception; when we got the union here Baker cornered us and made us take our small lobsters away, he would not take them at the cannery; that was only done on the one occasion, and it was not done in any other place, I understand.

Q. As to the female lobsters with the berries extruded, what percentage of them do you get in your catch?—A. That is another question it is pretty hard to answer.

Q. You cannot tell definitely, you can only say about the percentage to the best of your knowledge?—A. This year there were scarcely any berried lobsters at all but last year I suppose there were 4 to 1, well say 3 to 1 anyhow.

Q. Was the percentage as much as that?—A. Yes, that is the proportion of mine to the catch this year.

Q. That is you got 4 last year to 1 this year?—A. Yes, that is it, but it is pretty hard to say as we heave them all over as soon as we get them.

Q. What number of berried lobsters would you say you get in every hundred lobsters taken?—A. I have not kept any account, I would hardly say.

Q. In some places they tell us that there are two or three, and in other places they say it is as high as five or six.—A. I would think there would be about 4.

Q. What has been the practice with regard to them, what do you do with them?—A. Well, I heave them overboard.

Q. That is done generally, and in other places they bring them all in to the cannery?—A. Yes, but later on Baker was taking them and putting them into his pound; he says he puts them along the coast afterwards, and perhaps he does, but I cannot say whether he does or not; anyhow we came to the conclusion that this pound was nothing more than a slaughter house for these seed lobsters, and we concluded that we would all put them overboard and we have been doing that.

Q. For how long have you been doing that?—A. For three or four years we sold them, but seeing that Baker was giving us such a small price for them we had to do something and this year some fishermen put them overboard, others did not.

Q. How do they collect these seed lobsters?—A. Baker's smack goes from place to place.

Q. What style of lobster trap do you use here?—A. A trap made out of laths with three ends, net in the ends.

Q. That is the parlour trap?—A. Yes.

9-10 EDWARD VII., A. 1910

Q. How long has that trap been in use?—A. It has not been use very long here, not over six or seven years.

What do you claim for that trap, what is its particular merit over the old-fashioned trap?—A. Well, the chief merit is that the lobsters when they get into the parlour trap stay there, although, of course, I suppose some of them get out.

Q. But in the event of your not being able to fish your traps every day you think it holds the lobsters better than the old style of trap did?—A. Yes.

Q. What mesh do you allow in the nets in the end of the trap?—A. I suppose it is about 4 inches.

Q. But that would let a pretty large lobster out, would it not?—A. No, it is not 4 inches, it is about 3 inches, but I never measured them in fact.

Q. What space do you allow between the slats?—A. We do not pay any particular attention to that, we just nail them on. .

Q. Has the space been narrowed down? Is it as much as it used to be a few years ago?—A. It is wider with some now, just according to the man who makes the trap and whether he knows how to make it right.

Q. Would you expect to find more berried lobsters at any particular part of the season than at any other time?—A. Yes, I think so, at the last part of the season when we get close in to the rocks in shoal water, we get more berried lobsters.

Q. You begin fishing here generally about the 10th of May?—A. We very seldom commence before that, and we have sometimes started later, and I think on one occasion we started on the 1st.

Q. And you fished up to the end of the season?—A. To the end of July.

Q. Is it the practice to fish right up to the close of the season?—A. Sometimes the factory closes up before that, and sometimes it does not.

Q. Why do they close down before the end of the season, is it owing to the diminished supply?—A. Oh, I do not know, the lobsters are not quite as plentiful and an odd fisherman drops off and goes to the herring fishery and so the canneries close down for their own convenience.

Q. Has the other fishery commenced at that time, what we call the deep sea fishery?—A. Oh yes.

Q. Are there any men who stick to the deep sea fishery and do not fish lobsters?—A. Yes, there are men who do that; there is one man here to-day who does that.

Q. Now as to the matter of price, what has been the prevailing price paid for lobsters here within your recollection?—A. When I first started lobster fishing as a boy with my father I got 80 cents a hundred, count, I think, and when this factory came here first they gave 50 cents; of course nobody could pay for their gear scarcely or make a living at that price, it was a starvation price and people began to drop off. Finally the lobsters came up to \$2.50 but even then they could not begin to live at that price because the lobsters were scarcer, and then the canneries began to take them by weight. We got \$3.75 the summer before last, and this last summer they cut us down to \$2.75.

Q. What was the highest price you ever got?—A. \$3.75.

Q. And this year you received?—A. \$2.25. they cut us down to that and we had to furnish our own gear and boats and bait and everything, so that you can see no man could exist on that.

Q. What is the average catch of a good lobster fisherman, how much does he make in the season?—A. This year I made about the best catch around here, I do not know but that we fished more traps than a good many of them, some do not have a hundred traps, but I think that the average perhaps would be 100 traps right through, and I think this year with two boats and three men we got 7 ton.

Q. How is the arrangement made between the fishermen and the canner, who fixes the price of the lobsters?—A. The packers always fix the price and they fixed it so that they kept it down pretty good until we got the Union and then we made the

SESSIONAL PAPER No. 22a

price ourselves. They gave us what we asked on one or two occasions, but last year they would not give us that, they said they would either close their factories or else we would have to fish at the price they offered.

Q. At what time of the year do you make your arrangements as to the price to be paid?—A. Sometime during the winter.

Q. Are the fishermen usually paid for their lobsters in cash?—A. In cash.

Q. It is entirely in cash?—A. Yes, that is as near as anyone can get it.

Q. Is there any competition in the matter of price, or are you forced to accept a certain price?—A. We are forced to accept it.

Q. If there are two canneries running is there any difference in the price?—A. Not at all, they are always together, you are supposed to take that price or else give up altogether, so that if you have your gear ready you are in a hole.

Q. Do you know about the price paid by other canners in the neighbourhood?—A. No, we understand that to the westward they get more than we do, they always have up to last year.

Q. Now, as to the matter of licensing, you know that the practice of the Department has been to try to keep down the number of canneries, there were more at one time than there are now; what is your idea about the whole system of licensing, do you think that anyone who wants to can should be allowed to do so?—A. I think that every fisherman should get a license to can if he wanted it, that is if he had the necessary capital to back him up.

Q. The Minister has, with the hope of avoiding friction between the canners and the fishermen, during the last couple of years decided to issue licenses to what is called "Co-operative canneries," are there any of those canneries here?—A. No.

Q. What do you think of that as a means of overcoming the difficulty between the canners and the fishermen?—A. Of course the idea is allowing what they call co-operative licenses was that in any place where there is friction between the packers and the fishermen a number of fishermen could band together and pack under the co-operative license on their own account?—A. That would be all right provided they had the capital to go into canning, but of course if they had not it is a different thing.

Q. What is your opinion about the whole business of issuing licenses for canning purposes?—A. I think if the fisherman had the capital and wanted to can his own lobsters he should get a fair show to do so.

Q. He would have, of course, to make application himself for the license?—A. Yes, give him a chance.

Q. Do you think every man who applies should be given a license to pack?—A. No, not unless he has the necessary capital, everybody should not be allowed to get a license.

Q. Would not a number of fishermen, if they clubbed together be more likely to possess the necessary capital than an individual fisherman?—A. I have no doubt they would.

Q. Do you think that any standard should be adopted, that we should insist on the packing being done in a certain way, that there should be a standard cannery, with tables arranged in a certain way and covered with proper material?—A. I do not know about that, but I suppose that the cleaner the work is done the better; I haven't any experience in canning. I never worked at that.

Q. The idea is that supposing licenses were issued to everybody who applied we should have some check upon them, do you think it would be wise in that case to exact a certain standard and to require that the cannery must be up to a certain fixed standard?—A. I do not know, of course these Main-a-dieu men have the best of it anyway, and a poor man would have no chance whatever if there was anything very big required.

Q. The object of the Department of course is to get the best we can for the fishermen and the object of this commission is to get from the fishermen how that

9-10 EDWARD VII., A. 1910

can best be done?—A. I have no doubt that everything about the cannery should be tidy and clean.

Q. Has there ever been any attempt made to carry on the fresh lobster industry here?—A. On one occasion a boat came here from Boston and took the fresh lobsters, she made a trip or two but that is all I know about it.

Q. Do you know anything about the result of that effort?—A. The first time I understood they did very well, but the next time the lobsters were dead when he arrived at market, he lay too long in some harbour on the way.

Q. As to the method of providing for the female lobster, what is the best thing to do with her?—A. My idea is to have her thrown overboard and let the fishermen be paid for her.

Q. How would you keep check of that?—A. There is no check at all needed except to punch the tail of the lobster, and if you caught that lobster again it would not have to be paid for.

Q. Do you not think that would require a very large staff of men?—A. Not at all, it would only cost about one-half what it is costing to-day and by that method the ground would be replenished, which it is not to-day.

Q. But why should the lobster fishermen be paid for observing the law? The fishermen must recognize the necessity of protecting the berried lobster?—A. But every man is not of the same mind, one man may put them overboard and the other man may wash them off and take them to the cannery.

Q. The percentage of berried lobsters now caught is not very large, and it would not seriously cripple the fisherman if he made up his mind to put the berried lobster back in the water it is to his own interest to do so?—A. No it would not cripple him seriously, but the government has just as good right to pay us for the seed lobsters we catch if we put them overboard as it has to pay H. E. Baker 16 cents a piece for the lobsters in his pound; if the government likes him so well as to pay him 16 cents for the lobsters he gets from us at a much less price, they ought to like us well enough to help us out too.

Q. That was only an experiment and whether it will be continued or not I do not know. What do you think of the method of preserving the berried lobster in pounds?—A. I do not think it is any good at all.

Q. What is the objection to it?—A. The lobsters are half dead before they leave here, I have seen them half dead myself. We have to care for these lobsters, I generally slip in some food to them, but we have to care for them and keep them until the smacks call for them, and they are often left on the dock in the hot sun, and I understand that half of them die before they are put in that pound or very soon afterwards.

Q. Supposing the pound were owned by the Department of Marine and Fisheries and the collection made by their own officers how would it be likely to work out when run in that way?—A. I do not know about that.

Q. Do you know anything about lobster hatcheries?—A. No; and I do not know anything about the pounds either, only what I have heard; but that is why we have come to the conclusion that it is no good. I think the mother lobster crawls into the rocks and spawns, and that it takes care of the young lobster until it comes to maturity.

Q. Before it became the practice to sell the berried lobster to the pound, what was generally done with her?—A. She was generally brought in and sold to the factories.

Q. Just as she was; they made no distinction against berried lobsters at the factory?—A. None whatever; they all went together.

Q. How does the fishery now compare with what it was when you first began lobster fishing?—A. The lobsters are scarcer.

Q. Are they decreasing in size; has the average size gone down, too?—A. I think it has.

SESSIONAL PAPER No. 22a

Q. Is there much more gear in use now compared with when you began?—A. Oh, yes, 10 to 1, I guess.

Q. Do you think it would be possible to limit the amount of gear? They limit the number of canning licenses, but they do not limit the amount of gear fished?—

A. It is no use to limit the amount of gear, because each man wants to get as much gear in the water as he can in order to catch as many lobsters as he can.

Q. But supposing that there is so much gear and the number of fishermen is so great that the lobsters cannot stand the strain?—A. Oh, that wouldn't work at all, I think.

Q. What do you think of the proposition to license the fishermen? You know it has been proposed to the department by some, and we have heard it suggested while taking this evidence, that the fishermen should be licensed?—A. I do not know what for.

Q. With the idea that they would be more careful, and that they would be a check upon each other; each fisherman would be in the position of being nominally a fishery officer, and therefore the law would be better observed. If it were found that a certain fisherman continually violated the law, he might lose his license and not be allowed to fish lobsters. That is the idea of those who make the suggestion. What effect do you think it would have on the fishermen; do you think it would make them more careful?—A. I do not think so, not a bit. If the fishermen are kept down so that they cannot make wages, they will do almost anything. I know I would myself, anyway.

Q. Have you any idea what branch of the lobster industry is the most remunerative to the fishermen—selling to the live lobster trade or to the canner?—A. I understand that selling for the live lobster trade is the more remunerative.

Q. Do you think that the individual fishermen would make more money if he were allowed to can on his own account?—A. I think he would; I think he would do better than \$2.25; we cannot live on that.

Q. A number of suggestions have been made with a view of re-establishing the lobster fishery. The first one was to have a universal close season, all over the coast, for a term of years. What would you think of that?—A. I do not think anything of it, sir.

Q. Why?—A. Because when we are carrying on any business we want to continue it; we do not want to stop.

Q. But supposing the position is that the business is being ruined, that the lobsters are being exterminated from some cause or other; you know that it has gone down from some cause or other?—A. It has gone down, but still some years you find the lobsters plentiful.

Q. You would not approve of that proposition then?—A. No.

Q. The last Lobster Commission recommended the shutting down of certain areas on the coast, and moving those areas around gradually until the whole coast had been covered, stopping the lobster fishing in one section whilst it continued in the other sections?—A. That would not work very well. What would the fishermen do in the district which was closed down?

Q. Another suggestion is that the season be shortened by, say, a couple of weeks at the end?—A. I do not think it could be better than it is; it is very good as it is now.

Q. Others again have suggested doing away with the size limit altogether, and making it legal to catch lobsters of any size, always saving the berried lobsters?—A. My idea is to do away with the size limit altogether, or give us a 7-inch limit and enforce it. I would rather have the last.

Q. Could it be enforced?—A. I do not think there would be any trouble about it.

Q. Formerly, if you remember, we had a 9-inch limit, and the fishermen said: 'Give us an 8-inch limit and we will live up to it.' They had not been observing the

9-10 EDWARD VII., A. 1910

9-inch limit. They were given the 8-inch limit, but that has not been enforced; it did not work out as they said it would. Now, would a 7-inch limit be enforced any better than the present limit is? The 8-inch limit has not been observed any better than the 9-inch limit was?—A. I do not know anything about that.

Q. It was 9 inches when you first began fishing?—A. It was 9 inches, but if you throw away all below 7 inches you will find that there are a good many now below that size; and you want to remember that they keep all sizes now; but I do not want to keep any below that size now if other people do not. Of course, if others are going to keep the small lobsters, why I am going to do the same.

Q. Is there any other statement you would like to make? I do not know that there is anything else I have to ask you; but if there is anything I have not touched upon, or if you have any further views to offer, or any suggestions to make with reference to the lobster fishery, I will be glad to hear them, and they will be duly recorded and submitted to the committee?—A. There is nothing further that I would like to say. I think I have given it to you about as good as I know how.

Witness discharged.

GEORGE W. DICKSON, fisherman, Main-à-dieu, called and sworn:—

By the Commissioner:

Q. How long have you been engaged in the lobster industry?—A. About 18 years.

Q. Have you always been fishing in this place?—A. Always here, yes.

Q. Do you carry on fishing generally, are you a deep sea fisherman?—A. No.

Q. Then you confine yourself to lobster fishing?—A. Yes.

Q. Do you own your own boat and gear?—A. Yes.

Q. You fish in a two-handed boat, I suppose?—A. I have a boy with me generally.

Q. How far off shore do you fish?—A. About a mile, in the spring.

Q. In what direction do you set your traps?—A. To the southward.

Q. When do you begin, one season with the other, what is about the time you begin fishing?—A. The 10th or 12th of May.

Q. What is it prevents you from fishing earlier?—A. Ice.

Q. What is your average percentage of loss in traps, one year with the other, do you lose many traps during the year from ice?—A. We lose quite a number. This year I lost about one-half of my traps, generally we lose about one-fourth.

Q. What is the life of a trap generally?—A. I have used them for four years sometimes.

Q. What do you consider the traps are worth? What do they cost for the trap and gear?—A. You mean for the rope and all, the trap complete?

Q. Yes.—A. About 50 cents.

Q. How many traps do you generally fish?—A. 80.

Q. What style of trap do you use?—A. The parlour trap.

Q. You begin to fish about the 10th of May and you say you fish out about a mile off shore, in what depth of water would that take you?—A. 5 or 6 fathoms.

Q. It is shoaly. A. Sometimes in the spring we fish where there are 8 fathoms of water.

Q. How long do you fish out in that water?—A. Up to about the first of June.

Q. Then what happens?—A. We move our traps in as the lobsters come into the shore.

Q. Into how shoal water?—A. 2 or 3 fathoms.

Q. And what style of traps do you say you use?—A. The parlour trap.

Q. Have you always used that style of trap?—A. No, I have used that style of trap for 5 or 6 years, I suppose, I do not remember the date I commenced to use them.

Q. And before that you used the old fashioned double end traps I suppose?—A. Yes.

SESSIONAL PAPER No. 22a

Q. Do you make your own traps?—A. Yes.

Q. What space do you generally leave between the slats?—A. About $\frac{3}{4}$ of an inch.

Q. Have you narrowed that space down in recent years, or did you always make it the same?—A. Oh, it has been narrowed down.

Q. With what idea did you narrow it down?—A. To catch the smaller lobsters, of course.

Q. What proportion of all the lobsters that you catch would you say are below the legal size limit of 8 inches?—A. About 20 per cent.

Q. Is that percentage greater at the end of the season or at the beginning of the season, or when is the percentage the greatest?—A. I never see much difference.

Q. And as to the berried lobster what percentage would you say they run to, how many berried lobsters would you get in a hundred?—A. They would run about 4 per cent.

Q. Do you find more of them in any particular part of the season than you do at any other part?—A. We get more of them late in July when the weather is fine.

Q. And do you find more of them when you are fishing inshore than you do when you are fishing in deep water off shore?—A. Yes, we always get more then, and in fine weather in particular.

Q. What do you think is the spawning season of the lobster?—A. Well, in August I would suppose.

Q. Is there any time in the season when the lobsters are not fit to take for consumption?—A. I do not think they are that way at any time.

Q. There are certain times when the lobsters are called 'soft shell'?—A. I do not catch them much, I have seen them but the time for them has not arrived this year yet.

Q. Could fall fishing be carried on here?—A. I think it could.

Q. Did you ever do any fishing in the fall?—A. I never did.

Q. When you first began fishing how long did the season last?—A. The same season that we have now.

Q. In early years they began fishing in August?—A. They allowed them to fish after the 1st of January.

Q. Of course the time to commence fishing is governed by the conditions, you could not do that here?—A. We never fished here before the first of May.

Q. And not after the 1st of July?—A. No.

Q. Not even when it was permissible to do so?—A. No.

Q. Why was that, was it because there was other fishing to take to?—A. Yes.

Q. When they first began lobster fishing there were no restrictions, you could fish when you pleased?—A. I know that.

Q. When did canning first begin here within your recollection?—A. When my recollection first began I was not living here.

Q. Who did you sell your lobsters to this year?—A. To the Robert Simpson Company.

Q. Were they operating here?—A. I delivered to their smacks here.

Q. Before that where used you to deliver your lobsters?—A. To Burnham & Morrill's factory, I always fished for them until this year.

Q. Now as to the matter of price, how is that arranged, who fixes the price to be paid for the lobsters?—A. The packers.

Q. Has that always been the case?—A. Except this last three years when the Union fixed it.

Q. What was the price last year?—A. \$3.75.

Q. And the year before what was the price?—A. \$3.50.

A. And the year before that again?—A. \$3.50.

Q. So that the last year you came up 25 cents per hundred pounds?—A. Yes.

Q. When you first began to fish you sold by count, I suppose?—A. By weight.

Q. Was it always by weight in your time?—A. Always in my time.

Q. Then this year what price did you get?—A. \$2.25.

9-10 EDWARD VII., A. 1910

Q. What happened this year—of course we understand there was trouble between the canner and the fishermen here—how did the trouble begin?—A. It began this spring.

Q. Some time before the fishing commenced, was it?—A. Yes, I cannot exactly tell you the date it started.

Q. And you found then that they were only offering?—A. \$2.25.

Q. And that price would not suit you?—A. It did not, we could not live on that price, and fish for it.

Q. Tell us in your own words the history of the affair?—A. I do not know that I can exactly tell you. They put the price down to \$2.25, and they told us we could either take it or leave it, and of course we had to fish for it or else stop fishing.

Q. And the canneries were closed down?—A. The canneries were closed down.

Q. And was it some time before anybody else came in to buy here?—A. No, it was right away—well it was within a week or ten days afterwards.

Q. And then the Roberts, Simpson Company's smack came up here?—A. Yes, from Louisburg.

Q. And did that smack continue to take all the lobsters that were caught here?—A. They stationed a man here after that, and he took some of our lobsters.

Q. How many boats were fishing here?—A. Only about half a dozen.

Q. Is that the usual number?—A. Yes.

Q. There are more than that fishing lobsters out of this harbour are there not?—How many boats under ordinary circumstances are fishing lobsters from here?—A. I can hardly tell you how many boats there are usually fishing lobsters from this part of the harbour.

Q. I mean for these two factories?—A. About 30 or 40.

Q. Did they all fish this year?—A. I think so, except 1 or 2.

Q. Did they go into other fisheries?—A. Moved away.

Q. Has it been your practice to fish right up to the close of the season, towards the end of July?—A. Within 8 or 10 days?

Q. You generally knocked off before the season closed up?—A. Very often we get our traps smashed up and it does not pay to put them out again.

Q. And do the lobsters slacken up towards the end of the season?—A. Of course they are getting scarce.

Q. Do you think that, taking one season with the other, you get a larger percentage of small and berried lobsters at the close of the season?—A. I do not know about the large or small lobsters, but of the berried lobsters we do.

Q. What is the smallest sized lobster you ever noticed carrying berries?—A. About 8 inches, I think, but I never measured them.

Q. As a rule what size of lobster do you find the berried lobster to be, is it a fair-sized lobster?—A. A fair size.

Q. Have you any idea how the lobsters run to the pound can in the factory here?—A. I never worked in the factory.

Q. Do you think that the parlour trap is any more destructive to the young lobster than the old-fashioned trap was?—A. It gets more of all sorts.

Q. That is that it holds on to them better when they get inside?—A. Yes, and therefore it must be more destructive.

Q. Do you think that by regulating the space between the slats in the trap, by fixing it say at one inch that a fair proportion of the small lobsters would be allowed to escape?—A. I do not think that would be any good.

Q. Why do you think that?—A. Because it would be almost impossible to have the slats at an equal distance apart.

Q. But in building the traps is it not usual to have a certain gauge by which to space the slats?—A. It is pretty hard to tell what gauge it should be.

Q. As to the matter of licensing canneries now, there was a time, as you probably know, when anyone that applied for it was granted a license, that was in the beginning.

SESSIONAL PAPER No. 22a

and it was thought then that the thing was being overdone, a good many went into it and overdid the thing, and finally the Department restricted the number of licenses in the interests of the industry. What do you think of that, do you think the number should be restricted?—A. No, it should not, anyone who is able to show that he has capital enough to run a factory should get a license.

Q. How much capital do you think the party should be able to show?—A. I cannot answer that question.

Q. How would the Department be able to establish the ability of the applicant to run a factory?—A. Let him deposit a certain amount of money with the Government.

Q. It has been suggested that the most reasonable way to regulate that matter would be to set up a standard, to require that the cannery which the applicant would put up would be up to a certain standard, it need not compel him to fish too many lobsters but he might be required to have a certain equipment. Do you think it would be proper to insist upon a certain standard equipment, that the tables should be constructed and covered in a certain way, that it should be kept absolutely and scrupulously clean and that it should be covered with glass, marble, zinc, or something of that kind, so that it could be easily cleansed?—A. Of course the cleaner the tables are the better.

Q. We see a good many canneries in the course of a season that seem to have very miserable tables on which to have the meat spread out, sour, foul smelling and not always very clean. Do you think that the product of the canneries, that is the canned article should be subject to inspection?—A. I cannot answer that question.

Q. Of course you know that most of the food products, canned meat of various kinds and other similar articles of food are inspected nowadays?—A. Yes, I know they are.

Q. Then why should the canned lobsters be exempt from similar inspection?—A. They should be compelled to put up good meat.

Q. What has been your practice with regard to the undersized and the berried lobsters, did you expect the canneries to take everything you brought them?—A. They mostly do.

Q. That is of recent years?—A. Except the one year that has been referred to they did take them.

Q. And in that one year what did they do?—A. They threw away all the small lobsters under 8 inches.

Q. That is they would not take them?—A. They would not take them.

Q. And did that make much difference in the earnings of the fishermen that season?—A. About 15 or 20 per cent—that is, it made that difference to me.

Q. What does the average catch amount to, how many tons?—A. About \$200, that is one year with the other, but of course this year I only get \$80

Q. This year you were late in beginning?—A. Yes.

Q. And it was poor fishing?—A. Yes.

Q. And you also lost your traps?—A. Yes.

Q. Would you suggest any change in the present regulations? What would you suggest as to the proper change to be made, we want regulations that can be observed and that may be enforced? Now what should those regulations be—of course you know that the present regulations are not enforced and cannot be enforced?—A. I am quite aware of that; I do not believe there should be any size limit at all, but that we should carefully look after the berried lobster.

Q. Do you think that we can regulate, partially at any rate, that matter of size limit by exacting a certain space between the slats in the trap?—A. I do not think we can at all, I do not think it would make any difference.

Q. Why do you think it would not make any difference? Is it that the lobster would not go through the space, or would it be too hard to follow the fishermen in the matter?—A. It would be too hard to follow the fishermen in the matter.

9-10 EDWARD VII., A. 1910

Q. But if he could be followed do you think it would make any difference?—A. No—well, I suppose it would make some difference.

Q. Do you think it would be possible to adopt for the fishermen the practice followed by the Department of Agriculture which sends around men to lecture to the farmers on the best methods of cultivating crops and raising stock and all that sort of thing. Now, do you think it would be possible in any way to persuade the fishermen to observe the regulations, especially in regard to the berried lobster, by sending men around to talk to them? I think there is a general feeling all around the coast, on the part of the fishermen, as far as we have been able to ascertain from the evidence given, to protect the berried lobster?—A. They have thrown the berried lobster out the last two years here.

Q. Does that mean a very serious loss to the fishermen?—A. It means some.

Q. But if the percentage is not more than 4 per cent of the catch it could not amount to very much?—A. It would not be very much.

Q. Do you not think it would benefit them very much in the end if all the fishermen threw the berried lobsters back into the water?—A. If the fisherman lived long enough it might benefit him.

Q. Well, how long would he have to live? An 8-inch lobster is supposed to be 3 years old?—A. I can't answer that question.

Q. What do you think of these various propositions that have been made as a remedy for the existing state of affairs? You have heard what the propositions are, one of them is that lobster fishing should be closed down altogether for a term of years, what do you think of that?—A. I think it would be very hard on the fishermen.

Q. Well, what do you think of the proposition to close down by sections, give each part of the coast a close season in turn, allowing the fishery to continue in the other sections?—A. That would be about the same; but let me understand, could the fishermen from the section which was closed down move into the other section which had an open season and fish there?

Q. That is the proposition which was made by the Lobster Commission of 1898, did they not come here?—A. Yes.

Q. Well, that is their proposition, what do you think of it?—A. I do not think it is any good.

Q. Then it has been suggested that the size limit should be done away with; that the protection of the berried lobster should be insisted on rigidly, either by getting the fishermen to put her back again in the water or by purchasing her from the fishermen and taking the eggs to a hatchery, or something of that kind; and that in return for doing away with the size limit that the department would shorten the season a little?—A. I think it is short enough as it is.

Q. In some sections, you know, there are other fisheries to turn to, and it is generally admitted, and you say so yourself, that it is at the tag end of the season the damage is done. That would be the least hurtful of all the propositions, would it not?—A. I think so.

Q. What do you think of this matter of pounds?—A. Well, I have never seen one, but I do not think they are very good.

Q. You think that the seed lobster suffers between the time it is taken out of the trap and the time it reaches the pound?—A. Yes, they say she does.

Q. What would you think of a hatchery?—A. I have never been where there has been one.

Q. But you have heard about them, I presume?—A. Yes, but I do not think they would be very much good.

Q. You do not?—A. No; I do not think it is a good thing to take the spawn off the lobster.

Q. Well, it is known for a fact that 98 per cent of the eggs have been hatched out when they were carefully taken off the female. Do you not think that a certain

SESSIONAL PAPER No. 22a

percentage of the young lobsters would survive, at all events?—A. I have no knowledge on the subject.

Q. You would prefer to have the berried lobster put back in the water direct as being the most natural and practical method of preserving her and the least hurtful?—A. Yes.

Q. How could we go to work to get that done do you think?—A. Pay the fishermen for the seed lobster.

Q. But then you would have to have them brought in all the same?—A. Yes; but they should be taken right out and dropped in the water again.

Q. Then the department would have to have a man stationed at every place where the fishermen came in to receive them?—A. Certainly.

Q. You know nothing about the live lobster business?—A. No.

Q. You have never engaged in that business, or been where it was carried on?—A. No.

Q. Do you think that the live lobster business is the most profitable to the fisherman where it can be carried on?—A. I guess so.

Q. If you had better transportation facilities, cold storage and rapid transit, do you think it could be entered into profitably?—A. I think so.

Witness discharged.

Mr. J. W. MADDIN, M.P.—Some fishermen I have talked to, from time to time, raise the objection to the lobster pound that in the distribution of the lobsters from the pound preference is given to those districts that require them most. The fishermen from other places say that the waters that are depleted by the carelessness of the fishermen who take the berried lobsters are being replenished at the expense of those districts where the fishermen are careful to save the berried lobster and send her to the pound. They say that by doing away with the pounds and inducing the fishermen to throw the berried lobster overboard when she is found in the trap, they are preserving their own fishing ground, and the fishermen who observe the law get the benefit of it, so a motive is furnished for obeying the regulations.

The COMMISSIONER.—No doubt putting the berried lobsters back into the water they came from is the most effective method of protecting and preserving them.

Mr. MADDIN.—There is one other matter I would like to refer to. A gentleman wrote me that the Dominion Coal Company have a line of boats running from Louisburg to Boston, and that it would be a matter of very little expense to fix up a fish tank on the deck of those boats. I think it would be worth while for the government to inquire into the matter with the company, as those coal boats run regularly; and I think at a very small cost arrangements might be made by which the fishermen on this coast could ship their lobsters from Louisburg to Boston.

HUGH FERGUSON, fisherman, South Port Morien, called and sworn:—

By the Commissioner:

Q. You are a lobster fisherman?—A. Part of the time.

Q. When you are not engaged in the lobster fishery what do you do?—A. I have worked for fourteen years in the cannery, and about ten years in lobster fishing.

Q. When did you last work in the cannery?—A. About ten years ago.

Q. In what place did you work?—A. Madden's Cove.

Q. Well, now, as to the lobster fishing first; from what port do you carry on your fishing?—A. Port Morien.

Q. How far off shore do you fish there?—A. Off the headlands.

9-10 EDWARD VII., A. 1910

Q. In what depth of water?—A. Sometimes we go as far as ten fathoms.

Q. Does the water deepen rapidly there?—A. No.

Q. How far off shore are you when you fish in ten fathoms?—A. There is not a great distance of shoal water there.

Q. Do you fish all the season on the same ground?—A. Except when we move in.

Q. When do you move in?—A. That is according to the season.

Q. You move in because the lobsters are getting scarce outside?—A. Yes.

Q. What sort of a bottom do you fish on?—A. A rocky bottom.

Q. I suppose you find it is more profitable to fish on that bottom than it is on a soft muddy bottom?—A. There is not much profit in fishing on a soft bottom.

Q. How is the fishing now compared with what it was when you first began fishing?—A. It is away down.

Q. You have to fish more gear in order to get the same amount of lobsters?—A. Oh, a lot more.

Q. When did you first notice that decrease?—A. I suppose it has been gradual.

Q. The decrease has been gradual?—A. Gradually, I suppose.

Q. Is the decrease both in quantity and in size?—A. I do not think there is any decrease in size.

Q. The decrease is not so much in size?—A. I do not think so.

Q. How do they run with you, are there many lobsters below the 8 inch limit?—A. There are a few, not a great many.

Q. What cannery do you deliver your lobsters to?—A. Leslie & Co.

Q. That is Leslie & Co. of Halifax?—A. Of Halifax.

Q. Is their cannery in Port Morien?—A. They have two, one at South Port Morien and one at Morien.

Q. Have they been there very long?—A. For a number of years.

Q. Ever since you have been fishing?—A. Yes.

Q. There was no cannery in existence there before them?—A. Yes, sir.

Q. Who were the canners there before them?—A. L. Pickard & Co., Boston.

Q. Do you belong to the Fishermen's Union?—A. Yes.

Q. All these gentlemen who have given evidence here belong to the Union?—A. Yes.

Q. What is the number of your union?—A. No. 14.

Q. And how long has it been in existence?—A. Three years.

Q. Are there many other fishermen fishing out of the same port with you?—A. Out of the same bay, yes, sir.

Q. What number of boats would you say there are?—A. There are 40 members belonging to that Union.

Q. That covers practically all the Union?—A. Yes, that takes all the Union, they all belong to it.

Q. Do they all fish lobsters?—A. Yes, sir, all of them.

Q. Now as to the size, you say you get very few undersized lobsters?—A. We do get some.

Q. What has been the practice with regard to the small lobsters?—A. We take them to the packers.

Q. The packers take them all?—A. Yes, anything at all.

Q. And the berried lobsters too?—A. Yes, berried lobsters and everything, until we protected them ourselves.

Q. That was understood to be one of the principles of the Union, to protect the berried lobster?—A. Yes, sir.

Q. And since that principle was adopted you have been doing what?—A. We have been putting them overboard.

Q. I suppose all the fishermen own their own boats and gear?—A. Yes.

Q. It is not the practice here for the packer to supply the gear and boat?—A. Not just now, I don't think.

SESSIONAL PAPER No. 22a

Q. Was it ever the practice?—A. Oh, yes.

Q. In a great many places we have been we found that all the gear is owned by the factory, and in that case the men who fish lobsters are generally farmers, and people who come in from the country, but you have not any of that class of fishermen here, they are all regular fishermen?—A. No, we have not any, but we will soon have them I guess the way things are going.

Q. How does the price paid for lobsters now compare with the price paid when you began to fish?—A. The price is better now than it was when I began to fish, but still a man cannot do very much with it just now.

Q. That is owing to the low price and the scarcity of lobsters, then you got a very much larger quantity of lobsters, and though the price was lower you could get them much more easily?—A. Yes.

Q. Are you fishing more gear now than you did then?—A. Two men fish 180 traps.

Q. And when you began how much did you fish, did you fish as much gear?—A. No, not quite as much.

Q. How does the trap you use now compare with that you fished with at first?—A. It is an improved trap.

Q. That is that it holds the lobsters better?—A. I think so.

Q. Do you make as large a mesh in the net now as you did then and do you allow as much space between the slats at the end?—A. Yes, sir.

Q. What space do you allow?—A. About enough to keep the lobsters from getting out.

Q. You do that pretty thoroughly now, but you were not so careful about keeping them in in the beginning?—A. I think so.

Q. You did not catch as many small lobsters then?—A. I think so.

Q. Did you catch as many small lobsters when you began with the old fashioned trap?—A. I think so.

Q. I think the practice then was to allow a much wider space than you allow now?—A. I do not think there was much difference in the trap.

Q. What would you think of this proposition to license the fishermen, is there anything in that?—A. It would give them a chance to live.

Q. You mean the licensing of the canner, I am referring to the proposition to license the fishermen. It has been suggested to the department that the best way to get the law observed would be to license the fishermen, who would have to take out a form, paying a small fee for it, or perhaps no fee at all. The idea being that the licensed fisherman would be more apt to observe the law and to inform on others who violated it. Do you think it would have that effect?—A. I do not think it would be of any benefit at all, I do not think it would.

Q. As to the matter of the price paid for the lobsters, how is that arrived at? What arrangement is there about that, is there any competition between the canneries, and if you sold your lobsters to one cannery could you sell to another, or how does it stand?—A. The canner gives just what he pleases for the lobsters.

Q. You are obliged to take what he offers or leave it alone?—A. Take that or leave it alone.

Q. Has that always been so?—A. No, it has not.

Q. Was there more competition in times past than there is now?—A. I think so.

Q. Why is that so?—A. I do not know, I cannot tell you that.

Q. Do you think there is any distinct combine on the part of the canners to keep prices down?—A. It looked very much like that this season.

Q. What did you get this season for your lobsters?—A. \$2.25 for the most of them.

Q. For the most of them?—A. Well, you might say all, at the last they paid \$2.50.

Q. They raised the price at the end?—A. Yes.

Q. What led them to raise the price?—A. I guess their conscience bothered them.

9-10 EDWARD VII., A. 1910

Q. That does not often bother people in business matters. What did you get last year?—A. \$3.75.

Q. That is by weight?—A. By weight.

Q. Did you always deal with them by weight or was it by count at one time?—A. When I first started years ago, I think it was by count for a few years and then they changed it and it is by weight now.

Q. I suppose that when the lobsters began to get smaller the packers would not take them by count?—A. I think it was the fishermen wanted it by weight.

Q. What do you think is the spawning season of the lobster?—A. I can hardly say that.

Q. Do you not notice that the eggs are getting ripe towards the end of the season?—A. Towards the last of the season they are.

Q. Do you see more spawning lobsters towards the last of the season than you do in the first part?—I think there are more towards the last.

Q. Do you think that they come inshore to spawn?—A. I do not know, but I guess they do.

Q. Have you ever fished in the fall?—A. No.

Q. How is the present close season observed?—A. Pretty well.

Q. Is there any canning at all done during the close season?—A. Not around our way.

Q. Not after the close of the season? In some places we found they did a little canning after the season?—A. In some places they may, but not here.

Q. What proportions of the total catch is berried lobsters do you think?—A. About 4 per cent.

Q. Is it a very serious loss in the earnings of the fishermen, do you think, to return those seed lobsters to the water as fast as they are taken out of the traps?—A. I do not think so.

Q. It does not involve a very serious loss to him?—A. No.

Q. Has the practice of stripping or washing the eggs off the berried lobster ever been followed here—I suppose there is no need of doing it where the packer takes them?—A. Some may have done it on the sly.

Q. Has the canner to your knowledge ever objected to taking the berried lobsters, or has he taken everything brought to him?—A. He has taken everything brought to him.

Q. That is up to the time you commenced to save them yourselves?—A. Yes.

Q. Then the regulations were never observed within your recollection, or was it always the same?—A. Always the same from the start to the finish.

Q. Now as to the matter of licensing, what do you think should be done? The department is anxious to do what is right in the matter, and, as you know they have restricted the number of licenses in the hope of preserving and protecting the fishery, not with the idea of favouring any particular corporation or person. Do you think that every man who applies for a license should get one?—A. It would be just as well, and it would be better.

Q. Do you think that every fisherman could make more money if he undertook to can on his own account than he could by selling his lobsters to the cannery?—A. I think so.

Q. How would you regulate that matter, you could hardly give a license to every individual that applied?—A. I suppose not.

Q. You would have to have some check of some kind, what check would you put on it?—A. In what way?

Q. How would you establish a man's fitness to can or pack lobsters?—A. In some places I think five or six fishermen could get together and pack their own lobsters.

Q. That is the policy of the Department, to issue co-operative licenses to the fishermen who band themselves together for that purpose. Has that been tried in your case?—A. No, sir.

SESSIONAL PAPER No. 22a

Q. Have you ever thought of trying it?—A. Yes, I think some of the fishermen are thinking about it now.

Q. You have to think of that in time to get your building erected and to procure your license, so that you will know what is ahead of you. Do you think that the determination of the department to issue co-operative licenses affords sufficient relief to the fishermen, who complain that they are being cramped and kept down by the canner? Does it give them a fair show when the department says: 'If you think you are not properly treated, you can club together and we will give you a co-operative license to can lobsters'? Do you think that offers relief enough?—A. These people might engage in it here, but there are districts where the fishermen could not engage in it.

Q. If there are a number of fishermen at any place they would have the same opportunity of clubbing together, if they desired to do so, in one place as another. They might not be all equally well off, but they would all have some capital?—A. Yes, of course.

Q. Do you think we could fix any standard, that we might insist that the factory must be up to a certain standard?—A. I think some of them are in very poor condition to-day.

Q. How? As to cleanliness of the gear and plant?—A. Yes.

Q. That is one of the things that has been suggested, that we should insist upon the tables in the cannery being prepared in a certain way, that the fishery officers should be inspectors to see that the requirements are lived up to. Do you think that could be done?—A. I think so.

Q. Do you think that the product of the cannery, the packed article, should also be inspected?—A. I think it should be inspected.

Q. Do you think that the existing staff of fishery officers would be competent to carry on that inspection, or would it require trained men?—A. I think there are too many fishery officers now for what good they do.

Q. Have you many in your neighbourhood?—A. There is one here and there all over the country.

Q. Do they visit the canneries and check them?—A. Once in a while they visit them, but I do not know that they have done any checking, though.

Q. You think they have made no attempt to enforce the regulations?—A. No. Oh, sometimes, just for the fun of it, they might.

Q. Do you know anything about the live lobster trade; have you ever done anything in that line?—A. I think it would be a benefit to this part of the country.

Q. That could be developed, of course; there is a great deal required. You want cold storage and rapid transit facilities for getting to the market?—A. Yes.

Q. What do you think of this matter of lobster pounds; have you had any experience at all in that connection?—A. I do not think they are any good.

Q. What is your objection to them?—A. I think it is just a waste of the country's money for nothing.

Q. Do you know anything about lobster hatcheries?—A. I have heard about them.

Q. Do you think they are any better than the pounds?—A. I think the lobsters are best left to themselves to hatch out their young in the natural way.

Q. There is no doubt about that, but do you think it would be of any benefit to the fishermen to establish a hatchery?—A. I think the fishermen should be paid for the spawn lobsters, and that the lobsters should then be let go on the grounds from which they are taken.

Q. How would you propose to check the seed lobsters?—A. By marking the lobster—punching the tail.

Q. Do you know whether this is done anywhere else?—A. Not in this part of the country, I believe.

9-10 EDWARD VII., A. 1910

Q. Do you think it is right that undersized, immature lobsters—the lobster is supposed to reach its maturity at 8 inches—do you think it is right that undersized and immature lobsters should be destroyed at any time?—A. I think that if the size limit were brought down to 7 inches there would not be very much trouble.

Q. Do you think that the fishermen would be much more careful in observing the law with a 7-inch limit than they are with an 8-inch limit?—A. I think so. I think that if the size limit is placed at 7 inches, there would be very few taken under that size.

Q. Some people have suggested that the lobster fishery should be confined to the deep water, and that fishing should not be allowed to be carried on in shoal water and lagoons; what do you think about that?—A. I think it would be almost impossible to deal with it in that way.

Q. You think it would be almost impossible to regulate that?—A. Impossible.

Q. Do you usually fish up to the end of the season in your neighbourhood?—A. Yes, sir.

Q. You fish right up to the last day?—A. Yes.

Q. And when do you first get at it?—That depends upon the ice.

Q. Is there much loss of gear with you in this neighbourhood?—A. Yes, over one-half.

Q. That is, you expect to lose one-half your gear each season?—A. Yes.

Q. What do you value your lobster traps at altogether?—A. 50 cents.

Q. Do you fish trawls altogether or single traps?—A. On trawls.

Q. There have been various propositions made to the department, which I have enumerated to the other witnesses. Some people have suggested that the best way out of the existing difficulty would be to shut down on the lobster fishing altogether for a term of years! What do you think of that as a remedy?—A. I think it is altogether too severe.

Q. What do you think of the proposition made by the last Lobster Commission, to close down by sections, and keep moving the close season around until every part of the coast has been covered, what do you think of that?—A. I do not think that would be any good.

Q. What would you suggest as a remedy?—(No answer).

Q. There is another proposition, that we should do away with the size limit altogether, and so regulate the space between the slats in the trap as to allow the very small lobster, say those under 7 inches if you like, to escape; to protect the berried lobster always in some way and to shorten the season some two weeks at the end in compensation for the abolition of the size limit. How would that appeal to you?—A. I think if the lobsters are protected under 7 inches, and if the berried lobsters are looked after and not destroyed, I think that would be all right.

Q. With a shortening of the season at the end as suggested?—A. Yes.

Q. Now, with reference to fall fishing, could it be carried on in your neighbourhood?—A. It might be carried on, but I never did any fall fishing.

Q. The weather is not too rough in the fall, the northwest winds prevail then, and you are sheltered from them?—A. We could carry on the fishing in the fall I suppose.

Q. How would it affect the packer to-day if the size limit were strictly enforced to 8 inches? Would it put him out of business?—A. No, but it would hurt him some.

Q. And how would it affect the fisherman, would it hurt him?—A. Yes, it would hurt him more in some places than in others. There is one thing we would like to know and that is how it is that on some parts of the coast the fishermen get paid by the Department for their spawn lobsters and in other places they are not paid. We protect our berried lobsters here and we do not get paid for them.

Q. The department pays for them in some places for the hatcheries.—A. What about the Baker pound, the seed lobsters that go into the pound are paid for.

SESSIONAL PAPER No. 22a

Q. They are paid for, that is the lobsters that go into the pound, but as I understand that is only an experiment. The Department has had a man in the pound all this summer watching the experiment?—A. What the fishermen around this district would like to see is either that the seed lobsters should be put overboard at once and that they be paid for them, or else that pounds be established in the different localities so that the lobsters would be afterwards released into the waters from which they were taken originally.

Q. You would establish pounds in preference to the hatcheries?—A. I could not say about that.

Q. You understand that owing to the natural conditions which are essential to the success of the pounds they cannot be established everywhere; one place may be quite suitable for a pound and an adjoining port may not possess the conditions which are necessary.—A. Well, we want something to protect the industry.

By Mr. Donald Scott:

Q. You worked in a factory for a number of years?—A. Fourteen.

Q. About what number of pounds, while you were working in the factory, of raw material did it take to fill a pound tin?—A. $4\frac{3}{4}$ lbs. and sometimes 5 lbs.

By the Commissioner:

Q. In what canneries were you working?—A. Wallace Cove, Port Morien and Langan.

By Mr. Scott:

Q. Was it ever above 5 in any year?—A. No, unless they threw them away.

Q. Were they in the habit of losing very many fish?—A. Sometimes.

Q. That is when fish have been thrown away?—A. Lots have been thrown away some years.

By the Commissioner:

Q. Were they thrown away by the cannery?—A. Yes.

Q. Why?—A. Because they could not handle them.

Q. There were more fish brought in than they could handle?—A. The canners would take everything that came in.

Q. And they got more than they could handle?—A. That is it, they had more than they could handle.

By Mr. Scott:

Q. Do you remember the canners coming in here and telling the fishermen that the principal reason they could not pay the fishermen the same price down here as in the western part of the province was that the fish were so much poorer, what have you to say about that, do you think that that is correct?—A. No, it is not.

Q. What do you suppose was the object of the packer in telling the fishermen down here that the fish were poorer?—A. It was to cut down the price.

Q. The argument they advanced this year was that they could not give any more than they offered for the fish because of the large amount of bad goods on the market. That is what he told a committee of the union?—A. Yes.

Q. Well the fishermen had not packed any, had they?—A. No.

Q. And therefore the packer said he would have to 'slice' the fishermen this year to make up for the bad work of the factories last year. I think that one of the principal reasons why the Government came to the conclusion to give a monopoly virtually to the packers—because it has all the earmarks of a monopoly, and the fishermen are suffering thereby—was that if the fishermen were allowed to get a license to pack fish the result would be that the product thus put on the market would be so inferior in

9-10 EDWARD VII., A. 1910

quality that it would ruin the market and injure the lobster business generally. Do you think that is correct?—A. No, sir.

Q. That has not been your experience?—A. No, sir. Anybody who knows anything about canning at all can pack lobsters as good as they are packed to-day.

Q. Speaking from your own experience in the factories in which you have worked, do you think it is possible to have better plant, better buildings and better equipment than is to be found in the factories nowadays? Were those factories kept absolutely clean in order that the fish might be placed on the market in the best condition?—A. Not at all.

Q. They were dirty, were they?—A. They were dirty, sometimes.

Q. There was not sufficient care taken in the very important matter of washing off?—A. No, sir.

Q. They were not washed as they should be washed?—A. I wouldn't like to eat some of the canned lobsters.

Q. You did not consider that the product of some of the factories was in a fit condition for human food?—A. I didn't think so, I knew it was not.

Q. You know that the product was not fit for food?—A. Yes.

Q. Do you consider that it is absolutely necessary in order to protect and conserve the lobster industry of this province, or of this particular part of the province, to have a size limit and to have it enforced?—A. I think it would be better to have a 7-inch size limit.

Q. And have it enforced?—A. Certainly.

Q. Do you think there would be any difficulty in enforcing that limit?—A. I do not think so.

Q. You give it as your opinion that it is necessary all these factories should be under close inspection during the packing season?—A. I think that is perfectly right.

Q. You think it is necessary to have that inspection in order to have a good product for the market?—A. Yes.

Q. Do you consider that the present staff of inspectors in this county, that is the regular staff of men, know their business and have the practical experience to enable them to tell when the lobster is properly packed?—A. I think they are good enough to draw their salary and do nothing else.

Q. They are not practical men?—A. Not alone to-day, but ever since I have known anything about it.

Q. You think it is necessary for the department to get men of experience, men having a knowledge of the business, to act as inspectors in order to ensure a good pack. That is your opinion?—A. That is my opinion.

Q. Supposing the government would make a regulation to take all these berried lobsters from the fishermen, and pay the fishermen for them, how would you have these fish distributed, what would be your plan and your idea with regard to that?—A. I would like to have them taken into the factory or the smack, and let every smack man be sworn to punch these fish and mark them for the fishermen, and then put them overboard. I think that is the best way to protect them.

Q. The smack would call at your fishing ground and take them just about where you got them, and it would only be necessary that there should be a man to mark the seed lobsters by punching the tails, and put them right overboard?—A. I think that is the best way, and the most satisfactory.

Q. Well, if these fish were caught over and over again the marks on them would show that they had already been paid for?—A. The smack man would be able to tell that.

By the Commissioner:

Q. The marks would remain until the lobster gets another shell?—A. But that would not be until another year, as far the stripping of eggs from the seed lobster is

concerned, I have seen the boxes used for that purpose which are about so long (illustrating), the spawn is taken off the seed lobster and thrown into the box and kept there until it is sent to the hatchery.

Witness discharged.

THOMAS PEACH, fisherman, Port Morien, called and sworn.

By the Commissioner:

Q. You have heard the evidence given by the other witnesses, do you approve of it?—Yes, I approve of it.

Q. Was there any matter in reference to which you differed in opinion from the other witnesses?—A. No, sir.

Q. Are you a lobster fisherman?—A. I have been a lobster fisherman for nearly twenty years.

Q. Are you a deep sea fisherman?—A. Yes.

Q. Have you always been a fisherman?—A. All my life, since I was ten years old.

Q. And you have always fished from Port Morien?—A. Always from that port.

Q. About what time do you generally begin the lobster fishery?—A. Whenever the ice will allow us to go to work, after the 1st of May.

Q. Is there much loss of gear on account of the ice generally?—A. Not with us, I have never lost any gear from ice.

Q. Then you are careful about putting it out before the ice has gone?—A. Yes, sir, I generally wait until it is clear.

Q. What number of traps do you take?—A. There are six brothers of us and we fish 700 traps, six boats.

Q. Do you group all you catch?—A. We throw it together,

Q. What was the return this year from those six boats?—A. We got 65,000 lbs. of lobsters.

Q. How did this season compare with the previous year?—A. Our catch was just one-half of what we had last year, when we took 132,000 lbs.

Q. You made that catch with the same amount of gear as you used this year?—A. Yes.

Q. And this last year was an off year?—A. Yes, it was, and the bad weather had a lot to do with the catch too.

Q. Within your experience then, is the lobster fishery falling off?—A. That is a pretty hard question to answer; some years you think it is falling off and then other years you think it is not. Last year was as good as any year I ever had, and we got a good average, but this year it is bad. From my experience I have come to the conclusion that the weather has a lot to do with the catch of lobsters, as much as anything else.

Q. In some places they seem to say—along the northern part of Prince Edward Island where they suffered from the ice a great deal—they tell us that a late season is generally a good one.—A. That is the way we find it.

Q. When they do get at it they say they make a pretty good catch?—A. Yes, they catch the lobsters quicker.

Q. But on the whole would you venture to say that the lobster fishery has decreased?—A. Yes, sir, it has, some.

Q. Of course it has decreased more in some places than in others?—A. Yes.

Q. I suppose that would be due largely to over-fishing?—A. I do not know, I have always fished on the north shore and I think it is due more to the weather; I find that in the spring when we have a lot of northerly winds the fishing is poor, but if we have southerly winds the fishing is good.

9-10 EDWARD VII., A. 1910

Q. What depth of water do you fish in?—A. At the start we fish in 6 or 7 fathoms, and we move our traps in until we get into 2 fathoms of water.

Q. As to this question of berried lobsters, do you see more of them at any one particular season than at other periods?—A. Well, yes. When we come in nearer to the shore we see more of them. I think the lobster comes into shore to spawn.

Q. What would you say is their spawning season?—A. That is a pretty hard question to answer. I have seen them with spawn on at all times during the season, but at the tail end of the season it is twice as ripe. Of course in the spring of the year I have seen the lobsters just making spawn.

Q. Did you ever hold lobsters in a trap in order to ascertain anything about the date of their spawning?—A. No.

Q. At some of the places I have visited I have met fishermen who have done that.—A. I do not think that would be a very good method, because if the weather was rough the trap would be knocked about and the seed might be brushed off the lobster. I know on our shore you would be liable to find the trap up on the bank.

Q. What about this matter of licensing canneries, what do you think should be the practice in connection with it?—A. I think if the fishermen want to can their own lobsters they should have the privilege of doing so.

Q. Do you think it would be safe to give a license to every man who applied for it?—A. If he had the capital and had a competent man to run the factory, I do not see why it would not.

Q. And how would we find out that he had the capital?—A. It seems to me he would not be able to start without it.

Q. It occurred to me that one way by which we could ensure that would be to compel him to put a factory of a certain standard, of course we could not ask him to pack a certain number of cases?—A. Certainly not, he might not have enough capital to pack a large quantity.

Q. Do you not think that he might be required to build and equip a factory conforming to a certain standard—of course you understand I have no power in the matter, but these are suggestions that have been made at different places?—A. We have been trying, the six brothers, to get some men to run the factory, and to get a license for the last six or eight years, and we could not get a license. Our two factories could never handle the fish we got, there has been a terrible waste. I know one year we started at \$2.25 for fish, and fished for a fortnight, when the factory got blocked. Mr. Leslie sent the steamer down to take them to St. Peter's, and put 30,000 aboard and they nearly all died. He sent another load down there, and when they got there they were all dead and had to be dumped. The result was that because his factory could not handle the fish they dropped the price, and the six of us lost \$500. We applied for a license, we stated our case, and we sent in a petition, but why it was I do not know, they would not give us a license; those packers seemed to be ahead of us every time. I am not asking for a license this year because we have a license now and are packing.

Q. Did you get a co-operative license?—A. No, sir, we got a license of our own. Still although we have our license now, I do not think the fishermen have ever been treated right. I think this berried lobster business is all astray. I will just tell you my experience in connection with it. When Baker got the pound up there, before that they always took them at the factory, I think Mr. Ferguson here can tell you the way they handled them, they paid 4 cents a piece for our spawn lobsters, the first year the pound was established we only got 2½ cents for the lobsters. The next year they came around and we commenced to get pretty cross about it, we would not do the picking out that year, they were thrown into the smack and they picked them out themselves up at the factory and put them into these little square crates. They did not think enough of them to hold them properly, they crowded them into the crates, and put a cover on the crate and the man jumped on it to press it down; the "Sea Bird" came

SESSIONAL PAPER No. 22a

around once a week, on Saturdays generally, to take them away. The consequence was that when they went to take our seed lobsters out of the crate about $\frac{2}{3}$ of them had to be thrown overboard at the breakwater. My opinion is that most of those lobsters were dead before they got to Gabarus but that Baker got paid for them by the Government at 16 $\frac{1}{2}$ cents, although $\frac{2}{3}$ of them never left the breakwater. It got so bad that our people would not pick the seed lobsters out and hand them over, and now we throw them overboard. We had to do that because we began to understand matters and found that it was necessary to protect ourselves. I know that when they have to come so far for the seed lobsters they are no good when they get them at the pound.

Q. What is the distance from here to Gabarus by water?—A. It is about 34 miles. I do not know anything about the pounds, but I just know the way our fish were handled. They are dumped into these boxes at the harbour here, and kept there for a week before they are taken away, and I do not think any of them get to the pound in good condition at all.

Q. They do the same thing in the hatcheries, they strip the eggs off the seed lobster, put them in a box and they are collected and taken to the hatchery.—A. I saw them take lobsters at Lingan some years ago, strip the spawn off the lobsters and put it into a little bag which was kept in the sea to hatch the eggs. I saw it afterwards and it was full of sea fleas but there were no lobsters there. You can ask Mr. Ferguson here how our fishery officers perform their duties, I do not think they are of any use. I know that our fishery officer is a practical miner. He works at it once in a while, but doesn't know anything about fishing.

Q. How long has he been fishery officer?—A. About three or four years, he never fished lobsters, but used to fish cod.

Q. Do you think the present staff of fishery officers is sufficient?—A. I do not see why we should have a staff at all.

Q. It has been proposed that we should inspect the canneries; would it need a practical canner to make that inspection properly?—A. It should be a man who understands the canning business thoroughly. Of course I do not think that the fishermen know anything at all about it. The year before last they kept us at the 8-inch limit for one week, and after the week we sold everything.

Q. Did they do it with a view of observing the law or were the canneries crowded with fish?—A. I do not think it; it was the year we started the Fishermen's Union, and I think they wanted to crowd us. We people have not been notified about this commission, we did not get the book of evidence or anything else, all we know about it is what we heard; we are one of the big stations and I do not see why they left us out.

By Mr. Scott:

Q. You spoke of the state of affairs at Port Morien in one year when the packers had to throw away a great deal of raw material. Did you suffer from the absence of any other cannery to which you could sell your lobsters?—A. We could not sell our lobsters to any other cannery outside of our own, as far as we found out.

Q. Did you make an agreement with the cannery not to sell to others?—A. No, we were not bound to anybody, we did not make any agreement, but they were bound to one another, that is my opinion.

Q. Do you remember that on one occasion there were two smacks here representing two different firms, and some of us fishermen went and offered our fish to those men and they declined to take them?—A. Yes; they said they were Leslie's fishermen, and they could not handle his lobsters.

Q. What firm did the smacks represent?—A. I think one of them represented Burnham & Morrill.

Q. And the other?—A. I do not just remember, but I think it was Baker's; I am not very sure of the time, but it was my father tried to sell the fish to them. Once

9-10 EDWARD VII., A. 1910

in a while Baker would run his smack down here when he got a little mad at Leslie, and would start opposition for a day or two, but they would meet in Halifax and settle up their difficulty.

By the Commissioner:

Q. What firm is that; is it R. J. Leslie?—A. The firm is run in the name of G. A. Leslie, I think.

Q. We have the firm of Leslie in the Magdalen Islands, they are Halifax people?—A. The man who comes down here to do the business is T. B. Leslie, but I think the firm name is G. A. Leslie.

By Mr. Scott:

Q. There is an idea abroad that it is rather strange that the government of the country should be called upon to pay the fishermen for putting the spawn lobsters back into the water when it is to their own personal interest to do so in order to protect and preserve the industry. Have you any idea why the fishermen adopted this rule of putting the fish overboard?—A. It seems to me that this government is taking a lot of trouble to protect our spawn lobsters now and in many different ways, but it is pretty hard to ask us people here to throw away our spawn lobsters and to get no compensation for doing so, when other people right alongside of us are getting eight cents a piece for them. Here, only yesterday, a man on Mira bay got eight cents for them. I say that the government should pay for all the spawn lobsters that are put overboard, and if they are going to pay any one for them they should pay the fishermen straight and let them be thrown overboard where they are caught. I do not see any difficulty in doing that; let them punch the lobsters in the tail and put them back in the sea, and let the department pay the fishermen what they think they are worth. I am not kicking for a big price like they are paying to Baker, 15 or 16 cents apiece, but pay us the same price as we get for our other lobsters.

Q. As far as you understand it, the fishermen along this coast, many of them, are ready to protect the berried lobster, but there are a certain number of them want to be paid for the lobsters they put overboard. Your idea is that if the fishermen were paid, say eight cents each for them, they would protect them?—A. We have a lot of people who are not actually fishermen, they are more farmer than they are fisherman. They put out a little gear, and fish a little while in the spring; and, of course, we cannot watch them, and perhaps some of these men might wash the seed lobsters.

By the Commissioner:

Q. Would it not be easy to get over that difficulty if the proposition to license the fishermen were adopted?—A. I do not know but that it may be better that way. I am not going to say much about that, but I was of the opinion some years ago that every fisherman should have a license. We have a lot of men who have no permanent interest in the work and do not make a living at it, but it is the people who make a living out of it who should be considered.

Q. In Prince Edward Island the majority of those engaged in the lobster fishing are farmers, blacksmiths, etc.?—A. Those are the people who make trouble. We have to make our living out of the sea; we are a different class of people altogether from them.

By Mr. Scott:

Q. How would you make it better in regard to that matter by licensing the fishermen? Would it not be worse to restrict the fishermen, the bona fide fishermen who are actually engaged in fishing and who make their living entirely and exclusively by fishing?—A. That would be pretty hard, but if a man has a neighbour alongside him who wants to go and catch a few fish it is a pretty hard thing to say to that

SESSIONAL PAPER No. 22a

neighbour, 'You cannot go.' I think that would be a little bit selfish, and I would not like to say that that man should be restricted from fishing.

Q. I just asked the question in order to get your opinion.—A. It is my opinion that we could educate our people to a better standard than we have. I think if the government could see its way to pay the fisherman for those seed lobsters, they could either pay him for a certain percentage of his catch or for the actual number caught, their tails being punched, and put them right back in the sea again.

By the Commissioner:

Q. That is the best way, probably, to put the seed lobster back in the sea under its natural conditions.—A. There is no doubt about it. The seed might come to life in the lobster hatchery, or it might not, and no one can say whether it will live when the young lobster is put into the sea from the hatchery. I think the natural way is the best. As far as these pounds are concerned, from the little I have seen of them, they are a regular nuisance; the fishermen are being paid to destroy their own interests. I have made a study of the matter and have observed the operations on the steamer and I have come to the conclusion that with the pound as it is operated they are paying us people to destroy our own industry. I have seen too much of it. Now they tell us that that man had 50,000 lobsters in the pound, now if there were that many there they must have been rubbing the spawn off each other.

Q. Well, the committee will know more about the pound now, because they have sent some one there to watch its operation and to ascertain what the conditions really are?—A. It has no right to have the pound there, Morien has just as good a right to have it as Gabarus has.

Q. But it is not everywhere you can find the natural conditions which are essential to make a pound?—A. Well, if they pay us for our seed lobsters and we put them overboard in our own grounds it will be all right. You were talking about a limit, I am of the opinion that there should be some limit on the lobsters.

Q. That is a size limit?—A. Yes.

Q. Experience seems to indicate that it is difficult to enforce a size limit. We have been told that you would need a man in every cannery in order to enforce it.—A. Then you could not do it. I do not know if it can be enforced at all, but I believe that the lobsters down to 6½ and 7 inches are better in the sea. A lobster of that size is too small for any man to take.

Q. The question is should they be taken at all at that size. There is no doubt that the lobster has not reached the age of reproduction until it is 8 inches long?—A. Yes, I have caught them.

Q. There is not one in 100,000 under that size?—A. I have caught some very small lobsters this year with seed on them. I have caught quite a lot of lobsters in my lifetime.

Q. Most of them are above 8 inches before they carry berries but now and then you will find a small specimen bearing berries?—A. Of course I have been fishing for 20 years and I have always sold everything I have caught until the last three years, we have put the seed lobsters away ourselves. I was never restricted in the size of the lobster at the factory until that one week. One year I caught as high as 15 or 16 ton of lobsters myself, and I sold them all, and every year I have sold everything with the exception of that one year when they would not take the small lobsters just for one week.

Q. Is there any port in your neighbourhood which is suitable for the establishment of a pound?—A. I do not know what they would want.

Q. You want an enclosed area that is protected from the sea with sufficient depth, there ought to be at least three or four fathoms of water, and there should not be any fresh water in it, it should be as salt as the sea, and you need also a narrow mouth

9-10 EDWARD VII., A. 1910

so that it can be fenced off in order to retain the female lobsters in the pound?—A. I do not think there is any place like that around here. There is a place at our port but it has a muddy bottom, although some lobsters go in there.

Q. They can stand a certain amount of fresh water, but there must be a certain percentage of salt in the water or they will die?—A. There is no place over there that I know of that would meet those requirements.

Q. It would be an easy matter to have small pounds in the vicinity of the factory into which the seed lobsters could be put as they were brought in?—A. I object to that myself, I think the right place for the seed lobster is right overboard where she belongs.

Q. The female lobster undoubtedly comes in shore to ripen her spawn?—A. Yes, that is my opinion.

Q. Those who profess to be up on the subject tell us that the female lobster comes into shore to ripen her spawn and that when the spawn has reached a certain stage of ripeness she goes back to the deep water and that it is there the young lobster is hatched. The young lobster furnishes a very large proportion of the food of the mackerel, and the first three months of his life he swims head on, after that he goes to the bottom and crawls backwards. The first year he grows to three inches and after that he grows two inches each year, that has been determined by tests and observations?—A. I am glad to get that information.

Witness discharged.

JAMES B. CAMPBELL, president, Fishermen's Union, Main-a-dieu, called and sworn.

By the Commissioner:

Q. You have heard the evidence given by the previous witnesses?—A. I have heard the evidence of the various fishermen.

Q. And on the whole do you approve of it?—A. I approve of the whole of it. At the present time I am not a lobster fisherman, I started lobster fishing in 1894, and I knocked off in 1902. The lobsters at that time were fairly plentiful, and where I fished, on the south side of Scatari island, the lobsters run large and we get considerable spawn lobsters. At that time there was a factory in operation in the North Cove, Scatari island, and the price paid was \$2.25. I was fishing for W. F. Greely, of the firm of Burnham & Morrill, and we were insisting upon a little raise in the price of our fish, but he would not give it. I went to the other man who ran the factory at the Northwest Cove, Scatari island, Mr. Neville. I went to that gentleman and told him if he would give me \$2.15 for my lobsters I would let him have them. He replied: 'My poor man, I cannot do it; we cannot take them.' That is just how it was, we were kept down at that time like a lot of slaves. That was the condition of things, if you wanted to sell to another factory they would not take them. I have seen a man come in from Flint island, a mile and three-quarters off this place, on Saturday evening, with a load of lobsters and ask this firm to take them, but they would not. I gave up lobster fishing on that account, because I had an independent mind and did not want to be kept down as a slave. Now, with reference to the spawn lobsters. There was a place down on this coast where I used to fish, a great high cliff, and outside there is another cliff, leaving a small channel, running down to a gravelly bottom, one end of it completely closed up, the other having a small opening in it. At very high tide I went there in a dory, and it occurred to me to drop a little bait there. I dropped the bait and the first thing I saw was the claws of a lobster coming out from the cliff. I and another man were together, and at low water we went there when it was dry and we put meat on the end of a gaff and pulled out 72 spawning lobsters. We got out of that channel 200 spawning lobsters and,

SESSIONAL PAPER No. 22a

strange to say, not another lobster. These were all sold. I have seen a lobster taken and put into a place made for it, into a little pound, and kept in our harbour, afloat, it was taken in June and kept there until the latter part of August; there was spawn on the lobster when taken in the month of June, and it was kept there so long that at last it died.

Q. The spawn did not mature?—A. No, it did not. I have seen the small lobsters when they first appeared in the form of what we call sea flees for which they are often mistaken, although a man who knows can easily see the difference, frequently the sea fleas are taken for lobsters by mistake. Our traps are built sometimes with a certain space left between the slats, but when they are put in the water the dry slats will swell and therefore it will close up the space between them, and if you have the slats wide enough apart to allow a certain sized lobster to escape when the slats swell, as they would of course, when first put in the water dry, allow quite a number of legal sized lobsters to escape. Now then these lobsters are put into this pound at Fourchu, and I understand from very good authority that they are put there in thousands; we have seen them in our own cars, they have turned around and eaten one another, and they will do the same when they are put in the pound in large numbers. These lobsters in my opinion cannot bring forth their young there as they would if they were let loose in the waters to which they belong, no matter whether the government or anyone else purchases them and puts them in the pound. It would be satisfactory to all the fishermen in the province of Nova Scotia to liberate these fish on the grounds where they are taken, and if the government will send in a smack wherever they are found it will cover a large amount of ground, and the smack man can punch the tails and let them go into the water again. That will result in a large increase in the number of lobsters, and the government will not have to pay nearly as much money as it is paying out at the present time, and it will be much more satisfactory to the fishermen. Let the government pay the fishermen for the seed lobsters, let the tails be punched, and let a man be appointed with a boat or some other means of transportation to enable him to go over the ground, so that the lobsters can be liberated every day. I think if we had that we would have the lobster fishery protected as well as it possibly can be.

By Mr. Peach:

Q. The man on the smack might do that, he might be sworn in at the beginning of the season?—A. The trouble is that his master might not allow him to do that, his employer might object. We want to have a man charged with that duty who is independent. It would be important enough in my opinion for the government to appoint a smack man who would take in a certain portion of the ground on purpose to look after the seed lobsters and do nothing else, if the man is engaged in the factory he is another man's servant and we do not know what he might do.

Mr. PEACH,—I have spoken to the man down there and he will not take one seed lobster, he is only a hired man but he keeps us posted so that if a man puts one in there he will be looked after right away. We asked him in the spring to watch for the spawn lobsters and to report to us who was delivering them at the factory, he has for the last three years, and we have been after the man who did so right away. You asked about the price of the lobsters. This year we did not get any offer at all from the packer, he told us that whatever they paid at this other factory over here at Louisburg we would get. We have generally had a definite arrangement, but this year he would not give us any satisfaction, all he would say was: 'Whatever they pay over at Louisburg you will get the same.' With reference to the spawn lobster I think with the other witnesses that they come inshore to spawn and that's the reason why we catch more of them when we come into shore.

Mr. CAMPBELL.—I think it is the same with the lobster as with the other fish it is the heat of the sun that hatches the spawn; I have noticed it frequently in my

9-10 EDWARD VII., A. 1910

experience, and that is why the fish come into shoal water to spawn. I am on my oath at the present, and I do not say that there were no young lobsters came out of the pound alive, but at the same time I would like to have some man bring some of them and show me. I do not see how they could hatch out there with the great bulk of the lobsters crowded into the pound.

Witness discharged.

DONALD SCOTT, Secretary Fishermen's Union, Main-a-dieu, called and sworn:—

By the Commissioner:

Q. You have heard the evidence of these other gentlemen, and the statement made by Mr. Campbell, President of the Union, do you concur in it?—A. I concur in it all, as far as it goes.

Q. Is there any further statement you wish to make, if there is we would be glad to have it?—A. I am in the position now that I would be glad to give a little evidence that may have some bearing on this matter, chiefly from the practical standpoint of a man who was working in the factories for 18 years, in all departments of running the factory, and for four years more or less of lobster fishing. Now, in reference to the lobster industry, I have paid particular attention, and had some experience and opportunities for studying the matter, and I have been studying it for years. In fact from the time I commenced fishing I observed the lobsters and their habits as much as I possibly could. There is one thing I have to say, and that is that the law in reference to the protection of the spawn or berried lobster, and the small lobster, that is the lobster under the size limit, has never been adhered to or observed by the fishermen or the packers in this locality during my 18 years' experience, with the exception of one year when the size limit of 8 inches was strictly enforced in this locality by Messrs. Burnham & Morrill, or their agent, or foreman here. I think I am well within the mark when I state that it was not for the purpose of protecting the fishery at all that the law was enforced on that occasion, but that it was purely to get back at the fishermen. That year they had formed a station of the Fishermen's Union here, and the packers put their heads together and said: 'We will have to get back at these people, we will have to give them an object lesson.' These packers were experienced men, they knew in respect to the quantity of fish under the size limit that it was some 60 per cent of the total catch for the year previous when the price was \$3.25, and they thought by enforcing the size limit on that occasion they would deprive the fishermen of 60 per cent of what they took out of their traps and that at the end of the season, after making up their accounts, if they compelled them to throw away the small sized lobster, the sum total of their earnings would not be equal to what it was the year previous when there was no union in existence. I am sure that it was the object of the packers in enforcing the law on that occasion to discredit the union. I might say that away back in 1893, there was an effort made to enforce the size limit here in this locality, we had the late inspector coming in to harass us, at all hours, even at night, he was coming morning, noon, and every other time of day.

Q. That was in 1893?—A. In 1893. It was necessary then in order that we might protect ourselves, I was working then in the factory, to take all precautions. They kept such a close watch on us, and were so hard on us, that the men who were receiving the lobsters on the wharf had to cull all the undersized and all the spawn lobsters as quickly as they could and put them in a separate part of the dock, hiding them to-day in one place and tomorrow in another, in order that we might save the factory or the proprietor from being fined. This was done so successfully, that I think from 1902 to 1906 the factory paid three fines. In 1902 I took it in my head, I do not know why, but just desiring to find out all I could about it, to keep track of the spawn lobsters, and I took a memorandum of every day's work. In 1902 the result was that in

SESSIONAL PAPER No. 22a

reference to the spawn lobsters taken in the Main-a-dieu factory they amounted to 10½ per cent of the total catch, in 1903 it was something less than 10 per cent, in 1904 it came down to 8 per cent, and in 1905 it was under 7 per cent. To qualify that statement and to show you where there has been depreciation during those years, I might mention that to the westward they were using a contrivance to which they gave the local name of 'hand trap,' merely hoops with net fastened all around which are laid flat on the bottom, which are usually put out during fine weather where any fisherman can put a trap in order to catch the spawn lobsters in the latter part of the season during the very fine days. Some fishermen would put 15 or 20 of these traps along the coast and the result was that a very great number of lobsters during that period between 1902 and 1906 were destroyed. The destruction was something terrible, and when we come to look at it in view of the decrease in the supply during recent years we realize that, no doubt, was one of the main reasons for the decrease. This appliance was brought down and introduced by a fisherman from the western part of the province and they were put abroad not by our own fishermen themselves, but by the instructions of the men who ran the factory, in order to catch the spawn lobsters and to make a little more money by having a larger pack at the end of the season. I want to make the statement that the firm I was working for, Messrs. Burnham & Morrill, did not care a bawbee, or to the extent of one dollar, whether the industry was conserved or not.

Q. What was your average pack during those years?—A. During those years they were packing from 1,100 to 1,600 cases, as to that I am not speaking by the book but off-hand. On some occasions in July when the weather was fine and all that, the fishermen seeing that one man began and made a few dollars that way, all turned in and did it so that there was an awful depletion during those three years, so far as the destruction of the seed lobster is concerned. I took the precaution yesterday to look over some of my memoranda, and I find that the number of small lobsters, that is lobsters under the 8-inch size limit taken, was about 25 per cent, or one-fourth of the total catch. In my humble opinion this was the rock on which the lobster regulations inaugurated by the government, no doubt with some wisdom behind them, and with an honest desire, I will say that, to protect the industry down in the maritime provinces, were wrecked. Taking out the spawn lobsters and the 25 or 30 per cent of the total catch, the fishermen looked upon that as too great a sacrifice altogether for them to make, notwithstanding the fact that they profit by the industry. They think that they should not be required to make that great sacrifice in order to fulfil the law while the packers had no sacrifice to make. Why should the fishermen actually throw away 30 per cent of their catch? I maintain that was too great a sacrifice for that class of people, poor people, because everybody knows what our earnings are, and they could not be expected to make that sacrifice in order to protect the industry because by doing so they could not do themselves justice and support their families in the business. Now the packers, as far as I know them, made no effort to enforce the law; on the other hand they rather encouraged the fishermen to catch everything and anything whether it was the spawn or the small lobster. On one occasion one packer, an agent of Burnham & Morrill, instructed me to take no fish under 8 inches. The lobsters were plentiful at that time and they were paying a very small price for them, and they found that more or less of these small lobsters were coming in, and that they were very troublesome in giving them too much work, and he conceived the plan of having his men on board his smacks and on the wharf throw away all lobsters under 8 inches, and it was done for a little while. But what happened? The other packers came around on his ground and said to the fishermen, 'We will give you the same price you are getting at the Main-a-dieu factory, and we will take them, spawn and all, right down to 6 inches, or anything at all we can put into the can.' The lobster canning business has one peculiarity about it, they have different kinds of cans, the very smallest being ¼ of a pound. To make good fish and to put them in ¼ pound cans they must have small claws and small tails, in other words, small lobsters. Then

9-10 EDWARD VII., A. 1910

they have pound cans, $\frac{3}{4}$ pound and $\frac{1}{2}$ pound, so that with these different sized cans they can, of course, use up all the material offered them by the fishermen.

Q. Have you any idea which class of can commands the highest price in the market?—A. The cans commanding the highest price in the market are the one-quarter pound cans, and the next highest is the one-half pound, then comes the three-quarter pound, and the smallest price they get for their fish anywhere in the markets of Europe, Great Britain or anywhere else is for the pound cans.

Q. And these one-quarter pound cans can only be filled with the small fish?—A. With the smallest fish. I would like to note upon the evidence in reference to the size limit. Last year I took the precaution to go into one of the factories during the latter part of the season, and on one occasion there were 2,000 pounds of lobster on what was called the cooler. I am on my oath now, and this is evidence that is practical, there is no gainsaying it. I weighed one dozen lobsters that I found there and they weighed $1\frac{3}{4}$ lbs. Five of these were under six inches, and there were four of them. I think, that just about measured six inches, and two were between seven and eight inches. That was in the latter part of the season. In the 2,000 pounds of fish there, there must have been in the neighbourhood, taking them by count, of 5,000 lobsters. In my opinion, it is necessary to have a size limit, and I think if the size limit were put at 7 inches the fishermen would agree among themselves to observe it. I may say that the great majority of the fishermen are educated up to the point now, and that they will agree with me when I say that there is necessity for a certain amount of protection for the lobster industry. I do really believe that to preserve and to recuperate the lobster industry up to the point that it will be not only profitable for the fishermen, but for the packers also, it is necessary to have a 7-inch limit, and to have that limit enforced.

Q. Have you any idea how many 7-inch lobsters it takes to fill a one-pound can?—A. You mean by number?

Q. Yes?—A. I never worked in a factory that took them by count.

Q. Well, I have the actual measurement which shows that it takes nine seven-inch lobsters to fill a one pound can?—A. I must say that the most profitable lobster for the canner is that ranging from $7\frac{1}{2}$ to $9\frac{1}{2}$ inches; if they threw all the rest away they would gain by it; they would be able to run their canneries at an average cost of $4\frac{1}{2}$ lbs. of green lobsters to the one pound can. The smaller cans bring the better price, and are the more profitable to the canners. My opinion is that where the larger proportion of the lobsters are medium the average is very much larger.

Now, in reference to canners' licenses, I have had a little experience in connection with them, and I am going to say, generally speaking, that I believe it is not right there should be any restriction to the canners' licenses at all. I believe, in a word, that any man who has the necessary experience and capital to enable him to can lobsters should be given a license by the department. One of my principal reasons for taking that ground is that if you restrict those licenses to any particular class, in a little while they will take advantage of that, and, as a matter of fact they have done so. You have a practical illustration of that in what has occurred right here during the last season. The canners took advantage of the fact that they are protected from outside competition to squeeze the fishermen and to give them whatever price they chose for their fish. In other words, this creates a monopoly, and if the fishermen cannot sell their fish to the canneries they have no market for them, particularly down here. We have no live lobster market or facilities for shipping to any of the live lobster markets of this country, and the result is that we are altogether, under the present regulations with regard to the canner's licenses, at the mercy of the canners. If it is made an open industry, such as it was before the license was restricted, it would keep these men who are engaged in the packing business straight; they would always be in fear, as they were before these conditions were brought about by the restricting of licenses, of outsiders coming in and competing with them for the fish. But under the existing regulations that competition has been destroyed, and the result

SESSIONAL PAPER No. 22a

is that the fishermen have no chance at all. Last season our station of the Fishermen's Union fixed the price at \$3.75, and notified the packers to that effect. I might say that we did not know the exact condition of the market for canned lobsters at the time, and we fixed our price on the same basis as the previous year. They said they could not possibly come to any agreement at the time, and they kept backing and filling. We could not get a license, we had no means by which we could protect ourselves against them, and we could get no satisfaction. When the time came the fishermen got their gear ready, made their traps, and fitted out for the fishing season, and it was only along the latter part of April that they said for the first time: 'We will not give any more than \$2.25, and if you do not choose to take that we will close the factories.' The result was that the factory at Gabarus was closed on account of the strike. The men called a strike, the fishermen refused to fish for that price on the ground that they could not make a living at such starvation wages. They held out, and in the meantime we asked the government to intervene. The Hon. Mr. Brodeur was asked to appoint a commission, and he replied that he had no machinery for that purpose. We offered to arbitrate with them, and finally the department at Ottawa sent Mr. Morrison, the inspector of fisheries, here. He came here and met the agent of the union in the presence of one of the packers, and we said: 'It is out of our hands altogether, the government has sent an officer from the department; we will submit altogether to him. We will lay before him all our data and all the information that we have, and we will abide by the decision of Mr. Morrison, the man sent here by the government.' But they would not meet us. We asked the principal packers to meet the delegates from the various unions at Port Hawkesbury and adjust the dispute. We were ready if they proved they could not pay the price we had demanded—we had fixed on \$3.75—and it was agreed by all the other stations in Nova Scotia that we would take a lesser price if it was shown that the packers could not pay the amount asked, or such price as would allow the packers a reasonable margin of profit and that would give the fishermen enough to live on. They refused point blank to accept that offer, and also to meet the official sent by the government to investigate, and they said: 'The price is \$2.25, if you don't take that we will close the factory.' The result was they closed up the factory and threw some 45 men, boys and girls out of employment, and for a few days the fishermen who usually fished for Burnham & Morrill were in great doubt whether they would be able to sell their fish or not. A few days afterwards Roberts, Simpson & Company, of Halifax, put a boat on and decided to buy the fish. In 1906 the packers paid \$3.25 in this locality. The price in Great Britain at that time and on the continent was five shillings lower than in 1909. The reasons they gave for the reduction in price is simply a fairy tale, to put it very mildly. One of the reasons given is that our fish are not as good, that it takes more fish down here to make a can than it does in the western part of the province. That is one of the reasons they assign why they cannot pay the same price here that they do west of Canso.

On account of the dispute between the packers and the union, up to the 15th of April we had no assurance from the department that we could get a co-operative license—I believe that it is a wise move on the part of the government to issue co-operative licenses, but the result was that down here we had nothing. Down at Gabarus they have succeeded, and a couple of stations in other places are ready, but we were left altogether on our oars, and if it had not been for the pressure brought to bear on Simpson & Company in Halifax these people who had been selling to Burnham & Morrill would not have been able to sell their fish at all; the packers were simply going to wipe us out altogether. I think every person will agree with me that such a state of affairs as that should not be permitted to exist for one moment in any civilized community, and especially under our free constitution here in Canada. We are not unreasonable men, our policy always has been to live and let live. Whenever in the last three years we have had an opportunity to adjust prices we have done so; we made contracts with these men and we followed those contracts out to the letter.

9-10 EDWARD VII., A. 1910

If something is not done in the matter, if the packers continue to have the monopoly, as they have to-day, it is going to be hard on the fishermen. As a matter of fact I have heard the opinion expressed by a great many fishermen along this coast that something will have to be done, and that they will have to be protected in their rights, otherwise they will have to go out of business altogether.

Some questions were asked by your honour in reference to the standard of canneries and all that. When this splendid franchise was given to these men who now hold it and the licenses were restricted to them and to them alone, one of the principal arguments they advanced was that the fishermen who packed were usually dishonest, and all that sort of thing; that the market would be ruined by inferior goods being placed upon it by the inexperienced fishermen. Now, in 1908 there were no packers of any kind other than these same good, reliable and honest men; they were the only men who were putting up lobster, but what do we find? We have the evidence out of their own mouths, Messrs. Burnham & Morrill's agent says: 'We had returned to us up to the end of October, 1908, 5,000 cases of the last shipment which went over on the Allan Line, some 10,000 cases.' Now, these fish were sold at \$16 a case, and they had 5,000 cases of that shipment returned to them, and Robert Simpson told me in April that their firm had lost \$100,000, and that was why they couldn't give the price, that these fish were thrown back on them, and that was the reason they had to put the price down. I do not think it is fair that the fishermen who gave the raw material to these gentlemen in perfect condition should be placed at a disadvantage, and be made to recoup the packers for the loss which resulted from their own carelessness or slovenliness in doing business; or because they did not put up the grade of goods that the European markets required or that they had themselves contracted to supply to their customers.

So far as the time limit is concerned, all the fishermen here seem to be of the opinion that that is all right. There is one part of the regulations that we have always adhered to; we have never caught any fish during the close season. There is no fishing here out of season, from St. Peters to Cape North; that part of the regulations has always been strictly observed.

Perhaps it will be wise for me to give my opinion in reference to pounds. It is true I have never visited Baker's pound, but I have heard a great deal about it, and I have had some experience in connection with it, for two years I handled the lobsters that went into those cars that were shipped to Mr. Baker. In turning up my memoranda I find—this evidence is specific and positive—on one occasion his boat came here, the lobsters were gathered up in smacks, brought in and remained in the sun all day; they did not take any precautions to protect them. I suggested that proper boxes or baskets be put on board some of the smacks in which to put the seed lobsters, but they told me that the government was going to foot the expense; they were not handling the spawn lobsters in a proper way, and a great many of them were sick and almost dead when they came in, and many of them died. On one occasion I examined the lobsters myself on the morning that they were taken away from the factory by the *Sea Bird*, and I found that 60 per cent were dead. On another occasion, the next trip, there were 50 per cent dead, and on the third and last time, 70 per cent were dead. I do not know what happened to them after they left the factory, but from the knowledge I gained, and from what I know of seed lobsters, I do not believe that there were 5 per cent of them alive when they went into Baker's pound. Looking over the evidence taken at Ottawa, I am reminded that Mr. Baker swore that 5 per cent of these lobsters died in the pound, that that was the percentage of mortality in the pound. I do not know how that could possibly be if they handled them the way they were handled when I had charge of the handling of them in the factory.

Q. What he probably meant was 5 per cent of those that went into the pound?—A. It is also claimed that a very large number of small diminutive lobsters, just come out of their shell, so to speak, are found in that pound. Now, it is not very likely that the

SESSIONAL PAPER No. 22a

lobsters will hatch in Baker's pound any sooner than they will at the Canso hatchery. I have read the evidence in regard to that matter by men of experience, observant men, employees of that hatchery at Canso, which is conducted, I believe, in a splendid manner, and they say that no proportion of the small lobsters are hatched out before the last week in July. I have been in the place and asked the question, and took down the reply, and they tell me that the first and second week in August is the time when the young lobster comes to life, and that then they are found in myriads. If that be the fact, and it must be owing to the source from which the evidence is obtained, where do the experts in the month of June and earlier find these small lobsters swimming around the pound? I believe, from what I know about it, that the lobsters do not spawn on this part of the coast before the last week of July and on in August. That is the spawning season as far as I can learn.

Q. As to hatcheries, have you anything to say about them?—A. With regard to the hatchery, as far as that has been demonstrated I must admit that they do produce the little lobster, but the great trouble is—of course the object is a good one and the department are no doubt desirous to protect the great lobster industry and all the evidence points to the fact that they do produce and hatch out these little lobsters—but the question that arises with the practical fishermen here, and everywhere else in the province, is, how many of these young lobsters ever reach the age of maturity. How many of these are preserved? They take them out, they go through the glass jars down into the great vat, and when the vat is filled up they have a barrel and take them out and distribute them along the coast. My opinion is that the mackerel and other small fish gobble up these little lobsters, and that none of them come to maturity, and that so far as the efforts of the department are concerned the result is nil. To put it the way an old fisherman suggested, he thought it was a very strange way of doing business for the government to be spending the money of the people in raising young lobsters to be fed to the mackerel along the coast. That was his opinion and I think it is correct. With reference to the spawning lobster I think the evidence goes to prove that the best way to deal with her would be to let her go just where she is caught. I have worked in the lobster industry a great many years and I have observed all these things in connection with the lobster and I am satisfied that it could very readily be worked out. When the lobster fisherman sees this spawn lobster in his trap he can easily put her aside—our experience in three years was that the spawn lobsters do not exceed 4 per cent of the catch, and I believe that this man who would be appointed for the purpose would not be overburdened by the work of taking these lobsters, stamping them, putting them overboard and giving a receipt to the fisherman. As far as the expense is concerned all these men could be made pro tem officers of the department, sworn in the regular way and paid a small salary for it. I do not know what the quality of the smack men is in other parts, but I must say this of the smack men engaged in this factory, and at Port Morien, that they are intelligent men, honest men, and I believe that if this scheme were adopted it would go far towards removing any anxiety in connection with the future of the lobster industry on this part of the coast.

With respect to the condition of affairs in the western part of the province I have no distinct knowledge, but I know this, that the drain upon the lobster specie in this part of Cape Breton county is not nearly so great as it is on other parts of the coast from Canso to the west, for the reason that we have more stormy weather to contend with, every week the fisherman loses one or two days, and then the ice comes in in the spring so that we never can get to work here before the 14th or 15th of May at the earliest and on one occasion it was the 13th or 14th of June when the fishermen got to work. We do not have down here in the very best seasons any more than two and a half months' fishing, and, as I said before, we adhere strictly to one of the regulations, that is that we do not take any fish out of season. Speaking generally in regard to that matter if the department chooses to adopt our suggestion with regard to spawn lobsters, and gives us a 7-inch limit, I think that this part of the coast, as

9-10 EDWARD VII., A. 1910

far as I have any knowledge, will be safe for years to come. I do not think it is possible to deplete the industry under those conditions so that it will be a loss to those engaged in it. As one taking an active part in the consideration and discussion of this matter I am very pleased that the government has sent a commissioner down here to take the evidence of the fishermen; I believe that it is the right method to pursue, and that when the evidence is all taken that the regulations that will come as a result of that evidence given before this Commission will redound to the benefit of all concerned in the lobster industry.

Witness discharged.

Commission adjourned.

LINGAN, C. B., 23rd August, 1909.

JOHN BURKE, packer, Lingan, called and sworn:—

By the Commissioner:

Q. How long have you been engaged in the lobster packing business?—A. I have packed, myself, 12 years, but I have not packed these last five years, the factory has been leased.

Q. You have actually given up packing?—A. I have not packed lobsters for the last five years.

Q. Who is doing the packing now?—A. Baxter Bros.

Q. Where do they come from?—A. Brunswick, Me.

Q. What is the capacity of the factory?—A. About 1,200 cases are usually packed there.

Q. How many boats are fishing for the cannery?—A. I guess somewhere about 30, or 35, possibly.

Q. Do the fishermen own their own boats and gear?—A. They all own their own boats and gear.

Q. About what number of hands are employed in the cannery?—A. Men and women, somewhere about 35 are employed sometimes during the season; that does not include fishermen.

Q. How does their pack compare now with what it was when you first began?—A. For two years they packed more than I did, but this year of course was bad on account of stormy weather.

Q. What was the quantity packed?—A. About 996 cases.

Q. When you were packing you had a smaller number of fishermen?—A. No, we had about the same, in fact I do not know but what I had a few boats more.

Q. What is the condition of the lobster fishery in the neighbourhood of Lingan, in the bay, and off the bay, compared with what it was when you first started?—A. I remember when the fishery was started first, about six years before I began, the lobsters were more plentiful, but for the last 16 years I think they have been just as plentiful as they were when I took charge of it.

Q. Is there as large a run of lobsters?—A. Yes, they run the same.

Q. Have you any idea of the percentage taken now below the 8-inch size limit?—A. Well, of course in July quite a lot of them are below the 8-inch limit, and in the latter part of June there are some, but in the first of June we do not have any.

Q. Your season here is from the 1st of May to the last of July?—A. Yes.

Q. As a rule, does the cannery run right up to the very tag end of the season?—A. Very seldom; this year there was a heavy storm and the gear got broken.

SESSIONAL PAPER No. 22a

Q. As a rule do they usually fish to the end of the season?—A. They generally fish up to about the 20th of July.

Q. And are they ever able to begin sharp at the opening of the season?—A. Never, not on the first of May.

Q. The ice conditions here are such, I suppose, that you cannot begin on the first of May?—A. It is often the 22nd of May before we can begin here, and a few years ago it was the 6th of June before we got at it. When you ask that question, if you desire it, I can give you the dates that I started the factory in each year from 1894 to 1904, and the number of days fishing we had in each month during that period. The figures in the columns 'days fishing' show the number of days I had taken lobsters from the fishermen in that month and the figures in the last column show the total number of days during the season on which lobsters were taken at the factory. In 1894 and 1895 there was no fishing in July, the season ended on the last of June. In 1896, an extension was granted, and in several other years they granted us extensions. In 1902 there was a big storm, there was only eight days fishing in June, and only a few of the fishermen were fishing, there was very little done in July either in that year. (Statement filed as follows:)

Year.	Date starting factory.	Days fishing each month.	Days fishing each month.	Days fishing each month.	Total days fishing each year.
1894.....	May 25	May 6	June 22	July —	28
1895.....	" 22	" 9	" 15	" —	24
1896.....	" 18	" 10	" 23	" 16	49
1897.....	" 21	" 9	" 22	" 9	40
1898.....	" 14	" 12	" 20	" 13	45
1899.....	" 17	" 10	" 25	" 4	51
1900.....	" 12	" 15	" 22	" 14	51
1901.....	" 10	" 18	" 18	" 10	46
1902.....	" 9	" 17	" 8	" 5	30
1903.....	" 14	" 13	" 22	" 19	54
1904.....	" 16	" 13	" 20	" 13	46

Q. After 1904, you rented the factory?—A. Yes.

Q. What used to be the average, can you give us any idea of the average of lobsters when you packed? How many did they run to the pound can?—A. About 275 was the best I ever got to make a case.

Q. About 275 lobsters?—A. 275 pounds to make a case; sometimes it would take more than that if we were rushed.

Q. Now, is there any difference during the season as to the quantity of meat the lobsters will turn out? The first lobsters you get do not turn out as much meat as the same weight of green lobster does later on, do they?—A. They do not give as much meat, but they are larger lobsters.

Q. In what depth of water do the fisherman usually fish here?—A. I do not think any of them fish more than three or four fathoms, and most of them not that much. They fish on the shoals and off the head.

Q. What is the best fishing season here?—A. In May and up to the middle of June, that is when they get the most lobsters and the biggest lobsters.

Q. You find a larger and better run of lobsters early in the season than you do later on?—A. Oh, yes.

Q. When the fishermen are fishing in that very shoal water is there a larger percentage of small lobsters, do you think?—A. Yes, there is, when they are getting in shore in July.

Q. And is there a larger percentage of egg-bearing lobsters at that time?—A. Yes, I expect there would be, they make out that the egg lobsters are close to the shore then.

9-10 EDWARD VII., A. 1910

Q. You believe that the female lobster comes close in shore to spawn?—A. Yes. Another thing that I know, some fishermen get a great many more of the egg-bearing lobsters than others.

Q. What percentage of seed-bearing lobsters would you consider is taken, how many out of every hundred?—A. About 3 per cent I would say.

Q. That is, taking it the whole season through?—A. Yes.

Q. The percentage would be a little greater at the end of the season and less at the beginning, I suppose?—A. I always found that there were as many at the beginning as there were at the end.

Q. Would you venture to say what proportion of the total catch of lobsters would be below the legal limit?—A. Here I would say that in July it is fully 50 per cent.

Q. What was the practice here of the fishermen in the beginning? I suppose the regulations have never been strictly enforced?—A. No, not while I was in the factory. The first year I took hold of the factory we had a very strict overseer, and it had to be enforced as far as he was concerned, but there are various ways of keeping them hid, of late years they are not enforcing the size limit, but they are enforcing the regulations with regard to the seed lobster.

Q. Have the fishermen ever followed the practice of wiping the eggs off the seed lobster and bringing it into the factory?—A. They did, but I do not think it is done to any extent now, I think they are dropping that practice. There may be a few of them that will do it, but I think the majority of them will not.

Q. The majority of the fishermen you think will not do it?—A. No.

Q. Is it the practice of the fishermen to bring everything they catch to the factory?—A. Here we never take any lobster under 7 inches, smaller than that they would not be worth packing.

Q. What is the practice here as to the berried lobsters, do the canners take them?—A. They do not take them here now, they are very careful about that.

Q. Have you ever lost fishermen because of your refusal to take the berried lobster from them?—A. There was one year I had some difficulty, my fishermen said that other smacks were taking the egg-bearing lobsters and that if we would not take them we would not get any. I wrote to the other smack men about it, but I did not have any reply; however two or three days afterwards these other smack men told my fishermen that I had written to them about taking the berried lobsters, and the result was that they would not give me any lobsters.

Q. What would you regard as the spawning season of the lobsters?—A. All seasons; I have been on the shore on Christmas eve and I found them with seed on them then.

Q. But that seed would not be ripe for hatching, it would not be hatched until the warm weather?—A. No, it would be a long time afterwards before it would be hatched, but you get lobsters with the small black seed on them in the winter although they would not be hatched out until much later.

Q. What class of lobster do you find bearing eggs, small or large?—A. I have seen them 8 inches long, or less than 8 inches with eggs on, but most of them when bearing eggs are about 9 inches.

Q. In very rare instances they have been found with eggs on at 7 inches?—A. I have never seen any 7-inch lobsters with eggs on. The run of lobsters here, however, is not as large as in deeper water.

Q. What would you suggest as the best means of protecting the egg-bearing lobster?—A. My opinion is that the best means is to put them overboard in their own natural ground, because I can see that there must be an awful per centage of them that will die if you take them any distance to the pounds. The fisherman must be three or four hours at his traps, and if he picks one of these berried lobsters out he throws it into the bow or the stern of the boat, and after he takes it to the factory it will lie around there until the smack comes to take it to the pound, so that it is knocked around

SESSIONAL PAPER No. 22a

a good deal and the female lobster is more delicate and cannot stand such rough handling.

Q. You think that the egg-bearing lobster cannot stand the handling it receives before it gets to the pound?—A. I do not think it will, and a larger lobster will not live as long as the small one; they are not fit to take away any great distance, and then again when they are placed in the pounds in good condition perhaps the confinement is not suitable for them. I see by the evidence that when they liberate them they take them two miles off shore at Fourchu, and the fishermen claim that the conditions may not be suitable for them where they are deposited.

Q. Taking it for granted that the best way to protect the female lobster is to throw her overboard, what is the best way to induce the fishermen to do this?—A. If the factories would not take the berried lobsters there would be no inducement to the fishermen to hold her, and they would throw her overboard.

Q. Was there not always a risk of inducing the fishermen to brush the eggs off so that they could turn her into the cannery?—A. There was more inducement to them to do so some time ago than there is now, but the last few years I find that the fishermen are beginning to realize, particularly around here, that it is to their own benefit to put the seed lobster overboard.

Q. Do you think there would be any good object served by sending down some one who is an expert on the subject to talk to the fishermen, and point out to them the advantage it would be to them pecuniarily if they protected the seed lobster?—A. I think it would.

Q. The Agricultural Department does something of that kind in connection with the farmers; they send out experts to explain to them the advantages of raising certain stock or certain crops, the furnishing of the soil with plant food and all that sort of thing, and might not an educational work be carried on with advantage on similar lines among the fishermen?—A. I think so. A great many fishermen do not really understand the damage they are doing by taking the seed lobster.

Q. Do you think if it were properly explained to them it would have a good effect?—A. Yes, I think it would.

Q. I suppose it would be difficult to detect the lobster that had the eggs brushed off?—A. It would not be very difficult to do so when the boats come into the factory, but it would be more difficult to detect them when being placed in the smacks.

Q. Most of the lobsters here are smacked to the factory, are they?—A. At this factory possibly one-third are delivered at the factory.

Q. What is your idea as to the usefulness of pounds?—A. As a matter of fact I haven't much faith in them. I have not seen the pounds, but I have not very much faith in them.

Q. What do you think about hatcheries?—A. I do not know anything about hatcheries at all.

Q. Now, as to the matter of licenses, there is a good deal of feeling, you know, about the present state of affairs with regard to canning licenses. Is there any fishermen's union here?—A. There has been one, but they dropped it.

Q. As to the matter of licenses to canneries, you know that the policy of the department during the last number of years has been to keep down as far as possible the number of canning licenses. What do you think of that, do you think there are canneries enough?—A. I know that there are more canneries now than can get lobsters to can. This factory here is able to can all that they can get here, and there have been two other canneries started here but they went down.

Q. Is there only one cannery here now?—A. Yes.

Q. Is there any reason why any man who shows his competency to can should not be given a license?—A. Well, I do not know that there is in that way of speaking. But there were a great many little canneries operating formerly that were injuring the market by putting up bad goods.

9-10 EDWARD VII., A. 1910

Q. Of course you know there has been friction, especially on this shore, a little further along the shore, between the fishermen and the canners, and in order not to give the fishermen any cause for complaining the department, under the Hon. Mr. Brodeur, the present minister, decided to issue what they call co-operative licenses, and these are the only new licenses that are issued, by which the fishermen who are dissatisfied can band themselves together and pack lobsters. What is your idea about that?—A. I suppose it is a matter of public opinion, and if people kick up and want them the only thing to do is to give it to them, and I say, all right, but in Gabarus they tell you they are losing money, which I knew they would do.

Q. Of course it needs other qualifications besides the ability to catch lobsters to run a factory successfully?—A. Yes, it is uphill work in these days to run a factory.

Q. Now, as to the matter of price, what has been paid the fishermen here for their lobsters?—A. This year the price was \$2.25, last year it was \$3 and \$3.50, and I think it went as high as \$3.75.

Q. I presume the reason for the decrease in the price was that the market had dropped?—A. The market dropped last winter. Last summer it was fine, and there was a very large catch, so that the market got glutted.

Q. Is it your opinion that, one year with another, the fishermen would make more money if they were allowed to can for themselves?—A. I do not believe they would, or that they would even make as much money.

Q. What are the ordinary wages paid to hands here? What is usually paid to a scaler?—A. \$35 to \$40 and his board.

Q. And what wages are usually paid to the other hands?—A. Men get from \$20 to \$30, and boys about \$20, and the women from \$12 to \$15, but neither the men nor the women are given maintenance, only the sealers.

Q. These are what we may call the standard wages?—A. That is about the standard, yes.

Q. With reference to the size limit, do you think it is in the interest of the lobster fishery that lobsters should be taken before they reach the age of reproduction?—A. Yes; I believe the factory, I know it is the case around here, could not work at all if they were confined to the size limit.

Q. As you know there have been various remedies suggested for the existing condition of affairs; you do not seem to be as badly off here as they are in some places, or at least the fishery is not exhausted to the same extent that it is in other places?—A. No, I do not think it could be if the egg-bearing lobsters are protected, because we do not have more than two months' fishing.

Q. The most heroic of all the remedies which have been suggested is that we should stop all fishing for a term of years; what do you think about that?—A. I think that would be most serious to the capital invested in it.

Q. And you think the fishery has not reached that stage to necessitate such heroic measures?—A. Not on this coast anyway.

Q. Then the Lobster Commission of 1898 made a recommendation—they did not come here, did they?—A. No, I went to Sydney to meet them, but they had gone to North Sydney before I arrived. However, I sent them my views.

Q. They recommended shutting down all along the coast by sections, closing down this section, we will say, this year, and allowing the fishery to proceed on the other parts of the coast, and next year shutting down in the next district and so on, moving around gradually until the whole coast had been given a close season?—A. I guess I must have misunderstood that; was it that they did not intend to close any particular port, but to lay out certain portions of the ground and allow no traps there.

Q. What I understand was that they proposed to close off a certain section of the coast each year and not allow fishing in that section?—A. I think it would be very hard to do that.

SESSIONAL PAPER No. 22a

Q. Another proposition that has been made to the department is to do away altogether with the size limit and to strictly protect the berried lobsters?—A. I think that would be about the best way.

Q. And I suppose the department would expect something in return for the abolition of the size limit by cutting off say ten days or a fortnight at the end of the open season?—A. That would not make any difference here, because that portion of the season is not usually fished anyway.

Q. In most cases we find, especially where the lobster fishery is carried on by legitimate fishermen, that it would not make any very material difference, because they have other fisheries they could turn to, and a great many of the factories close down before the end of the season in any event?—A. This one here never worked until the end of the season.

Q. In my division the factories usually close down about the 10th of July, and the result is that the most of the lobster fishing closes about the 15th of June. What are the bulk of the lobster fishermen in this neighbourhood; are they genuine fishermen?—A. Yes, they are people that have been fishing ever since the factory started here years ago.

Q. But do they continue to fish when the lobster fishery is over?—A. A great many of them do, but some go to the mines.

Q. In Northern New Brunswick a great many of those engaged in the lobster fishery are farmers, and the cannery supplies the gear and the boats, and when the fishery is closed they go back to their farms?—A. A great many of them here are that way also, but every one here owns his own boat and gear.

Q. What kind of trap do you use here?—A. They all use what they call the prison trap.

Q. How long has that trap been in use?—A. About five years.

Q. That is what is called the parlour trap?—A. Yes.

Q. The only merit which that trap has, as I understand it, over the old-fashioned trap is that it holds the lobsters better?—A. It keeps them better once they get in.

Q. And in the event of the fisherman being unable to fish his traps every day he does not lose the fish?—A. That is the idea.

Q. How far do they space the slats apart here?—A. There is no particular space; at first there was a wide space, but I do not think they are more than one inch apart now.

Q. We have found in many places that the slats are only half an inch apart because we measured them?—A. That might be the case here, too.

Q. Do you not think that space is unnecessarily small? Do you not think that by insisting upon an inch space a certain percentage of the small lobsters would find their way out of the trap?—A. I know here that they never bring in anything that could get out of a one-inch space. A lobster under 6 inches would not be of any use to the factory.

Q. In some places they are canning them where it takes 15 or 16 to fill a pound can?—A. They do not can anything like that here; they do not can some 7-inch lobsters because they are thin and slim, but if they are broad they take them.

Q. What is the most valuable can; which size can fetches the best price?—A. I do not know; they have different cans for different markets.

Q. We have been informed at other places that what is called the $\frac{1}{4}$ -pound flats bring the best price?—A. Oh, yes; they do.

Q. They must have very small lobsters to fill such a small can?—A. In July is the best time to put up that can; the $\frac{1}{4}$ -pound can is not any smaller around than the $\frac{1}{2}$ -pound can, but it is lower.

Q. According to measurements actually taken we find that it takes nine 7-inch lobsters to fill a pound can?—A. Yes, that is about it, I think.

9-10 EDWARD VII., A. 1910

Q. Do you think that the strict enforcement of the 8-inch limit here would put the canner out of business?—A. It certainly would.

Q. And I presume it would put the fishermen out of business too?—A. After the 1st of June it would, but before that date there are very few caught under that size.

Q. I suppose that to carry on the live lobster industry here is out of the question?—A. There has not been any sent alive from here.

Q. The facilities for exporting them from here to the Boston market do not exist?—A. I think it would be too hard to handle them, they would not pay.

Q. It has been suggested that for the better control of the lobster fishery the lobster fishermen should be required to register and take out a license?—A. I think that would be a very good idea, and you would have them under some authority.

Q. If that were done by refusing the fishermen a license if he showed a determination to continually violate the law, he could be prevented from carrying on that particular industry?—A. It would make him feel that he had some responsibility as well as the packer.

Q. Are you aware of the fishermen having complained that the price they were receiving for their lobsters was not sufficient?—A. Of course this year they complained considerably, but before this they appeared to be fairly well satisfied, because they knew they were getting the same as the fishermen were getting anywhere, that is taking the conditions which exist here and the fact that no live lobsters are exported.

Q. Professor Prince favours, he always has recommended, that there should be only two seasons for the lobster fishery for the Atlantic coast, that there should be a universal close season from July 15th to January 1st following, that is you could fish from the 1st of January to the 15th of July, how would that suit this coast?—A. That would suit this coast all right, there is nothing caught on this coast after July 15th.

Q. That is his recommendation for north of Cape Canso, and from the 1st of July to January 1st south and west of Cape Canso, that is giving them two weeks' shorter season south of Canso than you would have here, and insisting down there on a larger size limit on account of their being able to export their lobsters to market alive, to have a limit of 9 inches and enforce it.—A. I believe their lobsters are larger than ours.

Q. Yes, they come out of deeper water.—A. Out of deeper water.

Q. Do you think that the product of the canneries should be subject to inspection? You know that the tendency nowadays is to have all food products inspected?—A. Well, it is hard to inspect the meat after it is canned.

Q. You might say the same of other food products, canned meat, fruit, and many other canned articles of daily consumption are now inspected for the protection of the consumer.—A. I know they are pretty well inspected now. The lobster people you are going to send your canned lobster to are going to inspect the product of your factory pretty well, but a government inspector might be a useful man in cases of dispute between the packer and the purchaser, he could assist in settling the dispute.

Q. Do you think that we should insist upon a standard cannery, that the conditions in a cannery should be up to a certain standard. We find that in a great many canneries the conditions are very bad, the tables are very rough, some of them are unclean, in fact everything about them is unclean?—A. Yes, I think they should be inspected.

Q. It seems to me that if we are going to give every man a license, to increase the number of licenses granted, the simplest way for us to hold it in check would be to insist upon some standard with which the cannery must comply before the license is issued.—A. Well, I would think that you could not have everything too clean; you should have your table covered with zinc or some other material in order that it may be kept clean.

SESSIONAL PAPER No. 22a

Q. Some people have suggested marble, and some plate glass, which has been found to work very well in some places when laid in cement, as suitable covering for tables. Mr. Menier at Anticosti has a very large and elaborately equipped cannery, the tables of which are covered with marble, but of course everybody would not put up a cannery like that costing \$20,000.—A. There is certainly a great deal in keeping a cannery pure and clean, and there is no doubt it takes a great deal of labour to do that and you have to scrub and scald them in order to keep them clean.

Q. In some places they are using a table now covered with enamelware, a table is being manufactured now with a steel base covered with enamel, made to drain towards the centre.—A. That would be first rate.

Q. How about giving canning licenses to aliens, what do you think about that?—A. I think that those who first put money into the business are entitled to get the licenses. They were the first people to start the business here.

Q. As I undersand it their capital is the only thing that is 'alien' about it, they employ Canadian labour and purchase Canadian material to erect their factory and if we shut out foreign capital what are we going to do with the industries of the country that are carried on with that oreign capital?—A. It would not be right, they are good people, they treat our people all right and they deal fairly with them, and they were the first to begin the packing industry.

Q. Where both branches of the lobster industry can be carried on, which do you think is the most profitable to the fishermen, to sell to the canner or to engage in the live lobster industry?—A. I can hardly answer that question because we have not done any live lobster business here, it is all canning here.

Q. Is there any fishing done here out of season, during the close season?—A. I do not think there is.

Q. Or are any lobsters packed during the close season?—A. There is no packing whatever out of season.

Q. What do you think of the method of stamping the cases and putting labels on them, do you think there is anything gained by that?—A. I do not think there is, only a little trouble in getting the inspector to come and put the labels on when you want to ship them sometimes.

Q. I suppose all the fishing done here is done on the sea coast, you do not do any fishing on the lagoons and bays and inshore waters?—A. No, it is all in sea water.

Q. Do you think that the lobster fishing should be kept in a certain depth of water? On our shore there is a regulation that no fishing should be done in less than three fathoms?—A. I think that should be close enough, because I have seen in some parts of the season the traps exposed at low water. My opinion yet is that there must be some regulation, when the lobsters crawl off they are not likely to go very far, and there must be some better place to catch them than where we fish. I understand that to the southward they have to go a much greater distance off shore than we do.

Q. Oh, yes, they go ten miles off shore in some places?—A. And I understand there is good fishing out there.

Q. What would you say was the average earnings of an active lobster fisherman? What is the usual catch for a double-handed boat?—A. There is a very great difference in their catches, some that prepare well for it catch a great many more lobsters than others. I suppose some of them might make \$500, some of them \$200, and \$300. I do not know that on the whole the average fisherman here would make more than \$300, although, of course, some of them make very much more.

Q. That is practically for a couple of months' fishing?—A. They fish about two months, but they lose about two and a half months' time.

Q. Do they lose very much gear here?—A. Oh, quite a lot.

Q. They lose it, I suppose by rough water?—A. Yes. About this live lobster question I was just wondering whether it was any benefit to the fishermen when they lowered the size limit in the United States. My opinion was that the Americans

9-10 EDWARD VII., A. 1910

lowered that for their own benefit. I believe that Nova Scotia is now sending about three times as many lobsters for about half as much money.

Q. Yes, they lowered the limit from 10½ to 9 inches?—A. Yes, and now they are not paying nearly the same money for more lobsters.

Q. But it has brought in a larger number of lobsters, there is no doubt about that. I do not think, though, that we are bound to follow them in the size limit. There is one practice that I do not see how it has been allowed to go on; the Americans come over and buy all the berried lobsters they can get and carry them back to Maine?—

A. That is a very bad practice, of course it is an international question, but it should not be allowed as far as our government is concerned.

Q. I do not know how we ever tolerated that sort of thing, and I cannot see how the Canadian fisherman would be blind enough and stupid enough to sell his berried lobsters for them to be carried away into another country?—A. That is quite so. On this eastern coast the water is very shoal and the lobsters here have never been as large as they were on the other coast. To give an instance of that, I had a brother who lived out near Main-à-dieu, he was inspector of the lobsters at Main-à-dieu and Louisburg; about ten years ago he was in the East on a visit and went into the factory and was looking over the lobsters I had there. I was not in at the time, but I was there when he came out and he said: 'I do not know how you can make decent pay, I never saw such trash in my lifetime.' But he did not see the small ones, that was at the time when the small ones were hid away, and that shows that there must be a big difference between the lobsters caught here and those caught at Main-à-dieu, when he made that remark without seeing the small ones.

Q. I think that as a rule, where you have an extensive shoal running out off-shore you must have smaller lobsters than where the water is deep.

Q. Can you give me from your records some idea of the catch of a good lobster fisherman?—A. I have the record here for 1901. In that year from the 15th to the end of May one fisherman got 4,959 pounds of lobster; he fished 16 days in June and got 8,095 pounds, and in July, it is only 4 days he has got here, but he might have carried his lobsters over, he fished until the 10th of July and he had 857 pounds. He is a man that you might call a fisherman, because he makes his living at fishing and he attended to his business. That is an actual record taken from our books.

Q. Have you another that you could give us? If you had two or three similar records we would be able to make an average?—A. Here is the account of another man who, in 1904, fished 11 days in May and caught 3,813 pounds; 20 days in June and caught 7,737 pounds, and 12 days in July, when he caught 3,544 pounds.

Q. At what rate was that man paid at that time?—A. In 1904 the price was about \$2.75, I think; the other man in 1901 was paid \$3.

Q. Are these men a long way above the average?—A. These are what I would call fair fishermen. One of these was a fisherman who made his living by fishing, the other man did not, he had a little farm which he worked afterwards, he only fished lobsters. Of course there are a few farmers who fish a few traps only.

Q. Against that there would be the cost of the man's outfit. He fished how many traps? and he had a boat worth how much?—A. The boats used here are worth about \$15.

Q. Not more than that?—A. That is what they buy and sell them for.

Q. That is a cheap boat?—A. It is only a 12-foot boat.

Q. And what number of traps would they fish?—A. About 100 traps.

Q. The traps here were worth how much apiece?—A. Material was cheaper then; outside their own labour these traps would not cost these men 35 cents apiece.

Q. Is that with the rope?—A. That includes rope and all. Of course the greatest cost of the traps is the labour, but they make them in the winter time when they have nothing else to do. To-day they cost a little more.

Q. What would they cost to-day?—A. The trap would cost almost one dollar when it is fit for the water.

SESSIONAL PAPER No. 22a

Q. What is the life of the trap?—A. It will stand three years.

Q. And what percentage of loss have they to reckon on annually?—A. Here they lose about one-half, some years more than that; this year they lost all of them, and other years they have not lost as much as that. I think about one-half is the average.

Q. The lobster fishery, I understand, is one that is paid for in cash?—A. It is paid for in cash.

Q. When is the engagement generally made between the fisherman and the packer to fish?—A. Oh, well, the price is generally made before the fisherman starts to fish, although some years he has started to fish before the price was fixed.

Q. You are out of it now, so that you can speak candidly on the matter. Do you think there is any combine on the part of the canners to establish a low price?—A. No, and there never was in my time, that is my experience.

Q. Is there anything else you would like to say, or is there anything that I have not asked you about?—A. I see Mr. Baker has suggested that there should be 25 cents a case paid by the packers, which would give \$40,000 as a fund available for the establishment of pounds. That is a large amount, and it has occurred to me that if they will pay \$4,000, the department could put a man in every factory to inspect it closely and prevent the use of any seed lobsters there. That would be a much cheaper method.

Witness retired.

WILLIAM KELLY, smackman, Lingan, C.B., called and sworn:—

By the Commissioner:

Q. How long have you been engaged in the lobster business?—A. About three years smacking.

Q. And before that?—A. I was not in it at all.

Q. Within what distance each side of Lingan do you run?—A. I only smacked on one side.

Q. That is to the eastward?—A. To the northward.

Q. How far do you go?—A. About four miles.

Q. Where does that bring you to?—A. To the Low Point lighthouse.

Q. What number of boats would you smack from in that area, about?—A. There would be about 8 or 9 boats.

Q. That is 8 or 9 boats that you collect the product of? When do you begin in the season?—A. I used to begin about the 1st of May, but I would not begin carrying lobsters then, I would be carrying material, freight, &c.

Q. You would be outfitting?—A. Yes.

Q. Before you begin to smack lobsters you have to carry down material, ropes, cordage, &c., for the fishermen?—A. Yes, whatever they wanted.

Q. What is the average number of traps fished by a boat?—A. I do not know, but I do not believe that up our way they would average more than 80 traps.

Q. Are they single-handed boats or double-handed?—A. Some are single-handed and some double; where there are two men they would have more traps than that, but I do not think they would have more than 100 or 120 traps at the outside.

Q. In what depth of water do they do their fishing?—A. I do not know; it would be more than 5 fathoms at the most.

Q. Do you visit them every day when the weather is fine?—A. Every day.

Q. What is the average daily catch of a boat along that shore, single and double-handed?—A. I do not think that a double-handed boat would average any more than between 300 and 400 pounds of fish.

9-10 EDWARD VII., A. 1910

Q. That would be their average catch per day in good weather?—A. There are times they would have more than that, but I do not think it would be more on the average.

Q. At what point in the season is their average the highest?—A. In the first part of the season.

Q. Do they fish in the same depth of water all the season?—A. Well, as the end of the season gets closer they come in; if they kept their traps out at the same place they began they would not get any.

Q. Into what depth of water do they generally come then?—A. Into one fathom and two fathoms.

Q. Do you notice any difference in the quality of the lobsters after they move in?—A. Well, they are smaller.

Q. Are they smaller later as the season goes on?—A. Yes, they get smaller.

Q. When you get inshore you get smaller lobsters?—A. Yes.

Q. Can you give me any idea of their run; how many lobsters are there below the 8-inch limit; what percentage is there below that limit at the various seasons? In the beginning of the season I suppose you do not see many?—A. At the time they were allowed to take them I weighed them for a few days, and I know that if a man had about 300 lbs. of lobsters he would have about 50 or 60 small ones.

Q. Is that percentage greater at one part of the season than it is at another?—A. The later it is in the season the more small lobsters I would expect to get.

Q. And as to the berried lobsters, what about them?—A. There are a good many of them.

Q. What becomes of them?—A. Some of them are washed off.

Q. And I suppose in other cases they are brought in; that is what we find in most places?—A. There are none brought in that are seen at all, but they get mixed up with the rest, some of them. We never bring in any that we see.

Q. They do not come to the factory here; you do not bring them in?—A. No.

Q. Have you any knowledge—you have not been looking for them perhaps—how many berried lobsters there will be to the hundred? Of course you do not handle them in the smacks and you cannot tell us exactly?—A. I do not know, but I would not say that there would be more than 5 or 6 to the hundred lobsters.

Q. That would be a pretty large percentage, would it not?—A. Yes.

Q. Now, the lobsters, when you get them, are generally pretty fresh, are they?—A. Oh, yes.

Q. How long are you making your trip, one day with another?—A. You will get the lobsters from the fishermen somewhere about 10 or 11 o'clock, and you will get in here at the factory somewhere about 12 o'clock.

Q. That is not very long; you land these lobsters in pretty good condition, then?—A. Oh, yes.

Q. Do you know whether the egg-bearing lobster is more feeble than the others? Will she stand the same amount of hardship and exposure?—A. I do not know.

Q. You have never carried them?—A. No.

Q. Does your smacking generally continue up to the end of July?—A. No, only until the time the factory shuts up, whatever time that is.

Q. Taking the three years that you have been smacking, when do they generally shut up?—A. On the 15th of July, or sometimes before that.

Q. Why do they give up then?—A. The lobsters are scarce and the fishermen are giving up because they are not making enough at it to continue for the other two weeks.

Q. So that, as a rule, the canneries very seldom keep on up to the actual close of the season?—A. No, they do not.

Q. As to the price of the lobsters, you have nothing to say, have you? Do you hear much complaint from the fishermen as you go along the coast that they are not getting enough for their lobsters?—A. Some years there were complaints.

SESSIONAL PAPER No. 22a

Q. This year especially there were complaints, I suppose?—A. I was not smacking this year.

Q. What style of trap do they mostly use here?—A. They use what they call the parlour trap.

Q. The old-fashioned trap has altogether gone out of use?—A. Yes.

Q. Are there any of the old-fashioned traps being fished at all anywhere in this neighbourhood?—A. No.

Q. You do not know whether they took a larger run of lobsters when they were using the old-fashioned trap?—A. I do not know.

Q. In some places it has been stated that the fishermen who fish only the old-fashioned trap bring in a larger run of lobsters, not so many small ones?—A. I suppose it is because there is so much room between the slats for them to go out that the smaller ones get away.

Q. Have you any idea what is the best thing to do, or what should be done with the berried lobster?—A. I do not know much about that.

Q. What bait do they generally use here?—A. Herring.

Q. Do they use mackerel gibbs at all?—A. There are very few mackerel caught here.

Q. What other fishing do these men carry on here after giving up the lobster fishery?—A. Cod fishing.

Q. Do they not get mackerel here in the fall?—A. Very few.

Q. What is the value of a trap?—A. They calculate them at \$1 each.

Witness discharged.

Commission adjourned.

LITTLE BRAS D'OR, C.B., August 24, 1909.

GEORGE STUBBART, fisherman, Little Bras d'Or, called and sworn:—

By the Commissioner:

Q. You are engaged in the lobster fishery?—A. Yes.

Q. How long have you been engaged in it?—A. Well, off and on, about 23 years, from the time Mr. Baker first started in here.

Q. You have always fished from this neighbourhood?—A. Always from this neighbourhood.

Q. What cannery did you fish for this summer?—A. It is called the Snowflake.

Q. Who are the owners of it?—A. That is pretty hard to tell, some years it is owned by one firm and some years by another.

Q. What is the name of the firm operating it?—A. Baxter Bros.

Q. Have they been carrying on canning here very long?—A. For some years.

Q. Do you fish your own boat and gear?—A. Yes.

Q. Do all the fishermen here do so?—A. Yes, now they do.

Q. Did they not do so formerly?—A. They did not, some years ago when Baker was first here he found everything, boats, gear, bait and everything. After that they got to find their own boat and Baker found the gear, and after Weatherall came to us he found the gear, and finally he dropped that, then some found their own gear, and he found the gear for those who wished it; finally it came down a few years ago that everybody had to find their own gear, boats, bait and everything.

Q. In what direction do you fish from here, how far off?—A. About a mile and a half.

9-10 EDWARD VII., A. 1910

Q. Off the shore?—A. That would be at the outside, and we fish from that distance in.

Q. In what depth of water do you usually fish?—A. From ten fathoms up to four and three.

Q. At what depth do you generally begin?—A. We begin in about ten fathoms at first in the spring.

Q. How long do you fish out there?—A. About, I suppose, near the 1st of July and then we begin to move in.

Q. At what date do you generally begin the lobster fishing, take one season with the other?—A. The first of May is the time for starting, but sometimes the weather will not permit us to start as early as that.

Q. At what time do you generally begin?—A. On the average the 6th or 7th of May.

Q. What is to prevent you beginning earlier?—A. Mostly the ice.

Q. What number of traps do you fish?—A. From 100 traps down, probably some may fish 120, but generally one man would fish from 100 down.

Q. That is 100 traps for one man?—A. Yes.

Q. Are the boats generally manned by one man?—A. Some are and some have two, but mostly they are manned by one.

Q. When there is more than one man there are more traps?—A. Oh, yes.

Q. You fish in about ten fathoms of water up to what date?—A. Somewhere between the 15th of June and the 1st of July, as the fish begin to move in we move in our traps too.

Q. And then you come in to about four fathoms?—A. Probably three or four fathoms.

Q. At what time of the season do you get the best fishing?—A. The first of the season, the earliest we can get out is the time when we are supposed to get the best fishing.

Q. What kind of a run of fish do you get early in the season?—A. A fairly good run.

Q. How does it compare with what you get later?—A. It is not the same at all.

Q. In what way?—A. In size.

Q. Are the fish as abundant at the end of July as they are at the end of May?—A. Oh, no, that is when the fish are quite scarce; in fact after the 1st of July the catch is very small.

Q. Is that in size or in number?—A. It is small in number and small in size, both.

Q. The fish run smaller then?—A. Yes.

Q. Can you give me any idea of the proportion of fish you take below the legal limit of 8 inches, how does it run here?—A. What percentage do you think would be below the 8-inch limit?—A. You mean at the first of the fishing?

Q. Yes, at the first of the fishing, if you like?—A. Oh, well, I do not know.

Q. Just about, give it approximately?—A. I guess about one-fourth of them would be small.

Q. That is in the early part of the season?—A. In the early part of the season.

Q. And will that proportion increase as the season advances?—A. Oh, yes.

Q. And towards the end of the season what would you say the percentage of the small lobsters would be?—A. We would not get one-half of the legal size at the end of the season.

Q. As regards the female lobster with berries extruded?—A. 50 per cent would be below 9 inches.

Q. Below 8 inches, that is the legal limit?—A. I do not say that 50 per cent would be below 8 inches, below 9 inches.

Q. What proportion of them would be below 8 inches?—A. There wouldn't be but a few, but they wouldn't be very far from it.

SESSIONAL PAPER No. 22a

Q. As to the berried lobsters, when do you meet with them?—A. At any time.

Q. When you first begin fishing do you meet them?—A. Yes, we meet with them at the very beginning; in fact I have seen them here late in the fall when they are thrown up on the shore by the storm, I have seen egg lobsters.

Q. Are they any more numerous at one time than they are at another?—A. About the 1st of June.

Q. About the 1st of June they are more numerous?—A. Yes, I would say so.

Q. Do you notice that the eggs are not always in the same condition, that they are riper at some times than at others?—A. Not at that time.

Q. When do you find them riper?—A. Later on, late on in July.

Q. What would you think is the spawning time of the lobster?—A. Here?

Q. Yes.—A. Oh, I do not know, I suppose July would be the spawning month.

Q. July?—A. I think it would be.

Q. What has been the practice here—of course you know that the regulation says that lobsters under 8 inches should not be taken, and that berried lobsters should not be taken—what has been the practice here? Is it to bring everything to the cannery?—A. Well, I do not say everything. Of course as for the spawn lobster, I will say that the packers have always forbidden us bringing them; they have always done that. Of course I do not say that it is the wish of the packer that any spawn lobsters go there, because they have always forbidden us as far as I am concerned to bring spawn lobsters to the cannery.

Q. How about undersized lobsters?—A. Oh, well, of course I can say that there have been small lobsters go to the factory. The thing is that if we could not sell our small lobsters we would not fish at all, because we would have nothing to fish with.

Q. Then what has been the practice with regard to the berried lobsters? The canner refused to accept them, then what happens?—A. As far as I know they are thrown away.

Q. Is that the regular practice here?—A. That is the regular practice here; when you catch them you throw them away.

Q. Has the practice of washing the eggs off been followed to any extent here?—A. Not that I know of; of course I can only answer for myself.

Q. What style of trap is in use here?—A. We use the jail trap.

Q. When did that style of trap first come into use?—A. I think it would be about ten years ago.

Q. What is the particular merit of that trap over the old-fashioned double-ender?—A. It is a much better trap.

Q. In what way?—A. It saves the lobsters which get in there.

Q. It holds all the lobsters it gets?—A. Yes.

Q. What space do you allow here generally between the slats in the trap?—A. I do not know; it is very hard to tell that because everybody does not make them alike. I do not suppose there are two fishermen on this coast who make their traps alike. Some have them one style and some another; some fishermen build them with four heads and some think three are enough; there is a difference of opinion.

Q. I wanted to know what space is generally allowed between the slats?—A. I think it is from one inch up.

Q. You think it is not under an inch?—A. I do not think.

Q. What is the mesh in the net at the ends of the trap?—A. About 2½ inches.

Q. Do you think it is 2½ inches?—A. I think so, about 2½ inches.

Q. What is the condition of the fishery to-day compared with what it was when you first began fishing?—A. There is quite a difference.

Q. Explain in your own words how the industry stands to-day?—A. Well, as far as I know, I have known one man in a boat having a 14-foot keel to fill that boat as full of lobsters as she can carry.

Q. With what number of traps?—A. About 100.

9-10 EDWARD VII., A. 1910

Q. How long ago is that?—A. That is 20 or 21 or 22 years ago; I suppose about 22.

Q. Would he do that to-day?—A. No, sir, he could not get the half of it to-day.

Q. What is the cause of that decrease? To what do you attribute it?—A. There may be several causes; of course I suppose probably it may be that the fish are getting caught up; it may be that at that time there were very few fishing, and of course now there are quite a number. I suppose there are more coming into it every year, and probably the spawn fish are getting destroyed, I do not doubt but what they are.

Q. So these are the reasons you think why the fishery is decreasing?—A. I suppose so.

By Mr. Mackenzie, M.P.:

Q. How is the total catch? Do you know anything about the catch? Does the cannery receive as much fish now as they used to?—A. That is something very hard to answer, because it is very hard to find out from these packers what their pack is. They mostly say they have not done anything, and when they say that it is very hard to find out really what their pack is.

Q. You do not know what their pack is, do you?—A. I do not know. Of course these men that are in the employ of the factory, the sealers and those working in the factories would have a better idea than the fishermen would have.

By the Commissioner:

Q. How does the number of lobster fishermen compare with the number when you first started?—A. I believe there are double as many.

Q. Are they fishing any more gear?—A. I do not think there is any increase in the quantity of gear. They used pretty much the same quantity then as they do now. I do not think they do on the average use more.

Q. What arrangement is there between you and the canners with regard to payment for the fish? What price did you receive this year?—A. At the start we got \$2.

Q. Two dollars, that is per cwt. or per hundred fish?—A. In weight, at the first starting, and then there was one packer down the north shore I think went up 25 cents and the rest of the packers had to follow, so they all went up the same.

Q. They all went up?—A. Yes.

Q. Did that advance cover the whole season?—A. No, from the 15th of June on.

Q. What price used you to receive when you first began fishing?—A. When we first began fishing Mr. Baker started at 50 cents and found everything.

Q. That was per hundred fish, by count?—A. Yes, by count.

Q. When did they change to weight?—A. A short while before Mr. Baker left.

Q. When was that?—A. I think he ran three years here.

Q. How long ago was that?—A. Twenty years.

Q. What led to that change?—A. That is something I cannot tell.

Q. Was it not because the fish began to run small?—A. Oh, no, I think the fish are just as good to-day on this shore as ever they were. I think so as far as the size is concerned the fish are just as good here as they ever were.

Q. Are they just as large?—A. I think so. We got big fish here at the start, and they slacked off small at the end of the season then as they do now.

Q. Do you get as big fish now and as many of them?—A. Not as many of them.

Q. And you are fishing more boats and more gear?—A. Certainly.

Q. What price did you receive last year?—A. \$3.50.

Q. And the year before?—A. The year before it was \$3 or \$3.25, I am not sure which now.

Q. What reason did the canners give you for the decrease in the price this year?—A. That the price had gone down in the market, and they could not afford to give any more.

SESSIONAL PAPER No. 22a

Q. When did you learn that?—A. That was just before the beginning of the season.

Q. How are the lobsters generally paid for, is it a cash transaction? Are the fishermen all paid in cash?—A. Yes, of course. One factory pays the fishermen with cheques on the bank, and the other pays in money. Of course it is all cash.

Q. What are the most of those who fish lobsters here? Are they genuine fishermen, regular fishermen who fish all the time, or are they people having other occupations who only fish lobsters?—A. I think the most of them only fish in a certain season, and then they work in the mines and on the farms after that, but most of them generally take in the fishing season.

Q. As soon as the lobster fishing is over the fishermen can go into cod fishing, can they not?—A. Yes, some of them, and some of them are on farms and some work in the coal mines.

Q. Have you ever remarked with regard to the berried lobster, the female lobster with berries, are they generally a fair run of lobsters or are they small?—A. Generally they are the largest lobsters.

Q. Have you noticed what is the smallest lobster you have ever seen bearing eggs?—A. I cannot think I have ever seen one under 8 inches.

Q. What is your idea if the regulations with regard to the size limit were strictly enforced, would it put the canner out of business here? Can he continue his canning operations?—A. Yes, I think it would put him out of business.

Q. You told us a little while ago that very few would fish at all if it were enforced?—A. Yes, it would put him out of business.

Q. To your knowledge, have the cannery ever made any strict examination when the lobsters were brought to them to see that they do not receive any berried lobsters?—A. Well, they have; they have with me, I know.

Q. Would it be difficult in handling a large quantity of lobsters at the cannery to detect the berried lobster?—A. Yes, it would.

Q. If the canner refused to accept the berried lobsters, as you say, would it have the effect of inducing the fishermen to throw them overboard, to return them to the water?—A. Of course it would if they would not take them at the cannery at all.

Q. You think it is done?—A. Of course, I do not know whether it is done or not, I cannot say, I can only answer for myself and it has never been done with me; they never took them from me unless it was when they did not know it.

Q. You recognize it is right that the berried lobster should be saved and protected?—A. It should for the good of the fishery.

Q. Do you think there is any more inclination on the part of the fishermen to-day to protect the berried lobster than there used to be?—A. There is with some, but of course it may not be so with all. I think, however, that the majority of the fishermen are against taking spawn lobsters. Of course there are a few, no matter what business you are in, who differ from the rest.

Q. Is there a fishermen's union in this place?—A. There was.

Q. Is it not now in existence?—A. No, it has not altogether gone out of existence, but it is not really very strong at present.

Q. What is the number of the Union?—A. It is Station No. 17.

Q. What do you think would be the best way, speaking from your knowledge as an experienced fisherman, to get the fishermen not only here but everywhere, to return the berried lobsters to the water?—A. I suppose if they got a bounty for them they would do it.

Q. But why should they require a bounty for them? Is it not in their own interest to protect them?—A. Of course it is, but there are lots of things that are in the people's own interests, but they do not really look into it and some suffer on account of what the others do.

9-10 EDWARD VII., A. 1910

Q. What proportion of the total catch would be berried lobsters? How many out of every hundred?—A. There were not many this summer.

Q. But take them one season with another?—A. Oh, I do not know, it is not a large percentage.

Q. So that it would not be a ruinous matter to the fisherman if he did put them back into the water?—A. No, of course it would not, although being that they are the biggest lobsters always it does make a difference.

Q. Do you know anything about the matter of pounds or hatcheries?—A. No, I do not know anything about them, but I do not think they are of much use.

Q. Why do you object to the pound or hatchery, whichever you do object to? Take the pound, what is the trouble with the pound?—A. I do not think any fish are going to hatch and breed in confinement the same as they will do under natural conditions, and I do not think that the water in the pound is as clear and will preserve the lobsters as well as will the water in the ocean.

Q. That would depend upon the nature of the pound, and whether the tide flowed freely through it?—A. Yes, that would; but again, when they are taken from the pounds and are let out they have more chance of being destroyed by storms and other fish than they would have if they had been at large all the time.

Q. That is the young lobsters?—A. Yes, the young lobsters.

Q. But where they are hatched out in the natural conditions they run the same chance then, they come to the surface?—A. They do, but they are not all gathered together into a small mass like they are in the pounds.

Q. As to the hatchery, have you any knowledge how the work is done in the lobster hatchery?—A. No, I have not.

Q. Now there have been various propositions made to the department from time to time, as to the best way of preserving the lobster; various suggestions have been made. The first suggestion is to close down altogether for a term of years, universally, all over the coast, what do you think of that?—A. Well, I do not know about that, I do not see what good it would do.

Q. Would it not allow the lobsters to recuperate and grow again?—A. Of course it might, but that would not be any good to the fishermen who are at present in the business.

Q. Do you not think it necessary to do something for the fishermen who are coming afterwards?—A. It may be, but I do not think it would be much good for those who are in business now.

Q. You would not think that would be a satisfactory remedy?—A. I do not think it would be wise.

Q. The last Lobster Commission—I do not know whether they came here, or whether you met them or not in 1898?—A. I do not think——

Q. They made a recommendation advising the closing down of the coast by sections; that is one part of the coast would have a close season one year, and that close season would be moved around so that it would gradually cover the whole coast. How would that appeal to you?—A. Oh well, I do not know; it might work out all right.

Q. Other suggestions have been made, among them the doing away with the size limit altogether. It appears that the regulations never have been very strictly enforced?—A. No.

Q. Has it been enforced at all? At all events that is the proposition on the part of some people to do away with the size limit, always protecting the berried lobster as strictly as possible and somewhat shortening the season. The general opinion is that the last few days of the season is the time when the greatest harm is done in the catching of small and berried lobsters. How does that appeal to you?—A. Our season could not be much shorter than what it is.

Q. You do not fish up to the end of July?—A. Sometimes we are very late in starting.

SESSIONAL PAPER No. 22a

Q. As a rule do you fish right up to the last day of the season?—A. Yes, the last day in July.

Q. Do they not begin to slack off before that?—A. Most seasons they do, although I have seen some seasons when the fishing at the last of July was about as good as the first, but this season it was not.

Q. At that season are there not other fisheries to which the regular fishermen could devote themselves? You begin to fish immediately for cod, do you not?—A. It would suit some, but the majority of the fishermen it would not. You know there are a lot of fishermen that fish lobsters in small boats, and they have not any other boat except that which they take lobsters in. Those who have big boats, it will suit them all right, because they can go out. After the month of July the fish begin to move off, and these fishermen with small boats cannot follow them.

Q. Those who fish small boats are not regular fishermen, are they?—A. They fish lobsters and then they go to some other employment.

Q. As to the matter of licensing canneries, do you know that the policy of the department now, and for some years past, has been not to increase the number of canning licenses. Do you think there are canneries enough?—A. Oh well, of course I do not know about that. I know there are enough to take all the fish we get, there is that all right.

Q. Do you think that if the number of canneries was increased it would be better for the fishermen?—A. I do not see if there were more canneries we would get a better price, I know now, they take all the fish we have.

Q. Do you think that an increase in the number of canneries would have the effect of exhausting the fishery?—A. Providing there were more boats fishing than there are now, I suppose it would. There are now as many boats here as when there were three or four canneries.

Q. I suppose you know that the department, within the last couple of years, have decided to issue what they call co-operative licenses, to enable a number of fishermen to group themselves together and pack lobsters. What do you think of that?—A. I think it would be all right if they had the capital to do so.

Q. Of course it requires some capital. Is there any competition at all in the matter of price, or are you bound to accept a fixed price? Do you think there is any combine on the part of the canners to keep the price down?—A. I do not know that, I know this spring we had to take what we got.

Q. Was this the first time that this trouble has occurred?—A. Well, I think so; I think it was.

Q. It is understood that it is due to the sudden drop in price of the canned article last year?—A. That is the report we got.

Q. Is there any opportunity here to carry on the live lobster industry?—A. No, there is not any.

Q. Why not?—A. Well, I do not know, I do not know what is the trouble.

Q. Has it ever been tried?—A. It has never been tried that I know of.

Q. Do you think that facilities exist for carrying it on? It requires fast transit, and quick carriage to market?—A. Yes, that is to the Boston market.

Q. Yes, and there several other markets, Montreal, Quebec and Toronto, but you think the facilities do not exist here. Anyway it has never been tried?—A. It has never been tried.

Q. Have you any idea which is the most remunerative branch of the lobster industry to the fishermen, the live lobster trade or the sale to the packer?—A. Of course that is a thing it is very hard to decide on. If the fish continued the same size right up to the end of the season as at the first it would be different.

Q. You told me a little while ago that you thought there are as many large lobsters as ever there were?—A. But you know that after a certain time in the season we do not get large lobsters, they are smaller then you understand. It would be all right in the first part of the season, but in the latter part of the season it would not.

9-10 EDWARD VII., A. 1910

Q. Why is it you do not get large lobsters all through the season?—A. That is something I do not know, and I do not know of anybody who can tell you why.

Q. Do you think they go back into deep water, do not come inshore?—A. Well, probably they do.

Q. Do you think the fishermen would make more money if they were allowed to can for themselves?—A. Well, of course that is something I could not tell you because I have never had any experience in it. We have always sold our fish here and that is something I do not know anything about.

Q. What suggestion would you make yourself as to the best method of protecting the fishery and preserving it?—A. I would save the spawn lobster.

Q. And what, in your opinion, is the best way to save it?—A. Oh, there might be many ways of saving the spawn lobster. Of course there is one way, if everybody would do what is right nobody would take them. But the trouble is, I suppose, that probably everybody does not do that.

Q. You think a bounty should be put on it?—A. Well, you might do that, sir.

Q. How would you go to work to provide the money with which to pay the bounty?—A. Do you not think the government could give us a bounty on it.

Q. The government give you a bounty?—A. You would think so.

Q. I would not think so?—A. Is our fishing industry of no benefit to the government in any way?

Q. It is a benefit to the people, I suppose, but I do not see myself why the fishermen should receive any bounty—I am not here to express any opinion, but since you asked me I do not see why the fishermen should receive a bounty for saving that which it is to their own interest to save?—A. I look at it this way, if there are no people there is no government, and what is for the welfare of the people should be for the welfare of the government. If the people are all prosperous the government should be prosperous, and if they are not prosperous it would affect the government.

Q. Do you think we should increase the tax on the canners and out of the increased tax raise a fund to pay for the berried lobster, if we have to pay for her?—A. I do not know.

Q. Do you think there would be any object in sending someone down to meet the fishermen and to explain to them the necessity for the protection of the female lobster?—A. I suppose it would.

Q. You think it would have a good effect?—A. I suppose it would.

Q. Do you think that the fishermen are beginning to realize the necessity for saving her?—A. I think there are still a great many fishermen who look at it this way, that it is hard to throw away the spawn lobster, what they really labour hard for, the best lobster they get. A good many look at it that way, that it is hard to throw her away.

Q. Could not they be made to understand that in a very few years if they would protect that lobster they would be reaping the benefit from it?—A. Some would.

Q. Do you not think yourself they would?—A. I think they would. The fishermen in general are a class of men who never get very much, they never seem to get very much except what they earn, they are a class of men that pay taxes honestly like all other men do and they are a class of men that in general get very little for nothing. they only get what they work hard and honestly for.

Q. Is there any fishing done here after the close of the season, or is the close season strictly observed?—A. Oh, yes, it is observed.

Q. There is no canning going on here after the close of the season?—A. No, sir.

Q. Do you wish to add anything else to what you have already said? Is there anything I have not covered?—A. I do not think there is anything else. Of course I know there should be something done about the seed lobster, I know that something should be done about that, because if the spawn lobsters are not preserved we know that the fishery will not stand it, that is sure. Destroy the female of any specie and you destroy the race.

SESSIONAL PAPER No. 22a

Q. And it will be the same if you destroy the immature, the young ones who have not reached the age of reproduction?—A. Yes, but still the lobster under 8 inches is very small, and I do not think there is any considerable quantity under 8 inches taken. A person would not be bothered with lobsters so small as that at all.

Q. How small do they can them?—A. I do not know that.

Q. Have you any idea how many 7 inch lobsters it takes to fill a one pound can?—A. No, I have not.

Q. It takes nine, by actual count?—A. I suppose it would.

Witness discharged.

JOHN McDONALD, fisherman, Little Bras d'Or, C.B., called and sworn:—

By the Commissioner:

Q. How long have you been fishing?—A. About 14 years.

Q. Always here at Bras d'Or?—A. Here and at Point Aconie

Q. But always in this neighbourhood?—A. Yes.

Q. At what season of the year do you generally begin fishing?—A. Somewhere about the 7th of May.

Q. That is one season with the other?—A. Yes, one season with the other.

Q. In what depth of water do you generally begin fishing?—A. In about 10 fathoms.

Q. How long do you fish out there?—A. I have been fishing there all season, some years I have never shifted.

Q. What was your experience when you fished in deep water all season, did you get more lobsters?—A. I got about the same.

Q. I suppose in those seasons you remained out there you did not find the lobsters slack off?—A. I did.

Q. But you preferred to remain out there rather than to come in?—A. There were a few years I did.

Q. When you did shift in what was your experience? Did you find a better run of fish in the early part than in the latter part of the season?—A. We had larger fish.

Q. Do you think when you got a better run of fish that you got as many?—A. We sometimes got pretty large lobsters coming on towards the last of the season.

Q. What bottom do you generally fish on?—A. On a rocky bottom.

Q. On a hard, rocky bottom?—A. Yes.

Q. How long do you generally fish, right up to the close of the season?—A. We do not very often fish until the end of the season.

Q. When do you generally knock off fishing?—A. About the 1st of July.

Q. Do you knock off as early as that? What do you go at then?—A. Generally from the 1st to the 15th of July we knock off, and then we go to the cod fishing.

Q. What number of traps do you generally fish?—A. About 110 or 105

Q. Do you fish alone in the boat?—A. I fish two hand.

Q. Are you a member of the Fishermen's Union?—A. I was.

Q. How many other boats are fishing in this particular place where you fished? About how many?—A. Do you mean from this port, altogether?

Q. How many boats fish, say in this harbour?—A. I suppose there would be about 40 or 50 boats.

Q. Are they all fishing for the one cannery?—A. For the different canneries.

Q. How many canneries are there?—A. There were five this year.

Q. Where are these canneries situated?—A. Levisconte and Leslie, at South Bar, and two canneries of the Baxter Bros.

Q. Is there not a cannery here belonging to the Portland Packing Company?—A. There might be.

9-10 EDWARD VII., A. 1910

Q. Who are the owners of these canneries, are they residents of the place or are they strangers?—A. These companies are American, as far as I can understand.

Q. Are the managers local men?—A. One is a local man.

Q. What sort of trap do you use in your fishery?—A. I use the four-headed trap.

Q. Did you always use that trap?—A. No, I did not.

Q. How many years have you been using them?—A. About 10 years, I suppose.

Q. Can you give us any idea as to the practice followed here with regard to the space between the slats? What space do they generally allow? You make your own traps, do you not?—A. Yes, I make them.

Q. What gauge do you use in spacing the slats?—A. I generally nail them with a small axe, and I allow the width of the pole of the axe.

Q. How much would you say that space is, an inch?—A. It is over an inch.

Q. What mesh do you leave in the net at the head of the trap?—A. I could not really say, but somewhere about a 3-inch mesh.

Q. That is extension measure?—A. Yes.

Q. What size lobster do you think could get through that gauge and that mesh?—A. They would not get out very large through that mesh.

Q. But quite a good-sized lobster could get out through that mesh, could it not?—A. Yes, quite a size.

Q. Do you fish any more gear now than you did when you began to fish?—A. Some more. I was not very old when I began to fish.

Q. Taking one man with another, have you to use more gear now in order to keep up your catch?—A. I don't think.

Q. Do you think that a man makes the same average catch now that he did 20 or 25 years ago?—A. No, they do not, but there are more fishing.

Q. What does the ordinary lobster fisherman make now in a season?—A. On an average I suppose there would not be more than 5,000 lbs. of lobster; the average catch is between 4,000 and 5,000 lbs.

Q. That is for a double-handed boat?—A. Oh no, what I say was for the average fisherman.

Q. For the average boat, then?—A. For the average fisherman.

Q. A two-handed boat would make more, and of course a single-handed boat would make less than the two-handed. What price do you receive for your lobsters?—A. \$2.25.

Q. That is by weight?—A. By weight.

Q. When did the practice of buying by weight begin here; in some places we find they are still buying by count?—A. It was by count when I started.

Q. When did you change?—A. It was by weight before that, and there was a company came, and they started taking them by count.

Q. What way would you rather sell them?—A. By count.

Q. What percentage of the fish you catch would be below 8 inches?—A. Do you mean the season through?

Q. Yes?—A. That is the proportion of the fish in number or in weight?

Q. Well, I mean out of every 100 lobsters you take, how many would be below 8 inches?—A. I suppose, taking the season through, there would be about one-fifth.

Q. That would be 20 out of every hundred?—A. Yes.

Q. Then as to the berried lobster, what percentage of them do you find, how many out of every 100 lobsters bear berries?—A. We sometimes get a good many.

Q. Can you tell me how many?—A. We have had as high as 30 in the morning.

Q. Out of how many lobsters?—A. About 1,000 lbs.

Q. Does it continue all through the season at the same rate?—A. Oh no, that is at the first of the season.

Q. And how is it at the last of the season? When do you see the most of them?—A. Oh, I don't know, it is just about the same all through.

SESSIONAL PAPER No. 22a

Q. It is the same all through?—A. Sometimes, some years, they are more plentiful than others.

Q. You do not think then, from what you say, that they are more numerous at the close of the season when you are fishing in shoal water, than they are earlier in the season when you fish in deep water?—A. Oh yes, the nearer you come to the shore, and at the close of the season you get more seed lobsters, they come in on the rocks.

Q. What do they come in for, do you think?—A. For spawning.

Q. About the berried lobsters, has it been your practice to throw them away?—A. Yes, it has been for the last four or five years.

Q. You did not always throw them away?—A. For the last four or five years I have thrown them away.

Q. What induced you to do so?—A. I had an understanding between myself and the other fishermen that it was the best thing to do.

Q. Do you not think that feeling is increasing among the fishermen generally? Have you not talked to the other fishermen about it?—A. I have, yes.

Q. And what do you think about it, is there a feeling among the fishermen generally that the seed lobster should be saved?—A. There is, but I think there are some who will not throw them away.

Q. Do you think that the practice of brushing the berries off the seed lobster is carried on to any extent?—A. I could not say as to that.

Q. We know that it is in some places, some fishermen have been frank enough to tell us, 'We always do it.'—A. I could not say.

Q. Now as to the matter of price, how is the price regulated between the fishermen and the packers?—A. I do not know that it is regulated at all.

Q. But it is fixed by somebody?—A. It is fixed all right, they fix it.

Q. The price is fixed, and you have to take it or do without it, is that it?—A. That is what it seems.

Q. Has there ever been any competition in that respect when you had more canneries?—A. There was.

Q. Some cannery might give you a little more than others?—A. Some would raise the price if they wanted the lobsters.

Q. How are the lobsters collected here, do the smacks go along the coast and collect them?—A. Yes.

Q. All the lobsters here are smacked?—A. Yes.

Q. Are there rival smacks or not? Will one smack offer a little more than another?—A. They have not, of late years, there was some rivalry some years ago.

Q. But there has been none of late years?—A. No.

Q. Is it your opinion that there is any combination or agreement, or arrangement between the packers to stick to a fixed price? What do you think about it?—A. It would be my opinion that there is an agreement.

Q. You think it looks like that?—A. Yes.

Q. Do you think that the combine extends over the whole coast of the province, or of Cape Breton, or is it only an arrangement among the local canners?—A. As far as I can learn the canners on the coast say they cannot afford to give more, that is all I know about it.

Q. Do you think that the various companies put their heads together and arrange that they will not compete in price?—A. We had an understanding to that effect last spring, but the talk died out, and there is nothing more to it.

Q. As to the matter of licensing these canneries, you know that the policy of the department has been to restrict the number of licences, to keep the number down; do you think that ought to continue or should every man that wants one get a licence to pack?—A. It would not be any special benefit or hurt to the fishermen, no matter how many licences were granted I do not think it would hurt the fishermen.

Q. Why not?—A. I do not see why it would.

9-10 EDWARD VII., A. 1910

Q. Do you think an increase in the number of canneries would not mean an increase in the amount of fishing done?—A. I do not think so. Anybody that knows this place knows that there would not be any more fishermen in the end.

Q. What do you think of the present policy of the department, allowing a number of fishermen to associate themselves together and get what is called a 'co-operative' license. Do you think that would meet the difficulty in regard to the friction with the canners?—A. I do not know, I am sure.

Q. That was the object of the minister in issuing the co-operative licenses. When the fishermen complained about the packers the minister said, 'If a number of you will band together I will give you a license to pack your own lobsters,'?—A. If the fishermen got a fair price for their fish, I believe myself if they were sold we would have no more bother with them, and it would be just as well for the fishermen to sell as to pack. I do not think there is much in the co-operative license, there may be for some, but for myself I do not want to have anything to do with it.

Q. Have the canners in your neighbourhood ever objected to accepting the berried or under-sized lobsters, or do they take everything you bring to them?—A. I do not bring in my lobsters to the factory, I let them go to the smacks, but I am not asking them to take berried lobsters.

Q. But what about the under-sized lobsters?—A. Well, with regard to them there was not much restriction.

Q. The smack man does not object to taking them?—A. The smack man does not want to take them in some cases. They do not want, anyway, to take the berried lobsters.

Q. If the canner refused to accept the undersized lobsters what effect would it have on the fishermen?—A. They would have to throw them away.

Q. Would he still catch enough to permit him to keep on fishing?—A. That would be according to the price and the season.

Q. Could he continue according to the present prices?—A. At the present prices we would make nothing.

Q. Would you knock off fishing?—A. We would not fish.

Q. Has it been the practice to avoid dealing with the canner who was known to be careful or scrupulous on that point of accepting undersized or berried lobsters? Some canners have told us that they have to take them, or if they do not they would lose their fishermen?—A. Well, I believe they tell the truth.

Q. What is your idea of the best way of protecting the berried lobsters?—A. Throw them away when we catch them.

Q. If that can be done everywhere there is no doubt that it is the simplest, the straightest and the best way, but there are other ways of looking after them. What do you say of the matter of placing them in pounds? Paying the fishermen who catch them to preserve them and have them delivered to some one appointed to receive them?—A. If the pound is carefully looked after it would be all right. There is a pretty good place here for a pound.

Q. Is there?—A. I think so.

Q. There ought to be when you have so many islands here. You know what is required for the pound, I suppose?—A. I have an idea of what is required, and I think that the entrance to the Bras d'Or would be a pretty good place for a pound.

Q. You want some shelter and a considerable depth of water with a free flow of the tide?—A. You have all that here.

Q. Do you know anything about hatcheries?—A. No, sir, I do not.

Q. Now, as to this matter of fishing for the live lobster market, have you any experience whatever in that?—A. I have never shipped any.

Q. Has it ever been tried here?—A. It has never been tried here, but it has been tried to the southward at Gabarus.

Q. Do you know anything about how it turned out?—A. I do not know.

SESSIONAL PAPER No. 22a

Q. Where the live lobster trade can be carried on, which is the most profitable for the fisherman, the live lobster trade or the canning?—A. It will be a matter of price.

Q. You do not know what price they get for the live lobster when shipped to the market?—A. I have an idea of what they got for some.

Q. Which do you think is the most profitable branch of the lobster industry?—A. I could not say.

Q. It has been alleged that in some instances the fishermen have suffered injury by the failure of those holding canning licenses to operate their factories, although a sufficient supply of lobsters was available. Do you know of any instance of that kind?—A. No.

Q. What do you think of the various propositions that have been made for the purpose of remedying the existing conditions as I explained them to Mr. Stubbart? The first one was that there should be a closing down altogether for a term of years; the next one was that the entire coast should be closed down in sections, successively, another proposition was that we should do away with the size limit and shorten the season by ten days or a fortnight?—A. Doing away with the size limit?

Q. That has been proposed.—A. To have no restriction on that?

Q. That is as to the size limit. Some people say that is a regulation that has never been enforced, that it is very difficult to enforce it; that the size limit should be done away with, that the berried lobster should be protected in some way, and that the season should be shortened somewhat. How would that appeal to you as a remedy?—A. It would appeal to me as a remedy all right. The berried lobster should be thrown overboard, and I would rather throw them away than get paid for them.

Q. That does not happen everywhere. In a great many places I am afraid that only a few fishermen throw them away. Would it cripple you to have the season shortened by ten days?—A. Not a bit.

Q. How would it affect the fishermen generally?—A. They are here to answer for themselves.

Q. We want the opinion of practical fishermen on that question. You say it would not affect a fisherman like you.—A. It is like this, we could not this year begin to fish until the 15th of June on account of the ice, and in a season of that kind you would only have six weeks fishing.

Q. Is it not the case that in a season of that kind, when you are late in beginning on account of the presence of ice you have pretty good fishing and generally do well?—A. We get them in close to the shore.

Q. Would you not expect to make better fishing then?—A. Not a bit, it is just about the same.

Q. Do you think it would be possible to enforce strictly this size limit?—A. I do not know.

Q. Then you want to stick to the same fishing season, May, June and July?—A. And throw away the undersized.

Q. No, no, stick to it, enforce the regulations?—A. What do you mean?

Q. I mean to prevent any small or undersized lobsters below eight inches being brought into the factory. You know there are various propositions, as I tell you, one is to do away with the size limit, and to protect the berried lobster, to insist if you like on a certain space between the slats of say one inch; in some places we found the slats only half an inch apart, and to shorten the season by a few days, or else to enforce the present regulations strictly.—A. If there were no small lobsters or spawn lobsters taken I suppose in a few years we would get the benefit of it.

Q. An 8-inch lobster is supposed to be three years old.—A. Three years.

Q. Yes. Which of all the plans suggested do you think would be the best to adopt; which would cause the least hurt to the fishermen? Would stopping altogether for a term of years be a very severe measure?—A. It would be pretty hard on the fishermen.

9-10 EDWARD VII., A. 1910

Q. The gear would become destroyed in the meantime, and I do not think the fishery is far enough gone to necessitate that?—A. On some parts of the coast there is nothing else the fishermen can do in the spring of the year, and if the lobster industry should stop I do not know how they would get along.

Q. Of all the plans which have been enumerated which one would you suggest as being the most reasonable both for the lobsters and the fishermen?—A. I think, taking it all through, that if the undersized lobsters and the spawn lobsters were protected by the enforcement of the present regulations it would be all right.

Q. Is there any fishing after the close of the season, or is there any illegal canning done here? We find that in some places there is quite a lot of illegal canning done?—A. I do not know of any.

Q. Another proposition that has been made by some fishermen is that fishing should be confined to deeper water, that people should not be allowed to fish in shoal water, in lagoons or bays?—A. I believe that is right.

Q. Do you think that fishing in extremely shoal water is more destructive than it is in the deeper water?—A. It is undoubtedly.

Q. Are hoop nets used here at all?—A. None whatever that I know of.

Q. I do not know that I have anything more to ask you particularly, is there anything that you think of yourself or that you would like to suggest, if there is it will be taken down?—A. There is nothing I think of.

By Mr. McKenzie, M.P.:

Q. Is there anything, Mr. Macdonald, that the fishermen have discussed among themselves, or that you know of your own knowledge as a fisherman, that has been suggested, by which this supposed combine can be broken up? Which is the best way of getting at that combine, if there is such a thing?—A. It is pretty hard for me to say.

Q. Have the fishermen discussed any way which they think would be effective or suggested anything which could be done?—A. No, we have a union here, and the grand president is supposed to be on the track of these people. We last saw him when we came down to \$2 in price and we have not seen him since.

Q. You see it is a criminal offence if these men are in a combine, I am not saying that they are, but if they are they will have to be punished by the criminal law. If there is such a thing in existence as a combine I, as a lawyer, would like to hear of something being done about it. I suppose that really, when it comes down to the fine thing, we have not very much evidence?—A. For my part I know nothing about it, I have heard something about it, but that is all, I do not know whether it is true or not.

Q. I simply want to know, or I just want to see if there is any evidence that can be brought to the notice of the department that there is such a thing as a combine. I want the fishermen to know from me as your representative, that certainly I will do all I can to have the license cancelled and the perpetrators punished if such is the case, but as far as I am concerned I do not know whether there is a combine or not. It is quite possible that the packers are perfectly honest in saying that is the best price they can give; I am not saying that it is right or that it is not, but it is quite possible that they may have ground for taking that position.

THE COMMISSIONER.—This is not the only place where there has been a drop in price, that has been universal in Nova Scotia, New Brunswick and Prince Edward Island.

Witness discharged.

SESSIONAL PAPER No. 22a

JOHN MCCREADY, Little Bras d'Or, President of the Fisherman's Union, called and sworn:—

By the Commissioner:

Q. You are a lobster fisherman yourself?—A. Yes, sir.

Q. And you belong to Little Bras d'Or?—A. Yes, sir.

Q. How long have you fished lobsters?—A. 22 or 23 years.

Q. You are president of the union, No. 17, is it?—A. Yes.

Q. Is the union still in active operation?—A. It is not altogether active just now, I think.

Q. There is no use going over, with you, perhaps, the history of the fishery and the method of fishing. You have heard the evidence given by the other gentlemen?—A. Yes.

Q. I suppose their testimony as to the stage the fishery has reached, the method and the condition of the fishery is about correct, is it not?—A. Yes, it is about the same with all of us.

Q. Can you tell us as to the matter of licensing canneries, what is the opinion of the union you represent? I want to get this evidence to lay before the committee and the department, that is partly, I suppose, why I was sent down here, to get information on those points direct from the fishermen so that it can be laid before the minister and the committee. When was your union organized here?—A. About three years ago.

Q. What led to its organization?—A. It seemed that the most of the fishermen. in fact pretty nearly all the fishermen, thought there was a combine between the packers, and there was no organization of the fishermen to fight them so that they had to take whatever the packers offered.

Q. And you thought that by having a union through which all the fishermen would speak as one, you would be able to come to better terms with them?—A. Yes.

Q. Did it work out right?—A. It worked all right until this spring, when I think we were led astray ourselves by the grand president of the union in the province. He told us that the price was up in the market and that the packers could afford to give the price we asked so we stood out against the reduction and lost a good deal of our season by standing out, and afterwards we had to take what the packers offered.

Q. Did you make any inquiries yourself as to the state of the market? The information could be obtained from the *Financial Journal*?—A. Our grand president got the information and brought it to us, showing how the foreign market stood.

Q. What is your own opinion as to the matter? Do you think there is a definite combine on the part of the canners to fix prices or to keep the price down?—A. I imagine there is, to a certain extent, for at the time we had the trouble last spring I had a telegram from a man who was here representing one company saying they would pay every cent they could afford to pay, but at the same time they could not pay what we demanded.

Q. What demand did you make?—A. \$3.75, the same as we got the previous year.

Q. Was it not in your knowledge that the market for lobsters had fallen?—A. Oh, yes, we knew that at the last, but we did not know it at the first, and after the factories opened and we started to fish we learned it. This man represented a rich company from the States——

Q. What company is it?—A. The Snowflake Canning Company. And after the factories had run two or three weeks a man who runs a small business on the shore came over and paid \$2.25, whilst this company was only paying \$2. That is what makes us believe there was a combine to keep down the price, because that man in a small way of business came and offered to pay \$2.25 whilst this rich company was only paying \$2.

Q. And did this company then come up in price?—A. When the word went to them of what the other man was paying they gave us \$2.25.

9-10 EDWARD VII., A. 1910

Q. What is your opinion as to the best remedy of getting over the difficulty if there is any combine? Do you think that the practice of the department, recently adopted, of allowing a group of fishermen to associate themselves together and take out a co-operative license would fill the bill and put the fishermen in a more independent position?—A. It works all right in a number of places, but it is pretty hard to get the fishermen together to pack their own fish. We got a license here and did not use it.

Q. Perhaps it was too late when you received it to use it this season?—A. That is true, it was too late to use it this season anyway.

Q. Do you propose to use it next season?—A. I do not know, I am sure.

Q. Of course it requires organization and capital to run a cannery. Would you put the number necessary to get a co-operative license at a lower figure than 15?—A. Yes, I would say that it would work better if fewer fishermen were required to club together to get a license.

Q. What would you bring the number down to—one-half of that?—A. Yes, one-half of that.

Q. That is you would allow six or eight fishermen to obtain a co-operative license?—A. Yes, about that number.

Q. What do you think of the proposition to do as they did formerly, to let everyone that applied receive a license? Do you think it would be possible to fix the standard of cannery? If you give every man who applied a license, should you not insist that the cannery should be fitted up in a certain way?—A. That would be all right, if you required that the cannery should be fitted up in a certain way before they could get a license at all.

Q. We see a good many canneries that are very poorly fitted to put up a good product, and it would appear that it would be almost obligatory on the department, if everyone who applied were to receive a license, to insist upon a certain standard being observed; that the tables should be fixed and covered in a certain way with a proper material. I think you will agree that the department would hardly be justified in giving a license to everybody who applied without some regulations to guarantee that everything would be properly done?—A. Certainly there should be a guarantee that the cannery would be in proper shape.

Q. There is another matter I am going to ask you about. Do you think that the product of the cannery should be inspected? You know that the tendency to-day is to inspect all food products. In other lines of canning, such as meat, vegetables and fruit, inspection is insisted on, but there is no such inspection insisted on with respect to lobster packing?—A. Yes, I think it should be inspected too.

Q. Do you think that the present staff of officers in the Marine and Fisheries Department would be competent to carry on that inspection. To be effective, I presume it would require some knowledge of canning. Do you think that the present staff of fishery officers would be competent to do that work?—A. Not in this district.

Q. Have you any experience in the live lobster trade?—A. No.

Q. Would you venture to say that where it can be encouraged, where the facilities can be improved for the carrying on of that industry, do you think it would be a more profitable one for the fishermen than selling to the canneries?—A. It would be if we were near a live lobster market.

Q. So you think that canning must always be the principal industry here?—A. Yes.

Q. You have heard the various propositions that have been made with a view to improving the fishery, what, as a practical fisherman, do you think is the best of all the plans proposed for the department to adopt or follow with a view to preserving the lobster fishery? I suppose you realize that it is necessary to do something, the present regulations either have not worked, or have not been enforced, and things are going on from bad to worse. In many places we find them packing lobsters where it takes

SESSIONAL PAPER No. 22a

12 or 14 to fill a pound can, and that must be ruinous to the industry?—A. That is small fish.

Q. And in many places the berried lobsters are not protected at all, and where the cannery is scrupulous about taking them the fishermen brush the eggs off and take them to the cannery. What is your suggestion?—A. My opinion is that if the fishermen were paid a certain amount for the seed lobsters and they were put back in the sea again it would be all right.

Q. How would you propose to check that? Could we take every fisherman's word absolutely that he put so many lobsters back into the water, would you be satisfied with that?—A. The union has discussed that matter for the past couple of years, and it was thought that if the smackman were a sworn officer for the lobster fishing season, and when the fisherman brought his lobsters to the smack the smackman would take an account of the number of berried lobsters and put them overboard, giving a check to the fisherman that he had put so many berried lobsters overboard.

Q. The department would require to have a fund of some kind out of which to pay for that sort of thing. Do you think that could be best obtained by increasing the license fee to the packer?—A. I understand the packers have to pay a certain amount.

Q. They pay two cents a case, that is \$2 for a hundred cases?—A. Supposing that fee were increased to provide the fund.

Q. I think Mr. Baker proposed to raise it to 25 cents a case?—A. To raise the fund to pay the fishermen?

Q. I am very much afraid if you raise that it would come out of the fishermen all the same?—A. I am very much afraid it would, they would not get as much for their lobsters. But even if it were that way, that would save the berried lobsters, even though it came out of the fishermen's total catch.

Mr. McKENZIE, M.P.—The objection was raised before our committee that you might take the same berried lobster and get paid for her over and over again.

By the Commissioner:

Q. They have overcome that difficulty in the State of Connecticut, where the officer who gives a receipt for the berried lobsters punches a hole in the tail. Of course that is all right until that lobster casts its shell, but that does not occur until the close season has commenced?—A. Yes.

Q. What do you think of this other proposition, to close down altogether?—A. That is a difficult question.

Q. As far as we have gone it does not appear that the remedy needs to be so heroic?—A. No.

Q. And then as to closing down in sections, that was recommended by the last Lobster Commission in 1898?—A. Yes.

Q. That also, I gather it, is a little more severe than the fishermen care for?—A. It is.

Q. And it would be very difficult to regulate. Then it has been proposed by some people, Professor Prince says enforce the law strictly as it stands to-day?—A. As it stands to-day?

Q. That is enforce the 8-inch size limit. No doubt it will be rather hard for a year or two, but in the end I think it will almost justify itself. Others again say do away with the size limit altogether, it has not been enforced; protect the berried lobster, but somewhat shorten the season in order to compensate for the abolition of the size limit. There is very little doubt that the bulk of the damage is done in the last days of the season?—A. Yes, I guess that is so all right.

Q. At the same time there is a general disposition in most places to slacken off at the end of the season, some fishermen are getting tired of it?—A. Yes, that is the case here.

9-10 EDWARD VII., A. 1910

Q. And great loss of traps occur very often among those who fish in very shoal water, so that I do not believe the shortening of the season by eight or ten days would be so serious as a great many fishermen are afraid of?—A. Of course there is not more than one out of every ten who fishes until the close of the season.

Q. How do all these things appeal to you? We would like to have your opinion, as head of the union here; you speak with the authority of your position.—A. I think that the most of the packers, anyway we fishermen around here think that if the size limit on this coast were cut down to seven inches and strictly enforced it would save an awful lot of lobsters, because the way it has been these last years they have been taking them as small as they could be, anything in the shape of a lobster at all has been taken.

Q. The worst of that proposition is that originally we had a 9-inch limit which was enforced for a while, and then they said, 'You cannot enforce that, but if you will only give us an 8-inch limit we will observe it, and you will have no more trouble,' that was done, the limit was made eight inches, and now the same thing is happening again; the 8-inch limit is not observed and now you say, 'Give us a 7-inch limit and that will be observed.' What guarantee will there be that the 7-inch limit will be observed if it is given?—A. Three years ago when the union was organized we asked \$1 more per hundredweight than we had before and they answered that they would give that for legal lobsters, and for two weeks the smack men would not take any others than the legal lobsters; there was an awful lot of fish thrown away at that time even with the 8-inch limit.

Q. The idea is that if we could strictly protect the berried lobster and have the season slightly shortened we could do away with the size limit, that the thing would always limit itself. There is always a limit to the small lobsters that the packer will receive. Do you think there is anything in the proposition to insist on a certain fixed space being left between the slats in the trap?—A. I do not know, I am sure. Small as you make it a pretty large lobster will go through that. We make the mesh of the net for the head of the trap two and a half inches, and a pretty large lobster will go through that; we never make the slats here less than one inch apart, and a good many go through that.

Q. Have you anything further to add yourself? Is there anything more that I need ask you about? You have heard the evidence of the other fishermen about the state and condition of the fishery, the time it opens and closes, and how it is carried on. Is there anything you wish to say yourself especially with regard to the matter of licensing?—A. I do not think so.

Q. Another proposition that has been made is that the fishermen themselves should be licensed the same as the canners?—A. Mr. Baker had that opinion some years ago.

Q. There are others besides Mr. Baker, of course, who have made that suggestion at various times. It is suggested that if the fisherman were licensed he would feel that he was more or less responsible himself, that he was a fishery officer in a small way and that he would be more careful in observing the law himself and also would be likely to inform on others who were not observing the law?—A. And what if he broke the law.

Q. The license to fish would not be given him in that case. It might not be necessary to charge any fee at all for the license, but if he broke the law, and it was proved that he was in the habit of bringing in undersized lobsters and of destroying the berried lobster his license would be revoked and consequently he would not be able to fish. What effect do you think that would have?—A. If the size limit was seven inches and the man licensed I guess it would be all right, but if the 8-inch limit is enforced in this district it will close up all the canneries. When we had this trouble last spring we thought that if we had some board of arbitration it would force the packers to give us fair treatment. It seems that there is no man appointed to deal with such matters. I think if a man were appointed to do that, and if the fisher-

SESSIONAL PAPER No. 22a

man asked for a price in the spring and the packer said it was too much if such a man were appointed to overhaul the price, and if the price was too small, to force the packers to give more, it would be a good thing for the fishermen.

Q. I am not a lawyer, but it seems to me that it would be a very difficult thing to force a packer to give more than he thought he could afford to give?—A. But it seems to me that if there was a fishery arbitrator who was given power to investigate such matters and to take steps in case the price offered by the packers was unreasonable it would be of great benefit to the fishermen. The man who went out to look into the matter this spring had no power to act.

Mr. McKENZIE, M.P.—The trouble is that the terms of the Conciliation Board do not apply to the fisherman, but there is no doubt that machinery could be supplied by which an inquiry could take place for the purpose of determining whether the packers were justified in the price that they offered. I think the president of the union is justified in saying that the inspector should have authority to institute an inquiry of that nature if he thought it necessary.

Witness discharged.

CHARLES MCCREADY, fisherman, Point Aconi, called and sworn:—

By the Commissioner:

Q. You have the evidence given by the other gentlemen who have preceded you?—A. Yes.

Q. Do you agree with them, or do you differ from them in any point?—A. I agree with them.

Q. Or is there any matter which you would like brought out more fully than has been done in their case?—A. No, sir.

Q. Your practice here is to begin lobster fishing sometime about the first week in May, I believe?—A. The first or the second week, we did not start until June this year.

Q. That was partially due to the bad weather in the beginning of the season and the trouble with the packer?—A. Yes, sir.

Q. You were not as unfortunate in that trouble as you might have been, because the weather in the month of May was bad anyway?—A. Yes.

Q. Have you always carried on fishing in the same place?—A. No, I fish in different places along the shore.

Q. Do you fish far away from here?—A. About 12 miles.

Q. But it is on the same coast. You own your own boat and gear?—A. Yes.

Q. When do you knock off lobster fishing?—A. I knocked off on the 1st of August this year.

Q. To what other branch of employment do you devote yourself after you knock off lobster fishing?—A. To fishing, sometimes, and to other work.

Q. That is codfishing?—A. Yes.

Q. What number of traps do you fish?—A. About 70.

Q. Do you fish single-handed?—A. Yes.

Q. What is your average catch with 70 traps? What should it amount to in a fair season?—A. It is all according to the season, some seasons 10,000 or 12,000.

Q. Have you caught as much as that with 70 traps single-handed?—A. Yes.

Q. Then you must have good fishing. Is it the practice with you to move in as the season advances, or do you continue to fish on the same ground as you start on?—A. We always move in.

Q. What is the condition of the fishery at different times in the season? How is it when you first begin fishing, just explain to us?—A. The lobsters are larger at the start than they are at the last.

9-10 EDWARD VII., A. 1910

Q. How are they at the end of the season?—A. Well, where I fish they hold out a good size until pretty near the last of the season.

Q. And then you would expect to get some undersized and some berried lobsters I suppose?—A. From the middle to the last of June we get a lot of berried lobsters.

Q. How are they at the end of July? Do you see them having cast their eggs and having finished spawning?—A. Yes.

Q. You can tell that?—A. Yes.

Q. When do they begin to be soft-shelled here?—A. You get them any time after the middle of July.

Q. Do you think they are fit for canning then, would they make good food?—A. I would only see them in the last days of July.

Q. Do the canneries keep open until the end of the season?—A. I do not know, there is a kind of understanding that they have to run the season out when they start.

Q. And they take everything that comes to them?—A. Yes.

Q. Some people contend that the lobsters are not fit for food in that condition, what is your idea?—A. I am not certain they would be.

Q. What do you think as to this matter of licensing, what is your feeling, how should the licenses be distributed or administered?—A. I do not know.

Q. Do you think there are canneries enough now?—A. I think there are.

Q. Do you think more canneries would mean more fishing, and more loss?—A. If there were many more it would, but I think every man that can show he was able to pack should be licensed.

Q. What standard would you exact, or how would we get at him to know that he was competent to pack?—A. I suppose he would want capital, and that he would have to be qualified to pack.

Q. What would you put the capital at? The cost of a cannery is not very great?—A. No.

Q. It seems to me that the best way to get at that would be to insist upon that cannery being established up to a certain standard?—A. Yes.

Q. Do you think that could be done?—A. I think that every four of five fishermen should be licensed if they want to can. Fifteen is required now, but that number is too large, five, at the most, would be sufficient in my opinion.

Q. Do you not think that we could get at the matter by insisting on a certain standard of cannery, that they should pack a certain quantity of fish, that they should fish a certain number of boats, and that these canneries should be fitted up in a certain way with tables prepared in a certain manner, and covered with zinc, glass, marble, or some other suitable covering?—A. Yes, I think that should be done, but I think that five fishermen should be allowed to pack the lobsters they get themselves.

Mr. McKENZIE.—That is the idea in co-operating now, they are not compelled to buy from anybody else, but this witness thinks that the number of fishermen necessary to obtain a license should be smaller than it is at present.

By the Commissioner:

Q. What do you think of this idea of requiring the canner to pay a larger fee, instead of the two cents that is paid at present, so as to provide a fund with which to purchase the berried lobsters from the fishermen?—A. I think it should be increased, if there is no other source from which to obtain a fund.

Q. There does not seem to be any other fund available, and most people would insist that the industry should pay for its own preservation and protection I think?—A. Yes, I think that it should pay, and I think that the fishermen should be paid for the percentage of berried lobsters they let go.

Q. Has the practice of stripping or washing off the eggs from the female lobsters been followed at all in this neighbourhood?—A. Not to any extent now.

SESSIONAL PAPER No. 22a

Q. I believe that where the unions exist they have a sort of tacit understanding among themselves that the members of the union should return the berried lobsters to the water?—A. Yes, we have that understanding.

Q. Do you think there is anything in the statement made by one of the canners that he cannot afford to be too strict in receiving undersized or berried lobsters because he would lose his fishermen, they would go to somebody else who was not so scrupulous; do you think that has occurred?—A. Not very lately.

Q. That the fishermen would go to the next canner who would accept them?—A. There are none of them that would take the berried lobsters.

Q. Since how long has that been the case?—A. Since four or five years.

Q. But before that they would take them?—A. Yes, they took them before that.

Q. Have you any knowledge of the matter of exporting live lobsters to the market?—A. No.

Q. That has never been done here?—A. No.

Q. Have you any opinion yourself as to the respective profits of the two branches of the industry? Which do you think is the most profitable to the fisherman, the live lobster industry or the cannery, where both can be carried on?—A. The live lobster trade would be the most profitable where it is practicable.

Q. Would you find a sufficient quantity of lobsters over nine inches here to carry on that industry provided proper facilities were available?—A. Yes, sir, there would be.

Q. You have heard the various suggestions that have been made for the improvement and the protection of the fishery for the future, what is your idea? Which one of those propositions would appeal to you as the most reasonable?—A. I think the size limit should be cut down to 7 inches and strictly enforced.

Q. And the berried lobsters strictly protected?—A. Yes.

Q. Have you any knowledge of pounds at all, do you know anything about that matter?—A. No.

Q. Are there any places in this locality where pounds could be established close to the canneries?—A. I suppose there are places.

Q. For a pound we require a place with a certain depth of water and free inlet to the tide, so situated as to provide means for barring off the mouth, with a good bottom. I should think in a place as much cut up as this is there are places which would answer these requirements?—A. There are no places that I know of in Bras d'Or.

Q. What do you know about hatcheries?—A. I do not know anything about them.

Q. Have the fishermen any opinion to offer as to the merits of hatcheries or their usefulness?—A. No.

Q. Has there been any noticeable decline in the average size of the lobsters in your district in the last ten years?—A. Oh, yes.

Q. And it is still going on, I suppose? In a great many places they tell us that the decrease occurred years ago and that it has been arrested, that it is not going on now to the same extent. What is your opinion?—A. It is according to the season, if we have a good season they are plentiful.

Q. Do you think they are as plentiful as ever they were?—A. I do not think, no, but there are better methods of catching them.

Q. What bait is usually used here?—A. Herring.

Q. Does the quality of the bait used make any difference?—A. Oh, yes.

Q. Will you do better with fresh herring than you will with stale herring?—A. Yes, sir.

Q. Is it the practice to use mackerel gibbs or entrails here at all?—A. No, sir.

Q. In some places we find that they make a little bag and put the entrails of the mackerel in it, and they say that is the best bait they get, but some of the fishermen claim that that bait fouls the water?—A. I do not think that is ever used in this part of the country.

9-10 EDWARD VII., A. 1910

Q. Do you catch that herring on the spot here in the spring?—A. Yes, I think almost everybody catches their own herring.

Q. Do you use cod heads at all as bait?—A. In the last part of the season we do.

Q. Are cod livers used at all?—A. No.

Q. What do you think about this matter of keeping the lobster fishing out from the very shoal water?—A. There may be places where it would be all right, but there are other places where you get no lobsters outside.

Q. What, in your opinion, is the most active and the best time of the fishery? When do you do best at it?—A. For the first two or three weeks after the start, whatever time of the season we start.

Q. Has fall fishing ever been tried here?—A. For lobsters?

Q. Yes?—A. Not to my knowledge.

Q. There is no desire to fish in the fall?—A. No, I do not think it would do very well.

Q. Is it too rough, and too much exposed here in the fall?—A. Oh, yes.

Q. Is there anything more you would like to tell us, anything I have forgotten?—A. No, there is nothing, except that if there could be some officer appointed to hold an inquiry in case of dispute between the fishermen and the packers, as has already been suggested.

Witness discharged.

SOLOMON TURBET, fisherman, Little Bras d'Or, called and sworn:—

By the Commissioner:

Q. Where do you fish?—A. Off Little Bras d'Or.

Q. You have heard all that these other gentlemen have said here?—A. Yes.

Q. Do they agree with your ideas in the main?—A. Yes, pretty much.

Q. How long have you been fishing lobsters?—A. Every year, but not in this place.

Q. For how long were you away?—A. Five or six years, in the Magdalen islands.

Q. Did you live in the Magdalen Islands?—A. I was born there.

Q. How long have you been here?—A. Eleven years.

Q. Does the fishing here compare with what it was in the Magdalen islands?—A. I do not see much difference.

Q. Is it about the same class of fish, the same run?—A. Yes, pretty much the same run of fish.

Q. What is your experience as to the season? What time during the season do you get the better run of fish? Is it better in the spring than it is when you knock off?—A. Oh, yes, there are more lobsters in the month of May, when the fisherman can begin about the 1st of May, and the month of May is good all along the coast, but after that it begins to drop off; of course there are odd spots where it would not drop.

Q. Tell me, are the fish in May as well filled as they are in June?—A. You mean the lobster?

Q. Yes?—A. No, sir, they are not.

Q. They will not turn out as well to the canner?—A. No.

Q. Do you see many of these berried lobsters?—A. What are you talking about, seed lobsters?

Q. Yes?—A. Well, they are not so plentiful in the first part of the season as they are in the last part.

Q. Do you think that they come into these bays, right inside here, into the shoal water to spawn? You know the way they come into the lagoons and bays in the Magdalen islands to spawn?—A. I do not know that now.

SESSIONAL PAPER No. 22a

Q. Do they do the same here?—A. Well, I do not think, of course there are some, but there are not a great many.

Q. Is there any fishing done inside here?—A. No.

Q. It is all done outside?—A. All outside.

Q. You have been here, you say, for 11 years?—A. Yes.

Q. How is the fishery to-day as compared with what it was when you came here?—A. Every year is not alike.

Q. Well, one year with the other, how does it compare, is it getting poorer?—A. It is getting poorer, yes, that is a fact. There is a great deal of difference to-day compared with the first year I came here.

Q. That is the sort of thing we want to stop if we can, the fishery becoming poorer. Now, how would you do it? What is the best way to do that, in your opinion?—A. I do not know, I am sure.

Q. What is the reason for the decline?—A. The reason, I think, that the lobsters are getting scarce is because there are double as many fishermen as there used to be.

Q. You know that we limit the number of canneries now, and that we will not give a license to everybody to can. Do you think that the number of boats fished by a cannery should be limited?—A. I do not think, I do not see any use in that.

Q. What do you think about the number of cannery licenses? Do you think there are licenses enough now?—A. Oh, I do not know, I do not think.

Q. What would you say?—A. I think that if every one had the privilege of getting a license, the poor man as well as the rich man, it would be better. Of course we know that every man could not pack, that is sure, but let every man have the right to a license, one with the other.

Q. I suppose every man could not pack, and it would not do to give every man a license?—A. Oh no, no.

Q. How would you decide as to a man's competency to pack, how would you determine that?—A. I do not know.

Q. We would have to find some way, would we not, of determining it?—A. Of course, supposing that every man who fished was allowed to get a license to-day, every man would not pack.

Q. I am afraid a good many would ask for it who would not be able to do very much with it and, I think, we should fix it so that it would not do injury to the business generally?—A. Of course those who could not pack would not ask for a license.

Q. Could we limit the number of cases that a man should pack?—A. There was a time in the Magdalen islands that there were over forty packers.

Q. Over 100 packers.—A. Well, when I left there were over forty.

Q. We had over 100 packers there, and now it has got down to fifty, they have all dropped out, the small ones especially.—A. I am thinking that five or six at least would be sufficient to get a co-operative license.

Q. Do you think we should have the right to say that the cannery should be of a certain size, that they must pack at least 100 cases, that the tables should be made in a certain way, and covered with a certain material, and all that sort of thing?—A. One hundred cases is about a fair number I should think.

Q. What is the average run, how many cases does the factory pack to a boat here, do you know?—A. I do not know, I am not sure.

Q. In a good many places we find that the average is from fifty to sixty cases per boat, would they run up to that here?—A. I do not know, I am sure.

Q. Is there anything else you would like to tell us about the matter? Apart from that matter of licensing the canneries, what do you think about making the fishermen take out a license, as has been suggested?—A. I do not think it would hurt anyone; I do not see any way that it could.

Q. Do you think that a fisherman who had a form of license in his pocket would be more careful to observe the law than one who had not?—A. Oh, yes, he would.

9-10 EDWARD VII., A. 1910

Q. Do you think that it would be right if a man was found to be continually violating the law, whatever the law may be, that he should be prevented from fishing any more in that kind of fishery?—A. Yes, I think that would be all right.

Witness discharged.

RODERICK BACON, fisherman, Little Bras d'Or, called and sworn:—

By the Commissioner:

Q. Do you belong to this place?—A. Yes.

Q. How long have you been connected with the lobster fishery?—A. About six years.

Q. What did you do before that?—A. I was working around the factory.

Q. And then you took to fishing?—A. Yes.

Q. How have you found the fishery since you have been at it, is it a profitable industry?—A. Oh, yes.

Q. What number of traps do you fish?—A. About seventy.

Q. Do you fish for yourself?—A. Yes.

Q. You fish right off here, on the same ground as the other fishermen?—A. Yes.

Q. What sort of bottom do you select generally to fish on?—A. A rocky bottom.

Q. Do you find that the bottom makes a great deal of difference in the fishing?—A. Yes.

Q. There is no use fishing on mud?—A. No.

Q. Do you suffer much loss of gear in the early part of the season?—A. I do.

Q. What depth would you be fishing in then?—A. Ten fathoms.

Q. Fishing in that depth it would hardly break you up would it?—A. I do not fish in that much water, in eight fathoms.

Q. Do you suffer much loss of gear in eight fathoms?—A. Oh, yes, in a big storm.

Q. Does the ice bother you to any great extent?—A. It does in the spring.

Q. When does the greatest loss of gear occur?—A. When we come inside we lose very heavily.

Q. How did you escape this season?—A. I lost all.

Q. That happened to a great many?—A. To quite a few.

Q. What time was it that happened?—A. I guess it must have been about the first of July.

Q. I think it was about the 8th of July, we had a heavy storm in the inside?—A. It was about the 8th of July.

Q. We had another very heavy storm on the 24th of May, the Queen's Birthday.—A. We did not have any gear out then.

Q. When you began to fish this year did you get good fishing?—A. Not extra.

Q. One would have thought that as you began fishing late in the month of May that when you did get through with it in June you would have done well, were the fish not there?—A. They were not very plentiful.

Q. Did you get good fishing at any time this year?—A. Very late, I only fished about a month, and they were better towards the end, but a few years ago they were better at the first of the season.

Q. What is the difference between the first and the end of the season?—A. The lobsters get scarce where I fish, but it does not make much difference in the size.

Q. Do you think the lobster comes inshore to spawn?—A. I think so.

Q. Do you notice that as the season advances the eggs are getting riper?—A. Oh, yes.

Q. When you knock off at the end can you see that the lobsters, a good many of them, have passed the spawning season?—A. I do not know, but the shell seems to get very soft.

SESSIONAL PAPER No. 22a

Q. Of course you find the lobsters with berries on at all times of the season, in the fall and in the spring?—A. Yes.

Q. But they are only supposed to hatch them out during very warm weather. What percentage of egg lobsters do you think there are? How many out of every hundred do you think would be berried?—A. I do not think it would be more than about eight.

Q. You think it would amount to about eight per cent?—A. That is my idea.

Q. Do you think there is anything in the style of trap you fish?—A. Oh, yes.

Q. Is that parlour trap more destructive than the old fashioned double ender trap?—A. I do not know whether it is more destructive to the fish, but it gets more.

Q. The great merit it has is that it holds the fish, they cannot get out as easily?—A. They cannot get out very well.

Q. Do you think it would be possible to arrange a trap that would allow the small lobsters to escape? Could we enforce a size limit by a trap in that way?—A. Oh, I guess so.

Q. How would you do it?—A. You would have to have the slats further apart I suppose.

Q. How far apart are they put now?—A. Well, it is about one inch or one and one-eighth inch.

Q. Does that hold everything that gets in?—A. I do not think so.

Q. What size lobster would get through the opening?—A. I suppose a six-inch lobster.

Q. How is it in fishing, do you think the lobsters make any attempt to leave the trap when you disturb it?—A. Oh, they do.

Q. Do you ever see them scrambling out?—A. When we had an old fashioned trap we would see them falling out through the hoop.

Q. What do you think of this suggestion of licensing the fisherman as well as the canner?—A. I think it is all right.

Q. Do you think if the fisherman took out a license he would, on that account, be more scrupulous about observing the regulations than one who had not a license?—A. Oh, I do not know, of course I am, when under oath, more careful.

Q. Do you think that putting him under oath would make him more careful?—A. He would have to be then.

Q. Do you think there is an unfair understanding between the packers by which the fishermen suffer?—A. It looks like that, in my opinion.

Q. Do you think that this proposition of allowing a certain number of fishermen a co-operative license, even if the number was reduced, is a good one? Do you think that would bring the canner to terms? Would it have that effect?—A. If the fishermen could get together in bunches the canner would have to pay more for the fish or he would not get them, that is if the fishermen could can for themselves.

Q. How would you proceed to regulate that matter of licenses? It would not do to give every one a license, you would want to have some guarantee that the canning is going to be properly done; what guarantee do you think the department should exact?—A. For a co-operative license there should be five.

Q. But even if that were done would it not be necessary to insist that the canning should be done in a proper manner?—A. Oh, yes.

Q. You have had some experience in canneries, how do you think that should be done?—A. They should have an establishment pretty well equipped for handling the fish.

Q. We have seen in some places tables that looked very rough and ill smelling, and you could not possibly hope to put up good fish with an outfit of that kind. Do you think the tables should be properly covered?—A. Oh, yes.

Q. What do you think is the best thing to cover them with? We see them covered in some places with glass, and in other places with marble and zinc, and in other places galvanized iron has been used, we have also seen enamelled ware tables?—A. Of

9-10 EDWARD VII., A. 1910

course there might be some small places that could not afford a very expensive equipment.

Q. Do you think that the product of the cannery should be inspected?—A. I have no doubt but what it should.

Q. What has been your practice here with regard to the undersized and berried lobsters?—A. Where I fished it did not make very much difference with regard to the size limit. Of course with a 7-inch limit I do not think I would take any fish under that limit. Of course there are some under the 8-inch limit; and with regard to the berried lobsters they are not very plentiful.

Q. What percentage would you say, how many out of every hundred, bear berries?—A. I suppose, taking the season through, it would be between six and eight, something like that.

Q. Have you ever remarked their size?—A. Yes, several times.

Q. What is the smallest lobster you ever saw with berries on?—A. I think I have seen them down to—oh, I do not know—about 8 inches.

Q. You have not seen many about that size, that is about the limit, but they have been seen down to 7 inches I believe?—A. I have not seen any below the size I mentioned.

Q. Do the canners object to receiving the berried lobster?—A. Yes, sir.

Q. Have they always done so?—A. Pretty much so, ever since I have been fishing.

Q. Are some more careful about it than others?—A. No, sir, not as far as I know.

Q. What do you think of these various propositions for the future protection of the fishery? What would you suggest as being the best thing to do? What would you do with the lobster business?—A. Of course it is all right to throw away the berried lobsters in order to save them, but if there is a bounty, pay us for doing so, or have a pound.

Q. Or even a hatchery for that matter?—A. Or a hatchery. Of course, I think there are places in Little Bras d'Or where hatcheries could be worked all right.

Q. Are there any other canneries in the immediate neighbourhood to supply the eggs for a hatchery?—A. Of course there are only two canneries here now, there have been three.

Q. But there are several other canneries not far away, are there not?—A. There are some not far away, there is a small cannery probably ten miles from here.

Q. Is it to your knowledge that there has ever been any canning in the close season; has the close season been strictly observed here?—A. Yes, nowadays. Now it is.

Q. Have you any remarks to offer about the live lobster business?—A. No, sir, I do not think so, you see the market seems to be too far for that.

Q. You have heard the evidence of the other gentlemen and coincide with most of them, I suppose?—A. Yes.

Q. Is there any point in which you differ from them?—A. Not very much, I think.

Q. Is there anything you would like to put down as coming from yourself, any statement?—A. No, excepting, that if an officer were appointed, who would simply look into the matter and get the right market price, and see whether the price that the packers paid was the best price they could afford to pay or not, because now we have to take their word for it and we do not know anything about the market or whether they could pay a better price or not—if such an officer were appointed to look into the matter, it would be of great advantage to the fishermen.

Q. You think that if an officer of that description were appointed to inquire into the condition of the market and see what was a fair price to be paid for the lobsters, the fishermen would be willing to abide by his decision in the matter?—A. Oh, yes.

Q. Who would be the best officer to do that, the inspector?—A. Oh yes, I guess the general inspector.

Witness discharged.

SESSIONAL PAPER No. 22a

FREEMAN STUBBART, fisherman, Little Bras d'Or, called and sworn:—

By the Commissioner:

Q. Do you belong to Bras d'Or here?—A. Yes.

Q. How long have you been engaged in lobster fishing?—A. About 12 or 13 years.

Q. You are fishing with your own boat and gear?—Yes.

Q. What number of traps do you fish?—A. From 60 upwards.

Q. Do you fish for yourself?—A. Yes.

Q. What is the average catch that you make with that number of traps, how many thousand pounds per season?—A. It is according to the season.

Q. What is the best season you ever made?—A. 5,000 or 6,000 pounds.

Q. What did you do this year?—A. I did not do anything like that this year, the season was bad.

Q. How far did you come towards it?—A. About 4,000.

Q. Have you any idea how many lobsters run to the hundred pounds in weight, have you ever kept any account of that?—A. No, sir, well it is according to the season, you will find lobsters early in the spring of course, that weigh more.

Q. They are larger then?—A. Larger.

Q. Have you any idea how many lobsters it takes to make a hundred pounds?—A. In the latter part of the season it takes from 160 to 170, around that.

Q. And in the opening part of the season, what would you say?—A. I could not say.

Q. It would take a smaller number?—A. Yes.

Q. Will they run a 100 lobsters to 100 pounds do you think?—A. No.

Q. When the lobster fishery is over what do you devote your time to?—A. Sometimes to fishing and sometimes to farming, one thing and another.

Q. What happens to most of those who fish lobsters, are they in the same position?—A. Yes, most of them keep fishing right through.

Q. They fish right through?—A. Yes, codfishing.

Q. That is they go into the deep sea fishing?—A. Yes.

Q. How late do you keep fishing here in the fall, when do you knock off?—A. About Christmas.

Q. Have you always fished from this place?—A. Yes.

Q. You were never at Anticosti?—A. No.

Q. How do you find the lobster fishery compare now with what it was when you began to fish, is there any diminution in your time, you have only been fishing a short while?—A. They are not as plentiful here as when I first started, but there were not as many boats then.

Q. Do you think the diminution is going on, is the number of boats increasing every year or are they dropping out?—A. There were not so many this spring, but last spring there were more than ever.

Q. Do you think that the supply has been kept up by taking smaller lobsters to the cannery now than you used to?—A. How do you mean?

Q. I mean to say is not the fisherman now taking in practically everything he gets without regard to the size limit?—A. Oh, no, of course not; there are some that are not worth taking.

Q. Where would you draw the line?—A. Anything that is too small we do not take in.

Q. But where would you draw the line, what is too small?—A. I could not tell you what size they take, I am not the government officer.

Q. Did the government officer measure them at the cannery this year?—A. I could not tell you.

Q. Now, as to the matter of price, is there any competition at all in the matter, or are you obliged to take whatever is offered?—A. It seems that we are.

9-10 EDWARD VII., A. 1910

Q. Has it always been so?—A. Yes, only the two seasons we had our union in force.

Q. And then?—A. Those two seasons it has been different altogether.

Q. Do you think it was the existence of the union that gave you the larger price last year and the year before?—A. Of course the fishermen feel that, yes; they hung back and would not fish.

Q. Because the same price was given last year, and the year before, in many places where there was not any union. What, in your idea is the best regulation that can be adopted for the preservation of the lobster fishery? You have heard what has been said here; there is no use my going over it again; what do you think yourself is the best?—A. I could not say.

Q. The fishermen should be able to say what is best?—A. What do you mean by that?

Q. Well, it has been suggested that the lobster fishery should be shut down altogether for four or five years?—A. I do not see that that would be of any benefit.

Q. The idea is that the lobsters would have a chance to grow?—A. The lobsters should be caught the same as all other fish.

Q. In what way?—A. Well, you get all kinds of herring and all kinds of codfish, and they are just as numerous now as when we first started.

Q. And you think the lobsters are as numerous, too?—A. Yes, I think so. Of course the packers can tell you; one of the packers is here and he can speak for himself.

Q. And you think that the lobster fishery will always continue good, no matter what is done?—A. It will not if the seed lobsters are taken.

Q. How would you protect the seed lobster; what would you suggest?—A. I would say the same as Mr. McCready.

Q. What do you think of doing away with the size limit altogether?—A. I guess that would help out too; that is on the 7 inches. Of course on the west coast lobsters are larger than on this coast.

Q. Do you think that you have a smaller breed of lobsters here than are found any where else?—A. No.

Q. Were they not as large here at the beginning?—A. Yes.

Q. Why have they got smaller?—A. Because the bottom is too smooth for them to hold. You take a place where there is a rough bottom and the lobster will hold better.

Q. Have you not a rough rocky bottom here?—A. Not on this shore; of course there are rough places, but not the most of it.

Q. What has been the practice about here to avoid dealing with the canner who is known to refuse small or berried lobsters?—A. How do you mean; the fishermen not selling their fish to them, is that it?

Q. Yes, some canners have complained that they have to take small and berried lobsters because their fishermen insist on it?—A. I do not think so; the fishermen do not where I take my lobsters. We were given to understand in the spring that he would not take any seed lobsters.

Q. Has the practice of rubbing the eggs off the berried lobsters been followed here at all?—A. I could not say.

Q. You never saw it done?—A. No, the packer is the man who knows pretty well if that has been done, because when once the seed lobster is washed it is done.

Q. Is it the case that the seed lobster is more delicate than the others and will not stand as much handling?—A. Yes, I think so.

Q. You have heard the evidence given by the other gentlemen and generally you agree with it?—A. Yes.

SESSIONAL PAPER No. 22a

By Mr. McKenzie, M.P.:

Q. The average number of traps here, as I gathered from the evidence, is 70?—
A. Yes.

Q. Each man has about 70 traps?—A. Yes.

Q. Now, taking that number of traps with all the gear necessary to fish them and to fit out with, what would that amount in value to the fishermen? How much money does that represent? Does that represent all that is necessary to set and fish them properly?—A. You mean how much does it cost to build them?

By the Commissioner:

Q. What do you value them at apiece, with their trawl lines and everything?—A. I could not say.

By Mr. McKenzie, M.P.:

Q. Supposing you said to a man: "Fit me out 70 traps, build them and equip them with all the necessary rope, and whatever kind of buoys you use," what do you think he would do it for?—A. His labour and all, I suppose he would not do it for anything under \$100.

Q. Not under that?—A. No, I do not believe he would, and find the rope and do all the work himself, not the way the prices are now.

Q. Do you know anything about the work in the factory?—A. What do you mean by that?

Q. You were engaged in the factory itself, working for the packer, were you not?—A. Not for long. I worked in the factory about a fortnight.

Q. But you have heard the talk about the proper method of packing; now, what is there to guard against in packing so that you will have a good pack and proper goods to put on the market, instead of poor goods? From what you have heard around the factory, what is there to avoid so that you will turn out a proper article?—A. Well, I could not say; as far as I know the only thing to be carefully watched, that is in this particular factory run by Mr. Metherall here, is to be careful about packing dead fish, that has to be avoided.

Q. Of course if the packer packs dead fish he puts up a poor pack?—A. Yes, his meat is poisoned. Another thing that is necessary is to have a pretty good man to run the factory, a man who knows his business. Of course there are some men running a factory who do not know any more about how to run a cannery than a horse.

Q. In getting this good lobster what is it that you must keep from putting in that is to be found in the lobster?—A. I do not think it makes any difference between the smaller and the large ones. Of course a dead lobster spoils the pack if he is dead before packing.

Witness discharged.

T. H. METHERALL, packer, North Sydney, called and sworn:—

By the Commissioner:

Q. Are you packing on your own account?—A. No, sir.

Q. You are packing as agent for what firm?—A. The Snowflake Canning Co.

Q. Where are their headquarters?—A. Brunswick, Maine.

Q. Have they many canneries on the coast?—A. No, sir, this is the only one.

Q. This is the first time we have struck that name?—A. This is the only one they have.

Q. Have they been running it long?—A. Three seasons.

9-10 EDWARD VII., A. 1910

Q. Did they build the cannery or take it over?—A. They purchased it from the company that owned it.

Q. How long have you been engaged here?—A. I have been here since 1889.

Q. Does your experience in connection with the lobster packing go beyond that?—A. Yes.

Q. How far back?—A. Oh, well, I suppose I have been 26 or 27 years engaged at it.

Q. In what part of the world?—A. In Prince Edward Island and New Brunswick.

Q. You have packed on the northern shore of New Brunswick?—A. Yes, sir.

Q. You were engaged in the same business there?—A. The same business.

Q. What is the capacity of the cannery here, what is your pack?—A. It varies: it has gone down as low as 5, and often as high as 10 or 11.

Q. Hundreds?—A. Yes, sir, cases.

Q. Can you give us the average pack from a boat here?—A. It is hard to say what the average is here; some years it has been 40 and some over, and some years we have gone down very low, as low as 600 or 700 cases, while other years we have gone up to, 900 or 1,000 cases.

Q. Your average would not be anything like 60 cases?—A. No, it would not, not at all.

Q. Can you give us any idea how your lobsters run, how many it takes to fill a pound tin here?—A. We average about 6.

Q. Six lobsters?—A. Yes, of course we can take a few fresh lobsters and do better, but to take our average for the season it will run about that.

Q. But the lobsters that you get in the spring, though larger, are not nearly as profitable as those you get later in the season are they?—A. No.

Q. And the most profitable lobster is the medium size?—A. The medium size from 8 to 9 inches is the best fish.

Q. What is the most profitable tin in the market at the present time?—A. I cannot just say, but I think the pound flats are about as much in demand as any at the present time.

Q. We have been told that the quarter pound flats are the best?—A. We do not pack as much quarter pound as pound tins.

Q. To pack quarter pound tins you want small lobsters, because you have to put the claws in whole and the quarter pound tin will not take a very big one?—A. Yes.

Q. What has been your practice, as far as your connection with the business goes, is it the practice for the canners to take everything that is brought to them?—A. We have always tried as nearly as we could for our own benefit to keep as near the legal size as possible, that is what we have been trying to do.

Q. How do you think a strict enforcement of the regulation would affect you?—A. I think it would put us out of business.

Q. And do you think the fishermen would continue to fish then?—A. No, they could not exist.

Q. Your fishermen own all their own boats and gear here?—A. Yes.

Q. Have you come to any conclusion yourself as to the spawning habits of the lobster? At what part of the season do you think they spawn?—A. You know we see lobsters with spawn almost every month in the year, but I rather imagine that here, as the water gets warm, they come into the shore to spawn.

Q. Sometimes when taken in the winter they are found with spawn, but those berries would not hatch out until the warm season?—A. Of course not.

Q. At what size do you consider the lobster is fully matured?—A. I think the average lobster here runs along from 8 to 9 inches, that is the average of the bulk of the fish.

Q. And have you any idea of the percentage of the egg bearing lobster?—A. I have never taken any note; of course we have always tried to keep clear of the egg bearing

SESSIONAL PAPER No. 22a

lobster, and of course, in that way we would not know just what the percentage would be.

Q. Do you think that the practice of stripping the lobster is carried on to any extent here?—A. I do not think that it is, but, of course, it is done; we are aware of that.

Q. Was it done where you formerly were in Prince Edward Island and New Brunswick?—A. In those parts we did not take any account of anything like that.

Q. What was the practice then with regard to the regulations?—A. The size limit at that time was 9 inches but we took anything.

Q. Were you aware of anybody being fined or punished in those days?—A. There were some fined, now and again.

Q. Was there any more attempt made to enforce the regulations then than there is now?—A. Not so much.

Q. Is it then your experience that you would have lost fishermen by refusing to accept the undersized or berried lobster?—A. I cannot say that I have, I have generally had one lot of fishermen pretty much right along.

Q. Now as to the matter of licensing, you are aware, of course, that the practice of the Department for a number of years back has been to restrict the number of canning licenses, the idea being that by restricting the number of canneries they would in some way protect the fishery, though there was never any restriction placed upon the amount of gear that a cannery could fish. What is your opinion about this matter, do you think that a limit should be put to the issuing of licenses?—A. We find that we have our own troubles to get the proper articles for the market, and I think that if every one was allowed to can the market would be filled with an inferior article.

Q. What do you think of the present policy of issuing these co-operative licenses? You know, of course, that there have been complaints from the fishermen, that they were being severely dealt with, and that there was no competition in the matter; that they had to take what was offered them, and it was thought that this plan of issuing co-operative licenses would be a solution in some way of that difficulty?—A. Of course I suppose this is a free country, and if a man was properly equipped to pack his fish as it should be packed, I do not see any reason why he should not have the opportunity.

Q. Do you think we could govern or regulate that matter by exacting a standard of canning?—A. Well it would be pretty hard to regulate the thing, I should think so. Of course it takes considerable money to equip a factory and get in a position to do the work, and where a few men would co-operate together, the equipment would, for one or two years, take all the profit.

Q. And it would require considerable capital to start with?—A. And then, to-day, it is not the idea of packing the lobsters, but the idea, to-day, is to sell them.

Q. Do you think that, one year with the other, the fishermen would be better off if they were allowed to pack than if they continued to fish and to sell to the cannery?—A. That would be something for themselves to decide.

Q. As to this matter of exacting a standard do you not think that some fresh regulations should be insisted on regarding that matter with a view of protecting the pack?—A. I should think there should be everything done that can be done in every way to ensure proper packing, because there is no use putting up an article that is not fit for food.

Q. And the greatest care requires to be observed in packing lobsters?—A. The greatest of care, unless you take the greatest of care all the way through you will get left.

Q. Using soft wood tables, not covered and not scraped, is it possible to put up a good article?—A. You would have to be very careful.

Q. One of the greatest difficulties to be guarded against I understand is the souring of the meat?—A. It is.

9-10 EDWARD VII., A. 1910

Q. Is not that very apt to occur unless proper appliances are used and proper tables are provided?—A. Yes.

Q. What is your opinion as to the best covering for a table?—A. We do not want to go very high, and we generally use zinc.

Q. Zinc or galvanized iron?—A. I do not approve of galvanized iron, glass or marble are very much better.

Q. Neither of them is a very expensive article to use?—A. Not very, but I imagine there is more danger of their being broken.

Q. Glass, bedded in cement, stands a lot of rough usage, and I have seen a table covered with enamelware which makes a very good table?—A. That would be very nice.

Q. Then as to the matter of packing, once it has been put up in the tins, do you think there is any good reason why the product of the lobster cannery should not be subject to inspection as are all other food products to-day?—A. If you come to examine into it you will find it pretty well inspected already.

Q. We have met, since we have been on this trip, on several occasions, the agents of the purchasers who make their inspection at the canneries, but what I mean is an official Government inspection?—A. I think it would be a very good idea.

Q. Do you think that the present staff of fishery officers is competent to make that inspection?—A. No, sir, I do not think so.

Q. It would require an expert in the business to make that inspection you think?—A. I should think so.

Q. As to the matter of licenses do you think there is any reason why a license should be refused to aliens?—A. I do not see why, I am sure.

Q. Some people are opposed to the issuance of licenses to aliens and say it is absurd while we have so many Canadians who want licenses and cannot get them.—A. Well, every country almost is on the same footing, if you want to establish a business you can do so if you have the capital.

Q. Would any Canadian be permitted to pack across the border?—A. They do not do any packing in the State of Maine.

Q. The Americans I think are the pioneers in the business?—A. They are the pioneers in the business here.

Q. And all that is alien here is their capital, they employ Canadian labour and material do they not?—A. Altogether.

Q. What is the practice with regard to the lobsters they put up, do they ship the lobsters out of this country and label them as the American article, is that done now?—A. No, sir, the goods are labelled and stamped here.

Q. Where is the principal market for your canned lobsters?—A. In the United States.

Q. Entirely in the United States?—A. Entirely in the United States.

Q. Was the American market affected the same as the British market last year?—A. Yes, sir.

Q. Can you give us any idea as to the extent of the depreciation; of course that is shown in the trade journals?—A. Certainly, it is shown in the trade journals, of course at one time the article was practically unsaleable.

Q. Have you noticed, within your time, any appreciable decline in the average size of the lobsters?—A. I cannot say that I have.

Q. Not in this locality?—A. Not in this locality, I cannot say that there has been.

Q. Do you think where that decrease does exist that it is the natural result of over-fishing and destructive methods?—A. I suppose it is, sir, there is no doubt about it.

SESSIONAL PAPER No. 22a

Q. Do you think that the different size limits and the different seasons in adjoining sections of the coast are unsatisfactory and likely to encourage violations of the law?—A. Well, I do not see that it is.

Q. Do you think that, as far as possible, the seasons and the size limit should be uniform?—A. Well now, I do not think that, I think that the season should be fixed according to the needs of the locality.

Q. Is it your opinion that more damage is caused by fishing very late in the season, that the proportion of young, undersized lobsters and berried lobsters is greater at the tag end of the season than it is at any other time in the season?—A. I rather think it is.

Q. Is it the case that canners are compelled to accept undersized and berried lobsters for fear of losing their fishermen?—A. There are some cases of that kind, yes, I would say so.

Q. Have you any experience in this matter of pounds as compared with hatcheries?—A. No, sir, I have not.

Q. What do you think is the best way for us to proceed in order to protect the berried lobster?—A. To liberate her of course as you get her.

Q. The percentage of berried lobsters is not large?—A. Not so very large.

Q. Would it involve any great loss to the fisherman if he did that regularly?—A. It would be some loss to him, no doubt about that.

Q. But the loss would not be very serious or hard upon him?—A. No, it would not.

Q. Have you any mode to suggest whereby we could protect that lobster? The fisherman, if we should pay him for those lobsters should be required to throw them overboard, how could that be arranged?—A. The only way that I can see that it could be done is either by the fisherman bringing the lobster to the hatchery or have the smack man punch the tail and throw it overboard.

Q. Are you aware that that has been done in the State of Connecticut?—A. I believe you made that remark.

Q. You do not know how that turned out there at all, you had no experience?—A. I could not say.

Q. Do you think there is any great disposition on the part of the fishermen to protect that lobster now, are they really beginning to realize the necessity of doing so?—A. I think they are.

Q. We have been told in a great many places that that is the case?—A. I think they are realizing that here.

Q. Do you think that anything would be gained by sending some one down here to preach to the fishermen on the subject?—A. I suppose they are all open to conviction.

Q. The Agriculture Department, of course, sends around experts to explain to the farmers the best methods of cultivation and rotation of crops, the best kinds of stock to raise and so forth; do you think the same thing could be done in regard to the lobster fishery with good effect?—A. I think so.

Q. What do you think of this proposition to require the fishermen to take out a license?—A. I think it would be all right.

Q. Do you think that a man having a printed license in his pocket would regard himself as being in the position, more or less, of a fishery officer, and therefore feel it to be his duty to observe the law himself and to see that others would do so?—A. I think there are some who observe the law themselves and would also like to see others do so as well.

Q. Do you think there is any packing done here out of season at all?—A. Not that I am aware of.

Q. Do you think that the existing penalties for violations of the law are sufficient if they are enforced?—A. I think so.

9-10 EDWARD VII., A. 1910

Q. What do you think of the proposition to close down the lobster fishery altogether for a term of years?—A. Well, I do not think that would be satisfactory at all.

Q. And the fishery here has hardly reached a condition requiring such a heroic remedy, is that your idea?—A. I do not think so, not in my experience.

Q. What do you think of that other suggestion to do away with the size limit, and protect religiously the berried lobster, at the same time shortening the season at the end; it may not be the case here, but in many places it would be a very difficult thing to enforce that size limit?—A. It would be here. I think, of course, that the season is all right as it is, and I think that the berried lobsters should be protected, but I do not think there will be much trouble in enforcing a seven inch limit, and I do not know of anything else that can be done.

Q. Then you would not favour doing away with the size limit entirely?—A. No, I think the 7 inch limit would be all right.

Q. Would you favour a universal close season for the whole Atlantic Coast from July 15th to January 1st?—A. Well, so far as we are concerned it would be all right.

Q. That would be a shortening of the present season here by 15 days, and on the other hand it would not be putting any opening limit at all, nature would provide that?—A. No.

Q. How did the opening of the season come to be fixed on the 1st of May? We find it in some places April 20th, and in other the 6th of January, others again the 15th of January, and in some cases April 1st and May 1st?—A. I do not know, you see the ice with us protects everything in that line.

Q. It does that everywhere?—A. In the west again it opens earlier than it does here.

Q. West of Canso it does, but north of Canso the conditions are governed by the ice.—A. I know that they are three weeks ahead of us at Canso. I know that they are packing up there in April when we are solid with ice.

Q. But from the lobster point of view is there any reason why the lobster season should not begin on the 1st of January? It used to begin then you know?—A. Yes, I do not see any reason why it should not.

Q. That was changed, as I understand it, at the suggestion of the canner who supplied his own gear and outfit, and the fishermen were anxious to commence early in the spring and did not care whether the gear was lost or not.—A. It is no doubt it would be a good thing for a man owning his own gear to have a certain date to set it out.

Q. Now one of the propositions of course is to set the season in that way, and south of Canso there is another proposition to fix the season from July 1st to January 1st, and there to insist upon a larger size limit, because there they have all the advantages of the live lobster market; how does that strike you?—A. As I am not familiar with the live lobster market and with the country anywhere west of Scatari, I cannot say very much about it.

Q. These are Professor Prince's suggestions. Have you seen the evidence taken before the committee last session?—A. I have.

Q. Now, as to the price paid for the lobsters, you are no doubt aware that there is friction in a good many places between the fisherman and the canner; how is that regulated now?—A. As far as the canner is concerned, he regulates his price, he pays the fishermen according to the price at which he can sell his pack.

Q. Is there any agreement or understanding among the mass of the canners that a certain price will be paid and no more?—A. Not that I am aware of.

Q. That is to say, there is no combination; so far as you know, there is no combine?—A. There is none that I am aware of.

Q. Has there been, within your experience, any competition, a certain looseness in that matter, have some paid a little more than others?—A. Oh, they are always looking out for themselves as in any other business.

SESSIONAL PAPER No. 22a

Q. You have no experience in the live lobster industry?—A. No, sir.

Q. Would the fishermen in this district have any market for their lobsters if the cannery were closed?—A. No, sir, I believe not, any more than that there is a local market here.

Q. Do you think where the possibility exists of shipping the live lobsters that trade should be favoured in preference to the canning industry?—A. I do not know.

Q. Have you had any experience with hatcheries?—A. No.

Q. Would you favour the establishment of more hatcheries?—A. I would.

Q. Is there much gear left in the water here intentionally?—A. I do not think so.

Q. That is not likely to occur here where the fishermen own their own gear?—A. No.

Q. Where the packer owns the gear he complains that in many instances at the close of the season the fishermen disappear and the gear is left in the water. As to that matter of stamping the cases, do you think there is any good purpose served by that?—A. I think there is a good purpose.

Q. You think it prevents the packing of illegally packed lobsters; it should prevent that?—A. The illegal packing of lobsters.

Q. Do you know anything about fishing in lagoons and bays? Were you in Prince Edward Island?—A. I was at North Point.

Q. There are no lagoons there?—A. No.

Q. It has been suggested that wherever there are bays and lagoons to which the lobsters retreat at the close of the season no fishing should be allowed there, and at Prince Edward Island it has been suggested that fishing in those places like Richmond and Malpeque Bay should be prohibited, but you have no experience of that kind of thing?—A. No.

Q. What would you say is the average earning of an industrious lobster fisherman?—A. I think that a man who attends to his business and has a favourable year—of course, you sometimes have bad years——

Q. That happens with every fishery?—A. I think that at the best the average man would average \$200.

Q. That is for two and a-half month's fishing?—A. Yes.

Q. What is the average price paid to sealers? Those are the best paid men in the factory?—A. Yes; they get about \$45.

Q. Does that include maintenance?—A. No, sir.

Q. He maintains himself?—A. Yes.

Q. And as to the other men, what wages do you pay?—A. That varies a great deal. We do a great deal of our work on the piece work basis; and the men are paid from \$1.25 to \$1.60.

Q. What is the principal part of the work in a factory?—A. Cleaning and things of that kind.

Q. And the girls, how are they paid?—A. We usually pay them from 50 to 60 cents a day.

Q. And they maintain themselves?—A. Yes.

Q. Do they usually work full days?—A. The days are usually short.

Q. And are they only paid for a fraction of the day?—A. No, they are paid straight time.

By Mr. McKenzie, M.P.:

Q. I was asking the last witness what the packer has to guard against in packing so as to produce a good article. Can you give us an idea what are the precautions which must be taken in packing to ensure the production of a good article?—A. We have to take every precaution we can. The packer wants to get his fish as fresh and nice as possible, he must have the meat prepared as nicely as he possibly can, and be

9-10 EDWARD VII., A. 1910

sure that there are no shells or anything like that get in the can, and he must have his place nicely washed.

Q. What mistake would an inexperienced packer naturally fall into in connection with his packing? I mean more especially, are there sections or parts of the lobster that an inexperienced packer might put into the can which an experienced man would leave out?—A. I cannot say there is anything in that way. For instance, if a man is not properly fitted out to wash and cleanse the meat properly and have his goods in proper shape to put in the can, he will get a poor pack, and he has to be very careful in bathing his cans and filling them as well.

By the Commissioner:

Q. The lobster must not be left to sour on the tables, but you must put them in the cans as soon as possible after they are cooled?—A. Yes.

By Mr. McKenzie, M.P.:

Q. Would you mind telling us what, in your opinion, is the amount that would be required to fit out a canning factory for say a small company of five or ten men who want to can their own catch?—A. I would not say, but I do not think it is possible to fit up any kind of a place in any kind of shape for less than \$500 or \$700. I know that with us, in order to get our business established and to get things in shape, it pretty well costs \$1,000, that is without the tins.

By the Commissioner:

Q. That is for the cannery and building, the fireplace, tables, etc.?—A. Yes; no matter how small the factory is it will cost that much.

Q. Is there anything else you would like to add, is there anything I have not covered, or have you any further suggestions to make?—A. I have nothing I would like to add to what I have already said.

Witness discharged.

Commission adjourned.

NEIL'S HARBOUR, C.B., August 25, 1909.

A. B. MONTGOMERY, fishery officer, Neil's Harbour, called and sworn:—

By the Commissioner:

Q. How long have you been engaged in the lobster fishery?—A. I am the fishery officer here.

Q. Touching the matter of the lobster fishery you never did any lobster fishing yourself?—A. Very little.

Q. It had not been our intention to examine officers of the Department because the Department can get what information it wants from them at any time. Perhaps now that you are here you might give us some information in reference to the canneries. What number of canneries is licensed in this district?—A. Three.

Q. Who do they belong to?—A. McLeod Bros., Thomas Williams, and Mr. Buchanan.

Q. Are these all local owners?—A. Yes.

Q. What is the extent of the product? What do they put up altogether, we do not want it very closely, because we will get that later in the statistics?—A. Do you want the values?

SESSIONAL PAPER No. 22a

Q. Not in value, but how many cases?—A. Well, this year it was away behind.

Q. Well, what do they put up in an average year?—A. I could not make a very definite statement.

Q. Can you tell us what they packed this year?—A. No, I could not from memory.

Q. Are there a large number of boats employed in the lobster fishery here?—A. Well, quite a number, nearly all the men are employed in it.

Q. How many boats would you say there are?—A. 20, 23, and 15, I think that is about the number I have.

Q. Do the fishermen here as a rule own their own boats and gear?—A. Yes.

Q. How are the men who fish lobsters here, do they fish lobsters and then go to the other fisheries afterwards?—A. Yes, most of them.

Q. And are some of them men who only fish lobsters and then retire to their farms?—A. There are very few of those men, I do not think there are half a dozen in this district but what go into the other fisheries afterwards.

Q. What is the principal fishing industry here?—A. Cod fishing.

Q. And you also get mackerel, I suppose?—A. We get very few mackerel.

Q. In what depth of water do they carry on the lobster fishery generally, how far off shore do they go with it?—A. They do not go very far, the depth varies from 3 to 14 fathoms.

Q. What is the condition of the fishery now compared with what it was 20 years ago?—A. There is not much difference.

Q. Are they doing as well? Do they get the same quantity of fish with the same amount of gear?—A. I think there would be some falling off.

Q. How are the regulations observed with regard to the size limit and the protection of the berried lobster here?—A. Fairly well.

Q. What is the practice with the canners, do they take everything that is brought to them?—A. Well, I think so. They do not, of course, take the berried lobsters.

Q. They never have?—A. It is not a custom with them at all.

Q. And they never have taken the berried lobster?—A. Well, I would not say.

Q. Tell me, has the practice of brushing the eggs off the berried lobster been followed at all here?—A. Do they take them that way?

Q. It is not with a view of prosecuting or doing anything of that kind that I am asking the question but merely for the purpose of finding out the actual conditions so that in making further regulations we may know what to avoid and what is best to do.—A. I think there would be very few exceptions that would be inclined that way.

Q. How would a strict enforcement of the regulations affect the canner here, that is if he were confined to the 8-inch limit?—A. It would affect them greatly.

Q. Some canners we have had say it would put them out of business altogether.—A. It would hurt them here.

Witness discharged.

GEORGE GILES, fisherman, Neil's Harbour, called and sworn:—

By the Commissioner:

Q. Have you always been a resident of this place?—A. Yes, sir.

Q. How long have you been connected with the lobster fishery?—A. About 7 or 8 years.

Q. Only 7 or 8 years?—A. Oh, yes, it is more than that, I suppose.

Q. You are a fisherman, you live by fishing?—A. Yes.

Q. You own your own boat and gear?—A. Yes.

Q. And I suppose all the fishermen do here?—A. Pretty much so.

Q. Does the canner supply any outfit at all?—A. He does to outsiders.

Q. To those who are not regular fishermen?—A. Yes.

9-10 EDWARD VII., A. 1910

Q. In what depth of water do you generally fish at the beginning of the season?—
A. About 14 fathoms, that is the deepest.

Q. When do you begin generally?—A. As soon as the ice will allow us after the 1st of May.

Q. I suppose it is very seldom you get out on the 1st of May?—A. Very seldom.

Q. One year with the other what date would you say that you start to fish?—
A. The middle of May.

Q. The delay is generally due to the ice?—A. Yes.

Q. And later on do you move into shoal water?—A. We move in according to the season.

Q. What sort of bottom do you fish on?—A. Pretty rocky.

Q. I suppose it is all pretty rocky around here?—A. Pretty much so.

Q. Do you fish up to the close of the season, up to the end of July?—A. No, sometimes we cannot fish but little more than one-half of it because the storm comes and takes away all our gear, and when that happens you are done.

Q. That is when you are in shoal water?—A. It sometimes happens when we are outside.

Q. But as a rule you do not fish to the end of the season?—A. No, we generally knock off a fortnight before.

Q. Is that on account of the rough weather or because you have other fishing to go to?—A. The storms take away our gear, and it does not pay anyone to fit out again.

Q. What is your principal fishery here, is cod the principal fish?—A. No, lobsters I would say.

Q. How do you find the lobster fishing, when is it at its best?—A. When it commences, the first fortnight of the fishery.

Q. How do the fish run, do you get better fish in the beginning of the season or towards the close?—A. Yes.

Q. That is as a rule?—A. Yes, as a rule.

Q. How is the fishery now compared with what it was when you commenced to fish?—A. Not as good, the lobsters are not as plentiful.

Q. And do they run as large?—A. No.

Q. So that they have decreased both in size and quantity?—A. Yes.

Q. I heard you say a little while ago that if the regulation size limit of eight inches were enforced here it would affect seriously both the fisherman and the canner too?—A. You might as well give up, because you would not get enough to pay you.

Q. How many out of every hundred fish would you say were below the size limit?—A. Pretty nearly one-half.

Q. Is the proportion the same all through the season?—A. Yes.

Q. Will there not be a larger average of the small ones towards the close of the season than there is in the beginning?—A. Well, yes there is.

Q. What style of traps do you use?—A. What we call the Diamond trap.

Q. That is a sort of parlour trap, is it?—A. No, some use the parlour trap.

Q. What is the advantage of the Diamond trap, do you think?—A. They fish better, you can keep hauling them.

Q. How do you fish them, on single lines or on a trawl?—A. Some each way.

Q. What bait do you use generally?—A. Herring.

Q. Do you find that the lobsters fish better with good fresh bait than with old bait? Some people tell us they prefer the old bait?—A. They are generally better the second night it is in than the first night.

Q. Talking of the berried lobsters, what percentage of them do you find in your catch?—A. Not very many.

Q. How many would you say there were to the hundred?—A. Some days you will get four or five, and then perhaps for two or three days you will not see one. We always put them overboard again.

Q. Have you always done that?—A. We have within the last three or four years.

SESSIONAL PAPER No. 22a

Q. Is there any fisherman's union here?—A. No.

Q. What induced you to put them over? Are the fishermen generally of the opinion now that it is better to return them to the water?—A. Yes, return them to the water to spawn.

Q. Did they not always do so?—A. No, they did not always do so.

Q. As to the price paid, what do you receive for lobsters here? How are you paid?—A. \$2.25 on a cwt. this summer.

Q. Did you ever sell by count here?—A. At the first going off, yes.

Q. And this summer you got \$2.25 per cwt.?—A. Yes.

Q. What did you get last year?—A. \$3.75 and \$4 the year before.

Q. You were lucky, you got more than most people. How is that matter arranged between you and the canner?—A. Well, I do not know hardly how that is.

Q. I suppose when you decide to fish lobsters you come to the canner?—A. Yes but they do not know what they can give exactly.

Q. I suppose they have to wait until they get instructions from headquarters and until they know the market price? There has been no misunderstanding or ill-feeling between the fishermen and the canners here?—A. No, sir.

Q. There has been at some places. You are satisfied with the price you get, are you?—A. No, the fishermen were not satisfied this summer, not at all. The price went down.

Q. But did you understand the reason why that happened?—A. We do not know, they say the lobsters were down, but we do not know anything about that, and you hear reports outside that lobsters are a good price.

Q. As to the matter of licensing, what is the feeling here? Do the fishermen think they would be better off if every one were canning for himself?—A. I should say so; if there is anything in it a man would have it for himself then.

Q. Do you think every fisherman would be able to do that?—A. Well, each fisherman would not, but a club could get together.

Q. That has been the policy of the department for the last few years; in any case where the fishermen wish to club together for that purpose the department has given them a license, and that is the only license that is being issued now. The practice of the department for a number of years back has been to keep down the number of canneries, the idea being that in doing so they would protect the fishery, but the fishermen have complained that in some places they could not get a fair show from the canneries?—A. If the fishermen could not get the price they would like, and they could can their own lobsters if they felt inclined to do so, they would feel much better satisfied.

Q. Do you think that this method of dealing with the matter which has been adopted by the department is the best that can be done under the circumstances, to allow a group of fishermen to come together and say "We wish to can our lobsters," and then issue them a license?—A. I should say so.

Q. What do you think is the spawning season of the lobster? When do they hatch out their eggs?—A. Pretty nearly any time in the summer we find spawn on them, all through the summer, off and on.

Q. Is there any time when you see more of them, do you think they are more numerous at any one part of the season than at another?—A. When they strike into the shore.

Q. About what time is that?—A. About July.

Q. Do you think they come into the shore to spawn?—A. Yes, I think they do.

Q. What is the shoalest water you fish traps in here?—A. About three fathoms.

Q. They come in closer than that in some places?—A. Oh yes, some come in as handy as they can get.

Q. They come in so close that the traps dry out at low water in some places?—A. Probably so.

9-10 EDWARD VII., A. 1910

Q. Now as to this matter of the berried lobster, what do you think is the best way for the Department to protect that lobster?—A. There is one thing I want to speak about, there is a steamer coming here every summer to buy the berried lobsters and take them away.

Q. A steamer coming here to buy seed lobsters?—A. To buy seed lobsters.

Q. Where does she come from?—A. From Louisburg way, Baker's steamer.

Q. That was to take them and put them in the pound, I suppose? I did not know they came this far. Did he come more than once?—A. No, sir, no one would sell them to him, we wanted to put them overboard here, because it was taking seed lobsters away from our own shore.

Q. There is a pound at Fourchu and Mr. Baker entered into some arrangement with the Department by which they would pay him so much for all the seed lobsters he could collect and save, that was done with a view of saving them because it was understood that it was the general practice to take them and brush the berries off. The object of the Department in making that arrangement was to save the seed lobster.—A. I should say that would be a good thing if there was one in each district.

Q. What do you think of that method of saving the berried lobster?—A. That is a good idea if you could save them in your own place and not take them away from your own waters.

Q. Is there any suitable place in this neighbourhood where a pound could be opened? You want a sheltered place, and at the same time there must be a considerable depth of water, with a free rise and fall of the tide, and there must be a narrow entrance so that you can close it off?—A. At Barachois up here there is a place that would suit.

Q. There is another way of saving the eggs, not by putting the seed lobster back into the water, but by bringing her in, taking the eggs off and putting them in the hatchery where they are hatched in jars, the young lobsters afterwards being deposited in the sea. Undoubtedly the best way is to put the berried lobster back where she belongs. What in your opinion is the best way to get the fishermen to do that always? You realize that unless the berried lobsters are protected either by putting them back in the water or by stripping the eggs and hatching them in the hatcheries, it must bring ruination to the fishery in time?—A. Certainly, and if everyone puts them overboard I suppose it will be all right.

Q. But is that done now, do you think?—A. It is done by most people, so far as I know.

Q. If it is not done, what would you suggest yourself as the best way of getting it done?—A. I could not say.

Q. Of course if the percentage of lobsters bearing berries is not very large it would not mean a very serious loss to the fishermen if they all agreed to put them back, would it?—A. Oh no.

Q. And it would mean a great gain to them ultimately in an increased fishery, would it not?—A. Yes.

Q. It has been suggested at some places that the best thing to do is to have the seed lobster brought in and paid for in some way or other. Of course where they are put in pounds we ask the fishermen to bring them in and deliver them to whoever is in charge of the pound, and a certain sum is paid for each lobster.—A. I suppose that would be a good thing to be done here, everyone likes to save all he can.

Q. But still the number of berried lobsters any man would get in a season is not so large, is it?—A. Oh no, but I suppose some get more than others, that is the difficulty, you see.

Q. Various suggestions have been made to the Department with a view of improving the lobster fishery. One suggestion was that we should stop fishing altogether for a term of years in order to allow the lobster fishery to come back to what it formerly was.—A. I suppose they would be that much more plentiful when you began again.

Q. What would the fishermen do in the meantime?—A. I do not know.

SESSIONAL PAPER No. 22a

Q. Would it be a serious loss to stop fishing?—A. It would be to most of us.

Q. The last Lobster Commission which came around recommended that we should close down by sections, that we shut off one part of the coast for a year or a couple of years, and let the other parts of the coast go on fishing, moving around until gradually the whole coast had been covered by a close season.—A. I do not think that would be much benefit, the lobsters from the Nova Scotia coast would not come down here.

Q. You would be shut off here for a term of years during which the lobsters would grow, they are not supposed to travel very far, the idea being that when they go off shore they do not travel along the shore, but back off into deep water. Another suggestion that has been made is that we should do away with the 8 inch limit, and religiously protect the berried lobster, and in exchange for giving you the right to take all the lobsters we should close the season a few weeks earlier, that would allow you to take the small lobsters without making it illegal to do so as it is now, the idea being that by cutting off the tag end of the season we would save so many of the berried lobsters that it would, in a few years, make up for taking the small lobsters?—A. Well, what I think of it, after having been here for the last few years, I think that if July were closed down and we were given the month of September instead of July it would be a good thing for the fishermen.

Q. You think you could fish here in September?—A. Some years it is the best weather we could get.

Q. Of course, there are a great many places where they say they could not fish in the fall on account of the westerly winds, but you are protected from them here?—A. August here is the worst month, and September is the better month.

Q. That would be your idea, to knock off July altogether? To knock off the last of July and to have September?—A. In the middle of July we can knock off all right.

Q. How would it be, do you think, if the size limit were made 7 inches instead of 8, would it be any better?—A. Not at all; it is no use making any limit on size at all, I don't think, in this place. Anything that is large enough for the canner to put up the fisherman should be allowed to bring in and get paid for.

Q. That may seem all very well, but supposing you kill off all the young of any flock, what is going to happen? The lobster has not reached the point at which it can reproduce itself until it is 8 inches long, and if you kill off the undersized ones, where are you going to get the big ones finally?—A. You do not get the big ones in here at all, only a very few.

Q. But you used to?—A. They were all caught off and canned years ago.

Q. The object of this inquiry and of the regulations which it is intended to make as a result of the inquiry is to bring back, if possible, the original condition of affairs?—A. If you want to do that, the only thing to do is to shut down altogether, that is about the only correct way that I know.

Q. Are there any other industries that the fishermen could go to in the meantime?—A. They could go into cod fishing.

Q. What would you do with all the gear that would be thrown on your hands in that event?—A. That would go to wreck.

Q. That would mean the loss of a considerable sum. You see there are a lot of things to be thought of before you decide to shut down. Has there ever been any attempt made here to ship the lobster alive to market? You have not the facilities for doing so, I suppose?—A. There is no way here by which we could do it.

Q. Do the fishermen usually fish more gear now than they did when you began?—A. Oh, yes there are now twice as many at it.

Q. How many traps would a man use in a single boat?—A. Some 100, some 60 and some 70.

Q. And how many in a double-handed boat?—A. They are all single-handed boats in this neighbourhood.

9-10 EDWARD VII., A. 1910

Q. What do you consider the trap is worth with the gear and everything ready to put into the water?—A. They used to call it \$1, that is what the canners used to allow.

Q. What style of boat do you use in the lobster fishing, is it a smaller boat than is used in the cod fishing?—A. Yes.

Q. What would a boat for the lobster fishery be worth?—A. \$10 or \$15.

Q. How long do you consider the traps would last? What is the life of a trap?—A. They are smashed up sometimes in one summer; I have seen them all smashed the first summer.

Q. What is the average life of a trap?—A. If you get a trap to last you three years you do very well.

Q. What percentage of loss do you suffer here one year with another; you reckon on losing so many traps every year?—A. Yes, some lose all, some were cleaned right out this summer, and some made just about enough to pay their expenses.

Q. What is the smallest lobster you ever saw with berries on?—A. I do not think I have ever seen any very small ones with berries, they are mostly big ones.

Q. What is the smallest you have seen with berries?—A. About 6 inches.

Q. You think you have seen a 6-inch lobster with berries?—A. Yes.

Q. That is the smallest I have ever heard of, most people say the smallest they have seen is about 8 inches?—A. I have seen one or two of that size with berries on this summer; they were about the smallest I ever saw.

Q. Have you ever lost a catch of lobsters because the canner refused to accept them?—A. No.

Q. Is there anything else you would like to say, are there any points that I have not covered in my questions?—A. How is it about outsiders coming here from other parts and fishing lobsters? Do you think that is right?

Q. What do you mean by 'outsiders'?—A. Men coming from Newfoundland.

Q. To fish lobsters? I do not know about that; they are British subjects, of course. I think Newfoundlanders have the right to fish in British waters?—A. Yes, but if any of us go over there they won't allow you to put out a net, and I do not think that is fair. They come here and do what they like, but you cannot go there.

Q. I did not know that you suffered from that, do they come over here regularly?—A. They seem to make a practice of it now.

Q. What do they do with their lobsters?—A. They sell them to the canners here, take the money and walk off with our money.

Q. There is nothing in the law to prevent that, because they are British subjects, and, under the law, I suppose they have the same fishing rights as we have ourselves?—A. Could there not be something done to prevent that?

Q. There is another thing that I forgot to ask you about. It has been proposed that the lobster fishermen should take out a license, and I suppose if that were done we could keep out the Newfoundlanders. The suggestion is that every lobster fisherman should take out a license which would show that he was a licensed lobster fisherman, the idea being that if a man did that he would be more careful to observe the regulations himself and would be apt to see that others observed them also. That is the theory of those who recommend this. It would not necessarily cost you anything, but every lobster fisherman would have to take out the license and would not be allowed to fish lobsters without it. In that way by limiting the licenses to residents we could perhaps prevent the Newfoundlanders coming in here?—A. You had better find out from some of the rest what they think about it, but I would pass that law.

Q. You would?—A. Yes.

Q. The theory is that if a man had that license in his pocket he would feel that he was in duty bound to observe the regulations, and that he would take care that others who were fishing in the same neighbourhood did the same. If a man were found to be persistently violating the law by taking berried lobsters or otherwise,

SESSIONAL PAPER No. 22a

the license would be cancelled and he could not fish any more. It would cover the Newfoundlanders case, because the regulation might be made confining it to residents of the Dominion.

Witness discharged.

JAMES FREKEL, fisherman, Neil's Harbour, called and sworn:—

By the Commissioner:

Q. How long have you been lobster fishing?—A. I have been engaged in lobster fishing about 23 years here, and in Newfoundland for four or five years before that.

Q. Are you a Newfoundlander?—A. I came from England to Newfoundland.

Q. How long were you in Newfoundland?—A. About twenty years.

Q. And then you moved over here?—A. Yes, sir.

Q. How does the lobster fishery here now compare with what it was when you started?—A. Regarding the size of the lobsters here I do not see but very little difference, taking one year with another from what it was when I came here first, and I do not believe that the fishery has run out very much, only there are so many more people at it.

Q. What would you say is the difference? Has the number of people engaged in the fishery doubled since you commenced fishing?—A. Yes, there were only six or seven boats when I fished for this firm first.

Q. What firm do you fish for?—A. McLeod Bros.

Q. Have you always fished for that firm?—A. No, sir, because they have not been in the business all the time.

Q. Do you think there is not much difference in the fishery now?—A. No.

Q. Do the lobsters run as big as they did formerly?—A. No, sir, very little difference, because never since I have been here have they been nearly as large as they were in Newfoundland.

Q. How long were they fishing lobsters before you came here?—A. Only one year before I came here, I think.

Q. Lobster packing has been going on for 40 years here, I know.—A. It must have been more than one year before I came.

Q. What number of traps do you fish?—A. I used to fish 100, but now I only fish 50.

Q. They are getting heavier now, I suppose?—A. I am getting older.

Q. Is that the usual run for one boat?—A. The young people fish 100.

Q. How do you usually fish them?—A. In trawls, I might have a dozen single.

Q. What sort of trap do you use?—A. The Diamond trap.

Q. Is that trap used here altogether?—A. Some have the Parlor trap, only a few.

Q. What do you claim to be the difference between the Diamond and the Parlor trap? What is the advantage of the Diamond trap?—A. I have never used the Parlor trap, but they say the Diamond trap is easier to haul, and you can haul them twice a day.

Q. The advantage claimed for the Parlor trap is that it holds the fish better, is it not?—A. Yes.

Q. Tell me how long have you been fishing this Diamond trap?—A. I do not know, I think about nine years.

Q. Before that what did you fish?—A. Those long ones.

Q. That is the old-fashioned one with the double end?—A. Yes.

Q. Do you leave the same space between the slats now that you used to?—A. About the same.

Q. What space do you leave between the slats?—A. About an inch and a half.

9-10 EDWARD VII., A. 1910

Q. I do not think there are many with inch and a half spaces now?—A. About an inch and a quarter, perhaps.

Q. About the width of the lath?—A. Yes, about that.

Q. If you have an inch and a quarter space it will allow a pretty large lobster to escape, will it not?—A. Yes, it will. But if you get a small lobster that is not worth taking to the packer you may as well throw him overboard.

Q. Do you usually follow the same rules as the others, you move in as the season advances?—A. I do not move my traps much, I might move seven or eight single ones, but when I put them out in the spring I usually let them remain there.

Q. How do you find them work?—A. I do not see much difference. If the weather is rough the lobsters are away out in deep water.

Q. And in deep water you are not so likely to lose your traps are you?—A. No.

Q. Who fixes the price paid for lobsters?—A. The packers give the price you know.

Q. Has that always been the case?—A. Yes.

Q. What would be the price when you first began to fish?—A. Fifty cents per hundred count.

Q. What was it in Newfoundland, the same thing?—A. No, then we used to get everything there you know, and now there is nothing.

Q. Had you any close season at all then or did you fish all the year round?—A. There was a close season in the month of August, however we did not close up we always fished on. Then we fished again in September as long as we could, almost until Christmas.

Q. What part of Newfoundland?—A. Manchester Harbour.

Q. What is your opinion of this matter of licensing the canneries, do you think that every man who applies for a license should get one?—A. I do not know, I do not understand about that.

Q. Do you think that taking one fisherman with another, the fisherman would make more money if allowed to can on his own hook?—A. I suppose some would, those who understood putting them up, but I never put up any.

Q. Would it not require some capital, and he would have to make other arrangements before a man would be in a position to can for himself?—A. I suppose he would.

Q. Are the fishermen generally satisfied with the price they get for their lobsters?—A. We have to be satisfied of late years, but last summer it was pretty low; the canners I suppose did not get anything for them, and we could not get any higher price.

Q. You have had a good deal of experience in codfishing?—A. I do not do much now.

Q. But you have done it?—A. Yes, I have.

Q. Does not the price of cod vary, go up and down?—A. Oh, yes, it does.

Q. And is it not to be expected that the price of lobsters will vary in the same way, the same as it does for cod and mackerel?—A. Oh yes, everything does.

Q. What do you think about the regulations for the future, what would you, supposing you had to make regulations for this fishery, what would you do yourself with a view of saving the berried lobster?—A. I would put them overboard, that is what I would do and we would have them then right on our own ground.

Q. What, in your opinion, is the best way to get that done?—A. I think myself that every one here does it.

Q. Do you not hear of some who strip the berries off?—A. No, we do not hear at all of any one doing it now. I know I have done it before now when I began first and cleaned them in the boat but I do not do that now.

Q. Then you have reformed?—A. Yes, I do not take any of them now.

Q. What is the best way of inducing all the fishermen to do that everywhere? There is no doubt that would be the salvation of the fishery.—A. It is pretty hard to catch them at it if they want to do it.

SESSIONAL PAPER No. 22a

Q. What do you think of this method of licensing the fishermen? You know it has been suggested that every fisherman should take out a license?—A. I suppose that would be all right.

Q. Do you think that a man who had taken out a license would be more careful about observing the law?—A. One would be watching the other then.

Q. They would all be fishery officers as it were?—A. Yes.

Q. Do you think anything would be gained by sending somebody around at some season of the year, whatever period might be deemed best, to get the fishermen together and explain to them the necessity of looking after the seed lobster? Do you think anything would be gained by that?—A. Well, I suppose those who did take the berried lobster would say they did not.

Q. And you think they would go on doing it just the same?—A. Yes.

Q. I am afraid you have not much faith in them?—A. Well, that is about how it would be.

Q. Do you think there is anything in the suggestion to keep the fishery further off shore, not allowing the fishing to be done in shoal water?—A. I do not think so.

Q. Some people have told us that fishing should certainly not be allowed inside a couple of fathoms?—A. You would not fish in less than three.

Q. They say that in fishing in shoal water like that at the tag end of the season they get a larger proportion of berried lobsters and more small lobsters, do you think that would be the case?—A. I have fished in Newfoundland, and out of one trap I had inshore I fished 15 lobsters.

Q. What would you think of doing away with the size limit altogether and shortening the season by about 10 days?—A. That would be all right I should think, because it is not very often we carry it on any later than that.

Q. About the 20th of July you begin to slack off?—A. Yes.

Q. And you begin to fit out then for the codfishing?—A. Those that fish cod do.

Q. The sale of live lobsters does not concern you at all, you have no chance to ship them from here?—A. No.

Q. Has there ever been any friction or trouble, you know that in other places there has been, between the packer and fisherman?—A. No, there has never been any trouble here, when our work is done we get our money, and there has been no trouble.

Q. What is the average catch of the lobster fisherman in the average season?—What is the best catch you have ever made?—A. I have made \$100 odd at 50 cents a hundred.

Q. You are not making as much now?—A. No, I made \$90 last summer.

Q. How much did you make this summer?—A. \$26.

Q. You did not fish steadily?—A. Yes.

Q. What was the trouble?—A. Well, the weather you see.

Q. It was altogether due to the weather?—A. Some did not make that much.

Q. That was not a very profitable season?—A. I had \$8; after paying for my gear that is all I had coming to me.

Q. Do the fishermen have anything coming to them at the end of the season, do they save anything?—A. Some do.

Q. How is it with the fishermen generally, do they try to put anything away?—A. They cannot put anything away because they have to provide for the winter.

Q. Those who are young and active ought to be able to make something?—A. The young people may.

Q. Does not the fisherman out of his fishing make enough to put something by for a rainy day?—A. It is pretty hard to do it, it is a hard job to get enough to carry you through the winter, which is long. If you can get enough to carry you through the winter and pay your way you are happy enough.

Q. You are satisfied with that are you?—A. The winter is all right, we can go into the woods if we want to.

9-10 EDWARD VII., A. 1910

Q. Is there any lumbering here to do?—A. No, cutting wood to burn.

Q. Oh you mean just getting firewood?—A. Yes.

Witness discharged.

SILAS STICKLAND, fisherman, Neil's Harbour, C.B., called and sworn:—

By the Commissioner:

Q. How long have you been fishing lobsters?—A. About 14 years I guess.

Q. Have you always been fishing here?—A. No.

Q. Where did you fish before you came here?—A. Newfoundland.

Q. Are you a native of Newfoundland?—A. Yes.

Q. What part of Newfoundland?—A. The west part.

Q. How is the lobster fishery conducted here, is it pretty much the same as in Newfoundland? Do you fish the same trap and in the same way you did over there?—A. Pretty much the same.

Q. Do they use the same kind of trap there as you do here?—A. Yes.

Q. What kind of trap is that?—A. It is what they call the diamond trap.

Q. Were they using those traps in Newfoundland when you were there?—A. Yes.

Q. How many traps do you fish?—A. About 80.

Q. Do you fish by yourself in one boat?—A. Yes.

Q. How are those traps fished, on trawls or singly?—A. Trawls, single handed.

Q. What is the advantage of the single line method over the trawl, is it easier to fish?—A. Oh, yes.

Q. You can shift the traps about more readily?—A. Yes.

Q. About what time do you begin your fishing generally, one year with another?—A. We generally commence here some time in May, sometimes earlier and sometimes later.

Q. That depends on the moving out of the ice?—A. Yes.

Q. Is it pretty generally the middle of May, one season with another when you commence?—A. Yes.

Q. In what depth of water do you begin fishing?—A. Sometimes in 18, and we fish up to 6 fathoms.

Q. Do you always fish on the same ground all through the season?—A. No.

Q. You come into shoal water?—A. Yes.

Q. What brings you into the shoal water?—A. To get lobsters.

Q. Because the lobsters are coming in, and you follow them in?—A. Yes.

Q. How do the fish caught in deep water compare with those caught in shoal water, or is there any difference?—A. In the size of them?

Q. Yes, the lobsters you catch in shoal water would be bigger would they not?—A. Yes.

Q. And are they bigger later in the season than at the beginning?—A. No, they get smaller in the latter part of the season.

Q. When do you get the big lobsters?—A. When you set your traps out first you catch the big lobsters until the large ones are all caught up.

Q. And when you go further in you get another run of big ones, and then later on you catch the small ones?—A. Yes.

Q. When do you see the berried lobsters most?—A. About July.

Q. Do you think they come into shoal water to spawn?—A. I think so.

Q. What sort of a run of lobsters are they generally? What is the average size of the berried lobster?—A. They are the largest size most generally.

Q. What size would you say they run?—A. I guess they run to about 9 inches.

Q. Have you ever remarked any small ones among them, what is the smallest you have seen?—A. We very seldom see small ones with berries on.

Q. What is the smallest berried lobster you have ever seen?—A. About 9 inches.

SESSIONAL PAPER No. 22a

Q. They tell us that sometimes even a 7 inch lobster has berries, but it is only one in a hundred thousand.—A. There are not many of that size.

Q. You do not find many with berries on at 8 inches, they are from that up, but most of them are over 9 inches? What has been the practice, what was the practice in Newfoundland, when you fished there, with regard to the berried lobster?—A. They used to pack them.

Q. And what has been the practice here?—A. We throw them overboard.

Q. Have you always thrown them overboard ever since you have been here?—A. Sometimes the first year or two I came here I did not, I kept some and some I threw overboard.

Q. Has it ever been the practice here to brush the eggs off and take the lobster to the cannery?—A. Not that I know of.

Q. At some places we have been where the canners are strict about not receiving them the fishermen say they sometimes brush the eggs off and then bring them in. Is that ever done here?—A. Not these days.

Q. But was it ever done?—A. I do not think so.

Q. Do the canners object to receiving berried lobsters?—A. Yes, I do not think they want them.

Q. How about the small lobsters under 8 inches, do they reject them?—A. I guess they do.

Q. They object to receive them?—A. I guess they do.

Q. They do not take them?

Mr. JOSHUA STICKLAND.—Yes, we take them all; we do not take the seed lobsters at all.

Q. Out of every hundred lobsters how many of them are under 8 inches?—A. There would be a good many.

Q. If you were tied up at the 8-inch limit and not allowed to bring in any under 8 inches, how would it affect you? Would it cut off your earnings much?—A. Yes.

Q. Would it cut off one-half of your earnings?—A. I guess so.

Q. In that event, would it pay you to fish?—A. No, it would not.

Q. How do you think it would affect the canner?—A. Of course, it would be just as hard on him.

Q. Do you fish more traps now than when you began?—A. Yes, more.

Q. Why is that? Does it take more traps to make the same catch?—A. Some years it would and some years it would not, according to the weather.

Q. How did you do this year?—A. I did not do much.

Q. Do you mind telling us what your catch was?—A. I cannot tell you; I do not know yet.

Q. What was the best catch you ever did make at the lobster fishery?—A. Last year.

Q. What did it net you?—A. I cannot tell you how many thousands it was, I have forgotten.

Q. Have you any idea what the average catch of an active fisherman is? How much it would be?—A. The price was \$3.75 last year, and I made \$268.

Q. And out of that you have to charge yourself with the traps you lost and all the gear?—A. That is what I made.

Q. That is what you made clear of everything?—A. That is all I got.

Q. That was pretty good fishing, wasn't it?—A. Pretty good.

Q. When did you begin, in May?—A. Sometime in May.

Q. And when did you knock off?—A. The latter part of July.

Q. Do you not generally fish right up to the end of the season?—A. Very seldom.

Q. Why do you knock off so early?—A. Bait is scarce.

Q. And I suppose you are beginning to fit out for the cod fishing?—A. In some years.

9-10 EDWARD VII., A. 1910

Q. Tell me now, you are a young, active fisherman, how does the fisherman pan out? Are you at the end of the year able to save anything?—A. Not a great deal.

Q. Now, as to this matter of price, how do you arrange as to this price for the lobsters?—A. We did not agree very much about the price this year.

Q. But who fixes it?—A. I do not know I am sure, I suppose the packer.

Q. You were not satisfied with it, you expected more I suppose? We all expect to get more than we really get often, but do you think you got a fair price? Do you think the state of the market was such that the packers could not afford to pay any more?—A. This year you mean?

Q. Yes?—A. No, we were not satisfied.

Q. Did the idea enter your head that the packers had combined to keep the price down?—A. I do not know what they did. I will tell you one thing they did. The people who belong to this place found their own gear and everything, and the Newfoundlanders came over here and the packer found them gear and everything, and the packer only gives me 25 cents more than the Newfoundlander.

Mr. JOSHUA STICKLAND.—Last year you got \$3.75 and the Newfoundlanders only got \$2.

A. Yes, and the Newfoundlanders had all their gear found and their grub, too.

Q. I suppose you have so many friends in Newfoundland that they come over to see you?—A. I do not know about that, maybe it would be better if they did not come to see us so often.

Q. How long have they been doing this?—A. Two years, something like that.

Q. What is the largest number of them that has ever come over here?—A. Five of them.

Q. How do they get over?—A. They come in the *Bruce*.

Q. And they hire out here as lobster fishermen?—A. Yes.

Q. How are they paid, by the month or by the catch?—A. By the catch.

Q. Where do they get their boats and traps?—A. From the packer.

Q. There is nothing to prevent any British subject, as far as I understand it, from coming here to fish. There is one way of overcoming that difficulty, and that would be by licensing the fishermen.—A. That is what should be done, give our own men a chance.

Q. It has been suggested that the best way to get our fishermen to obey the law especially with regard to the berried lobster, would be to license every fisherman; he need not necessarily be charged anything for the license, but the idea is that he would have to go to the inspector in the spring and get a little form with his number on it, and he would be registered, and the fishery officer would see, if the man violated the law, or if it were seen that he was in the habit of washing the lobsters and selling them to the factory, not putting them back in the water, his license would be cancelled and he would not be able to fish. It would be the same with the Newfoundlander, if they came over here and did that sort of thing they would not be given a license, or if it were deemed advisable to do so we could restrict the licenses to our own people, that is the only way I can see by which we could get over the difficulty. We can prevent an American or a French fisherman from fishing in our waters, but not the Newfoundlander because he is a British subject the same as we are.—A. Something should be done anyway.

Q. Now as to the matter of preserving the lobster industry, do you think the fishing is falling off?—A. I do not know I am sure.

Q. What do you think when you have bad seasons, when you find that you do not get as good a run of lobsters as usual do you think there is some cause for it?—A. Yes, the storms.

Q. What do you think about these various remedies that have been proposed?—What about this proposal to shut down for a number of years in order to give the

SESSIONAL PAPER No. 22a

lobsters an opportunity to grow and increase?—A. I guess it would be a very good idea.

Q. What could you do in the meantime, supposing there were no lobsters packed here, and no chance of shipping lobsters and you were not allowed to fish lobsters?—A. I would go to other fishing.

Q. Codfishing; would you do as well as codfishing as you do at the lobster fishery?—A. No, I would not do as well, but I would have to put up with it.

Q. You think you would do well enough to keep things together. What would you think of that as one of the remedies? Some people have suggested that it is, and no doubt it is, a very stringent one? (No answer).

Q. Another suggestion that was made by the last lobster commission that came around was that the lobster fishery be closed down by districts, closing down one district while fishing was allowed in the other portions of the coast, and then moving around until all parts of the coast had been covered by a close season?—A. I do not know about that.

Q. Others again say, 'Do away with the size limit, it never has been enforced and you may as well do away with it altogether, and shorten the season by a few days to make up for that.' Which of these remedies do you think would be the most reasonable one, and the one which would cripple the fishermen the least? (No answer).

Q. What do you think of the proposition to shut down altogether for a number of years?—A. I think that would be a pretty good thing.

Q. You think that is the best way?—A. Yes.

Q. As I have explained another suggestion is to shut down by sections, and still another is to do away with the size limit, not to enforce the size limit, but to make it legal to catch the short lobster and to shorten the season by ten days or so always protecting the berried lobster very rigidly. Do you think that would be less hurtful to the fishermen in the meantime?—A. Perhaps it would.

Q. Do you think that shortening the season and protecting the berried lobster without a size limit would improve the industry in a few years? The idea is to protect the lobster industry without hurting the fishermen too much. All over the coast the lobster fishery is the principal cash fishery. You think the best thing would be to shut down at once?—A. Yes.

Q. And you think that you could get along with the cod, the herring or the mackerel fishery, or at something else in the meantime?—A. Yes.

Q. What do you think of this proposed method of issuing new licenses to can to a group of fishermen? The limit has been fixed at 15, but it need not necessarily be as high as that. Do you think they should be given a license to can on their own account?—A. That is the best thing you could do.

Q. You think it would be?—A. No doubt it would.

Q. As a fisherman have you ever discussed that matter with other fishermen or thought of canning for yourself?—A. Yes, I have heard lots of them talking about it.

By Mr. McKenzie, M.P.:

Q. On that question of grouping the fishermen together to pack, would you say that the number of 15, which is the regulation now, is too large?—A. It is too large, yes.

Q. You think it is a little too clumsy to require so many?—A. Yes.

Q. How many would you say would be the minimum number of men to whom a license should issue?—A. Five would be a lot better.

Q. You think it should be 5; of course 15 in your judgment is too high, and you say it should go down as low as 5?—A. Yes.

Q. You think that if 15 men wanted to come together there should be no objection to their getting a license, but it should be so arranged that any number down to 5 could get a license?—A. Yes.

9-10 EDWARD VII., A. 1910

Q. I think myself, and I have always said to the Minister, that 15 was too high.—A. Yes, I think so.

Q. This is something new to me, this matter of competition of which you complain, outsiders coming in here to fish; I never heard of that before. As I understand it from you the local fisherman who have been many years here has to furnish all his own gear, find his own boat, and if he loses it he is losing his own property.—A. That is how it is, he has to furnish his own boat, gear, rope and everything.

Q. Now the man who comes in here and competes with you in the catching of lobsters gets his gear from the packer, is that the way it is?—A. Yes.

Q. How many of these men were engaged here this season, can you tell me?—A. There were about five here.

Q. There were five fishermen who got their gear from the packer. On what terms do they get the gear from the packer do you know? What do they have to do before they get it?—A. I cannot tell you that, but he gets the gear made for them.

Q. Supposing this gear and boat gets lost, is it the loss of the packer or is it the loss of the fisherman? If he has anything coming to him is it kept out of his earnings?—A. It is the loss of the packer.

Q. The fisherman does not lose anything?—A. No.

Q. How is the fisherman who is fishing with the gear of the packer paid? What does he get for his fish as compared with the man who fishes his own gear? In the last year if you had come in with 100 pounds of lobsters you would get \$2.25 and the man who was handling the gear of the packer, what would he get for the same quantity of lobsters, from the same packer, this last season?—A. Well, this summer the fishermen belonging to this place found their own gear and everything and got \$2.25 and the outsiders from Newfoundland were getting \$2, and they were found in everything; they only got 25 cents less and the packer found everything.

Q. And that was the only difference was it?—A. Yes.

Q. And of that you complained?—A. Everybody complained.

Q. Besides the suggestion to compel the fisherman to take out a license, and that the license be only grantable to residents of Canada, is there any other way you can think of for preventing the competition against our own fishermen of which you complain?—A. I do not know.

The COMMISSIONER.—I do not know whether it might be made conditional on the issuing of the license to the canner that he should not employ foreign help.

Q. Is this the only season you have had competition of that kind?—A. No.

Q. How many were here last year working on that scale?—A. Three.

By the Commissioner:

Q. Was last year the first year they were here?—A. No.

Q. They were here the year before that were they?—A. Yes.

Q. How long have they been coming here?—A. Three years I think.

Q. They have been coming here three years?—A. I think so.

By Mr. McKenzie, M.P.

Q. What would you think of the idea of having an officer of the Department whose duty it would be to enquire into conditions in respect to the prices between the packer and the fisherman?—A. I do not know, sir.

Q. Perhaps you do not understand what I mean. Supposing now you had a case like that which occurred this spring when the price went down very rapidly from \$3.25 to \$2, as you were offered at first, I think, and \$2.25 afterwards, and the fishermen were not satisfied with that condition, and the fishermen wanted to know why the price was cut down. Would it not be well in that case if you could call in an officer of the department who would sit down and inquire into the matter, who would have power to make the packer produce his books and give evidence to show why he was

SESSIONAL PAPER No. 22a

cutting down his price, or to hear the evidence of the fishermen why they thought the price should be better? Do you think it would be wise to have some one in authority such as Mr. Morrison, the inspector, who you could call in to see whether the price offered was a proper one? Would it not be a safeguard to the fisherman?—A. Very likely.

Q. Undoubtedly there is nobody who has any authority to make such an inquiry at present, and it was suggested by some fishermen at Little Bras d'Or yesterday that there should be such a man appointed; what do you think?—A. I guess it would be all right.

Q. He might also have power to inquire into a difficulty such as you suggest about the fishermen coming here to fish this gear that does not belong to them?—A. Somebody should have power to look into that matter.

Witness discharged.

JOSHUA STICKLAND, packer, Neil's Harbour, C.B., called and sworn:—

By the Commissioner:

Q. Are you from Newfoundland?—A. Yes.

Q. I see you have a great many Newfoundlanders here?—A. They are all Newfoundlanders here mostly.

Q. What is your present employment, you have charge of the cannery here?—A. Yes.

Q. Who does the cannery belong to?—A. Mr. Buchanan.

Q. How long have you had charge of the cannery?—A. Nine years.

Q. Did you ever have charge of one before?—A. Yes.

Q. In what part of the world?—A. Newfoundland.

Q. In what part of Newfoundland?—A. On the west coast, Isle Moine, six miles below Port au Basque.

Q. What are their methods over there, pretty much the same as they are here?—A. Pretty much the same.

Q. What number of boats are fishing for you in this cannery?—A. About 12, I think, this summer.

Q. Are they generally single-handed or are they double-handed boats?—A. They are all single-handed boats.

Q. What number of cases did you pack this year?—A. 122.

Q. With how many boats, do you say?—A. 12.

Q. That is a pretty small catch?—A. Yes, it is.

Q. What should be the pack per boat generally? Have you any idea. We find in a good many cases they tell us their boats should give them from 50 to 60?—A. We had 18 boats at the beginning of the season, but they dropped off when it got rough.

Q. Last year how many boats had you?—A. I think it was 17, but I can soon find out.

Q. What was your pack last year?—A. 205 cases.

Q. And the year before?—A. 180.

Q. Was last year your best year?—A. Last year was the best year.

Q. What was that due to, had you a fine season?—A. Good weather; we never missed a day.

Q. Have you ever kept account of the fishing days; how many days in the season do your boats fish? At the Magdalen Islands they say their boats do not average more than 35 days' fishing?—A. It is about the same here, I think.

Q. How do the lobsters run now compared with what they did when you first began catching here?—A. With regard to the size?

9-10 EDWARD VII., A. 1910

Q. The size, quantity and everything else?—A. The size is about the same I do not see much difference.

Q. Then will there be any difference in the quantity? Have you to fish more boats and gear to get the same quantity?—A. Oh, no.

Q. Then the fishery is about the same as when you commenced here?—A. It depends upon the weather, when it is good you get more lobsters.

Q. How have the regulations been observed here? Do you pay any attention to them at all, or are they ignored? With regard to the small lobster, how small down will you can them?—A. As small as we can get them, if they are not too small.

Q. Do you can them down to 4 inches?—A. No, down to 6 inches.

Q. Have you any idea how many lobsters it will take to fill a pound can?—A. I guess it will take 10 or 12.

Q. I suppose it will, because it takes 9 of the 7-inch lobsters?—A. Yes, it will take 10 or 12.

Q. Supposing the 8-inch size limit were strictly enforced, how would it affect you at your cannery?—A. We would give it up altogether.

Q. You would have to, you could not get enough to keep you going?—A. The fisherman would not fish and the canner would not pack.

Q. What has been your practice with regard to the berried lobster?—A. Throw them overboard.

Q. You never take them at the factory?—A. Yes, one or two years we did; of course some of them would clean them, they would blind you that way, and we would not know it before they were boiled, we would not take them if we knew it because they are no good for anything.

Q. A lobster stripped that way is no good?—A. It kills them right away, and as soon as they are dead they are no good.

Q. How do they generally strip them, scraping them in the water?—A. Yes.

Q. Did you ever try to strip them off yourself?—A. Yes, I have done that in Newfoundland, we have done that in the factory where we were stripping them for the hatchery.

Q. What do you put up here mostly, what style of tin?—A. Half pound, and half pound flat.

Q. You do not put up any quarter pound?—A. No, sir.

Q. Where, in your estimation, is the proper place to cull out the berried lobster, at the fisherman's boat or after she is brought to the shore?—A. No, when we get them in the traps, sling them overboard.

Q. You have fished lobsters yourself have you?—A. I fished for a year.

Q. What percentage of berried lobsters do you find?—A. I do not think I have seen a dozen altogether this summer.

Q. So that it would not be anything serious, or a heart-breaking matter, for the fishermen to put them back in the water?—A. No, there were none this year, I did not see a dozen, and as a matter of fact I did not hear of any of the fishermen getting them.

Q. As to this matter of licensing the canneries, what is your opinion about it? You know we had a great many more canneries at one time than we have now, and the number is falling off, and in recent years the Department will not renew the licenses of any one failing to carry for a year or two, and no new licenses have been granted to large packers especially. The only new licenses that have been granted are the co-operative licenses where a number of fishermen, the limit has been fixed at 15, have grouped themselves together and have said that they wanted to can on their own account; these have been given a license to can. What is your opinion?—A. They can use their own method. I would not choose 15, or 2. I had one partner and we could not live out the season.

Q. Why not? Could you not agree?—A. That is one thing, they would not agree; one would be getting a little more than another, and then they would disagree. If I

SESSIONAL PAPER No. 22a

could not have the factory to myself I would have nothing to do with it. I did join in with two or three and we could not get along.

Q. Do you think it is reasonable to keep down the number of canneries?—A. I do not trouble about it, if a man can do better at canning lobsters, let him do so, he is welcome to it so far as I am concerned.

Q. Speaking of the fisherman generally, would he make more money canning than he would by fishing?—A. I do not know, it is for each man to consider for himself; all hands can pack if they want to as far as I am concerned.

Q. Have you any idea yourself what you could do best at in the long run?—A. I know I can do better to take my own traps and fish than to join with five other men. I could not live that way. I had two partners and I gave up fishing and canning with two partners.

Q. What number of cases did you pack?—A. We packed 75 and 90 cases.

Q. What was the real cause of the trouble, that you did not agree about the division of the spoils?—A. We could agree all right.

Q. You did agree?—A. Yes, we had an agreement to work with, but you see that with what was made in the factory there was no profit out of it and you could not live on it.

Q. You could not make as much profit out of one factory with such a small number fishing?—A. No.

Q. What did you get per case in those days?—A. \$10. We got our own lobsters and paid \$1 per hundred and found everything.

Q. And you could not make ends meet at that because of the labour in packing?—A. Yes, I could not do that. Two families could not live on what was made out of that factory; I could not make ends meet, I know that one year I sunk \$10.

Q. What would you say are the average earnings of a lobster fisherman supplying his own gear and fishing actively, two fishermen about two and a half months?—A. It was about two and a half months last year which was the longest year, before that we fished about two months.

Q. What would that fisherman make?—A. For good fishermen—I think last year I paid off some of them with \$545 to two.

Q. Which was divided between them?—A. It was divided between them, that was the best. I fished myself last year and I made \$200, single handed, I had a boy with me that used to work in the factory, but I worked my own boat and made that.

Q. Do you think if it was decided to give every man that applied for it a license to pack lobsters, that we should insist on the cannery being up to a certain standard, that it should be fitted in a certain way? You know that if the Department decided to give everybody a license it would be necessary to have some restriction, to see that the man had a certain amount of capital and was competent to pack; it would not do for everybody to pack and throw bad material on the market; that would ruin every one individually. Do you think we should insist on a standard cannery, and require that the tables must be covered in a certain way, and that the place must be kept clean and so forth?—A. In Newfoundland in those days they put a little tag on every can identifying the packer, and whoever packed bad lobsters it was sent back to him, but there was nothing like that; every one packed the same.

Q. How do they do about licenses there?—A. They can all get licenses there.

Q. But you must have a license to pack?—A. Oh, you cannot pack without a license.

Q. Do you give every one a license?—A. Everyone has a license.

Q. There must be some pretty small canneries?—A. They caught their own lobsters in those days, but they have knocked off, they could not make a living at it.

Q. Did you ever have anything to do with sending lobsters alive to the market?—A. No.

Q. Neither here or in Newfoundland?—A. Yes, I have sold them alive and they were shipped I suppose.

9-10 EDWARD VII., A. 1910

Q. What were they worth?—A. Four dollars a hundred, but they had to be alive and in good order.

Q. And they must be perfect, they must not be minus the claws or anything of that kind?—A. Yes, they all had to be good ones.

Q. Do you think the canners are compelled to accept undersized and berried lobsters for fear of losing their fishermen? Some canners complain to us that if they do not take them their fishermen would go away and sell to the other canners.—A. I do take small ones, but I would not take the berried lobsters at all.

Q. As to the various suggestions that have been made for regulating the fishery and protecting it, what do you think of this plan of shutting down altogether for a number of years?—A. I do not know that we could do it. If there were \$8,000 or \$9,000 a year cut out of this place, all our people would feel it pretty bad. If there was that amount cut out here some years, in fact I do not know how you could do it. I suppose I could live because I could go fishing, but I do not know how some would get along.

Q. Do you think that the other branch of the fisheries would make up for it completely?—A. I do not know.

Q. It would not to some?—A. No, I cannot see how it would work if the lobster fishery were cut off in this place.

Q. Well then what about that plan of closing down by sections and moving around?—A. That is just as bad.

Q. What do you think of the other proposition to do away with the size limit and shorten the season a little?—A. If the season is shortened, we have knocked off about 20th of July every year.

Q. You do not can after that?—A. No, it is closed up mostly every year about that time.

Q. What do you think about the proposition to have the size limit at 7 inches and enforce it strictly. Some people say put it at 7 inches and we will live up to it and there will be no more trouble?—A. I do not think that would work.

Q. You think it would be as hard to enforce the 7-inch size limit as it has been to enforce the 8-inch size limit?—A. Yes.

Q. Which of all the plans, do you think is the most reasonable, and the one most likely to work out for the protection of the fishery? All these regulations are made with the idea of bringing the fishery back to where it was originally. They tell us that if we do away with the size limit, we might perhaps regulate the size of the opening between the slats so that it would not be less than an inch—in some places we find that it is only half an inch, and in some places they are canning very small lobsters, 13 and 14 to the pound tin, and you have to have the slats very close together in order to hold these small fellows?—A. I always find where there are small openings that is where the small lobsters come in.

Q. Do you not think he will get out that way?—A. Some will and others will not.

Q. Do you not think when you are raising the trap that he would try to get out?—A. Yes.

Q. Do the big lobsters drive the little ones out of the trap?—A. I do not think.

Q. What would you think of going back to the old season that we used to have years ago here? We used to fish from the 1st of January to the 15th of July, I think, that is to fish when the ice leaves you?—A. Yes, it never leaves us before the 1st of May.

Q. So that the date of the beginning of the season does not make any difference?—A. No.

Q. How would it do, do you think, to go back to the old date from the 1st of January to the 15th of July? You see we used to fish on those dates and we had a 9-inch limit in the beginning, then it gradually got smaller, and the dates were changed at the suggestion of different canners that came around.—A. It would be no good to us around here, May is early enough for us.

SESSIONAL PAPER No. 22a

Q. What do you think about fall fishing?—A. Well, September would be a good month for us, about the best month we could get.

Q. Do you think the fishermen would give up the other fishing and take to the lobster fishing again?—A. Some would and some would not.

Q. How would it affect you as a canner? Do you think by putting fish into the market that were canned late in the season it would upset the market? They tell us in some places that it would and they would not know where they were at if there was a fall pack coming in as well as a spring pack?—A. I do not know, in the straits, at Newfoundland they pack there in the fall they are taking in the fish and putting them up there.

Q. They are beginning to talk of cutting off the fall fishing there, they are being fished out rapidly. Now how is it that the Newfoundland fishermen came to be employed here? This is the first place that we have struck that?—A. Oh, well, perhaps the packers never had hardly enough men, and they had a big shipment to make and did not get lobsters enough to keep the factory going right through, and they thought if they could get a few more boats they would do better. The fishermen from Newfoundland I put up in a place where the men from here never went so that they never interfered with any one who was fishing here. Of course I am satisfied to have no Newfoundlander at all if I can get enough lobsters without.

Q. That is the way it happened, you were not getting all the fish you could handle?—A. No, we were not, and there was a spare place up above and I put a few men there.

Q. What do you think yourself about the price paid the fishermen for their lobsters? Do you think the fishermen are getting a fair share of the profit made in the lobster industry?—A. This year if I had had to pay any more than \$2.25 I would have given up.

Q. That is what some canners did in some places?—A. They had to do so, I paid \$3.75 last year and I could afford to do so because I got the price on the market.

Q. And did you go as high as \$4 the year before?—A. I did, another man came around here and I paid that, that was just through enemies, but it would have been better for me to have taken my boats and gone and fished that year. I cleared \$80 when I cleaned up, and if I had taken my traps and fished I would have made \$200.

Q. And you had the whole responsibility of running the factory and you cleared \$80?—A. And I paid some of my fishermen \$200; I can show my books and accounts for that. Last year was a good year for the fishermen. Last year I gave these men around here \$4 and the Newfoundlanders got \$2.

Mr. GEORGE GILES.—I have to stand the loss of my gear but the Newfoundlanders have no loss to stand.

A. Last year the Newfoundlander got \$2, and he says, 'I will come next year for the same as last year,' and I agreed to give it to them. I bargained with these men last fall to come here and work for me this year, at the same price, and at that time we did not know what we were going to get for our pack. Now last year we lost no traps, this year we lost all.

Q. Is there any fish canning or any fishing done here at all after the close of the season?—A. No, there are none ever caught here at that time.

Q. Are there any places here where pounds could be established? One of the modern methods of taking care of the berried lobster is to bring her in, pay for her, and put her in a pound?—A. I think the best way is to put them overboard.

Q. There is no doubt about that, but we cannot be sure that is being done. Do you think there are no places around here where pounds can be established?—A. I do not think so.

Q. What wages do you pay a sealer here?—A. \$30 a month and found.

Q. And what wages do you pay to the other parties?—A. Six cents an hour for the hours they work.

9-10 EDWARD VII., A. 1910

Q. How many hours work a day do they have generally?—A. That is according to the pack of the lobsters.

Q. If there is a rush of lobsters?—A. They work all day.

Q. And if there are very few lobsters they only work short hours?—A. That is the way it works out.

By Mr. McKenzie, M.P.:

Q. I was going to ask when does a packer know the price he is going to get for his pack? Take for instance, this year. You have to be ready to begin packing soon after the 1st of May, and the season ends the last day of July, do you know before you begin packing what you are going to get for your pack?—A. Yes, we knew last year some time in March. This year we did not know before we got them half packed because the prices were so low we would not sell, and we held on until the very last.

Q. Do you sometimes sell in advance?—A. Oh, yes, we sell them every year before we get them, but this year we could not, we never sold until about the last month, the way it was the prices were so low we could not, and we tried to get five cents more.

Q. Last year you sold in advance before you commenced packing?—A. Yes, somewhere about March.

Q. You knew the price you were getting would enable you to give the fishermen \$3.75?—A. Yes.

Q. Did you try to place your pack this year like you did the year before?—A. Oh, yes.

Q. As a packer, can you account for the difference in the market? How do you explain that the price is so low this year compared with last year?—A. I do not know the reason, it fell last summer sometime about the middle of the summer.

Q. Where do you sell your pack here?—A. At Halifax. Of course the people think you could pay more this year than \$2.25, but I told them I would knock off if I had to pay more. I want to pay my way this year and I could not do it on 120 cases.

Q. Now, with regard to the outside men, I suppose that the resident fisherman has reason to complain that he has his home here, he pays taxes, church dues, and all that kind of thing that are a drain upon his money, and that the man who comes in here and pays nothing of that kind goes away with cash. I suppose that is the reason they give for getting better conditions than the man who comes from outside and who does not contribute to anything to the roadmaking or church money or anything of that kind?—A. He pays his rates when he is here long enough.

Q. But he would not be compelled to under our laws, if he were only here for the fishing season?—A. Yes, they did pay it last year, my men from outside paid it last year, they were here for three months.

Q. You are the only man that is packing here, and you had a little factory of your own at one time; would you mind telling me what it cost you and your partner to fit out so that you could pack?—A. It was not here, it was in Newfoundland.

Q. Supposing that five people were trying to get together and pack, what do you think it would cost them in this country to get an outfit to pack?—A. I could not tell you at all; some people give different prices for their traps, some say 50 cost them \$50.

Q. I mean the cost of your cannery. What would it cost to rig up a cannery just ready to work? If I was one of five fishermen, and we were going to start packing, and we had no provision at all for packing, I want to know how much it would cost the five of us to be in a position to pack our own catch taking everything that was necessary for the tables, etc.

Mr. BUCHANAN.—\$50 would do it outside of the building.

Q. What size building would you require for five or ten men?—A. About 30 by 15 would be required, with 6 or 7 foot posts. The material in that would not cost very much, but the labour of course would not count.

SESSIONAL PAPER No. 22a

Q. You have to suppose that you would hire men to put up the building.

By the Commissioner:

Q. A great many fishermen say: We would like to can on our own account.' And the department replies: 'Show us that you are able to begin and we will give you a license.' Now, what capital should a man have have to equip himself in order to begin canning.

Mr. BUCHANAN.—\$150 would start a man, that is he would have to add his labour to that.

A. Oh, yes, \$100 would do it for five men.

Witness discharged.

Commission adjourned.

BRITON COVE, C.B., 26th August, 1909.

JOHN MATHESON, fisherman, Briton Cove, C.B., called and sworn:—

By the Commissioner:

Q. How long have you been engaged in the lobster fishing?—A. You have asked a question I am not very well prepared to answer.

Q. How long since they started fishing here?—A. Perhaps Mr. McLeod would know better what time they started fishing here.

Q. Was it 20 years ago?—A. It may have been, I cannot say.

Mr. McLEOD.—I think it was '91. We began packing here in '90, and I think you were fishing here the year afterwards.—A. Yes.

Q. Do you do any other fishing besides lobster fishing?—A. Yes.

Q. What other fishing do you do?—A. Cod-fishing, herring-fishing, mackerel, anything I can catch.

Q. Do you own your own boat and gear?—A. Yes.

Q. Who do you sell your lobsters to?—A. Mr. McLeod here.

Q. Is that the only cannery here?—A. The only cannery I deal with.

Q. At what time in the spring of the year do you usually begin fishing?—A. Generally as early as we can, if I were at home, I could tell you the date.

Q. I do not want the exact date, I suppose it is the first or second week in May?—A. It was the second week before we got at it this spring.

Q. And at what time is it other years?—A. Some years it is later and some earlier, a couple of years ago it was June.

Q. What does the opening of the lobster fishing depend on?—A. Drift ice and the weather.

Q. What number of traps do you fish?—A. I fish 65 traps.

Q. On single lines or trawls?—A. On trawls.

Q. In what depth of water do you usually begin?—A. We begin generally in 5 fathoms and fish into 2 fathoms.

Q. But 5 fathoms is the outside limit?—A. Yes, sir.

Q. I suppose after fishing in that depth of water you generally shift?—A. Oh yes, occasionally. I set my traps farther out in the early part of the season, and move them in as the weather gets fine.

Q. That is the general rule with all the fishermen here, is it?—A. As far as I know.

9-10 EDWARD VII., A. 1910

Q. What is the best period of your fishing, when do you do the best?—A. At the beginning of the season, when we first start in.

Q. You do best for the first few weeks?—A. For the first few weeks, when we start in.

Q. How do you find the fish run? Do you get a better line of fish at that season than you do later on?—A. Sometimes, it depends on the weather.

Q. What is your experience, one season with the other, generally?—A. I will just tell you, as far as my experience goes, we get a good line at first, and then they will slack off a little, and perhaps another school will come in again, pretty much the same size of lobster, until very late in the season, if we get a chance to fish late, but it is seldom we do. This season we had to close up by the bad weather sometime about the 1st of July, the storms broke up all our gear.

Q. What percentage of loss do you generally meet with, one year with the other? What do you reckon on?—A. I haven't made a reckoning of the percentage of loss; of course this year was an exceptional one, we lost the whole of our gear, I might say.

Q. Would you venture to say that one year with another you lose one-third of your gear?—A. Yes, I think so.

Q. Do you reckon on that?—A. Yes.

Q. Tell me as to the fishing, how is the fishing now compared with what it was when you began?—A. Well, at the time we began first, we were not prepared with as good gear as we are now, and we were not so anxious because the price was pretty low, and we depended more on other fishing then, than we do now. But the last couple of years we did fine, because we had better gear and attended to it better.

Q. How do the fish compare?—A. Are they as large now as they were when you began first? Is the average as good?—A. I do not know that they are, nor that they average as large.

Q. What are the regulations here. What time do you begin fishing, and what time do you close?—A. The regulation is that we should begin fishing on the first day of May and close on the last of July.

Q. What are the regulations as to the size limit, berried lobsters and those things?—A. The regulation as to the berried lobsters is that we are to throw them overboard and the size limit is supposed to be 9 inches.

Q. It is 8 inches, I think, here.—A. Eight inches? Perhaps so, I am not sure.

Q. What proportion of the total catch would be below eight inches? We understand that that particular regulation has not been enforced anyway.—A. That is something I cannot very well tell you on the spur of the moment, without I get time to consider.

Q. Well, the time is short, you intimated that you could only give me a quarter of an hour?—A. I remember one man, the first year I commenced to fish, we were selling by count and we used to catch small lobsters, and the packer that I fished for, I fished for one packer for one year before I fished for Mr. McLeod here, his name was Sully, and he used to take two small lobsters for one, but there would not be many that he would have to count that way.

Q. Is the percentage of small lobsters greater now, are there more now, and if you were tied up strictly to the 8-inch limit now, how would you get along?—A. In my section, where I am, there would not be very many.

Q. Not many under eight inches?—A. No.

Q. So that if the law were strictly enforced it would not affect you?—A. It would not affect me, but there are other places on the coast it would affect more than me.

Q. As to the berried lobsters, what is the practice?—A. A. As a rule, as far as I know, I know it was the rule with me, to put them overboard.

Q. You have always done so?—A. Not always, not when I started in at first.

Q. But you have not taken them in recent years?—A. Not in recent years.

SESSIONAL PAPER No. 22a

Q. You have not taken them within how many years?—A. I would say within ten or twelve years, not since the law was enforced.

Q. Is it the general practice among fishermen here to return the berried lobsters to the water?—A. I cannot tell you about anything except my own boat; I can only speak with regard to the man in one boat, and I know that he throws them overboard.

Q. Is there a Fishermen's Union here?—A. No, sir.

Q. Are you fishing more gear here than you did when you began?—A. Oh, yes.

Q. Do you think it takes more gear now to take the same quantity of fish?—A. We have better gear.

Q. You have an improved trap?—A. An improved trap.

Q. What trap do you fish now?—A. What they call the jail or parlour trap.

Q. What advantage has that style of trap over the old double ender that you used to fish?—A. The advantage is that the fish cannot get out, they hold the lobsters better.

Q. Do you allow the same space between the slats as you used to when first building traps?—A. Oh, yes, the same space.

Q. What will that space amount to?—A. Pretty nearly the width of the lath.

Q. The width of the lath is $1\frac{1}{4}$ inch?—A. Yes, but we haven't more than about one inch space.

Q. What about the price paid for the lobsters, who fixes the price?—A. The packers.

Q. What price did you receive this year?—A. \$2.25 per cwt.

Q. And last year?—A. We received \$3.75 last year.

Q. And what did you receive the year before?—A. I really do not remember.

Q. Are you satisfied with the price generally?—A. Well, yes.

Q. There are no complaints here on the part of the fishermen?—A. Not as far as I know, not on my part, because we know we are dealing with a square, honest man and that he will give us anything he can afford to give, and what he cannot afford to give us no reasonable man would ask.

Q. What do you think, do the female lobsters come into shore to spawn?—A. I do not know, I hardly think so, because there was a time when I used to get lobsters in deep water when cod fishing, and I used to see spawned lobsters when cod fishing.

Q. At all seasons of the year?—A. I do not know about the seasons, I did not pay particular attention to that at the time.

Q. Do you frequently find lobsters when cod fishing?—A. Oh, yes.

Q. You would recognize, in fishing lobsters, that the eggs are riper at one season of the year than at another?—A. I do not know that they are—well, they may be riper with one lobster and with another they would not.

Q. Then you do not think there is any definite spawning season for the lobsters?—A. I do not think so.

Q. What is your experience of the lobsters with berries on, are they good sized lobsters? How small have you seen them with berries on?—A. I have not measured them, but I have seen spawn on pretty small lobsters.

Q. How small, three or four inches?—A. Oh, no, I have never seen a lobster as small as that.

Q. Why they can them that size in some places?—A. I do not think I have seen them.

Q. What proportion will the egg-bearing lobsters bear to the total catch? What number out of every hundred will be egg-bearing?—A. Some weeks, especially this summer, there would not be many, I do not think I saw a dozen all the season. Some years, however, they may be quite plentiful.

Q. Do you get more of them at one part of the season than at another?—A. No, I do not think so; they come in pretty early, just an odd one now and again all the time.

9-10 EDWARD VII., A. 1910

Q. What is your idea about the best regulations to enforce? You know there are complaints that the lobsters are being exterminated gradually, and that they are running down, that the catch is getting poorer, what do you attribute that to?—A. To the fact that there are a great many of them caught.

Q. That is, you think it is due to over-fishing?—A. To over-fishing.

Q. You think there is too much gear in the water?—A. No matter where you go there are lobster traps everywhere along our coast.

Q. Do you think that the amount of gear ought to be limited?—A. It is pretty hard to limit the fisherman when he has to depend on it for his living.

Q. There have been various propositions made to the department with a view to remedying the existing state of affairs; some people have recommended closing down altogether for a few years, stopping lobster packing and fishing, what do you think of that?—A. I would not approve of that for this reason that quite a number of fishermen have a lot of gear on hand which would go to waste, and it would be an expensive thing afterwards to have to start in with new gear all at once.

Q. And it would deprive the community of considerable revenue at a time when there is not much other fishing going on?—A. Oh, yes.

Q. The Lobster Commission of 1898, I do not know whether they came here or not, recommended shutting off by sections, and giving all parts of the coast a close season in that way, shutting down, say, the Cape Breton coast this year, and another part of the coast next year and so on.—A. I saw that.

Q. How would that appeal to you?—A. I do not know, before I give my opinion on that I would like to have a little time to consider, I did not come here expecting to take the stand.

Witness discharged.

KENNETH A. MORRISON, fisherman, Wreck Cove, called and sworn:—

By the Commissioner:

Q. Do you fish from this place?—A. From Wreck Cove, about seven miles to the north.

Q. How long have you been engaged in the lobster fishing industry?—A. I might say for the last twelve years anyway, and perhaps a little further back.

Q. You have always fished from Wreck Cove?—A. From Wreck Cove.

Q. What is the condition of the fishing there compared with here, are the conditions about the same?—A. Not quite, there is some difference.

Q. In what way, do you fish in deeper water?—A. No, but we get more lobsters in the latter part of the season than they do here.

Q. When do you begin fishing, one year with the other? Of course we know it depends on the ice rather than the weather?—A. It depends on the ice, when the coast is clear and the weather is fine we begin.

Q. One year with the other when would that be?—A. About the middle of May, on the average, sometimes it begins on the 8th of May, and sometimes at the beginning of June.

Q. Then it is generally pretty well into May before you get fairly started?—A. Yes, I remember one year we began about the 8th of May.

Q. And it takes a man some days to get out his gear?—A. If everything is ready it does not take very long to get out the gear.

Q. How many traps do you fish?—A. Fifty traps sometimes.

Q. Do you fish them single handed?—A. Yes.

Q. Do you fish them on trawls or single lines?—A. Mostly on trawls, of course at the latter part of the season I think there are more single traps.

Q. You fish what they call the parlour trap, I suppose?—A. Yes.

SESSIONAL PAPER No. 22a

Q. You do not fish the diamond trap at Wreck Cove?—A. No, well, I do a few,

Q. In what depth of water do you put the traps out first?—A. Seven fathoms.

Q. How far off shore does that take you?—A. Not very far.

Q. Do you fish there all season, you do not move in?—A. I move in according to the weather.

Q. And, I suppose, 'according as the big lobsters pass in, you come in after them?—A. Yes, I follow them.

Q. When do you make the best fishing?—A. At the first part of the season and at the last part.

Q. It slacks off a little in the middle?—A. Yes.

Q. How do the lobsters run? Are they better in the first part of the season or at the end, or are they about the same all the way through?—A. I would say that about the first week they will be pretty fine lobsters and about the last part of the season they get good again.

Q. But they will not weigh as well in the beginning of the season as they do in the latter part?—A. Oh, yes.

Q. We have understood from the evidence at other places that they are not quite as full in the early part of the season as they are towards the end?—A. Oh, in the early part of the season they are pretty good.

Q. What percentage of the total catch of your lobsters would be under the regulation limit of 8 inches?—A. I could hardly say what the percentage is, but there are quite a lot under 8 inches.

Q. Does that percentage vary at different parts of the season?—A. Is it greater in the latter part of the season than early in the spring?—A. It is greater in the latter part of the season.

Q. When you are fishing in the shoalest water?—A. Yes.

Q. How would it affect you if the 8-inch size limit were strictly enforced, and all the small lobsters under 8 inches were put back in the water? I have been connected with the lobster fishery for 32 years, and we know that the size limit has not been observed?—A. I suppose not.

Q. In many places the fishermen say that if they had to throw back all the lobsters under 8 inches they would quit fishing, and the canners tell us that if they were compelled to refuse all under 8 inches they would have to shut down?—A. Oh, yes.

Q. What would you say, would the enforcing of that regulation put you out of business?—A. It is pretty hard to say, the poor man has a good deal to contend with, especially with the dog fish which are a great nuisance and put their other fishing out of business almost sometimes.

Q. What is your average catch?—A. 3,000 or 4,000 pounds, according to how the weather runs.

Q. Did you get that this year?—A. I did not, I got about 3,000 pounds, I think.

Q. And they were all paid for at the same rate to everybody here, \$2.25?—A. \$2.25 at first, and \$2.50 at the latter part of the season.

Q. There were no complaints about the price, everything is satisfactory?—A. Well, yes, it was a poor year, of course the fishermen thought they would get more this year, but they understand that the market was lower.

Q. And that was the season for the big drop in price?—A. Oh, yes.

Q. Do you fish cod?—A. Yes.

Q. And the same thing occurs in regard to that fishery, does it not? Some years the price is up and other years it is down?—A. Just the same.

Q. What number of fishermen fish out of Wreck Cove? How many boats fish lobsters out of that cove?—A. There are two coves and two canneries in Wreck Cove, one in each cove.

Q. Who are they owned by?—A. One is owned by D. L. and M. J. Morrison, and the other by John A. Robinson.

9-10 EDWARD VII., A. 1910

Q. You deliver your lobsters up there, you do not bring them down here?—A. No.

Q. How are the lobsters generally delivered, do the smacks come around and take them there from the fishermen, or does every fisherman deliver his own lobsters?—A. Those who fish out of the cove bring their lobsters in, but the smacks come for those at a distance.

Q. What proportion of the total catch would you say are female lobsters with the eggs or berries on them?—A. That is pretty hard to say, because, while we are throwing out two or three spawn lobsters to-day we might not get any of them to-morrow, or we might get more to-morrow from the same traps.

Q. Did you ever mark them in order to see whether they travelled far?—A. Well, I did not, but I can tell just about, by the size and the looks of the lobsters, where they come from.

Q. Some men have marked them and found that they do not go very far as a rule.—A. I did not mark any.

Q. Did you ever shut a female lobster in a trap and keep her there to see when she spawned?—A. No, sir, I never did.

Q. Can you say whether the percentage of berried lobsters is large?—A. It is not very large.

Q. Would it be anything like one-half of the catch?—A. Oh no, the berried lobsters are not very many.

Q. They are generally large lobsters are they not?—A. They are good-sized lobsters.

Q. Did you ever remark as to their size, what is the smallest size you ever saw a lobster with eggs on?—A. I have never seen one smaller than 8 inches.

Q. I suppose all the fishermen in your neighbourhood own their own boats and gear?—A. Yes.

Q. What has been the practice in the past, as long as you have been connected with the fishery, with regard to berried lobsters? Of course one of the theories of those who try to explain the growing scarcity of the lobster is that too many berried lobsters have been destroyed?—A. Yes, that is so.

Q. That they have either been brought straight in and canned or else that the berries have been rubbed off them outside and wasted?—A. I can only speak for myself, and I know that the way that I used to do with them was to throw them overboard.

Q. I suppose that the percentage of berried lobsters is not so large that it would make a serious inroad on a fisherman's catch if he threw them overboard?—A. I do not think we would lose much, but the way I take it is this, I well believe that when the berried lobsters are thrown overboard that they keep coming there every year, and that they spawn over the same ground, so that keeps up the supply. That is my opinion and, therefore, I keep throwing them overboard.

Q. That is the right and wise thing to do because you gain by it in the end?—A. Yes, I gain by it in the end.

Q. Do you think that is the general practice here? Fishermen talk about these things and generally know what is best for them; of course if that is the general rule here your lobsters are pretty well protected.—A. I would not say that everyone does it.

Q. Who fixes the price for lobsters, do you know?—A. The packer.

Q. Has the fisherman no say in the matter at all?—A. Only he grumbles over it, I suppose, if he does not get enough, that is all. He has to put up with what he gets.

Q. What do you think with regard to the matter? Do you think that the fishermen would make more money if they were allowed to pack for themselves?—A. I believe they would, that is if they knew how to pack properly.

Q. Everything depends on that, of course. It requires some knowledge and training to go into work of that kind.—A. Of course there is a reason for that, there would not be so much expense on the fishermen as there is on the packer.

SESSIONAL PAPER No. 22a

Q. Have you any idea what it would cost to put up a cannery?—A. I could not say.

Q. You know the practice of the department has been to restrict the number of licenses, and that for a number of years back no new licenses have been granted?—A. Yes.

Q. With the idea, of course, that they were protecting and improving the fishery. The amount of gear, however, has not been restricted. The fishermen have complained in various sections that they are not getting a fair show in the matter, that if they were allowed to pack for themselves they would do better, so that within the last few years the Minister decided to issue what are called, 'co-operative' licenses. That is if a number of fishermen—15 is the number that has been fixed—declare their intention to co-operate in packing, they could get a license to can. Do you think that is a fair way out of the difficulty, that that gives the fishermen a show? Or do you think the number should be less than 15?—A. I think that is too many, it is pretty hard to get 15 men to agree.

Q. You think the number might safely be made smaller?—A. I do think so.

Q. Have you always fished the same style of traps that you have now?—A. No.

Q. You used to fish the old-fashioned double-ender?—A. Yes.

Q. You gave them up because the fish used to escape out of them when you did not fish regularly?—A. Yes.

Q. Do you allow the same space between the slats as you used to, or has it been narrowed down?—A. It is just about the same.

Q. About the width of a lath?—A. Yes, of course we do not measure it, just nail them on.

Q. Is it your opinion that the laths have been placed closer together with a view of holding the smaller lobster? Of course if the space is large the smaller run of lobsters will get in and out again?—A. Yes.

Q. What bait do you use here?—A. Herring.

Q. Is there much difference in your fishery here if you use old bait or fresh bait?—A. Fresh bait is better.

Q. Do you use mackerel gibbs or entrails?—A. No, sir, I have never used them.

Q. The gibbs they say are the best bait of all?—A. But it is hard to get here. The cod head is good bait sometimes.

Q. Do you think the female lobsters come in shoal water to spawn late in the season, or have you any idea in the matter?—A. No, I haven't any idea.

Q. You do not see any more egg-bearing lobsters ripe and ready to spawn towards the close of the season than at the beginning?—A. Not many.

Q. You could see whether the eggs were riper, could you not?—A. Yes.

Q. You could see the small hard berries sometimes?—A. Yes, and they are not the same colour.

Q. How do you think we should go to work to induce the fishermen to return the berried lobsters to the water? I suppose there isn't any question it should be done generally with a view to preserving the fishery?—A. It is pretty hard to throw your best lobsters away.

Q. That is what we want to get at if possible, that is the main secret, there is no doubt about it, preserving the berried lobsters and protecting them?—A. I do not know if the smacker would be the man. I think it is the smacker who takes the berried lobsters who could check it.

Q. He takes the berried lobsters?—A. When he takes all the lobsters if the smack-man were put in such a position that he would not take any of the berried lobsters it would be all right.

Q. That really means the canner, because it is the canner who sends the smacker out?—A. Yes, hence I would say that if the smacker was pretty sharp he could notice if berried lobsters were with the others, and he should be very strict about taking them.

9-10 EDWARD VII., A. 1910

Q. Do you not think it is easier for the fishermen when taking them out of the trap to tell which is the berried lobster than it is for the canner or the smacker who is having a lot of them thrown in on him?—A. Yes, of course if the fishermen would do it that finishes it, but it is hard to get the fishermen to do so, that is every one.

Q. Some people have suggested that if you sent some one down to interview the fishermen and to explain to them the absolute necessity of saving the berried lobsters, that it is like killing the ewes and the lambs, you can't kill them both off and have a flock, and that it is to their interest in the end to save them, because they are the sufferers, do you think it is any use preaching a revival amongst them?—A. I believe there are some for whom revivals are no good, they would have their own opinions afterwards.

Q. They are case hardened?—A. Yes.

Q. Do you think it would be possible to establish such a thing as a pound here? There have been various ways of protecting the berried lobster suggested if the fishermen want to save them themselves; it has been suggested that they should bring them to somebody appointed for the purpose of collecting them, either to have the eggs stripped off them for hatching in the hatchery or for placing them in pounds where they would breed, and then be released at the close of the season. It is not, however, everywhere that the conditions exist which would make a pound practicable. You want not less than two fathoms of water, with a rocky bottom, pure salt water where the tide flows freely, so situated that you can place a bar across the mouth to prevent the lobsters escaping. Are there any spots in this neighbourhood of that character which would be available for a pound?—A. No, I do not suppose there are.

Q. Are there any hatcheries in this district? Have you ever heard of them?—A. Only what Mr. Baker has had.

Q. That is a pound, the hatchery is at Canso. Then there is nothing but to put them back in the water where they belong?—A. That is the best way.

Q. Are you aware of any fisherman having lost his catch of lobsters by reason of the packer having refused to receive them?—A. No.

Q. That has not occurred here anyway?—A. No.

Q. Now various propositions have been made for improving the condition of the fishery, among others, as you heard me say just now to the other witness, to shut down altogether, over the whole coast, for three or four years, in order to allow the lobsters to grow up again. The lobster is supposed to reach the length of 8 inches in three years from the time of its birth. How would shutting down universally affect the case do you think?—A. There would be a great change in this part of the country.

Q. There are parts of the country where the fishermen are depending more on the lobster fishing than you are here?—A. Perhaps there are, but that would not help this place any.

Q. You think that would be a pretty severe measure?—A. It would be very severe.

Q. The Lobster Commission of 1898 recommended closing down in sections until the whole coast had been given a close season, that is shutting down a province or a part of a province, and moving the close season around gradually until the lobsters in every part of the coast had been given a chance to grow up again. That would be a little easier than shutting down altogether?—A. Yes, it would be a little easier.

Q. Then some people have suggested that we do away with the size limit which has never been enforced, and which if it were enforced we are told would put everybody out of business in a few years, and also to strictly enforce the regulation against taking the berried lobster, at the same time shortening the present season ten days or a couple of weeks at the end. How would that appeal to you?—A. Well, I am of the opinion that our season is short enough already. That is, after we begin fishing, nominally on the first of May.

Q. You have to the end of July now?—A. That is long enough, but now when we do not get a fish until the middle of May we will not have a very long season at all, especially when we take into account the storms and everything of that kind.

SESSIONAL PAPER No. 22a

Q. The object of the proposed regulations is that if that were enforced for a few years it would mean that the lobsters would increase in numbers and be as numerous in the course of time as they were formerly, and the fishermen would, of course, make up for it later on. It is generally conceded that we have to do something or other. Which of all the propositions I have enumerated is the one that appeals to you as most likely to accomplish the end in view and, at the same time, be least hurtful to the fishermen?—A. It is pretty hard to say in a short time.

Q. Of course these are the matters that the committee want advice about from the fishermen themselves. The statements we are getting from the fishermen now will be printed and laid before the committee, and the members of that committee must say what they think is the best thing to do in the face of the evidence. Of course you will admit, I think, that it is useless to have a regulation on the statute book like that size limit which is not enforced, that does not mean anything, which everyone treats with contempt. It is better to wipe it out altogether if it is not enforced.—A. That is about the size of it.

Q. Yes, the size limit.—A. Well, that is a good sized lobster, 8 inches is a good sized lobster.

Q. Some people on the other hand say reduce the size to seven inches and enforce it. Do you think it would be any easier to enforce the 7-inch limit than it has been to enforce the 8-inch? It used to be 9 inches and that was not observed, and then they said: 'Give us an 8-inch limit and we will observe the law.' You know how that has worked out, it has never been observed or enforced, and I am afraid if we had a 7-inch limit in a short time it would be the same thing over again. I do not think there is any doubt that the last proposition, if it can be accomplished, is the least harmful to the fishermen, because there are other fisheries to which you could turn for the last ten days in the present season. In any event a number of the fishermen are dropping off at that period, some going back to their farms and others going to the cod fishing, and many of the canneries close down, so that it would not in the end be very severe for all the fishermen to stop fishing a little earlier than some of them now do. Of course I am not supposed to have any views in the matter, I am merely stating what suggestions have been made.—A. I cannot say about any other parts of the coast, but at our own place down here we got them as good at the last part of July as we did at the first part of the season; that was the case this year.

Q. There is another thing that has been under consideration, there is no doubt that the lobsters taken at the last part of July will contain a larger proportion of female lobsters with spawn on, and that they will spawn more quickly if left alone in the water; there is no doubt that the principal spawning season is between the 15th of July and the 15th of August, so that it is between those dates that the most serious damage is done to the lobster fishery by the taking of seed lobsters?—A. I see.

Q. Do you think there is any combination on the part of the canners in this neighbourhood to fix the price, or do they allow the foreman to fix his own price?—A. Well, I could not say, generally they are about the same price.

Q. As to hatcheries you tell me you have no experience of them, but would you favour the establishment of a hatchery if nothing else could be done?—A. Well, if we could not protect the seed lobster any other way.

Q. What about fall fishing, has that ever been tried here?—A. No.

Q. I suppose this is one of the localities where you could fish in the fall, you are protected from the westerly winds which usually prevail then?—A. Yes.

Q. You are more apt to have gales from the west in the fall than from the east, are you not?—A. Well, some years; some years it is bad enough, and other years it is better.

Q. Do you know anything about the live lobster trade? Has there ever been any attempt here to ship lobsters alive to the market?—A. No.

Q. You have always sold to the canner?—A. Yes.

9-10 EDWARD VII., A. 1910

Q. There is no opportunity here to sell them alive?—A. We have no chance here to do that.

Q. Among other things which have been suggested to the department is the licensing of the fisherman, not the canner, but the fisherman. It has been proposed that the lobster fisherman should take out a license, there need not necessarily be any charge for it, but that he should go to the fishery officer before he began to fish lobsters and get a license. The idea is that if a fisherman had a license he would feel himself obliged to observe the law rigorously, whatever that law might be, and that he would be careful to watch that others did the same, and that none fished without a license. If it were known that a fisherman were violating the law regularly and persistently his license would be stopped and he would not be allowed to catch lobsters. What do you think about that? Do you think that having a form of license in his pocket would make the average fisherman more careful in observing the regulations?—A. I do not think so.

Q. Of course it would be one means of keeping out outsiders. In some places they complain about competition from outsiders and that is about the only way we could prevent that. It would also furnish a means of preventing anyone who was known to be persistently wiping the berries off or violating the law in any other way from continuing to fish. That is the idea with which the proposition was made. How do you think it would work?—A. I have not considered the matter. I would like very well to see the berried lobsters protected because that is the only means for keeping up the supply. Of course if everybody would get it into their heads that by letting the berried lobster go they are keeping up the supply and would act accordingly it would simplify matters, because if every berried lobster hatches out there will be no falling off in the fishery.

Q. Of course there will be some loss among the young lobsters, other fish devour them?—A. Yes, but there are such immense numbers of them.

Q. I forget the exact number, but I think a 15-inch lobster has 85,000 eggs?—A. Of course if all that number were hatched there would still be plenty left, even if other fish did feed upon them.

Q. Where they take the eggs carefully off the seed lobster and hatch them out in these glass jars in the hatcheries they have succeeded in hatching from 90 to 95 per cent?—A. That should keep up the lobster supply so that there will be plenty to meet the demand if the seed lobsters are all saved.

By Mr. McKenzie, M. P. :

Q. It was suggested to the Committee last winter, and a note is being made of it, that possibly it would be a way out of the difficulty to buy the berried lobster from the fisherman, and to arrange so that it would be put back in the water. One plan that was proposed was that the smackman would buy them from the fisherman who, when fishing his traps, would separate the berried lobster from the others, and would hand them over separately to the smackman, who would record the fisherman's name and the number of seed lobsters furnished by him, and that the government would make an allowance to pay for those seed lobsters. What do you think would be a fair allowance to make for each seed lobster delivered to the smackman by the fisherman? What would it be worth as a rule?—A. It just depends on what the price would be during the summer. Last year we had a good price for them, and this year it was away down below what it should be. I suppose it would depend on what the price was each summer.

Q. Taking a summer like this year, what do you say would be a fair allowance for the government to make for the seed lobster?—A. Well, the seed lobster is not worth any more than any other lobster to the fisherman.

Q. I do not suppose it is worth quite as much because he has no right to catch it?—A. No, that is the trouble.

Q. The idea is to encourage the liberation of the seed lobster so that there will be no temptation to rub the seed off, but that the fisherman would get something in

SESSIONAL PAPER No. 22a

order to preserve it, so that the smackman would be supposed to put it back in the water, or to take it to the pound or hatchery if there was one convenient.

By the Commissioner:

Q. Do you ever count your lobsters in order to see how many run to the hundred?

A. Yes, sir.

Q. How many are there?—A. In some weeks there is a fine catch of lobsters so that it will not take perhaps on an average more than 125 to make a hundred pounds, and at other times they run smaller than that.

Q. By that way you could establish an average for the hundred lobsters, by averaging them. Of course the berried lobster is generally a pretty good lobster?—

A. A pretty good lobster.

Q. How would you distinguish them? You would sell your lobsters to-day to the smackman, and he would put down your name and the number, or would pay you on the nail for them, or keep a record for every man of everything he caught, the time and the price?—A. That would be better for the fisherman if he could get the same price for it.

Q. It would be bad for the packer, I am afraid, because we would have to take it out of them. In some places, in the State of Connecticut, they do that sort of thing, they punch a small hole in the extreme end of the tail of the lobster, and, of course, any lobster found with the tail punched would not be paid for again. I do not know whether the fishermen would get punches for themselves?—A. If they did that part of the tail could be clipped off and then the fishermen would not be able to do that.

By Mr. McKenzie, M.P. :

Q. You are not troubled here with outside fishermen, as they are called?—A. No, sir, not as far as our place is concerned.

Q. We had quite a complaint yesterday at Neil's Harbour, about outside fishermen coming in there and fishing with the packer's gear in competition with the local fishermen who own their own gear. But you have no such trouble here, have you?—

A. No, sir, not so far as we are concerned, but this year I learned that fishermen from Nova Scotia were fishing down in this neighbourhood.

Q. That is the western section of the north shore?—A. Yes, and the people do not like it because they have enough gear in the water themselves.

Q. What cannery were these men fishing for?—A. I forget the name—Baxter Bros. at Bras d'Or.

Witness discharged.

RORY A. MACDONALD, smackman, Briton Cove, C.B., called and sworn:—

By the Commissioner:

Q. How long have you been engaged in the lobster fishing business?—A. I have been at it off and on for the last thirteen or fourteen years.

Q. Have you always fished on this shore?—A. Yes, sir.

Q. You live here at Briton Cove, do you?—A. Yes.

Q. You have fished lobsters?—A. I have fished lobsters for a couple of years.

Q. When was that?—A. In 1891 and 1892.

Q. From your knowledge in smacking how do you find the fishery compare to-day with what it was then? You have a good opportunity of seeing the run of lobsters and you know what takes place.—A. Well, I think I can say that this summer it has not been as good, but this last summer twelvemonth, I think they were almost as good as I ever saw them.

Q. On the whole, of course you have good and bad years, do you think the fishery has decreased, that it has failed? Is it taking a larger amount of gear, different and

9-10 EDWARD VII., A. 1910

better gear to make the same catch as a man would make formerly?—A. I guess it does.

Q. When you used to fish first did you follow the same rule as they do now, fish early in the season in deep water and then move in?—A. Yes.

Q. The conditions are the same now in that respect?—A. Yes.

Q. And you say they get about the same run of lobsters?—A. About the same.

Q. Now with regard to handling the lobsters, how long have you been smacking?—A. I guess I have smacked four or five years, I have smacked for Mr. McLeod here.

Q. What has been the practice with regard to berried lobsters during your time of smacking?—A. The fishermen are supposed to let them go.

Q. Do you ever get them slipped in on you?—A. I suppose so, to tell you the truth it is pretty hard to avoid it; in spite of you there will be a berried lobster slipped in occasionally.

Q. That might happen by accident, of course?—A. No doubt about it.

Q. But if the object were to save the berried lobsters and to pick them out where is that most easily done? By the fishermen, by the smackman or at the cannery?—A. Well, the best place is at the cannery. It is pretty hard for the smackmen when the lobsters are thrown into the berth or cupboard, or wherever they are put, to see them all; but at the cannery there is every opportunity to examine them more carefully.

Q. And when they are once in there they are apt not to be discovered until they are boiled.—A. I believe the best way would be when the smackman is putting them into the barrel or landing them.

Q. Is the female lobster delicate, will she stand as much rough usage as the other lobsters? We understand where they are shipping lobsters alive that it will not do to ship the female lobster as she will not stand the handling, and if her eggs are torn off her she will not leave the crate alive when it reaches the market.—A. I have no idea.

Q. If you had a large number of lobsters in the boat and had to carry them some distance from where you got them to the cannery would you expect the berried lobster to die before the other?—A. I have no idea whether she would or not.

Q. You have never noticed?—A. I have never noticed that.

Q. When you were fishing, what was the practice with regard to the berried lobster?—A. They were liberated.

Q. What was the size limit then?—A. Nine inches.

Q. Was the law more strictly enforced then than it is now?—A. I suppose it was about the same.

Q. Do you think it was not more strictly enforced? It is generally understood that when the regulations were first imposed the fishermen observed them more closely; there was not the same disposition to escape the regulation then that there is now. The cannery did not want the small lobsters as they were buying by count. What was the reason of the change from buying by count to weight? Was it not that the lobsters were running smaller, or what was it?—A. I suppose it was.

Q. And that they had to take two for one?—A. I guess so.

Q. How far do you smack your lobsters?—A. Five miles one way and four the other.

Q. You go every day when you can?—A. Yes.

Q. How long, as a rule do you take in making your rounds?—A. Going one way it will take us a half day, of course it used to take us more than that, but we have an excellent boat now and we can do it more regularly.

Q. Are many lobsters lost by you, do many die between the time you take them from the boat and the time you deliver them to the factory?—A. No, not many.

Q. What is your opinion, would the fishermen make more money if they were allowed to pack for themselves than they do under the present conditions?—A. In my opinion I do not suppose they would.

SESSIONAL PAPER No. 22a

Q. It requires a certain amount of knowledge of business and some capital?—A. Yes.

Q. Have you any knowledge of what it costs to fit out a fairly good cannery? You want a building, boilers, table and an outfit and a good many things? What capital would a fisherman or a group of fishermen require to establish such a cannery as they might be expected to operate?—A. I suppose they would need in the start about \$400 or \$500, for the building and for the cannery itself.

Q. For the outfit? In some places you know there has been a good deal of trouble between fishermen and canners, and it has been supposed by the fishermen that they were not getting a fair price for their lobsters; there has been a lot of wrangling and the department decided to allow a group of fishermen—there must be 15 at least—to apply for a license and can on their own hook. Do you think that idea is a good one? Does it remedy the difficulty that stood in the fishermen's way?—A. Well, it is very hard for me to say anything on that question. We have never had any difficulty here between the fishermen and the canners.

Q. Where they have had difficulty is not that the best way, to say to the fishermen: 'If you will group together and put up a cannery the department will give you a license?'—A. I suppose if there was a difficulty it would be all right to do that.

Q. What do you think about the number, is 15 too large or large enough?—A. I should think it was quite large enough.

Q. Are the fishermen generally using more traps than they used to, or using more gear?—A. I think the individual fisherman is using about the same, but I believe there are more fishermen at it and more traps in the water.

Q. When you began fishing did the fisherman supply his own gear or did the canner supply it?—A. No, he did not; the canner supplied it.

Q. And now it has got to be entirely the fishermen's business?—A. Yes.

Q. Are there many fishermen here who are outfitted by the canners, or do they all own their own gear?—A. They all own their own gear.

Q. What do you think of the price paid, is it a fair price as far as the condition of the markets will allow?—A. I think it is.

Q. Do you fish cod when you knock off?—A. No.

Q. You only do smacking?—A. Yes.

Q. Do the fishermen expect the canners to take everything they catch?—A. I do not suppose.

Q. They do not? What would happen if the canner refused to accept undersized lobsters; that is, lobsters under 8 inches?—A. I suppose the fishermen would have to be content with it.

Q. You think they would have to be satisfied?—A. I suppose so.

Q. How do you think it would affect them? What percentage of the fish you bring in are under 8 inches?—A. That I cannot say.

Q. Is it a large percentage?—A. I guess it is; this year anyway there was a pretty large percentage. They were all telling me that this year.

Q. Is it so large that if the 8-inch limit were enforced it would shut up the cannery?—A. It would affect it a great deal.

Q. Have you ever remarked yourself as to this matter of berried lobsters? What is the smallest sized berried lobster you ever saw?—A. I have never measured them, but I think I have seen them as small as between 8 and 9 inches, down to 8 inches.

Q. As a rule, though, they are pretty decent lobsters?—A. I do not recollect ever having seen seed lobsters smaller than that. Of course I might have seen them.

Q. They have been seen down to 7 inches, but that, of course, is very, very rare. What do you think is the right way to deal with those berried lobsters; what should be done with them? That is the root of the whole question, is it not?—A. Yes, of course it is. In my opinion the way we are situated here we cannot have a pound or anything like that, and I think that if the law were strictly enforced and if the fisherman would liberate all his seed lobsters I think that would be the only and best way, so far as this place is concerned.

9-10 EDWARD VII., A. 1910

Q. Do you think it is an unfair thing, seeing that the fisherman himself is the one who benefits by the fishery, do you think it is unfair to expect him to do that?—

A. To liberate the seed lobsters?

Q. Is it not right to expect him to do so?—A. I should expect so.

Q. Would it mean a very serious loss to each fisherman if he put those seed lobsters back in the water for a few years?—A. I do not suppose it would.

Q. Do you think that at the end of three years—at three years we think that the lobster has reached the full limit of 8 inches—do you think the fisherman would see the good of it at the end of three years?—A. I would think so.

By Mr. McKenzie, M.P.:

Q. That is one of the propositions that has been made to us. Do you think that it would detain the smackman very much to take the seed lobsters if the arrangement were made that he would be buying them separately from the fishermen?—A. And the smackman to liberate them again?

Q. He would receive them or count them, and if there were a place where there could be a pound he would take them along and deliver them to be deposited in the pound. Would it take very much time if that were done, if the fishermen had them all ready for the smackman in a separate place?—A. Oh, no, it would not take much time, and he could have a separate place in his smack for the seed lobsters.

Q. He would, of course, have to enter in his book the number he took from each man, and at the end of the season each fisherman would be reckoned with for all the seed lobsters that he delivered. Do you think that could be carried out by the smackman?—A. In a place like this where we have no pound or hatchery what would be done with the seed lobsters that are collected right here?

Q. Where you have no pound would the smackman immediately liberate them the moment he took a record of them?—A. I think some years ago they were collecting seed lobsters here, I think it was Baker, and they were taking them from here, they made a couple of trips and the fishermen were kicking because they were not liberated in these waters where they were taken.

By the Commissioner:

Q. It has been suggested that down in the State of Connecticut when the smackman goes around, the fishermen bring him the berried lobsters they have caught, and he gives them a check for them, he has a little book with a slip or form and counter foil, and after giving the fisherman the check he punches a hole in the tail of the lobster as a check that the lobster will not be paid for twice, and it is then liberated. Do you think that would cause much delay in the work?—A. Of course it would cause a little delay, but it would not be material.

Q. Of course the smackman would have to receive some remuneration for his work, you could not expect him to do that for nothing, and it would not injure the lobster, would it?—A. I do not suppose it would, because there is nothing but shell at the end of the tail anyway.

Q. That is the only way of keeping a check, otherwise if you liberated the lobster without any mark you might have to pay for her pretty often?—A. I guess so, there is no doubt about that.

Witness discharged.

D. B. McLEOD, packer, Briton Cove, called and sworn:—

By the Commissioner:

Q. You are packing in this cove, I understand, Mr. McLeod?—A. Yes.

Q. You are the only packer here?—A. No.

SESSIONAL PAPER No. 22a

Q. Who else is there packing in this cove?—A. There is this man from Halifax has a factory down here, he has been packing here for the last two seasons.

Q. Who is that?—A. M. Neville.

Q. And what distance are the other canneries on either side of you?—A. There is one about five miles away, that is the nearest.

Q. Is that to the northward?—A. To the northward.

Q. And how far is the nearest cannery to the southward?—A. About eleven or twelve miles.

Q. What number of boats are fishing for you and deliver you their catch?—A. About 60 this year.

Q. What was the extent of your pack?—A. 443 cases.

Q. I suppose you were below the mark this year?—A. Oh, yes.

Q. What was that due to? Being late in commencing?—A. We were late, and not so much that as that we had some very heavy storms, there was a very heavy storm came about the 9th of July that swept all the gear.

Q. And that practically put an end to the fishery this season?—A. It practically put an end to it.

Q. Did you shut down shortly afterwards?—A. We kept the factory open but we got very few lobsters.

Q. What would you put as the average earning of a good lobster fisherman during a season?—A. Well, it is pretty hard to estimate that in a place like this where there are so many; when the price is good there are generally more fishing, and also when there is a good season.

Q. What would you expect a good lobster fisherman to get as his share of the total catch, how many thousand pounds?—A. The best fisherman we had this year made nearly \$300, about \$290.

Q. That was last year when it was good?—A. Last year.

Q. But that is away above the average?—A. Above the average.

Q. A long way above the average? What number of hands do you employ in the cannery, men, women and girls? Of course it varies, I suppose?—A. It varies considerably. For the last number of years we have hired by the hour. Whenever we have work we hire outside labour.

Q. What is the ordinary wage of a sealer? I suppose he is the best paid official you have?—A. From \$30 to \$35 and found.

Q. What, as a rule, do you pay the girls by the hour?—A. The girls we hire by the month, some of them at \$12, and some we pay \$8, that is for small girls; we pay from \$8 to \$12 per month.

Q. And of course they find themselves?—A. They find themselves.

Q. What is your experience, do you think you require a larger amount of fishing done to keep up your pack now than you did when you began, more boats and more gear?—A. Yes.

Q. How do you find the run of lobsters?—A. We find the run of lobsters smaller.

Q. What do they run here, what is your average to the pound can?—A. Well, up until 1904 we took them by count here.

Q. Tell me, we find in a great many places they have changed from count to weight; why was that change made? Why did you change from count to weight?—A. The lobsters were getting smaller than at first, every year there were more small lobsters.

Q. So that you had to take them by weight?—A. We had to take them by weight.

Q. Was it the practice to take two for one before the change was made, that was the general practice along the coast?—A. No, we never did that; they were doing that down the coast, but we never did it.

Q. Did you tell me how many lobsters they ran to the pound can?—A. The last year we took them by count, that was 1903, they averaged for the whole season $7\frac{2}{3}$ to the pound can. In May they went $7\frac{1}{2}$, in June $7\frac{2}{3}$, and in July $8\frac{1}{3}$, or very nearly that.

9-10 EDWARD VII., A. 1910

Q. Is it safe to say that, one year with the other, you would expect to get a smaller run of lobsters as the season advances?—A. Yes.

Q. Have you generally packed right up to the end of the season, to the end of July?—A. Yes.

Q. Do your fishermen slack off and begin to scatter before the end of the season?—A. They do, to the west of here.

Q. For what reason?—A. The lobsters are getting scarce, and they do not hold out to the westward, that is in the bay, as well as they do farther north.

Q. The water is shoaler in the bay?—A. Yes, it is shoal.

Q. Now, with regard to this matter of the weight of fish, though they are a larger run in the spring they do not weigh as well, do they? They do not furnish as much meat as the fish you get later in the season?—A. No.

Q. Then they fill up, and you get more meat per hundred pounds of green lobsters than you will at the opening of the season?—A. Oh, yes.

Q. Have you any statistics on that head?—A. I have statistics for 1906 and 1908, I have left 1907 out, you see.

Q. Yes?—A. In 1906, in May, this is the weight, the average was $6\frac{1}{10}$ lbs. to the can.

Q. That is green lobsters per can?—A. Yes. And in June $5\frac{1}{2}$ lbs., in July 5 lbs. In 1908, there would be about $6\frac{1}{10}$ lbs. in May, in June $5\frac{1}{2}$, a fraction over $5\frac{1}{2}$, and in July 5.

Q. Do you notice that towards the end of July you are beginning to get under-sized lobsters?—A. Some years we get more, this year I only noticed a very few, we did not get many this year.

Q. Now, as to the matter of the berried lobster, have you any experience or do you know whether you are liable to have offered to you a larger number at one period of the season than at another?—A. Well, for the last number of years, our fishermen are getting awakened to the fact that it is to their interest to protect the berried lobster, and we do not see many.

Q. But when you did see them?—A. Yes, at certain times there would be more.

Q. Do you think it would be safe to say that, as a rule, you would see more as the season advances, that is towards the close of the season, than at the beginning? Of course I know that lobsters have berries on them all the year round, but of course there are times when they do spawn and then they are riper than at other times?—A. I often spoke to the fishermen about them and they say that the berried lobsters come in schools; sometimes they get quite a number of them, and then they drop off until they will not get any. I do not know whether they get more at the latter part of the season than at any other time.

Q. Do you know whether they are more delicate than the other lobsters? Will they live a shorter time out of the water?—A. I have never noticed, but I have no doubt if the spawn has been washed off them they are more delicate.

Q. Has that practice been followed to any considerable extent along this coast?—A. I do not believe it has generally, but I think it has been done to some extent by some fishermen.

Q. Here the fishermen fish with their own gear and boats?—A. Oh, yes.

Q. And the price we understand was, this year, \$2.25 to \$2.50?—A. Yes, \$2.25.

Q. And later in the season some of them say they got \$2.50?—A. \$2.50.

Q. What was the reason that a lower price was paid this year than last year and the year before?—A. Because the market was very low.

Q. Have you any information that you can give us as to the condition of the market from your own personal experience?—A. Yes.

Q. Where do you sell your fish?—A. In Halifax.

Q. How were you affected by the change in the market?—A. I got a much less price for them.

Q. Had you any difficulty in disposing of them?—A. This year I haven't disposed of them yet. I haven't had returns about it.

SESSIONAL PAPER No. 22a

Q. Do they inspect them at Halifax? Do they overhaul them and cull them?—
A. Yes, they open the case and test them.

Q. How do they test them, do you know what practice they follow?—A. They go to work, as I have seen them at it, they select a case out of the lot, open the case and take a few tins out of it which they open and sample. They will probably open two or three cases from a shipment, and if they are all right they pass them all, but if they find anything wrong with them they will open more. Last year I saw them opened on two different occasions.

Q. Do you think that the careful packer suffers through the neglect of the less careful man? Does the quantity of bad lobsters thrown on the market affect the general price?—A. Yes, it does.

Q. Is it to your knowledge that there is a great deal of bad lobster put up?—
A. I do not know that there is, I believe that nowadays every packer is as careful as he can be; but it is a very delicate fish to pack.

Q. You know that in some places there is a great deal of friction between the fisherman and the canner, you have fortunately escaped it here, but it does exist, perhaps it is because they are badly advised, but do you think that the present policy of the department in places where the fishermen are discontented, and think they can do better that way, to allow them to club together and give them a license is a wise and right one?—A. I do not know. I suppose if I were not a packer I would be more liable to answer that question.

Q. Do you think there are canners enough licensed now?—A. I think so.

Q. Do you think the fishermen generally would make more money canning their own catch than by selling their lobsters?—A. No.

Q. Has it been tried, to your knowledge?—A. Yes, it has been tried here.

Q. With what result?—A. There were three or four of them combined here to pack their own catch, but they gave it up and sold the factory to Mr. Neville, of Halifax. I suppose if they had been making money out of it they would not have done that.

Q. Then you think the policy of keeping down the number of canneries is a wise one?—A. I think so.

Q. Do you think we ought to insist on any standard for a cannery? There has been no attempt at anything of that kind, and I suppose you know we see a good many canneries, the product from which we would not care to eat. Do you think the department would be wise to insist upon some sort of standard, that the tables should be prepared in a certain way, and that it should be made the duty of the overseer or inspector to see that the cannery was properly run?—A. Yes, I should think so.

Q. I suppose it is necessary to be scrupulously clean in connection with it?—A. Oh yes, it is for the packer's own benefit.

Q. What have you to guard against most particularly in packing lobsters?—A. We want to put the lobsters up as soon as we can after taking them from the trap.

Q. And not allow them to remain on the tables overnight?—A. Not unless the weather is cool.

Q. Very often they will sour off if left overnight, will they not?—A. Yes, and the meat gets dark.

Q. Do you think that the product of the cannery, the canned goods ought to be inspected? You know that nearly all other food products are now inspected, meat, flour, butter, cheese and everything else. All other canned goods, like meat, has to be overhauled, but lobsters always escape. Do you think it would be an advantage to have a government inspection? It certainly should be to the good and careful canner?—A. Yes, it should be.

Q. And it would be the means of preventing a good deal of poor material getting on the market if a regular inspection were carried on by official inspectors.—A. That would mean, I suppose, opening out the cans after they were packed?

9-10 EDWARD VII., A. 1910

Q. I suppose it would mean pretty much the same thing as is now done in an unofficial way by the buyer?—A. Yes.

Q. Do you think that the existing staff of the Marine and Fisheries Department would be competent to do that kind of inspection?—A. No, I do not think so.

Q. It would require an expert in the business?—A. Yes.

Q. Now as to this matter of size limit, how would it affect you if the 8-inch limit were strictly enforced?—A. I suppose we would have to close up the factory after some time in June.

Q. You think you would close up then, but you think you could pack until a certain date?—A. I think we could pack until some time in June.

Q. In a great many places they have told us it would put them out of business at once.—A. In some places it would put them out of business all right.

Q. What is the most profitable sized tin to send to the market? What commands the best price?—A. The smallest tin, I believe, is the quarter pound flat. I never packed any of those, half pound flat is the smallest we pack.

Q. In a quarter pound flat you could not put up a very big lobster, could you?—A. They could put up broken meat.

Q. They tell me they must have the complete claw and all that, but it must not be broken.—A. It would be a very small lobster. Some years they want more half pound flats, and we have to give them those, that is when we make a contract with the buyers we have to give them what they want. This year there was only 50 cents a case difference between pound flats and half pound flats, now the case costs that much in buying it.

Q. How do you do, do you manufacture your own tins or buy them already prepared?—A. No, we buy them.

Q. Of all these various propositions which have been made for remedying the state of affairs, to close down altogether, or to close down by sections, what do you think of those two propositions? It has been represented that to close down altogether, or even by sections, for several years would throw a lot of material out of use that would deteriorate and would be practically useless when they began canning again?—A. As far as I can understand that if they were closed down here, the people would have to leave the place, because this is the only fishing in the spring.

Q. And they get cash for their lobsters?—A. Yes.

Q. They tell us in most places where the lobster fishermen are mostly farmers, that is the only way they get cash, by lobster fishing?—A. Yes.

Q. What do you think of this other proposition, to do away with the size limit which is not enforced and never has been?—A. Never has been.

Q. It never has been strictly enforced, it has been in some places a little more than others, in the beginning there was a little attempt to do so, but later it has not been enforced at all. How small lobsters would you can? There must be a limit where it becomes unprofitable to take the small ones?—A. It is not profitable to can under 7 inches, it is not profitable to can the 7 inches even.

Q. But still you have to do so, you must take them from the fishermen?—A. Yes, that is it.

Q. You only take them because the fishermen bring them to you and you cannot help it, is that it?—A. It does not pay the canners to put them up at all; the small lobster meat is more tender, and whenever we had trouble with the pack it has been because of the small lobsters, they will not stand anything and are liable to get dark in the meat.

Q. So that if the size limit were done away with it would not make things worse than they are at present?—A. No, it would not make any change.

Q. And it would not hurt you seriously if the last ten days of the season were cut off?—A. No.

Q. Or even fifteen days?—A. Even fifteen days.

SESSIONAL PAPER No. 22a

Q. The most experienced canners we have met seem to think that the remedy is to shorten the season more than anything else?—A. Yes, I believe that.

Q. It is during the last few days of the season that the undersized and berried lobsters are taken?—A. Yes, and the soft lobsters are coming in.

Q. In a great many places we have been told by the canners that if we give them two months' canning they will be satisfied?—A. Yes, it does not pay the fisherman and it does not pay the packer to have a longer season.

Q. And towards the tag end of the season there are other fishing industries that the legitimate fishermen can get to work at?—A. Yes.

By Mr. McKenzie, M.P.:

Q. Two months' packing here would mean from the middle of May to the middle of July?—A. Yes.

Q. Although you are allowed to begin on the 1st of May you seldom get at it until the middle of May?—A. Very seldom, and not often at the middle of May sometimes. Two years ago it was the 6th or 7th of June when we began packing.

By the Commissioner:

Q. Of course some seasons will be short, that is inevitable?—A. This year it was well on in May before we commenced.

Q. Do you not think that the various extensions that have been granted at different times until the middle of August have done more harm than good?—A. Yes, they have.

By Mr. McKenzie, M.P.:

Q. About the price of the lobster, taking one year with another that is calculating upon the seed lobster which is usually eight inches in length or above it, what would you say would be an average value for a single fish?—A. The average value would be, say that you take the seed lobster at 9½ inches, they will average between that and ten inches and that lobster would weigh on the average between 18 and 20 ounces, and the average price that I paid for the last five years was \$2.80 per cwt. At that rate the 18 ounce lobster would be \$3.15 per hundred and the 20 ounce lobster would be \$3.50 per hundred. I think that is the average along the shore.

By the Commissioner:

Q. How much would that be apiece?—A. That would be about 3½ cents apiece on the average all through.

Q. Of course they want to be careful if they are buying them to protect them and not mix them up, so that they might be worth a little more for the extra care devoted to them?—A. Yes.

Q. I think Mr. Baker paid 8 cents a pound for them and complained that he did not get enough. Have you any other statistics there you would like to give us?—A. I do not think there are any other statistics.

By Mr. McKenzie, M.P.:

Q. Have you any figures showing the different dates at which you have opened the factory during the last five or six years, and the different dates on which you have been getting fish?—A. Yes, we can get that in a few seconds. In 1902, we commenced packing on the 6th of May and closed on the 28th of July; in 1903, we commenced on the 11th of May and closed on the 31st of July; in 1904, we commenced on the 10th of May and closed on the 20th of July; in 1905, we commenced on the 24th of May and closed on the 28th of July; in 1906, we commenced on the 4th of May and closed on the 29th of July; in 1907, we commenced on the 14th of June and closed on the 29th of July; in 1908, we commenced on the 8th of May and closed on

9-10 EDWARD VII., A. 1910

the 31st of July, and in 1909 we commenced on the 20th of May and closed on the 31st of July.

By the Commissioner:

Q. That means that you began packing and closed the factory on the days you have mentioned?—A. Yes, and 1907 was the best season we had both for the fishermen and the packers.

Witness discharged.

Commission adjourned.

INGONISH, C.B., August 25, 1909.

FRED MORRIS, fisherman, Ingonish, called and sworn:—

By the Commissioner:

Q. How long have you been engaged in the lobster fishing?—A. A good many years.

Q. About how long; all your life?—A. I do not know about that exactly, about 15 or 16 years, I suppose, altogether.

Q. Have you always fished from this place?—A. Oh, well, no, I fished a little in Newfoundland.

Q. Are you a native of Newfoundland?—A. No, England.

Q. When did you come over to Newfoundland?—A. When I was 13 years old; I have lived here 21 years this spring.

Q. And you fished here you say how long?—A. Off and on for 15 or 16 years anyway.

Q. And you are fishing here still?—A. I have not been fishing much the last two or three years.

Q. You have been selling your catch to who?—A. To Mr. Burke and others around here.

Q. Who are operating the canneries here?—A. There is Mr. Burke now, and Cann up here; they are the two canning on this side of the bay, and on the south side of the bay the two Hines are running the cannery there. They have two factories on the southward, the two brothers Hines.

Q. Have you any idea how long they have been canning there?—A. They have been canning quite a while.

Q. You have no union of fishermen here?—A. No.

Q. When you are fishing lobsters how do you fish, alone, in a single-handed boat?—A. Yes, pretty much all the time in a single-handed boat.

Q. What time do you begin to fish; one season with another, what time does the lobster fishing open?—A. Along from the 1st to the 15th of May; it depends altogether on the ice; as soon as the ice clears we begin to fish.

Q. In what depth of water do you begin to fish?—A. 8 or 9 fathoms.

Q. How far off shore does that take you?—A. No distances at all outside.

Q. Do you fish on the same ground all through the season?—A. Well, later on in the season we fish in shoaler water; we follow the fish in.

Q. What time of the season do you get the best fishing?—A. When we start first, from the beginning of May until about the 1st of June, somewhere along about that time.

SESSIONAL PAPER No. 22a

Q. Do you notice any difference in the fish you get in the beginning of the season as compared with those you get at the end?—A. Generally they begin to get a little smaller at the end.

Q. As the fishing goes on they get smaller?—A. Yes.

Q. You know the regulations about the fishery, that the berried lobsters should be put back in the water and all fish under 8 inches shall be thrown overboard? How have the regulations been observed here in the past? Has there been any attempt to enforce the regulations?—A. Oh, yes.

Q. What proportion of the total catch are under 8 inches?—A. I do not think they are much good, anything under 8 inches; they are very small, and certainly the 7-inch lobster is a very small affair.

Q. If the regulations prohibiting the catching of the lobsters under 8 inches were enforced how would it affect the fisherman and the canner?—A. It would affect them a good bit.

Q. These are the things we want to know?—A. The lobster is all right from about 6 to 7 inches.

Q. From 6 to 7 inches?—A. Oh, yes.

Q. Can you give me any idea of the number of boats that fish lobsters out of this bay?—A. Mr. Burke can give you a pretty good idea how many there are here, and we could soon count up all the others.

Q. I do not want it absolutely, but approximately?—A. I do not know exactly.

Q. Now, with regard to the berried lobster, what has been the practice regarding her here? You see we find that in a good many places the lobster is brought in berries and all, and boiled that way; in other places the berries are brushed off her, and in still other places again they say they return the berried lobster to the water. What is the practice here?—A. For quite a while back the spawn lobster has been thrown right away, it is just passed overboard when the men get it.

Q. Have you any idea how numerous they are? How many out of every hundred lobsters would be spawn lobsters?—A. Sometimes there are quite a number, and at other times you will get very few.

Q. How many would you say there are?—A. Perhaps not 15 or 20.

Q. Do you think there would be that many to the hundred; that is a very large proportion?—A. Well, we will say 10.

Q. Perhaps you have not kept any particular record?—A. No, I have not; some times you would not find any and at other times you would get a considerable number.

Q. Has it been the practice to brush the eggs off or not?—A. I would not like to swear to that.

Q. Do all the fishermen here own their own boats and gear?—A. Pretty much all.

Q. Does the factory supply some people with the boats and gear?—A. In these days, no; they used to do so, but now the fishermen generally supply their own.

Q. What is the arrangement between the fishermen and the canner here, are they sold by count or by weight?—A. By weight the last few years.

Q. Were they ever sold by count?—A. Oh, yes.

Q. Why was the practice changed?—A. There was some kicking, some thought they would do better by weight and they came to the conclusion to weigh them so that every man would have his rights.

Q. What price is paid on this part of the coast for lobsters?—A. \$2 this year and last year \$3 and \$3.50.

Q. And the year before that, have you any idea what the price was?—A. No, I have not.

Q. Now as to that price, how is it established? Who fixes it?—A. Well I suppose the price is fixed generally according to what the cannery are getting for their lobsters in the market.

Q. It is based on the market price?—A. Yes.

9-10 EDWARD VII., A. 1910

Q. And the fisherman knows when he fishes what he is going to get?—A. Yes, they generally know what the price is before they start.

Q. What has been the practice? Does the fisherman expect to take to the factory everything he catches?—A. Yes, they do around these parts.

Q. Where will he draw the line about small lobsters?—A. Well, he generally has the measure in the boat.

Q. He has the measure in the boat?—A. Yes.

Q. Do you think he measures them carefully to see that they are 8 inches?—A. Well, a man would not need to do that, he would have a pretty good idea when a lobster would go 8 inches, but he would have a measure in his boat to see exactly if he wanted to.

Q. Do you get more berried lobsters at one part of the season than at another? When do you see the most berried lobsters?—A. Going on the last part of June, along in the warmer season.

Q. Do you see more of them when you are in shoal water than you do when fishing in deeper water?—A. Yes.

Q. If the regulations regarding the berried lobster were strictly enforced where should it be enforced? When the lobster is taken out of the trap or in the smack, or at the cannery?—A. It should be enforced, I would say, and most anybody would say, when the lobster is taken out of the trap; let it be passed overboard then and it receives no hurt, but if that lobster is kept in the boat it might die. I would say put her overboard when she is taken out of the trap.

Q. Is it the case that spawn lobsters are more delicate than the unberried lobsters?—A. Not much, I do not think.

Q. And you think that the regulation should be enforced when the berried lobster is taken out of the trap?—A. Yes, that is the time, when she is taken out of the trap first.

Q. You think that is the easiest time to enforce it?—A. The fisherman can then see them easily and can put them overboard.

Q. How would it be possible to get the fishermen to return all these berried lobsters to the water? What is the best way to do that?—A. I do not know that you can do much more than put a fine on a man.

Q. You would have to follow him out there to know what he is doing?—A. It is an easy matter when he comes to the shore to see whether he has passed the berried lobsters overboard or not.

Q. I suppose you realize the fact that the berried lobsters should be saved and they should be put back in the water?—A. That is my idea, they should be put back, every one of them.

Q. I suppose there is no doubt that if all the berried lobsters were protected the fishery would be in a better condition than it is?—A. All these men around here who are lobster fishermen ought to have a pretty good idea of that themselves.

Q. Do the fishermen now use more gear than they used to do when you began to fish?—A. I do not think.

Q. They fish about the same number of traps do they?—A. A good many fish less because they do other work besides, fish haddock or something else.

Q. They haul the traps in the morning and do deep sea fishing through the rest of the time?—A. Oh, yes.

Q. Is that done all through the lobster fishing season?—A. Well, pretty much, coming on towards the last of June; the other month there is not much fishing done for haddock.

Q. When does the haddock fishing begin?—A. About the 20th or 25th of May generally.

Q. What is the reason, do you think, that the fishermen are so careless about protecting the berried lobster?—A. I do not know, except that when a man gets them he doesn't like to let them go, that is the only thing I can attribute it to.

SESSIONAL PAPER No. 22a

Q. It has been proposed among other suggestions made to the department with a view of protecting the lobster, that the lobster fisherman should be obliged to take out a license, he need not perhaps pay anything for it, but he would have, before he began fishing lobsters, to take from the fishery officer who comes around, a license on a printed form. The idea of those who suggested it is that a man having a license of that kind would feel himself bound to observe the law and he would be likely to keep a good lookout for others who did not. Do you think it would have that effect?—A. I am sure of it.

Q. And if any person holding a license were found to be persistently breaking the law he would not be given a license in future and could not therefore fish lobsters. That is suggested as one way of getting the fishermen to observe the regulation with regard to the berried lobster particularly.—A. That should be done, it is pretty hard for a man to get out in his boat and measure every lobster coming into that boat, it is quite possible he might unintentionally bring in a lobster that is a little too small, and the small lobsters are not making much difference. But with regard to the berried lobsters it should. In a storm or anything like that he might not see the small lobster and might pass him over, but small lobsters I would not have anything to say about them, but the berried lobster he can easily see.

Q. With regard to the small lobster, do you think it is wise to destroy him? Isn't it better to wait until he comes to maturity?—A. I do not know I am sure.

Q. They grow 2 inches a year, at least an 8-inch lobster is supposed to be three years, and is it not a short-sighted policy on the part of the fishermen to destroy the small lobster?—A. I think to give every one fair play the lobster should be about 6 inches, and anything any less than that should be passed over, but when it comes to 6 inches a man should have a very good idea whether that lobster is worth taking.

Q. You think that if the limit were fixed at 6 inches the law would be observed?—A. I would say so, because I do not think anything under 6 inches is much good to the canner or any other man.

Q. It is not a question of whether it is much good, but whether it is right to destroy the lobster at that age. The lobster is not supposed to reach the size at which it reproduces itself before it is 8 inches, and if you destroy your lambs and your calves what is going to happen? That is what has brought about the difficulties in the lobster business, the destruction of the immature and the berried lobsters?—A. Oh yes, I hold to the berried lobster, I will pass her over every time.

Q. But you still stick to the small lobster?—A. Yes.

Q. What sort of a trap do you use here?—A. Oh the common style of trap.

Q. Is it the old fashioned double ender trap?—A. No, what they call the parlour trap.

Q. What space is left between the slats now?—A. One and a half or two inches.

Q. You ought not to have many small lobsters if you have a space as wide as that?—A. About that, one and a half inches.

Q. What do you use for a gauge?—A. Generally a small lath.

Q. A lath is only one and a quarter inches wide?—A. About one and a half inches.

Q. What do you think of the matter of licensing the canneries? Do you think there should be any limit to the number of canneries? The practice of the department for some years back has been, you will understand, to limit the number of canneries with a view of protecting the fishery. There are not now nearly as many canneries in operation as there used to be; do you think that is a wise thing to do, to keep down the number?—A. I do not know, I do not see much use in that; the lobsters will be canned anyhow and I do not see how it matters who cans them.

Q. Do you not think that if there were more canneries more lobsters would be caught?—A. No, I do not think there would be; I think pretty much anybody who can fish is fishing now. I cannot see where there is room for any more to put their gear out.

Q. Have you ever heard anything about pounds and hatcheries?—A. They were around here two or three years for the berried lobsters.

9-10 EDWARD VII., A. 1910

Q. Did they come very often?—A. Two or three times.

Q. That was for Mr. Baker's pound at Fourchu?—A. Yes, he had a steamer come here a couple of times, that is all.

Q. How did they carry those lobsters? Were they put in crates or how?—A. I do not know, I know he came and took them.

Q. It was a long way to come for berried lobsters?—A. Yes.

Q. The idea in encouraging the establishment of these pounds is that it is one way of protecting the berried lobster by holding out some inducement to the fishermen to save her, bring her in, by paying him as much or a little more than he will get for the general run of lobsters. The berried lobster is then turned into the pound where she can hatch out her eggs, and at the conclusion of the season she is set free again. Do you think there is any possibility of establishing a pound in this neighbourhood? You want a place with a narrow outlet, so that you can bar it across to keep the lobsters in, with free access for the inflow and outflow of the tide, it must be salt water, and a considerable depth of water, because they cannot stand the heat?—A. I do not know, unless it is just below here.

Q. You want some kind of narrow place which can be barred across?—A. They could not get it this side of the bay.

Q. Do you know anything about hatcheries?—A. No, I do not.

Q. They are established in the same way, the berried lobsters are brought into the factory and the eggs are scraped off them and are protected and cared for until the smack comes and takes them to the hatchery where they are hatched out in glass jars. Of course the best way of all is to put back the berried lobster into the water?—A. Yes, that is the best way there is no doubt about that.

Q. Another matter that I might ask you about in connection with the licensing of canneries is this, that in some places the fishermen have complained they are not getting enough for their lobsters, and there was a good deal of ill feeling in consequence, so the department decided to issue what they call co-operative licenses under which a number of fishermen who thought they could do better by canning their own lobsters would be given a license; that number was fixed at 15, what do you think of that?—A. That would be all right if the people were not satisfied with what they got.

Q. Do you think that 15 is a fair number, or should it be more or less?—A. 15 is, I think, plenty, if not too many.

Q. A number of other suggestions have been made to the Department by those interested, with a view of relieving the conditions which exist. One suggestion is to shut down altogether, to stop all lobster fishing for a term of years; how would that appeal to you?—A. I suppose it would suit all right if the people could live in the meantime.

Q. You think it would go pretty hard on some of them?—A. It would be hard on the people, how are they to live?

Q. You think there is nothing else they could do?—A. Oh well, they might go into codfishing or something like that.

Q. The Lobster Commission of 1898, composed of a number of gentlemen who were appointed to go around, take evidence, and make recommendations, reported in favor of shutting off by sections, that is stopping the fishery on one portion of the coast for one or two years, and then changing around so that all portions of the coast would be given a close season for a certain period. How do you think that would work?—A. That might work all right, but there would be, I suppose, a kick that way too.

Q. Another suggestion is to do away with the size limit altogether, it is difficult to enforce it, and it has not been enforced, and to protect the berried lobster as much as it is possible to do.—A. That is what I think would be the best thing in the world.

Q. That is the proposition, and at the same time you are doing away with the size limit to shorten the season a little by way of compensation?—A. I do not know about that, but to do away with the size limit would be a very good idea as well as to protect the berried lobster. the law should be very strict about that.

SESSIONAL PAPER No. 22a

Q. And in exchange for doing away with the size limit the Department might fairly say: 'If we do away with that we want something in return and therefore we propose to shorten up the season by ten days.' Is it not at the end of the season, in July, that the most damage is done by the destruction of the small and the berried lobsters?—A. Yes, I think it is, I know myself that you generally get a run of small lobsters then.

Q. How would it affect you here generally if the season were shortened by about ten days? Of course we know you do not begin to fish until the middle of May or sometimes even until June.—A. That is the point, I think that with any people who can start out on the 1st of May you could shorten it that way, but when you cannot commence until the 1st day of June if you shorten it by ten days then they have very little time to fish at all.

Q. I suppose you have never done anything in the way of the live lobster trade here, you have never sent them alive to market?—A. No.

Q. You are too far out of the way for anything of that kind?—A. No, we have never done it, we are too far out of the way.

Q. Is there anything else you would like to say or any suggestion you would like to make, is there anything I have not covered?—A. I have'nt anything else to say.

Witness discharged.

ROBERT JACKSON, fisherman, Ingonish, called and sworn:—

By the Commissioner:

Q. You live in Ingonish and have always lived here?—A. Always.

Q. How long have you been engaged in the lobster business?—A. About 10 years I guess.

Q. Then you did not begin at the commencement of it?—A. No, sir.

Q. But you can go back to the time when there was no lobster fishing, you can remember when there were no canneries here?—A. I do.

Q. When did the canning first begin here?—A. Somewhere about 25 or 30 years ago.

Q. Were the same canners that are operating now here then?—A. No.

Q. Who was the first man to begin?—A. A man named Fitch from Halifax was the first.

Q. What is your experience in connection with the lobster fishery, how is the lobster fishing today compared with what it was when you were young?—A. I know there are not half as many taken, and I know they are not half as big.

Q. They tell us in a great many places that they have run down in the size and that the quantity taken must be as large as they were before?—A. There might be as many in the water, but they are not as large a run of lobsters I know in this place.

Q. What do you attribute that decrease to?—A. Well, continual fishing is what is doing it.

Q. And do you think that the destructive methods of fishing has something to do with it? Is it fair to say that the waste of the spawning fish and the small lobsters have been the greatest factors in the destruction rather than anything else?—A. That might be.

Q. I do not want to put words in your mouth, you have your own opinion about it?—A. I do not know.

Q. At all events you will say that it was overfishing?—A. That is what I would think, it would be overfishing and not giving the lobsters time enough to grow big.

Q. That is the best way to put it I suppose. What is the number of traps fished by a lobster fisherman now?—A. From 100 down.

9-10 EDWARD VII., A. 1910

Q. Is that a single-handed boat?—A. When a man has 100 traps or over he has two men; a single-handed boat has 50 or 60 traps.

Q. How are these generally fished, single lines or on trawls?—A. No, not on trawls, single lines.

Q. What is the advantage of single line fishing over trawl fishing?—A. You can move them around more easily.

Q. How often are they fished, once or twice a day?—A. Once a day.

Q. Where they are fishing single, they sometimes fish twice a day?—A. There are some who fish twice a day when they are running.

Q. How do you fish at the beginning of the season?—A. In 8 to 10 fathoms.

Q. That does not take you very far from the shore?—A. No, the water is deeper around the Island than what it is on the mainland.

Q. What kind of a bottom have you there?—A. Rock and kelp.

Q. That is the best bottom for lobsters?—A. Yes.

Q. A sandy bottom is no good?—A. No, nor a mud bottom.

Q. Do you think on the whole that you get a smaller run of lobsters late in the season, in shoal water, than you do early in deep water?—A. I think we do.

Q. And do you think it would be right to say that you get more berried lobsters?—A. Yes, coming on the last of July we get more seed lobsters than we do at any time of the year.

Q. You see them at all seasons?—A. Yes, but they are not so plentiful.

Q. Are the fishermen fishing more gear now than they used to?—A. No, I do not think so, they are fishing about the same quantity.

Q. Do you think that the traps used now are any more destructive to the lobsters, that it catches a smaller lobster than the one you formerly used?—A. No, I do not think so, but when a lobster gets into the trap he cannot get out of it.

Q. But do you think the slats are not put closer together than they used to be?—A. I do not know about that, some may have them closer and others may have them about the same.

Q. We find in some places that, by actual measurement, they are only half an inch?—A. That is not around here.

Q. What is the usual gauge, the slat itself?—A. Some take the slat itself and some the back of the hatchet, that would be about $1\frac{1}{4}$ or $1\frac{1}{8}$ inch.

Q. Do you think that the width of the opening between the slats in the trap will have anything to do with the catching of small lobsters? Will a fair size opening allow the small lobsters to escape?—A. Yes, it will.

Q. Does the small lobster try to escape when the trap is disturbed? Some say that he will not, but that he will take hold and hang on?—A. No, I have seen them come straight off the head of the trap, and get right straight out.

Q. What size mesh is there in the net at the end of the trap?—A. $2\frac{1}{2}$ or 3 inches.

Q. What would be your opinion as to the percentage of undersized lobsters taken? Of course we know that the regulation calls for nothing under an 8-inch lobster, but we know also that that regulation has not been enforced, and I do not know that it ever was enforced. What percentage of the lobsters taken in the trap would be under 8 inches? They tell us in a good many places that if we enforce strictly that 8-inch limit it would put both the canner and the fishermen out of operations, that the quantity of lobsters taken above that would not be enough to keep them going.—A. It pretty nearly would do so in this place, there is a small run of lobsters here.

Q. Various suggestions have been made with a view of remedying this state of affairs, you have heard me, perhaps, tell the other gentlemen, what those suggestions were; you see the Department is continually in the receipt of advice from various quarters as to what should be done to improve matters. Some people say shut down altogether, close up the lobster fishery for a term of years, until things come back to where they were before and then start in with a new set of regulations.—A. That might suit some, but those who are depending on what they get from the lobster fishery

SESSIONAL PAPER No. 22a

at the first of the season would feel it pretty hard if they had their earnings cut off.

Q. I suppose there is a large portion of the population that depend upon the lobster fishing for their early spring earnings?—A. Oh, yes.

Q. What would you say is the average earning of the lobster fisherman? You can get at it I suppose by knowing how many thousand pound he catches?—A. I could not tell you, some of them do well at it, and others do not do as well.

Q. That is the same way with everything, but there will be an average I suppose?—A. Yes, I suppose Mr. Burke will have a good idea on that.

Q. I suppose the fishermen here own their own boats and gear?—A. Yes, pretty much all.

Q. The last Lobster Commission, in 1898, composed of a number of gentlemen from various provinces, who were appointed for that purpose, went around and interviewed the fishermen and sent in their recommendations. The first recommendation they made was that we should close down by sections, that a certain part of the coast should be shut down for a year or two, and the other parts be allowed to go on and fish, and that then the first part should be allowed to resume fishing and another part be closed off and so move it around until all the coast had had a close season, what do you think of that?—A. I do not know how that would work around here; I do not think it would do very well.

Q. The opinion among fishermen seems to be that the proposition is one that it would be very difficult to entertain, and after all it does not appear to them that the fishery has reached a stage to call for such a severe remedy. Another recommendation that has been made is to do away with the size limit, which never has been and cannot be enforced, as they say you would need an officer in every boat in order to enforce it, and to strictly protect the berried lobster by some means or other.—A. That is the right thing to do.

Q. Do you think the best way to do that is to put her straight back in the water, if everybody would do it?—A. Yes.

Q. And in return for doing away with the size limit altogether, it is necessary to do something to balance that, it is thought that it will be necessary to somewhat shorten the season. The general feeling among careful fishermen and among packers, too, is that the greatest part of the damage is done during the last few days of the season?—A. If we were sure to be able to commence the fishing on the 1st of May in every season it would be all right, but our time is so uncertain you see.

Q. The theory upon which all these recommendations are based is this that if that regulation were enforced and lived up to for a few years the fishery would be so improved that all the fishermen would be recouped for any temporary loss they might sustain, do you not think they would?—A. Yes, I think they would.

Q. Others again have said: 'Give us a 7 inch limit and we will not take any smaller lobsters, and then protect the berried lobsters and we will get along all right.'—A. Yes.

Q. But you see at one time it was a higher limit, 9 inches was the limit, and they said: 'Give us an 8 inch limit, the 9 inch limit is not observed, but if you give us an 8 inch limit we will live up to it.' The 8 inch limit was established, and while it may have been observed in the early days of the regulation we find that there is very little pretense of observing it now and they say that the limit is not enforced and cannot be enforced but if they had a 7 inch limit they would live up to it. They contend that it is a mistake to have an 8 inch limit that is not enforced?—A. It is not good.

Q. But will it be any better if the limit is made 7 inches than it was before? Do you not think that shortening the season the way I speak of by ten days would do the least harm to the fishermen of all these remedies? There are other fisheries of course they can go to then, and the fact is that towards the close of the season a great many canneries do shut down, and do not operate until the close of the season; a great many fishermen also knock off fishing so that the whole thing is pretty slack towards the end?—A. Yes, that is so, and they are not catching any.

9-10 EDWARD VII., A. 1910

Q. What do you think of this other proposition to license the fishermen?—A. I do not know.

Q. The proposal has been made that the lobster fishermen should be required to take out a license?—A. I do not approve of that myself.

Q. It does not follow that he would have to pay anything for it, but simply when the fishery officer came around to pay the bounty in the spring, those intending to fish the lobsters would take out a license. The idea is that the man taking out a license would feel himself to be, to a certain extent, an officer of the law and would be more apt to observe the law and see that others did the same. In the event of his turning out to be a persistent violator of the law he would lose his license, and another year he would not be able to fish lobsters at all. That is the theory on which the proposition is made. Do you think it would be workable and would have the effect they say it would?—A. I think the best thing would be to wipe out the size limit altogether.

Q. And what about the shortening of the season, we would require to have something on the other side to balance the wiping out of the size limit?—A. It might work that way better than the other way.

Q. As to the matter of the price paid for the lobsters, who fixes that, how is it arranged? Some people think the canners are making great fortunes out of it?—A. There is no fortune to be made out of it, I don't think.

Q. I suppose all that is a matter that has to be regulated by the market, is that the way you feel about it? Are the fishermen generally satisfied that they are getting their share?—A. I think so.

Q. The market for lobsters fluctuates the same as the market for any other thing?—A. Yes.

Q. How does the price paid now compare with what you had when you first began to fish?—A. I think that the price is better than it used to be.

Q. It is a great deal better generally in my country; then we bought lobsters by count at 40 or 50 cents a hundred.—A. I think when they first started canning lobsters here it was 50 cents a hundred.

Q. And the price has greatly gone up over that?—A. Yes.

Q. What is your own experience of the practice generally with regard to the berried lobster here? Do you think that there is a growing feeling that she should be saved, and that, generally speaking, the fishermen are more disposed to-day to put her back in the water and protect her than they used to be?—A. I certainly do, and I would be loath to think that any fishermen in Ingonish would take the berried lobster; if it were not so we would run out of lobsters here very quickly.

Q. Do you think that the regulation has been fairly well observed?—A. As far as I know about it.

Q. Have you ever noticed the size of the berried lobster? What is the smallest lobster you ever saw with berries on?—A. I have seen them as small as 8 inches, but I do not think you ever see any with berries on less than that; I have come across 2 or 3 about 8 inches, but I never remember seeing any less than that.

Q. Do you think that the lobster with berries on is more delicate than the ordinary lobster?—A. Well, I do not know about that I am sure.

Q. Where they ship them alive to the market they say that the berried lobster will not stand any exposure?—A. They say that if they lose any spawn they are apt to die right away.

Q. They are very careful not to take any berried lobsters with the spawn brushed off them, they will not take them because they die immediately?—A. I guess that is so.

Q. Do the canners here object to receiving berried lobsters?—A. Yes, they strictly object.

Q. Is that only of recent years, or was it always the case, or do you know about that?—A. Ever since I have been fishing they have been very careful of the spawn lobsters and of the small ones.

SESSIONAL PAPER No. 22a

Q. Do you not think that the fishermen expect the canner to take everything that is brought to him?—A. I do not think they do.

Q. Would there be any other market for your lobsters?—A. Not here, there would not; what few could be shipped from here one man could supply all the market there would be for them.

Q. That is the local market?—A. Yes, North Sydney is the only market we can get for them, and that market will not take a great many, one man can supply that.

Q. Have you any idea as to where the live lobster trade can be carried on, which branch of the fishery is the most profitable to the fishermen, the live lobster trade or selling to the canner?—A. No, I have not.

Q. You never had any experience?—A. I never had any experience of that kind, oh no.

Q. Is there ever any fishing done here outside of the season, any packing or anything of that kind?—A. No, I know of none here.

Q. It has been alleged that in some instances the fishermen have suffered injury by the failure of those holding canning licenses to operate the factory, although a sufficient supply of lobsters to enable them to do so was available. Do you know anything about that?—A. No.

Q. Do you think there is any combination on the part of the packers to keep down the price?—A. I do not know that there is, I would not like to say so anyhow.

Q. That is one of the things that one thinks about sometimes, but will not say anything about?—A. Yes.

Q. Do you think the fishermen would make any more money if they were allowed to can for themselves?—A. I do not think so myself.

Q. It requires some capital and business experience to operate the canneries successfully.—A. And if a man went to work to can them he could not spare the time to go out and get them, so that what they gain in one way they would lose in another.

Q. Have you any knowledge of the system of hatcheries and pounds and things of that kind?—A. No, I never saw any of them.

Q. For the hatchery we have the fishermen bringing in the berried lobsters to the cannery where the eggs are stripped off them, and then the eggs are sent to the hatchery?—A. I would not think that the egg would hatch until it came to perfection, and that it would do better when on the lobster itself.

Q. Of course, if the eggs are not very far advanced it will take a longer time to hatch them than if they are almost ripe when they are stripped off the lobster. Sometimes they hatch almost as quick as they are brought into the hatchery; they are kept dancing about in the glass jars in the hatchery as though they were in the sea?—A. Yes.

Q. With regard to the pounds, that is another way of protecting the berried lobster, instead of taking the berries off her they put her into a pound and keep her there until the fishing season is over and then turn her loose to hatch out her berries. Are there any facilities here, do you think, for carrying on a pound?—A. I do not think there are.

Q. I think you told us that the best part of the fishing season was the early part, when the fishing industry is most actively prosecuted?—A. Yes.

By Mr. McKenzie, M.P.:

Q. I think the Commissioner asked you the number of berried lobsters you got out of every hundred, how many did you say?—A. That depends a great deal on the place you are fishing, some men fish in so many different places, and you will get more berried lobsters in one place than you will in another. Some men will get more berried lobsters than other men will, but I do not ever remember getting over 8 or 10 in the hundred in the best of the fishing.

9-10 EDWARD VII., A. 1910

By the Commissioner:

Q. And the average would not be as high as that?—A. That would be, of course, in the bay fishing, there may be some difference when we are fishing at the Headlands, you know.

By Mr. McKenzie, M.P.:

Q. Have you any idea whether the lobsters travel far away from one place to another? Or do they simply back off the shore in the winter and come back in the spring? Have you any information about that?—A. By the way they work out in the spring it appears that they back off into deep water, and they would not be far away, because as soon as the spring comes they are here very early, so that they cannot be a very great distance off.

Q. So that if the Ingonish lobsters stay here and do not go to Neil's Harbour, and the Neil's Harbour lobsters do not come here it is very important to the fishermen that you should save your own seed lobsters here?—A. Yes, I think so.

Q. Because if they do not breed on these grounds you exterminate them altogether?—A. I know that a great many spawn lobsters were taken from here one summer and we found the effect of it afterwards.

By the Commissioner:

Q. They do not distribute the lobsters from the pound here?—A. I do not know about that, but I know that two or three years we felt it.

By Mr. McKenzie, M.P.:

Q. You have had no competition here from outside fishermen coming in?—A. No, I do not know of any.

Q. We had a complaint at Neil's Harbour yesterday that some of the packers supplied boats and gear to fish with, and that men came in from the outside to fish them. You have none of that here?—A. Not that I am aware of, I never heard of it.

Witness discharged.

S. S. BURKE, packer, Ingonish, called and sworn:—

By the Commissioner:

Q. How long have you been engaged in lobster packing?—A. 14 years.

Q. Were there other canneries here before you began?—A. Yes, many years ago.

Q. Whose cannery was that?—A. Pitts.

Q. Was he the first here?—A. The first in Northern Ingonish.

Q. How long before you commenced was it that he began?—A. It must have been 25 or 22 years.

Q. Then the fishery commenced here a good many years ago?—A. Yes.

Q. What became of him, where did he move to?—A. At that time he owned most of the gear and supplied the fishermen, and the storms destroyed it all and he failed, that is how I understand it was.

Q. Has it been your practice to employ fishermen and supply them with gear?—A. It has, I used to supply it but the last few years they found it.

Q. What difference used you to make between those who fished their own gear and those who fished your gear?—A. About \$1 a hundred.

Q. You paid the men who fished your gear about \$1 a hundred less?—A. Yes.

Q. Had you any reason to think they were not careful of the gear when they were working on that line?—A. Yes, I did have.

SESSIONAL PAPER No. 22a

Q. Did it happen to you that they abandoned the fishery and left the gear in the water?—A. Well, the storms were so frequent in those days.

Q. How many boats do you employ here now?—A. About 20 or 22.

Q. What is the extent of your pack?—A. It differs, this year it was one-third less than last year. Last year we packed 294 cases, this year 203.

Q. That was due to the rough water and the poor fishing generally?—A. Not to the poor fishing altogether, but to the destruction of the gear.

Q. It was because there was nothing left to fish with?—A. That was it.

Q. What percentage of the gear is lost every year?—A. Some years there is scarcely any lost but this year almost all of it was lost.

Q. What number of hands do you employ in the cannery?—A. 12 or 13 hands.

Q. That is men and women?—A. Yes, sometimes less and sometimes more.

Q. What is the wage generally paid a sealer?—A. \$35 and board.

Q. And how are the girls paid?—A. \$12 and \$15.

Q. That is per month, and they board themselves?—A. Yes.

Q. I suppose all your help is obtained in the neighbourhood?—A. Yes.

Q. What is your experience during the time you have been packing? How do the lobsters run to-day compared with what they were when you began?—A. When I began there was not anyone fishing here very much for 15 years; there were a few fishermen on this side of the bay who sold their lobsters to the packers on the south side of the bay, and there were not so many traps fished here. The first year I packed 600 cases with 1,000 traps.

Q. How many traps do your fishermen fish altogether now?—A. About a thousand.

Q. You think there is no more gear in the water now than there was then?—A. Not in my opinion.

Q. How do the fish run with regard to size?—A. They are smaller.

Q. Have you any idea how many fish it takes in your case to fill a pound can? What is your average in that respect?—A. It takes 250 to 300 at the first of the season, it takes more lobsters to fill a case then than in the latter part.

Q. How many lobsters do you consider it takes to make 100 pounds?—A. It takes 150 lobsters on the average to make 100 pounds, in some localities 100 lobsters will average a pound each, but not the general average.

Q. How many pounds of green lobsters do you require to a case?—A. About 275, anywhere from 250 to 300 pounds, it depends upon the season.

Q. At the first of the season they are not as good an average as they are later?—A. No.

Q. How would it affect you if this regulation regarding the 8-inch limit were enforced?—A. We would not pack as many lobsters.

Q. But would it put you out of business? Would you pack so few that you would have to give up?—A. No.

Q. In what style of can do you mostly pack your lobsters?—A. Pounds and halves.

Q. You do not come down to quarter pounds?—A. No.

Q. As to the matter of licenses what is your opinion, do you think the Department is wise in their policy of restricting the number of licenses?—A. Well, that is a question that I am not—I think there are enough canneries on the coast now.

Q. Then you think the Department's policy in keeping it limited is wise?—A. Yes.

Q. Is it your opinion that if there were more canneries there would be greater destruction of lobsters?—A. It is.

Q. What do you think of the policy of the Department in the matter of co-operative licenses? There are, of course, complaints from the fishermen in various sections that they are not getting a fair show and the Department replied: "Very well, if a number of you will combine together we will give you what we call a co-operative license and you can can for yourselves." Do you think that should satisfy the fishermen?—A. Yes.

Q. You think that meets the difficulty?—A. Yes.

9-10 EDWARD VII., A. 1910

Q. Would you keep the number at 15 or would you keep it lower—A. I think that if that number agree to work together they should have a co-operative license.

Q. What is your opinion about the various remedies that have been suggested to bring about an improvement in the existing condition of the lobster fishery? What do you think of that idea of closing down altogether for a number of years?—A. I think if that were done it would certainly give an impetus to the lobster fishery.

Q. If it were shut up altogether?—A. Yes, but the trouble is that it would be pretty hard on both the packers and the fishermen. But it is the only true solution, I believe, to close down for a number of years.

Q. What do you think of this other proposition to do away with the size limit and shorten the season?—A. If I were making the law I do not think I would reduce it below 7 inches, and I would have that regulation strictly enforced.

Q. Do you not think there would be the same trouble about enforcing that as there formerly was with regard to the 9-inch limit as there now is with regard to the 8-inch?—A. It all depends on the canneries, whether they are taking them or not.

Q. Would you leave the onus on the canners instead of on the fishermen?—A. Certainly.

Q. About that matter of the protection of the berried lobster do you not think that the berried lobster should be returned to the water by the fisherman?—A. Certainly, we never take the berried lobster. I will say this for the fishermen here that they are very particular about that, and have been for five years.

Q. Was it ever the practice here to strip the berries off her?—A. Yes, it was.

Q. You think if the canner were to absolutely refuse to receive illegal lobsters that would settle the matter?—A. I think it would.

Q. You think you could get along and do that?—A. I do.

By Mr. McKenzie, M.P.:

Q. That is with a 7-inch limit?—A. Yes, with a 7-inch limit.

By the Commissioner:

Q. What is your opinion on that matter of pounds the holding of the seed lobster in pounds until the season for spawning is over?—A. I have no knowledge of those pounds, I do not know anything about them.

Q. Then as to the matter of hatcheries, have you any knowledge about them?—A. I have no knowledge of them either.

Q. Would you favour the erection of more hatcheries where it is possible to have a supply of eggs for them?—A. If they were liberated at the proper spot and the proper time I think that would be the natural way of propagation.

Q. Is it your opinion that the present impoverished condition of the lobster fishery is due to overfishing?—A. I see no other cause for it, no other explanation.

Q. Do you think it is in the interests of the lobster fishery that lobsters should be taken before they reach the age of maturity or the age at which reproduction is reached?—A. No they should not be fished.

Q. What do you think about the shortening of the season yourself?—A. Well, the last two weeks in July are no good to the packer or to the fishermen.

Q. And do you think also that it is during those last two weeks the greatest harm is done?—A. Well, I do not know, the people who put their traps out in deeper water the last two weeks get better lobsters than are taken in shoal water.

Q. That is those who go to deep water get a better run?—A. Yes.

Q. The majority of the fishermen come closer in shore towards the close of the season?—A. Yes, they do.

Q. How would it affect you and the most of the fishermen here, if the season were shortened?—A. I believe it would be better if it were shortened ten days.

Q. Is it the case that fishermen begin to slack off about that time, and that some of them go to other fishing?—A. Certainly.

SESSIONAL PAPER No. 22a

Q. And as far as the canners generally are concerned they would be satisfied to see the season shortened?—A. I speak for myself merely.

Q. Many of them tell us they would rather shut down earlier?—A. I think so.

Q. Do you think it is the case that canners are compelled to take small and berried lobsters for fear of losing their fishermen?—A. No.

Q. Have the regulations ever been very strictly enforced within your recollection?—A. Yes.

Q. When?—A. Not in my time, but to my knowledge on several occasions they have been strictly enforced.

Q. Have you ever been fined?—A. Yes.

Q. How long ago, it must have been a long time?—A. The first and second years I was packing.

Q. I thought it was a long time ago. With regard to the live lobster fishery, you have no opportunity of carrying it on here?—A. No.

Q. You are too far away from the market, and the means of getting the fish rapidly to the market do not exist here, so there is no use discussing it?—A. No.

Q. There is one other matter I want to ask you about, do you think we should exact some standard in the cannery? It has been proposed that we should say that the tables should be covered in a certain way, and that certain care should be observed in putting up the pack?—A. Yes, I think it would be good for everybody.

Q. Do you think it would have a good effect on the market generally if that were done?—A. I think so.

Q. I suppose it is the case that the good packer suffers on account of the misdeeds of the careless one?—A. I think so.

Q. Do you think it would be wise to inspect the pack officially the same as pork, butter, and certain other food products are inspected?—A. Certainly, it is to the packer's own interest anyway.

Q. I suppose the price paid for lobsters is dependent on the market?—A. Yes, last year we paid \$3.50, this year we paid \$2.25, that was all we could afford to pay.

Q. Is it to your knowledge that there has been fishing and packing carried on after the close of the season? In some places we find there is fishing after the close of the season and some illegal packing carried on?—A. Not that I can prove.

Q. What do you think of the method of stamping or labelling the cases, is there any good produced by that?—A. I think so, I think it is a check on sending out something that was not legally packed.

Q. The idea was that labelling the cases would put an end to the sale of lobsters that are caught and packed after the season, illegal lobsters, but it does not seem to have done that.—A. There is another way of sending them out if they want to get around the law.

Q. By unpacking the cases and packing them over again?—A. Not exactly that.

Q. Some underground way?—(No answer.)

Q. What do you think about fishing in the shoal water of bays and lagoons? Do you think that fishing in very shoal water should be allowed, or do you think there should be a limit in that respect?—A. In this bay the water is very shoal anyway and at the first in the spring there are a good many lobsters come in, and they stay in shore most of them until they are caught up.

Q. What is the general nature of the bottom of the bay?—A. They fish generally on the rocky bottom, they will not fish on the sandy bottom because they will not get any lobsters.

Q. Are hoop nets used here at all?—A. Not now. The berried lobsters were very scarce this year, I never knew them to be as scarce as they were this year. They are much less than 10 in a 100 in my opinion.

Q. Do you think they ever go that high?—A. No, I do not think so.

Q. I do not think they ever go, at the very outside, more than 5?—A. That is about it.

9-10 EDWARD VII., A. 1910

Q. So that it would not be such a serious matter for the fisherman to return those fish to the water? He would not lose so much, and he would ultimately gain a great deal?—A. Yes, I think that is quite true.

By Mr. McKenzie, M.P.:

Q. There is no branch of the Fishermen's Union here, is there?—A. No.

Q. With reference to the number of fishermen required to obtain a co-operative license, 15, I think perhaps that number has its origin in the provincial legislation which fixed 15 as the basis for the formation of a Union. The Nova Scotia Act provides 15 fishermen may organize themselves into a Fishermen's Union, and possibly the Dominion Government took that as a cue when fixing the number necessary to obtain a co-operative license. Now, supposing these 15 fishermen got together and made up their minds that they would pack lobsters, what would it cost them to fit out their cannery, to say nothing about fitting out for catching lobsters, what would the outfit for the cannery cost them?—A. You mean including tins, solder, everything ready for canning and the building?

Q. No, because the cost of the tins would be large or small according to their catch, but I mean the necessary outfit for the cannery?—A. If there is a standard put on by the Government as Commissioner Wakeham has suggested, that would all depend upon the requirements of that standard.

Q. I mean having the tables covered with zinc, for instance.—A. Then of course they can put up a very rough shack for packing lobsters as long as it is tight and clean inside, that could be put up for \$100, and then there is the boat and everything else, I think \$250 would start a small cannery.

Q. Would that cover everything?—A. I mean there is the labour besides that.

Q. \$250 would cover the things they would have to buy outside of their own labour??—A. Yes.

Q. How many traps does the ordinary fisherman fish?—A. From 50 to 100, about 75 on the average, a good many of them fish 75.

Q. That is for one man, and every man owns his own traps?—A. Yes.

Q. What does it cost a man to build or buy, and fit up, say 100 traps?—A. Clear of his own labour, including rope and everything, it would cost him \$30.

Q. That is the material?—A. Yes.

Q. And if he had to buy them?—A. It would cost him \$50.

Witness discharged.

Commission adjourned.

GABARUS BARACHOIS, August 30, 1909

E. G. WHITMAN, packer, Beaver Harbour, Halifax County, called and sworn:—

By the Commissioner:

Q. You are managing the cannery here for whom?—A. B. F. Smith & Co., Halifax.

Q. How long have you been connected with this cannery?—A. With this company do you mean?

Q. Yes?—A. I have been connected with them about 10 years.

Q. How long have you been here at Gabarus for them?—A. I think this is the fourth season.

SESSIONAL PAPER No. 22a

Q. What is the extent of the cannery, how many cases did you put up this year?
—A. 200.

Q. And last year?—A. I could not give you the exact figures.

Q. About how many?—A. Well, over 400 anyway.

Q. And the year before, 1907 and 1908 we find in most cases were pretty fair years?—A. Ours were pretty small.

Q. What was the largest pack ever put up here, do you know?—A. Last year, something about 400 cases.

Q. How many boats fish for the cannery?—A. It is pretty hard to get at that, some days you will get a good many and other days there will not be so many. I think I have the names of 24 or 25 fishermen on the books.

Q. These all own their own boats and gear?—A. As far as I know.

Q. The factory does not supply the boats and gear?—A. No.

Q. When did you make your first pack this year?—A. May 20th I think it was.

Q. The 20th of May or June?—A. May.

Q. And when did you close down?—A. We closed down the 2nd of August.

Q. You canned right up to the close of the season?—A. Yes.

Q. About what time does the fishing begin?—A. On an average about the 15th of May, some years it is earlier and some later.

Q. The opening of the season depends upon the ice conditions, whether the ice has gone or not?—A. Yes.

Q. This is a pretty exposed place, is the loss of gear pretty large?—A. Yes.

Q. The fishermen lose a lot of gear?—A. Yes.

Q. Are you fishing a larger amount of gear now in order to keep your cannery going than you used to formerly?—A. Not that I know of, the fishermen, of course, could answer that.

Q. From your own observation as a canner what do you consider to be the spawning month of the lobsters?—A. We get them with berries on the whole season, right through the season.

Q. Is there any particular time when there are more of them coming in?—A. I should say in July.

Q. Do you believe that the lobsters approach the shore for the purpose of spawning?—A. I could not answer that.

Q. They do come to the shore?—A. They do come towards the shore.

Q. And they come in shore in the warm weather?—A. Yes.

Q. Can you tell me what number of lobsters it takes here to fill a pound tin, what is the average?—A. It depends on the size.

Q. What is your average?—A. I do not know, we bought by weight this year, and I could not tell you the average.

Q. How many lobsters does it take to make 100 pounds?—A. By count?

Q. Yes?—A. It is pretty hard to tell that.

Q. Then give it by weight, you have no record of that?—A. No.

Q. Do you know how many lobsters it takes to fill a case?—A. I can tell you by weight, but probably the fishermen could tell you better.

Q. What amount does it take?—A. 240 pounds by weight on the average.

Q. Is there any time in the season when the lobsters are in better condition than at another time?—A. Yes.

Q. When are they at their best?—A. I should say about the 1st of July.

Q. They will yield more meat then than they will when you first get them in the season?—A. Yes.

Q. Can you give me any idea what will be the proportion at your cannery of lobsters under the 8-inch limit?—A. It is pretty hard to tell that, we never measure any.

Q. You take them as they come?—A. Yes.

9-10 EDWARD VII., A. 1910

Q. Is there a large proportion?—A. If the law were strictly enforced as to the 8-inch limit where would it land you?—A. I do not know, I cannot say, we would have been all right this summer.

Q. They have run large?—A. We haven't taken any from the inside this year, they were all outside lobsters.

Q. Is it the case that the lobsters taken from outside in the deep water are better than those taken in shoal water?—A. I do not know about that, but the lobsters caught outside are better than those taken in the harbour.

Q. What time are they caught in the harbour?—A. At the same time as outside.

Q. Are they in there as soon as they are outside?—A. I think so, the fishermen can tell you better about that.

Q. You cannot give us any definite information about the size of the lobster?—A. No.

Q. Is the practice of stripping or washing the eggs off the seed lobster followed by the fishermen?—A. I could not tell you.

Q. In recent years, since the pound has been established here, I suppose all the berried lobsters go to the pound?—A. Except this year, a great many of them this year were thrown away.

Q. They were put back into the water?—A. Yes.

Q. Would it be difficult to tell at the cannery whether the lobster had been stripped or not?—A. Well, no, not if you examine them.

Q. Is it the practice to examine them to see whether they have been stripped?—A. No.

Q. Then again as to the matter of the size limit which is 8 inches, is it not?—A. Yes.

Q. If the canner refused to accept lobsters under that limit what would happen?—A. Well, I should say that the fishermen would feel the result.

Q. You think the fishermen would feel the result?—A. Yes.

Q. What price has been paid for lobsters here this season?—A. \$2.25 and \$2.50 and \$2.75.

Q. You have paid as much as \$2.75?—A. Yes.

Q. How was that, did they advance in price as the season advanced?—A. Yes.

Q. Who fixes that as the standard price? Do the companies generally fix it?—A. Generally.

Q. Is there any arrangement among the companies as to the fixing of that price?—A. Not that I know of.

Q. Was there any competition this year here, was that what led to the advance in price?—A. I do not know whether it was or not, I am sure I could not say.

Q. Were the fishermen satisfied with the price they got?—A. I could not tell you that.

Q. You heard no grumbling?—A. Oh, yes, there was grumbling.

Q. What was the price paid last year?—A. All prices were paid, I bought as high as \$4.

Q. What did you begin the season at?—A. \$3.75.

Q. And it went up to \$4?—A. Yes.

Q. What led to that rise, what was the cause of it?—A. Opposition.

Q. Can you tell me whether the regulation established as to the size limit is enforced in this division or not?—A. No.

Q. Has it ever been enforced to your knowledge?—A. I don't think.

Q. Everything that the fishermen brought in was received by the canner?—A. Yes.

Q. Where do you draw the line, what is the smallest run of fish that you will take?—A. We take everything that they bring along.

Q. Down to what size?—A. I could not tell you that.

Q. Down to four inches?—A. I do not think we come that small.

SESSIONAL PAPER No. 22a

Q. Where would you fix it?—A. I do not think they would stay in the traps that small.

Q. The statement has been made authoritatively that a strict enforcement of the 8-inch limit would put the canner out of business?—A. Well, if it would put the canner out of business it would put the fishermen out as well.

Q. But what about the canner, is the quantity of small lobsters canned here so great that if it were put into force it would shut the canneries up? You see we have the evidence of some of the canners in parliament last winter about that?—A. It would be a great hindrance.

Q. Is it the case that canners are compelled to accept undersized lobsters for fear of losing their fishermen?—A. I do not know.

Q. As to the matter of licenses, you are aware it has been the policy of the department to restrict the number of licenses; do you think there are canneries enough in existence?—A. Well, I think there are at the present time.

Q. Do you think there is any good reason why one man has not as good a right to get a license as another?—A. He has just as good a right.

Q. Do you think in that case it would be wise to insist upon a standard? It would not do to give a license to everybody that applied for it?—A. No.

Q. Do you think it would be wise to insist upon some standard of cannery that the cannery should be up to a certain standard and be prepared to can lobsters in a certain way so as to guarantee the quality of the pack?—A. Yes, I think so.

Q. How do you do with regard to your tables here, what are they covered with?—A. Zinc.

Q. I suppose it is necessary in a cannery to be particularly careful as to cleanliness?—A. Yes.

Q. What is the first point to look after in canning lobsters, what is the first consideration?—A. In regard to cleanliness, do you mean?

Q. What is the first thing to do? Is it to see that they are canned as soon after they are cooked as possible?—A. Yes.

Q. That is one of the first things to be looked after?—A. Yes.

Q. The meat must not lie about after cooking?—A. No.

Q. You are aware of course that the fishermen have complained that they did not receive as much from the canner, and that there is a good deal of friction on some parts of the coast, especially in Cape Breton, with regard to the matter, although it exists everywhere more or less?—A. Yes.

Q. Now the department to get over that difficulty, decided to issue a license to any group of fishermen who would get together and agree to co-operate, and in that way they have been issuing during the past two or three years, what they call co-operative licenses. Do you think that is sufficient to fill the bill, so far as the fishermen are concerned?—A. I should think so.

Q. Is it the case that a co-operative cannery has been running here?—A. I think this is the first year.

Q. Now, as to the remedy to be applied, a great many remedies have been suggested to the department. Some people say, those connected with the lobster industry say, that the right and simplest thing to do is to close down altogether for four or five years and allow the lobster to recuperate. What would you think of that?—A. I do not think that would be the right thing.

Q. What would be your reason for thinking that?—A. It would make pretty hard times for the first couple of years.

Q. The Lobster Commission of 1898, I do not know whether they came here or not, they went around collecting evidence and they recommended that temporary reserves should be established, that we should close down in certain sections of the coast, and move around that closed section gradually until the whole coast had been covered. How would that work do you think?—A. I do not know.

9-10 EDWARD VII., A. 1910

Q. That was their recommendation at all events. Now other people have recommended to the department that they should reduce the size limit from eight inches to seven inches, they say that the fishermen would be more likely to be careful in not taking any under seven inches if the limit were reduced. But you see we began originally with a 9-inch limit, which was not enforced, and then they said, 'Give us an 8-inch limit and we will be careful and live up to it.' They have had that 8-inch limit and now they say it won't work, and they are asking for a 7-inch limit, how do you think that would work?—A. I think that would be all right, anything under 7 inches would not be worth anything to the canner.

Q. Well you do can under seven inches?—A. Only a few, that is very small.

Q. But what sized lobsters are they using where it takes fifteen or sixteen to a pound can? We do know that it would take nine 7-inch lobsters. It has been suggested that the size limit should be done away with altogether, as it is difficult to enforce it, and in fact it cannot be enforced, because you would require an officer in every boat to do so, and that the berried lobster should be strictly protected in some way, also that the season should be shortened by ten days or so. The easiest of all the regulations to enforce is the one affecting the season?—A. Yes.

Q. How would that appeal to you? These are all remedies that have been suggested to the department by various people?—A. It is pretty hard to say.

Q. Which of all these propositions do you think is the one that is going to attain the end desired, save the berried lobster and continue the industry?—A. I should say by saving the seed lobster.

Q. How would you propose to save her?—A. By putting her back into the sea.

Q. Have you any idea of the number or proportion of seed lobsters to every hundred lobsters taken?—A. I have not, the fishermen can give you that better than I can.

Q. What is the average catch each season of an active fisherman?—A. The average catch?

Q. Yes, the average catch of a good active fisherman?—A. I should say that is pretty hard to tell this year, but take a good season.

Q. You know what you have done and how many thousand pounds a good man has caught?—A. This year the average was small.

Q. Of course they began late and they lost a great deal of gear?—A. Yes, and the average was 3,000 pounds.

Q. And last year when you had a good year what was the average?—A. I should say the average for last year was 5,500 to 6,000 pounds.

Q. That is an average catch for a double handed boat?—A. Yes.

Q. Most of the boats here are fished by two men?—A. Yes.

Q. Has there ever been any export of live lobsters from this neighbourhood to the market, to your knowledge?—A. I think Mr. Baker has exported them.

Q. Have you any idea how it panned out?—A. No.

Q. Do the facilities exist here for shipping the lobsters alive to market?—A. No.

Q. There is no regular or fast communication?—A. No.

Q. Do you think the fishermen would make more money if they were allowed to can generally?—A. They can tell you that themselves, I could not tell you that.

Q. What is your opinion about that as a packer? Representing the packers you must have an opinion as to whether the fishermen would, as a rule, make more money by packing themselves?—A. I know they could not last year or the year before, I do not know anything about this year. High prices were paid last year, more than the packers could afford.

Q. Are you aware of any complaints by the fishermen that the price paid for lobsters by the packers was unsatisfactory?—A. Yes, they made complaints this year.

Q. Are you aware of any cases where fishermen have lost their catch of lobsters by the canners refusing to accept them?—A. No, I have not.

Q. It has been alleged that, in some cases, the fishermen have suffered injury by the failure of the canners to operate their canneries although a sufficient supply of

SESSIONAL PAPER No. 22a

lobsters was available. Are you aware of any such instance where the canner, although he held a license, has refused to operate the cannery and thereby put the fisherman out of a market for his lobsters?—A. I am not aware of any.

Q. You are not aware of any such case?—A. No, I am not.

Q. As to this matter of pounds, do you know anything about them, have you ever seen the pound yourself?—A. No.

Q. What is your impression with regard to the pound? Do you think that the pounds should be increased in number and more of them established wherever the natural conditions exist to enable them to be operated successfully? Of course it is not everywhere that those conditions are to be found.—A. I could not say, I do not think the pound is of any benefit to the fishery beyond a certain distance on either side.

Q. You think that the lobsters should not be carried too far to the pound?—A. No, they should not, because they will not live.

Q. Otherwise do you think there is anything in getting the fishermen to save the berried lobsters and having them put in the pound? Do you think that is one way of improving the lobster industry?—A. I could not say.

Q. Do you know enough about the hatchery to express an opinion?—A. No, I do not.

Q. Do you think more hatcheries should be established on the coast?—A. I do not know anything about it.

Q. Do you know that there is any packing or fishing done out of season?—A. No.

Q. There is no illegal packing done as far as you know?—A. No.

Q. Do you think that the stamping of cases prevents fishing and packing out of season?—A. I should think so.

Q. As to this matter of fishing in bays and lagoons, there are many cases where lobsters are taken inside lagoons after the fishing is practically over, at the Magdalen Islands, for instance; have you ever been there?—A. No.

Q. There are lagoons and bays there in which no fishing is allowed, and the lobsters come in there late in the season. Do you think that in that type of lagoon fishing should be carried on, it is only carried on there late in the season?—A. I do not know; what do they go in there for, is it to shell?

Q. They go in there to shell and also to spawn. What is the average price paid to sealers and hands in the cannery here? What is the sealers' wage, is it about \$35?—A. Yes.

Q. Is he boarded at that?—A. In some factories he is and some he is not.

Q. Where he is not boarded he receives more wages to compensate him for that?—A. Yes.

Q. What wages are paid to the girls?—A. \$10 per month.

Q. Are they all paid by the month in your case?—A. Sometimes they are paid 50 cents a day.

Q. What number of girls do you employ here?—A. 7 or 8 and sometimes more.

Q. Is there any other packers' representative present who can give us an idea of how many lobsters run to the pound tin here?—A. Mr. Bagnall may be able to tell you.

Witness discharged.

GEORGE BAGNALL, packer, Gabarus, called and sworn:—

By the Commissioner:

Q. Up to this year have you always been engaged in lobster fishing?—A. Not in lobster fishing. I never was a lobster fisherman but I have been connected with the lobster industry since 1874.

Q. In what capacity?—A. I was working with Mr. H. E. Baker sometimes buying lobsters for him, but as a sealer most of the time.

9-10 EDWARD VII., A. 1910

Q. Have you been engaged at this work of buying lobsters and sealing at other stations than Gabarus?—A. Yes, I worked at one station two seasons for Mr. H. E. Baker up at L'Archeveque, Richmond county, and I was also buying lobsters, crating and sending them for Mr. Baker from Scatari and back at Glace Bay, and I was about 10 years on Scatari and these two last years I was at Mulgrave shipping live lobsters from that to Boston.

Q. We will touch on the live lobster trade afterwards, but in connection with the canning industry in your experience how do the fish run to-day as compared with the time when you first began your connection?—A. Well, it will take quite a number more to fill a pound can now than when I first commenced.

Q. Do you think that the fishermen, as a rule, are fishing more gear now than they used in the early days?—A. There is more gear used now than in the early days.

Q. There are a great many more fishermen, but do you think the individual fisherman uses more gear?—A. Yes, a great deal more gear than in the olden days.

Q. What was the amount of gear used in the old days?—A. I could not tell you.

Q. And in the old days they used the old double-ender trap; when did that go out of fashion?—A. It is hard for me to say.

Q. Is that trap known as the parlour trap used here now altogether?—A. Yes.

Q. What is the particular merit of the parlour trap over the other traps?—A. The fishermen can tell you more about that than I can but the idea is that when the lobster gets into the parlour trap it is more difficult for him to get out.

Q. Their merit, as I understand it, is that the fisherman, if he is unable to fish his traps regularly, knows that the lobsters cannot escape as they did from the old traps?—A. Yes, that is the idea.

Q. With regard to the price paid for lobsters, what was the price paid when you were first connected with the industry?—A. Fifty cents.

Q. Was that by the hundred count?—A. By the hundred count.

Q. How long before the price began to rise?—A. Some two or three years; it gradually rose from 50 to 60 cents.

Q. And the price gradually advanced up to the point that it reached the year before this, which was the highest point it ever reached, was it not?—A. I have paid higher for lobsters than what was paid here at Gabarus last year. I have paid as high as \$5.

Q. When would that be?—A. That would be about five years ago, but it was only for a little while.

Q. What led to that high price?—A. Opposition.

Q. The demand for lobsters? Was there a scarcity at the cannery and in the market?—A. Oh, the canners got their backs up, one against the other.

Q. And the price went up to \$5, but only for a short while?—A. For a short while.

Q. Was that general over the coast or only in a particular locality?—A. Only in a particular locality.

Q. Can you give us any idea of the value of lobsters per case in those early days? What were they worth then; what was the market price of the canned article?—A. That is something I cannot tell you because I do not know. I know at times canned lobsters were only worth \$6 a case, that is what the packers say.

Q. They were in the early days about \$6 a case, I think, and they have been sold as low as \$5 in some places; we have evidence of that?—A. Yes.

Q. Is it the case that along this shore the gear is owned generally by the fishermen?—A. Well, there have been seasons here when the packers owned the gear, although some of the fishermen owned their own gear. This season I think the fishermen all owned their own gear.

Q. What is the difference in the price paid to the fisherman who is fishing his own gear and that paid to the fisherman who is fishing the factory gear?—A. I could not tell you; the fishermen will be able to tell you that.

SESSIONAL PAPER No. 22a

Q. During the time you were engaged in smacking what was the practice? Was it your practice then to take everything the fishermen gave you?—A. There was one season I was at Scatari we observed the size limit to the letter.

Q. Can you give us any idea what year that was, or about the year?—A. It was the first year the union was formed, I think it was about five or six years ago; that was the only place that I know of, Scatari, where the size limit was observed strictly.

Q. It was observed strictly?—A. Strictly.

Q. What led to that regulation being observed that year?—A. The union had just been formed, and it was a part of their charter to observe the law; the packer paid them a pretty high price, it was a nice price, and they were to observe the law and did so.

Q. Do you know what the price was?—A. \$3.50.

Q. Now as to the berried lobster, what was the practice with regard to that?—A. The practice then was to sell the berried lobsters to H. E. Baker and ship them from Scatari to the pound at Fourchu.

Q. Is it to your knowledge in your experience that the berried lobsters were stripped by the fishermen?—A. Yes, I know they were stripped.

Q. Was it the practice to bring them to the cannery?—A. Yes, in the early days.

Q. In those days did the canners make any objections to receiving them?—A. They did not make any objection because we did not examine the lobsters and did not notice them.

Q. As to discriminating, is it an easy matter to separate the berried lobsters in the cannery?—A. That is when they are brought in with the berries on them?

Q. Yes?—A. Certainly.

Q. Is it a difficult matter to cull them out?—A. No, it is not a difficult matter.

Q. Where is the right place to cull them?—A. When they come out of the trap.

Q. Have you any idea at all, though you have not fished lobsters you have been smacking them and you might know, as to the percentage of berried lobsters?—A. No, I could not say about the percentage.

Q. In connection with smacking, can you give me any idea as to whether the run of lobsters you took was better when they were fishing in the early part of the season off shore than it was later on in the season when they were fishing in shore? What would be the facts of that matter?—A. The lobsters, I just bought them at Scatari and shipped them, and the average weight of the lobsters was rather better later on in June and the first of July than it was in the month of May.

Q. They were fuller?—A. Yes, they were fuller.

Q. But what I want to know is as regards the size of lobster.—A. In the month of May and the first part of the season you will get the best sized lobsters, the most large lobsters.

Q. Is it the case generally that late in the season and when fishing in shoal water you will expect to find a smaller run of lobsters than you would early in the season when you are fishing off shore?—A. That is something the fishermen would answer better than I can.

Q. But if you were smacking them you would know.—A. I know that going on in July in some parts of the season, the latter part of June and early in July the lobsters are smaller, and then again coming on the end of July we get just as good lobsters as in the beginning of the season.

Q. Do you see a larger proportion of soft-shelled lobsters in July than you do early in the season?—A. We do not see many, but I have seen some.

Q. What were the regulations when you first began?—A. Take all.

Q. What was the season then?—A. Commence when you could and knock off at the 20th of August, and remain off for one month until the 20th of August, and remain off for one month until the 20th of September and then commence again.

Q. What was the fishing like after the 20th of September?—A. Good.

9-10 EDWARD VII., A. 1910

Q. How were the lobsters then, how did they run, were they good sized, in good condition and good meat?—A. They were good size and good lobsters.

Q. Now as to the matter of returning the berried lobsters to the water, do you think it would be a serious loss to the fishermen generally if they followed that practice?—A. I do not think it would be such a serious loss to the fisherman because he has been doing it this season, the company I packed for was a co-operative company, and we got to work and put the berried lobster away.

Q. The percentage of berried lobsters up on our coast is not so large that it would mean a very serious loss to the fishermen who threw them overboard?—A. No.

Q. And they would ultimately be the gainers themselves by the practice?—A. The men themselves might not, but their children hereafter might.

Q. Well, if the lobster grows at the rate of two inches a year, as we know it does, it would not take it very long to reach the full size?—A. I know it would be a great deal better for the industry than to confine the berried lobster in a pound because there is a large number of them die before they get to the pound, and quite a number also die after they reach the pound.

Q. What would you think of the proposition requiring the canner to pay an increased fee instead of the 2 cents per case as at present, and in that way realizing a fund for the purchase of the seed lobsters from the fishermen?—A. I could not say anything about that.

Q. Would you, as a canner, be prepared to pay an increased fee?—A. The way I am situated I am only with a company who are packing lobsters; we are packing our own lobsters; we buy no lobsters.

Q. But still you would be required to pay an increased fee, whatever that may be, if it is decided to purchase the berried lobsters for the pound or for the hatchery. Do you think that the industry will stand the higher fee?—A. That is something I do not know about.

Q. Now, then, as to the matter of licenses; you know that in the early days every one used to get a license, and there were a great many more canneries then there are now; a great many people have gone out of the business; in recent years the practice of the department has been to restrict the number of licenses and no new licenses have been issued because people said there were enough canneries in existence. Do you think that the number of canning licenses should be restricted?—A. I think not.

Q. Would you give a canning license to any man that applied for it?—A. Any man that is in a position to put up a factory and run a business should get a license.

Q. Then you would require to impose stricter conditions?—A. Yes.

Q. What should those conditions be?—A. If that man was not capable himself of running the business let him hire a foreman that knows the business who could run it for him and see that the goods are put up in good condition.

Q. Would you restrict the number of cases that he should pack?—A. I do not think that he should be limited to any particular number of cases, or to any number of lobsters any more than the fisherman should be restricted as to the number he should catch.

Q. You see the policy of the department, since it has become clear there was friction between the fisherman and the canner, has been to give a license to a number of fishermen to co-operate. I suppose it is under that plan you came together?—A. Yes.

Q. Do you not think that will cover the complaint of the fishermen as long as that is done?—A. I think that is a very good plan wherever 15 men unite together.

Q. How about that number of 15? That was fixed by the department, it is understood, because the Nova Scotia Act required at least 15 fishermen to form a union?—A. Yes, and as many more as choose to join; there were 19 in the case where I was interested.

Q. Should the number be reduced? Is 15 too large a number, or would you cut it down?—A. Well, if you were to reduce it to say 10 or as many more as liked to join.

SESSIONAL PAPER No. 22a

Q. You think the limit should be put down to 10?—A. I think it would be as well perhaps to put it at 10.

Q. Do you not think that it would be right and proper for the department to insist upon a certain standard of cannery, that the lobsters should be put up in a certain way, and that there should be a certain guarantee as to cleanliness?—A. Certainly I think so.

Q. You would want a guarantee that there were suitable arrangements for washing and cleaning?—A. Yes, because if they are not put up clean, if they are not in good condition, the meat is not fit for the market.

Q. Do you think there is any reason why the product of the lobster cannery should not be subject to inspection the same as other products? Our pork, butter, cheese and canned meats of all kinds are inspected to-day, and about the only canned product that is exempt is the lobster?—A. Well, the man that buys them generally inspects them.

Q. But that is not an official inspection?—A. Oh, no, but there might be an official sent to inspect them, and he might not know as much about them as the man who buys them.

Q. He would have to be an expert of course. Now, as to the price paid for the lobsters, who fixes that generally, and how is it fixed?—A. It has generally been fixed by the packer; I do not mean the foreman, it is done at headquarters.

Q. Do you think there has been any combination among packers generally?—A. Well, I do not think there has been generally until this season.

Q. Is there any particular fact which gives you reason to think so or to say so?—A. There is, because the foreman came here and set one price and no man would differ from that, although we naturally knew he could give more; so that caused me to believe that there was a combine between them.

Q. But you do not think that condition existed until this season?—A. No.

Q. From what you say there must have been some competition in other years?—A. Of course, in other years there has been competition.

Q. What is your opinion as to the strict enforcement of the 8-inch limit? How would it affect the canner here?—A. Well, it would affect the canner quite a lot.

Q. What percentage of the lobsters would you say are below the 8-inch limit?—A. It is pretty hard to say; I never measured or kept account of it, and when a man does not measure or go into details he cannot say.

Q. In your case this year what was the run of lobsters? How many did you average to the pound can?—A. 231 pounds to the case.

Q. Can you tell me how many lobsters it takes here to make a hundred pounds in weight?—A. I cannot.

Q. You have no idea how many lobsters it takes to make one hundred pounds in weight?—A. No, I cannot, I never kept count of it, and I never heard the fishermen say anything about it.

Q. They generally know those things at the cannery where they weigh and count them sometimes?—A. I do not weigh them.

Q. Do you know it is the case the canners are compelled to accept undersized lobsters for fear of losing their fishermen? They tell us if they do not take them the fishermen will go somewhere else with their catch?—A. That is just about the way it is.

Q. Is it a fact that the fishermen expect the canners to take everything they bring?—A. Yes.

Q. And the size regulation has never been enforced?—A. No, and the canner expects them to bring everything they catch, and if they do not, he does not like it.

Q. What is the first consideration towards the protection of the lobster industry?—A. You can protect the berried lobster best when she comes out of the traps, by putting her back again in the water.

9-10 EDWARD VII., A. 1910

Q. And do you think that to do so would be a very serious loss to the fishermen?—

A. It would be some loss to the fishermen, but the government has been in the habit of paying one single individual to take these lobsters and look after them, where if there was so much bounty allowed to the fishermen they would put them in the water.

Q. How would you keep check on the fishermen?—A. It would be kept all right if one of our men, the smackman, or some other man, when the lobsters were brought to him, would keep a record of the number and put them back in the water, or else give each fisherman a lump sum bounty.

Q. It has been suggested that all lobster fishermen should be licensed, that they should take out from the fishery overseer at the opening of the season, a printed form which constitutes them licensed fishermen, there would not need to be any fee for it, it could be done without that. The impression seems to be that if the fishermen took out a license in that way, they would feel themselves to be fishery officers on a small scale, and be more likely to observe the law themselves and to see that others did. Do you think it would work out that way?—A. I could not say.

Q. Do you think that a fisherman holding a license form of that kind, would be more likely to live up to the regulations than he would be if he hadn't it?—A. I could not say about that.

Q. What do you think of those various propositions that I have referred to which have been made with a view of improving the fishery? The first one is that fishing should be stopped altogether for a term of years?—A. If fishing were stopped altogether, there would be a lot of men thrown out who are not in a position to go to work at anything else just then, and it would be a great loss.

Q. Are there any other fisheries that could be carried on at the same time?—A. There is the cod fishery, but we would have to go to the expense of boats and fitting out for that fishery.

Q. Are the boats used for the lobster fishery of any use for cod fishing?—A. No.

Q. Are most of those who fish lobsters regular fishermen?—A. There are some who fish lobsters who go farming, and then more go to the cod fishing.

Q. In many places, take in New Brunswick for instance, there are a lot of lobster fishermen who are not fishermen in any other sense?—A. There are some in Richmond county in the same way.

Q. You think that would be a pretty severe measure to shut down altogether?—A. Yes.

Q. Then the Lobster Commission of 1898 recommended that we should shut down by sections, taking one or two counties at a time, from year to year until the whole coast had been give a close season.—A. I think that would be too hard too.

Q. There are various propositions which have been made, one is to do away with the size limit, which is advised on the ground that it never has been, and cannot be enforced.—A. That is what I say, do away with it altogether.

Q. You think it is very difficult to enforce it?—A. Yes, it is.

Q. And it is suggested that at the same time we should strictly provide for the berried lobster one way or another.—A. We should strictly provide for the protection of the berried lobster.

Q. And in addition to that it is proposed that there should be some shortening of the season?—A. Our season is short enough as it is, we do not want any shorter season than what we have now because we are not able to get out sharp at the first of the season.

Q. All over the Gulf it is the same way.—A. And the lobsters are in as good condition at the last of July and the beginning of August as they are at any other time of the season.

Q. What do you think of that other proposition, to reduce the size limit to 7 inches and try to enforce it? Do you think it will be lived up to any more than the 8-inch limit has been?—A. No, I do not think it would be enforced or lived up to any more than the 8-inch limit has been, that is my opinion.

SESSIONAL PAPER No. 22a

Q. I think you told us you were a member of one of the co-operative concerns?—
A. Yes.

Q. Is there any Fisherman's Union in this place?—A. Well, it is not organized, we have no charter.

Mr. H. C. GUNN, President of the Fishermen's Organization—It is hardly a Union in the regular sense, it is merely a local assembly of fishermen having no connection with any other Union. We have no charter.

Q. Are you aware of any complaints made by fishermen that the price paid for lobsters by the canners is not satisfactory?—A. There were complaints made this season..

Q. Were they made before this season?—A. Some used to make complaints before that they did not think they were getting as much as they should, because some men got a high price and others not as high a price.

Q. The price was paid by weight, was it not?—A. By count, mostly all around here.

Q. Up to when did they pay by count?—A. Up to this season.

Q. You are paid usually by count here?—A. Yes.

Q. Is it altogether by count, or are some paid by weight?—A. Mr. Baker all the time pays by count here, and at the other place they pay by weight. Up in Richmond County he pays by weight and by count.

Q. That was a matter of arrangement between the fisherman and the packer?—
A. Yes.

Q. But up to this year there was no general complaint that the prices were not satisfactory?—A. No general complaint, no.

Q. Who are the packers in this place who are licensed?—A. The H. E. Baker Company, Mrs. Winton. Mr. Smith is packing on Mrs. Winton's license.

Q. The license is not issued in his name?—A. No.

Q. Who else is packing here?—A. On the north side there is a man named John Abel.

Q. And then there is the co-operative license, to whom was that issued?—A. To Joseph Grey and George Bagnall.

Q. Does that take in the whole of the canneries in this neighbourhood?—A. Yes.

Q. Have there ever been more canneries than there are now?—A. No.

Q. Are you aware of the fishermen having suffered injury by the failure of canners to operate their canneries for which they held licenses?—A. No, not that I know of.

Q. Would the fishermen in this neighbourhood find any market for their lobsters if the canneries were closed?—A. Not in live lobsters.

Q. You have had to do with the live lobster industry, what is your experience of that?—A. A great loss.

Q. To what do you think that loss was due?—A. The lobsters had to be carried too far, and there are not proper facilities for carrying the lobsters. The lobsters from here were carried by steamer to Mulgrave, put in cars there and then sent to Boston. I have received a complaint that there were over 4,000 large ones, and 1,300 mediums dead in one shipment. That is 4,000 over 10½ inch and 1,300 over the 9 inch limit.

Q. Why was that distinction in size made, were they for two different markets?—
A. Yes.

Q. That is one size was for New York and the other for Boston?—A. They both went to Boston that year. We used to ship to New York, but we shipped them to Barclay Clements & Co. of Boston, and Price & Mahoney.

Q. Which branch has been the most remunerative to the fishermen, the live lobster trade or the canning business?—A. The live lobsters, if you can ship them, are the most profitable.

Q. Have you any idea of the price that live lobsters brought per crate? How many did you put in a crate?—A. The first season we used to put about 100 to a

9-10 EDWARD VII., A. 1910

crate, which was a small sized crate. The next year we had large crates and a special car, and we used to put 135 and 140 large lobsters, and 200 medium in a crate.

Q. Is it the case that berried lobsters that have been stripped will not do for shipment alive, are they more delicate?—A. They die shortly after they are stripped.

Q. Now, as to this matter of hatcheries and pounds, have you been to the pound, do you know anything about it?—A. I have had a month's experience in the pound myself.

Q. Have you ever carried lobsters to it, what is your impression of it?—A. That it has not benefitted the lobster industry.

Q. For what reason?—A. So many of them die when you have to carry them all that distance, and after they get there many die, I am going on what people who work at it tell me, that there is a small percentage of them live.

Q. What is done with the lobsters that come out of the pound?—A. They are put out around the coast.

Q. Are they careful to put them back where they came from?—A. That I could not tell you.

Q. We have heard complaints in some places that they come and gather them up from those places but they never take them back?—A. I do not know anything about it.

Q. Do you know anything about hatcheries?—A. I have no experience in that line.

Q. Do you think that the style of trap used makes any difference?—A. The style of trap?

Q. Do you think that we should insist upon a standard trap, that is to say that there should be a certain space between the slats? Do you think if we do away with the size limit that we could provide for the escape of the very small lobsters by insisting upon a certain distance between the slats—A. Well, a very small lobster could get out of the trap as it is built.

Q. Will a 7 inch lobster get out of the trap that is now in use?—A. No.

Q. Will a 6 inch?—A. No.

Q. What about a 5 inch lobster?—A. I could not tell you about that, the smallest lobster I have seen here this year measured 6 3/16 inches, that was on the smack that Mr. Halkett was on.

Q. Have you any idea of the market price of lobsters, what are they worth this season?—A. I could not say as to their value in the market, but I know what we received for ours. We sold to Mr. Smith, but as to the actual value in the market, I could not tell you.

Q. What do you think of this method of labelling the case, does it serve any good purpose?—A. That is putting the stamp on them?

Q. Yes?—A. Well, that prohibits illegal fishing and packing.

Q. Is there any of that done?—A. Not around here.

Q. Has it ever been done?—A. Not around here that I know of.

Q. Do you know anything about that matter of fishing in bays, lagoons and shoal water, in places inside where the lobsters seem to take refuge?—A. No.

Q. There is none of that fishing done here?—A. No.

Q. I do not know of anything else I want to ask you, is there anything else you would like to say, if there is we would be very glad to take it?—A. I have nothing more to say.

Witness discharged.

JAMES McDONALD, fisherman, Gabarus, called and sworn:—

By the Commissioner:

Q. Have you always fished here?—A. Yes, I have always fished around this district.

SESSIONAL PAPER No. 22a

Q. How many years have you been engaged in the lobster fishery?—A. Well, I have been 25 years in it anyway.

Q. During that time have you engaged in any other fishery?—A. No, only in the lobster fishing season, unless I might put out a net or something like that.

Q. But that would be after the lobster fishing is over?—A. Yes, I generally fish in the fall again, along from the 15th or the 10th of August, and fish out the season.

Q. How late does the season run here with you?—A. About the last of November.

Q. You fished up to the last of November?—A. Yes.

Q. What is the last fishing you get, cod or mackerel?—A. The cod fishing, and sometimes I do a little mackerel fishing.

Q. Now we would like to know something about the methods of the fishery. When as a rule do you begin the lobster fishery, one season with the other?—A. Our season here opens on the 1st of May but it is not very often we have been able to set out at that time. It is mostly along about the 8th and 10th of May before we can begin, and some seasons we have been very late.

Q. Does it ever run into June?—A. Yes, I think—well, we never ran as far as June without putting out our gear, but we have put out our gear and lost it, and we did not do but very little until the 7th of June two years ago.

Q. Then, when you begin fishing, in what depth of water do you generally set your traps?—A. I generally set mine in late years in about from 7 to 12 fathoms.

Q. Do you fish farther out in recent years than you used to when you first began?—A. Oh yes, a lot farther.

Q. 7 to 12 fathoms of water would put you how far off shore?—A. Not very far, perhaps a third of a mile or so.

Q. How long do you fish in that depth of water?—A. We fish there up till about the 15th of June, sometimes, although the lobsters come closer in shore before that time occasionally.

Q. And then you move in?—A. Sometimes, and sometimes we still fish off shore.

Q. It depends altogether on the lobsters?—A. There is a lot in what the season is like, if the weather is rough the lobsters seem to keep off.

Q. Do you notice much difference in the quality of the lobsters now compared with the time when you first began? How do they run, were they more numerous then or now?—A. When I first fished lobsters no man was allowed to run a string of gear along the shore where now I have seen as high as probably 7 or 8 strings, so that you could not expect the lobsters to be as plentiful now as they were then; but I think if I were to go to the place where I used to fish then with only myself there, and only running one string of gear I would do as well pretty nearly as I did then.

Q. Would you expect the lobsters to be as large?—A. Yes, in the spring of the year, in the month of May when I first set out my traps. I never got a better average of lobsters in my life than I got 2 years ago.

Q. Could you give us any idea of how they run here, of how many lobsters it takes to make 100 pounds in weight?—A. Well, I have not had much experience with weighing or counting them. I weighed a few lobsters this summer, but two years ago I weighed and counted for about a week in the first of the season, and I think they ran, the lobsters I weighed for a week or for 7 or 8 days, somewhere about 95 lobsters to the 100 lbs.

Q. That is a good run of lobsters?—A. Yes, but mind you that was in the spring of the year when we were getting large lobsters.

Q. How would they run in the latter part of the season?—A. In the latter part of the season when the lobsters come into shoal water they are smaller. I should say that sometimes it would probably take as high as 140 lobsters to make 100 lb. weight.

Q. Can you give me any idea of the percentage of lobsters below 8 inches?—A. Well now, not very well, but after all there are not very very many lobsters taken below 8 inches, I should say perhaps one-sixth.

9-10 EDWARD VII., A. 1910

Q. In some places they tell us that if the 8-inch regulation were strictly enforced it would put the fisherman and the canner out of business, but it would not have that effect here?—A. It would be pretty hard on them; take a man that catches 6,000 lobsters and he has to heave away one-sixth of them when he is getting \$3 a hundred for them, and you can easily see what you are asking him to heave away.

Q. What is the average catch of an active fisherman, one year with another? Of course this year was no test.—A. Oh no, it is no use taking this year's catch at all because the men did not fish over one-half the season, I think. Well, some years they catch along from 9,000 to 12,000.

Q. From 9,000 to 12,000?—A. I should say so.

Q. That is by count or by weight?—A. I always sell by count myself.

Q. You sell by count?—A. I always sell by count. I have fished lobsters for a long time and if my memory serves me right I do not think I ever went under 8,000.

Q. Do you fish more gear now than you used to when you began to fish?—A. Yes, sir.

Q. Of course there is a great deal more gear in the water and more fishermen?—A. When I fished first I generally fished about 110 traps, and I have fished 140 and I do not know but possibly I may have fished 150 some years.

Q. That is with a two-handed boat?—A. No.

Q. You fished that number alone?—A. Alone.

Q. What idea can you give me as to the decrease in the annual catch, how does it compare now with what it used to be? Are they running smaller on the whole?—A. Do you mean the lobsters?

Q. Yes?—A. Oh well, I think they are.

Q. Is there much difference between the catch made in the early part of the season and that made in the latter part of the season, especially with those who move in shore?—A. Yes, the month of May, when we first set out I think that a man, if he got fine weather and had good bait, could get nearly double what he would get in the latter part of the season. He can do fully that, and probably more than that as compared with what he could get in the latter part of July.

Q. Is it your experience, one place with the other, that the lobsters run smaller, late in the season and in shoal water?—A. Yes, they run smaller, you cannot take as many large lobsters out of the hundred, not anything like as many, not more than one half in July, as you could in May.

Q. I suppose it would be only reasonable to expect that you would not because the large lobsters are caught off outside at first?—A. I think there is more than that, I do not think that the large lobster traps as well then.

Q. To what extent would you say that the amount of gear has increased? Is there twice as much gear in the water now as when you first began, or more than that?—A. Indeed there is twice as much as when I began and three times as much.

Q. Is it still increasing?—A. I do not know that it has increased much for this last 8 or 10 years.

Q. Now tell me, in connection with the diminution of the lobster fishery, do you think that occurred years ago, or is it still going on? A great many people tell us that it reached bottom some time ago, that the diminution during the last five or ten years is not so great as it was before that, in fact they say that it has stopped decreasing. What is your opinion?—A. That is the lobster?

Q. Yes, they say that the damage was done years ago and not recently, that the fishery is not decreasing at the present time?—A. It has been steady since I was fishing, or say for the last 25 years.

Q. What is the price paid by the packer here for lobsters by count?—A. By count? Oh, they pay different prices. When I first started lobster fishing here I was paid 50 cents; I did not fish this summer, now I always fish the packer's gear, I never had my own, and I was paid all the way up from 50 cents to \$2, and, I think, \$2.65.

SESSIONAL PAPER No. 22a

Q. And that was always by count?—A. Always by count. The price varied, sometimes they would go up to \$1.75, \$1.80, \$2.00 and \$2.25 and so on until it came up to \$2.65, that was the highest I ever received.

Q. Where did you fish this year?—A. Well, I did not fit out for lobster fishing, the packers gave up fitting out gear.

Q. Who is that?—A. The H. E. Baker Company. They gave out that they were not going to fit out any gear, I did not fit out gear myself, I attend to the light over here and it was kind of late when I heard from the Department, and then the packers came down and offered such a low price that I thought it was better for me not to touch it. I could have fished, but I thought it was better not to, there was not any money in it for me to fish.

Q. Have you any idea of what those receive who fish by weight?—A. Yes, they received last year here, that is out where I fished, as far as I can understand, and we had the prices hung up in the camp for all hands to look at, and \$4.05 was hung up I think, that was the best we received.

Q. \$4.05, as high as that?—A. Yes.

Q. Was that the highest point you had ever known the lobsters to reach?—A. That is the highest point I have ever known the lobsters to reach here, that is to be confident of it; of course I have heard of this one getting more and another one getting more, but I am not going to tell you that for truth.

Q. Do you think there is any competition in the matter at all? How is the price fixed for lobsters, is it established by the canner; is there any bargain at all between the fisherman and the canner or is it simply an arbitrary price fixed by the canner that the fisherman has to take or leave?—A. Of course when the packer offers a man a price, that man must take the price or leave it, he has no power to make the packer give more.

Q. Is there any competition among packers? Do you find fishermen leaving one packer and going to another because they get more?—A. I think there used to be a little of that done, but for my own part I never did it.

Q. You were always satisfied to stay where you were?—A. Whether I was satisfied or not, I stayed there.

Q. But you think there has been some of that?—A. Yes, my memory leads me to believe that there has been some of that done.

Q. What do you think in regard to that matter of licenses? It has been the practice of the Department for years back to restrict and keep down the number of licenses, the idea not having been so much that they wanted to reduce or cripple the industry, but rather with the idea that by keeping down the number of canning licenses it would check the exhaustion of the fishery. Do you think it had that effect?—A. Oh no, it did not hinder the fishermen from fishing because all those who could fish were at work, and if there were more canneries in operation that would not make any more fishermen.

Q. They would simply have to be divided up more, you think?—A. Yes.

Q. Do you think there is any reason why the number of canneries should be limited?—A. I do not see that there is, provided a man is able to put up a cannery and go to work and pay the fishermen for their lobsters. But I know they do not always do that and I guess that was one thing that led to this restriction being put on the number of canneries.

Q. There were at one time a great many more canneries than there are now?—A. Well, there were never more here that I know of.

Q. Of course you know there has been friction between the fishermen and the canners in some places?—A. Yes.

Q. The fishermen complain that they have not had a fair show. Do you think that the present policy of the department, by which a license is given to a number of fishermen who combine together, will put an end to that dispute and furnish the

9-10 EDWARD VII., A. 1910

fishermen with the necessary outlet?—A. I should think it would, I do not see why it would not.

Q. Do you think that the number of fishermen combining to get a license should be kept as high as fifteen. Would you put it at a lower number than that?—A. I would suppose that there may be in some places a body of fishermen not as numerous as that who want to pack, but you know when there is a small company there is a lot of expense. You see that they have to run a smack or two smacks and employ so many men, and all that expense has to come out of the lobsters. Of course there may be lots of fishermen who may be able to pack in some places where they would be nearer together and they would not have to run their lobsters so far.

Q. Do you think that a small number of men would be more apt to agree and pull together harmoniously than a larger number?—A. I should think that if the number were placed at 10 it would be all right.

Q. Do you think the female lobster comes in shore to spawn?—A. Yes, I do, she comes into a certain depth of water.

Q. Have you ever remarked the size of the female lobster bearing eggs, what was the smallest one you ever saw?—A. In general they are not very small, but they may occasionally see a small one, one out of 100 or 200. You may see one probably as small as 6 or 7 inches occasionally but it is only an odd one.

Q. Have you any idea of the proportion that the egg-bearing lobster bears to the total catch? Out of every hundred lobsters how many would have the eggs on them?—A. I think, I have saved the seed lobster for a good many years and of course I cannot say exactly, but I think they would not run much over 10.

Q. 10 seed lobsters to the hundred?—A. To the hundred. That is to say 1,000 out of 10,000. I do not think they would go much over that.

Q. Within your experience what has been the practice with regard to berried lobsters, have they been saved, or have they been landed at the cannery, or have they been stripped? What has been done with them generally?—A. Everything has been done with them.

Q. That is my own experience. I have been 32 years now at this work so that I know a little about it. There has been no attempt to protect them generally, until recently when they have been sent to the pound.—A. Of course they were protected then about as well as they could be, because they were worth a little shade more to the fisherman. There was a time when I guess that was about the most interest a fisherman had in the seed lobster, because they were worth a couple of cents more if saved in that way.

Q. How long since Mr. Baker established that pound?—A. That is more than I can tell you. I expect it has been there 9 or 10 years I should say.

Q. He ran it without any connection with the government at all at the first, did he not?—A. I could not tell you.

Q. I think it is only in recent years that the government has been paying him for the lobsters?—A. I expect the government paid for the lobsters in the first place, but I think the pound probably belongs to himself.

Q. It belongs to him yet?—A. Yes.

Q. He is leaving the country, I believe, and I understand he is trying to sell the pound to the government now. I understand there was an officer stationed there this year, Professor Halkett, to watch the pound and observe the conditions there. Did the cannery ever object to receiving berried lobsters?—A. Oh yes, they did.

Q. They did object?—A. Oh yes, they did object to receiving them.

Q. When did they do so, and for how long?—A. For years before that, I could not tell you just how many years, but for 2 or 3 years before that pound was established.

Q. They refused positively to take them?—A. Oh yes, they refused to take the spawn lobsters.

SESSIONAL PAPER No. 22a

Q. Was that what led to the practice of stripping them?—A. I guess so.

Q. Was it the practice then to avoid dealing with the canner who was known to be scrupulous on that point, and to go to others who were less careful? Some cannery tell us that they tried to live up to the law but that when they did so they lost their fishermen who went somewhere else.—A. I would not think he had much to do with it, because there was always a fishery officer to go around, and if he saw spawn lobsters I couldn't tell you what he would do.

Q. Was anybody ever fined?—A. Yes, I have known the packer to be fined several times.

Q. Have you ever known the fishermen to be fined?—A. No, I did not. It is pretty hard to fine the fisherman because he would not be foolish enough to go ashore and get an inspector in his boat.

Q. In the light of your experience what would you suggest as the best way of taking care of the berried lobster? She seems to be the most important point in fact the crux of the whole affair, it all centres on her protection. Now what do you think should be done?—A. There is no doubt about it, every man in this building should know that there is no better way than to put her back in the water right out of the trap.

Q. Why is that not done?—A. Because the Government provided this pound and is paying for it, and of course the lobsters were sold to Mr. Baker and the fisherman was receiving a little larger price for them than he was getting for the other lobsters, and you will never find a fisherman so well off but what he needs every cent he can get, and I guess that is about what led to it.

Q. I understand some of the fishermen refused to sell to the pound?—A. They never refused. I do not know of any fisherman that ever refused until this year, and this year they did not agree with the packers at all, and they refused to sell to the packers any lobsters this year, and when they refused to sell the other lobsters of course they refused to sell the seed lobster. They took that much from the Union, it was in the charter of the Union that they were to keep the law, and I suppose they borrowed that much from the Union; I understand that the charter of the Union says that they should not or ought not to take the berried lobster.

Q. Those fishermen who are members of the Union were obliged by their arrangement to do so?—A. Yes.

Q. Do you think that the best way to deal with the seed lobster is to put her back in her natural element where she comes from?—A. I think that is the best way, and that she will do best under those conditions.

Q. What can we preach, not here only but everywhere, in order to get the fishermen to do that? Some people have said that if you sent someone down to talk with the fishermen and explained to them the necessity of protecting the berried lobsters and the great gain they would ultimately make if they did so.—A. I think that would only be a waste of time.

Q. You think they know that already?—A. They know already what they should do, but it does not make things any better. I would say that one good way to accomplish that, and it would look fair and reasonable to me, is to pay the fishermen a bounty the same as the cod fishermen are paid. If the Government is going to pay money for protecting the seed lobsters, pay the fishermen a bounty in some way, I suppose it would depend on the average of his catch for the season, or on the percentage of berried lobsters.

Q. And then have him put the berried lobsters back in the water?—A. Yes, I should say that looks to me to be a very fair way and the easiest way that I can see of keeping the law, because if they commence to catch the lobsters and punch holes in their tails and put them overboard they might catch them again next day, and might shut one eye and punch the other side of the tail before they put him overboard and get paid for him again.

9-10 EDWARD VII., A. 1910

Q. As to this matter of pounds, what do you think of them? Do you think that the pound has done any good, that the method of preserving the lobster in a pound is a good one?—A. I do not know much about it, but I really think if there is any pound or hatchery that is any good at all it is the pound where the lobster is put and kept there, I do not think that taking the eggs from the lobster and trying to hatch them out afterwards is any good. But whether it has been any good to the fishermen or not I could not say.

Q. Would you venture to say whether the number of pounds should be multiplied, whether there should be more of them?—A. I do not know.

Q. It is not every locality that furnishes suitable means for building a pound, is it?—A. Just where that pound was built was not, I think, the best place for it. There may be something in that.

Q. You think that if pounds were established they ought to be near the section from which the lobsters were obtained so that they would not have to be carried too far?—A. Yes, it would be better; the longer the lobster is out of the water the worse it is, the lobster is not able to live very long out of water.

Q. Are the female lobsters with berries on more delicate than other lobsters?—A. I have never known them to be.

Q. Where they ship them to market alive they say that the berried lobsters will not live as long as the others.—A. I have never kept them, no more than from the morning until the evening in my boat and I did not notice that they died any sooner than the other lobsters.

Q. Have the regulations as to the size limit, within your knowledge, ever been observed?—A. Yes, one or two years, I cannot just tell you exactly when, it was observed to a certain extent.

Q. But that is a good while ago, is it not?—A. A long time ago, but it is since Mr. Baker packed lobsters here, just about the time of his first coming.

Q. Have you any knowledge of the live lobster trade? Can you tell me which in your opinion is the most profitable trade, and the one to be encouraged where the facilities exist for carrying it on, the live lobster trade, or canning? Which is the more profitable to the fishermen?—A. Well, I suppose where the fisherman is near the market and can get the lobsters into the United States alive, that is the biggest percentage of them, I would say it is better for them. But I think that here in our district the canning industry is the best.

Q. The facilities do not exist here, for shipping them alive, you are too far away from the market?—A. That is it.

Q. It has been said that in some districts no lobster canner could continue in business and observe the law regarding the size limit?—A. I do not think I dare to say that it would put the canner out of business, but probably it would put him pretty well out of business, and if it did it would pretty well put the fisherman out; and, as you know, if there are no fishermen there could not be any cannerys.

Q. It has been alleged that in some instances the fishermen have suffered loss by the failure of those holding canning licenses to operate the factory?—A. I never knew of any trouble until this year; there was something going on very near that this year, and I guess down to the eastward of us there was one of the factories closed up.

Q. Was it closed up all season?—A. Yes, closed up this season.

Q. Did they all run their canneries here?—A. Yes, this season.

Q. What happened? Did the fishermen and the cannerys come together again and did the fishermen decide to accept the price offered?—A. Those who fished for the cannerys did.

Q. And those who did not had their co-operative license and canned on their own account?—A. Yes.

Q. But the rest of the fishermen could not can?—A. The rest of them could not can and they fished.

SESSIONAL PAPER No. 22a

Q. Did they get any advance on the price offered them originally?—A. I only heard that \$2.25 was offered here in the spring, and that all the canners made the same offer, but later on in the season, at the latter end, it was not worth talking about hardly, just in the beginning of July when I do not suppose the fishermen got 500 lobsters, I think they raised up to \$2.50, and after that I think that any fisherman who brought his own lobsters, that is what I heard them say about it here, to the factory and saved the smacker, got \$2.75. That is what I understood from the fishermen.

Q. Now as to the matter of licensing, do you think that the present arrangement, I think I asked you this before, for the issue of co-operative licenses is a fair way out of the difficulty between the canner and the fisherman?—A. I think so.

Q. Do you think that a large increase in the number of canning licenses would affect the fishery in any way?—A. I do not know, I do not think that it could.

Q. You think that everybody that can fish lobsters is already engaged in it?—A. I think everybody that can fish or that would fish is fishing now. As far as this place is concerned I do not think they want any more canneries.

Q. You do not want any more than you have here at present?—A. Because there would be nothing for them to can.

Q. Do you think that lobster fishing should be kept further out from the shore? and would that result in the schools of immature lobsters that come in shore being better protected?—A. I do not think so.

Q. Some people have suggested that if the fishing were kept outside a certain depth of water it would furnish a means of protection?—A. That is a thing it is impossible to do.

Q. What is the best time for fishing in this neighbourhood, when is it most actively prosecuted?—A. The best time here for lobster fishing is from about as early in the spring as it opens up, after the first of May to the 15th of June.

Q. Now as to these various plans that have been suggested for remedying the condition which exists, which one appeals to you as the best? You know one proposition is to close down altogether but it does not seem to be the opinion that we need entertain that because the fishery has not reached a condition to necessitate that. Then there is the suggestion of the Lobster Commission of 1898 to close down by sections, which, although a little less hard than the first, does not seem to meet your approval?—A. No.

Q. Then there is the proposition to put the size limit at 8 inches, that if it is only put at 7 inches the fishermen would live up to it and there would be no more trouble about it. Then there is another proposition that we should do away with the size limit altogether which never has been and never can be enforced unless at very great cost.—A. I think that is the right one to adopt.

Q. And that we should strictly protect, in whatever method is found the most suitable, the berried lobster, and at the same time shorten the season by a few days.—A. I would not say shorten the season.

Q. You see if we do away with the size limit and allow the fishermen to take undersized lobsters we must have something to compensate for that?—A. I would not say shorten the season, we have only three months here now out of 12 and you can safely say that you have to lose one week, seven working days, out of every working month, and that takes away one month from you out of the season that we have now.

Q. That is out of the whole fishery?—A. Yes, Providence has made that provision, you will have at least three weeks lost time out of the season and I think that is quite enough. I would not say shorten the season here, because there are other parts of the Dominion that have a far longer season than we have.

Q. To the west of you?—A. Yes, and I would not think it would be fair to shut off our season and leave theirs.

Q. If there is any shortening of the season it would have to be general, you could not do it in one place and not in the other.—A. But with all the storms and the weather conditions our season is short enough.

9-10 EDWARD VII., A. 1910

Q. Towards the close of the present season are there not other fisheries available to the fishermen?—A. There is very little other fishing, and the fisherman while he keeps at lobster fishing cannot do much at the other fishing. He cannot keep the two going.

Q. But if the lobster fishing season were curtailed has not the fishermen other fisheries to go to?—A. I suppose he could go to his cod fishing, but there are very few of these lobster fishermen that have ever been very well able to go to cod fishing, they are not fitted out for cod fishing.

Q. Have you fishermen here who have nothing to do with the lobster fishing and who go to cod fishing very early in the opening of the season?—A. Yes, we have an odd one, but we have only an odd one, who used to do that and I do not think they did any lobster fishing this year but they generally set out a few traps in May around the harbour here.

Q. And they carry on the deep sea fishing at the same time?—A. Yes, the lobster fishing begins here on the first of May, and the fisherman cannot very often do anything with mackerel until along about the 20th or 25th and he has a few days in which to make a few dollars when he could not otherwise do so.

Q. When should the cod fishing begin? Before you fished lobsters at all here when did the cod fishing begin?—A. Before we ever fished lobsters?

Q. Yes?—A. That is quite a long while ago.

Q. It is a long while ago, but still it is only a recent fishery.—A. It never does begin much until the mackerel and herring strike the shore, somewhere about the same time, probably some years a little earlier and some years a little later.

Q. What have you to say with regard to fall fishing for lobsters? Some people suggest fishing in the fall, knocking off early in the summer and fishing again later in the fall?—A. I do not know how that would be, it may be all right, I have no doubt but what a man would do better, but it would not be worth a man's while fitting out for lobster fishing if he could not get a couple of months at it anyway.

Q. Have you any idea of the condition of lobsters in the fall?—A. Yes, I have fished lobsters in the fall.

Q. Some people say it takes a great deal more to fill a pound can in the fall than it does in the summer?—A. I do not know anything about that, but I know that the lobsters are very plentiful in the fall, in the month of September and October.

Q. It has been said that in a few years the live lobster trade will altogether replace the canning, but that is not likely to be the case here?—A. I guess they will have to give us a railroad first.

Q. Further west there is no doubt that seems to be the tendency. Have you any further statement you would like to make, if so, we would be glad to have it taken down.—A. I do not think I have anything more. I do not see anything further I could say.

Witness discharged.

JAMES MANN, fisherman, Gabarus, called and sworn:—

By the Commissioner:

Q. How long have you been engaged in lobster fishing?—A. About 21 years.

Q. You heard the evidence given by these other gentlemen?—A. Yes.

Q. Does it tally with your views in the matter pretty much?—A. Well, pretty much, but with regard to that seed lobster I do not think there are as many seed lobsters to the hundred as he said.

Q. How many would you say there are?—A. I should say about 5 or 6 to the hundred.

SESSIONAL PAPER No. 22a

Q. Even that is a large percentage?—A. Yes.

Q. Do you fish your own boat and gear or do you fish the factory gear?—A. I fish my own.

Q. What amount of gear do you fish?—A. 125 to 130 traps.

Q. What style of trap do you fish?—A. The parlour trap.

Q. When did you abandon the old-fashioned double-ender trap and take up the parlour trap.—A. Perhaps 6 or 7 years ago.

Q. Do you think the adoption of the parlour trap has had anything to do with the capture of a smaller run of lobsters than you used to get in the old trap?—A. I do not know, I do not think.

Q. It is simply that the parlour trap holds what gets into it?—A. It will hold all that will get in; perhaps you will not be able to get to your traps every day on account of the weather, and I think the parlour trap holds the lobsters better.

Q. What space do you generally leave between the slats in the trap? You make your own traps?—A. Yes, I haven't any measure by which to go, but I usually use the pole of the hatchet, about $1\frac{1}{4}$ inch.

Q. You leave as much as that, do you? Do you think there is a tendency to put the slats closer together than they used to be?—A. I don't think. No doubt in the old fashioned trap they were farther apart, but I never make any difference.

Q. Do you think some do put them closer together later in the season?—A. Oh no, they remain as they start out.

Q. When do you begin to fish, one year with the other, about what time do you commence?—A. We never start much before May 8th, 10th, or 12th and an odd year we will be later than that.

Q. The commencement of the fishery depends altogether on the ice?—A. On the ice.

Q. In what depth of water do you generally begin to fish?—A. From about 7 and 8 up to 10 and 12 fathoms.

Q. Do you remain on the same ground all through the season?—A. No, I move the traps in.

Q. Do you move them just directly in shore?—A. Wherever I can get a place.

Q. A place that is not taken up by some person else?—A. Yes.

Q. What sort of bottom do you generally seek to put them on?—A. In the spring it does not make much difference, a sandy bottom is just as good as any place in the spring, but in the summer you want to get on the rocky bottom.

Q. How do the lobsters run at various times of the season?—A. They are best in the spring, in the summer they get smaller.

Q. Is it safe to say that, one season with the other you notice they get smaller as the season advances?—A. It is different every year.

Q. During the same season you get big fish in the early part of the season and smaller ones towards the end?—A. Yes.

Q. What is the percentage of berried lobsters you get, about?—A. Five or six to the hundred.

Q. How is it with regard to the undersized lobsters? What percentage of them would you say are under the 8 inch size limit?—A. I could not tell you, I never took that much account of it.

Q. What has been your practice with regard to them, what would you throw out?—A. I never threw out any, just the very small ones.

Q. Where would you draw the line, what would you call a very small one?—A. I suppose about 5 inches, if they come down to 5 inches they are not much good to anybody.

Q. Have you any idea how they run, how do you sell your lobsters, by count or by weight?—A. Last year I sold by weight.

Q. Did you ever take notice how many they run to 100 lbs.?—A. In the spring when the fishery commences it would take about 90 to make 100 lbs.

9-10 EDWARD VII., A. 1910

Q. And as the season advances?—A. It will go perhaps 130 to the 100 lbs. in some places, and in other places they generally pretty nearly hold out the same, that is in rocky, rough places.

Q. How would it affect you if the size limit were strictly enforced at 8 inches? Supposing the canners refused to accept anything under that?—A. I think I would have to knock off.

Q. Of course of recent years all your berried lobsters go to the pound?—A. Yes.

Q. Before they went there what was your practice?—A. Before that they went to the factory.

Q. Was it necessary to brush them off before taking them to the factory, or were they taken as they were?—A. I have brushed them.

Q. Is it a very simple matter to brush them off?—A. Yes. I have knocked all the spawn off of them in perhaps two or three slaps on the water.

Q. How do you think it affected the lobsters?—A. I think it hurt them a little, but I do not think it hurt very much just giving them two or three slaps on the water.

Q. Do you think they would not live as long as the others?—A. Perhaps they would not, I have not noticed.

Q. Have you found that there has been a steady decrease in the lobster fishery in your time?—A. I can say there has not been much of a decrease.

Q. In your time?—A. I do not think so.

Q. One year with the other what has been your average catch?—A. I have not caught much by weight, I used to catch by count up to last year, and I used to catch from 12,000 and 13,000 down to 8,000 and 9,000 by count.

Q. It fell to 8,000 and 9,000?—A. Yes, I never got lower, I think, than 8,000. You see every year is not alike, one year you may catch many more than another.

Q. What is your percentage of loss of gear here? One year with another do you lose much gear?—A. This year I lost a lot of gear and some years I do not lose very much, perhaps 30 traps a year on the average.

Q. What is the life of a trap, how long will a trap last?—A. Four years, I never use them more than four years.

Q. What is the trap with its lines and everything worth? If you had to buy them, what would you pay for them?—A. They do not cost me more than 18 or 19 cents, but I make them myself.

Q. That is the material for building the trap?—A. Yes and the head.

Q. What size mesh do you use in the head?—A. I never measured the mesh. I guess it is about $2\frac{1}{4}$ inches.

Q. What do you think of that proposition of having the fishermen register and take out a license? Do you think there is anything at all in it?—A. I believe that is a very good plan.

Q. You see the idea is that when the fishery officer comes around in the spring, say when he pays the bounty, all those that intend fishing lobsters should apply to him and take out a form of license with the name filled in and the number on it. They need not pay anything for it.—A. Then he would be a sworn man.

Q. Yes.—A. That was always my thought about it, that is what is wanted, if you try to save that seed lobster all the men would have to be sworn.

Q. You think it would have that effect?—A. I believe it would. I do not think there would be many men who would break their oath, of course there might be an odd one here and there.

Q. And then somebody else would feel it his duty to inform on him?—A. Yes.

Q. Now as to the matter of price paid for the lobster, how is that generally arranged?—A. By the packer.

Q. And to whom do you generally sell your lobsters?—A. To the H. E. Baker Company until this year. I fished when I first went at it for \$25 a month and 25 cents a hundred.

SESSIONAL PAPER No. 22a

Q. You were fishing partly by wage and partly by count, and you gave that up did you?—A. I gave that up, and last year I got \$4.05.

Q. That was the year before last?—A. Yes, and about eight years ago I saw \$4.25.

Q. From the same firm?—A. From the same firm.

Q. What led to that increase in price?—A. Competition.

Q. And how was it this year?—A. This year we put up our own lobsters, I was one of those who got the license.

Q. You were one of those, that is the Gull Cove Factory?—A. No, that is here.

Q. What is your opinion, with the experience you have, do you think all the fishermen would be better off if they went into canning?—A. I think they would, because there is no way of shipping live lobsters from here.

Q. If there were more co-operative factories do you think the fishermen would do better with them than they will do by fishing for the regular factories?—A. Oh, I think so.

Q. Do you think there was any combine this year on the part of the canners to keep the price down?—A. I believe there was, they all came down and offered us the same price and would not vary a cent.

Q. How has it been other years?—A. Well, the last two or three years it has been leading to that; as far as I can find out they were trying to come together.

Q. Have you ever formed any conclusion yourself as to the spawning season of the lobster?—A. The spawning season is in the last of the fishing season, I think, in July, the last of July.

Q. Do you notice the eggs are getting ripe then?—A. Yes, and I notice that the lobsters had gone into the shell.

Q. You think they spawn about that time, at the end of July?—A. I think the majority of them do.

Q. Do you think you find more spawn on the lobsters that you got inshore than you do when you are fishing off shore?—A. We have our traps inshore because they come into the warm water I think.

Q. What is the smallest sized lobster you have ever noticed with eggs on?—A. I have never measured them, I think I have seen them as small as seven inches, but that is very rare.

Q. They say there is only one in 100,000 of that size?—A. It is very rare you find them so small as that.

Q. As a rule they are a very fair-sized run of lobsters?—A. Yes.

Q. What do you think yourself is the best method of securing the protection of these berried lobsters? Do you think there is any more general disposition on the part of the fishermen to protect and save them, or are they beginning to realize the necessity for doing so?—A. Yes, I think they are.

Q. They tell us in a good many places they think the fishermen are beginning to realize that in their own interests those lobsters should be saved.—A. Well, they are here too, and this summer we threw all our seed lobsters overboard.

Q. Would they not sell them to anybody?—A. No, there have been so many go to that pound, and the fishermen have heard that so many of them died before they even got there that we thought it was better to put the lobsters overboard and save them all that way. I have seen lobsters from the pound and they had only one whole leg on them, or perhaps a piece of a leg, and perhaps there was some seed still left on the lobster which was dirty looking and from her appearance I do not think she would ever bear any more eggs.

Q. You say you have heard the evidence of the other gentlemen who have gone before you and you approve of it. Do you think that if pounds are to be established they should be run by the department and not by private individuals?—A. I guess that is the only way they can be run, by the department.

Q. Do you think it is possible, from your knowledge, to establish other pounds about here? Do you not think smaller pounds and more of them would answer the

9-10 EDWARD VII., A. 1910

purpose better than large pounds?—A. No sir, I do not think you will get any lobsters here for the pound.

Q. You think the people here will put them overboard generally.—A. I think so.

Q. There is no doubt it is the best thing that can be done.—A. It is as far as I can find out.

Q. Do you know anything about hatcheries?—A. No.

Q. Do you think there is any time of the year when the lobster is not fit for food?—A. After shedding the shell, although I do not know, I have never eaten any of them, and I do not know whether they are fit for food or not.

Q. But they come up pretty quickly after they have shed their shell, do they not?—A. Yes, I have had the shell in the trap and the lobster alongside.

Q. Did you leave him there to see how quickly the shell would get hard again?—A. No, I did not.

Q. What do you think of this method lately adopted by the department, of giving a license to any group of fishermen who apply for it and show that they are in a position to establish a cannery and run it properly? Do you think that fills the gap as far as the fishermen are concerned?—A. I think so.

Q. If the fishermen are not satisfied with the arrangements with the canner they can can for themselves?—A. I think that is about all the fishermen want to do.

Q. As to the live lobsters, have you any experience in that trade?—A. No, I know Mr. Baker tried it here, he tried to send them away and did pretty well at it for a while, but last year I do not think he did much with it, we are so far away from the market.

Q. And you have not the facilities for shipping?—A. No, we have not in the summer.

Q. Have you any idea whether, where the facilities do exist, it is the most profitable market for the fishermen?—A. I think that it is where the facilities exist.

Q. Are you aware of any instance where the fishermen have suffered by reason of the canner's refusal to operate his cannery?—A. No sir.

Q. If there is a decline in the lobster fishery to what do you attribute it?—A. I could not say, unless it is that there are so many being caught.

Q. That is it is due to over fishing?—A. I do not know that there is much decline here, there are more fishermen than there used to be. You could not tell very well when Mr. Baker was sending away the live lobsters how many were sent away and how many were packed.

Q. Was the quantity he exported large?—A. He sent a lot of large lobsters away.

Q. How did he get them to Mulgrave?—A. He had a steamer, the *Sea Bird*.

Q. What do you think of these various propositions that have been made with a view to improving the fishery? The first proposition is to close down altogether for a term of years and the next proposition is to close down by sections as an alternative to the total closing down?—A. I do not think it would do at all to close down, because our lobster fishermen here haven't anything else to go at, they have not the boats and gear to go cod fishing.

Q. What do you think of that other proposition to fix the size limit at 7 inches, do you think that size limit would be any more likely to be observed than the 8 inch size limit has been?—A. I do not think it would.

Q. What would you think of doing away with the size limit altogether?—A. I think that would be all right, to do away with the size limit altogether and preserve the berried lobster.

Q. The department would have to have something in return for doing away with the size limit and it has been proposed that the season be shortened at the end.—A. If the government did shorten the season it would be against the will of the fishermen, and if it were shortened at all I believe it should be shortened at the beginning of May because we always have it shortened then.

SESSIONAL PAPER No. 22a

Q. Nature fixes the opening of the season, does it not?—A. Yes, we can never start on the first of May.

Q. What is the most active portion of the fishing season?—A. When we get started at the first, in the middle of May and up to June.

Q. Do the whole of the fishermen fish actively up to the close of the season?—A. Yes.

Q. We are told at a great many places that the fishermen begin to slack off before the season closes?—A. When the fishermen have slacked off it is when they have had their traps broken up.

Q. Do you think there is anything in the suggestion which has been made to have fall fishing, cutting off a month in the spring and tacking it on in the fall?—A. It is hardly worth a man's while to fit out for one month.

Q. You do not think it would be worth while to refit or put their gear out for that period?—A. It would not, if you should give us two months in the first part of the season and two months in the fall it would be all right.

Q. Is there anything you would like to say in regard to matters I have not touched on or is there anything further you would like to say?—A. You were talking about a bounty for seed lobsters. If you are going to pay money out I think you could arrange it to give the men the money, let the fishermen have a bounty according to their catch of lobsters, and pay them so much per hundred.

Q. Well, we would have to get the money to do that, the government would not like to vote money out of any other fund, they would very probably say that the lobster industry must pay for its own protection. Under those circumstances do you think it would be reasonable to charge the canners a higher fee than is charged at present, it is merely a nominal affair, \$2 per hundred cases—A. If we only got a little money one way and had to put it back another it is just as well to leave it as it is.

Q. It is problematic whether the people generally will agree to pay a bounty on lobsters, of course you can get a bounty on cod fishing, but that does not come out of Canada, the Americans pay that. It will be necessary to raise the fund in one way or the other out of which to pay the bounty you suggest.—A. It will be just as well for the fishermen to throw the lobsters away at once as to get something for throwing them away and have to pay it back in another way.

Q. It would come out of the canners presumably?—A. If the canner pays it it will come out of the fishermen anyway, we will have to pay it in the long run and in any event there is a big percentage of lobsters die there after they get into the pound.

Witness discharged.

Mr. ORMISTON.—There is one thing I would like to say about the government taking away the restrictions on the lobsters, they should take away the size limit altogether, and that will give the fishermen a chance to throw away the berried lobster; if that is not done they do not have anything to recoup themselves.

The COMMISSIONER.—You think they would recoup themselves for the loss of the berried lobsters if that were done?

Mr. ORMISTON.—Yes. I have seen the government official after the lobster fishermen here pretty often, and as regards the small lobsters I have known the government cutter to come in here, and the captain of the smack just had time to get away. The officials we have around here possibly do not desire to catch men all the time, and still I would not say that they would break their oath. It is a pretty hard job to throw away all undersized lobsters, because some of them are pretty nearly as good as eight inch lobsters.

9-10 EDWARD VII., A. 1910

Mr. H. C. GUNN, President of the Local Fishermen's organization, was invited to give evidence but declined to do so on the ground that the fishermen who had already testified were older men at the business and better qualified than he was to express an opinion. He suggested that the money paid to Mr. Baker in connection with the pound might better be taken by the government and distributed among the fishermen, and if that were done the results would be far greater than had been produced by the pounds. He stated he had been informed that the mortality amongst the lobsters in the pound was very heavy, one of the employees there having told him that on one occasion three smack loads of dead lobsters had been removed from the pound in one day.

The COMMISSIONER.—I understand Mr. Baker stated in his evidence before the Committee that on one occasion there was a heavy mortality on account of the weather becoming very warm, but that on the average under normal conditions it was not above 5 or 6 per cent. However, the department has had an official there all this summer investigating and observing the conditions so that the Committee at its next sitting would be placed in possession of the actual facts.

Mr. GUNN.—This last summer would not be a fair test because there were very few lobsters in the pound, not more probably than 5,000, the fishermen here having refused to give any lobsters to the pound this year; this is the ground from which they obtained the greater proportion of seed lobsters in former years. It stands to reason that where there were only 5,000 lobsters this year the conditions would be much better than they would in former years when it was stated over 40,000 lobsters were crowded into the same pound. I think the government had better pay the money direct to the fishermen and let them have the benefit of it.

Mr. JAMES McDONALD.—I have visited the pound on two occasions and I hardly think there were as many dead lobsters as reported. I was at that pound twice and I only saw one dead lobster.

Commission adjourned.

CANSO, August 30, 1909 (9 a.m.).

W. G. MATTHEWS, canner, Canso, called and sworn:—

By the Commissioner:

Q. How long have you been connected with the lobster industry in any shape?
—A. All my lifetime, I was brought up to fishing.

Q. Have you always fished in this neighbourhood?—A. In Canso, I was born here and spent my life here.

Q. And recently you have run a cannery?—A. Yes, just this last year.

Q. What is its capacity?—A. I put up about 400 cases.

Q. How many boats do you employ?—A. Somewhere about 50.

Q. The fishermen own their own boats and gear altogether here?—A. Altogether.

Q. Are they mostly two-handed or single-handed boats?—A. Mostly two-handed.

Q. What number of traps do they fish?—A. From 150 to 250.

Q. What style of traps do they use?—A. Mostly the parlour trap, but some use the old fashioned.

Q. Whereabouts do they fish?—A. Round about the light and cape, and up to these islands.

Q. Up in Chedabucto Bay?—A. Yes, some.

SESSIONAL PAPER No. 22a

Q. How many canneries are operating in this place?—A. There were three this year.

Q. Who are the other two owned by?—A. One by the Portland Packing Company and the other by Sproule & Co.

Q. How long have they been operating here?—A. The Portland Packing Company has been here I do not rightly know how long, twenty years at least.

Q. And Sproule & Company?—A. They have been here for some years, about 10.

Q. Are those the only canneries that were ever operated here?—A. No, Hayward operated here a few years, I do not know how many.

Q. They gave it up?—A. They gave it up, and I understand they sold to W. L. Foreham.

Q. We have heard of him in other places, I think he has canneries in New Brunswick?—A. I think so, yes.

Q. About what time do you generally begin fishing here?—A. Generally about the 15th of April.

Q. When does your season end?—A. The last of June.

Q. And commences on the 1st of April?—A. It runs from the 1st of April to the last of June.

Q. And you generally begin about the 15th of April?—A. Yes.

Q. Are you bothered by ice to any extent?—A. Quite a lot sometimes, so that we cannot commence at the beginning of May, and I have known it one year to be the 11th of May.

Q. What is the best time of the year for fishing here?—A. May month.

Q. What is the practice of the fishermen about here, is it to begin fishing out in deep water?—A. Yes.

Q. In about what depth of water?—A. They generally fish in from 10 to 15 fathoms.

Q. What is the greatest depth they go to?—A. Fifteen to 17 fathoms, round about that.

Q. How far off shore will that take them?—A. Not very far right off here, round about the light and back towards the Cape shoal.

Q. By 'the light,' you mean the light on Cranberry island?—A. Yes.

Q. How long do they fish out there, all the season?—A. No.

Q. When do they move in?—A. They move in about the 20th of April, as far as I can remember, that is when they commence to shift the traps into shoal water, it depends upon the season.

Q. And upon the movements of the lobsters?—A. Yes.

Q. And they come then into what depth of water?—A. Two or three fathoms.

Q. Is there much loss of gear by stormy weather?—A. Yes.

Q. I suppose the loss is greatest when they are fishing in shoal water?—A. Yes.

Q. How do they fish, trawls or on single lines?—A. Years ago they used to fish mostly on trawls, but they do not fish many trawls now, mostly what they call the hand pots.

Q. Within the limits of your experience how is the fishery now compared with what it was when you began fishing?—A. Well, to my mind, it is dropping off every year, there is a little dropping off each year.

Q. It is continuous?—A. Yes.

Q. A great many people say they think it has not decreased the last five or six years, but in your opinion it has decreased?—A. It has decreased right along.

Q. Both in quantity and size?—A. More so in quantity than in size. Our lobsters this year held out very good for size. What I mean by that is we had more market lobsters in proportion to the others than we had before.

Q. By market lobsters you mean those that you ship alive?—A. Yes, those that we ship alive.

Q. You do both branches of the trade, then?—A. Yes.

9-10 EDWARD VII., A. 1910

Q. What percentage of the lobsters taken here will be below the legal limit of 8 inches? Of course everywhere we find that that legal limit is not observed at all, never has been, they say in most places.—A. Well, it is pretty hard to tell.

Q. Is it a considerable portion?—A. It is, yes.

Q. In some places you know the canners say that if the legal limit of 8 inches were enforced it would put them out of business, that they could not continue, or the fishermen either.—A. According to what I hear there are places like that, but we get a larger percentage of large lobsters than they do in most places, and still there is a pretty large percentage of small ones.

Q. I suppose you have pretty good bottom for lobsters around here, the rocky bottom among the islands, the reefs and the shoals here ought to be pretty good lobster ground?—A. Yes, between here and Whitehead I suppose there are the largest lobsters caught.

Q. How many does it take in your place to fill a pound can?—A. Our average was in the vicinity of five, sometimes a little lower.

Q. How do you pay your fishermen, by count or by weight?—A. By weight.

Q. Has that always been the practice here?—A. For many years. In Ogden's time when he first commenced here they paid by count, but they got into paying by weight after a few years.

Q. Have you any idea, can you tell me, how many lobsters it takes to make 100 pounds?—A. How many in count?

Q. Yes, how do they run? What does a hundred pounds weight represent in number?—A. That is just as they are caught?

Q. Yes, green?—A. Just as they are caught big and small; well I do not know exactly, but I do not think they would average more than $1\frac{1}{4}$ pounds.

Q. You think the lobsters would run on an average to $1\frac{1}{4}$ pounds?—A. The largest would, I remember the time when 100 would weigh 200 pounds, I remember seeing that.

Q. But that is not at present?—A. No, I guess somewhere between one pound and one and a quarter on the average.

Q. Is the amount of gear now being fished much greater than it used to be?—A. Oh yes.

Q. There are more fishermen fishing?—A. Well, there may not be any more fishermen but they fish more gear. Of course there are more fishermen than there were 10 years ago.

Q. What are the men usually engaged in the lobster fishing here, are they genuine fishermen?—A. Yes, generally they are genuine fishermen.

Q. What other fishing do these men indulge in?—A. Cod fishing, mackerel, herring, all kinds of fishing.

Q. Does the cod fishing go on all the year around with you?—A. No, generally in cod fishing we do not get much before the 20th of May.

Q. And when do you stop fishing again?—A. When the season ends it is about the middle of January.

Q. Then between the middle of January and May you do not do much fishing?—A. No, that is cod fishing.

Q. Now then, within your experience, is it as good fishing, do you get a larger run of lobsters when fishing in deep water than you do when fishing in shoal water?—A. No, I do not think so—well perhaps we do at first in the spring get larger lobsters, some of them. And as to the small lobsters we get most of them in the last of the season.

Q. That is when you are fishing in the shoal water and warm weather?—A. Yes.

Q. When do you see most of the spawn lobsters, those with berries on?—A. In June.

Q. You have a hatchery here now?—A. Yes.

SESSIONAL PAPER No. 22a

Q. I suppose all the berried lobsters are sold to the hatchery?—A. Well, the spawn is taken off them in the factory and they send it to the hatchery every day.

Q. Where is the hatchery situated?—A. Below our place there, on that point.

Q. How long has it been in operation there?—A. I think this is the fourth year, I am not quite sure.

Q. Before the hatchery was established what was the practice of the fishermen and canners generally in regard to the berried lobster?—A. As far as I know they washed the spawn off them and sold the lobsters to the cannery.

Q. Were the canneries in those days particular about taking them at all?—A. They would not take them if they knew.

Q. They would not take them if they knew?—A. No.

Q. What would be the percentage of lobsters bearing eggs? Out of every hundred lobsters taken how many do you think would be egg-bearing lobsters?—A. That is a pretty hard question to answer.

Q. It is not a large percentage is it?—A. No, it is not a large percentage. You would probably get in June 20 or 30 out of a thousand pounds of lobster, that is about as near as I can come to it.

Q. How do they run, as a rule, are the egg-bearing lobsters generally of good size?—A. Yes, they are generally of good size.

Q. Did you ever remark the smallest sized lobster you have ever seen bearing berries?—A. I think I have seen them as small as 9 inches, and Mr. Davis was talking this morning about seeing them 8 inches.

Q. They have been seen down to 7 inches, and I have seen one myself 7½ inches. They say where they have kept a regular record, as they have in the United States Biological stations, they find about one lobster in 100,000 bearing eggs at 7 inches, as a rule they are 7 inches and up.—A. Yes, that is what I would say.

Q. I see by the evidence taken last winter before the committee in Ottawa, that a number of suggestions have been made with a view to improving the condition of the fishery. Among other things that have been suggested is the proposal that in order to get the fishermen to obey the regulations where there are no pounds or hatcheries that when the fishery officer comes around in the spring to pay the bounty every man who intends to fish for lobsters should take out a license. There need not necessarily be any charge for the license, the idea being that if a man took out this license he would feel himself in the position of a fishery officer and responsible for the enforcement of the regulations, so that he would not only obey them himself but would see that others did. Do you think that would have a good effect upon the fishermen generally?—A. It might have.

Q. That is the idea of those making the suggestion, that it would secure the better observance of the regulations?—A. That may be all right.

Q. As to the matter of licenses and restrictions generally, what is your opinion about the matter of issuing canning licenses? Do you think that the number should be kept down? That, as you are aware, has been the policy of the Department in the past?—A. What I really think about that is, I believe that those people who are holding licenses and do not use them should not have them unless they establish themselves and do business. On the other hand I do not think it would be wise to have too many licenses issued, but I think there should be an inspection, that is what I think about it, and if anyone packs the right kind of goods it is all right, but those that did not should have their licenses taken from them.

Q. You are aware there has been friction in some places between the fishermen and the canners, especially in Cape Breton?—A. There is here, lots of times.

Q. The fishermen have complained that they are not getting justice from the canner, that they are not getting enough for their lobsters, and that in some cases the canner shuts down his factory and they could not find a sale for their lobsters. To obviate that the Department decided to issue what is called co-operative licenses to 15

9-10 EDWARD VII., A. 1910

or more fishermen who combine to can their own lobsters. Do you think that is going far enough to assist the fisherman in his difficulties?—A. I do not see that you can go very much farther, that is giving them all the chance if they think that the packer is not giving them enough for their lobsters, to go on and try to can them on their own hook.

Q. Do you think that the fishermen, taking one with another will make more money canning than by selling their fish?—A. No, I do not think they will, they will find that out for themselves if they start at it, especially nowadays, it is not like what it used to be in the olden days.

Q. What do you pay your fishermen here?—A. We started at \$2.50 and ended up at \$3.50 this year.

Q. There is a feeling among the fishermen generally that there is a combine on the part of the canners to keep down prices. Is there anything of that kind to your knowledge?—A. There is nothing of that kind to my knowledge.

Q. And the fact that the price did run up would seem to contradict that?—A. Yes.

Q. What is the highest price you have known to be paid for lobsters?—A. \$4.50 I guess.

Q. That was the year before this?—A. Yes.

Q. Which branch of the fishery do you think, is the most profitable one to the fishermen, the sale of his fish to the canner or exporting them to the market alive where that can be done?—A. Yes, where it can be done. My experience, of course I am canning this year but I have bought and shipped them before, and I can safely say that I have yet to have the first dollar I have made out of the live export trade, that is taking the season right through.

Q. What was the trouble?—A. So many lobsters die in getting them to the market.

Q. The conveniences and facilities do not exist here for that trade?—A. They do not exist.

Q. You have to ship them to Mulgrave?—A. Or to Halifax.

Q. And there was the cost of getting them to the market?—A. Yes, I lost \$135 on one small shipment this spring. Of course there are times in the year when the fishermen can make money, but take the season right through and they cannot make anything.

Q. That is they can during the cool weather?—A. Take the last season when the price was pretty good, high, and of course a great many of them died, but there was money in it.

Q. As to this matter of handling the berried lobster, what do you think is the best thing to do with her, put her in the water when she is taken out of the trap, bring her to the pound, or bring her in and have the eggs taken off her and have the spawn hatched in the hatchery?—A. I always feel that the pound is the only place for the seed lobster.

Q. Are there any facilities in this neighbourhood for establishing a pound?—A. I think so.

Q. What is wanted is sufficient depth of water with a free flow of the tide and means of barring them off?—A. I think there are places like that around here.

Q. There ought to among all these islands and reefs you have here?—A. I think so.

Q. As a remedy for the poor condition of the fishery various suggestions have been made to the Department. One is to close down altogether for a term of years, what do you think about that?—A. Well, I do not know I am sure. I do not know that it would be very much better.

Q. It would be pretty rough on the fishermen?—A. Yes, in a place where they cannot do anything else but fish.

Q. Then the Lobster Commission of 1898 recommended the closing down by sections, closing certain areas for 2 or 3 years and then moving those areas around

SESSIONAL PAPER No. 22a

gradually until the whole coast had been covered, what would you think of that as a remedy?—A. I do not know about that, I am sure. Of course you take here for instance, if they take that from us in the spring that is the only thing the fisherman has to go to, and some years they get a pretty good start out of it and to take that from them and make them depend upon something else and that perhaps no good would make it pretty hard times here.

Q. Others have suggested that we reduce the size limit from 8 inches that we have here now to 7 inches, what would you think of that?—A. That would be all right I guess. Anything smaller than 7 inches should not be caught at all.

Q. You see it was nine inches originally, then it was brought down to eight and now it is proposed to make it seven?—A. Yes.

Q. Another proposal is to do away with the size limit altogether, it has always been difficult, in fact almost impossible to enforce it?—A. That is my idea about it too.

Q. And to protect the berried lobster, shortening the season by ten days or a fortnight at the end.—A. That is a very good idea, it agrees with my feelings exactly.

Q. Professor Prince, who is at the head of the service, and who is an expert, favours an open season beginning with the 1st of January and ending on the 15th of June on the Atlantic Coast?—A. Of course that is all right, it would suit some parts of the coast, but it would not suit us at all, because we would not be able to commence any earlier that we do.

Q. Well, you would begin when you could?—A. We would certainly do that, but I have never known them getting to work before the 1st of April, at least I did one year.

Q. I know in my own district, Gaspé, we can fish in March sometimes.—A. Yes, but we are troubled with ice coming down from the straits and it would not do us any good here.

Q. And the idea was that by doing away with the size limit we could shorten the season?—A. Yes.

Q. A great many of the most intelligent witnesses we have come across say, 'Shorten the season, take something off the end of the season, because that is the regulation that can be enforced, and it is during the last few days of the season the greatest damage is done in taking the small and berried lobsters?—A. That is my own experience exactly.

Q. Is it the case that the canners are compelled to accept undersized lobsters from the fishermen for fear of losing them? Do the fishermen expect you to take everything they bring in?—A. No, I do not think so now. The restrictions are there and they know it, and that we must go by them.

Q. We hear in some places the canners say that they have to take them because if they do not their neighbour will and he will get the fishermen?—A. It may, of course, happen in cases of that kind.

Q. Have the regulations for the strict protection of the lobster and the maintaining of the law ever been observed?—A. Oh, yes.

Q. You think they are?—A. I know I have smacked lobsters for years and there are lots of times I would not take them.

Q. You would not take undersized or berried lobsters?—A. I would not.

Q. In some places they have asked to have fall fishing, to cut off part of the spring fishing and to give additional time in the fall, what would be your idea of that?—A. I do not think that would suit this place.

Q. You think the people would not begin again after having closed down?—A. Some might and others would not bother, at that time you see there is other fishing, and to my mind it would not be worth while bothering about it.

Q. As to this standard of fitness in the cannery, do you think it would be wise to insist upon a certain standard of fitness, that the tables should be covered in a certain way, and that a certain standard of carefulness be enforced?—A. By all means.

9-10 EDWARD VII., A. 1910

Q. You think it would improve the market?—A. Yes, for the fisherman, the packer and everybody else.

Q. And then there is another thing that has been suggested, that is that the product of the canneries should be subject to inspection the same as we inspect other canned products. Fruit, vegetables and other things are already inspected but lobsters are not inspected?—A. I imagine that would be all right—I believe it would be right to have them inspected.

Q. But you would require to have practical men trained in the canning business to make an inspection of that kind?—A. Sure.

Q. The ordinary staff of officials at present in the department you think would not be able to do that?—A. They would be no good, you would have to get men trained in it to know a good lobster from a bad one.

Q. Are there any of these co-operative canneries here in this neighbourhood?—A. Yes, this one of ours is a co-operative one.

Q. Are you a member of the Union?—A. No.

Q. Is it to your knowledge that the fishermen have lost their catch of lobsters by the canners refusing to accept them? Has that ever occurred here?—A. No, but it pretty near occurred here a year ago. The Portland Packing Company did not open here the year before last and left all the lobsters for one factory and if Mr. Neville's boat from Halifax had not come down here and bought them we would have had very little market, and it would have hurt us; Mr. Sproule could not have handled them all. That is the only time I remember anything of that kind.

Q. Did the Portland Packing Company re-open and can afterwards?—A. They did last year but not that year.

Q. What was the cause of their shutting down that year?—A. The price got too high.

Q. They could not afford to pay the price?—A. That is it.

Q. They did the same thing on the Magdalen Islands, they said the price got beyond them. Do you think that the hatcheries are helping to maintain the supply of lobsters?—A. I really think they are to a certain extent. Of course we do not see the results here yet; according to what I hear they are a benefit and I do not see why they would not be.

Q. With regard to the matter of placing berried lobsters in pound for the purpose of hatching, what do you think about increasing the number, or going into the system of hatching putting the lobsters in pounds to hatch? At present we have only one pound, that operated by Mr. Baker at Fourchu. What do you think of that method of dealing with the lobsters?—A. I think it would be a grand idea. In all this coast there is only one hatchery between here and Halifax, and there are other people who do not get any benefit from it at all, whereas if they had pounds you could have small ones all along the shore and everyone would get his share of the benefit.

Q. Is there any fishing or packing done here after the close of the season?—A. No, not that I know of, I do not think there is anything done.

Q. What are the average earnings of a lobster fisherman? What number of pounds will an active fisherman take in a season, that is in a two-handed boat?—A. I could tell exactly by looking at my books, they made all the way from \$100 to \$600, that is for a boat.

Q. They did that during the season of three months?—A. Yes, I have known some boats to take \$600, but of course some did not make over \$100.

Q. What do you value a fisherman's boat at? The boat he uses for lobster fishing is a small boat is it not?—A. It would be worth about \$30, that is about it, say \$25, would be about an average.

Q. Are any of them using motor boats now?—A. Not for lobster fishing, but there is some talk about it.

Q. What is the trap worth with its gear and trawl line?—A. Somewhere in the vicinity of \$1.00.

SESSIONAL PAPER No. 22a

Q. That is in the water ready for fishing?—A. Yes.

Q. What wages are paid to the sealers in the cannery?—A. Generally about \$35 a month.

Q. And board?—A. No, board themselves.

Q. And what is paid to the other hands employed about the cannery?—A. The foreman gets about \$50 or \$60, and the other labour is paid——

Q. What are the girls paid?—A. About \$10 per month, some \$12 and some \$10 and the boys get from \$10 to \$12 according to what they are at. The other male help get about \$30 per month.

Q. I do not think there is anything else I can think of that I can ask you particularly. If there is anything else you think I have not touched on I will be glad to have it taken down.—A. I guess you have touched on everything that is necessary.

Q. If there is anything else that you want to lay before the Committee it will be taken down.—A. I think you have covered everything, but in the meantime, if I should think of anything else during the day I will give it to you. I think it will be well if you can get some ideas from some of the old fishermen.

Q. Those are the men I will be glad to get, and if you can get us some men who are able to give us evidence as to the conditions now and in former years I will be pleased.—A. There are a couple of old fishermen that I will try and get around here this afternoon. Of course there are some young fishermen who have new ideas that are not always right but as far as the fishing is concerned there is nothing like getting your evidence direct from the fishermen.

Witness discharged.

Commission adjourned.

CANSO, August 31, 1909 (2 p.m.)

CHARLES LONNES, Canso, called and sworn:—

By the Commissioner:

Q. Were you ever connected with the lobster industry in any way?—A. No, not any more than what I am telling you, for one season I was inspector at the lobster factory.

Q. Well, you have some knowledge of the condition of affairs. What in your opinion is the condition of the lobster fishery compared with your early recollection?—A. In what respect? Have the lobsters got scarcer?

Q. Yes.—A. Very much so, in my opinion.

Q. Has that been constant and steady, or did it occur years ago?—A. It is steady year by year, I think.

Q. To what do you attribute that decrease?—A. There are various reasons in my opinion. The lobster is a fish that does not travel very far, it just goes off shore a little way in the fall and returns in the spring, and I think that perhaps over-fishing or excessive fishing is responsible to a great extent for the decrease.

Q. And would you venture to say that it is due to the catching of too many immature fish and the destruction of the female fish?—A. More so with respect to the female. .

Q. It must conduce towards the extermination of any flock I would think if we destroyed the young before they reached the age of maturity?—A. Yes, and if you destroy the mothers it will be greater.

9-10 EDWARD VII., A. 1910

Q. In a few words, there is no use going into a long inquiry about the fishery, what would be your remedy for the existing conditions of affairs?—A. I have often thought, and I may as well tell you now, what I think my remedy would be, that if the government were to issue a license to all lobster fishermen, that is not make any charge for it to them, but that they could not fish without a license.

Q. That is one of the propositions that has been made?—A. Make it so that nobody could catch lobsters without a license, that everyone would have to get this license and would be required to make affidavit to these conditions which would be embodied in the license, that he was not to catch or destroy any seed lobster, and that he would observe the law, whatever it may be, as to the size of the lobsters to be taken. Even more important than that I would say that he should have his name on his lobster pots, which would not cause him any trouble at all, on his buoys and on all his lobster gear, and if he were caught with illegal lobsters in his possession he would be disqualified from fishing for a number of years, you might make it six or seven years, whatever the law was. I have thought for a number of years about this and that is the best way in my opinion to stop it. There are a number of conscientious fishermen that do not want to destroy the seed lobster and who want to see the others obey the law.

Q. We find that there are a number of fishermen who believe it would be better to save the female lobster and keep the industry alive?—A. I was going to say there are a number of men on whom it would be no use to impose a fine, but simply take the license from them so that they could not fish again, that would be the best way of dealing with them.

Q. That is one thing which has been suggested to me, that when the fishery officer comes around to distribute the bounty, he comes in the spring before the fishery begins, and he could issue those licenses, each license would bear a number and the fisherman might be required to have his rigging and traps bear a number corresponding with his license.—A. Exactly, and it would be the greatest benefit that could be adopted. Of course I am only one, but that is my opinion. On the other hand I might say that I am not in sympathy with the lobster hatchery and I will tell you why, no fisherman should catch the seed lobster, and of course there is a great destruction of seed lobsters, no question about that, and I am afraid the results are not very great. The idea of taking these small fish when you can just barely see them, they are so small, and putting them out into forty fathoms of water, in a strong current, when the minute fish cannot get to the bottom, and cannot make its own way there is a great destruction goes on among them. You can find places along the shore where a fish weir can be put across the mouth to keep the lobsters in the pound.

Q. You have them here along this shore, but you cannot have them always; there are some parts of the coast where you cannot find suitable places for a pound?—A. We have lots of places where just a small weir across the narrow neck would keep the lobsters in and I would suggest that wherever that is possible these pounds be constructed and that the seed lobsters be caught and put in there. One man is enough to look after a pound, but it would not make any difference if there were one or two, all the fish should be put there and kept there and fed until the lobster season is over, and then pull out the weir and let the fish out so that they would be at liberty to go where they choose. That, I think, would be the natural way of breeding lobsters.

Q. That, of course, is a more natural way than the hatchery?—A. No doubt. I am afraid that in my judgment there will be a very poor result from the hatchery. The people cannot be persuaded, but I think there is very little result produced by the hatcheries. Now, may I ask a question? Has the Canadian government or the United States government ever gone to the trouble to see if they can raise and produce lobsters his lobster pots which would not cause him any trouble at all, on his buoys and on all

SESSIONAL PAPER No. 22a

Q. I cannot say that they have. But they have taken the trouble at Hood's Hole in Massachusetts, to hatch them, and they have reared them until they were 3 or 4 inches long. All the information that we have about the lobsters has come from there. They have made extensive experiments there in the hatching of lobsters and have carefully watched them as they developed and made minute observations of their progress until they were distributed in the sea. From those observations they have determined that the whole of the early life of the young lobster for the first three months is nothing but a series of moulting, it grows a shell one day and casts it the next, it grows very rapidly, and the first year it grows about 3 inches long; the first and only time it progresses headforemost is the first six weeks of its life during which it travels on the surface of the water, after which it changes its method and goes to the bottom and then begins to crawl backwards. During that early stage the young lobsters form a very large portion of the food of the mackerel. After the first year they grow two inches a year, so that an 8-inch lobster is supposed to be 3 years old. That is the only place I have ever known of any attempt being made to keep track of the growth of the lobster. I do not think we have ever done anything along that line.—A. What is your opinion about the hatcheries?

Q. There is no doubt that unless the stripping of the eggs from the seed lobster is done carefully they are destroyed, but when the eggs are carefully handled there is no doubt that from 90 to 95 per cent of them can be hatched in the hatcheries. The stripping of the eggs from the female however appears to be injurious to her as the weight of testimony goes to show that she is much more delicate when in that condition than the other lobsters.—A. There is no doubt that they die most of them, because here we have shipped live lobsters to the United States, and they have often stripped a female lobster and put her in a crate, and, of course, there is no doubt there is a dead lobster before the crate reaches the market. My opinion is that if you scrape those eggs off before they are ripe you cannot produce lobsters from them.

Q. I would be doubtful of them any way. My own feeling is that the right thing to do with the female lobster is to put her back in the water when she is taken out of the trap, but failing that, and if you cannot trust the fishermen to do that, the next best thing is to take her from the fisherman and bring her in as quickly as possible and it may be necessary to give him a little more than the regular price in order to compensate him for the extra care which is necessary. When received from the fisherman in good condition then you can put her in the pound?—A. Exactly, that is what I think.

Q. Now that happened in connection with Mr. Baker's pound, perhaps they went too far for their lobsters, we are told they went up to Ingonish, and these seed lobsters cannot be in any condition after being two or three days confined in a boat.—A. There is no doubt about that. But on this shore from Scatari to Cape Sable there are hundreds of places where pounds could be established. We have excellent facilities all along this coast.

Q. Your opinion is, of course, that the best thing to do is to license the fishermen? —A. Yes.

Q. As to the season of fishing what do you think yourself? When should the season open, and when should it close?—A. The locality has a great deal to do with that. If the Government is going to allow the fishermen to catch fish in my opinion they also should allow them some reasonable time in which to catch them. It is no good to give them a month when the shores are blocked with ice, or some other time when they cannot fish. In my opinion I think that the season here is too long now, say April, May and June, although perhaps I should not do that because I am not engaged in the fishing.

Q. I have been in the service for 32 years and my experience is that it is in the tag end of the season the greatest harm is being done in the catching of the seed lobsters and the small lobsters, when they get close inshore. I find they are fishing

9-10 EDWARD VII., A. 1910

lobsters in some instances where the traps actually dry out at low water?—A. Yes, and it is the case here, they come as near to the shore as they can, and the nearer they get to the shore the more fish they get. You can put your hand on the top of the trap in many instances.

Q. The best fishermen and the best canners have told us that if they could get two months' fishing and packing that is all they want. Of course in New Brunswick and Prince Edward Island we find that a very large proportion of those engaged in lobster fishing are not regular fishermen, but farmers who come down and fish for the canneries with the canners' gear and boat?—A. That is so, I understand. In my opinion I think that along this shore from this point west to Halifax the 15th of June should be the end of the term. In fact, a great many of our fishermen here do not use the month of June anyway.

Q. They begin to slack off?—A. Yes, the lobsters are scarce and they find they can make more at codfishing and so they drop out. There are only a few among the many fishermen here, as far as I know, that fish the whole month of June.

Q. And the canner tells us that he would rather close up in the middle of June because the fishermen begin to slack off, and the quality of the fish he is getting is poor. He tells us that he only keeps open for the benefit of the fishermen, who say that he must keep open for them until the end of the season, but he would rather close earlier if he could?—A. I know that is a fact. I am acquainted with a great many of the packers, and I know as a fact that the time is very awkward for them. They have more help than they need, and if they discharge them it causes trouble because the fathers and the brothers of the help in many cases are fishing for them, and they lose their fishermen in that way, so that it just compels them to keep their factory open day after day so as not to lose their fishermen.

Q. I would like to ask you about the question of licenses. In the beginning licenses were granted to almost anybody that asked for them, and this led to a great increase in the number of factories until apparently it was overdone so that a great many retired and went out of business. The department to-day is not issuing nearly the number of licenses that were issued years ago for packing, and in recent years the policy of the department has been to restrict the number of licenses and the effect of this seems to have been to put the fishermen more or less at the mercy of the canners, and the fishermen rightly or wrongly have got the idea that the canners have combined to keep down the prices and that therefore they are suffering. My own experience in the Gulf of St. Lawrence is that there has been no combine among the canners any more than there has been among the fish merchants. Of course, they put their heads together and say that they will not pay more than a certain price, but the first thing that happens is that some man brings in a good lot of fish and gets a little better price for it and then the whole agreement is broken. The department has sought to remedy that state of affairs and to satisfy the fishermen by issuing co-operative licenses wherever a group of fishermen combine together and apply for a license to go into canning themselves. Do you not think that it would be a good thing for the department to set up a standard of cannery and to inform applicants that they can obtain a license if they are prepared to erect and equip a cannery up to a certain standard, whatever standard may be determined?—A. That is my opinion, but I would not like to say what the standard should be.

Q. You could not make it too high, because if you did you would rule out the poorer applicants?—A. That is quite right, some person in authority must decide what it should be, but it is unfair that because I got a license some years ago I should continue to get a license, and because you did not have one, although mine is renewed every year, you cannot get one. Take in our own place here, there are men with licenses who do not pack lobsters, and there are others who want to pack but who cannot do so because they cannot get a license. I say give every man a license who applies for it if he wants to pack, and provided he comes up to the standard required.

SESSIONAL PAPER No. 22a

Q. I have seen a great many canneries where there was no care taken at all to keep the tables or floors clean, or anything else. That sort of thing need not be tolerated; here is a product of food being put up for public consumption, and the whole tendency of today is to have the food product in proper condition, and it must be that the product of such canneries as those I refer to keep down the average price of the lobsters, and must have a bad effect on the market?—A. There is no doubt that is the case. If you were living in some other country and thought when you were buying a can of lobsters that you were getting a great luxury, but if you found upon opening the tin that the meat inside was not fit for food you would not want to buy any more of that particular article. In my opinion I think that every one who wants a license and who comes up to the standard should have one. If we have ten canneries here I do not think they can get more lobsters than the two would. The two can take care of all the lobsters our men can catch here, but if the same quantity of lobsters are distributed among a number of canneries greater than that it will eventually come down to the point that only the number of men who can make it pay will remain in the business, that thing regulates itself.

Q. It has been suggested that there was very little use in limiting the number of canneries when no limit was placed upon the amount of gear.—A. That is a great mistake, as long as there are canneries enough to take care of all the fish that are caught and now they can take care of so many more than what they did in years past, because they are sending so many away that are not canned.

Q. That involves another question. Where it is possible to carry on the live lobster industry, should the regulations be made to favour that industry as against the canning? It does not affect you here, perhaps, very materially, but go down to western Nova Scotia where you come up against the American laws, and where the market for live lobsters is direct to Boston it seems to me that one way out of the difficulty is to put up the size limit on the lobster and enforce it?—A. Yes, in that part of the province.

Q. And in that case the canner in that immediate neighbourhood would be sacrificed?—A. Yes, but that would not apply to us here.

Q. Of course that could not apply here or to Cape Breton or the Magdalen Islands where canning must always be an industry, and the regulations must be passed there with a view to assisting the canner, or that part of the industry. But where canning comes into conflict with the live lobster trade it has been urged that the regulations should be framed to suit that trade rather than the canning.—A. Yes, and then with regard to the conditions, we are able to fish here earlier than they are about Gabarus and along that shore so they may want the month of June.

Q. They tell us up in Cape Breton that they cannot do anything in the live lobster business because you people who live to the south of them under better conditions fish right up to the time when they do, and that you ruin the market for them.—A. It is only fair to the people of Cape Breton that if our season closes here on the 15th of June they should have two weeks in which they could do a fair business in live lobsters.

Q. After you are out of it?—A. Yes, that is about it, that is just what I think.

Q. Another thing I would like to ask you about is, it has been proposed that, in order to raise a fund with which to buy the berried lobsters with a view of putting them in the pound, a higher fee might be exacted from the canner than the 2 cents per case which is now paid, and which is a mere bagatelle in canning. The people on the western farms, for instance, might object to being called upon to pay for the protection of the lobster, they might say that the business should pay for its own protection. Mr. Baker, who started the pound at Gabarus, Mr. Tidmarsh and some others who are largely interested in the industry have suggested that a higher fee be charged to the cannery and in that way that a fund be established for the purchase of the seed lobsters for the purpose of putting them in pounds. A fee of \$25

9-10 EDWARD VII., A. 1910

per hundred cases they say is a mere bagatelle.—A. Yes, that is pretty small, it does not amount to much, but the fishermen would probably say if that fee were imposed that it would come out of them in the end, that the packer would not pay that.

Q. Here is one question I had written out. It has been suggested that for the better protection of the lobster industry the fishermen should be required to register and take out a license, that is what you suggest yourself?—A. I would not think what I have said would be any good unless the last clause were carried out, and that if he violated this law and was caught at it his license should be taken from him so that he could no longer fish. Unless the law were strictly enforced it would be of no value.

Q. There is no use having a regulation that is not enforced?—A. I think there is not a packer who would not stand up and tell you himself that there is not a factory in Canada that does observe the law, if it did it might as well go out of business. Now what is the good of a law that is just discredited to that extent that the man himself will tell you so? There is no good having that law on the Statute Book.

Q. Have you any idea about the matter of price, do you think that the price the fisherman gets is a fair proportion of the value of the lobsters? We have heard of his getting as high as \$4.50 in some places, some years, but last year it came down to \$2.50.—A. \$4 I think is full value.

Q. And they found it out after they had paid it did they not?—A. I think they did, and that is why I say that it was full value, because fish at that price instead of being an article of food becomes, to a very great extent, a luxury, and therefore it is left on the market because people cannot afford to buy it. The way I look at it is this that if a man wishes to have fish of some kind for supper, he might buy two cans of salmon for what it would cost for one can of lobster, and yet the one can of lobster would not give a mouthful all round, so that if he has only a certain amount of money he would buy two cans of salmon instead of the lobster.

Q. It seems to me pretty clear that in 1907 and 1908 the canners lost their heads and began bucking against each other until they ran up the price too much?—A. It was too much, more than the article is worth.

Q. And then last summer they came down too far?—A. It was too great a fall, if the lobsters were worth \$4.50 the year before they were worth more than \$2 last summer. That is my opinion. I think they were in error both ways.

Q. It was the same way with regard to codfish which was up to \$6, and now it is down to \$2 and \$3?—A. Yes, and no doubt a quintal of codfish was never worth \$6, although it is something I have not dealt a great deal with in my time.

Q. Which branch of the lobster industry do you think is the most remunerative to the fisherman and the least calculated to deplete the fishery, the canning or the live lobster trade, that is where the live lobster trade can be carried on?—A. I think the live lobster trade would be the least injurious to the fishery, because in the first place they don't want any seed lobsters or any small ones, and they are only going to take the lobsters that should be taken, they only want the full grown lobster or nearly that. I think that is a question that is easily answered. In other words, the canner will take all he can get. There are several men buying, they go out with smacks at the present day and carry the money right in their pocket, and if some smack is there that will not take these small lobsters or the seed lobsters the fisherman will say: 'All right you cannot have any of them.' Another smack comes along and tells the fisherman that he will take all of them and the consequence is that the first smack man loses his fishermen, and perhaps he has already advanced money to the man for his outfit. The live lobster trade would do away with all this, and the fishermen could not take the small lobsters or the berried lobsters because they would have no market for them.

Q. There is another thing I have noticed in recent years, that they are placing the slats more closely together in the traps than they used to?—A. I think so, at least I am told that.

Q. They have narrowed the space down to half an inch?—A. They have not done that here I think.

SESSIONAL PAPER No. 22a

Q. We were looking at some of them on the wharf and they run about one inch here?—A. Yes.

Q. Do you think that has anything to do with the capture of small lobsters? Do you think that the capture of these small lobsters can be controlled to any extent by regulating the width between the slats?—A. To a very great extent. If you put the slats close enough together you are bound to capture the greater amount of small lobsters that go in, whereas if the slats were far enough apart so that he could go out any way you would get very few of them. I would just sum it up in that way that wherever it is possible to have pounds have them, and I feel very strongly on the license question, impose a penalty on each and every man that is caught violating the law, so that he cannot fish any longer and he will have to go to some other business.

Q. Is there any other statement you would like to make?—A. No, I think that the last remarks will fill the bill pretty well, the traps should have a certain distance between the slats.

Witness discharged.

Commission adjourned.

CANSO, August 31, 1909 (7.30 p.m.).

J. W. SPROUL, packer, Canso, called and sworn:—

By the Commissioner:

Q. I understand you are engaged in canning?—A. Yes.

Q. How long have you been engaged in the industry?—A. Eight or ten years.

Q. Always in this place?—A. Yes.

Q. Before that time were you interested in the lobster fishery in any way?—A. Yes.

Q. In what way?—A. In catching and shipping.

Q. So that you have experience in both branches?—A. Yes.

Q. What is the ordinary pack of your cannery?—A. We started at 400 cases, and our largest pack was 880.

Q. When was that made?—A. Last year.

Q. And this year what did you do?—A. 750 odd cases.

Q. So that the season here was a fair one?—A. Yes.

Q. When did you begin to pack?—A. Well, our season opens on the 1st of April, but I think it was along the 25th or somewhere about that time before we canned any.

Q. When does the season close here?—A. On the last day of June.

Q. You are supposed to have three months' fishing?—A. Yes.

Q. Does the ice interfere with you here in the early part of the season?—A. As a rule it does.

Q. The ice that bothers you I suppose comes down the gut—drift ice?—A. Yes, but sometimes it comes from Scatari.

Q. What number of boats are engaged fishing for you, one year with another?—A. They vary. The way it is with us here, we do not have our own boats like they do in some places.

Q. No, the fishermen have their own boats?—A. Yes, every one fishes for himself; we buy from them.

Q. Do they deliver their lobsters to you, or do you smack them?—A. We have to collect them mostly.

9-10 EDWARD VII., A. 1910

Q. What style of boat are they generally, are they double-handed boats that fish here?—A. Usually, yes.

Q. Two men in a boat?—A. Yes.

Q. What is the average catch of a good fisherman? Do you buy by count or by weight?—A. By weight.

Q. How many thousand pounds will an active fisherman generally catch?—A. That is through the season you mean?

Q. Yes, through the season?—A. I haven't made it up that way.

Q. How do you figure it out, by his earnings?—A. By his stocks, yes.

Q. What would his stock amount to?—A. I would say, on the average, that is two hands in a boat, probably \$200.

Q. About \$200, one season with the other? I suppose some more and some less?—A. Yes, we have had them go as high as \$700.

Q. That would be unusual?—A. Yes, but on the average I do not think they would go over \$200.

Q. What part of the season do you think is your best fishing?—A. Well, I think about the 1st of May.

Q. Do you find that the fishing drops off as the season advances?—A. Yes.

Q. When do you get your best lobsters, at the opening of the season?—A. Along about the 1st of May, I think.

Q. Have you any idea what they run at, how many lobsters does it take to make a hundred pounds?—A. Well, the way we buy them here is by weight up to a certain size, and then they go what we call mediums, that is up to 10½ inches and over that size we call markets, and they run to about 90 to 100 pounds, that is on the average.

Q. That is the average all through the season?—A. Yes, I think so.

Q. I suppose the practice of the fishermen here is to fish at the beginning of the season out in deep water?—A. Yes, sir.

Q. And as the season advances they come inshore?—A. Yes, they come in.

Q. Do you find at the tag end of the season you get the small lobsters?—A. No, I don't think it makes any difference.

Q. What is the practice here with regard to small lobsters? There are certain regulations with regard to them, but we find that in very few places have they ever been observed. Have they been observed here, is there any attempt to enforce them?—A. They take them just as they get them, all they catch.

Q. And the fishermen expect you to take them?—A. Yes.

Q. Are you bound to take them?—A. Yes.

Q. Is it the case that you have to take them because if you did not you might lose your fishermen, that they would go to others?—A. That is the idea, exactly.

Q. Have you any idea as to the particular spawning season of the lobster? At what period do you think they spawn on this coast?—A. Well, they spawn all the time.

Q. That is to say they have berries attached to them all the time?—A. Yes, but there is more spawn lobsters here with us in the latter part of the season.

Q. Have you any idea of the proportion of egg bearing lobsters to the hundred, what would be the percentage?—A. To the hundred in count you mean?

Q. In count, yes?—A. Taking the season through?

Q. Taking the season through, what percentage of the total catch are egg-bearing?—A. I would not say there would be more than 2.

Q. Not more than 2 per cent?—A. No.

Q. Is the percentage greater at any particular part of the season?—A. Yes, I would say that in June it was double what it was in April.

Q. Here of course the fishermen bring in all the berried lobsters, and the eggs are handed over to the hatchery?—A. Yes.

Q. Previous to the establishment of the hatchery what was the practice with regard to the berried lobster?—A. Well, if you restricted them from bringing them

SESSIONAL PAPER No. 22a

in they would wash them off and they would come in anyhow, that is just about the size of it.

Q. What class of lobster are they usually? Is the spawning lobster a large lobster?—A. Well, as a rule, they run from 8 inches up, but we do get them once in a while smaller than that.

Q. Would you put 8 inches as the limit, you never saw them under that?—A. I would not say that I have seen them, but they mostly run from 8 inches up.

Q. The percentage under 8 inches bearing eggs would be very small?—A. Yes, very small.

Q. I suppose the fishermen here are using altogether the modern trap, what we call the parlour or Wheeler trap?—A. Yes, they use the parlour trap chiefly.

Q. They still use some of the old fashioned traps do they?—A. Yes, once in a while they use the old style trap.

Q. Are most of those who are engaged in the lobster fishery here regular fishermen or are they farmers?—A. Oh, they are mostly all fishermen here.

Q. Do they fish up to the end of the season, or does it slack off towards the end?—A. It slacks off in this way, that the fish gets scarcer anyway, and in the month of June there is generally other fishing coming on and a great many make more out of the other fishing so they go to it.

Q. In some places we find that the lobster fishermen are farmers and others who do not take part in any other fishery?—A. They are all fishermen here.

Q. When they make more profit out of the other fishery they drop away from the lobsters?—A. Yes.

Q. So that you keep open to the end of the season?—A. We have to keep open.

Q. What has been the average price paid the fishermen for lobsters?—A. .What do you mean, one year with the other?

Q. How much do they get per hundred pounds, or per hundred count? What did they get this year?—A. They started in for \$2.50 and I think they went up to \$3.50, that is for weighing lobsters and for market, it began at 8 cents and ended at 16.

Q. Are those lobsters shipped from here to market?—A. Yes, quite a lot.

Q. Do you meet with much loss in getting those lobsters to market?—A. Yes, sometimes we meet with a heavy loss.

Q. How do you generally ship them, by what route?—A. By Halifax.

Q. How do you get them to Halifax, is there a boat calling regularly?—A. There is a boat calls here once a week and she takes them to Halifax and there they are transhipped, the Plant Line.

Q. How long do they take between here and Halifax?—A. Well they get there in two days from here, and sometimes in one day.

Q. You never ship by way of Mulgrave by rail?—A. Oh yes, we have, yes.

Q. As between the two branches of the fishery which do you consider the most profitable to the fisherman, where the facilities for shipping alive exist?—A. I do not just understand.

Q. Out of which of the two branches do you think the fisherman would make the most money, the live lobster trade or in selling to the canner?—A. They sell both to the canner.

Q. Further down the coast they tell us, where they have the facilities for reaching the market, and the live lobster trade is carried on more extensively than it is carried on here that some of them ship direct.—A. They can do that where they have the facilities, they can sell all over the 9 inch lobster.

Q. What I want to know is whether if it can be carried on the live lobster market is more profitable to the fishermen than the canning?—A. Oh I think it is, yes.

Q. The practice of the department in recent years has been to limit the number of licenses to can, do you think that was a wise practice? Should there be any

9-10 EDWARD VII., A. 1910

restrictions to the number of canning licenses?—A. Well, that is a pretty hard question to answer. I believe in freedom in all cases, if any man is qualified to can I think he should be able to can.

Q. How would you fix that qualification?—A. Well, I think it would fix itself and that if they did not can right they would soon know it.

Q. Of course you know that in some places there has been friction between the fishermen and the canner and complaints have been made that the fishermen did not have a fair show, and, with a view of giving them a chance, for the last two years the Minister has decided to issue co-operative licenses to any group of fishermen, 15 or more in number, who apply for a license, if they show that they are prepared to go into it. In your opinion does that give the fishermen all the relief they have a right to expect?—A. I would think it would because anything less than 15 fishermen would not be sufficient to go into it and can profitably.

Q. Do you think that number is sufficient or do you think that the number should be reduced?—A. As a canner I would not think of starting with 15 fishermen to run a cannery. But certainly if 15 fishermen join together to co-operate and they thought they could make it pay I can see no objection to giving them a license.

Q. Do you think we ought to set up any standard in that case for the cannery. There is no standard required at present, and there are a good many canneries that are very poorly equipped and kept.—A. Well I do not think that any fishermen even if there is a batch of 15, should be allowed to undertake to can lobsters unless there was some one among them who had the knowledge how to do it thoroughly.

Q. They would be obliged to employ somebody would they not?—A. They should be, but even then they would make failures, however, that would be to their own loss of course.

Q. What would be the average cost of a cannery required by a group of fishermen of that kind, what would it cost to put up the cannery?—A. Do you mean the building?

Q. The building and the outfit, the equipment that is necessary, tables, boilers and everything required at a cannery?—A. \$600 or \$700.

Q. There is another question in connection with that matter I would like to ask you; do you think that the product of the canneries should be subject to inspection the same as other food products are?—A. Yes.

Q. Do you think that the present staff of fishery officers would be competent to carry out that inspection?—A. Well, I do not know whether they would or not, I am afraid they would not.

Q. Would it require an expert in the canning business?—A. I think it would.

Q. Do you think it would be a benefit to the trade if an official inspection were insisted upon?—A. I think it would.

Q. Do you think that, as a canner, you could keep in operation here if the 8-inch size limit were strictly enforced?—A. Yes.

Q. It would not cripple you entirely if the regulations were strictly enforced?—A. No.

Q. The canners in a good many places have told us that it would put them out of operation, and the fishermen have told us that if they could not catch the undersized lobsters they would quit, in fact that has been our general experience so far.—A. It would not close us up.

Q. Were the lobsters in your cannery measured this year?—A. Yes.

Q. Did you see any return of the size?—A. No.

Q. Has there been any noticeable decline in the average size of the lobsters within recent years?—A. No, I do not think there has been any decline in size, but I think that the lobsters are getting scarcer than they were years ago.

Q. Is there not a very much larger amount of gear in the water now?—A. Oh yes.

SESSIONAL PAPER No. 22a

Q. Do you think any considerable increase in the number of canneries would lead to more fishing?—A. No, I do not think so.

Q. You think there is as much fishing done now as there is likely to be, that there is no room for more fishermen?—A. There is as much fishing done as they can find room for around here.

Q. Have you any idea when lobster canning was first introduced in this neighbourhood?—A. No, it was before I came here.

Q. If there is a decrease in the quantity of lobsters to what do you attribute it?—A. Well, I attribute it to the fact that there are more caught.

Q. You think there are more caught?—A. Yes.

Q. Would you attribute it to over fishing?—A. No, I do not know that I could attribute it to over-fishing.

Q. Has it been due in any way to the destructive methods of fishing, to the destruction of many female lobsters and of undersized or immature lobsters?—A. I do not think you can say so with regard to the small lobsters, but you might, so far as destroying the female lobster is concerned; that is with regard to the lobsters we catch here. If you kill the females off you cannot have many young lobsters.

Q. And if you kill too many immature lobsters you will bring about the same result if they are destroyed before they reach the age of reproduction?—A. Of course if the young ones are killed off in time you will have no old ones.

Q. Do you think there is any necessity for so many different size limits in different places?—A. I would not say there was on the south shore here.

Q. What do you mean by 'south shore?' Do you mean from here to Cape Sable?—A. From here to the Bay of Fundy around the mainland, all that coast.

Q. Now as to the question for a remedy for the condition of affairs that exists. Some people have proposed to the Department as the best way out of the difficulty, to stop canning altogether for a term of years, how would that affect the community?—Well, I think it would affect them around here; it would stop fishing altogether.

Q. That would be your idea, that it would stop fishing altogether. You mean that the live lobster fishing would go on but it would stop canning?—A. No, it would stop fishing altogether.

Q. You think it would close the fishery up altogether?—A. I think it would.

Q. The Lobster Commission of 1898 proposed closing down by sections, each section being closed down for a term of years and the closed areas being moved around gradually until all the shore had been covered. I suppose there is no doubt that the best and the quickest way of recuperating the fishery would be to stop it altogether for a term of years.—A. There is no doubt about that.

Q. Would you regard that as a very severe remedy?—A. Yes, I would.

Q. Do you think that the lobster fishery has reached a condition that requires such a remedy?—A. I do not think it has here.

Q. Other propositions have been made, some have said, "Give us a 7 inch limit instead of an 8-inch limit and we will observe the law." You know that we began with a 9 inch limit which was not enforced and then an 8 inch limit was given because they said they would observe that, and now they want a 7 inch limit.—A. I would not propose anything of that kind. If I were going to propose anything along this line I would propose that the trap should have a certain space between the slats.

Q. What would you put that at here?—A. The fishermen around here use the head of the hammer as a gauge, and that is about an inch. There are a few undersized lobsters caught in those traps, but I should say that if the space were made 1 and $\frac{1}{8}$ inch it would be all right.

Q. What was the space originally?—A. They have always made them about the same here, an inch, but they have clipped the head of the hammer now.

Q. There is generally a smaller space being left now than there was years ago?—A. That might be, I know that up north they make them a great deal less than that again.

9-10 EDWARD VII., A. 1910

Q. In some places we found that they narrowed it down to half an inch, and the idea in doing so must have been to hold the small lobsters?—A. Certainly to hold the small lobsters.

Q. There is another proposition, some people say, do away with the size limit altogether and protect strictly the berried lobster, at the same time shortening the period by 10 days or a fortnight. How would that appeal to you?—A. Well, I think that would work all right here. I think the way they make the traps here now there are very few under-sized lobsters taken.

Q. You think it would be wise to insist upon a certain space of not less than one inch?—A. I think it should be not less than an inch.

Q. Do you think that the parlour trap is any more destructive than the ordinary trap?—A. It gets more.

Q. Is it that it gets more or that it holds more, that they cannot escape from it when once they get in?—A. That is what I understand.

Q. I understand that if a fisherman is not able to fish for a day or two, when he does lift his traps he finds the lobsters in it, whereas with the old trap they got out?—A. They have not gone out through the laths, but by the way they came in.

Q. Now, it is also proposed that it would be a good idea to compel the lobster fishermen to register and to take out a form of license, for which there need not be any fee collected; that when the fishery officer came around in the spring to pay the fishery bounty all those who intended to fish for lobsters would apply to him and obtain a license which would be numbered, and that in that way they would become in a sense officials and be more likely to observe the regulations themselves and inform on others who violated the law. Do you think it would have that effect? Of course it would follow that if a man were found to be persistently violating the regulations he would lose his license and would not be allowed to fish lobsters?—A. I could not say much on that point.

Q. You do not think that the holding of a license of that kind would make the fisherman any more careful?—A. I do not think it would make him any more honest.

Q. Do you think there is on the part of the fishermen generally any disposition to live up to the regulations? Do you think they see more clearly than they did years ago the necessity for some regulation protecting the berried lobster?—A. I think there are lots of fishermen who would be prepared to throw the berried lobster away, and the undersized also if they were sure their neighbour would do the same, but the way the fisherman generally looks at it is that if the other fellow gets them he might as well get them, too.

Q. Do you not think that if the canner refused to accept them the fisherman would be more liable to observe the law and be more careful?—A. I think he would.

Q. Do you think the blame lies with the canner? Some people say that if the canners refused to take them the fishermen would be obliged to do right?—A. I think that is the case, but if you oblige a man to observe the law you have to follow him up.

Q. Do you think it is a very easy thing to follow him up as far as that size limit is concerned?—A. No, it is hard for the canner to observe it because he would have to measure all his lobsters, and in going around where he has one smack he would have to have two in order to cover the ground. My idea of it is to regulate the traps and have a man look after that business. That would be my idea of it.

Q. We have heard it stated that the fishermen would leave the shore with a trap of the regulation order, and that when they got outside they would alter the traps in the boats before putting them in the water?—A. They could not do that, the man that talks that way has only a very foolish idea.

Q. You think that could not be done generally?—A. No, we would have our officers running around in their cutters, and they would haul up the boats once in a while, and if they found a man with his traps contrary to the regulations, then put the law on him. That is my idea of it, and what lobsters he got in his traps then I would let him handle.

SESSIONAL PAPER No. 22a

Q. Are you aware of complaints made by the fishermen that the price paid by the canners is unsatisfactory?—A. I am well aware of that.

Q. Is it, to your knowledge, the case that fishermen have ever lost their catch of lobsters by the canners refusing to accept them? We are told that it has happened where there is a dispute between the canner and the fishermen that the canner has shut down and the fishermen have been left without a market for their lobsters?—A. Since I have been here I have seen one cannery shut up altogether, last summer, it went out of business, and that is the only one I know of.

Q. Was that on account of a dispute with the fishermen about the price?—A. Well, yes, he could not afford to pay the price, or that is what I suppose it was.

Q. Is it to your knowledge that there has been any combine among the packers to fix the price?—A. Well, only verbally, as far as I know. I will tell you the way it is. Some one starts the price, and then they all follow, but the first thing you know is that one fellow will commence to give a little more and then the others have to increase the price too.

Q. That is my experience of how it works?—A. That is the way it is around here, and as a canner I can say there has been no money in it because one fellow is trying to cut the other fellow's throat.

Q. Are the present facilities for the export of live lobsters from this neighbourhood sufficient, do you think?—A. Well, they could be improved, they are not what they should be.

Q. You think they could be improved?—A. Oh, greatly.

Q. Do you know anything about the matter of pounds. There is only one, as far as I know, along this coast, and that is up at Fourchu here? Have you any remarks to offer concerning the advisability of increasing the number of pounds, do you think it is a good method of protecting and saving the berried lobster?—A. Well, I think if the pounds were properly located and properly handled it would be all right.

Q. Do the facilities exist in this neighbourhood for establishing a pound?—A. Well, I think it could be established here.

Q. What do you think of the pound as compared with the hatchery?—A. I know that the hatchery is hatching lobsters, but whether they grow up after that or not I could not say. It is the same way with the pound, I do not say but it would pretty nearly have the same effect, although the mother lobster would be there in the pound to look after the young lobsters, that is if they do look after them, which I am not prepared to say whether they do or not. I would not propose a pound like they had down there. My way for the pound would be to take some inlet that covered a great deal of space with a narrow entrance; of course we could get them here.

Q. It is not every shore that offers the facilities for them?—A. You could fasten up the mouth of a large inlet such as I have described and put the berried lobsters in there and let them have plenty of room.

Q. You must have a free circulation of currents through the place, there must be a free circulation of water?—A. That is what I understand.

Q. As to the hatcheries, would you advise an increase in their number?—A. Under the same method that is being carried on here, I would, yes, either pounds or hatcheries.

Q. Has there ever been any fishing or canning out of season here?—A. I hear of it, that is all I can say about it.

Q. What do you think of the usefulness of that method of labelling cases? Do you think it serves any good purpose? Does it prevent packing out of season or the sale of illegally packed lobsters?—A. Oh, well, I suppose it would have a tendency to do so.

Q. What are the wages paid to the leading hands in the canneries in this neighbourhood. You have a foreman?—A. Yes, we pay him about \$50 a month.

Q. And what do you pay the sealer?—A. About the same amount.

Q. Is that with or without maintenance?—A. Without maintenance.

Q. And what do the girls or minor hands receive?—A. About \$10 to \$15 per month.

9-10 EDWARD VII., A. 1910

Q. I do not know, Mr. Sproul, there is anything else I want to ask you. Perhaps Mr. Sinclair may have some questions he would like to ask you.

By Mr. Sinclair, M.P.:

Q. I think, Mr. Commissioner, you have gone over the ground pretty thoroughly. I was not, however, very clear about what Mr. Sproul proposes. I understood you to say, Mr. Sproul, you would adopt a certain style of trap?—A. Not a style—well, I suppose in one way it is the style—but that a certain space be insisted on.

Q. That is between the slats?—A. Yes, between the slats of the trap.

Q. A space wide enough to allow the lobsters under eight inches to escape?—A. Yes.

Q. What space would that require, about?—A. Well, as I said, I think the space is an inch. I measured a hammer today and I knew that is the width the fishermen leave when they make the trap, they just place the head of the hammer, and shove the next lath up to it, leaving that space. I know there are very few small lobsters taken here now, and I think if the space were made $\frac{1}{8}$ th of an inch more it would give a little more freedom.

Q. Would the lobsters go out?—A. Yes, they certainly sift out whenever the trap is shifted; the lobster goes out if he can get out, tail first.

Q. I have heard the statement made that the lobster will not go out, that he is inclined to stay in and he pulled up rather than go out, you do not agree with that?—A. I do not agree with that.

Q. Do you mean to say that a $1\frac{1}{8}$ inch space will allow an 8-inch lobster to escape?—A. All I can do is to show you the way it turns out. I would say that the way they make the traps now you will not find but very few under $7\frac{1}{2}$ inches in the traps, we do have some undersized but they are generally from $7\frac{1}{2}$ to 8 inches and we really find lobsters of 8 inches trying to get out, they may be partly out when the trap is hauled, but whether he could get out of the space I have named I am not prepared to say.

Q. You do not want to let a lobster of 8 inches out, but one under 8 inches?—A. Yes.

By the Commissioner:

Q. A lobster of very considerable size will get out of an $1\frac{1}{8}$ -inch space I should think?

By Mr. Sinclair, M.P.:

Q. Our space in this part of the province is wider than they make it in other parts of the province?—A. Yes, and that goes to prove it in my opinion, that with a smaller space you hold the small lobsters, the little fellow gets in and can't get out.

Q. I understood you to say that in your opinion it would not stop the packing business if the law were strictly enforced?—A. I do not consider it would; no that is here.

Q. That is a question the Minister has to consider whether he will send out orders to enforce the law strictly and fine every man that takes or catches and retains the lobsters under 8 inches. Provided that were done, and the instructions carried out to the letter, do you think the business would still go on and be profitable?—A. If that were done and strictly enforced, I for one would agree to it.

Q. You think you could continue your business as well?—A. Yes, if it were enforced right straight through.

By the Commissioner:

Q. Do you think the majority of the fishermen would continue fishing too?—A. Yes.

SESSIONAL PAPER No. 22a

By Mr. Sinclair, M.P.:

Q. Are the lobsters larger here at Canso than they are at other parts of the coast?—A. I do not consider that they are any larger here than on this southern shore, but when you go north they are smaller.

Q. It was stated last winter in the investigation at Ottawa that the lobsters were smaller even up the bay here than they were here at Canso?—A. They do run smaller up in the bay.

Q. What do you mean? Take 100 lobsters that you will get a larger number of small lobsters up there?—A. If you catch a thousand lobsters up there you will not get as large a percentage of 'markets.' That varies around here a little, when we get up into what we call Dover we do not get as many market lobsters as we do back of the Cape. There the lobsters run larger.

By the Commissioner:

Q. You have a very good bottom for lobsters here?—A. Yes.

Q. They prefer reefs and a hard rocky bottom?—A. Yes.

By Mr. Sinclair, M.P.:

Q. Do you notice the small lobsters here in any larger numbers since the hatchery started?—A. I cannot say about that.

Q. Is there any evidence that the lobsters produced in the hatchery are living and thriving?—A. I do not think you could get any evidence of that any more than just what you would judge by indications. That is my theory that the hatchery is good, that if the lobsters are hatched there must be some of them survive. It is the same way with the pound, if they are hatched in the pound there will be some of them survive. There is no room at all to say that the hatchery or pound is an injury to the fishery, it is all for the benefit of the industry, even though you only get one out of twenty or one out of 100 to mature it must be some benefit.

By the Commissioner:

Q. There is no doubt the best way of protecting the berried lobster would be to put her back in the water when she is taken from the trap?—A. There is no doubt about that.

By Mr. Sinclair, M.P.:

Q. Do you think that the depletion of the lobster is gradual, that from the time you went into the business down to the present time it has been getting worse from year to year?—A. Well, no. I cannot say there is much difference since I have been in it. There is a difference this way that where they used to have say 150 boats they will have 200 now; there are more men, but I think they get about the same quantity of lobsters. I think there is the same quantity of lobsters taken in the same territory, but it takes more traps to catch them, that is to say that the fishermen are now fishing more boats than they used to and there are more fishermen engaged in it, at all events that is the way around here.

Q. That is proof that the fish are becoming scarcer, that it requires probably 250 boats to catch the same number now as 150 boats would catch a few years ago.—A. Well, there are more fishermen at it. What I mean by that is that there were just as many lobsters canned in Canso this year as there were when I first came here.

By the Commissioner:

Q. But did you can the same class of lobsters then that you are canning now?—A. The same class.

9-10 EDWARD VII., A. 1910

Q. Did you get as many small ones brought into you then?—A. Just the same. But before I came here I do not think there were very many 'market' lobsters shipped as a rule; of course there were some, but not so many as there have been of late years.

Q. Can you give us any idea of the proportion of the catch that is shipped to the market now?—A. In money's worth?

Q. My idea was in number, in quantity, but if you can give it to us in money let us have it.—A. Well, in money's worth, I will speak for myself, that is all I can speak for, the market lobsters for the last few years have run us about \$7.00 to \$10.00 on the canning; that is about 7-10ths.

Q. That is a large proportion?—A. That is what I have, and that proportion is larger with us than with most any other cannery that we have around this Cape here. We get more market lobsters.

By Mr. Sinclair, M.P.:

Q. You said that the facilities for shipping might be improved on, in what way?—A. If we had two boats per week, if we could ship twice a week from here we would get a better result, because now we have to hold our lobsters a whole week and a good many of them die.

Q. Boston is your chief market?—A. Boston is our natural market.

Q. You cannot send them by rail?—A. We could send them by rail, but the experience has been poor, it takes too much if they have to go by express.

Q. Can you tell us what it does cost to send 100 pounds of live lobsters by rail to Boston from here?—A. It costs \$2.25 per hundred weight by the carload.

Q. And for smaller parcels how much?—A. For smaller parcels it would be nearly twice that, I do not know exactly, I did know, but I haven't it right in my memory. We have shipped carloads and I know what it costs.

Q. Did I understand you to say that you think the lobsters are as large here as they are in the Bay of Fundy?—A. No, take it up in the Bay of Fundy and the lobsters run larger there, that is there are more 'markets' and less canning lobsters. There are hardly enough canning lobsters there to make it worth while.

Q. Then there was good reason for making the size limit larger in the Bay of Fundy than on this coast?—A. In the Bay of Fundy I think it would be better for them to go out of the canning of lobsters, that is my idea of it. It would be better for the fishermen.

By the Commissioner:

Q. How far up the coast would you propose to do that?—A. When I am speaking of the Bay of Fundy I speak of Briar Island, in the bay, and as you go around Cape Sable.

Q. The facilities for shipping alive to the market are very considerable there, and it is a question whether the live lobster fishery should not be encouraged there and the canning discouraged by the regulations?—A. That is my idea that up in this district where they can have the live lobster market they would on the average do better if they did not can any.

Q. Have you any further remarks you would like to volunteer? If there is anything more I will be very glad to have it taken down.—A. I would like to state that if they are going to make any laws and rules cutting off some here and lengthening out some there I hope that our hon. member will see that we have fair play.

The COMMISSIONER.—There is no doubt about that.

By Mr. Sinclair, M.P.:

Q. What do you propose, in what way?—A. Up to the westward they are clamoring for a nine inch law and a full season, as long as we have here; I do not consider

SESSIONAL PAPER No. 22a

that is right. No one would object here to them running a nine inch law up to the time that we could commence to fish here, in fact, as we know, they have the market up to that time, but after that they should be deprived of it.

By the Commissioner:

Q. They begin so much earlier than you do?—A. Yes, they commence on the 1st of January and they have a long season before we can do anything, and if they are allowed to go on in our season it makes the lobster of very little value in the market when we begin to fish so that we are almost entirely excluded from the market.

By Mr. Sinclair, M.P.:

Q. When do the packing places open in the west?—A. At the same time they are allowed to ship, the 1st of January.

Q. What do you propose, that they be restricted to a shorter season and shut them down altogether in the spring?—A. No.

Q. What is it?—A. I propose that as their harvest is in the early season, before we start, well, say the first of May—

Q. I understand they have an advantage over you in that way but what do you propose, to make a law taking from them what they have now?

By the Commissioner:

Q. How much would you shorten them up?—A. I would shorten them up to the 10½-inch limit after the 1st of May on that coast, they have had the 9-inch limit from the 1st of January, and if they were shortened up to the 10½-inch limit about the 1st of May it would give us a better chance down here.

By Mr. Sinclair, M.P.:

Q. And your proposal is to have that west of Briar Island is it?—A. Halifax.

Q. That west of Sandro, or whatever place it is they start at, no fisherman or packer be allowed to handle any fish less than 10½ inches after the first of May?—A. Yes, and it would be better for them. They have from the first of January up to the 1st of May to catch and run to the market 9 inch lobsters, and it would be my idea that in fairness to us in this part of the province they should stop that then and go to the 10½ inch.

By the Commissioner:

Q. How would it affect them up there if the limit were placed at 10 inches for the whole season?—A. They would not do as well the first part of the season. If these people would consider the matter I think they would see that they would not lose anything much, they might think they would lose if they were restricted to that. I don't believe in trying to choke anybody off, or to put them out of business. It would not affect us down here if they were catching down to 9 inches in one season and up to the 1st of May, and therefore I do not feel like cutting them off that, but I think it is only in fairness to us that they should stop it on the 1st of May, that is, this 9-inch business, in order to give us a chance.

Q. Is there any reason why, because they have dropped the limit in Boston for their own purpose, we should follow the Americans in doing that?—A. No, I cannot help what they do, but I think it would be better for ourselves if we kept the size limit up for the live lobster market, that is my idea.

Witness discharged.

Commission adjourned.

9-10 EDWARD VII., A. 1910

CANSO, September 1, 1909 (9 a.m.).

WILLIAM FANNING, fisherman, Canso, called and sworn:—

By the Commissioner:

Q. Are you engaged in the lobster fishing?—A. Yes.

Q. For how long have you been engaged in it?—A. For about 35 years.

Q. Then you will remember it from the beginning?—A. Pretty nearly.

Q. You, of course, fish your own boat and gear?—A. Yes.

Q. What canners and packers have you been fishing for?—A. Always for the Portland Packing Company.

Q. What number of traps do you fish?—A. I fish from 150 to 155 and sometimes 160.

Q. That is in a two-handed boat?—A. Yes.

Q. One season with the other, about what time do you generally begin fishing?—A. We start in about the first of April to get ready.

Q. But can you generally get to work at that time?—A. No, not much before the middle of April.

Q. That is on account of the ice?—A. The ice, and on account of bad weather, one thing and another, it keeps us back until along about the 10th.

Q. Do you always find lobsters there when you begin?—A. Oh, yes.

Q. Have you any idea that you will get them there in March as well?—A. Yes, I have fished one March.

Q. How were the lobsters then?—A. They were not quite so good.

Q. It is the case that they are not quite so full of meat in the early part of the season as they are later?—A. No.

Q. They will not weigh as well?—A. They will not.

Q. How do you generally sell your lobsters, by weight or count?—A. By weight.

Q. Have you always sold by weight or only recently?—A. Always by weight except market lobsters which are sold by count.

Q. How long have they been fishing market lobsters here?—A. A good many years, I cannot exactly say how long but a good long time.

Q. It is not a recent affair?—A. No.

Q. Did you always do it, from the beginning?—A. No.

Q. When you begin fishing in what depth of water do you generally commence?—A. All the way from 15 to 12 fathoms and 10 fathoms.

Q. And do you continue long in that depth of water?—A. Oh no, we continue in that depth of water until the first of June and then we shift into shoaler water.

Q. How close in do you come?—A. Right in against the rocks.

Q. Where is the most of your fishing done, to the eastward here or in the bay?—A. Most of the boats fish to the eastward.

Q. You have a very good bottom for lobster fishing here, have you not?—A. Yes, very good.

Q. I suppose it makes considerable difference what the bottom is, you prefer a rocky bottom with reefs about?—A. Yes, a rocky bottom.

Q. You do not do as much on a sandy bottom?—A. Not in the spring, but in the summer time, in June.

Q. Then you get into a smooth bottom?—A. Yes.

Q. Is there any station of the Fishermen's Union here?—A. Yes.

Q. Are you a member of it?—A. No.

Q. Do you know the number of the Union here?—A. 27 is the number.

SESSIONAL PAPER No. 22a

Q. Are there many fishermen engaged in the fishery here, what number of boats would you say fish out of this harbour?—A. Lobster fishing?

Q. Lobster fishing, we are talking only of lobster fishing?—A. I do not know exactly.

Q. Would there be 50 or 60 or 100?—A. There are over 100 anyhow, I know that.

Q. What number of canneries have you here?—A. Three.

Q. And those 100 boats would be fishing for the three canneries?—A. Yes.

Q. Who are the canneries owned by?—A. Matheson & Scott, the Portland Packing Company and Mr. Sproul.

Q. When did canning begin here?—A. I could not rightly say.

Q. You have been fishing lobsters for 35 years?—A. Yes.

Q. They have been here 35 years?—A. Yes, there was a cannery here 50 years ago. The first man that ever canned lobsters here was old man Brown who canned lobsters down on the beach about 50 years ago.

Q. How long has the Portland Packing Company been here?—A. I expect they must have been here certainly 40 years. I know I have been fishing around 30 years and they were here when I commenced.

Q. And they have carried on uninterruptedly ever since?—A. Yes.

Q. What style of trap are you using now?—A. Well, they are using mostly all kinds of traps, different kinds. Some have the three headed traps, what we call the parlour trap, and some use the old fashioned trap.

Q. I suppose that in the beginning all used the old fashioned trap?—A. Yes.

Q. When did you begin to change the trap?—A. Somewhere about 10 or 12 years ago they commenced to change to these new traps.

Q. What was the idea in changing?—A. They were better they thought.

Q. Are they better in your experience?—A. Yes, the parlour traps are better, chiefly on account of the way they hold the lobsters.

Q. When you cannot fish them regularly they hold the fish?—A. Yes, but the old fashioned traps the way we fished them inside, every day, were almost as good.

Q. Has the number of fishermen increased greatly within your recollection?—A. Oh yes.

Q. How many were engaged in fishing when you began?—A. I could not say, but there were not much over one-half the number that there are now.

Q. Did you fish as much gear, as many traps then?—A. No.

Q. Did you catch as much fish?—A. Oh yes, we got more fish.

Q. With less gear than you are using now?—A. Oh yes.

Q. How do the fish run now as compared with 35 years ago?—A. They run a great deal smaller, most of them.

Q. They are much smaller now?—A. Yes, I can remember when we fished at first to the southward, if we set 100 traps we would haul 1,000 or 1,100 weight of lobsters, and out of that probably we would not get 20 small lobsters on the average, under 9½ or 9 inch lobsters.

Q. They used to look upon 9 inch lobsters as very small in those days?—A. Yes, I have seen 21 or 22 lobsters in the pot and they would all be large lobsters at that time.

Q. Do you catch as large lobsters now?—A. An odd one.

Q. Do you make the hoop in the net any smaller than you used to?—A. No, they make them bigger, although some fishermen have the idea that the smaller hoop is better.

Q. Do you think it makes any difference?—A. I think so, yes. I think that the right size of hoop, a little large, will get you bigger lobsters.

Q. Some hoops are so small that they will not let large lobsters in?—A. I think so.

Q. You think that the number of fishermen and traps has greatly increased?—A. Yes.

9-10 EDWARD VII., A. 1910

Q. Has it doubled?—A. It has since the time I started fishing.

Q. Did you say that the fish were large? How are they at different seasons of the year, how are they when you begin fishing, and in the middle of the fishery, and towards the end of the fishery, how do they run?—A. When you commence first at the spring of the year they are generally very small, and as it gets along in the season the lobsters commence to get a little larger.

Q. About when would that be?—A. About in May, about the 1st of May you will get good lobsters.

Q. Is it then you make the best fishing?—A. Yes, May is the best month here for fishing.

Q. And towards the end of the season, how would it be?—A. Towards the end of June the fish slack off and we do not do much. The lobsters will not pot very well then, I do not think they get into the pot some way or other.

Q. Do you think they are more lively then or are they more sluggish?—A. No, you get them in June just as smart as at any other time. I have the idea that the lobsters when it is coming on pretty close to the spawning time, do not trap.

Q. Now as to the matter of spawning, when do you find the spawn lobsters in the greatest quantity?—A. We find the greatest quantity in June, that is when we get most spawn lobsters.

Q. What part of June?—A. Well, say from the first to the last of June we find the most spawn lobsters.

Q. What proportion of the total catch of lobsters are spawn lobsters, out of every hundred how many do you think are egg-bearing lobsters?—A. I could hardly say, but out of every hundred there might be ten.

Q. That is all through the season?—A. Well, I would not like to say as to the season, there might be more at the latter part of the season, in June, than there would be at the first.

Q. Do you think that 10 per cent of the egg-bearing lobsters would be a very large proportion? Do you think it runs up as high as that?—A. I would not like to say for sure, you know, because in the beginning of the year we do not see but very few.

Q. That reduces the percentage very largely?—A. Yes, so it would, and the most of our spawn lobsters we see from the 1st of June until the last of June.

Q. Do you not think 10 per cent is too large a percentage?—A. Yes, that would be a little too large, put it down say to 5 per cent, I should think that would be about it.

Q. You know what the regulations are with regard to the fishing season, which ends in June, and with regard to the berried lobsters, the fishermen are supposed to put them back in the water, and they are not supposed to take fish under 8 inches. Have these regulations been observed to your knowledge?—A. I do not know. I know for my part that since they have commenced taking the berried lobsters at the hatchery we bring them all in.

Q. What became of them before that time?—A. They used to let them go, a great many fishermen would, that is what I used to do.

Q. Do you think they were all let go?—A. That would be a hard thing to say.

Q. We have heard a good many canners say that they took them, they did not make any bones about accepting berried lobsters, and we have also heard of cases where they were frequently brushed off, that is where the canner refused to take them they arrived at the cannery without the eggs.—A. That is a pretty hard question to answer.

Q. Now as to the size limit, has that ever been observed? Will the canner take everything you bring, and does he expect you to bring everything you catch?—A. I do not know whether they expect us to bring everything, but they take them.

SESSIONAL PAPER No. 22a

Q. Of course there are certain small lobsters which you do not bring them, but where would you draw the line, how small do they take them?—A. That is hard to say, I was measuring them with Mr. Davis, and they took them as small as 5 or 5½ inches.

Q. Do you know how they measured, do you know whether there were many under 8 inches?—A. I could not say as to that, I never asked Mr. Davis.

Q. What percentage would you say of the fish that you take now are under 8 inches?—A. I could not say.

Q. If the law were strictly enforced how would it affect the fishermen, would they lose a great deal?—A. No, I do not think they would lose a great deal, the 8 inch lobster is pretty small.

Q. Now, as to the means of getting the fishermen to observe the law closely, not only here but everywhere, there are many places where the lobsters run smaller than they do here, it has been proposed to ask the fishermen in the springtime before they begin the lobster fishery to take out a license, there need not be any charge for it you know?—A. Yes.

Q. And every fisherman would have to take out a license and I daresay, he would have to sign it and to guarantee that he intended obeying the law before he was allowed to fish. What do you think would be the effect of any such regulation, would it have a good effect, or would it amount to anything?—A. I do not know.

Q. Those who propose it think that the fisherman having done that would feel himself obliged to obey the law and would, perhaps, inform on those who did not; the idea is that the man who was known to be persistently breaking the law would not get a license and could not fish. How would that work as a means of enforcing the law?—A. That would work all right, but there are lots of fishermen who are fishing lobsters would not need any license at all.

Q. At the same time we know there are many who do?—A. Oh yes, I know that.

Q. And it is to get after those fellows that we have to make regulations and enforce them vigorously, it is not for the careful man?—A. I think that would be a very fair way.

Q. Do you think it would be fair if a man was proved and known to be breaking the law regularly to debar him from the privilege of fishing lobsters?—A. I think so.

Q. What did you get for the lobsters in the early days when you first began fishing? At what rate were you paid?—A. We were paid 85 cents a hundredweight.

Q. Have you any idea how many lobsters it took to make a hundred weight then?—A. It took then about 22 lobsters.

Q. They must have run pretty large?—A. When we used to be putting them in boxes we used to weigh them, we had boxes to weigh 200 at that time, and we counted them and found 142 used to make 200 weight.

Q. That is not quite so large, but still it is good?—A. Yes.

Q. 200 weight I suppose in those days meant 224 pounds, what is the weight of a hundred weight now?—A. 100 pounds

Q. Was it not then 112 pounds to the hundredweight?—A. No, we used to go 100 pounds to the hundred weight.

Q. How many lobsters does it take to weigh 100 pounds now?—A. They run not much over 1 pound apiece, that is in the first part of the season, and later on, along when the bigger lobsters commence to crawl in in June and May, it will take less.

Q. How much less?—A. Probably it would take 2 lobsters to weigh three pounds.

Q. And at the very tag end of the season, at the end of June?—A. They run just about the same.

Q. They are not smaller then, you do not get more smaller ones then?—A. You may get a few smaller, and you may also get a few larger ones.

Q. What are you getting now for your lobsters?—A. Last year it was \$2.50.

Q. That was this year?—A. Yes.

Q. And last year you got?—A. From \$3.50 up to \$4.50.

9-10 EDWARD VII., A. 1910

Q. And the year before that?—A. We got \$3.50 and for the market lobsters we got from 8 to 10 and 12 cents apiece.

Q. This year was it \$2.50 all the season through?—A. No, they came up in June to \$4, in the latter part of June.

Q. As high as \$4?—A. Yes, and the "markets" came up in the latter part of June to 15 cents.

Q. That is the market lobsters?—A. Yes.

Q. How was that matter of price arranged, who fixes the price paid for the lobsters?—A. I could not tell you that, I do not know who fixes the price, I suppose it is fixed by the men.

Q. You have fished always, you say, for the Portland Packing Co.?—A. Yes.

Q. Is it a matter of arrangement between you and they, or are you told by them what the price is to be?—A. No, they never tell me what the price is to be, I very seldom know what the price is to be until we commence fishing, and we may probably be fishing for a month before I find out.

Q. You are always satisfied to let them settle that matter?—A. Yes.

Q. Do you think it is fairly done?—A. I do not know that it is altogether fairly done, but they do it.

Q. Are you satisfied yourself with the price you get?—A. We have to be satisfied I suppose.

Q. Is there any competition? If one canner will not give you what you want can you go to another and expect to get more?—A. There is never any difference here in Canso.

Q. The price paid is always the same by all the canners?—A. Always the same by all the canners.

Q. Do you think there was any understanding, or was there any arrangement this year?—A. I could not say whether there was or not.

Q. You do not know whether there is any combine on the part of the canners generally to fix the price?—A. I do not know, I am not sure.

Q. Has it been your practice to take to the factory everything you catch?—A. Yes.

Q. And do you expect the canner to take what you bring?—A. They always do.

Q. Do you think there is any more general disposition on the part of the fishermen to observe the law especially with regard to the berried lobster than there used to be?—Are they beginning to see the necessity of protecting the berried lobster and saving her?—A. I think so.

Q. That is a question that is discussed among the fishermen I suppose, occasionally, is it not?—A. Oh very often.

Q. What is your opinion about the berried lobster? Do you think it is a vital matter in connection with the fishery that she should be saved?—A. Yes, I think so, I think she should be saved.

Q. What do you think is the best way to save her?—A. The same as we have been doing, at least, I think, that is about the best way of doing so.

Q. What is taking her to the cannery to have the eggs scraped off and taken to the hatchery?—A. Yes, I do not see any other way.

Q. Do you receive anything extra for them?—A. No.

Q. There is nothing extra, they simply come to the cannery and are weighed in along with the rest of your lobsters?—A. Yes, sir.

Q. Have you ever remarked as to the size of these berried lobsters how do they run?—A. They run from between seven and eight inches.

Q. Are they as small as that?—A. Yes, I noticed some of them when I was measuring them with Mr. Davis, and we often pick them out and they go eight and a half inches.

Q. There are some at eight inches, but did you see any at seven or seven and a half inches?—A. Not many, you would see a few.

Q. How do they average, are they not a good sized lobster generally?—A. Yes, about a nine inch lobster.

SESSIONAL PAPER No. 22a

Q. You never saw any very large ones bearing eggs?—A. No, not great big lobsters.

Q. In the early days of the fishery did you see any larger female lobsters?—A. No, not like the male lobsters.

Q. Fishermen all know the difference between the female and male lobster?—A. Oh, yes.

Q. Are you aware of any fisherman having lost his catch of lobsters by reason of the canner having refused to accept them?—A. No.

Q. With regard to the matter of issuing licenses to the canners, what do you think about that, do you think that the number of canners should be restricted?—A. Well, I would say the more canners the better.

Q. The more canners the better?—A. Yes.

Q. For what reason?—A. Well it would make them more inclined to raise the price somewhat.

Q. Do you think there would be some competition?—A. Yes.

Q. Do you think an increase in the number of canneries would lead to an increase in the number of lobsters caught?—A. I do not suppose it would.

Q. Are there as many fishermen engaged in the business now as there would be, that is from here, if there were more canneries?—A. I think there are as many as there would be from here, yes; I do not think there would be any more engaged in the lobster fishery here than there are unless there would be some outsiders come in.

Q. How are all those who fish lobsters here, are they regular fishermen who go into other fisheries as soon as they knock off the lobster fishery?—A. Yes.

Q. Are there any shore men or farmers who go into the lobster fishery?—A. There are no farmers in it here.

Q. You know there has been a complaint on the part of the fishermen that they have not always had fair play from the canner?—A. Yes.

Q. You have had it here have you?—A. Yes, we have had lots of it here.

Q. Well, as a means of putting an end to that the Department has, for the last couple of years, been in the habit of issuing what they call co-operative licenses where a number of fishermen group themselves together and apply for a license in the name of one of themselves. Do you think that furnishes a way out of the difficulty for the fishermen?—A. I do not know whether it would or not.

Q. If the fishermen are not satisfied with the price they are offered by the canner, the only recourse seems to be for them to can on their own account?—A. Yes.

Q. And does that offer them the means of doing that? Is there any other way that the fishermen could be given an opportunity to do better?—A. No, not that I know of, I do not think of any other way.

Q. Do you think that one fisherman with the other, they would make more money by canning for themselves than they would by fishing?—A. On that score they would if they canned for themselves, they would make more money.

Q. What capital would it require do you think? It would need some money to put up a cannery and outfit it?—A. Yes, it would require some capital, but I could not say how much.

Q. For yourself, are you content to go on fishing?—A. Yes.

Q. You think that way it works out better than going into canning?—A. It would with me, because I do not know anything about canning.

Q. Now, as between the two branches of the fishery, the canning and the export of the live lobsters, which is the most profitable to the fishermen?—A. Oh, the canning of lobsters.

Q. You think you would make more by selling the canning lobsters than you would by what you call the market lobster?—A. You do make more anyhow; the way it would be there are some fishermen would make more and some would not, because there are some fishermen who fish off outside, on the outside ground, and they would catch more market lobsters and they would make more. But these fishermen

9-10 EDWARD VII., A. 1910

who are fishing inside do not get as many market lobsters, and they will make more out of canning.

Q. Are there any fishermen who export their own market lobsters?—A. No.

Q. They all sell their lobsters here to the merchants who do the exporting of them?—A. Yes.

Q. And no one fisherman ships on his own account?—A. No, sir.

Q. How does the present season, from the 1st of April to the end of June, suit this particular coast?—A. I do not think it suits it very well at all.

Q. What do you think?—A. Well, in April there are very few lobsters caught at all, that is one month you might say that is the worst, on account of the drift ice that comes down on top of us, and we have difficulty in getting our pots out. The fishermen have to carry their pots and put out their traps, and will get them out and probably the ice comes down and you have to lose the best part of April in some springs, not every spring, but it is a very rare spring you will not be delayed on account of the ice. Then again in May we mostly have a pretty good month, and in June again when we begin to put the pots in towards the shore to catch the lobsters we are very apt to have storms and lose all our pots, you are powerless, and some fishermen lost every pot they had on account of having them all in among the breakers and rocks. So we lose probably the best part of June and some of them do not get a half a month of fishing, so that I think we have a very short time here for lobster fishing in the spring. Put it altogether we have not more than one month steady fishing out of three.

Q. If you do not approve of the season as at present, what would you do?—A. I would sooner have two months in the fall of the year, and I think it would suit the fishermen better here.

Q. And no fishing in the spring?—A. Well, if you take that good May month, or two months in the spring, maybe it would not suit all fishermen, but I am only just talking, I think two months in the fall of the year would be all right.

Q. What two months?—A. We would say in October and November.

Q. You want to fish in October and November?—A. Yes.

Q. That leaves it pretty late?—A. Well take September and October, which would be good months.

Q. Do you think that most of the fishermen would be willing after fitting out for summer deep-sea fishing to knock off again for these two months and begin lobster fishing again?—A. As far as I can understand from talking to them, they all seem to be satisfied they would like to have two months in the fall of the year and two months in the spring.

Q. Well, if we have already overdone the fishery by catching too many lobsters, don't you think we would be doing it to a still greater extent if we lengthened the season to two months in the spring and two months in the fall?—A. I could not say.

Q. The lobster fishery is not as good as it was?—A. Oh, no.

Q. What has brought about that failure?—A. I would say so many catching them.

Q. You mean to say overfishing?—A. Yes.

Q. And if you continued to fish in the fall as well as the spring, would you not be fishing them to a still greater extent than you are at the present?—A. Well, yes, it would be to a greater extent, I suppose.

Q. Do most of the fishermen continue fishing lobsters right up to the close of the season, or do they knock off and begin to fit up and get ready for the codfishery?—A. They begin to fit out for the codfishery, some knock off at the beginning of June and commence it.

Q. The codfishing is on at that time?—A. Yes.

Q. And when do you have the spring mackerel fishery here?—A. That commences along about the first of June.

SESSIONAL PAPER No. 22a

Q. What do you think is the best way of providing for these berried lobsters? Here, of course, you have the hatchery and you bring the berried lobsters to the can- nery and the eggs are taken to the hatchery, but in places where there is no hatchery what would you think is the best way of providing for the female lobster, for her protection??—A. I would say to let them go.

Q. Let them go back into the water?—A. Yes.

Q. That is as they come out of the trap put them back in the water?—A. Yes.

Q. Do you think that the fishermen would do that on their own account if they all understood the necessity for it?—A. I think the majority of them would.

Q. You think they would?—A. Yes.

Q. You have told us already you think they are beginning to learn that it is necessary to protect that lobster if they want to have good fishing in the future?—A. Yes.

Q. Now what do you think of the matter of the size limit? Do you think that ought to be enforced strictly?—A. Yes, I think so.

Q. And you think it could be enforced and that the fisherman could still go on fishing and make enough to pay him?—A. I think so.

Q. And you think the canner could still go on canning if he did not receive those lobsters at all, if he were confined strictly to the 8 inch limit?—A. Yes, I think he could.

Q. Is there any time in the season when the lobsters are not fit for food?—A. Oh yes.

Q. When would that be?—A. That would be in July and August.

Q. Why are they not fit for food then?—A. They are shedding their shell, a good many of them.

Q. Do they do that after they have spawned?—A. Yes.

Q. Does the female always spawn before she sheds her shell?—A. Yes.

Q. What do you think is the spawning month when the female lobster hatches out her eggs?—A. They hatch them out in July and August. I have caught them in July and August with the shells off them and they are just raw meat.

Q. Do you know whether there is any fishing carried on here after the close of the season, that is the legal season in June?—A. No, I do not know of any that I am sure of.

Q. There is not any that you are sure of?—A. No.

Q. Have you ever heard that it is done?—A. Oh yes, I have heard of it.

Q. Do you think that by fixing say a one-inch space between the slats in the trap, it would allow any proportion of the small lobsters to escape?—A. I do not know about that.

Q. Supposing we did away with the size limit and tried to govern that by the establishment of a certain opening between the slats of, say 1 or $1\frac{1}{8}$ or $1\frac{1}{4}$ inch; would that allow a fair proportion of small lobsters to escape?—A. I do not know that it would, it might, there might be some of them that would crawl out, but take the most of those small lobsters and they will crawl out anyway, if the space is wide enough you will scarcely ever get a small lobster, they crawl out through the open- ings.

Q. Do you think it is the case that a small lobster would escape with a larger opening?—A. Yes I think it would, it would give him more chance.

Q. Some people tell us that there is no use disturbing the present arrangement of slats at all, because the moment the trap is disturbed the lobster will seize hold of something and not try to escape, but others say they will try to escape?—A. I have seen them trying to escape through the laths and some of them were almost half way through, and others I have seen with their heads through.

Q. Could we protect the lobster to some extent by establishing a certain opening, and what should that opening be? Your opening here is larger than it is in a good many places, it is pretty nearly an inch here?—A. Yes, pretty nearly an inch.

9-10 EDWARD VII., A. 1910

Q. In some places we have been it is only half an inch.—A. Well, I think with the laths an inch apart it would be all right.

Q. What size lobster would go through an inch opening?—A. A 5-inch or a 5½-inch lobster would go out I think through an inch opening; they go out through a very small space.

Q. That is my own experience and you would be surprised at what an opening a small lobster would go through.—A. Yes, I have often seen them go through the mesh in the heads of the trap and you would never believe they would get through that.

Q. What is the size of the mesh?—A. The size is 3½ and 4 inches, some make it 4 inches, that is what we used to do, but we are not making them quite so big now and when they are finished they will not be much over 2½.

Q. You do think that it would be a good thing to establish an opening between the slats of one inch, or would you put it at more than that?—A. I think an inch would be all right.

Q. An inch clear after it is swelled by the water would be all right?—A. Yes.

Q. Do you think that a fair proportion of very small lobsters would escape through such an opening?—A. I think they would.

Q. You have been fishing a good many years and ought to know?—A. Yes, I think they would escape, a certain proportion of them.

By Mr. Sinclair, M.P.:

Q. Do you think the lobster would escape if there was a pretty good bait in the trap, would he care to go?—A. He would. You will very often see a lobster go to the bait, eat all he wants of it, and then turn around and go out, and may be he will turn around and stay in the pot.

Q. It is pretty hard to tell what a lobster will do?—A. Yes, you are right, it is pretty hard to tell what he will do.

Q. I was told by a fisherman that so long as there is bait there the small lobster is likely to stay?—A. I have found that they will go out.

By the Commissioner:

Q. Have you ever seen the big lobsters chase the small ones out of the trap?—A. I have never seen anything like that, but I have often watched them long ago when the lobsters were plentiful and I have seen the big lobsters come to the bait and chase the small ones away.

Q. They sometimes kill them do they not?—A. Yes, they will bite them.

Q. And tear them to pieces we are told?—A. Perhaps so.

By Mr. Sinclair, M.P.:

Q. There is a Massachusetts expert who says that the safest way would be to have a trap to keep the big ones out, and that then you would be sure to save the spawn lobsters, because they are all big, and to let the little fellows get in at least; what do you think of that?—A. That in case he killed off the young lobsters I don't know what we would do for market lobsters.

Q. I do not suppose you would approve of that?—A. I would not.

By the Commissioner:

Q. Is there any suggestion you would like to make yourself with regard to the lobster protection?—A. I think what we are doing in the hatcheries is all right.

Q. Have you ever thought of the matter of pounds?—A. No, I never have. The other day I was down around the shore near Mr. Whitman's old factory, and I suppose I picked up 50 or 60 little lobsters about 2 inches long, I suppose they must have come from the hatchery, and I took them home and put them in a bottle of water intending

SESSIONAL PAPER No. 22a

to see how they progressed, but I forgot to look at them again until next day and then the lobsters were dead. These must have come from the hatchery, there was quite a quantity of them and the children were fishing them up down around the shore, on the beach there.

By Mr. Sinclair, M.P.:

Q. How old are they when they begin to shed their shell?—A. These were very small, they were just able to hold out their tail straight and were active, they were just big enough to enable me to tell that they were real lobsters.

Q. You could not mark a lobster so that you would know it next year?—A. No, I do not think you could.

By the Commissioner:

Q. Do you think these very old lobsters shed their shell every year?—A. I should think they would.

Q. They say there is a time when they do not, that you will find those black fellows covered with barnacles?—A. There might be a time when they do not, they might shed their shell for a number of years and after that perhaps they do not.

By Mr. Sinclair, M.P.:

Q. Is there not some way of experimenting by tagging a lobster so that when he was caught again we would get exact information, which we have not now? Is there any way of tagging them so that we would know them again like they do the salmon in Scotland? They get a salmon there and put a tag on him in order to find out how far he travels, and they get him again sometimes hundreds of miles away, or they might catch him again next year in the same place and in that way they get information which is valuable. We do not know exactly how long it takes a lobster to grow up?—A. No.

Q. At least there is no exact information about it?—A. No.

Q. Is there any way you might put a tag on it?—A. No, I think they cast their shell every year.

By the Commissioner:

Q. Did you ever see them casting their shell?—A. No, the nearest I have come to it is that I have seen them when the shell was so soft you could hardly touch it without breaking.

Q. Have you never caught them in the trap with the shell beside them?—A. Yes, I caught one in the trap once without a shell.

Q. And the shell lying alongside?—A. No, there was no shell there.

Q. Some fishermen have told us they have caught them in the trap with the shell lying alongside of them?—A. I have not had that experience.

Q. The new shell hardens up very fast does it not?—A. I could not say as to that.

Q. When you fished 35 years ago with an all-the-year season practically, did you never notice the lobsters were hardening up after casting their shell? They say they get hard in a few days?—A. I could not say, you catch so few of that description that you can hardly tell how long it will take to harden the shell. I do not remember catching more than two or three that way; but when I was a small little fellow gaffing the lobsters off the rocks I used to haul them out from under the rocks with no shell at all, just the raw lobster.

Q. The shell was gone?—A. Yes.

By Mr. Keating:

Q. What is your idea about the disposition of these young fry? There is a great deal of controversy and difference of opinion among the fishermen with regard to it;

9-10 EDWARD VII., A. 1910

the majority of fishermen think they should be put in the sea right close to the shore in the bays?—A. Do you mean the spawn?

By the Commissioner:

Q. The young lobsters when they distribute them from the hatchery?—A. I should think up around in the bay and in the shoals where they distribute them is the best place to put them.

By Mr. Keating:

Q. Inside or outside?—A. I think it would be better in along the shore, if they put the small lobsters outside where there are all kinds of big fish they would gobble them all up, and there are not so many inside.

By the Commissioner:

Q. We hear a good many complaints eastwards that you get their eggs over there and do not bring back the hatched out lobsters and distribute them where the spawn came from?—A. These lobsters grow up here and may go back where they come from.

By Mr. Sinclair, M.P.:

Q. The experts say that the spawn floats on the surface of the water for several days after they are hatched out until they develop and sink to the bottom and crawl. If that is true would it be the thing to put them inshore?—A. I think so, yes.

Q. What would happen, would they not be washed up on the beach?—A. If they were in shoal water near the shore they would go to the bottom.

Q. But they do not go to the bottom, assuming that is true. I have asked a good many experts who are dealing with this question and they say that is the reason these small fry they put out, they are very small, I suppose you have seen them?—A. Yes.

Q. About how big are they?—A. They are just about——

Q. About the size of a mosquito are they not?—A. Only a little larger you see; what we call sea fleas.

Q. So that at that stage they do not sink, they float, and perhaps it is several days before they are developed enough to sink and during that period they are on the surface of the water. Now if you put them close to the shore the wash will take them up on the beach and kill them. It will give them a chance if you go out and put them in the tide water; of course a great many will be lost by other fish catching them, but that will happen anyway. The theory is that when they are spawned under natural conditions they come to the surface and go through the same process. Some of the fishermen here have the idea that the lobster backs off into deep water; what is your idea, that these lobsters come into shoal water to spawn, to ripen up their eggs in the warm water and that they go out into deep water just before hatching?—A. I could not say, I think it would be a hard thing to say as to that without anybody seeing the lobsters do it.

By the Commissioner:

Q. There is a great deal that we do not know anything about. We find a great many fishermen who say that the lobster casts her eggs before they are hatched, that they are not hatched out when attached to her, and that you will see the empty shells on her after she has spawned.—A. Yes, you will often see a little bunch of empty eggs attached to her. I never remember seeing lobsters so small as I found along the shore the last summer or two.

Q. The lobsters you found the other day could not have been hatched out this year if they were an inch and a half long?—A. No, I do not think they were over one inch.

SESSIONAL PAPER No. 22a

Q. If they were less than an inch they might have been hatched out this year.—
A. If you go down to the beach at low water you will find them yourself.

By Mr. Sinclair, M.P.:

Q. Do you find them down near the hatchery?—A. Yes, near our house, you will see the little kids down there every day picking them up. Now about the lobsters being taken outside, I would think if they lay on the top of the water as you say they do they will be devoured by gulls, mackerel and other fish.

Q. So they are, there is no doubt about that.—A. Some of them, of course, may escape, but I would think that around the shore in shoal water they would not be so apt to be devoured.

By the Commissioner:

Q. There are other fish that eat them, perch and other fish of that description?—
A. Perch do not come up to the top of the water very much, and there may be some of them washed up on shore, but I think they would stand a better chance than away out at sea.

Q. How do they distribute the young lobsters?—A. I do not know.

Witness discharged.

WILLIAM SCHREIDER, fisherman, Canso, called and sworn:—

By the Commissioner:

Q. How long have you been fishing lobsters?—A. About 38 years.

Q. Of course you have always fished, you are not a packer?—A. Yes, sir.

Q. What number of traps do you fish?—A. About 250.

Q. That is a double handed boat?—A. Well two hands, yes.

Q. Have you always fished that number?—A. I have fished more, and years ago I fished less, but this last 15 or 20 years I haven't been under 250, from that to 275 and 290.

Q. In the old days of the fishery what number used you to fish?—A. We used pretty nearly always to fish single handed then about 120 traps.

Q. Of course when fishing as many traps as that you had them on trawls mostly?—A. Pretty nearly all hand pots, a good many do, but I do not use any trawls at all.

Q. When does the season open here?—A. The first of April.

Q. Are you able to go out generally about that time?—A. No, not generally before the 15th or 20th, sometimes we get out earlier.

Q. In what depth of water do you begin to fish?—A. Fifteen fathoms is the deepest water I fish in.

Q. I suppose you always select a rocky bottom?—A. Yes.

Q. Do you manage to secure your own ground as a rule?—A. No, the first man that comes there and knows the ground puts down his traps, that is the way we fish.

Q. What is the condition of the fishery compared with when you first began?—
A. There is a considerable difference.

Q. Is it falling off?—A. It is falling off, especially this last year, I have noticed a great failing.

Q. Has that decrease been regular and constant from the beginning?—A. I think so, they have been making a fairly good pack, but the traps have been increasing, which has kept the lobsters down for the last year very much. I think there has been a falling off from year to year, and the only way that we have been holding up a little better is by increasing the gear and by increasing the number of fishermen, which has given the packer a little more. I think now that we are overrun with gear, there is a little more gear in use than the ground will stand.

9-10 EDWARD VII., A. 1910

Q. I suppose the number of fishermen and the quantity of gear has increased steadily since the beginning?—A. Yes, it has been increasing, it has not decreased the last three years.

Q. When you begin fishing at first what class of fish do you get?—A. Not very large at first.

Q. The smaller ones come ahead of the big ones?—A. Yes.

Q. And the big ones come as the season advances?—A. Yes. It gets better, but we find when we commence to get into shoal water we get better lobsters, apparently in the deep water the lobsters are not so big.

Q. How are they in the early part of the season? How is the middle of the season compared with the beginning and the end?—A. It is pretty dull in the first part of the season in catching, that is what you mean, is it?

Q. Yes?—A. About the middle of the season is the best time along about the middle of May is the best time, and from that out they commence to dwindle off gradually.

Q. How are they as you get closer inshore and nearer the end of the season?—A. As we get along in the season we have to get closer in the shore, they do not get any better after the 15th of May, once the lobsters strike the shore they commence to drop off. About the time they are making their course for the shoal water then we get the best catch, and then we are in from 8 to 10 fathoms of water. We follow them from that depth to 3 fathoms, and in some places they will come to one fathom, but our catch commences to dwindle down.

Q. There is a small run of lobsters then?—A. No, just as good if not a little better.

Q. Is the percentage of small lobsters greater now than when you began to fish?—A. I do not think it is, I think on the average we have more big lobsters, according to our catches, than we did years ago, that is more large lobsters going from ten to ten and a half inches.

Q. As to these berried lobsters that we hear so much about, what percentage of the total catch would be berried lobsters?—A. I don't know exactly whether I could give you that.

Q. It does not seem to be very large?—A. It is not very large, we do not get many in April, hardly any, and we do not get very many in the month of May, the month of June is the month in which we get the most berried lobsters.

Q. And do you get more towards the end of June than at the beginning of the month?—A. Yes, more at the end than at the beginning.

Q. Do you think it is safe to say that the berried lobster comes into the shoal water to spawn?—A. I do, I feel positive as to that.

Q. What would you say as to the spawning of the berried lobster, of course you find spawn attached to them at all seasons?—A. At all seasons, yes.

Q. But there is a certain season when the eggs are ripe?—A. Well, I think July is really the hatching month, because that is about the time they hatch, and in the month of August they commence to shell.

Q. And those that did hatch will have hatched before the shelling season?—A. I think so, before that. Of course there may be some lobsters that do not shell, there are a certain class only that shell each year, but the lobster comes to the shoal water apparently to spawn, and as to the fishing in the shoal water, when we first began the fishery we hauled them out with a gaff, around the rocks, and we cannot do that now, they are caught up before they get there.

Q. Now as to the practice of the fishermen in this neighbourhood, have the regulations with regard to the berried lobster and the taking of undersized lobsters ever been strictly enforced?—A. I do not know that they have.

Q. What has been the practice, of course in respect to the berried lobster we know that the spawn has been taken off at the hatchery?—A. Yes.

SESSIONAL PAPER No. 22a

Q. But previous to that what was the practice?—A. Of course a great many of them were washed.

Q. And were the canners always strict about refusing them?—A. I do not know too much about the canners, I never was very much about the factories, but I guess as far as they were able to do it they tried to do so.

Q. And that led to the practice of stripping the eggs off outside?—A. Yes.

Q. And how about the undersized, has the canner ever been strict about receiving them?—A. Of late years unless it has been the very very small ones I do not think they have been, but there was a time when they were.

Q. When the large lobsters were more plentiful?—A. Yes. If you take away the small lobsters we do not get very many lobsters under 8 inches which is looked on as a small lobster.

Q. You are favourably situated here, you have good grounds around here?—A. Yes, we have.

Q. The reefs and rocky bottoms that you have around here must be good places for the lobster fishery?—A. It has been an excellent place for the lobsters, but as far as the lobsters under 8 inches go there would not be very many.

Q. How would it affect the packer and the fishermen if the regulation were enforced?—A. I expect it would be binding.

Q. In some places it would, in the Straits of Northumberland?—A. There is a difference in the fishing in here, some fishermen will get pretty good lobsters and others will get pretty small lobsters if they fish inside, the larger lobsters appear to keep out in the rough water, and a good many cannot fish out there, and they catch the small lobsters so that it would be very binding on them.

Q. What is the average catch of the fisherman, in weight or number?—A. It is pretty hard to tell the average, it will be pretty small if you put them on the average, but the really substantial lobster fisherman would run nowadays, last year it was very small, but I suppose I took in last year somewhere about 10,000 pounds.

Q. What was the best year you ever had?—A. I have gone away up to 25,000 pounds.

Q. How does the price you receive for lobsters now compare with what you received in times gone past?—A. Up till last year we were away up in price compared with what we got when I first commenced lobster fishing; I sold lobsters at 50 cents a hundred count which would average 25 cents per hundred pounds, the lobsters averaged 2 pounds each. The price kept going up year by year until the year before last we got \$4.50 and that was I think up to the full value and probably a little more. Last year they went down to \$2.25.

Q. I suppose that high price was the result of competition between the canners?—A. I reckon that was the idea.

Q. You began that season at what rate?—A. \$4., and it ran up to \$4.50.

Q. And this year you began at \$2.50?—A. And we went up until we got to \$3.50 a hundred at the last.

Q. That seems to be a sore matter with the fishermen especially in Cape Breton, we have heard about that. Do you think there has been any combination on the part of the canners to keep the price down?—A. I do not know, I kind of think there was this last year. Sure, I am pretty positive of it.

Q. Was it not the case that they overdid it in the previous year and burnt their fingers?—A. That may be the case too.

Q. And they came down with too much of a drop this year?—A. That may be, and that is where they made a mistake, they should give just what they were able to give and no more, and then the fishermen would understand it better, but if they go away up and then drop away down it makes the fishermen discontented. If the packers would close down when they went to a certain point and say, 'No, I can't pay more,' it would be better.

9-10 EDWARD VII., A. 1910

Q. In some cases, I am told, they have done that, in several instances in my own division, I have charge of the Gulf of St. Lawrence Division, and there they shut down and said, 'We cannot afford to pay this price, we will stop.'—A. That is the proper thing, and the best thing to do.

Q. Then the fishermen complain on the other hand that they have always been dealing with that factory and that they are deprived of their ordinary market when the canner shuts down, so that they have to go and look for another market.—A. Of course a man can make that plea if he likes, but I would not like to make it myself. If a man told me he was giving me all he could and could not go any higher without loss I would not expect him to pay it. I would try to get the best I could out of the fish.

Q. I suppose a large proportion of the fish you catch are sent alive to the market?—A. Yes.

Q. And these fish are sold by count?—A. By count, at so much apiece.

Q. From what size up?—A. From 10½ inches up. The year before last it was from 10 inches up, but they dropped it this year and put it at 10½, and put the price very low from what it was before.

Q. From which branch of the fishery, the live lobster industry, or the canning, would the fishermen derive the most revenue?—A. I almost think they would get it from the packing lobster.

Q. That is the greater quantity?—A. Yes, the greater quantity.

Q. Do any fisherman export their live lobsters?—A. None, I think there were two crates shipped last year.

Q. Do the facilities exist here for exporting alive to advantage?—A. I do not altogether think they do.

Q. There is too much delay on the road?—A. Too much delay in getting them to the market.

Q. Where the facilities do exist for exporting alive do you think that branch of the industry should be encouraged rather than the canning, is it not less destructive to the lobster?—A. Of course it is.

Q. And is it the most profitable to the fisherman?—A. I think it would be.

Q. So that in certain places where it would be possible to carry on that live lobster export trade to advantage that branch of the fishery, you think should be favoured?—A. Yes.

Q. Even if the other had to suffer?—A. Oh, yes, that is right.

Q. But there are other places, again, where it could not be carried on and there the canning must be taken as the first consideration?—A. Yes.

Q. As to the protection of the fishery which is evidently failing, what is your suggestion as to the best method, the best regulation to have enforced for the future protection of the fishery?—A. Well, now, I have been kind of thinking the thing over in case I was going to be called here to answer questions. I think the fishing has dropped off.

Q. I might explain what brings us here: a permanent committee of the House of Commons has been formed to take up the question of the fisheries, and to advise the Fishery Department, and they had evidence before them last year from various parts of the coast. They were not, however, satisfied that they had sufficient evidence to enable them to come to a definite conclusion as to the regulations that should be passed and enforced, so they advised the Minister to send somebody all through the Maritime provinces, and the province of Quebec, where the lobster fishery is carried on, to take the evidence of fishermen on the spot, and I was appointed for that purpose.—A. I am a little kind of sorry that I have come here alone to speak for the community in which I live, I hope I will not say anything which is to their disadvantage.

Q. This evidence will be printed and submitted to the committee, and I think you are competent to give us an opinion.—A. There are many things that might be done.

SESSIONAL PAPER No. 22a

Q. The Department have received various suggestions, some say, shut down altogether, stop fishing for four or five years.—A. I do not think that myself.

Q. Do you think the condition of the fishery is such that it has reached bottom and that there is need for such a drastic remedy?—A. I do not think it has.

Q. The Lobster Commission of 1898 reported in favour of closing down by sections, closing down a section of the coast for a certain period, and moving that closed section around until all the coast had been covered. Many of the fishermen have suggested that this remedy would only be a little less severe than the first one, and that it would be very difficult to shut off the fishing in one section whilst it was allowed in the next. They say you would have trouble with the fishermen going from the section which was closed down into the adjoining section where they could fish?—A. Certainly you would.

Q. Others have said, 'Give us a 7 inch limit instead of an 8, and we will observe the law.' We had, if you remember, a 9 inch limit which was not enforced, and then they said, 'Give us an 8 inch limit and we will observe it.' Now we find that the 8 inch limit has not been observed because in some places they are canning down to four inches?—A. I know that is the case.

Q. That regulation would need a tremendous force of men to carry it out. It is very difficult for the ordinary overseer who resides in the locality to strictly enforce such a law against his neighbours?—A. That is a fact.

Q. Others again say, 'Do away with the size limit and if possible insist upon such a distance being left between the slats in the trap as would allow the small lobsters to escape, and at the same time, somewhat shorten the season, because it is at the tag end of the season that the greatest damage is done in catching the berried and undersized lobsters.'—A. That would be my view. I think it is not very much use to put a restriction on the lobster, because it is pretty hard to save him always, he has been taken and is going to be taken, and I think the only way we can do it is by shortening the season. I am a lobster fisherman myself, and I want to get all out of the lobster I can, but I would not like to overdo the thing so that it would run out and ruin the industry altogether. I would like to get all the fish I could, but I would like to do something if I could to secure the permanency of the fishery, and I believe that shortening the season would be one way of protecting the seed lobster. I have to tell you that I do not think very much of the hatchery in our town. I do not know about the hatcheries in other places, but here in Canso I do not think it is very much good; if there were some other way of looking after the seed lobster I would prefer it.

Q. The best way I think is to put her back in the water where she comes from?—A. That is the only right way I believe, especially on our coast where we have so little shelter and the lobsters have to come into shoal water to spawn, I am pretty sure about that, and if the eggs are put into the hatchery here they have to carry the young lobsters out somewhere or other where the water is too deep for them.

Q. Have you ever considered the question of pounds?—A. That is a question I do not know anything about.

Q. The favourable conditions necessary for the establishment of a pound are, considerable depth of water over a considerable area, free ingress and egress of the tide, a good deal of current, and a place where it is possible to easily fence off the entrance so that the lobsters cannot get out.—A. Yes.

Q. Where a pound can be provided that, next to putting the seed lobsters back in the water where they are taken, is one of the best ways of securing or providing for them.—A. That is what I have always said. that the natural way is the best, and the only way in which we can save the seed lobster is by putting it back in the water as soon as it is caught and let it spawn itself. The only difficulty that I have been thinking about is that in the pounds the young lobsters would be devoured by other fish such as eels, &c., and you would have to be careful in locating your pound to select a spot where there are no eels, because they will destroy everything. Take the Bras d'Or

9-10 EDWARD VII., A. 1910

Lake, you would get many lobsters there if it wasn't for the eels, but as it is, you can only get an odd lobster, and you cannot get any small lobsters there. If you could get a site for a pound where there are no eels, I believe it is all right.

Q. It has been proposed that all lobster fishermen should be licensed, there need be no fee attached to the license, but that each fisherman should take out a license by which he guarantees to observe the regulations, and if a lobster fisherman were known to violate the law repeatedly his license would be cancelled and he would not be allowed to fish lobsters. Do you think that is workable?—A. I do not know, I am sure.

Q. That has been suggested by some people.—A. I do not know, I am sure, how that would be.

Q. The idea was that the man who had taken out that license would feel himself obliged to live up to the conditions?—A. Oh, yes, that is sure.

Q. And he would be also very likely to take care that information was laid against others who did not obey the regulations?—A. Yes.

Q. Those who suggested it seem to think it would work in that way. Do you think there is any more general disposition on the part of the fishermen now to take care of the berried lobster than there was some years ago?—A. I think there is but I do not think yet that there is as much disposition as there ought to be. I think that the majority of the fishermen are thinking of the matter, much more so than they used to.

Q. Do you think it is possible to provide such an opening between the slats in the trap as will allow a certain proportion of small lobsters to escape? Will they escape if given the opportunity?—A. Well, in some places they may.

Q. In some places they have the slats not more than a half inch apart?—A. Oh, my.

Q. And they can only be placed that way with the intention of holding the small lobsters?—A. We do not see anything like that here, I think ours are about $1\frac{1}{8}$ or $1\frac{1}{4}$ inches apart, I am not exactly sure.

Q. I notice that here the space is larger?—A. Yes, ours will about hold an 8 inch lobster.

Q. That is a matter we were talking about here this morning. It has often astonished me to see how small an opening a lobster will get through.—A. Yes, they will, and they will force their claws through an opening where you could not get it out; I have seen them shove their claw through the slat, and you could not pull it out.

Q. Do you think that if a space of $1\frac{1}{8}$ or $1\frac{1}{4}$ -inch were insisted on it would be the means of allowing a certain proportion of small lobsters to escape?—A. I think it would.

Q. Some fishermen tell us it would not make any difference, that when you disturb the traps instead of trying to get out they will hang on.—A. If they get into the pot shortly before you haul it they will perhaps stay there, but if they have been in for a little while they will go out if there is room for them to get out, when you disturb the pot.

Q. There has been a great deal of complaint on the part of the fishermen along the coast about the issuing of canning licenses. In the early days licenses were issued to almost everyone who applied for them, and then there were many more canneries than there are now, but the present tendency of the department has been to restrict the licenses with a view to protecting the fishery. There has been, however, no restriction upon the quantity of gear fished. Do you think the number of canning licenses should be restricted?—A. I do not know, sometimes we get kind of botched up a little bit, that is all. We had quite a hard job this year to get a packer to take our lobsters. We found here this year before we got that license that we had one packer, and last year in the month of June he could not handle our lobsters, and in the month of May he couldn't handle over one-half of them, but as it happened we got a packer to take them.

SESSIONAL PAPER No. 22a

Q. Some one came to your rescue?—A. Yes, by applying to the government we got a license.

Q. That is what they call a co-operative license?—A. It is one that was given to 30 fishermen, I do not know what they call it.

Q. Do you think that method of issuing what we call co-operative licenses, where the fishermen are dissatisfied, and where a number of them group themselves together, will fill the bill? That it will give the fishermen a reasonable chance to dispose of their fish?—A. I think it would. My idea would be to allow every man to pack who wished, that is if he is a packer, and understands handling the fish. If he does not it is a different thing.

Q. Supposing we decide to do that, do you think then it would be reasonable and right to insist that the cannery should be up to a certain standard of fitness, we have seen a great many canneries that are not putting up a good product, there is no doubt about that, they are dirty, and badly kept, and you would not eat anything that you saw packed in them. That should not be allowed?—A. Oh, no.

Q. Do you think there should be some inspection or some standard required?—A. There would want to be a standard fixed, that if the man were not really a packer, or if he did not pack his goods properly, he should not have a license. But a real packer that understood and knew how to pack lobsters should be able to get a license.

Q. Is it your opinion that increase in the number of canneries would not mean any more fishing?—A. No, not any more, there are as many fishing here now as could possibly fish.

Q. But it would mean more competition?—A. Yes, I think it would be of benefit to the fishermen. On this line I would like to say if we could get a license by thirty fishermen clubbing together, I do not believe we would have as good fish put up as if the packing were done by a real packer; but the 30 fishermen might start out and hire a packer, and he might be a good man, he might be a real good packer.

Q. Do you think the local inspector is in a position to decide that?—A. I do not know.

Q. Who would you leave that to?—A. That is too far for me, I hardly know whether a lobster is packed properly myself.

Q. We have not had any difficulty on that account in my own division. The practice in the gulf division has been that whenever an application is made to the department for a license to can the matter is referred to me to decide whether there are canneries enough in the division or whether the individual is prepared to do the work properly. I find that difficulties occur in Cape Breton more than anywhere else in connection with packing, because of the factories shutting down. It was the Portland Packing Company that shut down here. Was it not?—A. Yes.

Q. And they did not reopen?—A. They did not open any more that year, no.

Q. That was this last year?—A. Yes, last year, 1908. This year they ran the whole season.

Q. When the price got up to a certain figure they shut down?—A. Yes.

Q. Did they begin the season?—A. Yes, they began.

Q. And then closed down?—A. Closed down sure. They began the season and ran to the first of June. The lobsters went up very high then, and they said they could not buy them, that they were losing money, and they would have to close down. Of course when they closed down the other packers came down, so I reckon they were too high in the price.

Q. Do you think there is any good reason for having a smaller size limit in one district than in another?—A. Well, I would think so, because there are places in which the average lobster is so much smaller than in other places. Of course in the place I fish in we get good lobsters and would not mind the size limit so much as in other districts where they get smaller lobsters, and if they were going to be cut off in the other districts at the same size we were they would not get a quarter catch.

9-10 EDWARD VII., A. 1910

Q. Then your solution would be to provide strictly for the berried lobster in some way or other?—A. Yes.

Q. And do away with the size limit?—A. Do away with the size limit.

Q. And shorten the season?—A. Shorten the season.

Q. By ten days or two weeks?—A. I think that might be left to yourself, I am not particular in the matter of season, only in the time of the season.

Q. I suppose it is the case that at the close of the season other fisheries are available for the fishermen, there are other things they can go to?—A. That is if they can have the right part of the season; of course there is really only one part to cut off and I suppose you will not find one-fourth of the fishermen satisfied with that.

Q. Nearly all of the fishermen want it to be cut off in the beginning, the first two weeks of April?—A. Because you do not catch anything then.

Q. But if you are going to cut it off at that end of the season you are not going to protect the lobster any. If you are going to protect the lobster, surely you must take it off at the end, when the spawn lobsters come in?—A. I would say that if we are going to take off any we should take it off the end of June, 15 days, or 20 days, if they think best.

Q. I think it is along these lines that we have to find the salvation of the lobster industry?—A. I think so.

Q. And, although the fishermen might suffer a little for a while, after a few years some results might be derived from it?—A. If the fishermen look at it in the way I would I think that by cutting off 15 or 20 days at the end of the season in the course of two or three years we will have it all back and a little more in the improved fishery. If we cut off 15 or 20 days in June we can go to work at some other kind of fishing, and get pretty nearly as much out of it as we would out of lobsters, and I believe that in a few years we will get as much money in April and May out of the lobsters as we do in April, May and June. But to cut it off altogether as I have heard it rumoured, it would not do at all.

Q. Even bad as it is, I do not think it has gone far enough to require that, and I hope it will not be necessary?—A. I think the same as you do.

Witness discharged.

Commission adjourned.

GOLDBORO, September 1, 1909 (8 p.m.)

WILLIAM H. GIFFIN, fisherman, Goldboro', called and sworn:—

By the Commissioner:

Q. How long have you been connected with the lobster fishery?—A. It is along about 24 years.

Q. Was there much lobster fishing being done in this place when you began?—A. Yes.

Q. The fishery had existed as a fishery before that?—A. Oh my, yes, when we built our little factory up here there were four factories in this neighbourhood.

Q. When were the factories first established here?—A. You will have to get somebody who can go further back than I can to tell you that. I was in the United States then. I should say it must be 35 or 40 years.

Q. Was the canning first undertaken at that time by the Americans or by local people?—A. By the Americans, Mr. Anderson.

SESSIONAL PAPER No. 22a

Q. Did he come from the State of Maine?—A. No, from the State of Massachusetts.

Q. In those early days how was the fishery prosecuted?—A. Pretty much as it is now.

Q. Did you fish with the same style of trap and in the same way?—A. No.

Q. How did you fish, with hoop nets?—A. We called them hand traps. We fished with great two-handed pots, as big as two of ours now. I never took but 27 lobsters out of one pot at that time, but there are men who took 50, and we think it is a big thing to get 5 or 6 now. We never used the hand trap until after the lobsters quit potting, and then we used the hand traps.

Q. That is after they came right in shore?—A. Yes, we would set them in shore and watch them crawl on.

Q. Perhaps it would simplify matters if you would put in your own words what the fishery was at the beginning and how it is now. What has been the course of the fishery, has the failure been gradual?—A. That is what it has been.

Q. In the beginning how many traps did you fish?—A. About 80 to 100 traps.

Q. Were they set on single lines, or on trawls?—A. On trawls, all of them.

Q. Do they fish them now?—A. No, all single lines.

Q. And they use the modern parlour traps?—A. Oh yes.

Q. What is the particular merit of that trap over the old-fashioned one?—A. We think that if the lobster crawls in we get him, all that go into the parlour trap we get, that is what they tell us, but I do not believe that, I think some of them find their way back, but we get more than we did with the old-fashioned trap.

Q. Do you allow as large a space between the slats now as you did in the beginning?—A. No, when I first began fishing it was $1\frac{1}{2}$ inch, then it came down to $1\frac{1}{4}$, and we have them about 1 inch now.

Q. In some places they have only half an inch?—A. I guess there is one man in this harbour who has them only $\frac{5}{8}$ of an inch; but I fish out in the deep water.

Q. In what depth of water do you commence fishing?—A. 12 or 15 fathoms.

Q. On a rocky bottom?—A. We get them on a soft bottom early in the season, and then we follow them in, as they come in we follow them.

Q. Are you bothered with ice here?—A. All springs in the 25 years I have been here; one year we were all cleared out in June, the ice came in, swept the harbours and cleaned up everything, that was 15 or 16 years ago. Then again I have seen the ice off here and it frightened us badly but never came in.

Q. Is it the practice to continue fishing on the same ground, or do you follow the lobsters in?—A. We follow them in.

Q. About what time of year do you move?—A. Well, we will set out first in April, and by the 20th day of May we will be in 5 fathoms, 4 or 5 fathoms of water.

Q. That is the closest you come?—A. When we think the lobsters have done crawling sometimes we move back again, because in my opinion they never stop crawling, we will go back to deep water and get as good fishing, but we come in as close as we dare, and that is when we lose our gear when we get into 4 fathoms and 3 fathoms of water. I did not fish any in June, I guess my traps were all dried before the 28th of May, that is when we lose the largest amount of gear.

Q. In what period do you find the berried lobster?—A. We get the berried lobster on the first day and on the last day of fishing, but they are riper and heavier at the end, and the lobster commences to get sick.

Q. Have you ever formed any opinion as to the percentage of lobsters that bear eggs?—A. I do not think I have put overboard more than 11 or 12 lobsters in my day's catch out of my 300 weight, but seven was the most I put overboard this year, but I did not get over 250 pounds besides our "markets."

Q. Was this a poor season with you?—A. No, this year was nothing like the worst, it wasn't too bad, but they did not seem to come on. I am peculiar from anyone else, when I first start on the big fellows I always go out to the edge, among them, and I

9-10 EDWARD VII., A. 1910

always fish there as long as they are passing that point coming out of the deep water, as long as I can fish say 8 or 9 or 10 nights, I say that is a pretty good school of lobsters passing, but this year they seemed to pass in 4 or 5 nights, they did not seem to come on this year.

Q. Has not that sort of thing occurred before in your experience? Have you not had off years in your fishing?—A. Yes, the year before that was an extra year which put you away back to the old times, back to the times where these men had 1,500 or 1,600 market lobsters.

Q. What do you call 'market' lobsters?—A. The large ones, up to 4, 5, and 6 pounds.

Q. Is the percentage of small lobsters greater now than it used to be?—A. I have seen a man haul 2,100 pounds in one day, right between here and the harbour on a ridge where we do not hardly bother setting a trap. They were getting 35 cents a hundred pounds, when I commenced to fish I got 60 cents per hundred pounds, but I have got \$4.50, and this year we only got \$2.50 which made it a bad year in every way.

Q. To what was that reduction in price due?—A. They claim that the price per case was down to \$12, and at the same time the year before it was \$16.25. I know that is the case myself.

Q. Did that decrease fully justify the drop?—A. Not quite.

Q. They overdid it?—A. They have doubled their money on every case of small lobsters we sold to them for \$2.50, and they are selling them now at pretty near as much as they were the year before and we claimed that they knew it. We closed down and did not fish late this season.

Q. Are most of those who are engaged in fishing lobsters in this neighbourhood deep sea fishermen who go into other fisheries?—A. Yes, they are mostly. With the exception of myself there are a few, 3 or 4, with that exception, they are all deep sea fishermen.

Q. The factory does not furnish boats and gear here, the fishermen all own their own?—A. The fishermen own everything.

Q. How are the lobsters paid for here, by weight or count?—A. By weight for canning, and for the markets by count.

Q. There is a different price paid for them?—A. Yes, 12, 10 and 11 cents this year, but they have been as high as 12 cents apiece.

Q. Has the number of fishermen increased greatly since the beginning of the fishery as well as the quantity of traps fished?—A. When I first started to fish I could count all the fishermen on my fingers, there were then two boats fished out of this harbour.

Q. And how many boats are fished out of this harbour now?—A. There are only about 7 boats fishing here now.

Q. You have how many canneries in operation here?—A. Only one.

Q. The Burnham & Morrill factory?—A. The Burnham & Morrill factory.

Q. How many boats fish for the factory?—A. They have some all along the shore, they have six boats fishing here, and they smack the lobsters from the other boats all along the shore.

Q. What is the extent of the pack in this cannery generally? What did they pack this year, last year and the year before?—A. Four hundred and some odd cases besides the big ones they shipped.

Q. What proportion of the total catch goes to market as market lobsters?—A. It is difficult to say, it is according to where the men fish. The Drumhead men, I expect would be fully one-third, the deep sea men would have about one-third of the total catch, that is the Drumhead men would get that but it would not be as much here.

Q. Is the tendency of that live lobster export trade to increase?—A. Not this year, you see the American coast is fishing the big lobsters now, there was a five years' close season, and that is the time that the trade was better, but this last year the Americans are fishing the lobsters themselves, and there is such a large percentage

SESSIONAL PAPER No. 22a

which dies in transit. This last year was an off year entirely. I will say right here that one-third of the live lobsters shipped last year died in transit. I was going to say that the government should legislate to stop it, there was an enormous destruction last year, but this year it was entirely different, I have seen lobsters shipped from here that 95 per cent reached Boston alive.

Q. Was that because you had a cooler season?—A. It was a cooler trip. I have seen 7 or 8 crates shipped from here and we had to take them off the boat before we got to Halifax in order to save any.

By Mr. Sinclair, M.P.:

Q. At whose loss would that be?—A. The shipper loses them; if the fisherman has sold them on the wharf it is nothing to him.

By the Commissioner:

Q. Which of the two branches of the fishery is the most profitable to the fisherman, the proportion that he sells to the canner or the proportion he sells for the live lobster export trade. A. I think the large ones give him the best money. Last year I shipped two crates of live lobsters and I got \$4.25 back, and I could have had \$20 odd if I had sold them here.

Q. What should you have had if they had reached the market safely?—A. I would have got \$30 odd if they had reached the market alive, but they died.

Q. How many do you put in a crate generally?—A. 100 lobsters. We only have to pay so much freight on a crate, if I get a crate of 140 pounds to Boston I have to pay the rate, and if I can get 200 pounds of lobsters to Boston in a crate at the same rate I have that much saved towards paying expenses.

Q. What does it cost to ship a crate to Boston?—A. \$3.10, that is all, and that includes brokerage and everything.

Q. You ship from here to Halifax?—A. Yes.

Q. And from Halifax to Boston how do they go?—A. By steamer, we pay the man on the dock so much for every crate and they are transferred to the steamer for Boston.

Q. You never ship by rail to Boston?—A. No, one firm ships by that method.

Q. You know what the regulations are with regard to the taking of small and berried lobsters, have they been observed here?—A. I heave every berried lobster that comes into my boat overboard, and I claim that if every man had done that for the last 15 years we would not have very much shortage today, but the trouble is that I may heave the berried lobster overboard, but that same lobster may go into the next man's pot and he cleans her and sells her.

Q. Does the canner accept them?—A. They do not take them, no, but I think they are cleaned and brought to the canner. I can tell the berried lobster, if it has been cleaned, on sight, but when they are coming in quickly you cannot detect them. They can clean all the berries off with three slaps on the water; that was the trouble here, there was one man here, I think he is dead now, that I think destroyed more berried lobsters than all the other men here; he went inshore after the lobsters had gone inshore to lay their eggs and caught them.

Q. Do you think there is any disposition on the part of the fishermen now to be more careful of the berried lobsters?—A. Yes, every man that is a man and knows anything, and that believes he is destroying his own business by taking them, heaves them over, but the man that does not believe anything of the kind, take the man that is so ignorant, he does not believe that by taking the berried lobster he will prevent them multiplying, he will strip them. I have seen it done this summer with my own eyes, men have brought them to the factory in the boat and tried to pass them off, and they did not care what injury they were doing to the fishery.

Q. Is there a large proportion of the fishermen that practices that?—A. No, I do not think there are many. The man that does that is not entitled to considera-

9-10 EDWARD VII., A. 1910

tion because he sees it and knows that it is to his benefit to put the berried lobsters overboard.

By Mr. Sinclair, M.P.:

Q. There is an understanding among the fishermen at Drumhead to put the berried lobsters overboard?—A. Yes, and we have an understanding here.

By the Commissioner:

Q. Is there a Fishermen's Union here?—A. No.

Q. What would be the effect upon the fishermen, and upon the canner also, of course, if the regulation with regard to small lobsters were strictly enforced?—A. There would be no fishing at all.

Q. Why is that, is the proportion of small lobsters so great?—A. Yes, there are men in this bay, inshore here, who are fishing now. There are men who catch very few large ones, certainly not much more than they do at one place where when I saw the shells I asked a man whether he was running a shrimp factory or a lobster factory.

Q. I may tell you that the evidence we had at the place you refer to was that there are no undersized lobsters canned there.—A. All you have to do is just to look at the soft bottom there and you will know that the large lobsters are not to be had there.

Q. At Pleasant Bay, Magdalen Islands, there is a sandy bottom and the run of lobsters is very small, you get them right close in shore.—A. Do you think when we say there are no lobsters here in June that there are none here?

Q. Oh, yes, I think there are lobsters here.—A. Do you not think there are just as many on the bottom? We know they do not trap, but there are just as many lobsters there, and if we had the bottom cleaned where would we get them next year? I can go back 23 years and we could not get any lobsters, but the bottom was simply lined with them. I have put over a hand trap baited with gibbs and I have seen 15 lobsters come and look at that bait, but they would not crawl for the bait, except an odd one.

Q. Do you think it is due to the fact that they are approaching the breeding season?—A. I kind of think so. It is when the lobsters come in in the spring that they are hungry and trap.

Q. But although they are large in size then they do not weigh as much as they do later in the season?—A. It is in May when they are at their best, 400 pounds of shell would give you 100 pounds of meat in the can, that is the time you get the best lobsters.

Q. What is the best means of meeting the difficulty? It is evidently time something was done in the way of restriction, and various suggestions have been made to the department by different people; nearly every man has a theory of his own. Some fishermen tell us, that we should shut down altogether for a term of years in order to give the fishery a chance to recuperate.—A. That is what we said this spring, shut down for five years.

Q. What do you think of that as a remedy? It is no doubt a thorough going one?—A. I think it is not necessary to shut down yet.

Q. The fishery has not reached such a stage as to make that necessary?—A. No, I expect to see it improve, and if we had a hatchery it would be better. We have the experience of Port Hood to guide us, it was down there so that the canner was putting up 400 or 500 cases, but now he is back to the original number and can hardly handle all that is coming to him, and what made the difference? It was the hatchery. Then there is the Canso hatchery where the benefit has already manifested itself in the fishery.

Q. Among the recommendations of the Lobster Commission of 1898 was one that the lobster fishery should be closed down by sections, that certain portions of the

SESSIONAL PAPER No. 22a

coast should be shut off for a year or two, and that the closed area should be shifted around until all parts of the coast had been covered?—A. Well, you see, they came here and they asked us how much season we wanted and we told them that we wanted three months, April, May and June, and that is what they granted. Up west of us, those fellows west of Halifax, have the advantage of us, they commence to fish in January, and they fish as long as we do.

Q. They claim of course that there is a certain portion of that season when the weather is very rough, and that there are months of their time that they do not fish their traps?—A. If those men stopped fishing on the first day of May look at the chance we would have at the market.

Q. That is the complaint made along in Cape Breton, that you are cutting them out of the market?—A. They have about the same as we have.

Q. They think up there that you should be a little shorter than they are because you begin earlier?—A. I would not care if they took June off us.

Q. Among the other propositions there is one that the size limit should be fixed at 7 inches instead of 8. The fishermen in many places say, "Give us an 8 inch limit and we will live up to that strictly, we will not catch any smaller than that."—A. They are not much good if they are smaller than that, my traps would not hold hardly that size.

Q. Another proposition is that we should do away with the size limit altogether, they say that it is very difficult to enforce it, and that we should always strictly protect in some way the berried lobster, either by putting her back in the water, placing her in pounds, or stripping her eggs and taking them to the hatchery. I suppose there are various localities where a pound might be established, and other localities where hatcheries would be the more suitable; anyway the proposition is to do away with the size limit and strictly protect the berried lobster?—A. That is a perfect proposition.

Q. And at the same time shorten the season?—A. That is a perfect proposition, shorten the season to April and May.

Q. How much would you shorten the season?—A. My idea is to shorten it and just have it for April and May here, and protect the berried lobster.

Q. We have had a great many fishermen and canners say to us, "Give us two months' fishing." ?—A. It would pay the canner.

Q. The canners complain that they have to keep open in order to please the fishermen when they would rather close. —A. The destruction of the berried lobster is in June, and that destruction is caused by the man who follows the lobster inshore in June.

Q. That is where the harm is done, when the lobsters come close in shore?—A. When the lobster is ready to lay, when she is a sick fish. If we had the size limit taken away and the season shortened I believe every man around these waters would be satisfied. The deep sea fisherman goes after the mackerel on the 25th of May, and he is done with the lobsters then.

Q. Another proposition that has been advanced by some people is that we should require the lobster fisherman to take out a license, the idea being that the fisherman would in that way regard himself more or less as a fishery officer and would be more inclined to obey the law himself and to see that others did so, and if a man were known to violate the regulations, either in the matter of the size limit, or the destruction of the berried lobster, he would lose his license and not be allowed to fish lobsters, do you think that would work?—A. I do not think that would be any good, there is a lot of red tape about it.

Q. With respect to the licensing of canneries, do you think there are canneries enough, or that the number of licenses should be increased? The policy of the Department for a number of years back has been to limit the number of licenses with the idea evidently that in that way they were going to protect the fishery, but the amount of gear was not limited.—A. It would not protect the fishery, the number of licenses would not make any difference in the number of fish taken.

9-10 EDWARD VII., A. 1910

Q. You think that an increase in the number of licenses would not do that?—
A. No, but it would increase the competition.

Q. To give the fishermen in case of complaint—the department has had many complaints on the part of fishermen that they were bound to accept the price offered by packers, that they could not get out of it, they must either take it or leave it alone—a means of relief, the department decided to issue what they call co-operative licenses to any group of fishermen numbering 15 or more who apply for it in the name of one of themselves so that they can pack their own fish. Do you think that offers a fair way out of the difficulty for fishermen generally?—A. Yes, I think that is all right, we met in the spring and applied for a license ourselves. We had one for 18 years but we did not have it this year. I am sorry that we did not the way the prices were going, but it was too late, we could not start this year, it was only just at the start that they said to us, 'Here is the price, \$2.50 or nothing.'

Q. But they raised it during the course of the season, did they not?—A. Not one cent.

Q. In some places they seem to have raised the price?—A. For all the lobsters I got in April and May I came out of the factory with \$108 less than for the amount of fish in the same months last year. All that I got was the wages of my hired man and the cost of the gasoline, I did not get anything for myself out of it. We got \$5.00 for the fish last year and this year only \$2.50.

Q. You said that you favoured the establishment of more hatcheries?—A. Yes, I believe there should be more established right along the coast to Shelbourne, that is where the good fish are caught, these lobsters are away ahead of anything caught on sandy bottom, and they are the fish we want to preserve.

Q. Do you know anything about pounds?—A. No, unless it is this Baker pound in Cape Breton where they take the mother lobster and keep her until the close of the season and then let her out again, but they say there is a large percentage die in the pound.

Q. There is a certain percentage of deaths, and one season, I believe, when they had a long hot spell more died than usual, but when the season is cool I do not think the percentage is very large according to the information we have. The trouble is that they have to bring them so far that they suffer in transit before they reach the pound?—A. That is right.

Q. Are there any facilities in this neighbourhood where pounds could be established? You want a good depth of water, a free current through the place and an opportunity to bar off the mouth.—A. Drumhead Island is the only place I have in mind, that is a pretty place with big rocks and an opportunity to bar it off without interfering with navigation.

Q. What depth of water would you have there?—A. At high tide 6 or 7 feet, and at low tide not over 3.

Q. That is rather shoal?—A. Yes, but that is pure salt water there.

Q. I think you told us that an increase in the number of canneries would not mean an increase in the catch of fish?—A. I cannot see that it would, it would not increase the number of pots.

Q. Where it is possible to carry on the live lobster export trade should the regulations favour the development of that trade as against the canning?—A. Well, you know that the lobsters suitable for that trade are not profitable for canning.

Q. No, not the very large ones. I suppose the most profitable are medium size?—A. The 9, 9½ and 10-inch lobsters, and in fact down to 7 inches, because the shell does not amount to anything, there is more meat proportionately.

Q. That is what they say, that the small lobsters are fuller, and that those small half pound flats do not require large lobsters, and those are the tins that bring the highest price?—A. Exactly. You see if you take some of those large lobsters weighing 5, 6 or 7 pounds, when you shell them there is not much meat in them, and they are not profitable to can, the lobsters look big, but they do not give much meat.

SESSIONAL PAPER No. 22a

Q. It is a question that requires consideration whether in places where all the facilities exist for carrying on the live lobster export trade the regulations should not be so framed as to encourage that trade and shut off the canning.—A. Then there would not be any fishing.

Q. They say there would be?—A. That they would fish for just the live lobster trade?

Q. Yes?—A. They could not do it here, I could not fish all day for 10 lobsters.

Q. It only amounts here to about one-third of your catch?—A. Hold on, I just happen to have my lobster book in my pocket. In 1908, on June 1st—I will go back to last year, 1908, we weighed lobsters from the 15th of April, I weighed that morning from outside, 131 pounds of lobsters and 10 large ones; I had some in the car that I had been saving up for weighing, and all I had in the car was 222 pounds and 14 big ones, the next day I had 8 big ones in 167 pounds. The reason these were small is that I was hooking them from the fellow here, selling him the small ones and selling to Stropel because he was giving me a bigger price. I had 120 large lobsters in April that year and 1,420 small, that was in 1908, and that was a good year. In May I had 309 large ones.

Q. And what weight of small ones?—A. 2,500 pounds.

Q. And in June?—A. I did not fish much in June, only until the 18th and I got 886 pounds of small and 74 large ones. Now in 1909, this was a shameful year——

By Mr. Sinclair, M.P.:

Q. You could not continue business if you were cut off everything but the large ones?—A. I would never set a trap, and we fish outside, I am not in the bay, and we get as many large ones as all the boats in the bay. In 1909, in April I got 127 large lobsters and 1,742 pounds of small ones.

By the Commissioner:

Q. That is under 10½ inches?—A. Yes. I have the two months together here, and in April and May I got 280 large and 3,336 pounds of small.

Q. You did not fish at all in June?—A. Every pot was dry on the 28th of May, and the last lobster I landed was on the 26th.

Q. Is that about the general run of those who fish outside?—A. Yes, that would be about it. You see a fellow has to get something for lobsters when that is all he gets, I had 130 traps, the very best that could be made.

Q. What are they worth with their gear?—A. They are worth \$1 apiece, I would not like to make you one for that with the rope.

Q. There is more work in them than in the old fashioned trap?—A. I would rather make three old ones. Now with regard to these market lobsters, if the lobster is only a quarter of an inch under size he does not go, and I suppose when I had 40 markets in my boat I had an equal number between 10 and 10½ inches and if you took out those between 10 and 10½ you would have very small lobsters left.

Q. How is it that they stick at the 10½-inch limit when the Boston market takes them down to 9?—A. Because they call them 'baby lobsters' between 9 and 10½ and the price is not there; they rush them away west. I do not know where the lobsters come from, at Yarmouth they fish all winter, and still the boats will be loaded in April and May.

Q. Well, you see they have a favourable shore. They have the outlying reefs and rocks around Cape Sable, and wherever you find those conditions you will find a pretty good lobster.—A. That is just so.

Q. What do you think about fall fishing? It has been suggested in some places that fall fishing might be permitted?—A. I would say, no, for my part I would say, no.

9-10 EDWARD VII., A. 1910

Q. There is no use burning the candle at both ends.—A. Destruction again. I would never think of it, and I don't think there is a fisherman around here who wants it.

Q. It is said that in a few years the live lobster trade will altogether replace the canning, what is your opinion about that?—A. I do not know, it might, but I do not see how it would.

Q. I really do not know of very much more than I have to ask you. Do you think of anything more, Mr. Sinclair, that we could get from this witness?

Mr. SINCLAIR, M.P.—I think you have gone into it pretty thoroughly. There is one thing you did not ask this witness, as to the possibility of letting the small lobster escape by leaving a larger opening between the slats.

By the Commissioner:

Q. Do you think that we could regulate the destruction of the small lobsters by insisting upon a certain space between the slats in the trap? We find in some places that the space is narrowed down to half an inch?—A. I told you of one man in these waters that was responsible for a great deal of destruction, and he had his slats down to a half inch, or $\frac{5}{8}$ ths. With him it would take over 300 lobsters to make 100 pounds, that man has just destroyed the fishing in the bay since he has been fishing there.

By Mr. Sinclair, M.P.:

Q. Do you think that such a regulation would be of service?—A. It would be one of the best things in the world.

Q. Would the small lobster go out?—A. If you were acquainted with the lobster as well as I am you would think he would go out.

Q. As long as there is bait in the trap will he go out?—A. I have seen them all going out as fast as they could when you are hauling.

Q. What size lobster will go out of a certain space?—A. A $1\frac{1}{4}$ -inch space will allow an 8-inch lobster to go out. I claim a 7-inch lobster is too big a lobster to let go, why would you want me to let him go or to leave a space wide enough to let him go out when the government will allow them to can 500 cases at one cannery where they never see a 9-inch lobster?

Q. That is why I want you to answer the question. Assuming that the law was enforced all over Canada with regard to the construction of the traps with spaces the width of the slat?—A. All right.

Q. You think it would be a protection to the small lobster?—A. Yes, of course, he will not stay in, the lobster will go out so quick.

By the Commissioner:

Q. It is a fact that they have narrowed the space between the slats down, what is the reason?—A. Yes, of course they are narrowed down. In the olden days they used to put a lath between the slats as a gauge, and the mesh in the head of the trap was from 5 to 7 inches, and now it is only 3 inches and the laths are from $\frac{3}{4}$ to 1 inch apart.

Q. The long and short of it, as I understand it, is that you would do away with the size limit, and protect the berried lobster strictly and in the very best possible way?—A. Yes, that is about it.

Q. And have a regulation space between the laths; should that space be all over the traps or only half way up the sides?—A. I do not see any difference which way it is.

Q. And you would shorten the season?—A. Yes, that is right. I believe that if we protect our lobsters they will increase with our nine months' close season, we have

SESSIONAL PAPER No. 22a

nobody fishing illegally here. There is never a man looks at a lobster outside the season, because there is something else for him to do.

Q. And you will not deprive him of his means of living by shortening the season because he has other fisheries to go to?—A. That is it.

Witness discharged.

PHILIP McARTHUR, fisherman, Goldboro, called and sworn:—

By the Commissioner:

Q. You have heard the evidence of Mr. Giffin, and fully approve of it? Have you anything to add to it?—A. No, I would only go over the same ground, and I quite approve of it. I used to have a theory that the female lobster crawled under the rock and stayed there until the eggs were hatched and then the lobster crawled away. One day when we fished in July I found one female lobster that had hatched out every one of the young lobsters, they had all left with the exception of about three, where the young lobsters, about one inch long, were still attached to her. This confirmed my view that the eggs were hatched by the female lobster herself.

Witness discharged.

Commission adjourned.

ISAACS HARBOUR, September 2, 1909 (9 a.m.).

IRA L. GIFFIN, fisherman, Isaac's Harbour, called:—

By the Commissioner:

Q. How long have you been fishing lobsters?—A. Since I went to the lighthouse 15 or 16 years ago, just a few pots around the lighthouse.

Q. What is your impression as to the lobster fishery, is the condition going from bad to worse, are they getting scarcer?—A. They are getting scarcer, there is no question about it.

Q. Both in size and quantity?—A. Yes, that is in shore, of course I am not acquainted with the conditions of the fishery outside.

Q. In connection with that matter of the trap, you are of the opinion that by leaving a suitable opening between the slats the small lobster would escape.—A. The small lobster would escape, there is no question about it.

Q. Have the slats been put closer together during recent years?—A. Yes, they have. I am going to give my own experience, I made them wide apart and other men made theirs close and there were six small ones in theirs to one in mine. I would haul up my pot and would find the smaller ones dropping through between the slats, but when I went to the factory I found the other men sending in the small lobsters.

Q. How are the lobsters sold?—A. By weight.

Q. Have you any idea how many it takes to make 100 pounds?—A. I can tell you how they have run down; 15 years ago 110 and 115 would give 100 pounds, and now it will take 150 to 175 to the 100 pounds, so that you see they are falling off.

Q. And the traps have been built to capture that kind of lobster?—A. Yes, there is no doubt about it.

Q. Among the many suggestions which have been sent to the department at various times one is that the best way to remedy the existing state of affairs is to

9-10 EDWARD VII., A. 1910

shut down altogether for four or five years, but many fishermen have expressed the opinion that that would be a pretty severe remedy?—A. Yes, there is no doubt about it.

Q. In a great many places there are people who would be completely stranded if the lobster fishery were stopped as that is the main source of their cash earnings?—Yes, that is so.

Q. The Lobster Commission of 1898 recommended the closing down by sections, and moving the closed sections around the coast until every part had been given a close season.—A. That would be a very awkward and difficult thing to do I would imagine.

Q. Another proposition that has been made is to do away with the size limit which in practice it has been found almost impossible to enforce?—A. No, it has never been enforced and cannot be.

Q. But to so regulate the trap that a fair proportion of the small lobsters will escape?—A. Yes.

Q. And to protect always very strictly the berried lobster?—A. That is right.

Q. To make it a serious crime for taking the berried lobster, and also to shorten the season by ten days or a fortnight?—A. Yes, you might do that.

Q. All the evidence tends to show that it is at the tag end of the season most of the berried and small lobsters are destroyed?—A. Yes, no doubt about it.

Q. It is said that in the course of a very few years that would so improve matters that although the fisherman might complain at first, in a very few years if these regulations are going to be any good he will reap a great deal of benefit from it.—A. That would be the best way. It looks to me very strange that the government while going to all the trouble of building hatcheries for the purpose of hatching out the eggs should at the same time allow the mother lobsters and the little ones to be taken, it seems unreasonable to me, when if the trap is built so that they could not hold them the little lobsters would be running about on the bottom instead of being taken to the cannery.

Q. We meet a great many fishermen who say that it makes no difference, that the small lobster will not go out, that they will stick to the trap, but that is not your experience?—A. No, it is not my experience, of course I am not acknowledged as much of a lobster fisherman, but I tell you what I have seen with my own eyes.

Q. Another proposition that has been made to the department is that all the lobster fishermen should be licensed, the idea being that in the spring when the fishery officer comes around to pay the bounty they should apply to him and should receive a form of license which would bind them to do certain things, such as returning the berried lobster to the water, not to catch the undersized lobster, and to obey the regulations whatever they may be. The fisherman would sign the declaration and would get a license on which the regulations would be printed, the license being numbered. The theory of those who make the proposition is that any fisherman having done that will feel bound to live up to the terms of the agreement, and that he will be likely to obey the regulations himself and to see that others do the same, and in case he violates the law he would not be allowed to fish lobsters again?—A. I do not know how that would work. It seems to me that the man who will catch the berried lobster and try and dispose of her will do almost anything, and I do not think a license of any kind would prevent him doing so because if he does not have enough interest in the business to prevent him destroying the berried lobster, which I think it is a sin to do, the license will not stop him.

Q. What do you think is the spawning season of the lobster?—A. That is a pretty hard thing to tell. You put your pots out on the 1st of April and take them in on the 1st of July, and you may catch them at any time between those dates with spawn on them.

Q. But there are certain seasons of the year when they spawn and hatch?—A. Yes, we suppose they come into the rocks about the 1st of July to spawn; I have seen them spawning in July and August.

SESSIONAL PAPER No. 22a

Q. You think they come inshore to spawn?—A. Yes, that is my opinion of it.

Q. And have you any idea how many berried lobsters you find per hundred?—

A. Where I am in here there are very few. Of course last year I didn't do anything at all, but perhaps another year I would not have more than 50 or 60.

Q. Out of what quantity of fish?—A. About a couple of tons of fish, out of that there might be perhaps 100 I would put overboard. But you have to be careful how you treat those lobsters when you get them in the pot, if you handle them right and put them back again at once the lobster would not be hurt at all. And then they should also let the little ones go, sometimes they are like toy lobsters, only 4 inches long, and what is the use of destroying lobsters like that, they do not amount to anything.

Q. And yet we find a good many canners who tell us that they like the small lobsters because they are more profitable, the shell weighs so little.—A. Since they have been shipping the 9 to 10½ inches lobsters away to the United States if it were not for the small lobsters the factories could not run at all, and in that way they do not want to have any law to stop the catching of small lobsters, but I think we ought to have a standard for them. A great many fishermen tell you that it does not make any difference, take all the small lobsters you like, but I know that around the light house since they have been catching the small lobsters there is nothing there. The two points I would suggest is to make the laths on the pot far enough apart so that the small lobsters can drop out or crawl through—

Q. You think they will do that?—A. I think they will, of course there will be a small percentage of them that will not, but the majority of them will go out through the opening, that is my opinion; if the laths are far enough apart you will not have these small lobsters, or as many of them, in the trap. It is hardly to be expected that the man who sees his neighbour, fishing in the same water, pulling up his trap with one good sized lobster and ten or fifteen small ones, which are held there because the slats are close together, whereas, as in my trap he may have them wide apart and can see the small ones drop out as he pulls the trap up, and if he has only one good sized one in his pot you can readily see how he feels about it. The other man gets his profit out of the small lobsters which I have let escape between the slats in my trap. If the fisherman has no small lobsters in his trap he will not be tempted to keep them.

Witness discharged.

WILLIAM BAKER, fisherman, Isaac's Harbour, called and sworn:—

By the Commissioner:

Q. How long have you been fishing lobsters?—A. It is now about 18 years.

Q. You own your own boat and gear?—A. Yes.

Q. And you have always fished in this place?—A. No, I moved here 6 years ago.

Q. Before that where did you fish?—A. In Lunenburg County, Tancook Island, is my home.

Q. Well, how is the fishing here as compared with Lunenburg?—A. Well, for the last five years, since I have been fishing here it is double as good as it was in Lunenburg.

Q. How do the fish run here?—A. There are more large ones here, twice as many as in Lunenburg, they were small up our way. I do not know why it is the case, whether it is the bottom or what it is, but I think it is not because of the bottom because I will tell you when first I started in fishing you would not hardly see a 9 inch lobster, they would be all great big fellows; when I gave up fishing there they would be nearly all so small that you would have to pitch away.

Q. Now, since you have been here, you say you have fished here six years?—A. Yes, six years.

9-10 EDWARD VII., A. 1910

Q. How do you find the fishing here, is it the same now as it was when you began?—A. It was not this spring, but the spring before it was better than it was any spring I have been down here; this year it seems to be altogether a failure.

Q. How many traps do you fish?—A. I fished 120 traps this last year, my boy was with me, before that I was alone.

Q. In what depth of water do you fish?—A. We fish inshore in 8 to 10 fathoms of water.

Q. Do you fish in the same water all through the season?—A. I do.

Q. You do not follow the lobsters inshore?—A. Yes, my idea is they are off in April, they are in in May, and in June they go back into deep water. I only fish inshore in May, and then I move my traps off, and I do double as well outside. I have spoken to lots of fishermen here and they all tell me the same.

Q. Of course the law says that no lobsters under 8 inches shall be taken, but that is not carried out anywhere?—A. I know that.

Q. What proportion of the lobsters here would be under 8 inches?—A. I could pretty nearly tell you, there would be about one-third of them.

Q. Is that proportion the same throughout the season or are there more at one time than another?—A. No, it is pretty much the same all along, except the last few weeks, maybe two weeks they would average more, some mornings they would be right good and some mornings right small.

Q. But the last two weeks there will be more small ones?—A. Oh, yes.

Q. How about the berried lobsters, how many of them will there be in every hundred?—A. I do not get so many of them, to tell you the truth I put all mine away because I think it is right to do so, but I have seen men take them right alongside of me.

Q. Do they brush them off?—A. Yes. The way I did last spring I brought them in, I made a car and put them in it, and when the season for fishing was over I let them go so that I was sure no one else would get them.

Q. How did they live?—A. It was an open pot and I left it right on the bottom and they lived all right only they bit one another.

Q. Did you notice whether any of them hatched out their eggs?—A. Not one of them. I kept them the whole season through until we hauled out our pots, and they were just the same then as they were when I put them in.

Q. The eggs did not look riper?—A. They never changed a bit, whatever was the reason I do not know whether it was the confinement.

Q. How did they feed?—A. Of course they fed off what was in the water I do not know how else.

Q. Now, as you know, the fishery has been failing all along the coast, and a great many recommendations have been made to the department by different people, some who are engaged in the lobster fishery and some who are not, as to what should be done to improve the condition of affairs. In some places things are very far gone, they are getting no good sized lobsters at all?—A. That is quite true.

Q. Like the Straits of Northumberland, Prince Edward Island and other places. One recommendation is that we should cut off the lobster fishing altogether for four or five years. What would you say as to that?—A. I will tell you my plan, have one month in the spring, April or May, it would not make much difference to me which, and one month in the fall. I believe that the lobsters crawl into shore and spawn and after that they would be more plentiful, and if you take them in April you would not get a great many spawn then and by the time you commenced to fish in the fall they would have come into the shore and would have pretty nearly all spawned. I believe the lobsters will increase if they are all allowed to spawn.

Q. You would not fish during the spawning month, they spawn generally in July, do they not?—A. Oh, no, that was my plan all the time, not to catch them during the spawning month; I suggested that here two years ago.

SESSIONAL PAPER No. 22a

Q. What is the general opinion of the fishermen? How do they feel about it generally, what is their idea?—A. I do not know.

Q. Is there a fisherman's union here?—A. No they have no fisherman's union here at all.

Q. Have you ever had any conversations with fishermen about the matter?—A. No, other than with a few scattered fishermen who live right here.

Q. Another proposition that a good many persons favour is to do away with the size limit altogether, they say it never has been and never can be enforced, and to protect the berried lobster religiously, to provide that the traps shall have a certain opening of standard width between the slats so that the small lobster beneath a certain size would escape, and to shorten the season by a couple of weeks, what do you say as to that?—A. My opinion is that we may as well give up fishing.

Q. Why?—A. Say you make the space between the slats two inches, or even one and three-quarter inches, a 9-inch lobster can go out of the one and three-quarter inches easily.

Q. What width do you put generally in your traps, do you make them two inches between the slats?—A. I haven't got mine 2 inches, because a 9-inch lobster would go through it; in my trap the space is an inch and a half or an inch and a quarter, they are pretty close to tell you the truth.

Q. That is a pretty good width, one and a quarter inches, we have seen them a half inch in some places?—A. I dress my lath gauge down and put just the same distance between each one.

Q. And what mesh have you in the head?—A. I have a two-inch mesh.

Q. You use the parlour traps, do you?—A. Yes, I guess I had the first parlour traps that were used here. For two nights' fishing you get your lobsters better in those traps, but for one-night fishing the other pots are just as good, in my opinion. But I guess if we could not get one month in the spring and one month in the fall we had better be closed altogether for three or four years, I should think so.

Q. Do you think that the lobster comes inshore to spawn?—A. My opinion is that she stays right where she is; if she is a deep water lobster she will stop in deep water, and if she is an inshore lobster she will come inshore to spawn, because I have caught the big lobsters in ten fathoms of water at the last of June.

Q. How do the spawning lobsters run, large or small?—A. The general run of them is large.

Q. What was the smallest lobster you ever saw with eggs on?—A. The smallest one was about 9 inches, and there are not many as small as that. I think they have to be a certain age before they spawn.

Q. Do you know anything about the matter of hatcheries or pounds, and such things as that?—A. I do not.

Q. Do you think those things are any good, or would you advise the establishment of something of that kind?—A. I believe that would be a good thing, and I think it would save all the seed because there are lots of men, I have seen them right around here, that will knock the seed off the lobsters and sell them, and sometimes they will sell them to the factory with the spawn on, and the factoryman may be as sharp as he likes, but he cannot always see the spawn; if he had some way of protecting those eggs the fishermen would not destroy them. Every man has morality enough about him to keep and protect that spawn if there was a hatchery in which it would be hatched?

Q. And especially if he got something for it?—A. Oh, yes, you may be sure he would then.

Q. Does the factory expect you to bring in everything you catch?—A. No, but I do not think they quarrel against it. I did not bring in all I caught this morning. I pitch away 50 or 60 sometimes; it is out of all reason to take them in there, I do not believe in it, I never did, I was brought up to that, to pitch the small ones away

9-10 EDWARD VII., A. 1910

and we always did until the last few seasons, but there are quite a few take them all.

Q. What is the difference between the season at Lunenburg and here, they do not fish the same season down there that you do here?—A. That is what killed them, they fished all the winter, and the lobsters do not have any time to rest at all, they fish from the middle of December and fish right up to the last of May.

Q. Can they fish all the winter?—A. They can fish all the winter, of course if you put your pots out and it starts a very heavy blow you may not be able to go out to them, but take the fine days and you can fish all right, I fished one winter there.

Q. They say that during February and March they have very little fishing, that those are rough months and therefore they really cannot do anything?—A. It is certain they lose a lot of their pots there.

Q. Do they leave their gear out during those months?—A. Oh yes, they leave their gear out but I believe it is ruinous to the lobster to fish in winter, but still a fellow can't tell much about it.

Q. Are there many canneries in Lunenburg?—A. Quite a few.

Q. Who runs them?—A. One is run by A. Millett and one by his brother. He has got the Portland Packing Co. cannery.

Q. He is their manager, is he?—A. No, he bought them out, they are not in business there now, he bought them out quite a little while ago.

Q. Have these people here, Burnham and Morrill any canneries at Lunenburg?—A. They have some in Lunenburg County, but I do not know where.

Q. Where is the principal lobster fishing done there?—A. At Chester I guess.

Q. What price is paid you for the lobsters by the canners here?—A. This spring?

Q. Yes.—A. \$2.50, and 8 cents for the big ones.

Q. And does the same price run all through the season?—A. Yes, it did for me, I do not know about the other men.

Q. And the year before what did you get?—A. We started in at \$3.50 and it went up to \$5.10.

Q. That was a big rise?—A. And it started at 10 cents for the big ones and ended up at 15 I think it was.

Q. What led them to go up as high as that, was there any competition, anybody else buying lobsters?—A. I do not know, not more than there was this year, there was hardly as much opposition as there was this year.

Q. Are the fishermen generally satisfied with the price they are receiving for lobsters?—A. No, no, I would not put a pot in the water next year at the price we got this year, because it did not pay me to take my boy and go and get a few lobsters as we did this spring; I had better do something else.

Q. What is the average weight of your catch, how many tons do you take?—A. I generally get about 3 tons and a few over sometimes, never any less.

Q. You sell of course by weight?—A. Yes, not by count at all but by weight; in Lunenburg county they sell by count, I was smacking there and bought them for years.

Q. Why is it they take them in some places by count and in others by weight?—A. I could not tell you, I have no idea.

Q. You say there are small lobsters in Lunenburg and yet they take them by count?—A. Yes, because I was telling Mr. Giffin the man at the factory here that I would like to be selling mine by count instead of by weight.

Q. Is it the case that the small lobster will try to get out of the trap when you are pulling it up?—A. Oh, they will try to get out.

Q. Some fishermen say that when you move the trap the lobster grabs hold and hangs on?—A. No, he will not do that, because I have seen them go right out clean through the mesh of the net; if there is a hole in the head he will go right square through it, and if the laths are some distance apart he will crawl out between them, and you sometimes catch him half way through, he will not try to stay in.

SESSIONAL PAPER No. 22a

Q. Do you think there are canning licenses enough, or should other canneries be licensed? The Department for a number of years back have been trying to keep down the number of licenses with a view of protecting the fishery, but they have not limited the amount of gear; do you think it would have that effect?—A. Not a bit, my opinion of it is that there are plenty of licenses if they will pay the price for the lobsters.

Q. Do you think there is any agreement between the canners?—A. Sure, up in Lunenburg they combined and one man dare not pay more than another, and that is the thing that should be stopped. They have combined not to pay above \$3.50 per hundred by count, but the smack man may put 5 cents more out of his own pocket to get the lobsters, still the boss does not pay it; that is a thing that should not be allowed.

Q. Do you think that any man that applies for a license to can should get it?—A. Well, he has just as good a right to it as the other man.

Q. Do you think that the fisherman, one with the other, would make more money if he is allowed to can his lobsters than he will by selling them?—A. I do not believe he would because I believe if that were allowed there would be a lot of bad lobsters put up and the price would go down.

Q. That is what they tell us brought down the price, some bad lobsters had been put up.—A. That is just the case, as it is with everything else; it is the same with lobsters as it is with mackerel or herring, if a lot of poor quality is put on the market down goes the price on all of it.

Q. Do you know anything about pounds for putting the seed lobster in, that is the way they do in some places in the State of Maine and they have one in Cape Breton, they bring the female lobster with berries on and put her in the pound where she is kept and looked after, and at the close of the season they let her go?—A. I will tell you a little story about that. I put one into a big car we had when I lived down at the Island. I did handle one which was a big one, and I said I am going to see how long it will be before she spawns, and I kept her there until away in July, and when I went to look at her the car was full of little fellows just about half an inch long, and they stayed in the car, the bottom pieces were about 1½ inches apart, those little fellows stayed there a long while, and they were about an inch long before they went away.

Q. How long did you hold them?—A. I could not tell you exactly, but we put her in the car about the last week in May, and this was some time in the middle of July.

Q. Did you feed her at all?—A. Yes, I pitched in a sculpin now and again.

Q. Did you see her eating it?—A. Yes, the next morning we would go to see, and she had a big piece eaten out of it, and there was nothing else could get in to eat it, it was floating right at the top of the water, and there was about six fathoms of water there.

Q. She hatched out her eggs?—A. Oh, yes, she hatched them out.

Q. At what time?—A. About the middle of July, I could not tell you whether it was in the day time or what time exactly.

Q. How long did the small lobsters stay near her?—A. They stayed with her, I do not know, it was late in the fall when we took the car ashore, and it was some time in October when we landed the gear and they were gone, but she was there then.

Q. She was there yet?—A. Yes, and as good as ever, she had plenty of food, we gave her all she wanted to eat.

Q. Which branch of the fishery do you think is the one there is the most money in for the fishermen, the shipping of live lobsters to the market or the canning?—A. The canning.

Q. You think there is most money in the canning?—A. In the canning, yes, that is on the average, taking the value of the lobsters, what he gets for them you know. Then if you have fishing in the fall you will catch a lot of lobsters that will have spawned, but if you had caught them in the spring they wouldn't have a chance to spawn.

9-10 EDWARD VII., A. 1910

Q. Your theory is that by fishing early in the spring and late in the fall you would not capture lobsters at the spawning time and they would escape?—A. That is the idea I have.

Q. Have you anything more you would like to say, if you have we will put it down and it will be laid before the Committee?—A. I haven't anything to say only that I want a month in the fall, and I want a month in the spring, I would be very well satisfied with that.

Q. What about the months?—A. May and October would be good months.

Q. Would not October be a very rough month here?—A. No, it will be all right for lobsters, you don't want it smooth every night.

Q. Do they trap better on rough nights?—A. I tell you, if it comes up a little rough, after the rough weather is over you will get a bigger run of lobsters.

Q. What bait do you use here?—A. Herring, I salt my own bait mostly.

Q. Have you ever noticed whether the lobsters trap better with good fresh bait or old bait?—A. Yes, I will catch nearly double as many lobsters as any other man if he has not the same bait that I have, and certainly I do better than those who use the same kind of bait, but they do not attend to their gear. If you make your herring as salt as you would to eat it he is no good at all, you may as well not put him out, but when you are making your bait you want to take your herring and let it lie out of salt for a day so that you are sure you cannot cure him, then you can give him as much salt as you like and he is good bait.

Q. Would you prefer salt herring to mackerel gib or codhead?—A. Yes, the mackerel gib is all right for one night, but just as soon as that one night is over if you go back to your other bait, if you haven't enough gibs to keep on with all through, your other bait is no good for a good while, so that the best way is to keep on with the one bait, and not go from one bait to the other.

Q. Do you use your mackerel gibs here in a bag?—A. Yes, I put all my bait in bags, I knit bags that are hardly one inch in the mesh very often.

Q. Are they not able to cut the mesh?—A. Oh, they will cut it sometimes, the large lobster will cut the mesh, and a large lobster will bite a hole in the net of the trap and go out sometimes.

Q. What is the largest lobster you know has been taken about here lately?—A. The largest one that I got weighed 5 pounds, but I have caught them weighing 13 pounds in the hand trap, they could not get into a pot you know at that size.

Q. Is hand trapping done here at all?—A. Not a bit here.

Q. Is here any fishing done here after the season?—A. Yes, there are certain people here that catch them all the time.

Q. Are they canned?—A. Oh no, they just catch them and boil them I suppose, and sell them, I do not know what else they do with them, but I do not suppose they eat them all. I have eaten them myself out of season, but I never would catch one to can, that is as sure as you live, I never would. At home in Lunenburg I do not think they are even as strict about the law as they are here. That is one thing that should be looked after there, that is the reason the lobsters are going down, there are men there who will set as high as 30 or 40 pots with no buoys on them, and they will catch lobsters and take them to Chester, and sell them to the boarding houses, and the overseer there does not seem to see them, but I think he ought to know it. They get a big price for them there. If we had one month fishing in the spring and one month in the fall here, and the fellows that set their pots and catch and boil and then sell them were looked after here, I think the lobsters would increase, but I do not think they will ever get as plentiful as they were years ago for the reason that the bottom is getting poorer, the kelp is being torn away, and there are not so many hiding places for them, so that they will not come into shore the same as they used to.

Q. Have you any other fishing here?—A. The cod, herring, and mackerel.

Witness discharged.

SESSIONAL PAPER No. 22a

HENRY BURKE, fisherman, Isaac's Harbour, called and sworn:—

By the Commissioner:

Q. How long have you been fishing lobsters?—A. I have been fishing lobsters since Mr. Andrews first built his factory, I cannot tell you the exact time, but I was one of the first fishermen that started here.

Q. Was that 30 years ago?—A. It was over that, somewhere about 1873.

Q. What canneries had you here then?—A. F. S. Anderson's.

Q. Are there any others here now?—A. The Burnham Company pack now down here in the cove.

Q. Did they succeed him?—A. Yes.

Q. We would like to know something about the manner of fishing here; how many traps do you fish?—A. It varies, some years 125, some years 140 and sometimes only 100.

Q. Do you fish them on single lines or trawls?—A. Single lines.

Q. And you use the parlour trap?—A. Of late years.

Q. Is yours a one handed or two handed boat?—A. Two handed.

Q. In what depth of water do you begin fishing?—A. About 11 fathoms, from 11 to 9 fathoms.

Q. Is that out around Green Island?—A. East and south of it, the west and northeast is shoaler.

Q. What time do you generally begin to fish, can you always get out by the 1st April?—A. I put out about the middle of April because the weather is very rough in the first part of April and it is very hard on the gear.

Q. You fish on a rocky bottom I suppose?—A. Yes, a rocky bottom.

Q. Do you fish on the same ground all through the season or do you move into shoal water?—A. Move into shoal water as the season advances.

Q. How shoal water do you come into?—A. From 5 to 2 fathoms.

Q. When you first begin to fish what run of fish do you get, how do the fish run through the season in size and in quantity?—A. They run large at first, and the quantity decreases according as the season advances.

Q. And the size too?—A. No, the size is pretty much I guess on the average.

Q. What proportion of your fish would be below the 8 inch limit?—A. Well, a very small proportion of my fish, it would be very small, there may be one or two out of a hundred pounds, perhaps a half of that.

Q. Then most of your fish are market fish?—A. Most of my fish, say in an average of 300 pounds catch I would average along about 50 market lobsters of 10½ inches.

Q. Do you know how the lobsters that you catch run, you sell by weight?—A. By weight.

Q. How many lobsters to the hundred pound do they run?—A. Altogether, large and small?

Q. Yes.—A. They will average one pound apiece.

Q. What proportion of the total catch are berried fish? Out of every hundred fish how many would have berries on them?—A. They vary in that respect again, some days I would take 15 or 20 and other days I would not get more than 4 or 5.

Q. And do you get more at any particular part of the season than another?—A. Later on I think, I get more spawn lobsters.

Q. Do you think they come into the shore to spawn?—A. It appears they do.

Q. And later in the season you would expect to get a larger proportion of them?—A. Yes.

Q. What space do you allow between the slats in your traps; you build your own?—A. Yes.

Q. How do you regulate the space between the slats?—A. I would not think I put them any further apart than one inch, and some of them probably seven-eighths of an inch.

9-10 EDWARD VII., A. 1910

Q. Do you think that the distance between the slats makes any difference in the capture of the small lobsters?—A. Why sure, they could not possibly hold the small lobster if the space was large enough for them to get out.

Q. What space would a 5 inch lobster go through, what opening would be required to let a 5 or 6 inch lobster through?—A. He would go through an inch and a quarter all right.

Q. And do you think that we could lessen the catching of small lobsters by insisting on a certain space being left between the slats?—A. Yes, I am certain you could.

Q. What would you say would be a fair space so as to allow a moderately small lobster to escape?—A. I think an inch and a quarter space would allow all lobsters under 9 inches to get out.

Q. Then in some places they would not catch many lobsters with an inch and a quarter opening?—A. No, sure, but where I fish it is very different, I fish on the outside ground and the lobsters run larger there than inside.

Q. And you have a good bottom too?—A. Yes.

Q. Is it not the case that in smooth sandy bottom you generally get a smaller run of lobsters than on the rock?—A. That is right, you will.

Q. How will the fishery today compare with what it was when you began fishing?—A. There is a lot of difference in it.

Q. To what extent would you say it has gone down?—A. To what extent? Why, 75 per cent.

Q. You have now to fish a great deal more gear to get the same weight of fish?—A. I could not handle the gear now to get the same amount that I did when I first started out with 65 traps.

Q. Among the many remedies that have been proposed to the department in order to improve the condition of the fishery is one to shut down altogether for four or five years.—A. That would be a great disadvantage to the people on this coast.

Q. You think that would be pretty hard?—A. Yes, it would deprive them of one means of living that they depend entirely on.

Q. It is the only thing they can go at in the early spring?—A. Yes.

Q. What, would you say, are the average earnings of an average lobster fisherman from April to June with an average catch?—A. I could not tell you, of course this year was an exceptional one.

Q. Have you any idea what is the average weight of fish caught by a good fisherman, how many tons would he catch?—A. I know how much I caught myself.

Q. You catch more than your neighbours do you not?—A. I catch more than some, but all the outside fishermen who fish with me are about on an average.

Q. How many thousand pounds did you take last year?—A. I have my book here in my pocket. I took last year, 1908, in the month of May, 2,584 pounds, that is what we call small lobsters, and 900 market lobsters; in June I had 1,540 pounds of small and 460 large markets. I haven't my book here for 1909. Another man in the same boat with me had 490 pounds of small in May and 154 counts, and in the month of June he had 151 pounds of small and 19 large markets, I think that was our catch in 1908, and all the outside fishermen average about that.

Q. You did not give us anything for April, did you not do anything in that month?—A. Did I not give you anything for April, perhaps I had April and May month together, sometimes I just run them up together. Yes, that was for April and May together, I had 506 pounds of small and 167 market in April, but they are included in the catch I gave you for May.

Q. What period of the fishery is the best you have?—A. In the month of May.

Q. Now we will go back to the matter of the remedy, the first proposition you have is to shut down altogether which you say is a pretty severe measure. The last Lobster Commission that came around in 1898, I do not know whether they came here or not, they went all over the coast.—A. They may have come here; I do not know, but I think they were here.

SESSIONAL PAPER No. 22a

Q. They recommended closing down by sections, that we should shut off certain sections of the coast and move around in that way until all ports of the coast had been given a close season. How would that appeal to you?—A. I cannot tell, certainly the first part of April up to the middle of April is very little good to anybody.

Q. What remedy would you suggest? If the matter were left to you to say what the remedy should be for the better protection of the lobster fishery what would you do?—A. Well I think in some way we should protect the small lobster and the spawning lobster.

Q. Another proposition that has been approved by some of the fishermen and by the canners is to do away with the size limit altogether, they say that you cannot enforce it, and to provide for a certain fixed opening between the slats of the trap that would allow a certain proportion of the small lobsters to escape, and at the same to protect the berried lobster religiously and somewhat shorten the season by knocking off a few days at the end. Do you think that would be all right?—A. It would be, yes.

Q. Is it the case that during the last days of the fishery the most serious injury is done by the capture of the berried lobster and the small ones?—A. I believe you are right, but of course we can talk about the law and about leaving the slats open, but the people can wash their spawn lobsters off and sell them just the same as if they had no spawn on them and you could inspect the traps and the laths would be spaced all right, but they could carry a few laths out to sea with them and put them closer together when they got out to the fishing ground.

Q. But the officers might have a gasoline boat, and they might go out to see and examine the traps on the fishing ground, of course the officers would have to do more than they have been doing, apparently there hasn't been any formidable attempt to enforce the law during recent years?—A. There is no doubt about that.

Q. What is the practice of the fishermen here with regard to the berried lobster?—A. I can speak for myself, I liberate all my own, but as to other people we can only have our own opinion; I believe that the majority of people wash the spawn off the berried lobsters, a good many of them do anyway, although there are some men who regard the law and do not do so.

Q. Which branch of the fishery should in your opinion, be encouraged in the framing of the regulations, the export of lobsters alive or the canning?—A. I believe the live lobster export trade.

Q. You think it should be encouraged in framing the regulations, you think it is the most profitable trade?—A. I think it is.

Q. You think it is increasing?—A. Well, certainly, if the fishermen do not take the small lobsters they will grow large.

Q. And then they will be shipped alive to market?—A. Wherever there is a chance to send them.

Q. Selling alive to the market is the most profitable branch of the fishery?—A. Boston is our market.

Q. Your idea is to take a few days off the end of the season, and widen the space between the slats, it is along that line the regulations will, you think, have to be made?—A. I know that after the middle of June it slacks off, there are other things to do, and at the first part of the season there is not much doing.

Q. The best canners and fishermen have told us that in 'two months' fishing they will be able to do all they want?—A. I think they will.

Witness discharged.

JOHN LINTOP, fisherman, Isaac's Harbour, called and sworn:—

By the Commissioner:

Q. How long have you been lobster fishing?—A. Off and on for 10 years, not steady of course.

9-10 EDWARD VII., A. 1910

Q. What is the condition of the lobster fishery to-day compared with what it was when you began? Are the lobsters as large or are they as abundant?—A. Neither one I should say.

Q. What number of traps do you fish?—A. I generally fish about 80, that is the average.

Q. You are single-handed?—A. Yes, this year I was in with another man, but only had about 80 traps myself.

Q. Do you fish in deep water?—A. Not above 9 fathoms in the spring.

Q. You do not go very far out?—A. No, out towards the island, in the harbour.

Q. At what time is the fishing at its best?—A. Some time from about the latter part of April, I should say, until along about the middle or the last of May, along about that.

Q. Do you fish in the first part of April?—A. Not always. But this year I hove up on the 15th of May, the fishing got poor and I got sick of it, just about one-half of what it was last year.

Q. What remedies would you propose for the existing condition of affairs? The lobsters fishery is being overdone, and it is necessary to do something in order to protect it? The regulations, I believe, have never been enforced strictly either as to berried lobsters or to the size limit?—A. I do not think so. Last year I brought about 8 spawn lobsters in this harbour to try and save them, I was told there are men in the harbour washing the seed off the lobsters, and I said there is only one cure, to bring them up to my home and keep them in a pot in order to try and save them.

Q. Some people say, 'Shut down for four or five years altogether.' How would that work?—A. I do not know, I cannot tell how that would work in a year like this, this year was so poor, and they tell me that possibly next year it will be a lot poorer. It changed here some 7 or 8 years ago, I knew a man at Goose Island who hired a man, it is a good shoal there, for the fishing, and he told me that after he had paid everything he only had \$25 over the man's wages. Some say they are not going to buy anything smaller than 8 inches.

Q. That is the law now, how would it affect the canner and fisherman if that were enforced? Do you catch a large proportion of lobsters under 8 inches?—A. Yes, I think that this year they were either dreadfully small or else they went about 8 inches, I noticed that you did not get any lobsters this year, or very few under 8 inches, they ran from that to 10½ or 11.

Q. Do you think that by enlarging the space between the slats in the traps, and insisting upon it, that a fair proportion of the small lobsters would be allowed to escape?—A. I would think so; they tell me they do go anyway, so that if the space were enlarged they would be more apt to go I would think, but it would be bad for the fellow who had to go to work and make all new traps.

Q. Of course they would have to give notice that all traps made after a certain date must be made up to a certain standard. What is the life of a trap?—A. According to the way they are smashed up outside they would only last three years I would judge.

Q. The most reasonable suggestion that we have heard, in my opinion, is to do away with the size limit altogether which has not been enforced, and which it is very difficult to enforce, and to provide that a certain space should be left between the slats, sufficient to allow a reasonably small lobster to escape, say 1½ inch, that is for the future, and to cut off a few days at the end of the season. The general impression seems to be that the great damage is done to the fishery in the last few days of the season by taking the small lobster and the breeding fish at that period; is that your experience? Would you say there are more spawning lobsters at that season?—A. Yes, and especially in the shoaler water.

Q. They come in there to spawn, do they not?—A. I cannot say that definitely, but I think they do.

SESSIONAL PAPER No. 22a

Q. If they do, and if they are only getting in there towards the tag end of the season do you not think that is the time they should be protected?—A. They come in there in shoal water in May, say they are there, although I do not believe that we have any school of lobsters here at all these days. I believe they are only in here to breed, because I can be off in 9 fathoms of water and come in and set 4 or 5 traps and get as many lobsters there on a smooth night, just about as good, as I could outside.

Q. I suppose towards the end of the season there are other fisheries that a man could go to?—A. If he is going to the herring fishery he wants to knock off about the middle of May anyway so that generally the shortening of the season would not affect them at all.

Q. Are the bulk of the herring fishermen lobster fishermen?—A. Well, I have not been but I expect to be if I live another year, but most of them do herring fishing.

Q. And cod and mackerel?—A. Yes, they are deep sea fishermen most of them. I was just going to ask you, has anyone ever said anything about the fall fishing here?

Q. Yes, they have, what is your opinion about it?—A. My opinion is that I would say if we got a month and a half, September and until the middle of October, here, it would be far better, and I believe there would be no spawn lobsters taken.

Q. And what about the spring fishery?—A. Nothing in the spring, do not do anything until the fall comes on.

Q. A good many of them say, 'Give us the month of May alone in the spring, and a month in the fall,' sometimes they tell us that.—A. That will be September or October in the fall.

Q. Some consider October would be the best month.—A. A good many persons think a fine month is September.

Q. Your idea would be to fish 2 months in the fall and nothing in the spring?—A. I do not think it would hardly pay to fit up for a month in the spring, it looks that way to me, and I know I have heard other men say the same. I tell you how it is, the lobsters crawl right into the harbaur in the summer time, you do not use near as much rope when the lobsters are inshore and they are in nearer home, you can get up later in the morning in the fall than in the spring and that makes it easier for the fishermen. We would not have to go outside to get our lobsters.

Q. And you would not be catching them until after they have spawned?—A. Certainly, It is just as I told Mr. Sinclair, what is the difference in catching the lobster when she is full of spawn or berries and catching the same lobster before she is full of spawn, and when she has not had the opportunity to spawn? That is the way it is now, and I cannot see any difference if she is as big, and would have as many eggs as the other. Just as soon as I see a 10½ inch lobster I can tell by the soft fin on the tail whether they will have eggs, and I cannot see a particle of difference in killing one or the other. The lobsters spawn in the summer, and it is not right to take them until after they have spawned, therefore I say we should save them until after the spawning season.

Witness discharged.

Commission adjourned.

9-10 EDWARD VII., A. 1910

DRUMHEAD, September 2, 1909 (3 p.m.).

EDWARD FANNING, fisherman, Drumhead, called and sworn:—

By the Commissioner:

Q. Are you a lobster fisherman?—A. I am the second man that fished lobsters since the business was first brought in to this country here by Mr. Andrews. At that time a man could get 25, 30, and up as high as 50 in a trap. Today it is a rare thing for me to get 7 or 8 in a trap; the lobsters have gone low because they are caught in all kinds of shapes and forms, hand trapping, spearing, and in every other shape. More than that, of course the law is that we should preserve the mother lobster, throw her away, and of course there are lots of people do throw them away, but a large portion of them do not, I think, that is not much protection to the lobsters because where one man will do it another man will not.

Q. Do you belong to Drumhead?—A. I do.

Q. Have you always lived on this part of the coast?—A. Always in this part of the country, yes.

Q. How long have you been engaged in lobster fishing, how far back does your connection go?—A. I do not know the exact date, but it is from the time Mr. Andrews put his first factory here, that would be about 34 years ago.

Q. That was the first factory established in this place?—A. Yes, the first factory in this place.

Q. How long did he continue canning here?—A. Well, he continued canning—there has been no other factory canning, it has been under his license all the time, his name was in the business up to a few years ago and then he sold out to Burnham and Morrill.

Q. And at the present moment they are the only ones carrying on business?—A. At the present moment, yes.

Q. We would like to get some information as to the history of the fishery; you have just told us that in the early days of the fishery you used to catch so many lobsters. I suppose you fish a great deal more gear now than you did then?—A. Pretty nearly double.

Q. You are still fishing lobsters?—A. Yes.

Q. About what time does the fishery begin here, your season opens with the 1st of April, does it not?—A. We do not put our traps in the water until the 1st of April.

Q. Are you bothered here with ice at all?—A. Yes, it bothers us some, but it has not the last few seasons.

Q. About what time do you generally put out your traps, about the first of April?—A. About the 1st, as near the 1st as we have a chance to put them out.

Q. Do you find the lobsters there as soon as you begin?—A. A few, of course the water is too cold, they cannot crawl very well.

Q. In what depth of water do you begin?—A. From 15 to 20 fathoms, of course some are in shoal water.

Q. How far will that take you off shore?—A. Not very far from the outer island, a little distance from the main shore of course.

Q. At what part of the season do you find fishing at its best?—A. In the first of the summer, along about May.

Q. About the month of May?—A. Yes, along about May.

Q. How do the lobsters run at the different periods of the season? What would you expect to catch when you first begin fishing?—A. Well, we expect to catch a little more than we do.

SESSIONAL PAPER No. 22a

Q. But as to the size of the lobsters? The fisherman is like that everywhere you know, he is always more or less of a grumbler.—A. Oh, it is generally the natural failing of man to be that.

Q. During the first week of the fishing how do you find the lobsters?—A. Some years we find them very good and at other times again we do not find them as good. Sometimes the lobsters are pretty plenty, it varies, four or five or six traps will get good fishing, and other traps near will not get much.

Q. That depends upon the kind of bottom you are on?—A. Yes.

Q. I suppose, as a rule, you look for a rocky bottom on the edge of a reef, or something of that kind?—A. Yes, we do not like a flat muddy bottom.

Q. As the season advances how do the lobsters turn out?—A. Not very good.

Q. And towards the end of the season?—A. They get pretty well shed, they crawl in the rocks and they do not like to come out without a good deal of coaxing, and they are not much use to a man then if he does catch them, some have to throw them away and others do not.

Q. Out of the total catch of lobsters made here what do you think will be the proportion below the 8 inch limit?—A. I believe from the time we start catching lobsters they are 15 per cent of the whole.

Q. That is the percentage of the whole. But out of every 100 lobsters how many would be below 8 inches, which is the legal size limit, although that limit is not enforced and is not lived up to?—A. I guess—upon my word I can hardly tell you—but guess they would be one-half wouldn't they? All of 50 per cent.

Q. You would not find 50 per cent outside when you first began fishing would you?—A. No, not at first.

Q. Does the percentage of small lobsters increase as the season advances?—A. Yes.

Q. Do you know how your lobsters run to the hundred pounds, you sell by weight, but have you ever counted them?—A. No, I have not, I could not possibly tell you that.

Q. But they are not as large, they will not average as large as they did when you began fishing?—A. Oh no, no, nothing like that.

Q. I suppose as the season advances you move your traps in from the deep water, they do in some places?—A. Yes.

Q. Into what depth of water do you move them?—A. Into 4, 5 and 3 fathoms and so on, but if a man would be satisfied to keep his traps in the deep water he would do about as well.

Q. In what way, would he catch as many or as big a run of lobsters?—A. A better size of lobsters.

Q. As to these seed lobsters that you speak about, do you find them all through the season?—A. You can catch the mother lobster at all times of the year, I have caught them at all times of the year with seed on them.

Q. Is there any particular time when the seed seems to be riper than it is at another time?—A. Yes.

Q. When would that be?—A. Along about the end of June.

Q. You notice the change in the eggs?—A. Yes, the eggs are riper, there is a certain age of the lobster for shedding and spawning, and it is not right to take the lobster at that time.

Q. I suppose the shedding season is after the spawning season?—A. I do not know about that.

Q. What percentage of the total catch will be seed lobsters with berries on?—A. There would not be a quarter.

Q. Would not that be a very large percentage?—A. No, there would not be a quarter, about 2 or 3 out of 100.

Q. Well, is the proportion larger at any one time of the season than it is at another?—A. No, I haven't found that.

9-10 EDWARD VII., A. 1910

Q. In the early days I suppose you used the old fashioned trap, the double ender.
—A. Yes.

Q. Did you use the hoops before that at all?—A. The hand traps? Yes, we used them.

Q. That is an iron hoop with a net in it, we call them hoop nets?—A. Yes.

Q. That was the first kind you used, were they not in use before the traps?—A. Not before the traps, the traps were first used here after the factory was put up, and then after a year or two the hand traps were used.

Q. When were they used?—A. All through the season.

Q. Are they still used?—A. No.

Q. How was it they were given up?—A. The fishermen got the idea in their heads, and they had the idea pretty well right, that the hand trap was destroying the mother lobsters, and they thought it would be fair to all hands to give up using it.

Q. With regard to the female lobster with berries on, what has been the practice? What do you do with them?—A. Before the law came out that we should not catch them we sold them, and when the law came out we threw them away, but when I threw them out of my boat some other fellow would get them the next day in his.

Q. And what happens then?—A. I do not know what he did with them, I am not supposed to know.

Q. Do you think there is any growing feeling among the fishermen now that the seed lobsters should be protected?—A. I do, I think that the seed lobster ought to be protected.

Q. Are the fishermen more careful about her protection?—A. Yes.

Q. Are they more careful about washing the eggs off?—A. Yes.

Q. To what do you attribute this diminution in the quantity and size of the lobster?—A. To so many lobster fishermen taking out all the lobsters, the lobsters cannot breed as fast as they are caught.

Q. Was it not only because they were taking too many lobsters, but because of the destructive method of the fishery, the taking of the female lobsters with eggs on, and also the immature lobsters? Do you not think that is the cause?—A. Yes, I think so.

Q. Do you think we could govern the matter of the protection of the small lobster by insisting upon a fair opening between the slats in the trap? That size limit of 8 inches never has been enforced, the small lobsters have been taken?—A. Undoubtedly they have been by some fishermen.

Q. Do you think that if the size limit were abolished, it has been suggested by some fishermen that as it stands now it is only a farce, that we could provide for the escape of a certain proportion of the small lobsters by insisting on having a standard trap with a moderate sized opening between the slats?—A. Yes, if that were done he would turn round and go back again.

Q. When hauling the trap from the bottom to the surface you think the small lobsters would escape between the slats?—A. Some would, if he could make a quick move the lobster will go, but if he could not he would hang on to the trap, and there is nothing gained. I do not think you could make a trap that would keep the big ones in and that the little ones would go out; you could make it with a large opening, but he would remain there.

Q. Is it not a fact that when the traps were first made you allowed a greater space between the slats than you do now?—A. They were so plentiful then, but he would get in anyhow.

Q. What space do you allow between the slats now?—A. We generally take the narrowest lath we can get and use that for a guage.

Q. How much will that be?—A. Over an inch.

SESSIONAL PAPER No. 22a

Q. We see them less than that, in a great many places we find they are sometimes down to half an inch. Now why has that been done?—A. I do not know, it was not for the safety of the lobster at all, but it was just because the man fancied, I suppose, in his mind that he would make it that way.

Q. Do you not suppose that the fishermen have made the space with the narrow gauge in that way with a view of holding the small lobsters?—A. Yes, I believe that is right, as far as that goes. I believe he does, but still a lobster will not go out unless he is forced to by the big fellow. There may be a couple of little fellows in there and the big ones drive them out.

Q. You think that in hauling up the trap the small lobster will not escape when it is disturbed?—A. Not unless he is sitting on the head and can get out readily.

Q. You know the practice of the Department in recent years has been to limit the number of canning licenses, not to grant any new licenses, do you think there are canneries enough now?—A. No, I do not think it, I do not think there are enough, because I think there should be more canneries in operation so that they could not grind a man down and make him do as they please.

Q. You think the more canneries there are in operation the more competition there will be?—A. Yes.

Q. Would an increase in the number of canneries mean more fishing?—A. It would not mean more fishing, but more price.

Q. Would it mean more traps in the water?—A. I could not say whether it would.

Q. Do you not think that everybody who can engage in lobster fishing is at it already?—A. Yes.

Q. Do you think if you had 3 canneries here instead of one it would make any difference in the number fishing?—A. It would not make any difference if they all belonged to one man, but if they belonged to several different companies it would make a difference, because if the one man would not pay me my price I could go to another.

Q. If, instead of one cannery you had three, would it mean more gear on the ground?—A. I do not know that it would mean any more gear, because as soon as one old fellow drops out now there is another young one to take his place.

Q. There have been a number of complaints on the part of the fishermen that they have been more or less in the power of the canner, that they had no competition, and that they were not having a fair show and could not get enough for their lobsters. To remove that grievance as far as possible the Department has within the last two or three years agreed to issue co-operative licenses, that is that the fishermen by co-operating together could receive a license to can. Do you think that remedy removes the trouble as far as the fishermen are concerned?—A. I think it removes a lot of trouble, and I will tell you why. The factories come together and say that they will give us so much for our lobsters, and there was no other man to step in and raise the price, therefore the fishermen had either to sell for the price offered or give up fishing. Mr. Stropel here walks in and gives one cent more for the big lobsters, and he got all the fishermen around here, and finally the other factories had to compete with him in order to get some lobsters.

Q. They had to come up in price?—A. They had to come up too, so that if Mr. Stropel had not bought the lobsters here we would have ended maybe worse than we commenced.

Q. So that you think there will be nothing wrong in increasing the number of canneries?—A. I do not think so.

Q. Do you think the fishermen, one with the other could do better if packing for themselves than if they sell to the canners?—A. The fishermen on our shore cannot very well do that because they are engaged in other kinds of fishing which they would have to throw up if they commenced canning. The fishermen on our shore do not stick to lobster fishing only, they are all fitted out for other fishing, and if one thing won't fit they can go to another. If Mr. Stropel gives most he gets the lobsters, that is the way the majority of the fishermen work on this shore.

9-10 EDWARD VII., A. 1910

Q. In the early days I suppose you used the old fashioned trap, the double ender.
—A. Yes.

Q. Did you use the hoops before that at all?—A. The hand traps? Yes, we used them.

Q. That is an iron hoop with a net in it, we call them hoop nets?—A. Yes.

Q. That was the first kind you used, were they not in use before the traps?—A. Not before the traps, the traps were first used here after the factory was put up, and then after a year or two the hand traps were used.

Q. When were they used?—A. All through the season.

Q. Are they still used?—A. No.

Q. How was it they were given up?—A. The fishermen got the idea in their heads, and they had the idea pretty well right, that the hand trap was destroying the mother lobsters, and they thought it would be fair to all hands to give up using it.

Q. With regard to the female lobster with berries on, what has been the practice? What do you do with them?—A. I believe he does, but still a lobster will not go out unless he is forced to by the big fellow. There may be a couple of little fellows in there and the big ones drive them out.

Q. You think that in hauling up the trap the small lobster will not escape when it is disturbed?—A. Not unless he is sitting on the head and can get out readily.

Q. You know the practice of the Department in recent years has been to limit the number of canning licenses, not to grant any new licenses, do you think there are canneries enough now?—A. No, I do not think it, I do not think there are enough, because I think there should be more canneries in operation so that they could not grind a man down and make him do as they please.

Q. You think the more canneries there are in operation the more competition there will be?—A. Yes.

Q. Would an increase in the number of canneries mean more fishing?—A. It would not mean more fishing, but more price.

Q. Would it mean more traps in the water?—A. I could not say whether it would.

Q. Do you not think that everybody who can engage in lobster fishing is at it already?—A. Yes.

Q. Do you think if you had 3 canneries here instead of one it would make any difference in the number fishing?—A. It would not make any difference if they all belonged to one man, but if they belonged to several different companies it would make a difference, because if the one man would not pay me my price I could go to another.

Q. If, instead of one cannery you had three, would it mean more gear on the ground?—A. I do not know that it would mean any more gear, because as soon as one old fellow drops out now there is another young one to take his place.

Q. There have been a number of complaints on the part of the fishermen that they have been more or less in the power of the canner, that they had no competition, and that they were not having a fair show and could not get enough for their lobsters. To remove that grievance as far as possible the Department has within the last two or three years agreed to issue co-operative licenses, that is that the fishermen by co-operating together could receive a license to can. Do you think that remedy removes the trouble as far as the fishermen are concerned?—A. I think it removes a lot of trouble, and I will tell you why. The factories come together and say that they will give us so much for our lobsters, and there was no other man to step in and raise the price, therefore the fishermen had either to sell for the price offered or give up fishing. Mr. Stropel here walks in and gives one cent more for the big lobsters, and he got all the fishermen around here, and finally the other factories had to compete with him in order to get some lobsters.

Q. They had to come up in price?—A. They had to come up too, so that if Mr. Stropel had not bought the lobsters here we would have ended maybe worse than we commenced.

Q. So that you think there will be nothing wrong in increasing the number of canneries?—A. I do not think so.

Q. Do you think the fishermen, one with the other could do better if packing for themselves than if they sell to the canners?—A. The fishermen on our shore cannot very well do that because they are engaged in other kinds of fishing which they would have to throw up if they commenced canning. The fishermen on our shore do not stick to lobster fishing only, they are all fitted out for other fishing, and if one thing won't fit they can go to another. If Mr. Stropel gives most he gets the lobsters, that is the way the majority of the fishermen work on this shore.

9-10 EDWARD VII., A. 1910

Q. Do they all own their own boats and gear?—A. They do, they put in their lobsters to the factory until their bills are paid, and then they are free men and can do as they please.

Q. Do all the men supply their own boats and gear?—A. Yes, most of them.

Q. Does the factory supply some boats and gear?—A. Some of the factories supply the fishermen with gear for which they pay.

Q. In my own division the factory own the boats and gear and the fishermen are in some places paid by the month?—A. They are not that way here at all.

Q. Would you expect the canner to take all the lobsters you take to him, regardless of whether they are undersized or not?—A. It is all owing to circumstances, I could not expect him to take them if the law prohibits him from taking them.

Q. The law does prohibit their being taken, but what is the practice?—A. The practice is that a man usually puts in all he can.

Q. And the canner does not raise any objection to it?—A. No, he does not, because he wants to get all he can.

Q. Within your recollection has any attempt ever been made to enforce the present regulation with regard to the berried lobster, that she must be carefully put back in the water, and that the fisherman cannot bring in anything under 8 inches?—A. It has never been enforced except by the men themselves. I never saw any law in print to that effect, I have only heard men saying that we must let the egg lobster go and not take the small lobsters.

Q. Who was the man?—A. There was never any notice stuck up, any printed notification that we must not do this.

Q. Therefore no attempt was ever made to enforce the law?—A. No, only by the Government appointing some fellow who did not know one lobster from another to run around the factories and look at these men canning them.

Q. Those are the fishery overseers?—A. Those are the fishery overseers, the big majority of them that the Government appoints are that way.

Q. The lobster fishery has been falling off more in many places than it has here, and various suggestions have been made to the Government at different times as to what should be done to improve the conditions and save the lobster. Some people who take the extreme view say, 'Shut down altogether for 4 or 5 years.'—A. I would not know what to say on that, because there are a lot of people on our shore, and along this coast here, that depend a lot on the lobster fishing that have nothing else to work at, and if the factories were shut down they would have their hands tied and would not know what to do. There are a lot of people that can make a barrel of flour by getting a few lobsters around the shore, where they could not do anything if that were cut off.

Q. You think that would be a pretty hard measure?—A. Yes, it would be all right for those men who might say, 'I do not care whether you shut up the factories altogether.'

Q. The Lobster Commission of 1898, I do not know whether they came around here or not, reported in favour of closing down by sections, shutting off certain portions of the coast from year to year and moving the closed portions around gradually until the whole coast was covered.—A. I understand they did that, but west of here they can fish lobsters all the season, they come west as far as Sambro and Halifax, but we dare not put a trap down here until the first of April; while they can fish all through the season down there they can come and fish right on our grounds with us when our season opens?

Q. That is not what I mean. What these people mean is that the fishing should be stopped altogether on one section of the coast; say that there would be no fishing below Sambro, but you would fish here, and the next year they would shut you off here but they could fish down below Sambro.—A. I do not think that would be proper or right, because it appears to me that would be mere child's work.

SESSIONAL PAPER No. 22a

Q. There are other people who say, 'Give us a 7 inch instead of an 8 inch limit, and we will not catch the small lobsters,' but you know it used to be 9 inches and then they said, 'Make it 8 and we will not catch anything under 8.' But they have not done that, and now they want it cut down to 7 inches.—A. And let all below 6 go?

Q. That is it, but would there be many men let the 6 inch lobsters go?—A. Some men might not.

Q. There is another proposition, to do away with the size limit altogether, abolish it.—A. Yes, and keep all you can get, but let the egg lobsters be preserved.

Q. Keep all you can get, but insist on a certain space being left between the slats an inch or an inch and a quarter, with the idea that it would let a certain proportion of the small lobsters escape, and at the same time protect the berried lobster religiously, either by putting her in pounds or hatcheries, or by putting her back in the water, which is the natural and reasonable thing to do, and then cut 10 days or a fortnight off the end of the season?—A. Yes.

Q. The idea is that if they did that in a few years the lobster fishery would be very greatly improved?—A. Do you know what I think about the spawn lobster? I think it should be regulated to save her. The government should make a regulation that every fisherman should liberate his berried lobsters, and at the close of the season at the factory every fisherman should take his oath that he had liberated all his berried lobsters and the government should pay him a bonus for letting them go. I believe that would be the only way and the proper way to save the berried lobster, because no man that has any reason about him would take and wash the berries off when he knows that he has to take an oath that he has not done so——

Mr. ALBERT STROPEL.—You will want something else besides that, because a man that will wash a lobster in that way would not mind taking the oath.

A. (Continued) I say give every man so much at the closing of the season for throwing his lobsters away rather than washing them. He might be required to take oath that he did not wash, or ship or sell any of that kind of lobster.

Q. What do you think about the idea that we do away with the size limit altogether, regulating the space between the slats in the trap, protecting the berried lobster, and cutting off 10 days or a fortnight at the end of the season? Is it the practice of most of the fishermen to fish up to the close of the season? Are there not other fisheries that they can take to at that time, and is it not during the very last days of the season that the greatest damage to the small and berried lobsters is done?—A. Yes, I think it is, and I think there is a great deal of damage then by a man losing his traps. I do not think that would hurt the fishermen much by having 10 days cut off the end of the season.

Q. I do not mean here only, but universally.—A. I believe that would be all right, that is the best thing. As far as I am concerned, of course I am only one man, it would suit me all right, and of course other men, mostly all the men around here, are fishermen the same as I am and they know all about it.

Q. Another suggestion that has been made by some people is that the lobster fisherman should be licensed, that he should go to the fishery overseer who visits you periodically and get from him, before he begins lobster fishing, a printed license for which he need not be charged anything, which would bind him to observe the law and without which he could not fish. Their theory is that any man who took out such a license and signed an agreement to live up to the law would be careful not only to do so himself but to see that others also did the same, and if any man were proved to be in the habit of violating the law he would lose his license and would not be allowed to fish lobsters. How would that work?—A. I do not know how it would work.

A FISHERMAN.—It would work all right.—A. Yes, I believe that would work all right, but you see of course it would not do for me, if my neighbour did a little wrong thing, I would not like to put him into any trouble, and probably my neighbour would not like to do it to me, so that there would have to be some man appointed

9-10 EDWARD VII., A. 1910

to look after that affair independent of the lobster fishermen, and find out whether the law was being observed.

Q. Which branch of the lobster fishery do you think is the most profitable one to protect? There are certain districts where the market fishery, what we call the live lobster export trade, can be carried on successfully?—A. Yes.

Q. Where that can be done do you think that branch should be protected and developed as against the canning?—A. Well, yes, I believe it would be best.

Q. In which branch of the fishery is there the most money for the fisherman?—A. Well, there is more money for the fisherman in the market lobster.

Q. And it is not the market fishery that is destroying the lobster is it?—A. No, I think not.

Q. The berried lobsters are not fit for market purposes?—A. No, because they are out of season.

Q. They tell us they will not stand transportation.—A. Yes, and more than that, in sending them to the United States you are only building up another country, they will breed them there and that will build up their fisheries.

Q. Of course there are other parts of the coast where canning must always be the first consideration because they have not the facilities for shipping lobsters alive to the market.—A. I do not know, there is more money in it for the fisherman in the large lobsters by all odds than there is for the small ones.

Q. What size is required for the market lobsters?—A. From 9 inches to 11 inches.

Q. From 9 inches up to any size?—A. From 9 inches up those are the shipping lobsters.

Q. Now as to the protection of the berried lobster several ways of protecting her have been suggested. Of course I think the best way is to put her straight back in the water and let her do her hatching in her own way?—A. Yes, I believe so.

Q. But it is also possible to hatch out the eggs by having hatcheries?—A. I do not know, I am something like the old man, I think the good old way is the best way.

Q. That is the old fashioned way?—A. Yes, let her do her own hatching.

Q. Did you ever think of putting the lobster in the pound; it is not in every place you can build pounds?—A. No, you have to have good salt water all the time and a good current. But it may work all right.

Q. Are there any places about this coast where you would have a chance to do that sort of thing?—A. Yes, there are places here where it can be done.

Q. Would you venture to say that where hatcheries or pounds can be established it should be done?—A. Yes, you could get one here that would be all right, because there is a place right over there that would be a good place for a lobster pound. It is always clean water there, and lobsters go there at present.

Q. Supposing you did enforce that 8-inch limit absolutely how would it affect the fishermen and canner? Would it put the canner out of commission here?—A. Do away with the 8-inch limit.

Q. No, not do away with the limit but take nothing under 8 inches.—A. I think it would.

Q. And the fishermen too?—A. Yes, I think it would hurt both parties.

Q. But would it put him out altogether?—A. It would stick him pretty bad.

Q. In a good many places they tell us it would put them out altogether?—A. Oh well, probably they are only talking on their own behalf.

Q. There is a smaller run up north than you have here?—A. Yes, of course there are some fine lobsters here.

Q. What proportion of your total catch would be market lobsters?—A. I could not say, the men that ship them would have a better idea of that than I would.

Witness discharged.

SESSIONAL PAPER No. 22a

JAMES E. BURKE, fisherman Drumhead, called:—

Make every man take out a license and keep him to the conditions. I have never seen any pots here with slats a half an inch apart, all our pots are 1½ inch anyhow. That is all I have to say.

WALLACE BURKE, fisherman, Drumhead, called and sworn:—

By the Commissioner:

Q. You are a resident of this place and you have always fished here?—A. Always.

Q. For how many years have you been lobster fishing?—A. About 16 years.

Q. Did you fish as much gear when you began fishing 16 years ago as you do now?—A. Just about one-half.

Q. What return did you get from it?—A. I got more 16 years ago with one-half the gear than I am getting now.

Q. Where has the decrease been, has it been principally in the size of the lobster or in the quantity?—A. In the quantity, I should say.

Q. In the quantity rather than in size?—A. Yes.

Q. You have the same experience, I suppose, as the other gentlemen who have given evidence, you begin fishing in deep water?—A. I begin in deep water.

Q. You are all deep water fishermen here, you are not inside, harbour fishermen?—A. Away out.

Q. In what depth of water?—A. 13 and 18 fathoms, we do not go past that.

Q. Does 18 fathoms take you to the edge of the drop here?—A. In some places it will, and in others it will not.

Q. When do you begin fishing?—A. Generally begin about the 10th, it depends upon the weather.

Q. Do the fishermen lose much gear here by bad weather?—A. Yes, quite a lot. We do not lose a great deal when we keep out in deep water.

Q. Would you venture to say, one year with another, what percentage of loss of gear the fishermen would have to reckon on?—A. It would go 25 per cent, it would go to 50 per cent with some fishermen.

Q. Those who fish in shoal water lose more gear than those who keep in the deep water?—A. Yes.

Q. You do not lose much gear with ice here?—A. No, it does not bother us much.

Q. How long do you fish in deep water?—A. From the 1st of April to the last of June we haul them up in the deep water, of course we get a few in shoal water but the majority in deep water.

Q. You keep out in deep water all the season?—A. Yes.

Q. Do you find it more profitable?—A. Yes, we cannot get very much in shoal water.

Q. It is the market lobster that you are after?—A. That is what we are after.

Q. And you keep in deep water in order to get them?—A. Yes.

Q. Do you find more berried lobsters at any particular time of the season than you do at another?—A. I see more in the last part of June.

Q. What percentage of berried lobsters do you get?—A. About 3 per cent, not over that, some folks may get more fishing inside.

Q. Do you think you get more males than females?—A. I never took any notice, but I do not think so.

Q. Some people say there are a great many more male than female lobsters?—A. Yes, I would think so.

Q. Does the size of the lobster remain pretty much the same all through the fishery, or when do you catch the largest ones?—A. We get the larger where we fish in June.

9-10 EDWARD VII., A. 1910

Q. I suppose as the season advances they are better filled, they weigh better?—A. I do not know.

Q. The canners find that they are not as full in the early part of the season as they are the last?—A. Yes, they have more meat then.

Q. Is there much more gear fished now than when you first began?—A. Yes, double the amount.

Q. That is fishing for the same number of factories?—A. Yes, every man has nearly doubled the gear, and I think there are as many boats.

Q. Do you fish all single traps or on trawls?—A. Single, all single.

Q. You own your own boats and gear?—A. Yes, me and my brother, in common.

Q. And you fish together?—A. Yes.

Q. What do you think of the various propositions for improving the condition of the fishery, which one appears to you as being the most likely to be of use?—A. I think the hatcheries are the most use.

Q. What do you think of the proposition to shut down altogether?—A. I think that the license proposition is all right if the man is compelled to buy a license.

Q. I do not think it would be necessary to compel you to buy it, I think it should be issued without any charge?—A. Well, would you be compelled to take out a license.

Q. Yes, every fisherman would be compelled to take out one.—A. Then that would be all right.

Q. I think it could be done when the fishery inspector comes around with the fishing bounties, and if the fisherman violated the law he would not be allowed to fish.—A. Yes, that is all right.

Q. Supposing that the 8 inch limit were made a part of the condition of that license, do you think you could continue to fish?—A. Well, I do not know about that, the outside fishermen might continue to fish but the inshore fishermen could not, there would be no use their trying.

Q. They could not comply with the 8 inch limit?—A. No, they could not do that in the inshore fishing.

Q. What do you, personally, think of the proposition to do away with the 8 inch limit altogether and regulate the space between the slats, not only here but in other places?—A. I do not know that the space would make any difference, you would have to have the space smaller in the ends of the traps as well as in the sides.

Q. What space do you allow in the ends of the traps?—A. 3 inches.

Q. That is extension measure, that is what they say it is generally—and to protect the female lobster either by putting her back in the water or by bringing her in shore where the eggs could be stripped off her for the hatchery?—A. I think that is the best.

Q. Or by putting her in the pound.—A. Taking 10 days off in June would not be much hurt, there are not many lobsters taken after the 15th of June.

Q. Do you think the majority of the lobsters taken, or a large proportion of them after that date are undersized or berried lobsters?—A. I do not think so, after the 20th of June, you may get a few more berried lobsters but not any more small ones, in shoal water.

Q. You do not do much fishing in shoal water?—A. We have very few traps in shoal water.

Q. What do you think about the matter of issuing licenses to canneries, is there any good reason why any man should not get a license that applied for it, provided he could show he was prepared to go into the canning business and conduct it properly.—A. I do not see why he should not, I think the more canneries there are the better for the fishermen, that is of course if they do not combine, if they do, of course it is no better.

Q. Would an increase in the number of canneries necessarily mean more fishing?—A. No, I am only speaking for this place, but it should not here, because every man that can fish is fishing now, practically.

SESSIONAL PAPER No. 22a

Q. Do you think that the plan adopted by the department of issuing co-operative licenses is one that should assist the fisherman in protecting him from an unfair agreement between the packers if there is such a thing?—A. I think it will, yes. They did it down in Cape Breton this spring, but still they went back to the canners again, did they not?

Q. They had a great deal of difficulty in getting organized, they did not start until April, it was only after they could not agree with the canner that they started this, but that is not the time to start, they have to commence earlier to organize.—A. I do not know anything about that.

Q. Do you think it is all the department can do to protect the fishermen from any unfair agreement?—A. Yes, and they can give us a hatchery.

Q. Have you ever remarked as to the size of the female lobster with eggs? What is the smallest lobster you have ever seen with eggs?—A. I have seen them quite small, but I do not know how small; I have seen them I think under 8 inches.

Q. They say there is one now and again?—A. I think so, but I would not be sure.

Q. As between the two branches of the fishery, the market fishery, and fishing for the cannery, which branch of the fishery is the one that should be encouraged, do you think?—A. That is hardly a fair question because the inshore fishermen fish for the cannery and the outshore fishermen fish for the market.

Q. Which branch of the fishery is the destructive one?—Well, taking the small lobster, the inshore fishery.

Q. The market fishery is not the destructive one at all, you do not want small lobsters and you do not want berried lobsters, because if they have berries on them the market does not want them at all, and if you strip the berries off them they will not survive, will they?—A. No.

Q. Has that practice of stripping been extensively carried on in this district?—A. No, I have not, but I cannot answer for the other men.

Q. About that matter of the small lobsters escaping through the traps, do you think that a proportion of small lobsters do escape from the traps through the openings?—A. I think so, and through the holes in the nets which are larger than the holes in the traps.

Q. You think they do go through there?—A. Yes, some small ones.

Q. But what would you say about the hauling up of the trap, do you think the lobsters try to escape, or do they lay hold and hang on there until you get them up?—A. I do not know, I have seen them hanging on the outside sometimes.

Q. Do you think that if any such space were insisted upon it would mean that a proportion of the small lobsters would escape?—A. I do not know, I think the space around here is $1\frac{1}{2}$ inch.

Q. And yet, with that opening you do catch a considerable proportion of small lobsters?—A. Yes.

Q. Do you think that those who fish in shoal water narrow down the space between the slats at all?—A. I do not think they do around here.

Q. You think they use the same gauge?—A. Yes, I think so.

Q. They do use the same gauge?—A. I do not know, but here I think they are all pretty well alike.

Q. You make your own traps, what do you use as a gauge?—A. My brother makes them, I do not know, I suppose it is about an inch, I do not think it is under that.

Q. The fishermen generally tell us that the pole of the hatchet is used as a gauge in some places and in other places they use the lath itself.—A. It would be unhandy to use a lath every time, most of them use the hatchet head.

Q. Which of the two branches of the fishery do you think is the most profitable to the fisherman, the market sale or selling to the cannery?—A. The market is to the outside fisherman and the canner to the inside fisherman.

Q. Are the canners expected to take everything, without regard to the law, that you bring them?—A. I do not know whether they are expected to or not, but they do.

9-10 EDWARD VII., A. 1910

Q. The fishermen expect them to take them?—A. They never insisted on the canners taking them, but they took them.

Q. There is no need to insist upon it perhaps?—A. No.

Q. The canners are anxious to get all they can?—A. They want all they can get.

Q. Do you think the fishermen would make more money if they were allowed to can for themselves?—A. I could not tell, I do not know what the expense would be for canning. I haven't the least idea what it would be.

Q. Is there any illegal fishing done here to your knowledge, that is after the close of the season on the 30th of June?—A. No.

Q. In some places they fish after the season closes, you know, and there is some surreptitious canning done in the woods?—A. I do not know of any.

Q. Have you any experience of fall fishing?—A. Very little.

Q. I suppose you began fishing after the fall fishing had been cut off; at one time, in the beginning, they used to fish in the fall?—A. We tried once in the fall but did not do very much at it.

Q. Did they try canning, too?—A. No, exporting.

Q. It is said that it requires 30 per cent more lobsters in the fall to fill a pound can than it does in the summer?—A. I do not know about that.

Q. Do you think it would be wise to insist on the lobster fishery being carried on out beyond a certain depth of water?—A. At what depth?

Q. That would be for you to say now. There are those who say that the great harm is done by the shoal water fishing more than by the deep water fishing?—A. That will depend on the depth of the water.

Q. In some places the traps almost dry out you know?—A. Yes, you will catch them there all right in smooth weather.

Q. And in many places they use those hoop nets, they call them curleys in New Brunswick and they fish them when they cannot fish traps?—A. They do not use them here.

Q. Why were they given up?—A. I do not know, it was before I began fishing; I can remember the fishermen using them, but I guess it was because the lobsters were too scarce.

Q. It was not from any particular regard for saving the lobster?—A. No, I guess not.

Q. What is the average price you receive here for market lobsters?—A. What do they get here?

Q. Yes?—A. The average? Every year there is a different price. Last year it was 3½ cents for 9 to 10½ inches, and 9 to 10 I think for 10½ inches up. Ten was the highest here last year; 4½ for the 9-inch was the highest price.

Q. What was the highest price paid by the canner here in your case?—A. \$2.50 per hundred.

Q. And did that price advance during the season, did you get more towards the end of the season, or was it the same all the season through?—A. The same all through.

Q. That was as compared with how much last year?—A. There were different prices last year, I think it went as far as \$5.05 last year; on the average I should think we got \$4.50.

Q. As I understand it, your idea is that it would not be a serious injury to the fishermen to shorten the season a little?—A. Not to take ten days off, I do not think it would.

Q. And you say, build more hatcheries?—A. Build more hatcheries.

Q. And we might do away with the size limit?—A. I do not know about that.

Q. Or would you rather we stuck to the 8-inch limit?—A. I should think there would be more men benefited by doing away with the size limit. The canners could not run if you insist on the 8-inch limit.

SESSIONAL PAPER No. 22a

Q. Do you think where the market industry is the principal industry and the most profitable one for the fishermen, as it is in some places, that canning should be stopped there?—A. I do not know; I do not know anything about fishing outside of this place, there may be some men who are not capable of getting market lobsters, they cannot go far enough for them, some old men.

Q. It has been suggested that where the market fishery is the principal fishery, there the regulations should be so framed as to develop and protect that fishery, and practically close down the canning?—A. That would hardly be fair, because there are some men in every place that are unable to go far enough to get the market lobster, of course they get a few, but they have to stay around the shore and get what they can.

By Mr. Sinclair, M.P.:

Q. What proportion of the fishermen in this place are what you call inshore fishermen?—A. About one-fifth I should say, hardly that.

Q. One in five?—A. Yes, there may be one out of 8 or 10.

By the Commissioner:

Q. The great majority of the fishermen here are off-shore fishermen?—A. Yes.

By Mr. Sinclair, M.P.:

Q. You call all over 9 inch market lobsters?—A. Yes.

Q. And during the whole of the season you are able to dispose of them as market lobsters here?—A. We have been during the last three or four years.

Q. That is owing to the steamer calling here?—A. Yes, Mr. Stropel's steamer is calling.

Q. Once a week?—A. Once a week.

Q. And you are able to ship them once a week?—A. Yes.

Q. Are you able to take care of them during the week?—A. Mr. Stropel takes care of them.

Q. He is able to take care of them until the steamer comes along?—A. Mr. Stropel can answer for himself, he expresses them, but I do not know whether he is successful or not.

Q. He calls everything over 9 inch market lobsters, and you get the market price for them?—A. Yes.

Q. The commissioner was talking to you about the width between the slats, some fishermen at other places have said that it would be better if we compelled them to have an inch and a quarter space between the slats. Would it be necessary to have that opening all the way up or only between two or three slats at the bottom?—A. I think a few spaces of that width at the bottom would be sufficient.

Q. There are a number of traps owned by the fishermen now, and they would not want to throw them all away. Would it be sufficient to make three spaces of that width at the bottom in the old traps?—A. Yes, I should think so.

By the Commissioner:

Q. It would be necessary to give the fishermen notice that after a certain time we would require them to do this, and that all manufactured after a certain date must be made in that way.

By Mr. Sinclair, M.P.:

Q. What size seed lobster have you here?—A. I put them at 8 inches up.

Q. Have you seen any under 8?—A. Yes, but very few.

Q. It is a large lobster, is it not as a rule?—A. Yes, the berried lobster is from 9 inches upward.

9-10 EDWARD VII., A. 1910

Q. Do you ever see any very small lobsters, an inch or a couple of inches long around the shore?—A. No, I never have.

Q. They see them around the Canso shore they say?—A. Oh well, they have seen them there, perhaps, around the hatchery.

Q. How long does it take the lobster to grow up?—A. I haven't the slightest idea.

Witness discharged.

The COMMISSIONER.—Has any gentleman any suggestion to offer, or are there any here who differ in opinion from the views that have already been expressed? Can we take it for granted that all agree with what has been said?

JAMES E. BURKE, Drumhead.—For my part I say, put away every lobster under 7 inches and all the berried lobsters and let every man have a license. I do not want the government to pay us for catching the seed lobsters and letting them go again.

Commission adjourned.

LISCOMBE, 3rd September, 1909 (9 a.m.).

WILLIAM JACK, fisherman, Gegoggin, called and sworn:—

By the Commissioner:

Q. How long have you been engaged in the lobster fishery?—A. I think I have been somewhere about 25 years.

Q. Always in this part of the country?—A. Yes, always up here.

Q. What time of the year do you begin your fishing?—A. We generally begin the last of April in Gegoggin.

Q. The last of April?—A. Yes, that is when I begin.

Q. Your open season commences on the first of April?—A. Yes, but you see every year the ice keeps in, and we cannot get out.

Q. That is harbour ice?—A. Yes.

Q. How many traps do you fish?—A. Of late years I have not been fishing many.

Q. What is the ordinary number?—A. About 30 traps, that is all I fish.

Q. Those are all hand line traps?—A. Yes.

Q. What was the most you ever did fish?—A. 125.

Q. That was years ago?—A. Yes, when the factory first commenced.

Q. What factory is that?—A. It was Mr. Lewis' factory then.

Q. How many factories are there here?—A. There were two then but now there is only one.

Q. Do you own your own boat and gear?—A. Yes, I only fish a few traps, and I have only a small skiff to go out in.

Q. Do most of the fishermen own their own gear here, or do the factories supply them?—A. I could not tell you.

Q. In what depth of water do you begin generally?—A. We begin in 8 fathoms.

Q. You do not go out as far as some others?—A. No, my boat is small and I cannot go.

Q. Do you fish in that depth of water all season?—A. No, we shift in shore into 5 fathoms.

SESSIONAL PAPER No. 22a.

Q. When do you make that shift?—A. About the first of June.

Q. And do you fish in five fathoms up till the end of June?—A. Yes.

Q. What is the best part of the fishing season with you?—A. I do best in May.

Q. How do the lobsters run, when do you get the best lobsters?—A. In May.

Q. When you come further in shore do you get a smaller run of lobsters or are they about the same?—A. About the same, well perhaps a little smaller.

Q. What percentage of the catch would be under 8 inches?—A. There would not be a great many.

Q. There would not be a great many?—A. No.

Q. Have you any idea how many?—A. No, I cannot say.

Q. The law says they shall not be taken under 8 inches, but that has never been enforced, nobody has paid much attention to it.—A. I thought it was under 10 inches.

Q. No, under 8, the 10-inch are market lobsters you see. How do the fish compare, those you get in shoal water with those you get in deeper water?—A. Not quite as good later in the season when the lobsters are shedding.

Q. When do they spawn do you think?—A. June and July

Q. How many berried lobsters do you find out of every hundred?—A. Well, perhaps you wouldn't get any at all.

Q. That is on some days?—A. Yes.

Q. And on the other days what would you get?—A. You might get 5, 6, 7, 8, 9, or 10, something like that.

Q. What has been the practice here with those lobsters, do you bring them all to the cannery?—A. I do not know.

Q. What do you do with yours?—A. The small ones, the little ones, I throw away, but I fetch all the others.

Q. What do you throw away?—A. All under 8 inches.

Q. Then you live strictly up to the law?—A. Well, I think it would be right to do so.

Q. And how about the berried lobsters?—A. I throw them all away, I bring them inside and throw them overboard in the harbour and let them breed there.

Q. What does the canner do, does he refuse to take them?—A. Yes, he refuses to take them.

Q. What proportion of those lobsters you catch would be market lobsters?—A. There would not be more than one third.

Q. Are there many more fishermen fishing lobsters here now than when you began?—A. Yes, I guess there are five to one now.

Q. And that, of course, means there is a great deal more gear in use?—A. Yes, a lot more.

Q. What style of traps do you use?—A. Well, I use a small trap.

Q. Do you use the parlour trap or the old fashioned double-ender?—A. The parlour, well, there is a head at one end and others in the side.

Q. That is the parlour trap, some have two openings in the side and others only one. What space do you allow between the slats in your traps, what opening?—A. About one inch.

Q. Do you think it makes any difference what size there is, do the small lobsters get out of the traps?—A. Oh, yes, they often crawl out.

Q. Do you think that a small opening between the slats would prevent the small lobsters getting out?—A. It certainly would.

Q. Do you think we can protect the small lobsters by requiring a certain stated opening between the slats?—A. Yes, some but not all.

Q. There are always some that would remain would they not?—A. Yes, some will always remain in the trap.

Q. Do you think we could protect them to some extent by that method?—A. Oh yes, you could.

9-10 EDWARD VII., A. 1910

Q. How small a lobster do you think is worth canning?—A. Under 8 inches they are not much, not worth bothering with.

Q. Do you know how many 8 inch lobsters it takes to fill a pound can?—A. No, sir, I do not know, I have not worked in a factory.

Q. Is it to your knowledge do you know on your own account whether the fishermen here generally are careful to put the berried lobster back in the water?—A. I do not know, I cannot say.

Q. You do not know whether the practice of stripping the berried lobster is one that is carried out here?—A. I could not say about that.

Q. What price do you get for your lobsters?—A. We used to get \$4 but last year we only got \$2.40.

Q. How was that?—A. I do not know, I am sure, how it was; they would not give any more.

Q. You told me that you throw all the small and berried lobsters overboard?—A. I do not bring them ashore at all, if there is one in the boat that I did not take notice of I throw him out when I get inside.

Q. Do you think that as a rule you find more spawn lobsters close in shore than outside?—A. Oh yes, more close in, and towards the last of June.

Q. Have you ever remarked about the berried lobster, how small have you seen them with berries on?—A. There are not many under 10 inches.

Q. There are not a great many under 10 inches?—A. No.

Q. Now, of course you understand that the fishery has failed greatly?—A. Yes, so they say.

Q. What is that due to?—A. Now I am afraid there have been a good many taken in the fall.

Q. You think a good many have been taken in the fall?—A. I am afraid so.

Q. Is that what you would attribute the decrease to?—A. Yes, that is it, I think.

Q. Why would there be more harm in taking them in the fall than in the spring?—A. They do not begin to be as good then and it will take 25 or 30 more lobsters to fill the case in the fall than in the spring and they are soft shelled.

Q. Has it been the practice here to do fall fishing?—A. I think there has been considerable done in this place.

Q. Where would they can them?—A. I do not know, in the woods I suppose and in the houses.

Q. Is that still going on, do you think?—A. I am afraid of it, I think the pots should all be landed the last week in July.

Q. Do they leave them out?—A. Why, I guess there are some out yet; I was outside the island the other day and I saw five buoys out there, so I guess there must be traps there.

Q. Who runs this cannery here now?—A. I think it is Mr. Redden.

Q. Who does it belong to?—A. I cannot tell you who it belongs to.

Q. You sell your lobsters to it?—A. Yes, I sell my lobsters here.

Witness discharged.

IRA RUDOLPH, fisherman, West Liscombe, called and sworn:—

By the Commissioner:

Q. How long have you been engaged lobster fishing?—A. About 13 years.

Q. Have you always fished in this neighbourhood?—A. Always here, yes.

Q. You fish your own boat and gear?—A. Yes, I fish my own boat and gear.

Q. What number of traps do you fish?—A. Somewhere about a hundred, maybe a few more or a few less.

Q. Is that a single handed boat, or have you help?—A. Single handed most of the time, I have had a man with me but I am almost always alone.

SESSIONAL PAPER No. 22a

Q. At what time do you begin fishing, when do you put the traps out?—A. As soon as convenient, sometimes on the first of April, sometimes later, as late as the 27th

Q. Does the gulf ice trouble you here?—A. Sometimes, but not for many years.

Q. Have you ever had it here?—A. Yes, but quite a number of years ago.

Q. You can begin on the first of April?—A. Yes, except owing to bad weather.

Q. Could you begin in March or February?—A. Of course a man could some years, I suppose, and then again there are more years he could not.

Q. Because there would be, I imagine, no objection at all to letting the season open on the first of January, and you could then go to fishing as soon as you liked?—A. There would not be much done in January or February, of course a man might run a small business in March.

Q. There is no objection whatever that I can see to letting the season open on the first of January, and you could start fishing when it suited you after that. Of course away to the westward of you they begin on the first of January and do a good deal of fishing in that month, but do not do much in February and March, which are pretty rough months?—A. My idea about the lobster fishery is to close the spring fishing altogether.

Q. We will come to that later, you begin as soon as you can in April?—A. Yes.

Q. In what depth of water do you put out your traps?—A. We put the outside traps in 10, 12 and 14 fathoms.

Q. And about how far off shore is that generally?—A. About one mile or better outside Liscombe island. Of course there are some fishermen fish outside that, but that is as far as I go.

Q. How long do you fish in that depth of water?—A. I stay there until about the middle or 20th of May.

Q. And then?—A. I shift them into shore.

Q. Into two or three fathoms?—A. Yes, into three or four fathoms of water. Of course those who fish in the harbour fish in three or four fathoms.

Q. Do you get a smaller run of fish in the harbour?—A. Yes.

Q. What is the best time of your fishing?—A. May is the best month we have.

Q. You get more fish then?—A. May is the best month because we have the best weather.

Q. How do you find the fishing at the beginning of the season? In April, in May and in June? In each of those months, how do you find them run as to size and as to weight? When you first get them in April they are not as full as they are later on, are they?—A. Well, in the outside lobster I cannot see much difference, not a great deal, of course I think about the first of May we have our best lobsters here.

Q. That is the largest and in the best condition?—A. Certainly, yes.

Q. After you move inshore how do you find them?—A. Oh, well, they run small.

Q. They are smaller?—A. Yes, smaller, and you have to throw half of them away.

Q. You know the regulations which require that the berried lobster be put back into the water and that nothing under 8 inches shall be taken?—A. Certainly.

Q. But we all know that the regulation has never been enforced?—A. Not as it should be, no, sir.

Q. What has been the practice here, what do you generally do?—A. Here at Liscombe a great part, I could not say all, I would not like to do that, return the seed lobster to the sea where she is taken. I know the most of the men who fish on the same ground as I do when they take the seed lobster out of the trap throw her overboard, and I do that myself. There are some maybe take them to the cars and sort them inside, they do not stop to pick them out at the traps, but of course the factories will not take them.

Q. Were they always of that mind?—A. I could not say that, you know.

Q. But of recent years they have been?—A. Yes.

9-10 EDWARD VII., A. 1910

Q. Has the practice of brushing the eggs off them by the fishermen ever been followed here at all?—A. That is a hard question to answer.

Q. It has been done, we know, in many places?—A. I have no doubt it is; of course, there is no man who will do it that will turn round and say he did.

Q. It is a very bad practice?—A. It is a practice that a man should be arrested for.

Q. Do you think the fishermen generally are beginning to understand that they should save the berried lobster?—A. Some of them do, and some of them cannot see it. Some fishermen say, 'There will be lobsters as long as I need them,' and there are some men that are very particular about it.

Q. How is it as to the small lobster under 8 inches?—A. There are very few of them measured.

Q. You think not?—A. We guess the length of them.

Q. Are there many taken under 8 inches?—A. That will be pretty hard for me to say; but speaking to the best of my knowledge, I would suppose there are some.

Q. But you cannot tell me what proportion?—A. No.

Q. In some places we find there are 50, 60, and even 80, out of every hundred?—A. There is nothing like that proportion here at all, because I have thrown away myself, in picking them out of the pot, all that I thought were too little for anything.

Q. What does the canner do, does he object to receiving the small lobsters?—A. I do not know whether they measure them and throw them away afterwards; I cannot say.

Q. Now, as to the trap; what style of trap are you using now?—A. We use a trap that is called the parlour or jail trap.

Q. Is that trap used altogether on this coast now?—A. Yes, and they put the laths about one inch apart, and the net for the head has a 3-inch mesh; a 6 or 7-inch lobster goes through that way and escapes, unless he is eating his dinner when you begin to move the trap.

Q. There seems to be a difference of opinion among the fishermen as to whether the lobster will try to escape when you begin to move it?—A. I do not know.

Q. If you have a small lobster in your trap when you begin to haul it up, will he grab hold and hang on?—A. No, he will not grab on; I have seen him leave through the trap, and not little ones either, but big ones, too.

Q. And the little ones will do that, too?—A. Yes, in very much the same way.

Q. They say that if we insist on an inch or an inch and a quarter space between the slats it will let the small lobsters through, but in some places they have it down to half an inch?—A. That is small.

Q. In some places they want to get all the small lobsters they can for canning purposes, because they cannot get any more?—A. That is so.

Q. Do you think it really will let the small lobsters escape?—A. It will let a good many, because if there is one mesh broken in the head they will all go out, except it is a monstrous big one.

Q. A monstrous one would not go through the hoop of the net?—A. Yes, I got a 7½ pound one this year.

Q. You sell your lobsters to the canner of course?—A. Yes.

Q. What do you receive for them?—A. This present summer we got \$2.50 for a hundred weight.

Q. And for your market lobsters what would you get?—A. 8 cents, the mean sum of 8 cents.

Q. And they must be 9 inches long?—A. They must be 10½ in order to get 8 cents for them.

Q. Who fixes the price that you receive for your lobsters, how is it arranged?—A. The packer does it.

Q. It is the packer does that?—A. Yes.

SESSIONAL PAPER No. 22a

Q. There is practically no competition now, you have to take what they give you?—A. Exactly.

Q. Do you think if there were more canneries licensed there would be more competition?—A. Not a bit, if there were 5,000 it would not be any better than if there were 4.

Q. Why?—A. Because they will all pull together.

Q. There is another question that comes out of that, how do you think the fishermen would do if they canned for themselves? Would there be any more money in canning?—A. You want my opinion of that?

Q. Yes?—A. I think that inside of three years there would be so many rotten lobsters in the market that you could not get anything for your canned goods.

Q. You think it is better that the canning should be done by an established cannery where they have competent men.—A. Yes, but of course there are lots of people who are not of the same opinion as I am. They will say, 'I can pack good goods and everybody else can do the same,' but they cannot.

Q. Which branch of the fishery do you think is the most profitable one to the fisherman, the live lobster export trade or the sale to the canner?—A. What is the most money for the fisherman?

Q. Yes.—A. As the season has been?

Q. Well, as it is going, you see there are the two fisheries, and what I want to get from you is whether in drafting the regulations one branch of the fishery should be favoured more than the other.—A. Where we are getting the price for our lobsters it does not amount to anything, because it is figured down so neat that the live lobster is just about the same as any other, but if we could ship live lobsters to market on our own account it would be better.

Q. Of course there are risks there too?—A. Yes.

Q. How do you ship live lobsters from this part of the world?—A. In crates to Halifax.

Q. How often can you ship them?—A. About once a week the boat runs here.

Q. Which boat is that?—A. The *Dufferin*.. Of course the packers have their own boats to ship their own crates.

Q. Various propositions have been made to the department on the matter of the lobster protection and doing something or other to increase the supply of lobsters and to improve the condition of the fishery which is undoubtedly declining and getting run out?—A. Certainly it is.

Q. Some people say, shut down altogether for four or five years in order to let the fish rest and grow up, what do you think about that?—A. I would not approve of that at all.

Q. For what reason? You see it is reasons we want?—A. Well, the reason is that on the whole south shore of Nova Scotia here, it would put a lot of people in a bad hole for a while if it were shut off, of course there is always a way to get along, but at present a lot of people depend upon the lobster fishery for their living and if it were shut down they would have to go elsewhere and would never come back afterwards.

Q. In 1898 the Lobster Commission went through this country and made enquiries?—A. They were here but I did not happen to meet them.

Q. They made a recommendation in favour of shutting down by sections, closing off different portions along the coast in succession?—A. That would not be any better than the other because I will tell you, a few years ago, about 8 or 9, down here at the south end of Cape Breton, Cape Morien, the lobster business went down there so low that the people could not fish, and it got down to nothing. Leslie bought a factory there and started it on a small scale. In 1904 the lobsters struck there in plenty, more than they ever were since the first opening, he had at one time 80,000 lobsters, 40,000 were boiled and they spoiled on him, and they got 40,000 in

9-10 EDWARD VII., A. 1910

crates, and could not handle them. I saw that for myself. Of course for a short time there were lots of lobsters, but it was unusual.

Q. To what do you attribute that immense run of lobsters there?—A. I have no idea what caused it. The lobsters just happened to get together and struck that part of the coast in a pile, they had the food they wanted and stayed there.

Q. Were you there to see that?—A. No, but they did well the year after, and the next year they did well.

Q. But that ground had been resting for a while, had it not?—A. No, it had always been fished, but the lobsters were so scarce it didn't pay to do so.

Q. Other suggestions have been made, some people say, instead of an 8-inch, give us a 7-inch limit and then we would obey the law?—A. It would be obeyed just as well with the limit as it is as with the 7-inch limit, although, of course, it would be well to put it down to 7 inches if the people would agree to that.

Q. Then it is said, do away with the size limit altogether, because that never has been and cannot be enforced, and give us say an 1½-inch space between the slats of the trap, and that opening will be the best guarantee that a certain proportion of the small lobsters will escape?—A. Certainly.

Q. Protect the berried lobsters?—A. Yes.

Q. And knock about 10 days off the end of the season at the end of June?—A. When it comes to that, I do not say anything one way or the other.

Q. Some say it is the last few days of the season that the harm is done?—A. Yes cut it off altogether.

Q. Cut all the spring fishing off?—A. Yes.

Q. And fish when?—A. September, October and November.

Q. Can you fish here in November?—A. Yes.

Q. Is it better here for fishing than in the spring?—A. Yes.

Q. Have you discussed that with the other fishermen?—A. Yes, I have with the men where I live, and they agree with me.

Q. And your idea is that the lobsters, having cast their shell and spawned, will be better in the fall?—A. Yes.

Q. They say it takes nearly 20 per cent more lobsters in the fall than in the spring to fill a one pound can?—A. I do not know anything about that, but I have talked with a lot of people who have done fall packing, and they say it will be better if we could get that; they think it would protect the fish and help the fishermen out, simply because there are no live lobsters coming into the American market at that time, and if we could ship them in then we would get a price for them, and the fishermen would get twice as much money for one half as many lobsters.

Q. Would it not be difficult to have fall fishing on some portions of the coast, take the other side of Halifax?—A. It is only from Halifax here that we have spring fishing, but in their portion of the coast they fish in the winter.

Q. They begin on the 15th of December and fish up to the end of May, do they not?—A. Yes; that is the great question, and it should be stopped; let one half the coast, where there is a difference made in the seasons, have all of it during their season, and then let the other end have it all during their season, and then in the spring the price will be up for the people down at the other end; but, as it is now, when May comes in and we begin fishing here on the eastern shore the market is blocked, and it spoils the market both for them and us, whereas if we had the fall season we would be able to get good prices and would not interfere with them.

Q. How far would you have that winter fishing extend? Would you begin at Halifax?—A. I think, as far as I can see in the matter, it would suit the whole shore from Halifax east.

Q. How far east?—A. To Scatari or Port Morien, because down there the people are terribly bothered with ice in the spring of the year, which we consider a bad thing to deal with.

SESSIONAL PAPER No. 22a

Q. How are the winds in the fall?—A. We have variable winds the whole season through.

Q. Do you have more easterly winds in the spring than in the fall?—A. Yes, mostly.

Q. The westerly and northwesterly winds prevail in the fall rather than the easterly?—A. Yes; I think it would make a lot of difference to a lot of people, and it would help to give the lobsters a rest, just about as well as closing down here. That is my idea about the seasons.

Q. There is a great deal in that, and it is no doubt worth consideration. You do not think that issuing more canning licenses would make very much difference?—A. I do not think so.

Q. Do you think it means catching any more fish; is not the ground pretty well covered at present?—A. Well, it is.

Q. They have told us in some places that there is no room for more fishermen, and that there is no more fishermen to engage in it?—A. I think that is right.

Q. So that an increase in the number of canneries would not mean any more fishermen?—A. I could not say whether it would be any more protection to the fish or to the fishermen, but there would be a lot of canned goods that are not worth handling, because a lot of people would go into the business that did not know anything about it.

Q. Another thing that has been suggested—of course, you understand various people are making suggestions to the department all the time and giving advice as to what should be done—is that the lobster fishermen should be licensed; it is not suggested that the fisherman be charged anything for the license, but that before he commences fishing he should give in his name, receive a number and take out a regular fisherman's license?—A. And make him swear to it?

Q. Yes, that might be done. It is suggested that having taken out that license the fisherman would feel bound to live up to the regulations, whatever they might be?—A. Yes.

Q. And having done so, he would be careful to see that his neighbours also obeyed the law, and he might inform on them if they did not?—A. Certainly.

Q. Of course, if a man were found to be persistently violating the law, his license would be cancelled and he would not be allowed to fish any more?—A. I think that would be all right, because I certainly believe in putting away the seed lobsters.

Q. That is the law now?—A. Yes; of course, as far as the little ones go, people may as well say nothing about it, because if you get a small one that is only one lobster, but if you take one that is full of eggs that means a good many.

Q. Is there anything you think of yourself you would like to have put down? If there is anything I have omitted to ask you about, we are ready to take down any suggestion which you may have to make?—A. I think it is of no benefit at all to the fishery to let the factory run on until the middle of June. If there is to be any protection given to the lobster at all, and if you want to keep the fishermen alive, shut her down during the spring and start her again on the first of September and run her three months, or whatever time they can give us. That is my idea, and I think that in three years the people will see the difference both in their homes and in the fishery. Any gear that a man might have would not then be lost in the sea every year. There are fishermen here who have lost 100 traps, gear and everything, and that means \$100 lost to him, whereas if he had fished in the fall he would not have lost one-tenth of that.

Q. Do you know anything about lobster hatcheries?—A. I am not posted in them, but from what people tell me they are genuine affairs.

Q. Did you ever think of the matter of pounds, taking the female lobster and putting her in a pound where she can be held while she hatches out her eggs, possibly, or if not let her go at the end of the fishing season?—A. Anything like that would be all right. Are there any along the shore?

9-10 EDWARD VII., A. 1910

Q. Yes, there is one at Fourchu which has been a success, and there are some on the coast of Maine?—A. Well, they keep the fishery up there pretty well, and they have been fishing there longer than we have here. Another thing I would like to mention is that there should be some better provision to prevent sawdust from being thrown into the water where the mills are operating. It has certainly interfered with the fishing here. There are salmon, trout, gaspereau and herring running up that river near here where the sawdust is doing damage; some of the mills have sawdust burners, but there are other mills here that have not.

Witness discharged.

WILLIAM WILSON, fisherman, Liscombe, called and sworn:—

By the Commissioner:

Q. How long have you been engaged in lobster fishing?—A. I suppose from first to last, of course this last hitch I have only been two years, but I have been at it eleven seasons altogether.

Q. That is since you first began?—A. Yes.

Q. Have you always fished in this neighbourhood?—A. No; I fished in Northumberland Straits five seasons.

Q. You did not live down there, you just went down there to carry on fishing?—A. I fished for the Portland Packing Company three summers.

Q. At what particular place?—A. I might call it Cape Tormentine.

Q. Who was the manager there then?—A. A. P. Lewis, the agent of Mr. Baxter.

Q. When do you generally begin fishing here?—A. Of course, our season opens on the 1st of April, and in a fine spring the first taking of our lobsters would be, I suppose, about the 5th or 6th of April, something like that, and I do not know but it would be before that.

Q. In what depth of water do you generally begin?—A. We generally begin anywhere between 16 and 10 fathoms.

Q. What number of traps do you generally fish?—A. I generally fish from 100 to 130.

Q. Are they fished on trawls or single lines?—A. Single lines.

Q. You fish alone?—A. Yes.

Q. How long do you fish on that ground?—A. Well, let me see, I would say about a month and a half.

Q. And then you move into shoal water?—A. Yes, I begin to shift then.

Q. Into what depth of water?—A. From about 9 fathoms to 3.

Q. Now, how is the fishery at the different periods of the season, when do you have your best fishing?—A. The best fishing that I find is in May.

Q. Are most of those who fish lobsters also carrying on other branches of the fishery?—A. At the same time, do you mean?

Q. No; but a great many people who fish lobsters in some parts of the coast, in Northumberland Straits, for instance, are farmers, labourers, etc., who carry on that fishery but do no other fishing?—A. That is right.

Q. Is there much of that here?—A. No.

Q. The most of those who fish lobsters continue the fishing in other branches?—A. Yes.

Q. You tell us that your best fishing is in May?—A. Yes.

Q. Now, as to the proportion of large and small fish, is there any particular part of the season when you would expect to get a smaller run of fish than you would at another time? When you move inshore are the fish as good on the average as they were when you were offshore?—A. I do not hardly know how to answer that question, because I never see much difference in the run of lobsters, but I believe that the best season is in May.

SESSIONAL PAPER No. 22a

Q. Do you get more market lobsters in May than you do in June?—A. Yes.

Q. What proportion of lobsters would be below the 8-inch limit? You know that in some places they tell us if we enforced that limit strictly we would put the canners and the fishermen out of business altogether, that they could not get enough fish unless they took the small ones, in the Straits of Northumberland especially that is the case?—A. Yes, it is, still any lobster under 8 inches is middling small. I have never measured one of that size, but I should judge by the 9-inch lobster he would not be very large. I am aware that there are a lot of small ones taken, but still I do not think it would be advisable to stop them below 8 inches, because I do not think if a man takes any below that size he is doing any harm to the lobster.

Q. But how do you think it would affect the fisherman if the law as it exists at present were strictly enforced? Supposing you were not allowed to take anything below 8 inches, would it make much of a hole in his catch?—A. Yes, it would.

Q. And it would consequently affect the canner who would have a good deal less to can?—A. Yes, that is so.

Q. Now as to the berried lobster, what is done with her?—A. To my knowledge they are all thrown into the sea again, I know what I do.

Q. Has that always been the case?—A. Since, now, these two years that I have fished here. Of course when I fished here before there was no difference made, because they all went.

Q. They all kept them?—A. Yes, I think so, but I do not exactly remember.

Q. Is it to your knowledge that the practice of brushing the eggs off has been followed to any extent?—A. I never saw it done, and unless a man sees it done he cannot very well speak for it.

Q. Are the canners careful and scrupulous about accepting berried lobsters? Did they refuse to accept them?—A. Oh yes, they always did from me.

Q. What price do you receive for your lobsters?—A. Last year I think we had \$4.50 and 12 cents for markets.

Q. That is for those above 10½ inches?—A. Yes, and the price this year was \$2.50 and 8 cents.

Q. What led to that drop in the price, do you know?—A. Well, they say that it was on account of canned lobsters falling in the market.

Q. What was your impression? Who fixes the price, how is the price for lobsters fixed?—A. Well, I suppose that it lies between the packers and the buyers, that is my idea.

Q. Are there any complaints on the part of the fishermen that they are not receiving enough for their lobsters?—A. Yes, lots of them.

Q. Do you think if there were more canneries licensed that it would lead to more competition in the market?—A. Yes, and the more competition the better for the fishermen.

Q. And you think more canneries would not mean more fishing?—A. No.

Q. You think there are as many people fishing lobsters at present as there is room for?—A. Yes, well yes, just about.

Q. It has been the policy of the department for some years back not to grant any new licenses, the idea being to protect the fishery, but they have not limited the amount of gear. These complaints have reached the ear of the department and as a way out of the difficulty during the last two years what is called co-operative licenses have been granted to fishermen where they group themselves together for the purpose of canning. Do you think that the issue of those licenses offers a fair way to the fishermen out of the difficulty, if he is not satisfied with the price he receives from the canner he can unite with a number of other fishermen, secure a license, and they can open a cannery on their own account?—A. That would be a very good thing.

Q. It has been done in a number of instances?—A. Yes, I have heard of it; well, there is one thing, the packers would not then have it all their own way. I do

9-10 EDWARD VII., A. 1910

Q. Do most of the fishermen begin to rig out for other fishing before the end of June?—A. Yes.

Q. And they would have other fishing to go to, so they would not be seriously injured by the change?—A. Oh, no.

Q. What do you think about this fall fishing that we have heard of?—A. That is something I would not like to make any promises on at all. We do not know how it would turn out, it must be tried first.

Q. In the first place, how is the weather in the fall?—A. Well, it is rather better than it is in the spring I should say.

Q. Here you have westerly winds prevailing in the fall, and you are sheltered from that?—A. Yes, we have westerly winds and we are sheltered here, but April is a poor month here, because generally we have bad weather some time in that month, and that takes up the time, so that the season is very short; by the time the gear is put in the water it makes it a short month.

Q. Can you do any fishing in January, February or March?—A. Yes, we can.

Q. There is, as far as I can see, no objection whatever to opening the season here at the same time as it opens west of Halifax, that is the 1st of January?—A. I do not see any difference here in a great many springs between the 15th of March and the 1st of April, we have just as many bad snowstorms here some springs in April as we have in March, and I do not think that it is any colder. If I had my way, of course, which I never will have, I would have the season from the 15th of March to the 15th of June, or the 10th of June, and quit the business then.

Q. And go to some other fishing?—A. Yes, that is what I would do. But there is one thing that the government ought to give the fishermen in the spring of the year and that would make their season a lot better, allow the fishermen if they choose to put their traps in the water, but not allow them to bait them before the 1st of April; there are lots of times in the last week of March when we have some of the finest weather for taking gear out, and if we were allowed to take advantage of that fine weather to load up our traps and get them out in the water, but not put bait in them until the 1st of April, it would be a very great advantage to us.

Q. I do not see any reason myself why the open season should not commence, as it does south of Halifax, on the 1st of January?—A. There would be very few men begin then.

Q. But still there is no objection, as far as I can see, to letting the open season commence on the 1st of January, and you could begin just whenever you pleased after that?—A. No, there is none whatever, and that would be the best way to settle it; if the question were settled that way, there would be no kick coming from the fishermen.

Q. Some people tell us that if you do that the fisherman will put his gear out too early and will lose it, but that is his own business; it does not appear to me we have anything to do with that?—A. Certainly, that is his own business.

Q. As to this market business, what proportion of the fish caught here are markets?—A. I suppose a man would have to give an average of his own catch.

Q. Oh, yes, we want your own?—A. Oh, about one-third, I suppose.

Q. Markets would be about one-third?—A. Yes.

Q. What is the total catch of a good fisherman? What does it amount to in your season here, how many thousand pounds would it be, markets and everything else?—A. I suppose about 5,000 pounds, that is markets and packing together. That is in a good fair season, with good fishing and good weather.

Witness discharged.

SESSIONAL PAPER No. 22a

WILLIAM BAKER, senior, fisherman, Little Liscombe, called and sworn:—

By the Commissioner:

Q. How long have you been engaged in lobster fishing?—A. Oh about 25 years.

Q. I suppose there were not many canneries when you began?—A. No, there was only one factory here.

Q. How many are there here now?—A. There is only just one in this harbour.

Q. Are there any others near here?—A. There is one at Marie Joseph, but it shut down last year.

Q. Why?—A. The fishermen got fishing for the other man.

Q. Who did it belong to?—A. W. K. Lewis and Brothers at first, then other parties had it and Burnham & Morrill were the last men.

Q. Whose cannery do you call this here, who has the license?—A. I guess it is licensed to Burnham & Morrill.

Q. This one here?—A. Yes.

Q. Have they been running it?—A. Yes, they have been running it, I think this shop has only been leased, Mr. Hemlow has an interest in it.

Q. Have you always fished lobsters from this locality?—A. Yes, always.

Q. How is the fishery now compared with what it was when you began?—A. It is very scarce compared with what it was then.

Q. And how is it as to size?—A. Smaller size.

Q. Still you have some big lobsters?—A. Yes.

Q. But you are taking a larger proportion of small ones, are you?—A. Well, according to the number. Of course this present year the lobsters were smaller, there were not as many big ones as the year before when they were larger and not as many small. Last year in the best part of the season it was very rough weather and we could not do anything at lobster fishing when the big ones were here.

Q. When do the best lobsters come on?—A. From the middle of April to the middle of May.

Q. You fish how many traps?—A. From 100 to 125 and 130.

Q. You own your own boat and gear and everything else?—A. Yes.

Q. In what depth of water do you begin fishing?—A. About 14 fathoms.

Q. And as the season advances you follow the lobsters inshore?—A. Yes.

Q. Do you fish on single lines or a trawl?—A. Single lines.

Q. Everyone does that nowadays?—A. Yes, mostly all, I think.

Q. You used to fish trawls?—A. Yes.

Q. Why did you give the trawls up?—A. So many people fish single traps, they dragged over our trawls and we had to take the same way.

Q. The single traps take more rope do they?—A. No, the trawls take most rope.

Q. In my country we mostly fish trawls everywhere.—A. So they do on the north shore.

Q. Some of our canners imported fishermen this year from Grand Manan, and I noticed they fished single lines and hauled their traps twice a day.—A. Yes, the lobsters are too scarce here to do that.

Q. Can you tell us what proportion of lobsters are under the 8 inch limit?—A. I could not begin to tell you that.

Q. Is there any considerable quantity?—A. I guess there is.

Q. If the 8 inch limit were strictly enforced do you think it would put the fisherman out of business?—A. It would, I believe.

Q. And the canner too, I suppose?—A. Yes, the canner too.

Q. That is what the canners tell us, that if we enforce the size limit they will have to give up canning.—A. Yes, but I think you had better get that information from the canners. I worked two years in the first shop that was ever built here and then I took to lobster fishing.

9-10 EDWARD VII., A. 1910

Q. Can you give me any idea what the proportion of seed lobsters is to every hundred caught?—A. I could not say that, I never kept any account of what I caught, but out of a hundred pounds, or say out of every 20 or 30 counters you would get from seven to five, and some days you would only get two or three, but I never took any account of it and could not say definitely. I have thrown them away for these 10 years, I guess.

Q. What proportion of the lobsters you catch here are market lobsters?—A. Not more than one-third, about 30 out of every 100, I think.

Q. How many lobsters do you run here to the hundred pounds?—A. I did know, but I do not just know now.

Q. I suppose that the amount of gear now being fished is very much greater than when you began?—A. Yes, I would like to see it so decided that every boat should not have more than 125 traps, there are too many traps now for the fish.

Q. Is not that about the average?—A. Oh, there are boats that have 175 to 200 traps.

Q. Can they fish that number thoroughly?—A. Well, what they do not haul to-day they do to-morrow and it is ruining our water. I think that if the law provided that every boat should have just so many traps it would be better.

Q. Various suggestions have been made to the department as to a remedy for the present condition of the lobster industry; what would you suggest. The berried lobster, of course, should be protected?—A. Yes.

Q. How do you think that can best be done, by putting her back in the water?—A. Yes.

Q. Is that very generally done, do you think?—A. It is this last couple of years among the big majority of fishermen here, but still there are some men who do not do it, and that will, I suppose, always be the case.

Q. On the other hand there are a great many small lobsters brought in, should we not protect the small lobster also? Do you think that doing away with the size limit altogether, because it never has been enforced and is very difficult to enforce, would be for the benefit of the fishery?—A. I think we ought to take them down to 7 inches.

Q. Could we enforce that limit any more than we have been able to enforce the 8-inch limit?—A. Well, to my mind you would, because every man would pitch them over, below 7 inches they are not a bit of good to the packer.

Q. Another way of regulating that has been suggested, by making the opening between the slats in the trap of sufficient size to allow the lobsters below 6 inches to get out?—A. Yes, 1 or 1½-inch, or something like that.

Q. You say you think it should be 1½-inch, these are things we would like to know, we want to find out what space should be allowed?—A. Yes, I firmly believe the space should be 1½-inch.

Q. That is not a very large opening?—A. No, it is not. You could go 1½th inch anyway.

Q. We have seen traps in which the space is down to half an inch. Now, why have they been placed at half an inch unless it is to take the small lobster?—A. That takes everything.

Q. There are some places where they are canning 12 to 15 lobsters to the pound can, by actual count it takes nine 7-inch lobsters to the pound can.—A. Yes, that is not right to take them so small.

Q. There have been a great many suggestions made to the department, and perhaps everybody has a remedy of his own. Some people say, shut down altogether and let the lobsters recuperate for four or five years?—A. I think if the factories were allowed to work from the middle of April to the last of June that is as good as we could have.

Q. That is your season now?—A. From the first of April, but the middle of April is plenty of time to open, because the fishermen can only begin profitably at

SESSIONAL PAPER No. 22a

the middle of April. Another thing the western shore ought to be different, as they fish right from the first of January, and when we start in the spring they have the American market filled, and that closes us down with our fish.

Q. What would you do with them?—A. Well, I think that their season should be shortened by the month of May anyway, so that they would give us a little chance. Cut May off their season.

Q. At present they fish up to the end of May?—A. To the first of June.

Q. And you fish to the 30th of June?—A. Yes, but it closes us right off because our lobsters are coming in from the eastern shore, and they are fishing all the month of May, too, and their lobsters glut the market.

Q. And the price falls, I suppose?—A. Yes, the price falls.

Q. As to the market lobster business, which is the more profitable branch for the fisherman, the market or the cannery?—A. I think that for the fisherman the market business is the best, but, of course, I suppose if every one were shipping in the price would be cut down very low. There are a lot of fishermen talking about wanting fall fishing, but I think it would ruin our fishery altogether. On the eastern shore the storms are heavy in the fall and the fishermen would lose all their gear except just a few who fish inside, but everybody cannot get there.

Q. Of course, on the coast generally fall fishing is not asked for?—A. No, you could not do it at all. Another thing is on the eastern shore every man who could get a chance would go north in the spring if the fishing season were the same as it is here now, he would fish there, and then come back and fish here in the fall.

Q. And during the fall you have the mackerel, cod, herring and other things to go to—A. Yes.

Q. And I suppose the lobster fishing is the fishing you look to in the spring?—A. Yes.

Q. Another proposition that has been made is to do away with the size limit altogether and give a space of $1\frac{1}{2}$ inch between the slats of all traps made after a certain date, to protect the berried lobster thoroughly and absolutely, and close down the season ten days earlier, or a fortnight?—A. Yes, that would be, fish until the 20th of June.

Q. Yes, until the 20th of June?—A. I would not mind, for I would do as well.

Q. Those who propose that say it is during the last days of June the most harm is done by the capture of the small and the berried lobster, it is during that period the destruction of those fish is greater?—A. Yes, that is so.

Q. And at that time there are other fisheries open to which our fishermen could go, is that the case?—A. I think that is pretty near right.

Q. What do you think of this other proposition which has been made, to ask every lobster fisherman in the spring to take out a license, for which he need not be charged anything, on which the regulations would be printed, the license would be numbered, and he would have to sign a declaration, and swear that he would observe them?—A. That he will destroy no berried lobsters?

Q. That he will destroy no berried lobsters, and that he will live up to the regulations, whatever they may be, strictly, the idea being that any man doing that will take care his neighbours do the same?—A. Well, I think that is all right, that is my idea.

Q. If anyone were found to be violating those regulations persistently his license would be cancelled and he would not be allowed to catch lobsters at all?—A. I think that is all right.

Q. You do not think there is anything wrong in that?—A. No, I do not; of course there may be lobsters long enough after I am gone, but there is always somebody coming afterwards who will want them, that is what I have been telling them, they do not think of their children who are to come after them.

Witness discharged.

9-10 EDWARD VII., A. 1910

WALTER MITCHELL, fisherman, Liscombe, called:—

By the Commissioner:

Q. Do you fish lobsters?—A. I do, yes, but I am not particular myself what time in the year they fish.

Q. What time do they begin to fish here?—A. I would rather all the boats—I think they begin too early in the spring—would begin in the middle of April instead of the first, that is all I have to say about it.

Q. Why do you object to the first of April, what is the reason?—A. It is so cold and you cannot do very much, it is cold and stormy and you waste a lot of bait.

Q. But you do not need to begin on the first of April if you do not like?—A. No. but if one fellow begins that makes them all go.

Q. That is a matter that rests, I should say, with the fisherman himself. If he does not like to begin on the first of April he need not begin until the 15th.—A. If the law said on the 15th he could not begin earlier, but the way it runs now you see, the first man goes out as soon after the 1st of April as he can and all the others follow him.

Q. You were telling us your views about it, what do you think is the best way of protecting the lobster fishery and bringing things back to their former condition, what is your suggestion as to a remedy?—A. I do not know, I can't see much chance for them as long as there are so many fishing right along, they have to run down, it is a wonder that there are any at all.

Q. How are they compared with your early recollection?—A. Oh there is nothing in it.

Q. Of course there are a great many more people fishing?—A. Yes, that makes a difference, but still there are not the lobsters you know, why, a few fishermen used to catch more lobsters than twice as many do now, you can tell by what is brought to the factory.

Q. How do they compare in size?—A. They are not too bad in size.

Q. What is the practice with regard to the berried lobster? Has she been protected and preserved or is she being destroyed?—A. Oh well, I can tell you nothing about it, the only thing I know about it is I do not take any, I heave them away and that is as far as I can go, I do not know what the rest do at all. That is what is destroying the fishery, the taking of the seed lobsters.

Q. Do you think there is a greater disposition to save her now than there used to be?—A. I think there are a good many that do not take any now, but at first they did not make any difference, they took them all as they came.

Q. Did they bring them in as they were or did they brush the eggs off them?—A. At first they used to take them eggs and all, that is a good while ago, I could not say what they do now, I am sure, but I can remember when Robinson ran the factory here he only had eight boats running, and the factory was piled up with lobsters, but they are getting scarcer every year and it isn't any wonder at all.

Q. Do you think that if more canneries were licensed it would mean any more lobster fishing?—A. No.

Q. There are no more people left to fish and there is no more ground to cover?—A. No, the ground is all covered now.

Q. Are people going further off now than they used to? Do they fish in deeper water?—A. They go as far off as they can now.

Q. Do you think there is anything in the proposition that there should be a standard trap, that is, that there should be a regulation distance between the slats of 1 inch, $1\frac{1}{4}$ or $1\frac{1}{2}$ inch?—A. Yes.

Q. Do you think that would permit a fair proportion of the small fish to escape?—A. It might do that.

Q. The proposition is that the size limit should be done away with; it has never been enforced, and they say it is very difficult to enforce it, and that the best way to

SESSIONAL PAPER No. 22a

provide a size limit is by fixing a standard distance between the slats, the lower slats especially, and in that way allow a fair proportion of the small lobsters to escape?—A. Yes, sir.

Q. From your experience as a lobster fisherman, what would you think of that?—A. I do not know, I am sure; but I suppose it would do that.

Q. Some fishermen say that it does not make any difference, that the lobsters do not try to escape out of the trap?—A. Sometimes they do not; they come up no doubt into the boat. I know that many a time I have had to pick them out, because they were too small for anything. They stay around the bait. I do not know that that will be a great deal of good; people have a lot of traps on hand now, and they would have to make new ones.

Q. The present traps would soon be used up. The average life of a trap, as I understand it, is about three years. Of course, if a regulation of that kind were adopted, it would say that from this day forward all traps must be made with a certain space between the slats. That would not seem unreasonable?—A. No.

Q. Have you always fished in this locality?—A. Yes.

Q. You have never been away from here?—A. No.

Q. When did you begin fishing?—A. 25 or 30 years ago. We used to catch a good many of lobsters then, although we did not get anything for them.

Q. What did you get, 50 cents a hundredweight?—A. No, 35 cents, and we had to find our own boats, and we could not make anything at it, although they were very plentiful then in around the shores and everywhere. That is why I have objections to beginning so early in the spring. Of course, there are a good many years that we would not get out before the middle of the month anyway, but if it were fixed at that date it would give us more chance to get our gear ready. Of course, I am only one.

Q. Do you fish in deep water now?—A. No, I am getting past that; I am an old man now, and I fish inside. I catch a few round about the inside, but it is very cold on the 1st of April.

Witness discharged.

SIMEON BAKER, fisherman, Little Liscombe, called and sworn:—

By the Commissioner:

Q. How long have you been engaged in lobster fishing?—A. 18 years perhaps.

Q. Always out of this port?—A. Yes, I fished one year in Cape Breton.

Q. What part of Cape Breton?—A. Fourchu.

Q. Were you ever there in the time of Mr. Baker's pound?—R. No, there was considerable talk of it then, but he had no pound there at that time; he fished there and had his factory there.

Q. You own, of course, your own boat and gear?—A. Yes.

Q. Do you fish a single-handed boat or double?—A. A double. I have a man with me; my boy is with me now.

Q. What number of traps do you fish now?—A. On the average 140 to 150; sometimes a little more, and one time, when I had a man with me, 200.

Q. You use all parlour traps now?—A. Yes.

Q. And you begin fishing at what time?—A. I generally start on the 1st of April; some years I have not started at that time, but mostly on the 1st of April.

Q. You begin in what depth of water?—A. In 12 and 14 fathoms, that is about the depth.

Q. What sort of bottom do you prefer?—A. For fishing on?

Q. Yes?—A. Where we fish I think it is a rocky bottom.

Q. Rocky reefs?—A. Yes.

9-10 EDWARD VII., A. 1910

Q. Is the bottom out there uneven?—A. In one place it is very uneven.

Q. You like broken ground for lobsters, not too flat or muddy or sandy, you avoid that?—A. Yes, we do not want any mud at any time.

Q. How long do you fish on that ground? Some men tell us they fish all the season through in the deep water and others move in?—A. As the season goes on we begin to shift some of our traps out of there, but we leave some of there all season.

Q. You fish in deep water all the summer?—A. Yes, we leave some of them in 9 or 10 fathoms of water, but along about the middle of May we shift into shoal water.

Q. Into what depth of water?—A. Sometimes 2 or 3 fathoms in June.

Q. What is the best season of your fishery?—A. May is the best month.

Q. You do better in May than at any other time?—A. Yes.

Q. Do you get the same class of fish late in the season and in shoal water as you do in the deeper water? Will the fish run as large or will they average as well?—A. Well, there is a time in May out in the deep water we hardly ever, it is a very rare time we catch large lobsters, there is a certain school of small lobsters, and there are some larger lobsters in shore. In a certain time of the year, the last of May and June out in the deep water you will get a very small class of lobsters.

Q. What proportion of the catch throughout the whole season will be small, that is undersized lobsters, under the 8 inch limit?—A. I could not say that, I could not give you any idea about that.

Q. Is there a considerable proportion? You know that a great many canners and a great many fishermen have said that if you strictly enforce the 8-inch limit it will put them out of business, that the proportion is so large it would not be worth while to fish if they did not catch them?—A. I guess that is about right, in one way if you strictly forbid that the canners and fishermen would find it hard at some times of the season.

Q. There is a regulation that has been on the statute book for a number of years and yet it has never been enforced, and it has been suggested that if it cannot be enforced it had better be removed altogether. It would be a difficult thing to enforce it, would it not? To have a strict enforcement of any definite size limit?—A. Yes, it would.

Q. What proportion of the total catch will be egg-bearing lobsters? What do they run to? You see the idea is to find out if possible whether it is such a serious matter; some fishermen say, 'If you take away the egg-bearing lobster from me so that I cannot sell her you will cripple my catch, and if I put her back in the water and the next man does not I will lose so much money.'—A. Do you find many men on this shore tell you that?

Q. A good many say, 'Why shouldn't I take that lobster if the next man will take her and strip her?'—A. I cannot say that.

Q. What has been the practice with regard to her in the past?—A. There are sometimes in the season when we catch a good many egg lobsters and other times very few.

Q. At what time in the season would you expect to catch most?—A. Along in June.

Q. Towards the end of June or in the beginning?—A. In the beginning and towards the end, more in June than in any other month.

Q. At what time do you think the female lobster spawns?—A. I think in July.

Q. Do you think she comes in shore to spawn?—A. Yes, I think so because I have proved she does.

Q. Do you think there is any better disposition on the part of the fishermen, as a whole, to-day, to protect her and put her back in the water than there used to be?—A. Oh yes.

Q. Do you think that the fishermen are beginning to discuss the matter among themselves and to realize that if they destroy her they are destroying everything?—

SESSIONAL PAPER No. 22a

A. They find that now, for a good many years back in this place they have found it a benefit to them to put the berried lobster back in the water again.

Q. That is the best thing to do with her.—A. I generally let her go inside.

Q. You liberate her inside?—A. Yes, so that I will not be catching her again tomorrow and will not be bothered with her again, I most generally do that.

Q. Are you not afraid, in doing that, those who fish in shoal water are going to catch her?—A. Well, I am running a great risk possibly but I generally bring her inside.

Q. One way out of the difficulty they tell us is that we should establish pounds, so that when the seed lobster is brought in she can be kept in the pound and liberated when the season is over.—A. I say liberate her outside where she is taken.

Q. In the hatchery we strip the eggs off the fish and hatch them out and the female fish goes into the pot along with the rest. But in the pounds the female lobster is preserved and at the end of the season is liberated so that there is a chance of her spawning another year.—A. I would not think they would live, one half of them, when the eggs are stripped off.

Q. They do not need to live when the eggs are put into the hatchery, then they go into the pack. You see when the fisherman brings the seed lobster to the factory the eggs are all stripped off her and sent to the hatchery where they are hatched, but the fish itself is boiled along with the rest. It is a question whether she will live anyway if you strip the eggs off her.—A. I really could not tell you, but do you think the seed will live if it is taken off.

Q. If it is not taken off too roughly I think it does, because we have seen them hatch out in the hatchery.—A. Then that is all right.

Q. But it must be carefully done. Various propositions have been made to the department, and among others it has been proposed that we should shut down the lobster fishery altogether for four or five years, they say the fishermen will find something else to do in the meantime, how would that appeal to you?—A. Well, we are so used to this lobster fishery, I am not only speaking for myself now but for 10 or 20 other fishermen, when I say that it would be very awkward if we knocked off the lobster fishing in the season we have.

Q. How many pounds does a good lobster fisherman catch, one year with another?—A. It just depends on the season.

Q. Of course the season varies, but on the whole what is the best catch you ever made in your season? How many thousand pounds?—A. I think the best, certainly it has been a few years since I had the best, was about 7,000 pounds.

Q. That includes market lobsters and everything else?—A. Yes.

Q. What branch of the fishery is the most profitable one for the fisherman, do you think? Fishing for the market or selling for canning purposes?—A. Which is the most profitable for the fisherman?

Q. Yes, for the market you require lobsters about 9 inches, what is the rule here?—A. You cannot sell any for market lobsters here under 10½.

Q. How is that, because the Boston market now takes them down to 9 inches, and in some places the man who expresses them is taking the 9-inch for the market lobster?—A. If you can ship the 9-inch lobsters it is to the interests of the fishermen to ship them, there is more money in them for shipping than there is to can them.

Q. What proportion of your catch would be market?—A. I could not give you any decided answer to that question, certainly where we fish we get all good-sized lobsters.

Q. Are there one-half of them?—A. Yes, there will be a half of them, rather more than one half; down to 9 inches there will be more than one half of the catch.

Q. You see the object of finding that out is that it will become a question very soon if the sale of the market lobster increases, and the facilities for getting them

9-10 EDWARD VII., A. 1910

to the markets are improved, whether in framing the regulations it would not be better to so frame them as to favour catching the market lobster and shut off the canner.—A. What is the idea they have in view? Wipe out the canner altogether and just have the market trade.

Q. If it is the case that the market fishery is a growing one, that it is increasing and that it will increase as the facilities are improved, and as markets are found for them, there is no fear of destroying the lobster as long as you are fishing for the market, because you are taking no seed lobsters, you cannot ship a berried lobster, they will not stand shipping to the market?—A. No, they will not.

Q. And if they are stripped they will surely die, so that a man who is buying for the market will be very careful not to take any berried or stripped lobsters, and in that case, if all the lobsters of legal size are shipped the only ones that would be canned are the small ones that will not be taken, so that the live lobster industry will be better for the fishermen because it will protect the small lobsters and give them a chance to grow until they become market lobsters. Further west on the coast of Nova Scotia that question is up now as to whether the market fishery could not be protected at the cost of canning?—A. Yes, they want a similar law to the one they have in the United States.

Q. Now there is no canning at all there?—A. No, and they fish all the year around.

Q. And you may fish all the year round safely enough if you are only taking market lobsters?—A. Yes.

Q. Of course climatic conditions over a great part of our coast would prevent our doing it, in the Gulf of St. Lawrence and in Cape Breton they could not, and I suppose you could not here?—A. No, there are times we could not fish here.

Q. What do you think of the proposal, to which I have referred of licensing the fishermen, that is another idea that has been advanced by some people, that the lobster fishermen should be required to take out a license? What do you think of that proposal?—A. That a man should pay for a license to fish in the water?

Q. No, not necessarily, but that he will have to subscribe to the conditions and that a man who violated the law would not be allowed to fish.—A. That is a good way to get at the business, I suppose, and to stop people breaking the law; I think it is a very good idea to get at them.

Q. Do you think that it will make any difference, that the fisherman who has a license in his pocket will be more apt to be careful himself and to see that others obey the law?—A. It would be some check on him, I suppose, if he had a license in his pocket.

Q. I have always had doubts myself as to whether it would make any difference, but a great many people say they think it would?—A. It would have some influence with some fishermen, I suppose.

Q. It would be like a great many other things probably, it may be lived up to for a certain period then fall into disuse?—A. That is the way it is with the present law.

Q. Some say, 'Shut down for a number of years altogether' and the last lobster Commission suggested closing down by sections, which many fishermen say would be almost as bad, and other again say, 'Give us a 7-inch limit and we will live up to that.' But they said the same thing when we had a 9-inch limit, and they asked to have it made 8 inches. Now they have had it at 8 inches for a number of years but they have not observed it, and they say, 'Make it 7 inches and we will surely live up to it.' The question is, if they get a 7-inch limit will they live up to it any better than they have to the 8-inch? Another proposition is to do away with the size limit altogether and establish a standard trap, that is to say, a trap with a certain specified opening between the slats, supposing we say 1 inch or $1\frac{1}{8}$ inch and protect the seed lobster thoroughly?—A. Yes.

SESSIONAL PAPER No. 22a

Q. And then shorten the season by 10 days or a fortnight?—A. That is cut 10 days or a fortnight off the present regulations?

Q. That is the proposition, it is claimed that it is during the last few days of the season the most serious damage is done in connection with the capture of the small and seed lobsters?—A. Yes, I believe that is the case.

Q. And they say that during those last ten days or fortnight there are other fisheries that the fishermen can apply themselves to?—A. Yes.

Q. And that even by the enforcement of such a regulation to protect the berried lobster and to regulate the space between the slats, together with the shortening of the season, we would do a great deal to improve the fishery?—A. Yes, I think that myself.

Q. Of course the easiest of all regulations to enforce is the one affecting the date at which the season shall close, although there has been a great deal of illegal fishing after the close of the season and canning has gone on no doubt during the close season?—A. In years gone by that has been the case, but I do not think, as far as I know to the eastward of here anything of that kind goes on now.

Q. What do you think of shortening the season, do you think that the size limit and regulating the trap would make much difference?—A. No, I do not.

Q. What is the ordinary space left here between the slats?—I think about $1\frac{1}{4}$ and $1\frac{1}{2}$ inch.

Q. If you have anything like $1\frac{1}{2}$ or $1\frac{1}{4}$ inch space between the slats you have as large a space as is necessary, and a good many small lobsters must escape?—A. I know a good many years ago men were speaking about this thing, and we measured our traps and most of them varied from $1\frac{1}{8}$ to $1\frac{1}{4}$ -inch. I have not measured them since.

Q. That is a fair space, but in a good many places where they catch small lobsters and berried lobsters they have it down to half an inch, and wherever they have brought it down to that it must have been with the idea of catching the small lobsters, that is the only reason?—A. Yes, no doubt.

Q. Have you anything else you would like to say, is there anything I have not covered, if so I will be glad to have it taken down?—A. I do not know whether I have answered the questions to suit you.

Q. I do not want you to answer them to suit me, what I want is to get your opinion, every man has his own ideas, and it is out of the majority of the ideas that the committee will have to decide?—A. Yes, close down the last two weeks in June, I think that is the time when the damage is done.

Q. What do you think with regard to the opening of the season, do you think it makes any difference? Some people say they prefer to have a date fixed for the opening; I do not see myself why we might not just as well say the first of January as the first of April, and let every man begin when he finds that he can do so conveniently. Some people say that the fisherman will go out and maybe some men who are ambitious to get a certain position on the ground are afraid some one will get ahead of them, and that the man who goes out and sets his gear too early will lose it, and that I think is his own affair, not ours?—A. That is right too.

Q. The principal objectors to opening the season too early would be the canners, because all the fishermen would not go out early; and in a good many places the fisherman is using the canner's gear and when he is doing as they say he is not as careful about it as if it were his own?—A. That is natural, I suppose. But about the season, if you shut off the season about 15 days or the last week in June, and start on the first of April, I would not like to see it start on the first of January.

Q. If it opened on the first of January it would not mean that you had to fish then, but that you would start when you felt ready?—A. Yes.

Witness discharged.

9-10 EDWARD VII., A. 1910

CHARLES MORRIS, fisherman, West Liscombe, called and sworn:—

By the Commissioner:

Q. How long have you been fishing lobsters?—A. Since I have been 14 years of age.

Q. And you are 54 now.—A. I am 30.

Q. That is 16 years?—A. About that.

Q. How does the fishery compare today with what it was when you began?—A. Oh well, the lobsters are not as plentiful as they were then.

Q. Is that because they have got scarce, or is it because a great many more people are fishing for lobsters?—A. In those times there were not nearly as many fishing, certainly and the lobsters today may be just as plentiful as they were then.

Q. There are a great many more boats and a great deal more gear in the water?—A. Yes.

Q. How do they run, is there as large a proportion of good lobsters?—A. I think they are as large as when I first commenced, as far as I can remember.

Q. What time of the year do you begin fishing?—A. The first of April.

Q. Can you generally get out then, is there anything to prevent you getting out then?—A. There is the running ice.

Q. That does not do you much harm?—A. No, the trouble is more with their boats.

Q. But you do not lose your traps by it?—A. No.

Q. In what depth of water do you begin fishing?—A. 12 to 15 fathoms.

Q. What number of traps do you fish?—A. 100 to 110.

Q. Do you fish them yourself?—A. Yes.

Q. You own your own boat and gear?—A. Yes.

Q. What is the best sized catch you ever made, how many thousand pounds?—A. In the summer?

Q. Yes?—A. I hardly know, I had something like 6,000 pounds I think.

Q. That included market lobsters?—A. No, that is weight for the canner, and about a thousand big ones or a little better.

Q. That is a thousand over 10½ inches?—A. Yes, market lobsters.

Q. What do you receive for the big ones, what are you paid for them?—A. This year we only got 8 cents at first, and then we got 10 cents, I think. Last year we got 12 and 14.

Q. How about the price paid for canning lobsters?—A. We got \$2.50 at first per hundred pounds, and last year we got an average of \$4.00 and \$4.50.

Q. This year you got less than that, to what do you attribute that fall in price?—A. I do not know.

Q. Were you satisfied?—A. With this price this year?

Q. Yes?—A. Oh no, not satisfied, but you have to be when you could not get any more.

Q. You begin fishing out in deep water, do you fish in the same depth of water all the season?—A. No.

Q. What do you do?—A. We fish out there until the middle of May, and then you have to shift to the shore.

Q. Do you get as good a run of fish when fishing inshore as you do offshore when you began?—A. You do outside the shoals, but after you move in to the mainland you do not get as good, no.

Q. Will you get more berried lobsters late in the season, when fishing in shoal water, than when fishing off the shore?—A. I think you will.

Q. And you get smaller fish?—A. Yes, in June you get small lobsters, sure.

Q. Do you think that the space between the slats makes any difference? If you make the space very narrow down to half an inch, as it is in some places, will it hold an unfair proportion of small lobsters? We want to provide some means of saving the

SESSIONAL PAPER No. 22a

very small lobsters instead of having them canned.—A. Oh well, what lobsters would go out through a half inch hole you could not knit a mesh close enough together to save them; we knit the mesh for our heads $2\frac{3}{4}$ inches, and any lobster that will go out through the laths, the way we have them, would go out through the heads,

Q. What size lobster do you think escapes out of your trap?—A. I could not just exactly say as to that, but it is a pretty large lobster that cannot go out through a $2\frac{1}{2}$ inch mesh.

Q. Would an 8 inch lobster go through?—A. No.

Q. Would a 7 or a 6 inch lobster go?—A. No, I do not think a 7 inch would go out through it, still there are lobsters smaller than that, 4 inches and 5 inches, they would go out, I have seen them going out.

Q. You know in some places they can those lobsters?—A. I know they do.

Q. Do they can them here?—A. I do not know if they can small lobsters here, I suppose they are the same as any other place.

Q. Do you expect the canners to take whatever you bring to the factory?—A. Oh, yes, or else we could not live.

Q. Is it the case that if that 8 inch limit were strictly enforced it would bar you out?—A. It would be pretty hard on the fishermen, that is true.

Q. And it would be hard on the canner, of course what is hard on one would be hard on another.—A. It might be, but only for a few years, I would not say, it might last a couple of years.

Q. If it were enforced?—A. Yes.

Q. But do you think it wise to enforce it?—A. For my part I would not say.

Q. What is your opinion, put it in your own words, something must be done to protect the fishery, it is failing, is it not?—A. Oh yes it is.

Q. What is your idea as to the best thing to do to protect and preserve it? You will have children some day I hope and you would like to leave some lobsters in the water for them; the way it is going there is very little doubt the lobster will be exterminated and what we want is to get information from the fishermen generally in order to submit it to the Committee of Parliament and the department as to what regulations might be made for the protection of the fishery. You must have talked over this matter?—A. I do not know what you could do unless you cut the small lobsters off altogether, that is if you are going to protect them.

Q. And what about the berried lobster?—A. We heave them away already.

Q. But is that the case always, do you think.—A. If you take the seed lobster how long do you suppose it will be before there are none left?

Q. My experience, I have been connected with the matter now for 33 years, is that the seed lobster has not always been protected?—A. No, I do not say that it is, and all might not throw her away, yet I would not say as to that, but the fishermen, as far as I know, around here, all heave them overboard.

Q. They do not wash them or strip them?—A. No, a man that is doing that is only ruining himself.

Q. But still they do that, that is done in some places.—A. I know, on the north shore, I have fished a great many years and we have always saved the spawn lobster at Cariboo Island.

Q. You will know something about the hatchery then, if you have fished at Cariboo, what is your opinion of the hatchery?—A. I think it is a good thing.

Q. You think it is one way of protecting the lobster?—A. I think that is what keeps the lobsters up on the north shore as well as they are.

Q. Have you any experience of pounds? That is another way of protecting the berried lobster, that the fisherman, instead of putting her back in the water, brings her in and is paid for her and she is held there in the water until the open season is over.—A. I never saw one of them, we always saved the spawn on the north shore, that is all I have had to do with it.

Q. But here your practice is to put her back in the water?—A. Yes.

9-10 EDWARD VII., A. 1910

Q. What proportion of berried lobsters do you get out of 100?—A. Out of a hundred we would some days get 5 or 6 or 8, some days more and some days not that many.

Q. The general experience is that the percentage of berried lobsters is not more than 3, 4 or 5, that is from the beginning of the season to the end?—A. Yes.

Q. There are more at certain parts of the season but less at other parts?—A. Yes.

Q. Now there have been a good many propositions made to the department about protecting the lobster. Some people say shut down the fishery altogether, and there is no doubt that would be the easiest way of doing it?—A. It would, yes.

Q. They say shut down for four or five or six years, but that would be pretty hard on the fishermen, would it not?—A. Yes, it would.

Q. What appears to be the most reasonable of all propositions is that we should do away with the size limit altogether, that we should provide a regulation trap, insist on a certain space between the slats that would let the really small lobster out, say 1 inch, $1\frac{1}{4}$ or $1\frac{1}{2}$ inch, certainly nothing less than 1 inch, and also provide for a certain size mesh at the end of the trap, and that the berried lobster should be strictly preserved either by means of pounds or hatcheries, or putting her back in the water, and in exchange for having done away with the size limit, that we should cut the season off towards the end of June by 10 or 14 days, because it is unquestionably the case that it is during those last days of the season the largest proportion of small or berried lobsters are captured. At the close of the season, towards the end of June, there are other fisheries that the fishermen could direct their attention to, that their time would not be entirely lost?—A. That is right, yes.

Q. How would that appeal to you? The fishermen must expect to give up something in return for the abolition of the size limit.—A. It is just this way, if the traps we have now are not lost to us.

Q. All right, supposing we say that all the traps after this day must be made of a certain pattern, we reckon that the life of a trap is about three years.—A. Yes, but some of them do not last three weeks if a storm comes.

Q. Yes, but some of them will stand 5 years. In many places where they fish in stormy weather they lose more traps than you do?—A. Yes, I know that.

Q. Do you think that is the least hurtful to the fishermen and that it will give a fair show to the lobster? Of course the idea in proposing any of these regulations is that it may be hard for a year or two, that it may reduce the catch of the fishermen for a year or two?—A. I would sooner they would do that, if it has to be anything like that I would rather see them take off the end of June than close it down altogether and ruin the fisherman.

Q. Some people propose that everyone who fishes lobsters should take out a license, for which he would not pay anything, but the regulations would be printed on the license, each fisherman would have his number, and he would have to sign a form in the book by which he agrees to live up to the regulations, and if he does not do that he would not be allowed to fish lobsters any more, do you think that would be all right?—A. That I think would be all right.

Witness discharged.

JAMES HEMLOW, jr., packer, Liscombe, called and sworn:—

By the Commissioner:

Q. Have you been engaged in packing for a number of years?—A. About 25 years.

Q. Are you directly interested in your license here?—A. Not at the present time; I have the factory leased to the Burnham & Morrill Company.

SESSIONAL PAPER No. 22a

Q. You did run it at one time?—A. Yes.

Q. You own the factory and lease it to them?—A. Yes.

Q. How long have they been packing?—A. Twelve or thirteen years, and I have been managing it for them.

Q. What is your average pack per annum?—A. I would say about 800 cases.

Q. You did not pack that much this year?—A. I only packed 462 this year, last year I packed 964 and the year before somewhere about 800 cases.

Q. The last two years previous to this were pretty good on your coast?—A. This year was the smallest quantity we ever packed as far as I know.

Q. What was the trouble this year?—A. Partly on account of the scarcity of lobsters; we did not get as many fishermen, and our competitors got more lobsters than we did, but the lobsters were not good.

Q. You were not very anxious?—A. No, our foreman was not very anxious for lobsters, and the price was not good for the men, and our men did not put out any effort, but the others put out more effort.

Q. You usually begin to pack, about what season here?—A. The 1st of April. Well, we begin usually to can about the 10th or 15th.

Q. What time of the season are you busiest?—A. From about the 20th of April to the 20th of May.

Q. Could you give us any idea how the lobsters run, how many lobsters do you count here to a hundred pounds?—A. 100 count of lobsters here will make 125 pounds.

Q. 100 lobsters here will run to 125 pounds?—A. To 125 pounds, yes.

Q. That is a good average sized lobster?—A. Yes.

Q. Would it be the case here on this part of the coast that a strict enforcement of the 8-inch limit would put the packer out of business?—A. Well, I am afraid it would under the present conditions; the fishermen have never shipped their own lobsters here, and we always used to pack, and we did this year, the 9-inch lobsters, but they are getting now that they are beginning to ship the 9-inch ones, and there would not be enough left after that for the canner.

Q. You purchase the market lobsters from the fishermen?—A. Yes.

Q. You take the 10½-inch as market lobsters?—A. Yes.

Q. The Boston market takes the 9-inch lobsters now?—A. Yes.

Q. How many boats fish generally for this cannery when everything is working well?—A. 55.

Q. The boats are entirely owned here by the fishermen?—A. Yes.

Q. And these men who fish for you are regular deep-sea fishermen?—A. Three-fourths of them are.

Q. There are some who are not?—A. There are a few who fish around in the harbour and do not go outside, but three-fourths of them are deep-sea fishermen.

Q. As to the catch made by these people who fish around in the harbours and the shoal water, do you notice a distinct difference in the fish they catch from those caught by the deep-sea fishermen?—A. Very much, they are quite different.

Q. There is a larger proportion of small lobsters?—A. Yes.

Q. And would you say there are more egg lobsters?—A. I do not think there are.

Q. Of course, they do not bring them in?—A. No, they do not bring them to the packer at all.

Q. Do you think that the practice of putting them back in the water is fairly well followed here?—A. Yes, it is fairly well followed here.

Q. Of recent years?—A. Of recent years only; that used not to be done at all.

Q. Is there any stripping of the fish?—A. Yes, a few men do it.

Q. There is no illegal fishing in the close season?—A. Not for seven or eight years.

Q. No packing surreptitiously?—A. It used to be bad enough here, but there is none now; there is no illegal packing here I would say for the last six years anyway, but I would not go beyond that.

9-10 EDWARD VII., A. 1910

Q. Is the export of fish alive for the market getting to be a considerable factor in the business here?—A. Yes, very much so.

Q. And is it increasing?—A. Very much so.

Q. How is it, have the facilities for exporting those lobsters alive increased?—A. Yes.

Q. How do you do with what you do export, how are they sent?—A. Burnham & Morrill have a boat of their own, and they collect them from all their factories.

Q. She runs along the coast?—A. Yes, collects them from the cannery and brings them to Halifax, and from there they are shipped by the Boston boat.

Q. Are they recrated at Halifax?—A. No, they are held there at the dock until the boat is ready to go.

Q. The boat runs up to the dock?—A. Certainly.

Q. Is the percentage of loss very great?—A. Very great.

Q. That is the thing that cripples the business?—A. That is it.

Q. Is the loss greater in the very warm weather?—A. Oh, truly so.

Q. How do they run, have you any record here of the amount how many lobsters does it take to fill a pound tin with you?—A. I could tell you the pounds but not the year, well I would say of our lobsters, it takes five pounds of green lobsters.

Q. That is to fill a pound tin?—A. Yes, we came a little under the average last year, we have sent in a report to the firm just exactly what it takes, and I think last year's statement was four and seven-eighths pounds, but we call five pounds a good average; they put about one ounce of sauce in the pound can which flavours your meat.

Q. Is that an ounce of special sauce or water?—A. Clean salt water.

Q. Now, as to the question of season here, I suppose you are all of the opinion that the condition of the lobster fishery is that it is failing, do you think it is?—A. Oh, I think it is failing.

Q. Has the failure been, within your notice, steady and regular? Of course you have good years and bad years?—A. Up to 1908, before that we considered it was falling off very badly and we were surprised in 1908, but in that year we had the lobsters more plentiful than I have seen them for 10 years, and we continued right up to the end of the season; we packed a great many besides what we shipped, and we shipped 200 or 300 crates that year.

Q. What weight do you put in a crate?—A. We put 100 lobsters in a crate and they average about $1\frac{3}{4}$ pounds.

Q. Now, as to the matter of the best regulation to adopt with a view to conserving the fishery, of course a whole lot of suggestions were made to the committee last year and the department at various times have received a number of suggestions, one, which is the most drastic and thorough I have no doubt, is to shut down for four or five years universally?—A. I have heard of that, but I would not think that would be a very good remedy.

Q. It would mean hard times for the fishermen and a great deterioration of material, and waste and loss of capital invested in the industry at the present, and in the fishermen's gear and boats which are not suitable for anything else, and the traps would be destroyed which would be very serious apart from the loss of wages?—A. That is too severe and involves too much loss.

Q. Do you think that the lobster industry has reached the condition which renders that necessary?—A. No, I think not.

Q. The Lobster Commission of 1898 recommended shutting down by sections for a year or two, taking the coast by sections until the whole of it has been covered?—A. I do not think very much of that proposition.

Q. Other people say fix the limit at 7 inches?—A. Yes.

Q. And enforce that limit?—A. Yes.

SESSIONAL PAPER No. 22a

Q. And they say that is all that it would be necessary to do. Then others again say do away with the size limit, it has never been enforced and it is very difficult to enforce it?—A. Yes, it never was enforced.

Q. And protect the berried lobster religiously?—A. Yes, that is it.

Q. Either by putting her back in the water or by means of hatcheries or pounds?—A. Yes.

Q. And also provide a standard opening in the trap, that is to have the traps made, after a certain date, with a specified space between the slats. There seems to be a difference of opinion among the fishermen as to whether the opening in the trap means anything or not, but a good many fishermen say it does, and if we only had some reasonable space as it should be the small lobsters could get out; in places where the fishery has run down completely we know that they are narrowing down the space all the time, and that can only be with the idea of holding the small lobsters?—A. There is no doubt about it.

Q. The space originally was one and a half inches?—A. Yes.

Q. That has been narrowed down until now you will find very few with an inch opening, and there must have been some reason for doing that?—A. Yes.

Q. That is to say, do away with the size limit, protect the berried lobster, insist on standard traps, you could not have the existing traps altered, perhaps, but for all traps made after a certain date, and shorten the season for 10 days or a couple of weeks at the end?—A. That is the only thing I can see, the seed lobsters want to be protected, there wants to be a very heavy fine put on the packer that will take them so that they would not dare to trifle with it. If there is a heavy fine on the packer the fisherman would not expect the packer to take them, but if it is only about \$10 or \$12 they will say let the packer pay it.

Q. There would not be so much of a hardship on the most of the fishermen in closing down as early as proposed, because at that time there are other fisheries for them to fall back on?—A. Very often the codfishing is on in the middle of June.

Q. And most of the canners that we have come across say they would rather close down, that they have to keep open against their will, although the fishery has slackened off they are obliged to keep on canning because the fishermen say: 'Here is my lobsters, you must take them.'?—A. That is my experience, after 25 years, that it would be better to close in the middle of June.

Q. In many places where the packers begin later than you do they say: 'Give us two months canning and that is all we want'?—A. Yes, I think that is all right. Do you have many packers that want the season opened the same as on the western shore?

Q. Oh, no?—A. I think if a man wants to fish he ought to have the same privilege east of Halifax that he has west of Halifax, that is my opinion.

Q. With reference to this matter of licensing canneries, the practice of the department for a number of years back has been to restrict the number of canning licenses issued?—A. Yes.

Q. There has been a good deal of complaint about it, the fishermen say that if there were more canners there would be more competition and that they would have a better show and a good many people have been trying to get canning licenses but have not succeeded in getting them. The fishermen complain that it is unreasonable for one man to be able to get a license and another to be refused, but it is a difficult thing to decide. The idea of the department was that by restricting the number of canneries they were keeping down the extent of the fishery?—A. Oh, no, they are not.

Q. Because there is as much gear, so the fishermen say, in the water as there would be, and that more canneries could not mean any more gear?—A. My opinion is that there are canneries enough, there are many of them on this shore that will not run another year.

9-10 EDWARD VII., A. 1910

Q. To meet the objections of the fishermen who protested that they were not getting a fair price for their lobsters the department has consented to grant what they call co-operative licenses under which a group of fishermen, if they band themselves together, may can lobsters?—A. That is all I think that is necessary.

Q. Is there not a probability that some of those co-operative licenses will be absorbed by one person and that the co-operative principle will soon disappear?—A. Yes, I think so. Of course there are some people want a license who should not have it.

Q. Do you not think it is perfectly reasonable to insist on a certain standard of cannery, that is, that the cannery should be in a certain condition before the license is granted?—A. Yes, I do.

Q. We see a good many canneries that are in a horrible condition?—A. Yes, I have, too, and it is impossible to pack a good product there.

Q. And consequently the whole market suffers from the introduction of these inferior goods?—A. There is no doubt about it.

Q. Do you think I would be warranted in suggesting to the department that in issuing licenses there must be a certain standard conformed to by the cannery, that the tables must be covered in a certain way and that there must be means of ensuring proper cleanliness?—A. That is right.

Q. There is another question, whether the pack itself should not be subject to official inspection the same as other food products. Nearly all other canned articles are inspected now?—A. Yes.

Q. One question that I have here on my memoranda is as to whether the existing staff of fishery inspectors would be competent to carry out that inspection? Many are inclined to think it would require an expert in the packing business?—A. It would no doubt.

Q. It is suggested that while the existing staff of officers are competent for a good many things they would not be generally speaking competent for that?—A. No, they would not, they do not understand much about packing.

Q. There is another matter we come up against here, that is, with regard to the market fishery. There is no doubt as we get farther west the market fishery is beginning to assume larger dimensions, and there is a question as to whether in preparing regulations for that part of the coast where the market fishery is increasing, and where they have greater facilities for exporting alive than you have here, they should not be on such a basis that that portion of the fishery would be protected and encouraged?—A. Yes.

Q. It has been suggested that the department could venture to give people a longer season if they caught larger lobsters and if the catching of small lobsters be stopped entirely by giving a larger size limit, and in connection with the market lobster it is possible to enforce a size limit in a way that you cannot enforce a similar regulation with the cannery?—A. Yes, that is quite right.

Q. Now complaint is made that there is a combine among the canners to keep the prices down; have you, with your experience, anything to say on that matter?—A. I do not think there is very much of a combine.

Q. It has been pointed out that there was not very much of a combine a year or two ago when they ran the prices up on each other.—A. No, we have a lot of competition, we have three buyers in this little place and sometimes four, yes, the buyers for other canneries too come in smacks and buy our lobsters and take them away. I have been in business for 25 years and I have never yet, either myself or through the firm, entered into any agreement with any packer so far as the price was concerned.

Q. My opinion is, from the information I have received, that last year you ran the price up a little too high?—A. Yes.

Q. And this year you dropped it a little too sudden, and you went down too far?—A. Yes, the thing looked so black this spring that they were afraid to pack any or to give more, but at the close of the season the outlook was brighter.

SESSIONAL PAPER No. 22a

Q. Have you any recollection when the lobster canning was first introduced in this neighbourhood, when it first began?—A. I could not give the year, but it must be about 35 years ago.

Q. Who were the first to begin packing here?—A. W. K. Lewis and Bros., from Boston.

Q. Then the pioneers in the packing industry were Americans?—A. Yes, Americans.

Q. That leads to another question that has been asked, 'Why should licenses be given to aliens to pack lobsters'?—A. I think it would be better for the fisherman himself to license the foreigners.

Q. You say they were the pioneers in the industry?—A. Yes, they were.

Q. Is there anything American in the canneries beyond their capital?—A. Nothing more.

Q. Are the buildings built in Canada and of Canadian material?—A. Yes, exactly.

Q. Is practically everything employed in the construction of the building Canadian?—A. Yes.

Q. As to the labour employed, is that Canadian?—A. Yes, every mite of it.

Q. And you say they showed us how to do it in the first place?—A. Yes, and I think it would be a bad thing for the shore to drive them away.

Q. Have not Burnham & Morrill, the Portland Packing Co., and some others established recognized standard brands on the market?—A. Yes, they have, and they are always ready to comply with the law or any conditions imposed, I have never heard them dispute anything.

Q. Have they always been very careful of their pack?—A. They are very careful; our firm packs nearly altogether for the French market.

Q. Are your lobsters shipped direct from Halifax to France?—A. Yes, of course they pack broken meat, a lower grade, for sale in the United States but all the No. 1 goods are sent to France.

Q. Is it the case that canners have been compelled to accept undersized and berried lobsters for fear of losing their fishermen, who in case of refusal would go to other canners who are less scrupulous?—A. Not the berried lobsters, we have had no trouble with our fishermen of that kind for the last four or five years, but that is not the case with regard to the smaller ones.

Q. Is there 25 per cent more lobsters required in the fall than in the spring to fill a pound tin?—A. That is true up to September, but I do not think it would be true in October or November.

Q. How would the proposition that has been made by some of these fishermen here, to fish in September, October and November, instead of in the spring, appeal to you?—A. There are very few it would suit. September would usually be too early, the lobsters would not be ready then.

Q. And then you have the fall mackerel fishery, and that is the most valuable fishery you have?—A. Yes, but December would be a good month to fish here not before that.

Q. It would affect the market they tell us very curiously, on certain parts of the coast if they were canning in the spring and other parts of the coast where canning in the fall. We have been told by other canners in the Straits of Northumberland if that were allowed they would never know what prices to rely on?—A. That is very true.

Q. What do you think of this proposition to expect the fishermen to take out a form of license?—A. I do not think very much of it, I think it would be hard to enforce and would make lots of trouble.

Q. The idea of those who propose it is that the fishermen would look on it as binding on them and each man would be more apt to be scrupulous in observing the law himself and would perhaps be more ready to inform on those not so careful?—A. I dare say that it would.

9-10 EDWARD VII., A. 1910

Q. And that a man should lose his license if he were found to be violating the law. Mr. Baker suggested it, and it has been suggested by a good many people?—A. I do not think very much of it, the man who intended to evade the law would do so in any case.

Q. Could you give me any idea of the proportion, the ratio between the market fishery, that is shipping alive to market, and those canned? What percentage of the total catch are shipped to market?—A. Burnham & Morrill do not ship all they could, they only ship the largest when it suits them, when the market is good, and if they cannot get enough undersized ones they use the 9 inch lobsters to fill their one pound cans, and perhaps for a week or two weeks they will ship none, but can the big ones; perhaps we may have 40 crates ready to go when the steamer comes, and if the market is not favourable we will get a telegram to go ahead and can them, but ours is the only firm that do that, the others I think ship all they can.

Q. Are there any people not interested in the canning at all who are purchasing the live lobsters for shipment?—A. No, it is all done by the canner, there is no one else here ships.

Q. In some places the purchasing for the live lobster trade is not confined to the canners?—A. It is not the case here.

Q. I suppose you have had complaints, by the fishermen that the price paid for lobsters is not satisfactory?—A. Yes, this year particularly, there was such a very high price last year that the price seemed excessively low this year, although it was down to about the average price.

Q. Was it the same price all through the season here?—A. Yes.

Q. \$2.50 per hundred pounds?—A. Yes.

Q. And 8 cents for large lobsters?—A. Yes, that was only for the large ones, the fishermen would do better to ship them themselves.

Q. Now as to the matter of hatcheries, pounds, and those things, what is your idea with respect to them?—A. Well, my opinion is that the pound is very much better than the hatchery.

Q. It more approaches the natural condition?—A. Certainly, and not only that but you save the mother lobster, and in the other case you destroy her.

Q. Do you think there are the natural conditions here for the establishment of a pound?—A. I think so, I think we have almost a natural pound here.

Q. You want a certain depth of water with a free inflow of the tide and the means of barring off the mouth?—A. Yes, we have a good chance for that.

Q. How shoal is that, four fathoms inside?—A. Yes, deep water inside, if there ever is a place intended for a pound that is it.

Q. And in your opinion where a pound can be established it should be as it has advantages over the hatchery?—A. Yes, and it could be established here at a very little cost compared with the cost of building pounds generally.

Q. What have you to say about the department's method of labelling the cases, do you think any good purpose has been served by that, and has it prevented the packing and export of illegally packed lobsters?—A. There can be no possible doubt that it did that all right, since it came into force there is no fall packing, it was a check on that.

Q. I see that the creation of a fishery board for the Maritime Provinces for the purpose of advising the department from time to time has been suggested, what do you think of that? Would you approve of the idea, and how could such a board be constituted?—A. That is proposed by our member, Mr. Sinclair, the chairman of the Committee.

Q. No, this is a proposal outside of parliament, on the same principal as your Board of Trade?—A. I do not know, that is too large a question for me.

Q. Is there any gear abandoned in the water here, or are they more careful than they used to be? Complaints are made by the canners in some districts that the

SESSIONAL PAPER No. 22a

fishermen who fish with the canners gear disappear when the season closes and the gear is left in the water?—A. Of late years they have been more careful. They had a rule here formerly that the factories should find half the gear for the fishermen, and there was some loss then, but now since they have had to pay for all the gear there is very little left in the water, none of any consequence, the factories do not provide the gear now, the fishermen furnish their own.

Q. How early can fishermen begin here do you think? Supposing that the date were fixed at the 1st of January here, as it is to the west of you, of course it need not necessarily mean that they must commence to fish then?—A. No, I think if the season were open they would commence about the 1st or the middle of March, not before that. Of course if they had a season beginning, as it does further west, they would fish a month here all right and then cease fishing as they do there, and resume again in March. We could profitably fish a month here up to the 15th of January.

Q. If you could do it here they could all around the coast here?—A. As far as Canso I think they could.

By Mr. Sinclair, M.P.:

Q. That is their best haddock month?—A. That is right, they could do better at that fishing.

By the Commissioner:

Q. What wages do you pay a sealer generally?—A. \$45 per month.

Q. And he maintains himself?—A. Yes.

Q. And what do you pay for the other labour?—A. From \$35 to \$40.

Q. And what do you pay the women?—A. About \$13 per month.

By Mr. Sinclair, M.P.:

Q. Are the sanitary arrangements for the girls satisfactory in the canning places?—A. Yes, sir.

Q. They have apartments of their own?—A. Well, no; they have not.

Q. Do they live in the factory?—A. What do you mean?

Q. Do they sleep at nights in the factory?—A. Oh, no.

Q. How do they board?—A. Our girls here all board at home, in a place like this we hire the fishermen's girls, and they live at home; they bring their dinner here.

Q. Then the cases do not arise here where they are bunched together?—A. No, that does not affect us here.

Q. With regard to the question of pounds and hatcheries, supposing we had a pound here in which to put the seed lobsters where they will remain until the 1st of July?—A. Yes.

Q. Would you expect that she would shed her spawn prior to that date?—A. I do not think she would.

Q. Would you expect her to have the spawn on her at that time?—A. Yes.

Q. You would not expect her to spawn in this little pound?—A. There might be a very few. We very often put lobsters in a large car at the cannery, and we are very careful that we do not put spawn lobsters in there; we put them in from one Monday to the next Monday, and on the next Monday when we go to take them up we often find berried lobsters there.

By the Commissioner:

Q. The berries have come out in the meantime?—A. Yes.

By Mr. Sinclair, M.P.:

Q. If the berried lobsters are put in this pound, you would ship all the other lobsters without any berries on them, and the only lobsters that would be saved would be

9-10 EDWARD VII., A. 1910

the young lobsters that were hatched in the pound, and they would not have the same chance of being scattered 30 miles along the coast as those lobsters that are hatched in the hatchery?—A. No, they would not.

Q. Where we have the hatchery we have a little steamer that gathers up the spawn for 30 miles distance, and when she has a cargo of the little fellows that have been hatched out in the hatchery to distribute she takes them and drops them over the same territory in which she gathered the spawn?—A. That is the trouble with pounds everywhere, the fish are not distributed afterwards.

By the Commissioner:

Q. If you have pounds it will be better to have a number of small ones that will serve the various localities than to have large ones?—A. No doubt, it would be better.

Q. There is no doubt in my mind there are many cases where it would pay the canner if he were certain of his license, and of not having any competition, to establish a small pound and run it in connection with his cannery; he could run it himself?—A. Exactly.

By Mr. Sinclair, M.P.:

Q. And allow the seed lobsters to escape at the end of the season?—A. Yes.

Q. Mr. Baker made the proposal that an additional tax be placed on each case of canned lobsters in order to provide a revenue to pay for the seed lobster?—A. Yes, I saw that.

Q. By that means a fund would be created to propagate the lobster?—A. Yes.

Q. What do you think of that?—A. I think it would be a good idea, if they would leave us that money for the benefit of the lobster industry.

By the Commissioner:

Q. What are you afraid they might do with it?—A. Some think that the cannery might use that; for instance, they might create a pound there.

Q. What do you pay per case?—A. Two cents a case.

Q. Mr. Baker was proposing \$25 a hundred?—A. Yes.

Q. He says that they would raise \$40,000 that way?—A. Yes.

By Mr. Sinclair, M.P.:

Q. You think that would not unduly cripple the industry?—A. I think not.

By the Commissioner:

Q. I am afraid if you did that you would have an objection from the co-operative canners, the big packers are ready to pay that? (No answer.)

By Mr. Sinclair, M.P.:

Q. The co-operative canneries are very few?—A. It looks as if the canner ought to do something.

By the Commissioner:

Q. There is very little doubt that the industry ought to pay for its own protection?—A. Yes; they are really paying nothing now, because the 2 cents a case does not amount to very much.

Witness discharged.

The Commission adjourned.

SPRY BAY, September 4, 1908.

HECTOR M. SMILEY, packer, Port Dufferin, called and sworn:—

By the Commissioner:

Q. How long have you been connected with the lobster industry?—A. Ever since I was able to work I started in fishing, I think it is about 30 years since I started to go in a boat with my father.

Q. How long have you been packing?—A. Since 1887 or 1888, I am not sure which.

Q. Always in the same place?—A. Always in the same place.

Q. What is the capacity of your cannery, what is the largest pack you have made in it?—A. I have just packed in some years about 720 cases.

Q. When did you make that?—A. That was in about, I think, 92 or something like that, that is away back.

Q. What did you pack this season?—A. This season was the smallest pack I ever made, 351 cases.

Q. That is due largely to the bad weather, I suppose?—A. The bad weather.

Q. Did the low price affect the fishing any? We find in some places there were not quite as many engaged in the fishing on account of the low price?—A. We had just the same number of fishermen.

Q. When you began packing what number of boats did you employ, or what number fished for you?—A. We started in with six fishermen and packed our own.

Q. You had a sort of co-operative factory long ago then?—A. Yes.

Q. And now what number of boats have you?—A. Between 40 and 50.

Q. Do the fishermen supply their own boats and gear?—A. All their own boats and gear.

Q. To make a long story short, what is your experience of the present condition of the fishery compared with what it was in the early years?—A. I think there are just as many lobsters caught, but there are more fishermen at it.

Q. And are the lobsters of as large run as they were or are you getting smaller lobsters?—A. I think we are getting smaller lobsters.

Q. Do you know how many it takes on the average, with you, to fill a pound can, or how many lobsters here run to the hundred pound? You buy them by weight?—A. We buy them by weight. We get $4\frac{1}{2}$ cases to a thousand pounds of green lobsters.

Q. Do you always buy by weight?—A. Always by weight.

Q. It was never the custom here to buy by count?—A. Always by weight, that is the small lobsters.

Q. And how long have you been shipping market lobsters from here?—A. I think it is about eight years as near as I can recollect, or probably ten, I am not quite sure; Smith shipped one year from here before we did, I think it is about nine years.

Q. How was it they were not shipped prior to that, was it because the facilities did not exist?—A. Just so.

Q. How many canneries were there in the early years, was the first established by you here? Has the number increased at all?—A. No, it has decreased, I think.

Q. There are not as many canneries here as there used to be?—A. No.

Q. Did they go out of business on account of a decrease in the catch?—A. No, I think it was mostly through opposition, the price was so high they could not make it pay. A lot of them were small factories.

9-10 EDWARD VII., A. 1910

Q. Who are the packers in this neighbourhood besides yourself?—A. H. J. Balcom, Port Dufferin; T. F. Smith & Co., of Halifax, at West Quoddy; Burnham & Merrill, one each side of Port Dufferin, Ship Harbour Passage; and at Harrigan Cove; they do not run the Shaw Harbour Passage factory now.

Q. I suppose the amount of gear has greatly increased compared with what it was a few years ago?—A. No, a few years ago they fished about the same amount of gear.

Q. It has not increased for how long?—A. About 10 or 12 years.

Q. It has been steady for 10 or 12 years?—A. Yes.

Q. But there is a great deal more gear now than when you first commenced to operate?—A. Yes.

Q. Are the men who carry on the lobster fishery men who carry on the other branches of the fishery?—A. Yes, they are, they carry on the other fisheries, they are regular deep sea fishermen.

Q. About what time in the season do you make your first pack?—A. The 15th or the 16th of April.

Q. The season here, of course, is from the 1st of April to the end of June?—A. Yes.

Q. At what time of the season are you the most busily engaged, at what time are the most lobsters coming in?—A. I think about the first week in May.

Q. And it continues that way up to?—A. Well, the 20th of May.

Q. After that is there a slackening off?—A. Yes, a slackening off.

Q. What proportion of the lobsters you purchase are market lobsters?—A. I suppose about one-fourth, well we generally pack all up to $10\frac{1}{2}$ inches.

Q. You only export the $10\frac{1}{2}$ and upwards?—A. We only export $10\frac{1}{2}$ so far, and I suppose that percentage will be about one-fourth or probably one-fifth.

Q. How is it here with regard to the matter of size limit? If the size limit of 8 inches were strictly enforced how would it affect you? Did you see the evidence of last session?—A. Yes, I have it here.

Q. Most of the canners who were examined there seem to say that if the limit were strictly enforced it would put them out of business?—A. It certainly would.

Q. How would it affect you here?—A. We would not get enough to pay if we only had to pack those from 8 to 9 inches, we could not get enough because the fishermen would ship all over 9 inches and we know that if we only had those between 8 and 9 inches it would not pay.

Q. Has that regulation been enforced here?—A. Not very strictly.

Q. What has been the practice with regard to the berried lobster?—A. Mostly the fishermen throw them away.

Q. They do now?—A. They do now.

D. Did they always do so?—A. I do not think so years ago.

Q. Was it the practice to strip them or to bring them in as they were?—A. The fishermen, I think, used to strip them.

Q. What has been the practice of the canner in that respect? Has he always been ready to receive them?—A. No, I know for myself that we were always very strict that way.

Q. And that was what led to the practice of brushing off the eggs I suppose?—A. Likely that was it.

Q. But of late years the fishermen have seen that it is better for them to throw them away, you think that the fishermen see that they are ruining the industry by destroying the breeding female?—A. Yes.

Q. What do you think is the best means of providing for the breeding lobster? I suppose that is the first consideration? Various suggestions have been made, but I suppose the best way is to put her back in the water immediately, what would you consider is the percentage of the egg bearing lobster?—On our part of the coast this year they have been very, very few.

Q. But one year with the other, out of every hundred lobsters how many would you say were egg bearing?—A. I do not believe there would be more than 2 or 3 per

SESSIONAL PAPER No. 22a

cent. I have been talking a little to fishermen and one of the best fishermen told me he only got 33 seed lobsters all summer.

Q. So that the loss to the fisherman by putting her back in the water would be a very small affair?—A. A very small affair.

Q. It certainly would be compared with the benefit gained?—A. That is right.

Q. Where it can be done, it has been suggested that more hatcheries or pounds should be established; have you ever given that matter consideration?—A. Yes, I have written the government about that matter.

Q. What do you recommend?—A. I recommend a pound, I do not know anything about the hatchery, I never saw one, and I think the pounds would be the least expense and that they would work all right.

Q. Are there facilities here for establishing a pound?—A. Yes, I think so.

Q. You know what is required, a place with a narrow inlet that could be easily barred off, with a sufficient depth of water and a clear bottom, with the free flow of the tide in and out, and not too much fresh water; you know a very small percentage of fresh water will kill them?—A. Sure.

Q. So that wherever these facilities exist, a pound, it seems to me, is the reasonable way of providing for the lobster, and the practice has been in other places to pay the fisherman for his seed lobsters and place them in pounds, afterwards releasing them when the fishing season is over. One great objection to the pound is that it is difficult to distribute the lobsters from the pound, and the immediate neighbourhood gets the benefit, whereas the lobsters may be brought from quite a distance; the fishermen complain that it is not exactly right to bring the lobsters from their neighbourhood to the pounds and afterwards liberate them in the vicinity of the pounds?—A. That is right.

Q. But where it is possible there ought to be a number of small pounds as near the canneries as possible, that would get over that difficulty?—A. We have a place near Port Dufferin where at a very small cost a pound could be placed.

Q. In a good many cases a small pound could be run by the fishermen and the canners of the neighbourhood to their own great advantage without any further assistance. Would an increase in the number of canneries result in an increased catch of lobsters, do you think?—A. No, I do not think it would.

Q. Now, as to the matter of licensing canneries, the policy of the Department for some years past has been to restrict the number of canneries, with the view, as far as possible, to restrict the fishery, but no limit has been placed on the amount of gear used; do you think that this restriction has had the effect intended? You say you think that an increase in the number of canneries would not mean an increase in the fishery?—A. No, I do not think it would.

Q. Is there any good reason why any man who shows his ability to pack should not be granted a license?—A. I do not know any reason why he should not be given a license.

Q. There have been a great many complaints on the part of the fishermen that owing to the restriction in the number of canneries there is an absence of competition and that they are tied down in price. Of course we have heard a great deal of that in recent years, and you have heard it too I expect?—A. Oh, yes, we have heard it.

Q. And to obviate that the department decided a couple of years ago to issue co-operative licenses to fishermen who were dissatisfied with the way things are going, if they combine to the number of 15 at least and applied for a license. Do you think that relieves the position as far as the fishermen are concerned, and that it gives them the opening they want?—A. As far as our fishermen down our way are concerned I do not think very many of them would think of anything like that.

Q. Do you think that the fishermen would make more money if they all went into canning than they would by selling their lobsters to the cannery?—A. I think they would make less if it was anything like it was last summer.

9-10 EDWARD VII., A. 1910

Q. Still, where there is friction between the fishermen and the canner that way, it seems to be the natural solution of the difficulty to let the fishermen if they are not satisfied try it themselves?—A. I do not think they would keep the factories running very long or that they would keep at it for very many years for the simple reason that other packers would likely join together and run their business in a more up to date manner, and so control the markets.

Q. As to that matter of canneries, do you think it would be reasonable to insist on a standard cannery? If it were decided to increase the number of licenses they would have to put some restriction on it and to insist that the cannery was up to a certain standard of fitness?—A. Yes.

Q. There are a great many canneries we have seen where things are badly run, and the product of such canneries must have a bad effect upon the market generally, so it has been proposed that the department should insist that the cannery must be up to a certain standard before it is licensed. Do you think that is reasonable and fair?—A. I think that is quite reasonable and quite fair.

Q. You know that the tendency of the present day is to have all food products inspected by responsible inspectors; other canned products are all inspected; is there any reason why the product of the lobster cannery should not be inspected in the same way?—A. I do not see any reason why it should not be, I think it would be better.

Q. There is a certain amount of inspection carried on by the buyers, but that is not an official inspection, that is only for their own guidance in purchasing?—A. Oh, no, that is not an official inspection.

Q. Now, as to the remedies. I suppose there is no doubt that the condition of the lobster fishery has failed, and various remedies have been suggested to the department. Some people say the natural remedy is to shut down altogether for a few years and let the lobsters grow up again. How would that appeal to you?—A. Well, I do not think that it would make very much difference.

Q. It has been suggested by some fishermen that it is a pretty severe measure?—A. It would give the small lobsters a chance to grow all right.

Q. There is no doubt that if you had only the lobsters to consider that is the remedy?—A. That is the remedy as far as the lobsters are concerned.

Q. But there are other things to be considered also, the large amount of capital invested in the lobster fishery, and if the fishery were shut down for five years the canneries and the wharfs would deteriorate and all the fishermen's gear, and what would the fisherman himself do in the meantime, because the lobster fishery appears to be the first thing he can go to in the spring?—A. It is the first thing he can go at in the spring.

Q. What are the average earnings of a lobster fisherman during the two and a half or three months in which he is engaged in lobster fishing?—A. What we call a good fisherman will average \$300.

Q. That has to be divided between two men, has it?—A. Well, one man and a boy; you generally have to pay a young boy \$20 a month.

Q. What is the average boat used by the lobster fishermen worth?—A. \$20.

Q. And what is the average gear worth?—A. Where they make the traps fit for the deep water they are worth \$1. They cannot fit them out for less than that.

Q. That remedy, therefore, seems to be out of the question. Then the Lobster Commission of 1898, I do not know whether they came here, in the course of their enquiry?—A. No, they never came here.

Q. They recommended that we shut down by sections, shutting off one part of the coast, say 50 miles, or whatever distance it might be decided upon every year, and allowing the fishery to continue on the other sections of the coast, moving those sections around gradually until the whole coast had been given a close season?—A. I do not think that would work very well.

Q. Then it has been recommended and suggested that the size limit be reduced,

SESSIONAL PAPER No. 22a

that instead of an 8-inch we have a 7-inch limit. Some people say: 'Give us a 7-inch limit and we will take care that nothing smaller than 7 inches is captured and it will be all right.' Of course you know that once the limit was 9 inches?—A. Yes.

Q. But that was not observed, and they said: 'Give us an 8-inch limit and we will not violate that,' but that limit is now very generally ignored, and now they say: 'Give us a 7-inch and we will observe that.' Do you think they will be any more likely to observe a 7-inch limit than they have observed the 8-inch?—A. No, I do not think they would.

Q. Another proposition is to do away with the size limit altogether, it never has been enforced, and it is very difficult to enforce it, so it is suggested that the best thing is to do away with the size limit altogether and to provide for the protection of the small lobster to a certain extent by regulating the space between the slats in the trap, so that a moderately small lobster would be able to escape, and at the same time to strictly provide one way or the other for the protection of the berried lobster and to shorten the season by a couple of weeks at the end?—A. That is my idea.

Q. The general trend of the testimony we have goes to show that it is during the last few weeks of the fishery that the greatest harm is done by the capture of the small and the berried lobster?—A. Yes.

Q. And at that time there are other fisheries coming on that the fisherman could devote his attention to, so that the loss to the fisherman, by shortening the season, would not be very serious, whereas it would be a great protection to the lobster?—A. That is my idea of the whole matter; that is just the way I feel about it.

Q. Have you any experience with regard to fall fishing?—A. No.

Q. In some places they have suggested that we should do away with the spring fishing and allow fishing in the fall. It has been said that it would take a very much larger percentage of fish to fill a pound can in the fall than it does in the spring?—A. That is what I have heard, because after spawning and shelling the lobsters are thin, but I suppose later on, in November, it would be better; they begin to improve in October.

Q. Another proposition that has been made to the Department is that all lobster fishermen be required to register, that before fishing for lobsters every man shall submit his name every year and sign a form which binds him to observe the regulations strictly; it is not proposed that there should be any charge for this, but every lobster fisherman would have to obtain this license. The idea of those who suggest it is that a man having done that would feel himself bound to observe the regulations, and that he would perhaps interest himself in seeing that others would do the same, or would give information against them if they did not, the intention being that any one found persistently violating the regulations, particularly with regard to the berried lobsters, would lose his license and would not be allowed to fish for lobsters in the future. Do you think that is workable?—A. I think it would be all right if you could get it to work; that would be the right thing, but it is pretty hard to get a thing like that worked out.

Q. With reference to this matter of the trap, do you think that by establishing a fair space between the slats a proportion of the small lobsters would thereby escape? In a great many places you know they have narrowed the space down. I can remember when the traps were first used we generally made the space $1\frac{1}{2}$ inch, the width of the lath, but in places where they are catching a very large percentage of small lobsters that space has been narrowed down to half an inch, and that certainly prevents almost anything that finds its way into the trap from getting out?—A. Yes, anything that is any good.

Q. Do you think it would be fair to fix that limit at $1\frac{1}{4}$ or $1\frac{1}{8}$ inch?—A. Yes.

Q. Do you think that would provide for the escape of a certain proportion of small lobsters that want to go out?—A. They will not all go out.

Q. But will it allow a fair proportion to go out?—A. Yes, I think a proportion of them will go out.

9-10 EDWARD VII., A. 1910

Q. I suppose you all use the parlour trap here?—A. Yes, we all use the parlour trap.

Q. Which branch of the fishery do you think is the most profitable one to the fisherman? Where the opportunities exist for carrying on the export of lobsters alive to the market is it the most profitable branch of the fishery to the fisherman?—A. Yes, it is.

Q. What have been the prices paid here this year for canning and for market lobsters?—A. \$2.50 per hundred pounds and 10 cents for large.

Q. Ten cents for large, is that for over 10½ inches?—A. That is over 10½.

Q. How does that compare with the prices paid last year?—A. Last year the prices were \$4.50 and 15 cents; it started at \$4 and went up to \$4.75. I suppose the average would be about \$4.50 and 15 cents; of course they were not worth that, and the packers lost a lot of money.

Q. And this year they came down too low in their price?—A. I do not know that they did, the market was bad.

Q. In some places the price was \$2 this year and that is pretty low?—A. I think that is pretty far down, this year most of them only paid 8 cents for the large, but we paid 10 right through from the start.

Q. How do you export your lobsters from here?—A. By steamer to Halifax.

Q. How often can you ship them?—A. Once a week.

Q. When is that, to catch the Boston boat?—A. To catch the Boston boat. Of course this summer, on account of the heavy storms which made the pack short and destroyed the fishermen's gear, some of them gave it up altogether.

Q. If it became obligatory to have a wider space between the slats in the trap, I suppose the best thing to do would be to insist that all traps made from this date should have a certain space?—A. That is what I was just going to mention, what about the trap in use now?

Q. Because it would be a serious matter to condemn all the traps that are now in use. I suppose the life of a trap is about 3 years?—A. Yes, about 3 years, although with some of them it is not 3 days.

Q. Yes, but some of them last 5 years?—A. Yes, some of them will.

Q. But generally they have to be renewed every 3 years?—A. Yes.

Q. You do not suffer much from the ice here?—A. Not much.

Q. At what time do you generally begin fishing?—A. The fishermen always put out their gear on the 1st day of April if it is possible to do so.

Q. Why could you not have the same regulation here that they have to the west of you, that the season should open on the 1st of January? It would not mean that you would commence fishing on that date, but that you would start to fish whenever you could?—A. I think if they started in on the 1st of January some of them would want to put their gear out on the 1st of December.

Q. Not very far away from you here, the opening of the season is on the first of January?—A. Yes, and on the 15th of December further west in one section. I think our season opens early enough or a little too early. I know that the experience of my own fishermen is that they do not get the lobsters out in deep water at first, they get the gear out early and they catch what you call flat-tail lobsters, that is, the mother lobsters which never have a chance to come in and spawn. The fishermen always look out to get what they call the flat-tail school and try to catch them before they get in.

Q. The idea is that as far as possible the season should be uniform, there should not be different seasons and different size limits in different adjoining districts. It does not make any difference as far as the opening of the season is concerned really when it is fixed, because you only put out your gear when you are ready or when it is possible to go out. The reason why the seasons were fixed in the way they are was not with a view of protecting the lobster apparently, but with the view of saving the

SESSIONAL PAPER No. 22a

gear, and so that one man could not go out and get the best ground before the others were ready.—A. My idea is that the season is early enough, I do not want it any earlier.

Q. Is it to your knowledge that the fishermen have ever lost their catch of lobsters by reason of the canners having refused to accept them?—A. No, I have never heard of that.

Q. It has been alleged also that in some cases the fishermen have suffered injury by the failure of the canners to operate their canneries, although a sufficient supply of lobsters was available. Do you know of any instances of that kind?—A. I do not know of any.

Q. There have been places where there was disagreement between the canner and the fisherman?—A. Burnham and Morrill have cut off factories, they shut one down, and they smacked the lobsters at that place to another factory.

Q. As long as they buy the lobsters it does not matter much?—A. No.

Q. Most of the lobsters are smacked, are they not?—A. Most of them are smacked.

Q. Would the fishermen find any other market for their lobsters if the canneries were closed?—A. Not for the small ones.

Q. What are the average wages paid in the cannery? What do you pay, what does the foreman generally get?—A. \$60 a month.

Q. And the sealer?—A. \$45, that is paying his own board.

Q. And the other hands about the cannery?—A. Well, they average from \$30 to \$40, that is the men.

Q. And the girls?—A. The girls we pay \$8 per month and board, we pay wages straight through, \$8 to them.

Q. What provision is made for the care of those girls in the places where they are boarded, have they any retirement, or are there any special conveniences provided for them?—A. Oh, yes, they are looked after just as well as any other class of boarder.

Q. There are complaints that in some places the girls are not always carefully secluded?—A. We have not a cook house as they generally have, we take them to our own houses; I take one-half of them, four or five, and the other fellows take the others. I have heard that there are complaints in some places, but there is no reason for it here.

Q. Is there any fishing or canning done out of season?—A. Not to my knowledge of late years.

Q. There has been, has there not?—A. Yes, probably ten or twelve years ago there was.

Q. Is there a great deal of gear abandoned in the water? That does not happen where the fishermen own their own gear?—A. No, they are very particular in getting in the gear, if there is anything left out it is some old wornout trap which is not fit to bring ashore.

Q. What do you think of the method of labelling the cases, is any good purpose served by that? Has it prevented the canning of lobsters out of season?—A. I do not think it has.

Q. You think there have always been ways of getting over it?—A. Yes.

Q. Is there any suggestion you desire to make yourself, have you anything to propose for the improvement of the lobster fishery?—A. I haven't anything, I did not think I would have to say anything, I just came up to hear what was going on. The only thing I would like to say is, that I think we should have a pound or something like that.

Witness discharged.

9-10 EDWARD VII., A. 1910

A. F. BALCOM, packer, Port Dufferin, called and sworn:—

By the Commissioner:

Q. I would like you to give us your views, Mr. Balcom?—A. Mr. Smiley has said about all that I can say.

Q. Would you venture to say that you have heard all that he has said and that you approve of it generally?—A. Yes.

Q. And that you have nothing to add?—A. Not any more than I would like to see the season shortened if possible by ten days in the end of June, and as to the size limit, I would say no size limit at all, but be very strict on the seed lobster. For the last few years the law has been observed pretty well here in that respect, I know I have observed it myself, I have been right there all the time and if at any time I saw a spawn lobster coming in on one of the smacks I would send it back. Of course they will get in on the smackman, but the fishermen ought to be able to see them more easily than the smackman when dipping them out of the car.

Q. In places where it is not possible to establish hatcheries or pounds it is suggested that either a fishery officer accompany the smackman, or that the smackman be made a fishery officer, and that he keep tally of the berried lobsters he receives from the fishermen, and pay for them; you see that if they return them to the water they might be caught again and you would be paying twice for the same lobster. They overcome that difficulty in the state of Massachusetts by the smackman being provided with a small punch with which he makes a hole in the tail of the lobster, it does not hurt her, and then she is put overboard. Of course that hole disappears when she sheds her shell, but that is not during the fishing season, so that in that way they keep tab on the lobsters, and, of course, if taken by another fisherman during that season she is not paid for again. Do you think it is possible to do that here, would it mean any delay to the smacker?

Mr. SMILEY.—No, no delay at all, every fisherman can separate his seed lobsters and give them separately to the smackman who can then punch the tails and put them overboard and at the same time keep a tally of them, so that at the close of the season the fisherman will be paid for his seed lobsters.

Witness discharged.

JAMES ANDREWS, fisherman, Spry Bay, called and sworn:—

By the Commissioner:

Q. How long have you been engaged in lobster fishing?—A. Ever since there has been a lobster caught on the coast, however long that is.

Q. When did it really begin? I suppose there wasn't much lobster fishing before the canning commenced?—A. No, there was none.

Q. Before that the people used to hook out the lobsters for their own use?—A. That is about all.

Q. When did you say the canning first began here?—A. I forget the exact date, it must be close on 40 years.

Q. No doubt you had it here before we had it further north. Who were the first to begin the canning here?—A. Burnhams, I guess, were about the first.

Q. They were Americans, were they not?—A. Yes.

Q. And they were the first to introduce the canning, were they not?—A. Yes, the Winslow Company was the first and the Portland Packing Company, and there were others, but they all went out of business.

Q. You have been fishing between 35 and 40 years, haven't you?—A. Yes.

SESSIONAL PAPER No. 22a

Q. What is the condition of the fishery now compared with what it was when you began?—A. A long ways from it.

Q. Of course there is a great deal more fishing done?—A. Yes, of course they were very small in price when we first commenced, we only got 30 cents a hundred for count.

Q. Those were all big lobsters?—A. Yes.

Q. Were they larger than any you catch now?—A. Yes, all old lobsters.

Q. But you soon caught them off, did you not?—A. Yes, they did not last very long.

Q. And what is the difference in the amount of gear used now?—A. There is three or four times as much gear fished now as there was then.

Q. When you began fishing how many traps did you fish?—A. 100.

Q. And now you fish how many?—A. About 180.

Q. That is a two-handed boat?—A. Yes, a two-handed boat.

Q. How are these traps set, on trawls or single lines?—A. On single lines.

Q. When do you first begin to fish?—A. The 1st of April.

Q. In what depth of water do you put the traps?—A. 10 to 15 fathoms.

Q. How far off shore would that generally put you?—A. Not very far 2 or 3 miles off from the headlands.

Q. Is there any special bottom you look for?—A. Yes.

Q. What kind of bottom do you prefer?—A. Rocky bottom with broken ground.

Q. How long do you fish out in that deep water?—A. Until about the middle of May.

Q. And then?—A. And then we close in on the shore.

Q. Into what depth?—A. Shoal water, from 3 to 5, or 7 and 8 fathoms.

Q. Is it in the shoal water that you meet with the greatest loss of traps?—A. Yes, mostly about the last of June that we usually meet with the greatest loss of gear; this year we were a little ahead.

Q. Is there any Fisherman's Union here?—A. No.

Q. You employ your own boats and gear in the fishery?—A. Yes.

Q. Most of the fishermen here do the same?—A. Yes.

Q. Has that always been the case?—A. Yes, that has always been the case.

Q. Do most of the fishermen here when they have finished with the lobsters go to the herring, cod and mackerel fishing?—A. Yes, most of them are engaged in that.

Q. What style of trap do you fish?—A. The parlour trap.

Q. What is your opinion, as a fisherman, as to the desirability of fixing a standard trap? Do you think that the space allowed between the slats makes any difference as to the escape of small lobsters or not?—A. I do not know that it does, much. I think that anything that is under 7 inches goes out of what traps we have built.

Q. What space do you generally allow between the slats here?—A. About the width of a slat.

Q. Would it be an inch?—A. Yes, it is an inch all right.

Q. What is the mesh in the end of the trap?—A. About 3 inches.

Q. That is extension measure?—A. Yes.

Q. Now you heard me talk about that proposition of having the fishermen register?—A. Yes.

Q. That when the fishery officer comes around to pay the bounty those who want to fish lobsters would go before him and get a permit, a printed form of license? What do you think of that proposition, would it work, or would it be any good?—A. I think it would be all right.

Q. Do you think it would have the effect that those who propose it expect it to have, would it make the fishermen more careful?—A. It ought to.

Q. Of course a great many men do not require anything of that kind, but there are others who do require that kind of a check.—A. That is right.

9-10 EDWARD VII., A. 1910

Q. What is your practice here with regard to the undersized and berried lobsters, do you expect the canner to take everything you bring him?—A. No, we are very careful in putting the seed lobster away, we do not destroy any of them in any shape.

Q. Is it to your knowledge that any large proportion of them have the eggs brushed off outside?—A. I do not think they do, no; there has been a time when that was done, but I think they are very carefully taken care of now.

Q. As to the small lobster, what proportion of the total catch will be below 8 inches?—A. There are quite a few below 8 inches.

Q. How would it affect you as a fisherman if the 8 inch limit were strictly enforced, would you get enough lobsters still to pay you?—A. No, we would not.

Q. How is the matter of the price paid for lobsters settled? Who fixes the price?—A. The packers I guess fix the price.

Q. Do you think there is any combination among the packers to keep the price down?—A. I am sure there is.

Q. There was not any combination the year before to keep it down when it went up, was there? You have heard that explanation I gave a little while ago of the policy of the department with regard to giving the fishermen what they call co-operative licenses?—A. Yes.

Q. Do you think that is a fair way out of the difficulty, that if the fishermen are not satisfied with the price they receive they can club together and co-operate.—A. That is right, the fishermen should have a chance as well as the packers.

Q. And that gives them the chance they want?—A. Yes.

Q. Has there ever been any competition in the matter of price, or have you always been obliged to accept just what has been offered to you?—A. Yes, that is the usual way of it.

Q. Now take the market fishery as compared to the canning, in which of those fisheries is there the most money for the fishermen?—A. I think in the 'markets,' the live lobster trade.

Q. That is the large lobsters?—A. Yes.

Q. Is it the case to-day that the large lobsters are all sent abroad and not used for canning?—A. There are none used for canning except it is one that does not look fit to ship away, or that cannot take care of himself.

Q. What proportion would you say of the lobsters you catch are female lobsters with berries on?—A. I do not think there are more than 2 or 3 seed lobsters out of a hundred.

Q. That is from the opening to the end of the season?—A. Yes.

Q. Do you find them more numerous at any one particular time of the season?—A. No.

Q. You find them with berries on all through the season?—A. Regularly through the season.

Q. Do you find that the berries are riper at one time than another?—A. Yes, when it is coming on the latter part of the season.

Q. Have you ever seen a lobster that has hatched with the berries still remaining on her, but open and broken?—A. Yes, I have caught some this summer and I kept five or six of them for the especial purpose of seeing how soon they would spawn off, I kept them in the trap about seven weeks.

Q. Did you feed them?—A. Yes.

Q. And at the end of that time had they all lost their eggs?—A. No, not quite, but I never had one lose her spawn until I put the male lobster in with them. I kept them there quite a while but they did not seem to spawn off or anything, and I put some male lobsters in with them and then they spawned off.

Q. What would be your theory about that?—A. Oh, well, I do not know.

Q. What sort of lobsters do you get when you first begin fishing?—A. A very small run of lobsters.

SESSIONAL PAPER No. 22a

Q. When do you get the biggest and best ones?—A. About the first of the season we generally get the best lobsters, the most large ones.

Q. How is it when the season advances, and when you come into shoal water?—A. The lobsters get smaller.

Q. They are smaller?—A. Yes, they are smaller in shoal water.

Q. Do you think that is due to the fact that the big ones are caught off before that, or do you think that the small lobsters come close in shore?—A. I think so—well, I do not know either, I think there are only certain times when the big lobsters trap, I think that he is more particular about trapping than the small ones.

Q. Do you think the female lobster comes in shore to spawn?—A. That is pretty hard to say.

Q. Or does she spawn in deep water?—A. You will get them any time in the season right in close to shore, and you will get them off shore, so that it is pretty hard to tell.

Q. The theory of those who have devoted a good deal of attention to the matter is that the female lobster comes in shore where the water is warmer than it is in the deep water, and where there is more light in the bottom to hatch and develop her eggs, and that shortly before the spawning time she backs off and goes out into deeper water and it is there the eggs are actually hatched; as soon as they are hatched they come to the surface of the water and for about six weeks they float about on the surface and furnish a large amount of the mackerel food and that during that time the lobster travels head first, and his whole life is a series of shedding his coat, and in the first year he grows 3 inches; experts have watched them where they have large salt water biological stations, and they have settled that fact beyond any doubt, and that after the first year the lobster grows about 2 inches every year, so that an 8-inch lobster is about three years old?—A. Do you suppose that a lobster grows between his shelling seasons, while the shell is on him?

Q. Not much.—A. I do not think so either.

Q. He will, in the shelling process, expand two inches every year up to a certain date and after that they cease to lose their shell every year, that is the old lobsters you sometimes see with barnacles on do not shed their shells.—A. Oh, no.

Q. What is the smallest female lobster you have ever seen with eggs on?—A. You will get them very small, from 7 to 8 inches, lots of them in times when there were plenty of spawn lobsters.

Q. But as a rule the bulk of them are fair sized lobsters?—A. They are fair sized lobsters.

Q. It is your opinion that the lobster fishery is falling off, that it is suffering from some cause or other, and you have heard all the various propositions that have been made about closing down altogether, closing down in sections, and fishing a 7-inch limit instead of an 8-inch limit, doing away with the size limit, shortening the season and protecting the berried lobster; which of all these propositions appeals to you, as a fisherman, as being the right one to adopt both for the protection of the lobsters and the fishermen?—A. Well, I think to catch them of all sizes and give us a little shorter season; that would suit everybody, the fishermen and the packers too, I think.

Q. Is it the case that before the end of the season the fishermen begin, many of them, to take in their gear and prepare for other fishing?—A. Yes, and the lobsters are getting so slack that they are not making enough at it so that it does not pay them to keep their gear out.

Q. We hear that most of those who keep their gear out very late in the season are the older men who do not go out, those who fish inshore, around the bays and harbours, and around the coast.—A. Well, a good many of them do, yes.

Q. Do you think there is a better disposition on the part of fishermen generally to protect the berried lobster now?—A. Yes.

9-10 EDWARD VII., A. 1910

Q. You think the disposition of the fishermen generally is to do so, they see the need of saving her?—A. Yes, they know the necessity of putting her away carefully and they do it.

Q. Is it your opinion that in this neighbourhood they are doing that now?—A. Yes, as far as I know, every fisherman is. I want to ask you, do you suppose that the lobsters that are taken away and put in the pound, seed lobsters, ever come back again to the place they are taken from?

Q. I would suppose they would if it were not too far away; the lobster is not supposed to travel very great distances although there are some unmistakeable proofs that they have gone a good way, and into much deeper water than most people think. I have met many fishermen in the St. Lawrence, outside the coast of Gaspé we go into very deep water quickly, and the bulk of the fishing is done in three line water, and they very frequently hook up lobsters in that depth?—A. I have caught them myself on hooks in thirty fathoms off shore.

Q. Have you caught them very late in the season, in the winter time?—A. Yes; in the fall of the year, in the fall fishing.

Q. Lobsters have been marked and set adrift on the coast of Maine, and they have within a few days been caught at Grand Manan, showing that they must travel a considerable distance occasionally; but one great objection to the pound is that generally it is too far from the place where the lobsters are caught. Now, to the Baker pound above here they bring the lobsters from nearly 50 miles, and that is not wise I think, because, in the first place, the lobster does not reach the pound in very good condition after such a long journey because of the delays in getting her there, and then I think it is too far from the place whence she comes; it would be unfair to the fishermen in that neighbourhood if their breeding lobsters were taken away from their coast and liberated elsewhere where they would not get the benefit of them. That is the objection which has been raised by the fishermen?—A. And that is right.

Q. In the case of the hatchery the boat that takes the young lobsters after they are hatched is supposed to travel along the coast where she obtained the eggs and there distribute them?—A. Yes.

Q. I do not know there is anything more I have to ask you, but if there is anything I have forgotten, or anything you would like to say, we will be glad to hear it, and it will be recorded?—A. I think everything has been covered.

Q. Do you think that the decrease in the lobsters has been gradual, that it has gone on from the beginning?—A. Yes.

Q. Or has it been greater at any particular time?—A. Oh, the lobsters are scarcer now than ever.

Q. And, as you say, the total quantity caught now is pretty much as it was?—A. Yes, but look at the number of fishermen and the quantity of gear in the water compared with what there used to be.

Q. That means, of course, that you could not expect to get as large a catch of lobsters as you did when there was only one-half the amount. If it were reduced at the present time to only one-fourth of the gear in the water and one-fourth of the fishermen, they ought to do better?—A. I do not know; when you are fishing a hundred boats more or less, you do not seem to get any more fish than if there were half a dozen boats; it is about the same thing.

Q. You think the decline has been steady and gradual?—A. Yes.

Q. Some people tell us they do not think the decline has been as much during the last five or eight years as it was before that?—A. Well, I believe that myself; I believe that since the seed lobster has been cared for and looked after right, they have not gone back as much as they did before, that seems to have been the protection of them. The last three years they seemed to hold their own pretty good, and this year, if it had not been for that storm, they would probably have been as good as they were the year before. I take notice that this last two or three years there has been a much greater

SESSIONAL PAPER No. 22a

quantity of those small lobsters than there used to be; one fisherman told me that he threw away 30 in one morning.

Q. There is no doubt if the female lobster were strictly preserved we would have very little bother?—A. I think it is pretty strictly looked after now.

Witness discharged.

Mr. BALCOM.—What about a hatchery here. There are plenty of places around here where one could be started. I endorse what Mr. Smiley has said.

Mr. SMILEY.—If they are going to have a size limit, I would like to see it made 9 inches.

The COMMISSIONER.—Well, if you put the size limit at 9 inches, you will have to stop canning altogether. Professor Prince is in favour of putting the size limit at 9 inches.

Mr. BALCOM.—That means there will be no packing on this coast.

The COMMISSIONER.—Except intermittent packing.

Mr. BALCOM.—Of course, there will be some packed—those they cannot ship alive.

The COMMISSIONER.—What does it cost to pack a case of lobsters?

Mr. BALCOM.—A case will cost \$1.35 for cans.

Mr. HENLEY.—It looks to me as if the fishermen were getting too small a price. I am speaking from an independent standpoint, not being engaged now in the packing of lobsters, although I intend packing lobsters next year myself.

The COMMISSIONER.—Do you not think they ran the price too high the year before last, that they lost their heads?

Mr. HENLEY.—Yes, no doubt about that.

The COMMISSIONER.—And then they dropped the price too low this year.

Mr. HENLEY.—Yes, that is so.

Mr. SMILEY.—There wasn't any fixed price. We did not pay more than anybody else, and neither did you.

Mr. BALCOM.—Not at all. We did not pay more than \$2.50, but we paid 10 cents for 'markets,' and although there was a lot of kicking we kept on doing it. We sold at \$13.50 a case this spring, which was better than \$12, but we did not expect to get that.

The COMMISSIONER.—Mr. Henley, will you give evidence?

Mr. HENLEY.—No, I will not give evidence.

ALFRED LESLIE, fisherman, Spry Bay, called and sworn:—

By the Commissioner:

Q. Where do you fish from?—A. Spry Bay.

Q. How long have you been engaged in the fishery?—A. About 34 years, as near as I can get at it.

Q. Then you began with the industry pretty nearly?—A. Yes, I was a little boy then.

Q. What is the condition of the fishery to-day, in your opinion, as compared with what it was when you began?—A. It is not nearly as good.

9-10 EDWARD VII., A. 1910

Q. To what do you attribute that failure?—A. Well, a good deal of it was from the taking of the seed lobsters.

Q. Would it not be over-fishing too, do you think?—A. Yes, that is partly the cause of it, too.

Q. Do you devote your time to any other branch of the fishery after the lobster fishing is over?—A. Not at the present time.

Q. At what time do you begin your lobster fishing?—A. On the first of April we set out.

Q. In what depth of water do you begin generally?—A. From 7 up to 11 fathoms.

Q. What number of traps do you fish?—A. From 150 to 175.

Q. Of course, you own your own boat and gear?—A. Yes, sometimes I fish two boats.

Q. Then you will increase your number of traps, I suppose?—A. Yes, about 300 traps.

Q. At what period of the fishery do you find it at its best?—A. About the 20th of May.

Q. Is it at its height then?—A. At its height.

Q. How long do you continue to fish in the outer waters where you first start?—A. Up till the last of June; well, we work inshore, we fish up to the headlands and then we work back again.

Q. You work inshore gradually?—A. Yes, and as soon as June comes on we work right in.

Q. You fish all single traps in here I believe?—A. Yes.

Q. And use all parlour traps?—A. Pretty much, yes.

Q. What proportion of your total catch will be below the 8 inch limit?—A. That is a pretty hard question to answer. The limit is 8½ inches, is it?

Q. Eight inches is the legal limit, but of course that has never been enforced.—A. My catch would not be very much below that, of course there will be some.

Q. Will it be one half or one fourth of the catch?—A. No, it will not be over 10 per cent in what I catch.

Q. What proportion of the total catch will be female lobsters, how many per hundred would you say?—A. Some seasons there are a great many female lobsters, more so than other seasons, that is with seed on them.

Q. We do not mean female lobsters without the seed but those showing the berry.—A. Well, I suppose this year there were not very many, I do not know, but I do not think I had more than about 3 per cent.

Q. What has been the practice here with regard to those lobsters, what has been done with them?—A. The most of the fishermen to-day, I think, throw them away, they liberate them; there may be some that do not, an odd one.

Q. That has not always been the practice?—A. No, it has not.

Q. Within what number of years was it that change took place? There has been a change on the part of the fishermen in that respect?—A. It is changing now every year, more and more; the fishermen see the folly of destroying the seed lobster, and they realize what it is going to result in.

Q. How would it affect you as a fisherman if the 8-inch limit were strictly enforced?—A. It would not affect me a bit, I would be very glad of it, that is just what is killing the business to-day; what is the use of keeping the seed lobster and packing all these little ones? It is not giving the lobsters a chance.

Q. You think that the 8-inch size limit should be enforced?—A. Sure.

Q. Where would you have it enforced, at the cannery?—A. Yes, at the cannery, that is the proper place to enforce it. If they did not take them at the cannery the fisherman could not get rid of them.

Q. As a means of enforcing the regulations, and in that way trying to protect the fishery, it has been suggested that the lobster fishermen should be compelled to register

SESSIONAL PAPER No. 22a

and take out a form of license, for which no fee will be required; but before fishing every lobster fisherman would have to obtain from the fishery overseer or other officer a printed form, bearing a number, and reciting the conditions under which the fishery was to be carried on, which the fisherman would have to sign. The idea of those who propose that, and we have found since we have been taking this evidence a number of people who entertain the same idea, is that the fisherman would feel himself absolutely obliged to live up to the terms of his license and that therefore he would be careful not only to observe the law himself but to see that his neighbours did the same, and if it were found that any fisherman was persistently breaking the law he would lose his license. Do you think that is workable, and that that could be done?—A. That is a good idea, that is practical.

Q. With reference to the licensing of canneries the policy of the Department for some years back has been to restrict the number of canning licenses with the idea that by so doing they were restricting the fishery, do you think it has had that effect?—A. No, it has not.

Q. The number of canneries operating has very little to do with the extent of the fishery, has it?—A. No.

Q. Would an increase in the number of canneries mean more fishing?—A. No, I do not think so.

Q. Of course there has been, as you know a great deal of friction, more in some places than in others, between the fishermen and the canners, as to the prices paid, and as a way out of the difficulty the department two years ago decided to issue co-operative licenses so that a number of fishermen, they fixed the number at 15, might by combining together obtain a license and can for themselves. Do you think that gives the fisherman a way out of the difficulty if he is not satisfied with the price he is getting, if he is able to group himself with a number of other fishermen and can for himself?—A. Yes, I believe that would be a way out of the difficulty.

Q. Do you think that is a fair way out of the difficulty as far as the fisherman is concerned?—A. Oh, yes, I think so.

Q. Or would you rather see every man that applied for a license get it?—A. Well, I do not know anything about that; of course, every one would not want a license.

Q. What is your own idea of the matter, do you think the individual fisherman would make more money canning than he would by selling his fish.—A. Not separately, that is why I believe possibly 13 or 14 coming together that way could do as well, they have the same chance, as the canner, that is my idea of it.

Q. Then you approve of the policy of the department, as far as that goes?—A. Oh, yes, sure.

Q. Has it been the practice to take to the cannery everything that has been caught?—A. Yes, sure.

Q. And you expect the canner to take everything that is delivered at the cannery?—A. Yes.

Q. Is it to your knowledge that the canners have ever objected to receiving the berried or the undersized fish?—A. The berried they have, but the undersized they have not.

Q. Where do they draw the limit as to the size, how small fish will they accept?—A. They take everything that comes; of course some fishermen will heave away the very little ones, and sometimes they will heave in two for one, but as a rule they take in everything that comes.

Q. How far down do you go?—A. I have seen them down to six inches.

Q. That is moderate, in some places they get hardly anything above 6 inches. Do you think that is due to the fact that you allow a larger space between the slats than they do in some places?—A. No, I think it is because there are no small lobsters here because the laths are close enough to hold them.

Q. How far are they apart?—A. The width of a hatchet.

9-10 EDWARD VII., A. 1910

Q. That is a little less than an inch, is it not?—A. Yes, a little below that.

Q. Do you think that fixing the width between the laths at a greater distance would allow a fair proportion of small lobsters to escape?—A. Yes, I suppose it would, but it might allow some large ones to escape.

Q. You know in some places they are put three-quarters of an inch apart, and in others there is not more than a half inch between the slats, and that means that nothing can get out. It has been proposed by a good many who say that it is almost impossible to enforce the 8-inch limit—in the first place a great many canners and fishermen too have told us that its enforcement would put them out of business?—A. Yes, and if it is not enforced they will soon go out of business anyway, that is the way I look at it.

Q. It has been proposed that we should withdraw the size limit but insist on a certain opening between the slats, that we could regulate more easily in that way than by fixing the size limit?—A. You would have to go over every man's gear.

Q. Every man's gear would have to be examined before he put it in the water?—A. That makes a great deal of trouble, and I believe that if the 8-inch limit were to be enforced with the license it would stop it without attempting to regulate the slats, because one fellow will 'blow' on another, and will say to him, 'If you catch lobsters under 8 inches I will blow on you, because you are taking the meal out of my mouth.'

Q. Have you ever remarked the size of the smallest egg-bearing lobster you have seen?—A. I have seen them 9 inches, but very few.

Q. Have you ever seen them down to 7 inches?—A. I have never seen a lobster down to 7 inches with seed on.

Q. We got one this summer $7\frac{1}{2}$ inches with seed on?—A. I have never seen them as small as that.

Q. Have the regulations ever been enforced in this neighbourhood?—A. No, I do not think they ever were.

Q. Have you ever heard of anybody being fined for breaking the regulations?—A. Yes, they have been fined.

Q. For fishing out of season?—A. Yes, fishing out of season.

Q. Is there any of that done down here?—A. No, I believe not now.

Q. There has been?—A. Oh, yes, there has been.

Q. Has the practice of stripping the berried lobster ever been followed in this neighbourhood?—A. Oh, yes, it has been done.

Q. Have you any idea as to which is the most profitable branch of the fishery for the fisherman, the capturing of the market lobster, or the sale of the lobsters to the canner?—A. Well, no, I have not.

Q. You see it may be necessary in some places to so frame the regulations that one branch of the fishery may be encouraged and the other discouraged?—A. No, I do not know that I can form much idea on that.

Q. What proportion of your catch would be market lobsters?—A. I do not know what the average was this year, in fact I do not know how many I got this year.

Q. Is it a large proportion, do you think?—A. Yes, it is a fair proportion.

Q. Is it a quarter or one-third of the whole?—A. Oh, yes, it more than one-third.

Q. Would it be one-half?—A. Yes, it would be about one-half, taking the 9-inch.

Q. Have you any opinion to offer on the matter of hatcheries and pounds?—A. Well, I believe the hatchery is all right.

Q. You think a hatchery would be all right?—A. I believe it is a good thing.

Q. Do you know anything about pounds?—A. No, I do not.

Q. In the pound of course the lobster is brought in by the fisherman and is paid for, and is then taken charge of and put in the pound, where it is held until the close of the season; if she has hatched out before then, well and good, but if she has not she is liberated all the same. The requirements for a pound are a certain depth of

SESSIONAL PAPER No. 22a

clean salt water, with a clean bottom and means of fencing off the place easily. Next to putting the seed lobster back in the water as soon as she is caught the pound would seem to be the most natural method of breeding for her?—A. Yes.

Q. Many remedies have been proposed at various times by different people for the existing condition of affairs, first to close down altogether for four or five years in order to allow the fishery to recuperate; that is the quickest and certainly the most drastic way, what do you think about that?—A. I do not know what I would think myself of that, my idea is that we are fishing the wrong season of the year altogether; that is my idea, here you are fishing lobsters up to the last of June and there are no lobsters left for the seed.

Q. Some people say let us fish in September, October and November, and we will be clear of all that?—A. Well, the lobsters will have a chance to hatch out, that is sure, but now we are catching a lot of seed lobsters in the spring with no seed on them, but they would have seed on them in July and August.

Q. Many people differ on that, some say that the female lobster does not spawn every year; some fishermen who have experimented for themselves by shutting up the female lobster, tell us they have noticed there is no seed on them when they are shut up, but after a time the seed comes out. Some people say they spawn every year, some say they spawn twice a year and others say that they only spawn every second year, but the general opinion is that they spawn every year. What do you think is the spawning season of the lobster?—A. July and August is in my opinion.

Q. Is there any period of the fishery when you catch more female lobsters than at another?—A. Yes, I think about the 10th or the 15th of May, about the time the school of lobsters strike the shore, there appears to be more then.

Q. Do you think you get more female lobsters in shoal water than in deep water?—A. Yes.

Q. Do you think the lobster comes on shore to spawn?—A. Comes on shore to spawn and to shell.

Q. It has been alleged that in some instances the fishermen have suffered injury by the failure of those holding canning licenses to operate their factory, do you know of anything of that kind happening here?—A. Well, I do. There was one held back here this year though he had a license, we might as well have done a little better in price.

Q. Had he a license?—A. He was too late in getting his license, it was too late to open.

Q. But this is not the case of a man having his license and refusing to open his factory?—A. Oh, well, of course that would affect the fishermen.

Q. Has that happened in this neighbourhood?—A. No.

Q. Do you think there is any combination on the part of packers to keep the price down?—A. Well, I partly feel that way sometimes, yes.

Q. Of course, you have no proof of it definitely?—A. No.

Q. Now among the various propositions, I told you about the closing down altogether for a term of years, then the Lobster Commission in 1898, a number of gentlemen, Mr. Nickerson, of Clarke's Harbour, and Mr. Whitman, of Guysboro', and one or two others were appointed a commission of enquiry, and they came around the coast and as a result of their enquiries they recommended the closing down by sections, shutting off some 50 miles of coast at one time?—A. They would better have shut them off altogether, they have had too much time up there.

Q. Well, they propose to do that all around the coast, shutting off each section in turn, do you think that is workable?—A. I do not know how that would work, that would be a matter of consideration for some time.

Q. Then another proposition is to fix the size limit at 7 inches instead of 8 and try to enforce that; do you think we are any more likely to enforce a 7 than an 8 inch limit?—A. Not a bit.

9-10 EDWARD VII., A. 1910

Q. Then another proposition is to shut off the size limit, regulate the trap, as I have told you, and cut off 10 days or a fortnight at the close of the season; the general opinion seems to be that it is towards the close of the season the greatest damage is done in the catching of the small and breeding lobster?—A. In my opinion it is.

Q. But you would rather enforce the size limit?—A. Yes, I would rather enforce the limit.

Q. And have the berried lobster provided for strictly in some way?—A. Sure.

Q. Is there, to your knowledge, any illegal fishing here after the close of the season?—A. Not to my knowledge.

Q. Was it ever done?—A. Yes, it was done.

Q. Do you know whether it is the case that a larger percentage of lobsters is required in the fall than in the month of May and June to fill a pound can?—A. I do not know that.

Q. They say it requires nearly 30 per cent more lobsters to furnish that amount of meat in the fall?—A. All I know is this much that the lobsters are larger in the fall than in the spring; it appears to me that there is a new school of lobsters altogether strikes the coast here in the fall different from that which comes in the spring.

Q. They are not the same?—A. They are not the same, no.

Q. Do you think that where the live lobster industry would appear to be the principle one, that branch of the industry should be favoured as against the canning? Do you think that the canning is the most destructive form of the fishery?—A. I do not know about that.

Q. Do you think it must be so since they can the small lobster?—A. Yes, that is so.

Q. The market trade will never injure the industry because they are all big and they cannot export the seed lobsters because they will not live?—A. Yes, that is so, they cannot ship the seed lobsters.

Q. Is there anything you would like to say yourself in addition to what you have already said? Your idea as I understand it, is to enforce the law as it is?—A. Sure, yes.

Mr. BALCOM.—If there is to be any limit at all, let it be a 9-inch limit, because the packers could not pack with what is left between the 8 and the 9 inches.

The COMMISSIONER.—What would the packers do then?

Mr. BALCOM.—The packers would retire altogether and let the fishermen ship their own fish.

WITNESS.—Those fishermen who have a co-operative license would ship all they could and then pack the others.

The COMMISSIONER.—Of course it will put the packers out of business on certain parts of the coast altogether.

Mr. BALCOM.—Yes, I guess it would.

The COMMISSIONER.—In fact they say that an 8-inch limit would do so.

Mr. BALCOM.—I know we would not operate with an 8-inch limit, we would have to close her up, the only thing is to take off the size limit.

WITNESS.—If you put the laths at a certain distance apart you will shut out the packers as well.

Mr. BALCOM.—A 6-inch lobster is all right, we can get along with that.

SESSIONAL PAPER No. 22a

The COMMISSIONER.—The canners tell us that the small lobsters are the most profitable ones to can, because there is more meat proportionately to the weight of shell.

Mr. BALCOM.—That is so, there is more money in packing the 6-inch lobsters than the 9-inch, we are not buying so much shell and we are getting better meat. On the north shore they can average the best part of a case on a thousand pounds of lobsters more than we can on this shore, and out of a thousand pounds of lobsters up there, that our boats will get in a day, they will not have 5 big ones of 10½ inches, and up on the north shore there are more lobsters to-day than there ever were; we are packing to-day over half as many more lobsters than we did when we started there 9 or 10 years ago.

Mr. SMILEY.—The hatchery has helped that out.

Mr. BALCOM.—But they are miles away from us, and right where the hatchery is there are not as many lobsters as there are where our factory is.

Witness discharged.

Commission adjourned.

BOARD OF TRADE ROOM,
HALIFAX, September 7, 1909.

Senator WILLIAM ROSS.—The great need is to protect the seed lobster; they are packing the lobsters in some places so small that as the Commissioner has informed us they take 12 to fill a one pound can, and the necessity is to keep them down to a certain size and to protect the seed lobster.

The COMMISSIONER.—The question is how is that to be done, is it by the establishment of hatcheries and pounds or by insisting upon the regulation being strictly observed? The size limit is a very difficult regulation to enforce, and so also is that relating to the berried lobster because the fisherman is in the habit of wiping the berries off out at sea, and it requires a very minute examination when they come inshore to tell whether that has been done.

Senator ROSS.—The trouble is our inspectors are so well known that before they can reach the factory their presence is known, and whatever is wrong in the factory is covered up before the inspector gets there. To be effective the officer wants to be more or less of a detective, the local man can hardly be expected to give information against his neighbour. I think it would be well to extend the time that we now have in Northern Cape Breton and the county of Inverness as the ice prevents the fishermen putting out their traps as early as they do on the other parts of the coast.

The COMMISSIONER.—The consensus of opinion everywhere appears to be that one of the most ready methods of preventing the destruction of the lobsters is to shorten the season generally, by taking a little off the end of it.

Senator ROSS.—I do not think you could shorten the season in Cape Breton because it is often the 20th of May before they begin. They begin fishing west of Halifax here on the 15th of December and continue till the end of May so that they can fish five and a half months continuously, whereas we in Cape Breton, under the most favourable circumstances, would not have more than three months.

The COMMISSIONER.—They very seldom have that, about two and a half months.

9-10 EDWARD VII., A. 1910

Senator Ross.—Yes, two and a half months, and my impression is that that long season on the west coast would be calculated to reduce the supply of lobsters in the course of time, there would be over fishing as it were.

The COMMISSIONER.—The majority of the packers, and a good many fishermen, especially those men that are deep sea fishermen and take up other branches of the fishery at the close of the lobster fishery, are very generally in favour of some shortening of the season. The fishermen themselves say that they begin to slack off before the end of the season a couple of weeks, and the packers say they are obliged to keep open because the fishermen want them to, but that they would far rather be shut down.

Senator Ross.—Even with our fishermen when it comes the last week of July and the catch shortens they would just as soon take their traps up. I think it would be very desirable that the time should be extended on the northern shore of Cape Breton, and, if you can, adopt means by which you can preserve the seed lobster; Mr. Smith here is a packer, I do not know whether his Presbyterian conscience would prevent him packing small lobsters, he is not only a packer but an exporter too, and he will be able to give you a great deal of information I have no doubt in connection with the lobster fishery.

J. WILLIAM SMITH, of T. F. Smith & Co., packers, Halifax, called and sworn:—

By the Commissioner:

Q. How long have you been interested in the lobster packing industry?—A. As far as my knowldge carries me back, about twenty years.

Q. What canneries do you represent, or what canneries do you control at present, and where are they situated?—A. We have bought them out, as they would have to close them down as they were failures; we have seven that are now in active operation.

Q. What is about the amount of the pack annually?—A. It will exceed 4,000 cases annually, and then there is the export of live lobsters, probably 250 or 300 crates annually; those crates are 140 pounds each.

Q. From what points are those live lobsters exported?—A. From Halifax county and from Lunenburg county.

Q. Is it the case that that trade is one that is developing and increasing?—A. It is, as far as I know. Up to the present time we have evidence showing that it is increasing.

Q. Have the facilities improved in recent years for exporting live lobsters?—A. Yes, they have never been better.

Q. Are they all that they should be —A. I think that there are perhaps more men operating than there is business to warrant it.

Q. What is your opinion of the condition of the lobster fishery, how is it now compared with the condition when you first went into the business?—A. I do not think that, generally speaking, in the quantity of lobsters taken there is very much difference.

Q. Are you keeping up your pack by taking lobsters of a class that you would not have taken 20 years ago?—A. No, I think not; I think there is very little change in the size where we operate. Of course, in certain districts there always have been small lobsters and always will be, and there are others with a certain percentage of large. I see no difference.

Q. How would a strict enforcement of the regulations affect you as a canner?—A. That is as to the size limit?

Q. Yes?—A. Well, I firmly believe that if it were carried out generally we could not operate in canning lobsters.

Q. Was that always the case?—A. I think so.

SESSIONAL PAPER No. 22a

Q. In the case of your canneries, do you in any or all of them supply the boats and gear to the fishermen?—A. Yes, in Cumberland county only we do.

Q. As to the fishing side of the question, I suppose you have not much actual experience?—A. I have had a little. I have done some fishing in my day.

Q. Do you know whether the practice of stripping or washing the female lobster is generally followed by the fishermen?—A. That is a question I do not like to pass an opinion on, although I have heard of it, and I have an idea that it has been done, but I think the methods at the present time are better and that it is not done.

Q. How is it in your case, are you strict about receiving the berried lobster?—A. Yes, that is one thing we have enforced as far as possible.

Q. Have you always done so, or is it only in the more recent years?—A. We have always taken that step, but we have transgressed perhaps to a certain extent. We have liberated at one time over 3,000 lobsters. We bought and paid for them and liberated them at the close of the season.

Q. What, in your opinion and judgment, is the best way to proceed in order to protect that lobster?—A. By natural methods; I should say if hatcheries or pounds or anything could be built to save them in their natural way, it would be the better way.

Q. Well, is not the natural way the best?—A. The pounds would be the natural way. I am speaking now of the pounds and liberating them at the end of the season. But there is a better way. If the fishermen would liberate them on the spot there is no need of going to that expense, but they will not do that.

Q. Do you think there is any way by which we could get at the fishermen so that that would be done?—A. By common sense and enlightenment, much as the agricultural college would teach the farmer; have an instructor to teach the fisherman that it would be to his advantage.

Q. Do you think it would be wise to send a man to instruct the fishermen and help them in these matters?—A. It would be a good step.

Q. It was suggested by some witness at Ottawa last winter that the fee charged for a canner's license should be considerably increased with the view of raising a fund to provide for payment for the lobsters to be put in the pound and afterwards liberated, what do you think about that?—A. I think it would be a good step, and I would be willing to assist as far as I could in anything to assist the fishery, and would support any reasonable proposition.

Q. Do you think any attempt has ever been made to enforce the regulations within your recollection?—A. That is by the fishery officer?

Q. Yes, by the authorities?—A. Yes, I have known of cases where they have enforced the law.

Q. Do you think that is generally done?—A. I hardly think so; it is not properly carried out to the letter.

Q. What would you think of the proposed scheme of licensing all lobster fishermen, compelling them to take out a license before they begin in the spring. This would be a form of license for which, I suppose, there would not be any charge, but it would be given them by the fishery officer?—A. Without charge? I think it would be a good move, and have the fishermen bound down to observe the law.

Q. I suppose there would be a declaration, or, it may be, an oath attached to it?—A. That is in regard to the seed lobsters?

Q. With regard to the regulations whatever they might be?—A. Yes, of course. I have not known the fisherman to liberate any except the seed lobsters, only the seed lobsters, he would liberate them, but I do not think he could live at his vocation and liberate the undersized lobsters, what we term the small lobsters.

Q. Do you think it wise to continue to destroy these undersized lobsters, is it reasonable to do so?—A. It is a question in my mind which we should save, the large or the small ones.

9-10 EDWARD VII., A. 1910

Q. At what size do you think the lobster has reached the age of reproduction?

—A. I am not quite clear on that point, it is a scientific question.

Q. Do you think it would be wise to destroy the lobster wholesale until it has reached that age?—A. Well perhaps it would not, but then perhaps we could can the small lobster and protect the large; what about that

Q. That has been suggested I see by one authority?—A. I can remember something of that I think.

Q. That is sacrificing the export trade for the sake of canning?—A. Yes, I do not think so much of the export trade; I think it is not helping this country or the fishery a great deal, because we are losing the productive lobsters or the large lobsters which would be productive.

Q. You do not export the berried lobster?—A. No, but still they would get berries in a certain season. I do not think there is a man living who knows when they do spawn, or at what time, or how much.

Q. I think it is pretty generally accepted that they generally spawn during the warm season, July and August.—A. Yes, I think it is during those months, but as regards conserving the supply I think it comes from the large more than from the small lobster.

Q. Do you think it would be possible to regulate the capture of small lobsters in any way by fixing a standard opening between the slats in the trap?—A. Well, I hardly know about that.

Q. We find in some places it has been narrowed down to a bare half inch?—A. We have tried that in plants that we have in Cumberland County, they would have to be pretty wide, and everything would go out then because a lobster can go through a pretty small opening.

Q. Along that shore they have gradually narrowed down their slats?—A. I am not in a position to say anything about that because it is some years since I have been there.

Q. Now as to the matter of licensing the canneries, do you think the policy of the department has been a wise one in restricting the number of licenses for canning?—A. That is a point I hardly know how to express myself on. I think, perhaps it has not worked out just as the department thought it would, in the interest of all, it is not to my own advantage to say so perhaps, but I would just as soon see everybody pack lobsters who thought of doing it.

Q. Do you think that an increase in the number of canneries would mean an increased fishery?—A. In certain sections it would, in others it would not, such as Halifax County and Cape Breton, but in Cumberland or Pictou County, known as the Northumberland Straits, it would, that is why we object to more licenses, we buy factories and shut them down.

Q. But that does not mean a decrease in the number of fishermen, there are as many fishermen fishing, and as much gear in the water as there is likely to be?—A. No, I think if you increase the number of licenses in those localities you will increase the number of gear and fishermen, others would come in.

Q. There does not seem to be any object in restricting the number of licenses if they do not restrict the gear as well?—A. I do not think it would be any advantage because a man can only attend to so many traps, and if a fisherman wants to make a good season's fishing he can work 250 traps if he is a worker, and if he is not he will not have as many.

Q. We have found men in a double handed boat who have fished as many as 375 or 400 traps.—A. Yes, one boat would carry two principals, but I do not know enough about that point to enable me to express a definite opinion.

Q. I suppose you are aware that a great many complaints have been made to the department by fishermen who complain they have not received justice at the hands of the canner? Do you think the policy of the department in issuing co-operative

SESSIONAL PAPER No. 22a

licenses is a right one, and that the fishermen have a right to expect if they are dissatisfied with the price they are receiving from the packer and if a certain number combine together, that they should be given a license to can for themselves?—A. Yes, that has been the case where I operated this summer in Cape Breton, but I do not think it has been any profit to the fishermen who have banded together, as far as my experience and knowledge carries me, this season.

Q. Do you think that is all the department can do in the way of satisfying the fishermen?—A. For my part I do not think anything could satisfy him in that way, even if you give him all as far as that is concerned. If it is the mind of the department to grant them licenses, perhaps they will be satisfied that way, they can work out their own profits and ideas, I think they have had the best of it.

Q. Do you think on the other hand it would not be well to grant a license to any man applying for it who shows his ability to put up a certain standard of cannery?—A. I do not think so, I think the quality of the lobsters today depends a great deal on the methods employed under the license system, and they are poor enough under that system in many cases, and I think the fishermen holding a license cannot pack lobsters equal to those engaged in packing, men who have made a study and practice of it.

Q. Do you think any standard should be established as to factories?—A. In number?

Q. No, but as to the quality, that we should insist upon inspection of the cannery in order to see that they are up to the standard, because many canneries we have visited are a long way from what they might be?—A. I am in favour of anything of that kind, I think it will be well to have an inspection of the canneries.

Q. Is there any reason why the canned product of the lobster canneries should be exempt for inspection such as there is on other canned food products nowadays?

A. No, with a competent inspector perhaps it would be a good thing; as you say all other foods are now subject to inspection, and a great many lobsters should be inspected, although it generally works out in the right way under the present system, because when they come here to be marketed if they are not up to the standard they do not go.

Q. You say that the condition of the lobster fishery to-day is as good as it ever was, and it does not need any protection?—A. There might be a slight decrease but I think there are more engaged in it, and more going into consumption; there may be some depletion in some ways, naturally there would be.

Q. In which branch of the industry do you think there is the most money for the fishermen where they can both be carried on, that is in the live lobster trade or in the canning?—A. I should think they would make more money in canning than in the live lobster trade if the lobsters are suitable in size and they get sufficient. Another feature is that the high prices bring a great many more into the business, and there is very little in it for anybody. I am speaking now of the export trade.

Q. Do you know that the canner is compelled to take the undersized and berried lobsters for fear of losing his fishermen?—A. I do not know about the berried lobsters, I will not speak as to that, but if one canner will not take them perhaps another will, and the fishermen have been known to change off in that way.

Q. Do you know whether there is much illegal fishing in this section? Is any fishing done after the close of the season?—A. Not to my mind in this county, that is as far as I know, but I am of opinion that a great deal has been carried on in Cumberland county. I have heard that in the district of Pugwash and Wales and down towards Cape John it has been done.

Q. Is it to your knowledge that lobsters packed out of season reach the market?—A. I could not say about them.

Q. Do you think that the system of attaching labels to the cases has been instrumental to a certain extent in preventing that?—A. I think to a certain extent it has, but I do not suppose there is any rule laid down that is not sometimes transgressed.

9-10 EDWARD VII., A. 1910

Q. What is your opinion of the proposition to license the fishermen and then refuse licenses to those who are known to have violated the law, do you think that is workable?—A. In one sense he has as good a right to a license as myself or any other individual.

Q. I am not referring to licenses to pack, but to licenses to fish. It has been suggested that a man having taken out a license will be more apt to obey the law himself, and inform on his neighbour who violates it, and any man who violates the law would be refused a license and could not fish lobsters. Do you think that is workable or feasible?—A. I cannot say definitely, but I think that it could be worked, and perhaps that would be a means of saving a good many lobsters that are destroyed now, but I am not sure how it would work out.

Q. Has the number of canneries reached the maximum in the interest of the lobster industry, or should the issue of further canning licenses be discouraged?—A. I think it is, according to the supply.

Q. A variety of remedies has been suggested to the department, one is to shut down altogether for a term of years as being the best way out of the trouble. Of course the general opinion is that the lobster fishery is failing, and is failing continually?—A. Well I do not think that would be workable, it could be saved by other methods, shortening the season.

Q. You think that would be a pretty severe measure?—A. Yes, I think that will destroy the industry completely.

Q. You think the industry has not reached that point of depression which necessitates so severe a measure?—A. No.

Q. The Lobster Commission of 1898 among other things were in favour of closing down by sections, do you think that is workable?—A. No, I think not.

Q. When it has been suggested that we reduce the size limit from 8 inches down to 7. You know it was originally 9 inches all over?—A. Yes.

Q. Then they said if it were made 8 inches they would live up to the law, but they have not done so, and now they say make it 7 inches and we will live up to the regulation?—A. The canners must have something to do or leave the country. I should say make it 7 inches or have no size limit at all.

Q. Then there is no need of making it 7?—A. There is no need of making it 7 because I do not think the limit cuts very much figure, therefore I say preserve all the berried lobsters, and bring into operation all the means that can be utilized to increase the supply of lobsters such as hatcheries or pounds and in liberating the seed lobsters, those are methods that will help the industry.

Q. Other say do away with the size limit entirely and provide for a standard trap with a certain opening between the slats?—A. That would be a grave question, there are thousands and thousands of dollars invested in traps which the government might have to pay for and that they would not like to do. It would take a great many years to bring that about.

Q. What is the life of a trap?—A. In certain sections from 3 to 5 years perhaps, something has been done to preserve them, and you can make them last for 5 years with creosote and tar and things of that kind.

Q. Are they doing that?—A. Well, that can be done to preserve the life of a trap.

Q. Then the proposition is also to provide for the strict enforcement of the regulations as respects the egg lobster, and also that in exchange for doing away with the size limit altogether there should be a shortening of the season?—A. Yes, I am in favour of shortening the season because wherever we operate at the end of the season it is very unprofitable. For instance, I am speaking of Halifax county at the present time, I would be willing to see the season stop at the end of May, the month of June is unprofitable for us, both for the fisherman and for the packer alike, and the fisherman neglects other fisheries in which he could make a great deal more money. It would also preserve the berried lobster because that is the month in which we find the

SESSIONAL PAPER No. 22a

berried lobsters in greater numbers than at any other season and the fisherman could engage in the herring, in the mackerel and the cod fishing and it is in that month they lose their gear and we are compelled to operate at a loss. They would become compensated for the loss of that month's lobster fishing by the saving in their gear and by their other fishing.

Q. Do you think, generally speaking, it is during the last week of the season that the greatest injury has been done by the capture of small and berried lobsters when fishing in the shoal water?—A. Yes, I believe it is in the month of June in Halifax county, and in other districts it is during the last weeks of the season.

Q. What do you think of fall fishing? Some people have suggested shortening the season in the spring and fishing in the fall?—A. That has been my contention, take off the month of June and give them the equivalent in the fall, or let us give them the same season as on the western shore where they have five months against our three, but we only have two practically that are profitable. At present our fishermen are not in as good condition as they were years ago, there are more fishing and more extravagant ways of carrying on the work.

Q. You say give them the same season as the west shore?—A. I should think we ought to have the same season.

Q. Would you favour opening the season on the 1st of January?—A. I do not see why we should not.

Q. That is from Canso down?—A. We should have the same season as the western shore.

Q. There is no use doing that in the Straits of Northumberland?—A. No, that is for the southern shore of Nova Scotia.

Q. How far east and north would you go?—A. I suppose it is fair to give them all they like, those who could use the season would do so and those who could not would not.

Q. Of course Professor Prince, who is the head of our department, is in favour of having one season beginning on the 1st of January?—A. I know that the live lobster is worth more in the months of December, January and March than in April, May and June when there is an abundance on the market.

Q. What do you think of the policy of the department of encouraging fishermen to co-operate in canning?—A. Well, I am quite willing to see them go into it. I have no objection to make to that if it will help them because I can fit in some place.

Q. I do not think there is very much else I have to ask you, is there anything you think of yourself you would like to suggest? There is the matter of hatcheries we spoke of some time ago, would you favour the establishment of more hatcheries?—A. Yes, I am strongly in favour of it and of pounds also. A great many pounds could be built at little expense, there are certain places which are adapted for the purpose, and the berried lobsters should be bought from the fishermen by the government at a price, and kept in these places and fed and kept there until the end of the fishing season when they should be liberated, I think that would be a great help in every way.

Q. Did I hear that you are building a pound?—A. I have in mind doing so.

Q. We heard that somewhere on the coast I know?—A. Yes, there is a place there that is suitable and I am going to use it for my own private interest this coming season for the various fisheries, not the lobsters alone, but for other fish also.

Q. Do you think that the drop in price paid to the fishermen this last spring was fully justified by the condition of the market?—A. Yes, it was very much justified.

Witness discharged.

9-10 EDWARD VII., A. 1910

RICHARD H. WILLIAMS, of Roberts, Simpson & Company, Halifax, called and sworn:—

By the Commissioner:—

Q. How long have your people been engaged in the lobster business?—A. Nearly 30 years.

Q. Do they own any canneries themselves?—A. They are interested in them.

Q. Have they any license for them?—A. Not in the name of the Robert Simpson Company.

Q. To make a long story short, what is your experience as to the condition of the fishery, do you think the fishery is falling in spite of the fact that the pack is being kept up? Is it being kept up by unfair means, do you think; by canning lobsters that would not have been canned years ago? If you can state that in your own words, it would be better than by any suggestion from me?—A. I can only give you a personal opinion on that.

Q. That is all right?—A. Personally, I think that there is a reduction in the catch from year to year, but it is very slight; and rather than keeping it up by unfair means of packing, I think there are less unfair means of packing than there were a few years ago; there is a better attempt now to protect the berried lobsters than there was then, and I do not think there is any more attempt to take the small lobsters than there used to be.

Q. Do you think that has always been done?—A. Yes, it has always been done; there has been more fuss made about fining the packers for the last two years, but I do not think that the amount of small lobsters taken the last few years has been greater than it was for the previous five or six years.

Q. Have you been out among the fishermen generally?—A. Yes.

Q. Is there a large quantity of poorly put up material thrown on the market?—A. There was a large quantity of goods that was depreciated, but very little now that is practically worthless to the same extent that there was a number of years ago.

Q. What do you mean by poor quality, carelessly put up?—A. Yes.

Q. Can you venture to say from your experience whether this occurs or in what particular districts, is it on the part largely of the smaller packers, do you think? It has been represented to the department that it is these little packers scattered here and there, who have poor establishments and do not take the necessary precaution and care of the meat and the packing of it, and that the licenses issued to these people should not be issued, or that they should be subject to some kind of inspection in the cannery which would compel them to do their work up to a certain standard?—A. In some sections there has been quite a lot of poor packing on account of the prevalence of these small packers. I have in mind now some of those districts.

Q. Would it be going too far for you to tell us the district?—A. I do not want to prejudice any particular district or province.

Q. Can you say in a general way; we have an idea?—A. The whole of the New Brunswick north shore.

Q. I suppose it is particularly in that region where they can up to the middle of August?—A. Yes, I think that has improved in the last few years.

Q. Do you think anything would be gained by an official inspection of the pack?—A. I think it would be if you could get an official staff who would be competent.

Q. Do you think the present staff would be competent, or would it need an expert?—A. It would mean the employment of experts.

Q. But you think it would be a benefit to the industry if an official inspection, such as is held in other industries—pork, flour and other canned goods—were insisted upon for the canned lobster?—A. I do not know that an official inspector could accomplish it, because for the different markets we require a different quality; each market has its own preference.

SESSIONAL PAPER No. 22a

Q. But that would be perfectly within the ability of a competent inspector who understood all that, would it not? Is it the case that these quarter pound flats that are put up nowadays require small lobsters?—A. Not altogether.

Q. Some packers tell us they cannot put large meat in these small cans?—A. Mr. Payzant has packed this past season 5,000 cases of large lobsters, and the whole of his pack was put in quarter pound tins. It is possible he can explain to us about that.

Q. What do you think would be the result of a strict enforcement of the 8-inch limit?—A. In some districts it would mean the closing of the factories entirely.

Q. Are there other districts where it would not happen?—A. I do not think it would happen in the district west of Halifax. I do not think it would happen from Canso to Halifax.

Q. Do you think that it would be a wise thing on the part of the department to insist strictly on the enforcement of the limit with a view to protecting the industry?—A. No, I do not. It would reduce the quantity packed, and that would only increase the cost of putting up what is packed, which would make it unprofitable.

Q. Do you think it wise to continue packing immature lobsters? Do you not think it must end in disaster if you destroy the lobster before it reaches the age of maturity?—A. I do not just exactly know the meaning of the word 'immature' in that respect.

Q. The size of reproduction is supposed to be limited to 8 inches, and although you will find the berried lobster under that, it will be very rarely?—A. I think 8 inches is too large a size to limit the packing.

Q. Would we be any better off at 7 inches?—A. Yes, we will be better off, considerably better off.

Q. Do you think it would be any more possible to enforce the law at 7 inches than it is at 8 inches?—A. It would not be altogether possible, it would be easier to enforce the law at 7 than 8 inches.

Q. What do you think of the proposition to do away with the size limit altogether and provide for the escape of a neat proportion of the small lobsters by insisting on a standard trap, is there anything in that?—A. I do not know enough about it to speak about the traps; the impression in places like Cape Breton used to be that with a season of three months at the utmost, or practically three months on the average, that in itself is sufficient protection of the lobster to permit of canning.

Q. Do you think we can venture to shorten the season materially, we have the evidence of a good many canners, and large canners at that, who say, 'Give us two months' packing and that is all we want.'—A. There are some who would wish for three months.

Q. Some no doubt would wish five months?—A. I mean this way that some of the people who are advocating two months are showing a certain amount of selfishness; it is not so much the protection that it is going to give the industry as the better results to themselves from packing for two months only. They advocate fishing lobsters for two months and the fishermen would lose all the fish for the other month. There are some lobster fishermen who want three months because they do not go into the other fisheries and it would be an injustice to those fishermen to cut them off.

Q. But on the question of preserving and protecting the fishery do you not think it is possible for them to find some other means of occupying themselves for the other month?—A. Those who are in favour of the two months' season will argue that it is because the lobsters are not as plentiful, well now, if they are not as plentiful they will not get as many.

Q. Do you not think it is within the last two weeks of the fishery that the greatest damage is done by the catching of the spawning and the small fish, and do you not think that it is the very shoal water fishing at the tag end of the season that is doing the greatest injury to the fishery?—A. They do not all fish in shoal water.

9-10 EDWARD VII., A. 1910

Q. Nearly all of them come into shoal water at the end of the season; the tendency is to go out to deep water at the beginning and to follow the lobsters in?—A. I do not see how it can be any more injurious to the industry in catching the female lobster in the third month than it is in the first or second, it may be more noticeable that in that period you are taking the berried or female lobster.

Q. That depends largely upon the question whether the female lobster comes into shore to spawn or not. Do you think she does?—A. I am not able to say.

Q. Do you think that an increase in the number of canneries would result in an increased catch of undersized lobsters?—A. To some extent, yes.

Q. You think there will be more fishing if you have more canneries? Do you not think there is almost as much gear in the water now as there is room for?—A. Yes, but there is some respect towards the size limit in certain sections that will disappear entirely if there are more factories to take the output.

Q. Do you not think an increase in the number of canneries would simply mean that the same amount of fishing would be done, and that the catch would be split up among a larger number of canneries?—A. In some districts it would mean that, but when you get around to the North shore where the packers fit out so many fishermen themselves, then I think there will be more.

Q. Do you think that where it would be possible the cannery would be doing that it would be advisable to limit the amount of gear to the license?—A. I am afraid that limiting the amount of gear would create just about the same feeling among the fishermen as there is to-day on the question of limiting the number of licenses.

Q. Do you think where facilities exist for carrying it on there is more money for the fishermen in the live lobster trade than there is in the canning?—A. From Halifax west I think there is.

Q. In that case do you think it would be wise to so frame the regulation as to favour the one at the expense of the other?—A. No, I do not think so.

Q. Which do you think is the most destructive of the two forms of the fishery, that for canning purposes or that for the export alive?—A. Well, they both go together as far as I know.

Q. In the one case you have a standard size of fully developed lobsters?—A. Yes.

Q. And it is much easier to check the matter in the live lobster business than it is in the cannery?—A. It is easier to check the live lobster business as regards the size limit, certainly.

Q. And the berried lobsters are no good for export alive, are they? Is it the case that they do not stand transport as well?—A. I do not think they attempt to ship them.

Q. Can they ship them even if the berries have been brushed off?—A. I think they can, I do not know and I do not like to be too positive on that point.

Q. Judging from the information we have from fishermen it seems that once a lobster has been brushed off, especially if she has been roughly brushed, she will not survive very long?—A. In doing the fresh lobster business in western Canada we have frequently received requests from customers at hotels and different places, asking for lobsters with berries on.

Q. They mean lobsters that carry them, not lobsters with berries on their tails. They get a certain percentage of that kind now, I think the epicures prefer the female lobster?—A. Yes.

Q. What are your own suggestions as to the regulations that should be enacted for the preservation of the fisheries? Various remedies have been suggested to the department at different times?—A. I have no suggestions to make, I did not come prepared to make any statement on the point.

Q. Have you gone into the matter of hatcheries?—A. Yes, I have seen the Baker pound.

Q. What do you think of it as a method of protecting the lobster?—A. I think well of it, I notice in going along the shore that the prejudice against the pound

SESSIONAL PAPER No. 22a

arises from the people who have never seen the pound, and that it is more a personal prejudice rather than against the pound itself.

Q. That personal prejudice is quite a recent one is it not?—A. It has existed for some time. Locally, that is immediately around L'Archeveque and Gabarus, the prejudice has been recent, but in Main-a-dieu it has been of some standing.

Q. Would you favour the establishment of pounds in other places, and do you think they should be run by the department officials rather than by private individuals?—A. I think it would give more satisfaction to the fishermen if they were run by the department.

Q. What do you think of this proposed method of licensing the fishermen?—A. I see the danger of the same dissatisfaction that has been created about the cannery licenses. They argue now that it is an injustice to say to one man in the harbour, 'You shall not pack lobsters.' And to another, 'You may.' To say to one fisherman, 'You shall fish lobsters,' and say to another, 'You shall not.' There would be dissatisfaction. Then again with regard to the punishment for infringement of the law, there is danger of personal feeling on the part of the local fishery officer against the fishermen. I would not say that it is so, but there is that danger that one fishery inspector or local fishery officer might be good friends with a certain fisherman and would overlook some of his infractions, while he would not overlook it in the case of another man.

Q. Do you think the regulations have ever been enforced, that any attempt has ever been made to enforce them?—A. Yes, in some places.

Q. Recently?—A. Well, I think during the last five years; Mr. Paysant of Lockport was in circumstances where he had to pack legal lobsters, he tried hard to get all legal ones, and I think one season he did get all legal ones.

Q. Do you think the existing penalties are sufficient if they are enforced?—A. I do not know what limit there was to them; the fines I have heard of ranged from \$10 to \$100, and sometimes more.

Q. I do not exactly understand what you mean by limiting penalties. Are the existing penalties sufficient if they were enforced, that is the fine provided? I think they do not generally exceed \$20, the average fines, do they?—A. I saw in the paper the last few days about a fine of \$100 for something. \$20 fine, it seems to me in the case of a fisherman would be quite large enough and in the case of the packers would not be very large.

Q. Do you think that in the event of persistent violation of the regulations the license to can might be cancelled?—A. Yes, but there seem to be a good many ways of overcoming that, even without changing the license.

Q. Do you think that the number of canneries has reached the maximum. Having in view the preservation of the lobster industry, should the issuance of further licenses be discouraged?—A. Yes.

Q. What, in your opinion, would be the ultimate effect of a shorter open season without any restrictions as to the size limit?—A. I think it would be beneficial.

Q. Would you favour a universal close season for the whole Atlantic coast from July 15 to January 1st?—A. It would be very hard for the people in the Cape Tormentine section.

Q. I said for the Atlantic coast?—A. It would be an injustice to the people west of Halifax who now have fishing from the 15th of December to the 1st of January.

Q. That is the suggestion of Professor Prince who favours one universal season. What do you think of fall fishing, having a shorter spring season followed by a fall fishing season?—A. I do not think it would meet with favour from either fishermen or packers; it would give them the expense of fitting up for two seasons in one year.

9-10 EDWARD VII., A. 1910

Q. What would you think in that part of the Straits of Northumberland where they at present fish up to the 15th of August, of changing the season there from the spring to the fall, and having no spring fishing?—A. As long as you can make a dividing line between the two sections.

Q. There is a dividing line at present.—A. But it is easy to cross the line.

Q. You might say the same with regard to all these sections, that it is easy to cross the line; you have your line drawn from Shockfish river, N.B., to Westpoint, P.E.I., to one drawn from Indian Head, N.B., to Cape Traverse, P.E.I., and there they fish from the 25th of May to the 10th of August. A great many people have suggested—mind you I am not offering you any opinion myself, in anything I may say—that there the season could be changed to a fall season of two or three months?—A. It seems to me that some of the fishermen would be able to get both the spring fishing and the fall fishing by being on one side of the line in the spring and on the other side of the line in the fall.

Q. Is that the only change you have to offer in respect to that matter? That is the very district you referred to as the one in which they are putting out small and inferior lobsters.—A. I do not know of any other.

Q. The fishermen generally are in favour of the change along that shore, but the canners object to it because they say it would interfere with the normal conditions, to throw their fall pack on the market. Would that be the case?—A. To some extent it would, there is always an uncertainty in connection with the Magdalen Islands at present, as to what the amount of the pack will be, during the month of September it keeps the market in an unsettled state.

Q. I do not know there is very much more. I want to ask you, if you can give us that statement showing the market conditions for the last four or five years it will be quite enough for our purpose.—A. That is if we can.

Q. To show whether the drop in these prices was justified by the market conditions or not?—A. Yes.

Q. There is one other matter that I might ask you about perhaps, a great deal has been said about the issuing of licenses to aliens, what is your opinion about that?—

A. I do not know that the so-called aliens are any worse than ourselves.

Q. They were the pioneers in the business were they not?—A. Many of them were.

Q. I think on the greater part of the coast they were, and as I understand it, it is only their capital invested in the canneries that is alien, the canneries are generally built and operated by Canadians, are they not?—A. Yes, I think so.

Q. And they employ Canadian fishermen?—A. Yes.

Q. I will be glad if you will forward me that statement so that it can be embodied in the evidence?—A. I will do so.

Witness discharged.

(Statement subsequently filed by Mr. Williams as follows):—

September 7, 1909.

Commander WAKEHAM,

Commissioner, Lobster Fishery Inquiry.

SIR,—As requested by you we beg to submit the following information regarding the lobster markets in the springs of the last five years; basing our statistics on the prices contracted for and paid at Halifax to lobster packers for half pound flat lobsters, 96 x $\frac{1}{2}$ s., during the months from January to April in each year subdividing the prices into two classes representing (a) Atlantic coast packs, and (b) gulf packs.

SESSIONAL PAPER No. 22a

	' A.'	' B.'
In 1905..	\$13 00 to \$13 25	\$12 00 to \$12 50
1906..	13 50 to 13 75	12 50 to 13 00
1907..	14 75 to 15 20	12 50 to 13 50
1908..	17 00 to 17 50	15 00 to 16 00
1909..	12 00 to 12 75	11 00 to 12 00

The prices fluctuated during the summer months of each season, but showed a greater increase in the latter part of 1907 than usual, so that a greater advance was noticeable in the prices at the beginning of 1908.

During the summer of 1908 the prices fell very materially caused by various reasons partly because of (1) An increase of about 10 per cent in the total pack (2) the financial depression in the United States and Europe, but principally because of (3) a reaction in the trade on finding that the high prices during the previous winter had considerably curtailed the demand and consumption.

In the winter of 1908-9 large stocks remained in buyers and consignees hands unsold and prices were very materially lowered. The prospects for 1909 did not justify buyers contracting at higher prices than shown in the figures given above although an improvement in the prices has since been noted.

We are, sir,
Your obedient servants,

ROBERTS, SIMPSON & CO.

HAIFAX, N.S., October 16, 1909.

COMMANDER W. WAKEHAM,
Commissioner, Lobster Fishery Inquiry,
Gaspé.

SIR,—As the writer stated to you upon examination before the commission in Halifax on the 7th ult. that we were unable to reply to your questions on behalf of the firm because of our senior's absence in England, we forwarded him a copy of the evidence taken before the committee at Ottawa during the last session along with an outline of some of the questions asked by you, and it occurs to us that the following remarks from his answer to us may be of interest to you:—

On perusal of the printed report 'the testimony of the different witnesses is very conflicting and evidently most of the witnesses had merely in their minds when giving their testimony their own particular interests in their own districts which would not be applicable to other districts.' We believe that such of the evidence as indicates a conflict between the lobster fishermen, packers and buyers, only exists in isolated cases and 'generally speaking the best of feeling exists between packers and fishermen.'

As to your question whether legislation should be made to favour the live lobster business rather than the canning branch of the industry, our opinion is that from Halifax westward the two branches are about equal in importance, but in all other sections the canning business is of greater importance to the fisherman. As to the length of the season, 'we advocate no change in the season whatever.' The regulations as to the length of the season appear to us to answer the purposes of maintaining the supply which is more affected by weather conditions than over-fishing.

Replying to the questions regarding pounds: 'we consider these an advantage, but think they should be the property of the government and their officials could thus control the seed lobster and the young.'

With reference to your questions regarding a fall season in Shediac and Cape Tormentine districts, 'our opinion is that the markets are liable to get disorganized if

9-10 EDWARD VII., A. 1910

the seasons cannot be counted on as closing at fixed periods and extensions and rumours of same have a deterrent effect on market operations.'

We are, sir,
Your obedient servants,

ROBERTS, SIMPSON & CO.,
Per Richard H. Williams.

HALIFAX, NOVA SCOTIA, October 29, 1909.

Commander W. WAKEHAM, M.D.,
Commissioner, Lobster Fishery Inquiry,
Gaspé Basin, P.Q.

SIR,—Below we beg to hand you statistics of canned lobsters exported from Halifax, Yarmouth and Charlottetown since 1904, carefully compiled for our own use from statistics furnished by the various transportation companies and which having been compared and checked with the arrivals at foreign ports by our European house, are considered by us to be as accurate as it is now possible to have them made.

A perusal of the same will, we believe, aid you in the work of your present inquiry, and when considered in connection with the larger trade that is being done annually in shipping fresh lobsters to Canadian and American markets, especially since the passage of the 'Nine-Inch' Law in Massachusetts early in 1907, will show that there is no material decrease in the catch of lobsters in these provinces during the past five or six years excepting in seasons when the weather has been particularly stormy, such as 1906 and 1909.

—	Packages.	Estimated Cases equal to 48 lbs. net.	—	—	—
1904.....	200,639	175,125	175,125	
1905... .	193,255	169,814	169,814	
1906 ..	158,445	140,774	About 15,000 cases went via Montreal that in previous seasons were shipped via Halifax.	155,874	Rough season.
1907.....	176,555	158,351	158,351	Mass. 9 inch law in effect.
1908... .	172,084	152,765	About 18,000 cases un- shipped at end of year.	170,765	" "
1909	155,204	137,560	Deduct 1908 goods ship- ped in 1909 and add goods still to go for- ward (estimated).	132,560	" " and rough season.
		Average for	past 6 years	160,415	

All of which is respectfully submitted.

Your obedient servants,

ROBERTS, SIMPSON & CO.,
Per Richard H. Williams.

SESSIONAL PAPER No. 22a

RAYMOND PAYSANT, packer, Lockeport, called and sworn:—

By the Commissioner:

Q. How many canneries do you operate?—A. One.

Q. And it is situated where?—A. At Lockeport, I am the manager for the Canadian Atlantic Canning Company.

Q. How many years have you been operating?—A. About 10 years.

Q. What has been your average pack?—A. Well, perhaps 1,500 cases.

Q. We understand from the last witness that you have been putting up entirely these small tins?—A. The bulk of the pack for the last two years.

Q. It was stated to us by some canners, as a reason why they should can small lobsters, that if they could not can the small ones they could not put up the small profitable tins, is that the case?—A. No, lobsters from 9 inches and upwards are shipped to Boston but we get a proportion of them that are mutilated, and in isolated cases the fishermen have not the facilities for shipping, and we get the large lobsters from them and I think that any lobster from 9 to 10 inches will fit in the quarter pound flats.

Q. The quarter pound flats are not any different from the other tins except that they are lower?—A. They are lower, but they are of about the same proportion as the half pound tins.

Q. But it is half the height?—A. A little more than one half the height.

Q. What is the condition of the fishery with you now as compared with what it was?—A. It holds up all right.

Q. You notice no deterioration there?—A. No, I do not think so.

Q. What has been the practice there with regard to the berried lobster?—A. We do not see any berried lobsters at all, our season is from the middle of December to the end of May.

Q. They have not come in before the season closes?—A. They do not appear.

Q. They have not shed their eggs?—A. I do not think so, I only remember seeing one berried lobster last season.

Q. And as to the immature or undersized lobsters, what has been the practice?—A. The practice the last few years has been to take them.

Q. Was it not the practice previously?—A. Not in our particular locality.

Q. Why was that?—A. The law was pretty strictly enforced.

Q. Is the lobster fishery being carried on to-day with you much more extensively than it formerly was? Have the fishermen to increase the amount of their gear?—A. Yes, there is a considerable increase.

Q. The fishermen own their own boats and gear altogether?—A. Yes.

Q. It is not the practice of the canners to supply any of the outfit?—A. No.

Q. How are the fishermen paid there for all under 9 inches, by weight or by count?—A. In some instances we buy by weight. In the co-operative factory at Little Harbour, they operated this year, they bought by weight. All the other canners in Queens and Shelburne buy by count, and the practice is to take undersized lobsters two for one.

Q. How small lobsters will they can?—A. They are down to six inches anyway.

Q. Have you any idea how many six inch lobsters it would take to fill a pound can?—A. Well, really I do not know.

Q. We understand by actual measurement it takes nine 7 inch lobsters to make a pound can?—A. Yes, I suppose it would. In my opinion that is all right, and it would take probably 12 of the 6 inch.

Q. There was one other matter you want to explain as to the season?—A. Yes, Mr. Smith mentioned the fact of wanting the same season all along the south shore of Nova Scotia, he did not see any objection to that, but I would deplore the shortening of the season in the fall on our shore for this reason that the 15 days we have now in December is worth all the months of January, February and March, from a com-

9-10 EDWARD VII., A. 1910

mercial standpoint; I do not know how it affects the lobster fishery, but the lobsters then are more plentiful, the weather is more suitable, and the price is much better than for live lobsters.

Q. It is only in your section that the December fishing exists?—A. West of Halifax at the present time the season is from the 15th of December until the end of May. Now, if Professor Prince's suggestion is adopted, and you take off the 15 days in December, you might just as well cut out the fishing up to the 15th of April.

Q. The January, February and March fishing is no good?—A. Absolutely no good.

Q. The weather is rough?—A. Yes, and the lobsters are not on the shore.

Q. Do you think they are backed off?—A. The school that comes in in December are caught up, and then we have to wait until favourable weather in the spring to catch more.

Q. Is not that the case in Charlotte county also?—A. I do not know anything about that.

Q. Or in Digby county?—A. Yes, the Digby shore line is very straight and abrupt, and they cannot possibly do the business there that we can, because we are more or less protected by the islands in the harbour. West of Yarmouth the shore is very straight.

Q. Is there any December fishing done in this neighbourhood between Halifax and Yarmouth?—A. Yes, it is done here.

Q. It is not confined to that particular neighbourhood, but all along here?—A. Yes, I understand it is as valuable here in this county as it would be with us.

Q. There is a general complaint east of here that your fishing is unfairly long compared with what they can do themselves?—A. Yes, we have the privilege of fishing from the 15th of December to the end of May, but as a matter of fact there are only two months of that period that are really suitable and in which the business is prosecuted to any extent. Of course, in January, February and March there is really very little fishing.

Q. How would it affect you to cut off the latter part of the season somewhat?—A. In May?

Q. Yes?—A. That would be a hardship; but I do not see why people should be so alarmed about this lobster story. We have become alarmed over the state of affairs. In Maine, where they fish all the year round, they have a 10½-inch limit, but it has never been observed.

Q. Is it not more strictly observed now?—A. I do not think so. It is not if the reports are true as to the taking and selling of small lobsters. The canners have gone out of business, but the lobsters are caught and sold right down to 9 inches, and perhaps smaller.

Q. So you do not think any change should be made in the season as it exists?—A. I do not think there is any necessity for the preservation of the industry; the lobsters have ample time to breed.

Q. Do you think there is any necessity in that particular district of encouraging the live lobster industry as against the canning?—A. Well, the two features of the business are one in point of importance; the fishermen, I fancy, want them both; they are not at war at all. Let the fishermen ship their live lobsters if they wish, and at the same time during the season they sell to the canners. Without the canning industry the fishermen would, I think, be very badly off; and of course the American market takes all the large lobsters, and in fact a great many 9-inch ones now, but down to 10 inches anyway, from our section; that is all right.

Q. How would it affect you if we strictly enforced the law and the 9-inch limit?—A. It would close up the factories—when I say it would close them up, it would practically do so.

Q. Do you think it wise to continue allowing you to destroy the small lobsters?—A. I really can see no reason for alarm; the lobsters multiply very fast, and it

SESSIONAL PAPER No. 22a

does not look to me that there is any diminution of quantity. There is just as large a proportion of big lobsters as there used to be.

Q. Is that live lobster trade increasing?—A. Yes; and in Massachusetts the market is open now to 9-inch lobsters.

Q. As to this question of hatcheries and pounds, have you any opinion to offer?—A. I do not know anything about them at all.

Q. Would you suggest an increase in the number of hatcheries, or the establishment of pounds where it is possible to do it?—A. I really do not know anything about it, but I have an idea that pounds could be made profitable if the government would permit the dealers or fishermen, anybody in fact, to store lobsters and market them after the spawning season or after the shedding season. Now, our lobsters during the months of April and May are sold to the American smacks, a number of the larger ones—10½ inches—and they are taken over to the United States, in Maine, where they have large pounds, and these people store them and market them later on when the price is high.

Q. Well, is it the case with you that the berried lobsters are sold to these smacks, and that they are taken over to the United States and held there?—A. No, from the fact that there are no berried lobsters caught in our season.

Q. They state that it is the practice in Charlotte county, I understand?—A. May I be allowed to say that if the government will tolerate the handling of lobsters in the same manner as they do in the State of Maine, let a man who wished store the lobsters in the pound and keep them until he could market them himself.

Q. That is, follow the same practice as in Maine?—A. Certainly, it would not injure the lobster fishery, and it would help out the trade. It is estimated that \$1,000,000 worth of lobsters are taken from the western coast and shipped to the United States during the season, and those same fish if kept until September will bring \$3,000,000.

Q. What is your own idea about this matter of licensing the fishermen as proposed?—A. I do not know, I am sure, there is no necessity for it, at least I do not think there is, it is only creating a lot of new machinery, I think it would be a hardship and I would not care for it.

Witness discharged.

D. T. LESLIE, canner, Halifax, called and sworn:—

By the Commissioner:

Q. How long have you been engaged in the packing industry?—A. Well, for myself I have been engaged since 1886, now altogether 24 years.

Q. What number of canneries are you licensed for or interested in?—A. Eight.

Q. Where are they situated?—A. Between Halifax and Sydney.

Q. All on the Atlantic coast?—A. All on the Atlantic coast.

Q. Do you supply your fishermen with boats and gear or do they supply their own?—A. They own them all, we have sometimes supplied them with rope, &c., but they own them all.

Q. What is the total amount of your pack?—A. The average?

Q. The average, approximately.—A. Four thousand five hundred cases, I suppose.

Q. Have you been packing that same amount steadily or has it decreased or increased? How is the pack to-day compared with what it was when you began?—A. We did not pack so many this year. I would say 4,000 would be about the average, but there were times when we packed 8,000 or 9,000, we had a few more canneries then.

Q. Are you employing more fishermen, and do they represent more gear?—A. No more fishermen, I think, but more gear.

9-10 EDWARD VII., A. 1910

Q. Would you say it takes a larger amount of gear to keep up your supply than it did a few years ago?—A. I would say it does.

Q. What, in your opinion, is the condition of the fishery to-day compared with what it was when you began?—A. The lobsters are scarcer.

Q. Do you think they are decreasing in size so much as in quantity?—A. Not so much in size.

Q. What are you inclined to think is the spawning season for the lobster?—A. I think in August. I can remember we did not have any trouble with these spawning lobsters on this coast up until the end or the middle of July, there would be very few up to that time, but in August there would be lots of them.

Q. Within your experience does it take a greater weight of lobsters to fill a pound can in the fall than it does in the spring? Some people say it will require nearly 30 per cent more?—A. In the early fall, I have not had much experience, but it takes quite a lot more.

Q. After they are recovered from soft-shelling they are better.—A. Yes, later in the fall the lobsters are better in meat.

Q. Talking about the fall, what would be your opinion on the matter of fall fishing?—A. I would not like to see it except in certain localities; if the spring fishery were altogether done away with it might be continued in this district, I would not be at all in favour of two seasons.

Q. Not in some places?—A. No.

Q. Do you think the lobsters approach the shore for the purpose of spawning?—A. I do not think they do, but I have no means of knowing.

Q. Do we not get a larger proportion of spawn and undersized lobsters late in the season close in shore than at any other time?—A. No, for the last few years we very seldom see anything like a spawn lobster, the fishermen that we have to deal with seem to obey the law very thoroughly in that matter; very, very seldom do we see one spawn lobster.

Q. Do you think the fishermen generally are beginning to see that they must protect the seed lobster?—A. Yes, I am sure they do on the Atlantic coast.

Q. What do you think of the proposition to license the fishermen?—A. I think it would be altogether a fair and reasonable thing to do, if it does not injure the business generally.

Q. I do not mean the license to can, but to license the fishermen to fish?—A. I would not favour it at all.

Q. You would take some other means of enforcing the regulations?—A. Yes.

Q. How would it affect you if the regulations as they stand were strictly enforced?—A. It would pretty well close us—You mean as to the size limit? We would not be able to get lobsters enough to operate.

Q. Have you any idea what proportion of the lobsters you take would be under the standard limit?—A. It is an 8-inch limit is it not?

Q. Yes?—A. In number I would think they would be pretty nearly one-half but not in quantity, in weight.

Q. What would you think of that other proposition of sending somebody around to educate the fishermen the same as they do in the Department of Agriculture with the farmers?—A. In what way?

Q. To get them together and explain to them the conditions, the falling off in the industry, and the regulations, especially so far as the berried lobsters are concerned?—A. I think it would be all right, but I think they are already educated on the Atlantic coast, I am pretty sure that 99 out of every hundred fishermen would let the berried lobster go at once, that is the ones we have to deal with.

Q. You think the practice of brushing the berries off is not practiced to any extent?—A. Not to any extent, no.

Q. Have you any suggestion or proposition to make with regard to the regulations?—A. No, I have not except to say that rather than make a change in the size

SESSIONAL PAPER No. 22a

limit, which has more effect on the business than anything else, I would shorten the season for the sake of protection, and I would go further and say that instead of having the season from here east in the months of April and May, I would have it in the months of May and June; I would take it off the first end of the season instead of the last.

Q. What would be the object in doing that?—A. One of the objects would be that very often it is the case that April is a stormy month, and it is poor weather to fish, and they would have a much better and an easier time to catch the fish, which is the object I had in view, and then the lobsters are more profitable in June for the packer and the fishermen, but, of course——

Q. That would not be with any view of the protection of the lobster?—A. The only protection is that the lobster requires a shorter season and the liberation of the berried lobsters.

Q. Do you think that not fishing in April you would catch a great many more lobsters in May?—A. I would hope so, and that is the reason it would be more profitable and more sensible to my mind.

Q. I do not know how that would be from the point of view of saving the lobsters?—A. If you did not catch so many lobsters in the two months it would be. As to the continual taking of small lobsters I do not know why it was ever brought to your notice, or to the notice of the Government either. It has struck me, and I have heard it spoken of too, that the catching of these small lobsters day after day, and putting them over, is really more waste and injury to the industry than the canning of them. You catch the same lobster a hundred times over during the season, you keep him in the boat for a while, you measure him and lay hold of him, and he is injured, and there is really more waste and injury to the fish than the canning of a certain number of them would be.

Q. If there is a decrease in the fishery as you suggest, to what is it due?—A. The decrease in the fishery?

Q. Yes?—A. Oh well, to overfishing.

Q. Do you think that the different size limits and different seasons in adjoining sections of the coast are unsatisfactory and encourage violations of the law?—A. No, I do not think so. We have to deal with two or three divisional points at this place, at Point Michaud, and at another point, but I remember Point Michaud particularly, that would be one point where you would think the different seasons and limits would interfere with the fishing, but they do not, the fishermen in this district stop fishing and do not go over the limit.

Q. Is there any particular reason for having a smaller size limit in one district than in another?—A. Yes, I think so. I think that they are naturally larger in one district than in another. I had them examined by Mr. Bertram at one time and we proved that in a certain section of Cape Breton you could find a large percentage of lobsters that never reached the legal limit of size.

Q. Even before the fishing began?—A. That they had never come up to that size; you could find lobsters bearing eggs, and lots of them at $7\frac{1}{2}$ inches, that was in the Straits of Canso.

Q. The lobsters are small there now?—A. They have always been small there, ever since we began fishing.

Q. Is it to your knowledge that the canners are compelled to accept undersized and berried lobsters for fear of losing their fishermen?—A. Not this last few years that I have noticed at all, it would be the case probably some ten years ago, there was more trouble of that kind then.

Q. Have you ever estimated in your canneries as to how many pounds' weight of green lobsters it takes to fill a pound can?—A. Oh yes, we know just exactly when we are operating, from day to day.

Q. Can you give us an idea how much it takes?—A. I can give you a general average for a certain section, what I mean by that is that further west you find a

9-10 EDWARD VII., A. 1910

better average, we get probably, take it from here half way to Canso, an average of $4\frac{1}{2}$ pounds to the can, and east of that it would be 5 pounds, and then again further east still $5\frac{1}{2}$ pounds.

Q. The further east you go it increases?—A. Yes, the fish are poor at the time you pack them, and for that reason I spoke as I did a while ago, that if the government undertook to shorten the season it seemed to me to be unwise to cut off the latter end. My idea is to let the fishing go on as late as possible, so long as it does not interfere with the berried lobster, and then you get the benefit of the growth of the lobster.

Q. Have the regulations for the protection of the lobster ever been observed in your district?—A. They are not strictly enforced or observed.

Q. Were they more strictly enforced some years ago than they are now?—A. No, I do not think so.

Q. Do you think that the number of canneries has reached the maximum compatible with the continuation of the industry or would you favour an increase in the number of licenses?—A. From a personal point of view I would not, I suppose, but I do not know that there should be any objection to an increase in the licenses, if there is any assurance that the lobsters put up will be marketable, but when you look back to the time when there were 10 lobster factories to one there is now everybody knows the goods were not as good. You have the experience of that time to go by and it may get down to that same condition of affairs again.

Q. Do you think that the space left between the slats in the trap would govern the capture of small lobsters to any extent?—A. I would think it would, the small lobsters would surely crawl out if the space were large enough; they might not all go, but a good many of them would.

Q. Is it not the case that the tendency is to narrow down that space compared with what it was in the beginning of the industry?—A. There has been very little change, I think they follow pretty much the same rules they used to; the reason of that is that they wanted at that time to catch all the small ones and they still want to catch them.

Q. During what period of the open season is the lobster fishery most actively prosecuted with you? What is the best time of your catch?—A. In that part of the coast between here and Canso it is the month of May, and in Cape Breton I could not tell you because some years we do not commence there until June; two or three years ago we did not pack any lobsters in Port Morien until the 20th of June, and this year it was late again, so that we cannot very well tell about that, but we will say that from the first of June along to the middle of July is the best part there.

Q. What in your opinion will be the effect of a shorter open season with no restrictions as to size limit?—A. What will be the result?

Q. Yes?—A. I think it would be beneficial.

Q. You prefer to see it shortened in the beginning and not in the end?—A. Most decidedly from here east.

Q. What do you think of the proposition to establish a standard of fitness for a license to can?—A. I think it would be all right if it is possible, and if it can be done very fairly.

Q. Do you think that the product of the cannery should be subject to inspection?—A. Government inspection?

Q. Government inspection.—A. Might I ask a question? Is there any other class of canned goods that is subject to inspection?

Q. I believe so.—A. That is before they go into the cans, during the operation.

Q. Oh well, I suppose the inspection would have to be during the act of canning?—A. Yes.

Q. And I should suppose that the inspector would have to test and examine the pack?—A. Really I do not think it would be any benefit. You know I think the business has all the inspection it needs and can take care of itself.

SESSIONAL PAPER No. 22a

Q. The tendency today is to inspect all food products?—A. Certainly, I think if anyone wants a license there would need to be some report about that, but under the present conditions I think the packers are all capable of doing the very best they can and just as well as if they had inspection.

Q. What do you think of the policy of encouraging the fishermen to co-operate in canning?—A. Encourage them, what do you mean by encouraging them.

Q. Well, the tendency of the department just now seems to be that where the fishermen are complaining and are not satisfied with the prices they receive they will be ready to issue them a license to can?—A. I would have no objection to that, I think that would be all right if that is what is meant by encouraging them.

Q. Do you think it is wise to restrict the number of fishermen necessary to obtain a license to 15? The department insists that at least 15 fishermen shall combine together.—A. That will depend upon the locality very very largely, anyone will understand that. I know a place where probably 7 or 8 lobster fishermen could pack more than 30 or 40 in another place; but I suppose a license would not be very much good unless the fishermen could pack a fair proportion of lobsters.

Q. Is it to your knowledge that the fishermen have lost their catch of lobsters by the canners refusing to accept them? Complaints have been made by the fishermen in that respect?—A. You would not be able to tell the locality at all in which that happened?

Q. It was in Cape Breton, I think.—A. All I can say as far as Cape Breton is concerned, or at any other place, we have never refused lobsters, but have always taken them; in one or two instances we have been unable to pack them in a certain place, and we have shipped them to other factories, but we have taken them.

Q. It has been complained that canners have refused to operate the factory although a sufficient supply of lobsters was available.—A. No, I do not know of anything of that kind, unless it was this year, there might have been one or two cases this year.

Q. Would the fishermen have any other market for their lobsters if the canneries were closed?—A. They would have the live lobster market in the United States to go into, but there is this to be looked at in this connection, that if the factories were all closed there would be a great deal larger supply of live lobsters coming in and they would probably be cut down one-half or more than a half in price.

Q. Which branch of the lobster industry do you think is the least calculated to deplete the fishery, the canning, or the live lobster trade?—A. The last answer I gave you would have something to do with that, if the canneries were closed it would have the effect, you could see for yourself, that the supply would be more than doubled, and the market would in consequence go down.

Q. Are the present facilities adequate for the proper handling of the live lobster trade?—A. Yes, I would say so, on the west coast they are, and I think on the east coast too.

Q. How far east?—A. As far east as Canso. We have tried Cape Breton at different times with steamers of our own in different ways, but we could never get the lobsters to Boston alive.

Q. The facilities do not exist there for carrying them?—A. Well, in certain parts they may, in the neighbourhood of that pound, I think Mr. Baker used to send them by express, but I do not know enough about it to know whether he succeeded or not.

Q. Do you know anything about the live lobster trade yourself?—A. Yes, some of the business.

Q. What prices are paid for live lobsters?—A. The price varies all the way from 8 cents to—I do not know the limit I am sure.

Q. Is there any competition in the matter?—A. Oh yes, always has been.

Q. The fishermen complain that a combine exists between the canners to keep down the price; what is your experience in the matter?—A. I do not know anything about it at all, I never heard tell of its being done and never saw anything of that kind anywhere.

9-10 EDWARD VII., A. 1910

Q. You never saw anything of that kind?—A. No.

Q. Do you think such a thing could exist?—A. I do not think such a thing could exist between here and Sydney without my knowing something about it; it might in other places.

Q. What have you to say as to the matter of factories and pounds?—A. I do not know very much about it, but I do think that with regard to the hatcheries there have not been enough of them to my mind. If what we hear about the Pictou hatchery is true we should have some hatchery between Canso and Halifax. The one at Canso is the only one on this whole coast, and it seems to me that if the Pictou hatchery is as good as it is claimed to be two or three hatcheries between Canso and Yarmouth would solve the whole trouble for the department.

Q. What do you think about pounds?—A. I haven't much use for them myself. I do not think pounds are sufficient, they may be all right for the immediate neighbourhood of the pound, but the weak point of the pound system is that they take the seed lobsters from one place and put them in another, and the place where the pound is located, wherever it may be, is benefitted at the expense of the place where the lobsters come from. That is the complaint of the fishermen at Point Michaud and other points, that they have been taken from those points and placed in the pound at Fourchu, and they derive no benefit from them.

Q. Do you think there is much illegal canning or fishing done along the shore that you represent?—A. No, I do not think so.

Q. Has there ever been?—A. Oh yes, I suppose at one time when the fishermen had no license to pack there was a great deal, but I do not think there is any of it now.

Q. Do you think that the labelling of cases has had the effect of stopping that or is it of any value?—A. I think it has a good effect.

Q. Is it to your knowledge that it is being evaded?—A. In which way.

Q. That lobsters have been packed and labelled out of season?—A. It is not, to my knowledge, I have never heard that it has been done, and I have never really seen it done. One thing that occurred to me while you were asking about the size limit and the close season, I do not know whether anyone ever thought of it or not, but I do not see why the size limit should be enforced in any way for this reason, that if there are a certain number of lobsters in the sea at the end of the season what does it matter what size they are as long as they are there for the next year, and the next year after that? It seems to me that has been overlooked right straight along, if you only take one-tenth of the lobsters it does not matter, as long as there are sufficient left.

Mr. PAYSANT.—Mr. Leslie stated that he thought the reduction in the catch was due to over-fishing. As a matter of fact the season has been repeatedly shortened in his district. Am I not right? During the last twenty years it has been shortened two or three times.

Mr. LESLIE.—Is it not due to that fact instead of to over-fishing.

Mr. PAYSANT.—No, the reason I think my statement is right is that the fishermen since the last shortening have had to have more gear.

The COMMISSIONER.—Do I understand you to contend that the shortening of the season would deplete the fishery?

Mr. PAYSANT.—No, but to reduce the size of the pack and the catch in the aggregate.

Mr. LESLIE.—That is just my opinion, I do not think we can close our eyes to the fact that the lobsters are scarcer in the district of which I have knowledge than they were 10 years ago; it takes more traps and a different style of traps to catch them, better bait, and all that sort of thing.

SESSIONAL PAPER No. 22a

Mr. SMITH.—In speaking of pounds you said that the seed lobsters are kept in the district in which the pound is located; could not that be overcome by distributing them over the section from which they were originally taken. Instead of having one small pound there should be 20 if necessary, and that would be one way of getting natural results, all the lobsters, as soon as the season is over would be liberated.

Mr. LESLIE.—I think you will find the fishermen have decided that they do not want to have the lobsters caught and taken away from their own district. I do not think it is possible to collect many for the Fourchu pound in that way now.

Mr. SMITH.—Do you not think that the lobsters like other fish, have good and bad seasons? If you have the gear and the season to get them you will catch them?

Mr. LESLIE.—I believe that conditions vary sometimes.

Mr. SMITH.—We found an increase this year and the hatchery has been in operation there; they say there is better fishing there now.

Mr. LANGILLEE.—Since the hatcheries have been running there has been an improvement in the fishery.

Mr. LESLIE.—Have you any information from Canso in that connection? Is the fishing holding out better there than it was?

The COMMISSIONER.—I should judge so from the evidence we have. You have favourable conditions there.

Mr. LESLIE.—Not nearly as favourable as you will have about the bay and islands in some places in Cape Breton, where there are plenty of places most suitable for the establishment of hatcheries or pounds. Did anybody ever suggest that each factory should hatch out its own spawn?

The COMMISSIONER.—At their own expense?

Mr. LESLIE.—Yes, if need be, or in combination with the government. I believe the packers would be willing to bear a part of the expense, not if licenses were given indiscriminately, but under the existing conditions I think they would.

The COMMISSIONER.—If they had a guarantee that the licenses in the place would not be increased, would that be satisfactory?

Mr. LESLIE.—I do not know about that, but I believe that the packers would combine with the government to meet a part of the expense, and then there would be none of this trouble about not putting them in the right place.

Mr. SMITH.—In Maine they have large pounds where they keep large quantities of these lobsters until after the hatching season.

Mr. LESLIE.—I am speaking about hatcheries, where they are in the vicinity of a cannery.

The COMMISSIONER.—Or in the neighbourhood of a pound, you should have derived some benefit from it.

Mr. LESLIE.—We haven't seen any of it.

Mr. SMITH.—I believe that for the last ten years packers have not availed themselves of the privilege of canning after the 1st of July, although they have the right to do so until after the 15th. Do you think it is better to let the lobsters rest, that is in the Straits of Northumberland?

The COMMISSIONER.—Do you think it would be possible to take the lobsters alive from the cannery to the hatchery and have the eggs stripped there?

9-10 EDWARD VII., A. 1910

Mr. SMITH.—That is a question of distance, I should say.

The COMMISSIONER.—If the work is roughly done there is a great deal of loss, and I am afraid that in some of the canneries it is roughly done. The men set apart to do that work do not care much for it, and look upon it as a nuisance.

Mr. SMITH.—I should say if the pound system could be operated that it is the best and the natural way; and let the lobsters be distributed afterwards by the government or other authorities wherever it is possible to do so.

Mr. LESLIE.—The experience is that a pound is far more expensive than the hatchery.

The COMMISSIONER.—That is a very large pound.

Witness discharged.

Commission adjourned.

CHESTER, September 8, 1909.

JAMES L. REDDEN, packer, Chester, called and sworn:—

By the Commissioner:

Q. Your cannery is situated where?—A. Aspatogan.

Q. How long have you been canning at that place?—A. 25 years.

Q. You always canned at the same place?—A. Yes.

Q. What is the capacity of the cannery, what has been your average pack?—A. About 1,000 cases is the average pack.

Q. Was that your pack this year?—A. No, not this year, but before this we used to go up to 1,400, this year it was only 500.

Q. To what do you attribute the decrease this year?—A. To an off year for lobsters, there were very few lobsters here.

Q. Was the weather bad?—A. Yes, the weather was bad, at the latter end of the season when it got warm it was very bad and destroyed a number of the traps.

Q. From what number of boats do you collect your lobsters?—A. About 70.

Q. Extending for what number of miles along the coast?—A. 25 miles.

Q. That is 12½ miles on either side of you?—A. Yes.

Q. How do you find the lobster conditions now compared with what they were when you first began to operate?—A. What do you mean, in quality or size?

Q. How do they run?—A. Very much smaller than they used to, but there are just as many in number.

Q. There are as many but they are smaller?—A. A lot smaller.

Q. Has it been steadily decreasing since you began to operate?—A. Yes.

Q. So that the decrease has been gradual?—A. Yes, in size.

Q. You caught off the big ones in the early years and since then you have not seen so many of them?—A. Yes, they are getting small.

Q. How is it here, do you supply your own boats and gear?—A. No, the fishermen own their own boats and gear.

Q. Are the lobsters all smacked to the factory?—A. Yes.

Q. Do you have to employ more boats and gear to keep up your pack than in the beginning?—A. Oh yes.

Q. A great deal more gear is employed now than when you began to pack?—A. Yes.

SESSIONAL PAPER No. 22a

Q. What are the regulations in this district?—A. From the 15th December to the 1st of January.

Q. And what is the size limit?—A. 9 inches.

Q. How would it affect you if that size limit were strictly enforced?—A. I would have to go out of business.

Q. How long is it since you reached that point do you think?—A. Oh, over 20 years.

Q. It has been that way for 20 years?—A. Yes, a good long while.

Q. What has been the practice with regard to the berried lobsters by the fishermen?—A. They have been thrown back into the water for the last four years entirely.

Q. And before that what was the practice?—A. Well, some of them cleaned them off and sold them if they could get clear of them.

Q. Do you think there is a better disposition now on the part of the fishermen to protect that berried lobster than there used to be, are they beginning to understand it is to their advantage to do so?—A. Oh yes.

Q. You think that is the case pretty generally?—A. Yes.

Q. Have you any station of the Fishermen's Union here?—A. No.

Q. What price have you paid this year for lobsters?—A. \$2.25 per hundred.

Q. By count?—A. By weight, excepting the 10½-inch, for which we paid 12 cents.

Q. And you take them by count and not by weight?—A. Yes.

Q. How many lobsters do you run to the hundred pounds—A. I would suppose about 80, that is taking the large.

Q. Counting the big with the small it would run about 80?—A. Yes.

Q. Is that the case all through the season?—A. Yes, all through the season.

Q. That will represent a pretty good sized lobster, will it not?—A. Oh no.

Q. You pack them all, you do not ship any alive to market?—A. Very few, except in the winter.

Q. What is the best time of your fishing here?—A. Well, the best time would be when the season opens on the 15th of December.

Q. And how about January, February and March?—A. Oh well, after the 15th of January there is practically no fishing, in February there is none at all, and in March there is none; they do not fish here after the first of February at all.

Q. Are the traps taken up?—A. Yes.

Q. Are they brought ashore?—A. They are brought ashore.

Q. Why is that, because of the scarcity of lobsters or on account of the bad weather?—A. Scarcity of lobsters, there are none.

Q. They have backed off into deep water or they do not trap?—A. They do not trap, you could not get them in deep water.

Q. I suppose that when your season closes as it does, you do not see many berried lobsters, do you? When do you begin to find them with berries on?—A. Along towards the last of May.

Q. Will you see them with berries on in December?—A. Oh yes.

Q. Have you any idea of the spawning season of the lobster here?—A. No, you would catch them at any time of the season, they may seem to be just as far advanced in January as they would be in May.

Q. But in the cold water the eggs will not develop?—A. No, but they look just the same as they do in May.

Q. You did not notice that as the season advances the eggs got riper?—A. Yes, certainly, along towards the first of June some of them are almost ready to drop off.

Q. What is the practice of your fishermen here, in what depth of water do they usually fish?—A. The depth or the distance off shore?

Q. The depth, when the traps are put out in December, where will they put them?—A. In from 2 to 10 fathoms of water.

9-10 EDWARD VII., A. 1910

Q. Do they expect to get the lobsters that near the shore then?—A. Yes, when the season opens they fish close in shore.

Q. And in January and February where do they fish?—A. In some localities they are in close and some are off.

Q. Do you notice that the lobsters back off shore as the winter months come on?—A. I could not exactly tell you that, but they move in in the spring, and they keep on moving, into one fathom of water.

Q. Is it the practice of the fishermen to come inshore with them to move their traps in with them?—A. Yes, they move in and out.

Q. Is there any large trade here in export lobsters, the market lobsters?—A. No, outside of a few that are shipped in the winter, we cannot ship from here in the spring to make a success of it at all.

Q. From what reason?—A. The market is down in Boston and so many die.

Q. You have facilities here for shipping to the market, have you not?—A. Yes, there is every chance here.

Q. How are they generally shipped?—A. By rail to Yarmouth and boat to Boston.

Q. Could you tell me how your lobsters run here, how many does it take to the pound can?—A. About six, maybe a little more or a little less, one way or the other.

Q. About when was the lobster canning first introduced in this neighbourhood?—A. About 40 years ago.

Q. Who were the first to begin canning here?—A. There was an Englishman named Fry packed here first and then the Portland Packing Company came.

Q. Are they still packing in this neighbourhood?—A. No.

Q. Are most of the canneries in this neighbourhood owned by residents?—A. All of them.

Q. Are any American canners operating along here at all?—A. No.

Q. There are none?—A. No.

Q. What regulations were in force when you began packing?—A. As to the size limit?

Q. As to season and so forth?—A. Well, it was up to the first of July from the first of January.

Q. There were regulations enforced at that time?—A. Yes.

Q. What was the size limit then?—A. 9 inches.

Q. Has that ever varied, has it always been 9 inches?—A. Always been 9 inches.

Q. In the early years was there any attempt to enforce that regulation?—A. Well, not that I know of, I never was outside, I always worked inside and knew nothing about the outside part of it.

Q. To what do you attribute this decline in the condition of the lobster fishing?—A. To the destruction of the large lobsters, the seed lobsters with the spawn on them every year.

Q. Would you say that it was due to overfishing at all?—A. That might be.

Q. To too much fishing?—A. I would not say.

Q. As well as to the destruction of the seed lobster?—A. Well, I suppose that would help, but I would say it is because of the destruction of the large lobsters with spawn year after year.

Q. Do you not think that the destruction of immature lobsters, the undersized ones that have not reached the age of reproduction, must have contributed to the destruction?—A. It might in some localities where they take small lobsters, but most of them do not take lobsters under 9 inches.

Q. The general opinion of those who are experts in the matter is that an 8 inch lobster has attained maturity, we have found them $7\frac{1}{2}$ inches bearing eggs?—A. Yes, I have seen them too.

Q. But the general opinion is that the 8 inch lobster has reached the age of reproduction?—A. Yes.

Q. What style of trap is in use here?—A. They call it the bedroom trap, three-headed.

SESSIONAL PAPER No. 22a

Q. How long has it been in use?—A. I would say about 5 years.

Q. Do you think it is any more destructive than the old fashioned double-ended trap?—A. It catches more lobsters.

Q. That is the only difference, that the lobsters which get in it are likely to remain there?—A. Yes.

Q. Do you think that the space between the slats having been narrowed down, as it certainly has been in some places, I do not know whether it has been here or not, has anything to do with the catching of a smaller run of lobsters?—A. Sure it has.

Q. Do you think it would be possible by insisting on a standard width between the slats that a larger percentage of small lobsters would be allowed to escape?—A. Yes.

Q. A good many people tell us it will not make any difference?—A. It makes a lot of difference.

Q. You think it will make a lot of difference?—A. A lot of difference.

Q. Have you any idea how much space the fishermen allow here?—A. In some localities the lobsters are very small, and they put the slats closer together, I would say 1 or 1½ inch.

Q. Do you allow that much? One and a half inches will allow a pretty good lobster to escape?—A. Well, they take the lath as a spacer.

Q. You say the lobsters are smaller in some places, are they smaller because they have been fished out?—A. No, they have always been small.

Q. On what bottom would you expect to find small lobsters?—A. A smooth sandy bottom.

Q. I suppose it is the same here as everywhere else, that the best lobster fishing is about the reefs and rocky bottom?—A. Yes.

Q. Now, as to the remedies for the existing condition of affairs, what would you suggest yourself? Do you think there should be any change in the regulation with a view to protecting the lobster industry and trying, if possible, to bring it back to its former good condition? What regulations would you advise for that purpose?—

A. Oh, well, for the sake of the lobsters do you mean, or for the sake of the fishermen?

Q. I mean for the sake of the lobsters?—A. For the sake of the lobsters; well, I would say liberate all the large lobsters over 10½ inches and cut the size limit down to about 7, that would be the main idea.

Q. Would you limit or curtail the open season in any way?—A. No, I would not.

Q. Would you insist on a standard space between the slats in the trap?—A. Yes.

Q. There are some places where the space has been narrowed down until it is very little more than half an inch?—A. I have not seen any like that.

Q. If you liberate, as you suggest, the large lobsters, would that not put an end to the trade in live lobsters?—A. I suppose it would.

Q. And do you think the regulations should be so drafted as to favour canning at the expense of the live lobster trade?—A. That was not what you asked me; you asked me what would be the right thing for the lobsters.

Q. Do you mean that in that case it would not be better for the fishermen?—A. Yes, certainly; but that was not what you asked me. Of course, it would stop the fresh fish business, which I do not think would be the right thing to do.

Q. You think the fresh fish business here is not of sufficient consequence?—A. They have to can all their lobsters here, practically all.

Q. Is it the case that the canners have to accept undersized lobsters for fear if they do not do so their fishermen will go to other canners who are not so scrupulous?—A. Yes.

Q. It has been suggested that a good plan for enforcing the regulations more strictly would be to ask the fishermen to take out a license, the idea being that the fisherman before beginning the lobster fishery would have to go to the fishery officer and take out a license on which the regulations would be printed, this the fisherman would have to sign. It is suggested that there should be no fee charged for this license, the idea of those who suggested it being that the fisherman having done that would feel

9-10 EDWARD VII., A. 1910

himself bound by the regulations and would obey the law himself, and be more likely to inform on those who did not live strictly up to it. Of course, the intention is that any man known to have violated the regulations would forfeit his license and not be allowed to fish lobsters. Do you think there is anything in that proposition, or would it have a good effect?—A. No, it would not have a good effect. There is no way to stop it unless every fisherman would be an officer; you have to stop a thing like that at headquarters.

Q. Do you think it would make the fishermen more likely to obey the law themselves, and do you think they would be likely to lodge information against others who violated the law? Would one fisherman be likely to do that on another?—A. No.

Q. Do you think that an increase in the number of canneries would lead to more fishing?—A. It would lead to more fishing, yes.

Q. You think it would?—A. Yes.

Q. Do you think that everybody who could engage in lobster fishing is already engaged in it?—A. Yes.

Q. That would not mean a great increase in the amount of gear in the water, would it?—A. It would mean a lot more gear, but no more fish.

Q. You think there would be more fishermen engaged in the fishery if there were more canneries licensed?—A. Yes.

Q. Do you think that the number of licenses has reached the maximum compatible with the preservation of the industry?—A. Yes; I am speaking for my own district.

Q. Is there any reason why one man should not have as much right to can lobsters as another?—A. No reason whatever that I can see, but if another man started in the district where I am I would have to knock off. I am willing for him to buy me out.

Q. Are the fishermen satisfied with the price they are receiving here, or is there any friction?—A. They are never satisfied.

Q. You think they are never satisfied?—A. No.

Q. In a good many places the fishermen have complained to the department that they are not receiving a fair share of the profits from the business, and to satisfy the fishermen the practice has been, during the last few years, to issue what we call co-operative canning licenses. Are there any of those co-operative licenses in existence here?—A. No.

Q. Do you think that is all the department could be expected to do to satisfy the fishermen, or that it is the right thing to do?—A. I do not understand that yet.

Q. You see in a good many places the fishermen are complaining, in fact they are complaining very generally, at the price they are receiving, and with a view of satisfying the fishermen in their demands the department consented, and these are the only new licenses that have been issued for a number of years—the policy of the department is to restrict the number of canning licenses—and the fishermen have complained that the department has overdone the thing, that if there were more canneries there would be more competition, and that they would get more for their lobsters. Therefore, the department has issued co-operative licenses where a group of fishermen, numbering 15, have applied for permission to can their own lobsters. What we want to know is, do you think that provision is sufficient to satisfy the fishermen?—A. I can only speak for my own district. They could not get any more for their lobsters here than they have if they had ten licenses.

Q. Do you think they will get more for their lobsters by canning them themselves than they would by selling them to the factory?—A. No.

Q. You do not think the fishermen will make more money by canning for themselves than by selling to the factories?—A. Not in this locality, they get all that is in it already, and they cannot expect much more.

Q. The Lobster Commission of 1898, did you meet those gentlemen who came around in 1898?—A. No.

SESSIONAL PAPER No. 22a

Q. They made a report and suggested as a remedy for the decrease that was evident in the fishery then that we should close down by sections, that is shut off certain sections of the coast and stop all fishing there for a term of years, and then move those sections around until all the coast had been given a close season for lobsters. Do you think that would be possible?—A. Not unless they are prepared to feed the fishermen.

Q. And I suppose that the other recommendation that we should close down altogether for a term of years all over the coast?—A. That would still be worse.

Q. Are the most of those engaged in the lobster fishery regular deep-sea fishermen who go to other branches of the fishery when they are not fishing lobsters?—A. Yes.

Q. In a great many places we find that farmers, labourers, and people of that kind, who are not regular fishermen, fish lobsters?—A. The majority of those here are deep-sea fishermen, there may be a few others who are not regular fishermen.

Q. Do you think it would be wise to establish a standard of cannery? At present the license simply gives you the right to pack, do you think it would be wise in addition to that to insist that the cannery should be up to a certain standard of perfection? There are a great many canneries that are very poor affairs and it has been suggested that we should insist upon the cannery being up to a certain standard, that the tables be covered in a certain way and that certain provisions for absolute cleanliness be provided?—A. I can only speak for myself, I do not think it is necessary.

Q. Is it not the case that there is a considerable quantity of inferior pack put on the market?—A. I cannot speak of any but my own.

Q. But is it not a fact that such is the case?—A. Well, it is complained of.

Q. Is that not due to the canneries?—A. No, it is the quality of the lobsters caught down in the Gulf of St. Lawrence that is inferior to ours. I have worked in Antigonish for five years and I know what the lobsters are.

Q. In what way are they inferior?—A. The meat is inferior to our meat, it is darker when canned.

Q. Do they take an inferior rank in the market and bring a lower price?—A. Yes.

Q. Do you think the product of the canneries should be subject to inspection?—You know the tendency of the day is to inspect all food products, and to require an official guarantee as to their condition?—A. Well, I can only speak for myself, I do not need any.

Q. You sell by your mark?—A. Yes.

Q. And that is sufficient guarantee?—A. Yes.

Q. Do you think it would be in the interests of the trade generally that it should be done?—A. No.

Q. How does the price paid this season compare with the price paid last season and the previous season?—A. For the canned goods?

Q. Yes, for the canned goods?—A. About one-third.

Q. There was a drop of one-third?—A. Yes.

Q. That drop was caused by what?—A. I suppose over production, I do not know.

Q. By over-production?—A. I suppose so, or it may have been that they got so dear the people could not consume them.

Q. Are you aware of any instances where the fishermen have lost their catch of lobsters by the canners refusing to accept them?—A. No.

Q. It has been alleged that in some cases the fishermen have suffered injury by the failure of the canners to operate their factories for which they held licenses, although a sufficient supply of lobsters was available?—A. Not in this locality.

Q. Would the fishermen in your neighbourhood, have any market for their lobsters if the canneries were closed?—A. No.

Q. Which branch of the lobster industry do you think is the more remunerative to the fisherman and less calculated to deplete the fishery, the canning or the live lobster trade? You have already answered that of course in another way?—A. Yes.

9-10 EDWARD VII., A. 1910

Q. Can you give me any idea what it costs to put up a case of lobsters?—A. You mean the labour.

Q. I mean the total cost; what is a case of lobsters worth when it leaves the factory, what has it cost to manufacture?—A. That is the lobsters, the cans, the labour and all?

Q. Everything?—A. Well, some years it is different of course, we pay different prices for the lobsters, but I would say that this year the lobsters in the case cost about \$13.50.

Q. To manufacture?—A. Yes, I can only speak for my own locality, of course.

Q. Have you any experience in the matter of hatcheries, you say that you have fished or packed in the neighbourhood of Antigonish?—A. No, none.

Q. Was the Cariboo hatchery in operation at that time?—A. No, not at that time.

Q. You have no experience there since it has been in operation?—A. No.

Q. Do you think the department should establish more hatcheries?—A. Yes.

Q. Do you know anything about lobster pounds?—A. No.

Q. Do the facilities exist in your neighbourhood for the establishment of pounds?—A. No.

Q. You want, of course, a sheltered spot, with a free supply of salt water?—A. Yes, no fresh water, we have no place of that kind where I am. We have no place there but what has too much fresh water, or else it is rough.

Q. Has there been any fishing out of season along this coast, or any illegal packing done after the close of the legitimate season?—A. Never that I knew of.

.. Q. You say there never has?—A. No, never.

Q. What is your idea of the value of labelling the lobster cases, does it serve any good purpose, and is there any object in continuing it?—A. No.

Q. Of course it was introduced with the idea of putting a stop to illegal packing. Would it have that effect?—A. No, not as far as I know, it would not.

Q. If there is no illegal packing done here there is not much to be gained by labelling the cases?—A. No.

Q. Do you think it would be right and fair to increase the fee paid by the canners? At present it is a mere nominal affair?—A. No, I do not think it would be.

Q. Some canners have told us that they would be prepared to pay an increased fee, and in fact they have recommended that the fee be increased with the view of raising a fund for the protection of the fishery on the ground that the fishery should pay for its own protection?—A. No.

Q. Is there any fishing done here in bays or lagoons and other shoal water?—A. No.

Q. Or is it mostly confined to the offshore fishing here?—A. It is confined to offshore fishing.

Q. Is there anything you think of that you would like to suggest?—A. No, there is nothing, you have asked me about everything I could have spoken of.

Q. You favour the continuance of the present season as I understand it?—A. Except the limit.

Q. You would like to have the limit reduced from 9 to 7 inches?—A. Yes.

Q. Do you think if it were fixed at 7 the law could be strictly enforced?—A. By making every fisherman an officer.

Q. Then we would not gain very much by reducing the limit?—A. Except the license which would cover that I suppose, and there will be the declaration, it is impossible to stop it any other way.

Q. It has been suggested that one method of protecting the fishery would be to do away with the size limit altogether and provide a regulation space between the slats in the trap, to insist on that, and to somewhat shorten the season as the remedy most easily enforced. It is very difficult to enforce the size limit.—A. It is, and it is hard with reference to the traps, because there are some localities where the lobsters are all

SESSIONAL PAPER No. 22a

small, and it is a rare thing to have them over 9 inches, and if you make the law that the slats must be a certain distance apart those people would not be able to catch lobsters at all.

Q. Do you think in the beginning the lobsters were all as small in those localities?

A. They were always small.

Q. You do not think they are as big in the Gulf of St. Lawrence as they are on the Atlantic coast?—A. Never that I have seen.

By Mr. Webber:

Q. How far apart, in your opinion, should the slats be in this county of Lunenburg?—A. Well, there are some localities here where the lobsters are smaller than they are in the Gulf, take St. Margaret's Bay, you can get seed lobsters 7 inches long there, it is a rare thing to get a large one, they do not average two in a hundred over 10 inches.

By the Commissioner:

Q. Is not that due to overfishing?—A. No, it is the smooth sandy bottom they are on, so that you cannot make a general law to affect all districts that way. It would be a great thing for the canner if there were no small lobsters.

By Mr. Webber:

Q. Is there any money in it for the canner to buy small lobsters?—A. If you could buy them cheap.

Q. At the price you have been paying?—A. Oh no, I would sooner not see any.

By the Commissioner:

Q. It is not profitable to can any under 7 inches?—A. No.

Q. Is it the case that it takes 9 seven inch lobsters to fill a pound tin?—A. Yes, I think it would take about that—no I do not think it would take nine; you often find a 7 inch lobster with more meat in it than a 9 inch lobster.

Q. Proportionately the medium sized lobster is a better one to can than the very large one?—A. Yes.

Q. On several occasions we have had the matter tested, and we found it takes 9 seven inch lobsters, one with another, to fill a one pound can?—A. I would not have thought that, I would think it would not take more than 8.

Witness discharged.

SALEM COOLE, fisherman, Fox Point, Lunenburg Company, called and sworn:—

By the Commissioner:

Q. How long have you been engaged in fishing lobsters?—A. I was 11 years old when I first struck out at lobster fishing.

Q. How long ago was that?—A. Well, I am 49 years of age. I have dropped out of lobster fishing a portion of that time, but I caught lobsters the second year that lobsters were caught on the west side of St. Margaret's bay, George Knox and William Fittin were the first men who came into the lobster business down here, and my father bought their outfit and I was in with him as a boy.

Q. At that time were there any canneries in existence, that is about 37 years ago?—A. There was a cannery in Halifax county.

Q. Was that the only cannery about here then?—A. The only one in St. Margaret's Bay.

Q. Do you remember who it was run by?—A. There was a man by the name of Baker there at that time, but I do not know whether he owned it, the Portland Packing Company were also operating there.

9-10 EDWARD VII., A. 1910

Q. You owned your own boat and gear?—A. Yes.

Q. And you have always done so since you were engaged in fishing?—A. Yes.

Q. And the fishermen do generally about St. Margaret's bay?—A. Yes.

Q. When you are not engaged in lobster fishing do you engage in other branches of the fishery?—A. Yes, I fish for my living.

Q. That is the deep sea fishery?—A. Yes.

Q. When do you begin lobster fishing?—A. The 15th of December.

Q. Where do you put your traps then, in what depth of water?—A. We set our traps generally in from 4 to 18 fathoms.

Q. How far off shore would 18 fathoms of water take you?—A. In some places about half a mile.

Q. You put them out there and fish there through the latter part of December, how long do you continue fishing out there?—A. We generally fish until the latter part of January or February, it is according to the conditions, sometimes we get knocked out by gales, at different times I have had to haul up the remnants of my gear, what was left.

Q. Are you bothered here by ice at all?—A. When February comes in we are.

Q. That is local ice, made in the bays?—A. Yes.

Q. There is no gulf ice here?—A. No; I have been in the ice as long as half a day trying to get to shore.

Q. Have you always fished the same style of trap?—A. No; the first one we fished was the old-fashioned trap—the double-headed trap.

Q. Did you ever fish hoop nets?—A. Hand pots?

Q. Yes?—A. Yes, I have fished almost as many kinds of traps as any man that ever fished.

Q. When did you fish them? They have gone out of fashion now; the old-fashioned traps are not used here?—A. Well, these last two seasons we have given it up, but we have been following it up all the time we were lobster fishermen.

Q. Do you fish in shoal water?—A. Yes, in the spring of the year we fish in from 6 to 1 fathoms.

Q. Do you fish them at the same time you are fishing traps or after you take in the traps?—A. At the same time as the traps.

Q. How many traps do you fish?—A. Lobster cages or hand traps?

Q. Cages?—A. We fish on an average 140 traps to a boat—130 to 140.

Q. Is that a one man boat?—A. Two men to a boat.

Q. Do you fish them on trawls or single lines?—A. Single lines.

Q. Is that the practice here generally, trawls are not used?—A. In about the bay.

Q. How many hoop nets do you use?—A. Generally 40, that is where we set.

Q. Do you get the same kind of lobsters in the hoop nets as you do in the traps, or are they a smaller run of lobsters?—A. They are generally about the same, but in the pots late in the spring you get more berried lobsters.

Q. As to the berried lobsters, when do you see most of them?—A. When do we see most seed on the lobster?

Q. Yes?—A. Oh, well, there are more of the berried lobsters late on in the season than there are in the early part, but sometimes you catch lobsters with more berries on at one time than you do at another. Sometimes you get lobsters in winter actually loaded up with seed, and sometimes they would have none.

Q. Will you see many of them in December?—A. Yes, we get a few in December.

Q. With just as large a bunch of eggs on them as at any other time?—A. Yes.

Q. You haul up at the end of January?—A. We pick up about that time.

Q. When do you generally begin again?—A. About the 1st of April.

Q. So that you do not fish in February or March?—A. Not these late seasons, but I have fished all through.

Q. You have kept the gear in the water all the winter?—A. Yes, I have.

SESSIONAL PAPER No. 22a

Q. Is it the general practice with other fishermen, or is it the rule not to fish in February or March?—A. Yes, it is the rule, because we cannot catch anything.

Q. Is that because the lobsters back off shore, or what is the trouble?—A. They will not crawl when the season comes along—the lobster is a very queer fish when you come to understand him; he is a fish you can have your gear out, and it will be a very fine night and the lobster will not move at all, he will not crawl, but other nights the lobster will move and crawl, though on moonlight nights and with smooth weather the lobster will not move, whereas on a dark rainy night when it is rough he will crawl.

Q. Have you any idea of the percentage of lobsters caught that are berried?—A. Out of the whole quantity you get?

Q. Out of all that you catch what proportion of them will be carrying berries extruded?—A. Taking it on the whole?

Q. How many out of every hundred lobsters would you say have berries?—A. We would get four or five.

Q. Is that about the average? There are not more than that?—A. I would not think so.

Q. Can you give me an idea of the smallest lobster bearing berries you have seen?—A. Yes, I have seen them seven and a half inches.

Q. But I suppose you have not seen many of that size?—A. No, not many.

Q. What do they generally run?—A. From 8 inches up they have spawn on them.

Q. Have you ever seen any very large lobsters carrying spawn, the biggest lobsters?—A. Yes, I have seen them with spawn.

Q. Do you notice as the season advances that the spawn looks ripier?—A. It looks some ripier.

Q. Have you ever noticed the eye of the young lobsters through the egg, under the shell?—A. Yes.

Q. You would not see that in the berries on the lobster in December?—A. No, the berries then are hard, dark and black, and as the season goes on they get light when it comes along in June or the latter part of May, the closer it comes to maturity.

Q. Do you think they come inshore to the warmer shoaler water to spawn?—A. Yes, the lobsters as a rule will begin to move into the shore in the middle of April, and as May comes along we will get the seed lobster in a fathom of water, they come inshore to lagoons, that is on the lee side of reefs and shoals; I have fished in places with these pots that I hauled up, and I found I was catching berried lobsters, and I made a practice myself of throwing them in the water. Mr. Webber can tell that by hearsay, as there are lots of men saw me do it.

Q. Do you think it would be wise to prohibit that sort of thing at that time of the season?—A. Yes, it would.

Q. What do you call those hoop nets here?—A. Hand pots.

Q. We call them hoop nets inside.—A. A man that will catch lobsters with them should be punished, it should be made a criminal offence to be found with them in a boat.

Q. Do you think the fishermen are generally becoming aware of the necessity for protecting and preserving the lobster?—A. The fishermen are as a whole coming to see that by killing the seed lobsters they are killing the goose that lays the golden egg.

Q. What used to be the practice?—A. The practice used to be to catch them and wash them off; I have been out with my gear and saw them washing the eggs off the lobster when the smack was coming, but I have not cleaned any myself.

Q. Is it difficult to tell that the lobsters have been washed?—A. The lobster will die in a very short time after it is washed, you generally can tell whether they have been washed if you just know how.

9-10 EDWARD VII., A. 1910

Q. Are you fishing many more traps now than you used to when you began?—
A. Yes, we are fishing more gear now.

Q. Does it take more gear to keep up your supply of lobsters?—A. I do not know if it does, we find that the more gear we have the more lobsters we catch.

Q. How would you fare if you used the same amount of gear now that you did when you commenced fishing?—A. We could not get as many lobsters, they are not as big and they are not as many as when we commenced to fish first.

Q. Do you think they are not as many?—A. There may be as many but they are not as large.

Q. Do you think there is anything in insisting on a larger space between the slats in a trap, would it allow more small lobsters to escape?—A. I do not think it would be any good; of course if you did fix a standard you would not catch the small lobster, but the fisherman who would take the small fish would do almost anything. There are lots of boys go fishing and catch the small lobsters, and if they cannot sell them they are just as likely to kill them as to put them back in the water.

Q. That is not very generally done, is it?—A. No, I have not seen it done.

Q. Do you make your own traps?—A. Yes.

Q. How do you measure the space?—A. Once on a time we used to take the lath, but we do not now, we put them closer together.

Q. You put them closer together now?—A. Some of us do.

Q. Do you use the head of the hammer now as a gauge, or what do you use? Or do you go by guesswork altogether?—A. We go by guess work. Generally we would take a lath and make it the one width along.

Q. What space used you to leave in the beginning when you made your traps?—
A. The width of a lath.

Q. What would that be, $1\frac{1}{2}$ inch?—A. Yes, I would say it is about that.

Q. And what is the average space now?—A. I would say it would not be above an inch.

Q. Then the space has been narrowed down for the sake of holding the small lobsters?—A. Yes, and the mesh too.

Q. What mesh do you use?—A. Two and a half inch.

Q. Do you use the same kind of hoop, or is it smaller; I mean the hoop you put in the head?—A. I use a larger bow now than I used to; we formerly used a smaller size than what we are using now.

Q. What led you to change it?—A. I came to the conclusion that the large lobsters could not get into it.

Q. And do you find that you are catching a larger run of lobsters by reason of having increased the size of the bow?—A. Yes, I do get more large lobsters.

Q. When you disturb the trap by hauling it up do you think the small lobsters try to get out or do they seize hold and hang on?—A. The lobster when you are hauling the trap will swim all around the trap and try to get out, some of them, and others will just hang where they are when you start moving the trap.

Q. But some will try to get out?—A. Some will swim all around and try to get out, and some actually do get out.

Q. What do you think of this proposition to ask the fishermen to take out a license? You understand the idea which is that the fisherman should go to the fishery officer before commencing lobster fishing, and apply for a form of license, he would not probably have to pay anything for it, but this license would recite the law and the fisherman would have to sign it and it is thought he would then feel bound to comply with that law?—A. It would be all right, he would not then be ignorant of the law and so I think it would be all right.

Q. Do you think any fishermen are ignorant of the law?—A. Not many on this coast, I don't think they would be.

Q. Do you think that the fisherman having signed that form would be more apt to obey the law?—A. Yes, I think he would.

SESSIONAL PAPER No. 22a

Q. Do you think he would be inclined to lodge information if his neighbour was violating the law?—A. If his neighbour was an enemy he might.

Q. Some people think that would be a gain and others think it would mean a great deal of extra trouble to follow it up.—A. You can have your own idea of it, but I do not think it would cut much figure.

Q. Other people suggest swearing the man that he will not do wrong?—A. A man that is actually a fisherman knows what he should do, I know what I did, I was the first man on the south shore of Nova Scotia who fired away the seed lobsters, I went to the smacker and told him I would throw away all the seed lobsters I could find because I knew what it meant if they were destroyed.

Q. Do you think that the destruction of the seed lobster in years gone by has affected the supply of lobsters?—A. Yes, sure. If you have 50 hens laying eggs and you kill them you can't get chickens by allowing only the male birds to live.

Q. As to the matter of price, what did you receive for lobsters this year?—A. Canning lobsters and market lobsters, I sold my lobsters to Mr. Redden for \$2.25.

Q. Last year what did you get?—A. Last year I think I got \$3.75.

Q. That was by count?—A. Yes.

Q. Do you count the small lobsters two for one or do you count them just as they are?—A. Just as they are.

Q. Was that the highest price you ever received, \$3.75?—A. I have received more than that for lobsters.

Q. They have been higher than they were last year? Most places the fishermen got more last year than ever before?—A. This last season?

Q. I mean 1908?—A. I think that was about the highest we ever had for lobsters, the season before last.

Q. Did you understand the cause of the drop this year in the price?—A. I understood it was the financial crisis in Europe, but some people claimed it was the old stock.

Q. Are the fishermen generally in your neighbourhood satisfied with the return they get for the sale of their lobsters?—A. They were not satisfied this spring.

Q. But though they were not satisfied they knew there was a reason for it?—A. Yes.

Q. Do you think that the fishermen generally would make more money if they were canning on their own account than they do by selling their lobsters?—A. No, not the way I look at it, I consider that selling is away the best.

Q. Do you expect the canner to take all the lobsters you bring to him regardless of size?—A. The lobster boats comes to us for the lobsters.

Q. That comes to the canner all the same, do you expect the smacker to take all the lobsters you get without respect to the law?—A. He is in the habit of doing that.

Q. Do you throw any away?—A. None but seed lobsters.

Q. How small do you get them down to, what size?—A. I do not think I get very many under 7 inches.

Q. You do not get very many under 7 inches?—A. I do not think I do.

Q. Do you ever see lobsters under 7 inches? How small do you see them?—A. I have seen them 2 inches long.

Q. Do you get them in the traps that size?—A. Oh, no.

Q. Do you see them along the shore?—A. I see them along the shore.

Q. Do you see many of those very small lobsters?—A. Not many.

Q. They do not begin to come in until they reach about what size?—A. Well, it is according to the locality where you fish, if you fish in a cove with sandy bottom and eel grass you will catch small lobsters, but on the rocky shore where we fish I don't find many lobsters under 6 inches.

Q. But you think in shoaly and sandy places you get the small lobsters?—A. In places with a sandy bottom and coves with eel grass we get more small lobsters than we do in deep water.

9-10 EDWARD VII., A. 1910

Q. Would you advocate the abolition of fishing in places of that kind? There is a regulation where I come from that you must not fish inside of two fathoms?—A. I do not think it would be any good around where I live because we have a rough shore.

Q. They used to carry on lobster fishing in shoal water with trawls, cod head on lines, and that was prohibited?—A. There is nothing like that carried on here.

Q. Do you think where it is carried on it should be stopped?—A. Oh, yes, it should be. The lobster when the water gets warm will go almost anywhere he can crawl.

Q. Now, what is your own idea with regard to the regulations, what should they be with a view to protecting the lobster industry? Your opinion is that the fishery is failing, that you are catching a smaller run of lobsters generally than you used to?—A. Yes, I know all that.

Q. What would you do yourself, what is your own idea? You must have thought the thing over and discussed the matter with other fishermen?—A. Yes, I have talked it over.

Q. What do you think is the right thing to do to protect the industry?—A. The right thing to do is to have a close season if you want to protect the lobster and give it an opportunity to grow up, stop every man fishing.

Q. Stop it for how long?—A. You should stop it for seven or eight years.

Q. What would become of the bulk of the lobster fishermen in the meantime?—A. I guess we would starve, that is what it would mean.

Q. Is there anything else the fishermen could turn their hands to during that time?—A. Not that I know of; myself I depend upon the lobsters for a livelihood more than on anything else.

Q. What is your average catch, how many thousand pounds would a good fisherman take in a season?—A. We do not sell it by the pound, but by the hundred.

Q. How many thousand lobsters do you catch?—A. I could not exactly tell that.

Q. What does a good lobster fisherman get in revenue in his season's lobster fishing?—A. Last season we only fished a short time and all we got last year was \$75, although really we had only fished a fortnight.

Q. What is the best you ever did in your lobster fishing season?—A. We made in spring and winter fishing \$300 for the boat.

Q. In your season?—A. Yes.

Q. That has to be divided between two men?—A. Yes.

Q. What is the value of the boat?—A. The boat would be worth about \$20.

Q. What is the trap worth with gear?—A. It will be worth \$1 rope and all.

Q. How long will the trap last?—A. It is according to what kind of weather you have, you may make a trap and have it smashed the first night you put it out, and others again will not last very long before they get smashed, but if nothing happens you may fish them four or five seasons.

Q. You fish 150 traps, how many do you have to make every year, take one year with another? What proportion of your gear do you have to renew every year?—A. Out of 160 traps we put out this spring, every one went out of existence, smashed up. Last season we made about fifty.

Q. You will have to make more?—A. I do not think I will make any more, I rigged up what was smashed, but this winter fishing is what knocks a man's gear to pieces.

Q. What do you think of the fishing season, is it right as it is?—A. Well, I would like to have a little change made in it. I would advocate commencing on the first of December.

Q. And would you cut anything off the other end?—A. No, I would not cut anything off the other end, at the same time it is well enough the way it is, it suits me, and I do not care very much, but if I made any change in it at all, I would have it start a fortnight earlier in the fall, and we would not have as many gales to contend with.

SESSIONAL PAPER No. 22a

Q. But here we have a failing fishery, it is manifestly decreasing, and it is not likely that the period of the fishery could be extended, it would be more apt to be shortened than lengthened.—A. The Commission will have to use their own judgment, they will not listen to me anyway.

Q. The evidence of the majority of the fishermen will count for something, surely?—A. I think it is all right as it is. I see that a committee last winter, some members of it, advocated extending the season up to the first of July, I would not advocate that.

Q. That was Professor Prince, was it not, in his evidence?—A. Yes, I think it was.

Q. He believes in having one season all along the coast, from the first of January to the 15th of July.—A. He does not have to work in the gales along the coast as I have, or he would not talk as he does. It is all very well for him to talk about that, but if he had to work along the coast in an open boat he would be blowing on his fingers as I do sometimes.

Q. Have you ever shipped lobsters alive to the market?—A. No, I have not.

Q. Have you any idea which, the canning or the live lobster trade, is the best for the fisherman?—A. In my locality the canning is best, that is if we can get the law down to 7 inches, and if we cannot do that, and the limit is fixed at 9 inches, there will be more money in the live lobster trade.

Q. That is if it is fixed at 9 inches?—A. Yes, it would knock the canner out entirely.

Q. Would not a strict enforcement of the 9-inch limit now knock the fisherman out too?—A. To a certain extent it would.

Q. Do you think anything would be gained by sending somebody to meet the fishermen in various localities and explain to them the necessity for observing the regulations, especially in respect to the berried lobster. You know the Department of Agriculture sends out men to lecture to the farmers and to advise them with regard to the management of the soil, the best cattle to breed, the best system of rotation of crops to adopt; would anything of that kind be of any use to the fishermen?—A. I do not think it would, because the fishermen are up to date and are very well informed; and if there were a law passed they would soon learn what the law required of them, but of course it may be all right for the department to do it.

Q. It has been recommended that that be done.—A. That would be all right, of course we could come and hear the lecture, it would not hurt any man to do that.

Q. A great deal might be told them about the history of the lobster?—A. He would be a very bright man who could make the lobster fisherman know more about that than he does already.

Q. Who should be blamed for the capture of small lobsters under 9 inches, the canner or the fisherman?—A. You might blame the fisherman, I should think, more so than the canner, because if the fisherman would not catch them the canner could not buy them.

Q. On the other hand some people are inclined to lay the blame on the canner, they say that if the canner did not take them the fisherman would not catch them.—A. I do not want to put too much blame on the fisherman, but if the canner would not take them the fisherman would not catch them, and, at the same time, if the fishermen did not take them the canner could not buy them.

Q. What is your principal fishing after the lobster?—A. Mackerel and cod fishing.

Q. From which of all the fisheries do you derive the most of your income?—A. From the lobsters.

Q. Is it of the most importance to the fishermen along the coast generally?—A. Yes, the mackerel fishery has failed, we cannot catch enough to pay for our gear. I have to-day 310 fathom of line lying in the water and this morning I had six mackerel.

Q. Are there no herring?—A. No, no herring.

9-10 EDWARD VII., A. 1910

Q. Do you think an increase in the number of canneries would result in more lobster fishing?—A. It might in some localities, of course I do not know the situation along our eastern shore, but I have fished in the Northumberland Straits and down there it might result in an increase in the fishing.

Q. Down there the cannery, most of them, supply their own gear?—A. Yes, they did when I was down there.

Q. Where did you fish down there?—A. Pictou Island.

Q. How long ago; was the hatchery running there then?—A. I fished there 25 years ago.

Q. There was no hatchery there then?—A. No.

Q. Who ran the cannery then?—A. A man by the name of Shea.

Q. What sort of lobsters did you catch down there?—A. The majority of the lobsters were small, a lot smaller than on this coast.

Q. Was there any difference in the lobsters do you think generally?—A. The lobsters down there seemed to be softer than we have on our coast here.

Q. They were softer meat?—A. They seemed to be softer meat and a different class of lobsters. The shell of the lobster on the whole seemed to be softer; of course they were more plentiful when I was there. Each time I went to my gear there I brought ashore 2,400 lobsters on an average, I have it in my book at home.

Q. And how much were you paid then?—A. So much per hundred, and I got \$15 per month. I do not remember just how much I got per hundred, but it was not much.

Q. Do you think there is any combination among the packers to keep the price down? You know complaints have been made to the Department by the fishermen that there is such a combination?—A. Well, I believe there was a combination this spring among the packers to protect themselves.

Q. That is a very reasonable combination, we all try to protect ourselves.—A. I believe, of course I do not want to say too much, that probably they could not pay any more, and I think it is better for the canner to pay what he could and run his business than it would be for him to pay an exorbitant price and be knocked out of business. I believe it would be better for him and for the fishermen both.

Q. There is no general complaint against the cannery here, on the part of the fishermen?—A. No, none that I know of.

Q. There is no Fishermen's Union here?—A. No.

Q. Would a strict enforcement of the 9-inch limit here put you out of business?—A. Pretty well, yes.

Q. I think you told me that the best time of your fishing is in December?—A. Yes.

Q. I do not know of anything else that I want to ask you, is there anything that you think of yourself?—A. No, I guess I have told you about all that I know. I would not like the Commission to make a law to knock us out of our lobster fishing because it is a big industry to me, and I make my living by fishing; if I could not fish lobsters I do not know what I should do, because I cannot get mackerel sometimes. I tell you there are men who are not lobster fishermen who are making more howl that the fishermen about canning. I have caught lobsters late in the season, when it has been a very cold season, and have found them with sand sticking on their heads a half inch thick where they have been in retreat. The fishery is affected a good deal by the elements and the weather.

Q. In the old days when there wasn't any overfishing did you have bad seasons as well as good ones?—A. Yes, I have seen seasons that I thought myself we would never get any lobsters; I know one season when the railway was building here, that is several years ago, I was fishing with my son and in the first part of the season the lobsters were very scarce, and along about the middle of May the lobsters came along the shore and then there were lots of lobsters, fully one third of them were large, so that we had good fishing. Some seasons they will haul off and other seasons they come on.

Witness discharged.

SESSIONAL PAPER No. 22a

HARRY EVANS, packer, Chester, called and sworn:—

By the Commissioner:

Q. How long have you been connected with lobster packing?—A. About 15 years.

Q. Always from this centre?—A. Yes.

Q. What is your opinion of the condition of the fishery to-day as compared with what it was when you began?—A. I think the conditions are about the same, the lobsters are a little scarcer, something like that, but there are more fishermen to get them, and there are more traps in the water.

Q. How is it as to the run of fish, do you find that the average size of the lobster is decreasing?—A. They are decreasing some, but not a lot.

Q. What is the average of your pack, how many cases do you generally pack?—A. In a year?

Q. Yes?—A. About 550.

Q. What is the best you have ever done?—A. 822 cases.

Q. How long ago was that?—A. I think it was about five seasons ago.

Q. Was that due simply to the fact that it was a better fishing season?—A. Better weather.

Q. That was done with the same average amount of gear?—A. Yes, It was the same fishing all right.

Q. You smack your lobsters? From what distance each side of here?—A. From 14 miles one way and 9 miles the other.

Q. Are there many other canneries within that limit?—A. There is only one canner, but those cannerymen from here go out to our ground, and we go in on them.

Q. Now, as to this matter of the combine, is it to your knowledge that there is anything of that kind in existence?—A. A combine?

Q. The charge is made that there is a combine between the packers to keep down the price?—A. We have no combine, we simply pay what we think we can. We agreed to pay a price this season, but it was not as low as it should have been, according to how it turned out.

Q. That is this season?—A. Yes.

Q. Do you think still you paid too much?—A. Oh yes.

Q. I think you undoubtedly paid too much last year?—A. We did this year too.

Q. In your case all the fishermen own their own boats and gear?—A. Yes.

Q. It is not the custom of the canner around here to provide it?—A. No, not in this county.

Q. Does he make advances to the fishermen generally, or supply them with bait?—A. Nothing but bait, well, sometimes he supplies them with twine but nothing that is really worth speaking about.

Q. What, within your experience, is the average earning of an active fisherman?—A. Well that is a pretty hard thing to get at; you see we send our smackman out and he simply keeps tab of his day's catch, if he has 2,500 that is all we know about it, he has the names in his book and can tell us what fishermen he got them from, but we never know anything about it.

Q. Are the fishermen usually selling to more than one canner?—A. Oh yes,

Q. The fisherman is not obligated to sell to one man?—A. Oh no.

Q. There is then some competition among them?—A. Oh yes.

Q. Are the smackmen authorized to offer a little more?—A. I think not.

Q. We have heard complaints, especially among the fishermen where there is a Union, that they are bound down by a hard and fast rule to sell to the one canner?—A. I do not think they are bound down to any canner, they get all there is in it, in fact they get more than is coming to them sometimes.

Q. In 1908 there was a competition among the canneries, was there not?—A. Yes.

9-10 EDWARD VII., A. 1910

Q. There did not seem to be any combine among them to keep prices down that year?—A. Well, it was the same as it was this year, they could not afford to pay any more, but then the packers got crazy.

Q. We find that in a great many places in 1908 the price rose from what it was in the beginning, and towards the close of the season there was a good deal of competition, the canners were evidently very anxious to get the fish, and that is what ran the prices up.—A. Are you talking about this county?

Q. Not about this county in particular, of course we have only just struck this county, but in other counties it did happen?—A. Yes.

Mr. Webber, Fishery Officer.—I can say that there is very severe competition here on account of steamers coming in here. Mr. M. Neville's steamer ran in here and the Roberts, Simpson & Company's steamer from Halifax also runs in here, and they buy not only the market lobsters but the canning lobsters also, so that competition here is very keen.

By the Commissioner:

Q. Do you export your own lobsters or sell them to the cannery here?—A. Export.

Q. Where is your principal market?—A. Liverpool.

Q. What is the principal part of your pack here, in what shape do you export them generally?—A. Half pound flats.

Q. What would be the consequence, in your opinion, if the law with regard to the 9-inch size limit were strictly enforced here?—A. I think the packers would go out of business, and I think that the fishermen would also, in a year or so, be out of business themselves, because they would have to send their fish to the United States and it would not pay them, they would get nothing for them.

Q. There would be such a large quantity of lobsters poured into the United States market that it would spoil it?—A. Yes, those of us here who are in the business know, we do not ship anything, we know that the alteration in the size limit in Boston from 10½ to 9 inches has ruined the big lobster business here.

Q. Do you think there is any more disposition on the part of the fishermen to observe the regulation with regard to the berried lobster than there used to be?—A. Oh yes, in our section of the coast the berried lobsters are looked after in good shape, we never see a lobster come in washed now where five years ago you would.

Q. Do you think that you are beginning to realize any benefit from that?—A. Oh well, we must.

Q. Do you think that the decrease in the fishery has stopped? In some places they say they do not recognize any decrease at all the last five years, that the decrease took place years ago.—A. Well, with regard to this county I do not see very much decrease at all.

Q. There is no decrease in the total output?—A. That is what I mean, there is no decrease, they may have to fish a little harder for them, of course you cannot go by this year, which was poor on account of the bad weather in the beginning. Of late years I know we have packed what we always did, of course 10 or 12 years ago it was different.

Q. What proportion of the total catch do you think is below the legal size limit?—A. I haven't very much idea about that.

Q. How do they run in your cannery?—A. This season they run a little over 6.

Q. Do you think it varies from season to season?—A. Oh quite a bit, some seasons they are quite a bit, larger than others, but this season our lobsters went 6, that is from 10½ inches down.

Q. That is not including market lobsters. Are you in the habit of canning everything or do you export any?—A. We export the large ones, from 10½ inches up, but not from 10½ inches down, the mediums.

Q. You can from the 10½ inches down?—A. Yes.

Q. Have you given any thought to that question of the export trade? A great many people are of the opinion that it would be better to cook the lobster here and

SESSIONAL PAPER No. 22a

export it in cold storage rather than sending it alive to the market.—A. I do not think we could do that here, I have never given it a thought.

Q. It is the opinion of a great many people that the lobster must deteriorate by the delay in transport, and by the fact that it is taken out of the water and then shipped in cars to Boston and put in cars there again and all this time the lobster is losing in quality and cannot be nearly as good as if it were cooked immediately on being taken from the water, and chilled. They say that a better product could be put on the market if the lobsters were exported in a cooked and chilled condition, and they could be sent to more distant markets.—A. They could only do that in Boston, I would say, I do not think we could do anything of that kind here.

Q. Could they not be shipped from here frozen?—A. We would not have the conveniences to do that, it would not be easy to do that here, I think.

Q. Has any attempt ever been made, within your knowledge, to ship lobsters alive to the old country?—A. No.

Q. To what do you attribute the decrease that is supposed to have occurred in the lobster fishery, to overfishing and the destruction of the egg lobster, or to what cause?—A. As far as I know it is on account of the weather; we always pack as many cases of lobster now as we did, that is if we have a decent spring.

Q. You do not think there has been any decrease?—A. Oh, there must be some decrease, of course, but there are a great many more traps to catch them and we get them anyway.

Q. Would you favour reducing the size limit to 7 inches, that has been suggested?—A. Yes.

Q. And in return for that what would you propose to do?—A. I would propose to have these traps.

Q. Made according to standard?—A. Made so that the small lobster can get out.

Q. Do you think there is really anything in that? There are a great many fishermen and canners tell us there is nothing in that?—A. There is enough in it that if you had the laths far enough apart to allow the lobsters from 7 inches down to get out there are lots of them would go, otherwise they would not.

Q. What would you fix the standard at?—A. As to the laths I could not answer that because you would have to find out what space it should be, according to the size of the lobster.

Q. It is undoubtedly the fact that in your lobster fishery when it first commenced the space allowed was an inch and a half, that is my experience, and that they have gradually narrowed that space down; now there must have been some reason for that and it must have been to hold the small lobsters. That has been the experience in connection with all fisheries, it has been the same with regard to the whitefish and the herring in the Great Lakes, that as the fishery has been overdone the fish have decreased in size, and the mesh in the nets has been continually made smaller and smaller. Apparently it is the same with regard to the lobster.—A. It seems to be.

Q. What would you say to abolishing the size limit altogether and trying to regulate that matter by means of the trap? The size limit is a difficult regulation to enforce, and it has been suggested that you could to a large extent regulate the size of the lobster taken by the space between the laths in the trap.—A. That is the 7-inch lobster or whatever it might be?

Q. Yes, by having such a space between the laths as would allow a certain proportion of the small lobsters to escape.

Q. The way I would regulate it would be to have a size limit of 7 inches and make the space between the laths accordingly so that it would let the lobsters from 7 inches down escape.

Q. If you had traps arranged in that way, that would be in the nature of fixing the size limit at 7 inches, but as it is the existing regulation is a very difficult one to

9-10 EDWARD VII., A. 1910

enforce—A. There is only one way to enforce that, and that is to appoint a man to go around to the fishermen. He could do much more that way than by going to the packers; advertise it first, and let him tell the fisherman what he should do, that he should put his laths one inch apart, or whatever the space may be, and he will do it, and then let the officer come around every spring and see that the traps are built that way.

Q. And what about the traps that are already in use?—A. Most of the traps were smashed up this spring. I know that up our way there were not 20 out of 100 left. There would be only one thing I can see, and that is to advertise, you cannot get a thing of this kind in motion in half a year, but tell the fishermen when they are making the traps for next season to make them in that way.

Q. Warning would have to be given in any case, but it would be perfectly correct to say that the traps made from a certain date forward must be of a certain standard, and I would suppose that where the average life of the trap is reckoned at about 3 years, what with wear and tear the whole of the traps would be renewed in 3 years.—A. That would give the fishermen a chance, if it were put that way that what new traps they made each year would be made according to the standard.

Q. And every one of the old style would, within about three years, disappear?—A. The way it is now if a man had his old traps ready he could not help it, but most of the fishermen haven't yet got their traps ready for next season.

Q. But such a regulation could not go into effect for next season. Is it the case that canners are compelled to accept undersized lobsters against their inclination and interest for fear of losing their fishermen?—A. No. I not think it is; they need not take them if they do not want them. But the fishermen will get the small lobsters, and they will tell a yarn to one smackman, and that smackman will tell our smackman that they are going to take them, and so they get the thing going.

Q. We have had a lot of canners who tell us that if they are too scrupulous about receiving the undersized lobsters the fishermen will sell them to the other canners who are less scrupulous.—A. If one canner will not take them the other one will.

Q. Some canners have told us that if they did not take the small ones they would not get any. What do you think of this proposal to ask the lobster fishermen to take out a license? Do you think there is anything in it, that it will have a good effect and be workable?—A. I do not think that it will be very much good, they will do the same then as they do now.

Q. What do you think of the practice of issuing canning licenses to aliens?—A. Well, I do not know, I think the way the thing stands now there are enough licenses.

Q. A good many licenses are held by firms that are not resident in this country, although they employ Canadian operatives, and the materials are all bought in this country; but some people, as you know, have been strongly opposed to the issue of licenses to alien companies.—A. Well, that is a pretty hard thing to stop, I guess, but we haven't any here.

Q. On the other hand it has been suggested that they were largely the pioneers in the business?—A. Certainly they were, when it started.

Q. And that they bring nothing into this country except their capital?—A. Of course that does not effect Canada at all.

Q. What do you think with regard to the season? Is the season as it exists here about right?—A. I do not see that we can make any change in it, I think it is about right.

Q. You would not suggest any change in it?—A. No, I think the way it is is about as near as you can get it, that is for this county.

Q. What do you think of this proposition to require a standard of fitness for all licensed canneries, insisting that the cannery must meet certain requirements, that the tables must be made and covered in a certain way, and that certain sanitary precautions

SESSIONAL PAPER No. 22a

must be observed?—A. Well, as far as we are concerned we have all our tables, we have everything we require and we cannot make any change in that.

Q. Of course that is not universally the case, we have seen many cases where the tables are not properly covered.—A. All our packers around here have the tables galvanized.

Q. Have the tables ever been covered with marble or glass around here?—A. No.

Q. What do you think of the proposition to subject the product of the cannery to inspection?—A. I do not think there is any need of inspection, we have clean water and everything that is necessary to put up our goods in first class style; of course there is nothing to prevent an inspection if necessary.

Q. That is not universally the case, do you think it would be a protection to the good and the careful packer to have a government inspection?—A. I do not think so, no.

Q. Do you think the individual fishermen would make more money if they were allowed to can for themselves than they would by selling their product to the cannery?—A. No, they would not make as much.

Q. Are you aware of complaints made by fishermen that the price paid for lobsters by the canners is unsatisfactory?—A. I am aware that they make the complaints, yes.

Q. It has been alleged that in some cases the fishermen have suffered injury by the failure of the canners to operate their factories, although a supply of lobsters was available. Have any such instances come under your notice?—A. No, not in our district.

Q. That has happened in this way, you know that in some places where there has been friction between the fishermen and the canner and canners have refused to give the fishermen what they asked, they have shut down altogether and left the fishermen without any market for their lobsters, although the canners held a license.—A. No, we haven't anything of that kind here.

Q. Have you any information to offer in the matter of hatcheries or pounds?—A. No, I haven't any knowledge about them at all.

Q. Would you favour the establishment of hatcheries?—A. Yes, I think I would.

Q. You would not get very many egg-bearing lobsters for the hatcheries here when you knock off fishing on the 31st of May?—A. Well, there are not many seed lobsters at that time of the year.

Q. Not at that time?—A. Of course, I suppose there would be lots of seed lobsters if the fishermen brought them in as they used to years ago, but they have not been bringing them in.

Q. Have you any idea of the spawning season of the lobster in this locality?—A. No, I have not, but I understand it is in August.

Q. Now, as to the matter of pounds, do the facilities exist along this coast for the establishment of pounds?—A. Well, they do not at our place, so far as I know there are none here.

Q. A great many people are of opinion that pounds have certain advantages over hatcheries, in fact that they more nearly approach the natural conditions?—A. Yes.

Q. Is it to your knowledge that there is much or any fishing or canning done illegally here after the close of the season?—A. No.

Q. Has it ever been done?—A. No.

Q. In that connection do you think that the stamping of cases is of any value?—A. I do not see that it is in our district.

Q. Do you know anything about fishing in shoal waters, in bays and lagoons?—A. No, I have never had any experience in that fishing at all. I have heard about it, but I have never done any myself, they say that when the season first opens fishing in the deep water is better, and that the lobsters come into the shoal water as the weather gets warm.

9-10 EDWARD VII., A. 1910

Q. Do you think that at the close of the season when they are in shoal water, a larger proportion of small and berried lobsters would be taken?—A. I haven't any idea about berried lobsters because for years we have not been taking them, the fishermen have been looking after the berried lobsters.

Q. What wages are paid to the principal hands in the cannery, what does your foreman get?—A. I do not know, I am the foreman at our own factory, and I do not get much.

Q. What is the ordinary wages of the sealer?—A. The average wage is about \$35.

Q. And he maintains himself?—A. No.

Q. You maintain him?—A. Yes.

Q. And the girls, how much do they get?—A. They get from \$12 to \$15 per month and boarded.

Q. Can you give me an idea of the cost of putting up a case of lobsters?—A. That will be proportionate to what we pay for them.

Q. On the basis of what you do pay for them?—A. At any particular season?

Q. At any portion of the season?—A. I know that last year we put up cases that cost us \$16 to the case when ready for shipping, that is for labour and everything, and we got \$15.40 for them.

Q. If any increased fee were charged the canner would it ultimately come out of the fisherman? Would it be charged up as part of the cost of preparing product?—A. Not the way we have been doing it, we have been backing each other so that I think if 25 cents a case were put on it would come out of the packer.

Q. Would it not ultimately come out of the fisherman?—A. I cannot see it that way.

Q. Is there anything else you would like to state or have you any further suggestions to make?—A. I have nothing more.

Witness discharged.

A. J. MILLETT, canner, Chester.—I have heard what the other witnesses have stated and they have fully covered my views, and have fairly covered the conditions of the fishery along this part of the coast.

ARTHUR STANFORD, canner, Chester.—I also agree with what has been stated by the other witnesses.

JOHN A. WEBBER, fishery overseer, Chester.—I expected a large number of fishermen from the Tancook Islands, but the herring struck in the night before last and they cannot come in, they are too busy.

Commission adjourned.

WEST DUBLIN, September, 9, 1909.

JOHN HIMMELMAN, fisherman, LaHave Island, called and sworn:—

By the Commissioner:

Q. How long have you been engaged in lobster fishing?—A. About 25 years.

Q. Always on this coast?—A. Yes.

Q. What is the condition of the fishery to-day compared with what it was when you began?—A. A lot of difference.

Q. Please describe in your own words what the difference is?—A. Well, I will tell you what I would like to say. I am well aware that lobsters have been taken these

SESSIONAL PAPER No. 22a

last years, everything, small and big, and we think that is the cause why the lobster fishery has gone down compared with what it was when I first began to fish, it was all right then.

Q. What number of traps did you fish at the commencement?—A. About 100 traps.

Q. Was that a single-handed boat or a two-handed?—A. Two men.

Q. What were the lobsters like in those days?—A. They ran a great deal larger than now, and you would get more than as many again as you get now.

Q. You caught some small ones then?—A. Yes, but nothing like as many as we catch now.

Q. Can you compare the catch that you first made with what you catch now?—A. The first that we knew of lobster fishing there were no factories, we used to fish lobsters and take them to Hlave River and peddle them; we caught the fish at any time of the year we liked then, we did not have to go far for them, but caught them right around home.

Q. How long did that condition of things continue?—A. It was not very long before we were obliged not to take any in the close season.

Q. And then the canneries were established?—A. Yes.

Q. And the fishery became general and more people worked at it?—A. Yes, every year more would commence.

Q. And you fish more gear?—A. Yes, I fish about the same quantity now as I did then, about 100 or 110 traps, but I do not always have the gear, because there is so much of it smashed.

Q. When do you commence?—A. I do not think there are any persons now fish before the 10th of April.

Q. Do you fish in December?—A. Yes, we fish in the winter.

Q. The season opens here on the 15th of December and closes on the last day of May?—A. Yes, sir.

Q. What is the best time of your fishery, when do you do best?—A. The last of April and up to the 20th of May, that is in the spring time.

Q. Do you not do well in December?—A. Oh, there are some lobsters taken then, but I would rather see none at all taken for the time, sometimes we do a little in the fall of the year, but not much.

Q. Are there as many fishing in December as there are in April and May?—A. No.

Q. What do you do with your lobsters?—A. Sell them to the factory.

Q. How many factories have you operating here?—A. Only one, Mr. Wamboldt.

Q. How about January?—A. There is no fishing done here.

Q. And February?—A. There is very little; we may fish for a while in January up to around the 15th or the 20th. Every person hauls his gear ashore, but sometimes they haven't any to haul ashore, the weather is bad, it is cold, and the lobsters are scarce then.

Q. When does the spring fishery begin?—A. From the 1st to the 10th of April, some persons commence ahead of others.

Q. In what depth of water do you begin?—A. Fourteen or 15 fathoms.

Q. Do you fish there throughout the season?—A. No, some we leave in deep water, and some traps we move in to 8, 9, 7 or 6 fathoms of water.

Q. Why do you move into shoal water?—A. Because the lobsters are coming in.

Q. In the total quantity of lobsters you catch what proportion will be below the legal size limit of 9 inches?—A. I tell you, the way they were these last years, they run almost half below that.

Q. What do you do with those small lobsters, are they all brought to the canner?—A. Oh, yes, they were all sold the last couple of years.

9-10 EDWARD VII., A. 1910

Q. He does not make any trouble about taking them?—A. No, nothing was said the last two or three years, and as long as there is nothing said the fisherman will take all he can get.

Q. Has the law ever been enforced?—A. It never was, there has been talk about it from time to time, but no systematic effort has ever been made.

Q. Was that so from the beginning?—A. No, it was only within the last eight or nine years that we got these little lobsters, but whenever we catch them they are always sold.

Q. That is to say that the smacks come around and the lobsters are taken?—A. Yes.

Q. In the early years were the lobsters smacked to the cannery?—A. Yes, they always came and collected them.

Q. And you expect the smackman to take all you have?—A. Yes.

Q. What was the practice with respect to the berried lobster?—A. We put them overboard when we get them.

Q. Was it never the practice to brush the eggs off?—A. Not that I know of, I could not say that I ever saw a man doing it.

Q. You say that the egg lobster has always been protected here?—A. Yes, every man that I know of always said he put them overboard when he got them.

Q. What is the percentage of the egg-bearing lobsters? How many would you expect to get out of 100?—A. In some hundreds you would not get one and in others you may get two or three.

Q. Do you find more of them at any particular period of the season than you do at another?—A. No, we do not; last spring there were very few, that was in our boat, but some boats will get more than others, because in some places there are more egg lobsters than there are in other places.

Q. Would you expect to find more in the shoal water late in the season than in deep water where you are fishing early in the season?—A. No, I do not see any more in the fall of the year than in the spring; there are not very many at any time.

Q. How is it with the fishermen here generally, do they own their own boats and gear?—A. Yes.

Q. They are not supplied by the factories?—A. No, we have our own boats and gear always.

Q. Is any portion of your catch shipped alive to market?—A. Yes, I think the big lobsters that are above 9 inches are shipped from the factory here by Mr. Wamboldt.

Q. But you sell them to the smackman?—A. Yes, we sell them to him, but what he does with them I cannot say, but I hear them say that the large ones are shipped.

Q. Is the bulk of the catch here canned? Or do the shipments of live lobsters amount to a considerable portion of the catch?—A. Most of the lobsters are canned.

Q. Have you any idea as to which branch of the fishery would pay the fishermen best, to sell to the canner or ship the lobsters alive? You are paid different prices for them, are you not?—A. Oh yes, we are, but I do not know how that would work. I know that neighbours around here have crated their lobsters and sent them away to the States and they have done pretty well.

Q. That is the fishermen who have shipped their own lobsters?—A. Yes, and they have done pretty well.

Q. What size do they ship?—A. The big ones, 10½ inches.

Q. They can ship to Boston down to 9 inches now?—A. I know.

Q. Do you think all the 9-inch lobsters go to Boston?—A. Yes, last spring I think the biggest part of them went, that is from round about here.

Q. What do you receive for your lobsters?—A. Last year we got 8 cents and \$3 or \$2.50, \$8 per hundred for the big ones and \$2.50 for the others.

Q. You sold the big ones at so much apiece?—A. Yes, 8 cents a piece, and the small ones were \$2.50, that is the nine inch lobster.

SESSIONAL PAPER No. 22a

Q. Do you sell the canning lobsters by weight or by count?—A. All by count.

Q. And does everything count?—A. Yes.

Q. How small lobsters do you send to the factory?—A. There are some quite small, we sell everything we catch.

Q. What do you call quite small?—A. A 7-inch lobster, and some 8.

Q. The 4, 5 and 6 inch lobsters you do not bring in?—A. No, not any as small as that.

Q. You said you got \$2.50, did you?—A. Yes.

Q. And last year what did you get?—A. That was this last spring.

Q. I mean the year before, what did you get then?—A. I think we got \$10 for the large ones and \$4.00 for the small ones.

Q. You got 10 cents for markets and 4 cents for small lobsters?—A. Yes.

Q. How is that price arranged? That is a very good price, you did not always get that price.—A. No.

Q. Who establishes the price?—A. The men that come around I suppose, they have orders from their factories to pay such a price.

Q. Who do you settle with, the smackman?—A. Yes, he pays us right away for the lobsters.

Q. As you give them to him from the boat?—A. Yes, right as they come from the boat.

Q. Are there smackmen from rival factories? Do some pay more than the others?—A. We do not know, a great many men stick right to the one boat, but there are other boats that will pay a little more.

Q. There is some competition among the smackmen?—A. Yes, there is competition between them.

Q. And sometimes one will pay more than the other?—A. Yes, if the man has 500 or 600 good lobsters the smackman will pay a better price so as to get them if he cannot get them for less.

Q. So that the price is not fixed before you begin fishing?—A. Yes, they say, 'We will give you \$3 or \$5, or whatever the price is before we begin fishing, and that is what we commence on.

Q. And you think that the practice of stripping or washing the seed lobsters is not followed now?—A. Not that I know of here.

Q. Does the smackman object to taking lobsters with eggs on them?—A. I do not know anybody at all in any of the boats that we sell to that ever takes the berried lobster.

Q. They will not take them?—A. Not if they know it, oh no.

Q. As to this decrease in the fishery, do you think that it is going on still?—A. Yes, it was going on last spring just the very same.

Q. This has been a bad year, has it not?—A. Yes.

Q. But even when the fishery was good you had bad years in the lobster fishery the same as in other fisheries, had you not?—A. Yes.

Q. When you first began fishing did you have bad years then like you do now?—A. Oh no, the lobsters were much better then than now, every year it is going down, much smaller.

Q. Various propositions have been made to the department as to what should be done to prevent this, what is your idea?—A. I think it would be a very good idea to have the winter fishing for lobsters stopped altogether, that is what I would like to have for my part, and to commence around the first of April and fish to the first of June, and then take the traps out and do no winter fishing at all. A good many fishermen would be satisfied with that, they all appear to say it hurts the spring fishing a lot.

Q. That is to say that the lobsters are cut off then?—A. Yes.

Q. Are you fishing the same traps now that you used to when you began?—A. Do you mean the same amount of traps?

Q. When you began fishing you used the old double ender trap, did you not?—A. Yes, but we do not use them now.

9-10 EDWARD VII., A. 1910

Q. You use the parlour trap, do you?—A. The diamond traps, we call them.

Q. That is a smaller trap again?—A. Yes.

Q. When did you first begin using that trap?—A. I can't tell how long ago, it was 6 or 7 years.

Q. What led to the change in the style of trap?—A. We found that these were better; when the lobsters were plenty some time ago we could catch fish in any kind of trap at all that would hold the lobsters, but we find that these traps are handier to handle.

Q. Do they not hold the lobsters better than the old-fashioned trap?—A. No, I do not suppose they do, but we find them handier.

Q. Do you leave as large a space between the slats now as you used to, or are they closer together?—A. The last few years we have put them closer together.

Q. What gauge do you use now in setting the laths?—A. About one inch or one and a quarter apart, not any further than that.

Q. A pretty good sized lobster ought to get out of an inch and a quarter opening?—A. No, the lobster that will go through an inch hole is a pretty small lobster I think.

Q. And what mesh do you put in the ends of your trap?—A. About 3 inch.

Q. Do you fish your traps on trawls or single lines?—A. Single lines.

Q. Do you use hoop nets at all here?—A. We used to, but there are none used any more.

Q. How did you come to give them up?—A. We used to go lobstering nights, and we found that did not work very well so we gave that up.

Q. Do you think it would be possible to allow a larger proportion of small lobsters to escape by insisting upon a certain space between the slats in the trap?—A. Yes.

Q. We find that in some traps the slats are a little more than a half inch apart, and in many of them they are only three-quarters of an inch.—A. Yes, that will keep a small lobster in.

Q. What would you say should be the space allowed, if you were making regulations with a view to protecting the lobster, what would you do?—A. I think it would be right to sell the lobsters to 9 inches, and what would be below that should not be taken at all.

Q. Then you think the law as it exists should be strictly enforced?—A. Yes, below 9 inches there shouldn't be any lobsters taken here.

Q. Have you discussed that matter with other fishermen?—A. Well, I think all the lobster fishermen around this place now would agree, we agreed to put all in the water below 9 inches.

Q. Would that not cut off fully one half of your catch?—A. Well, it would very nearly do that, that is the way it was going these last few years.

Q. How would it affect the canners?—A. They would like to get all they could, no doubt, but the fishermen that are living around here have to look out for their own benefit.

Q. Is there any Fishermen's Union here in this neighbourhood?—A. No.

Q. Then you think it would be right to fix a standard trap, I suppose we could not alter the old traps, but it might be made a rule that all traps made after this date should have a certain space between slats. You think that would be fair and reasonable?—A. There are a large number of old traps, but they would soon be got rid of because every year we have to make a lot of new traps.

Q. Then I understand you to say that you would favour a strict enforcement of the law, and you would prefer to have the winter fishing done away with?—A. Yes, I think all fishermen would agree to have the winter fishing stopped.

Q. Do you think that there are canneries enough licensed at present? You know the policy of the department for some years back has been to restrict the number of canning licenses, and not to issue any more, what do you think about that?—A. I do not know about that.

SESSIONAL PAPER No. 22a

Q. The idea of some people is that if there were more canneries there would be more competition for the lobsters and the price perhaps would go up. Do you think that would follow?—A. I do not know, of course I suppose that if there were two or three factories around the fishermen might get more for their lobsters.

Q. If there were more factories would there be any more fishermen fishing than there are now?—A. I think not, I think we have all the men fishing now that would fish, of course there are young people growing up all the time and there may be two or three more. There is only one factory around this place, and if there were a second one it would be a little better.

Q. Are the fishermen satisfied with the price they get for their lobsters?—A. We have to be satisfied, we have to take what we get, if we want to fish at all we must take what is offered, but we would like to have more, that is sure.

Q. Last year was a pretty good one?—A. The season before this we got a pretty good price, but this year it was pretty small.

Q. Have you any idea what made the drop?—A. No, I have not.

Q. A great many remedies have been suggested to the department with a view to improving the condition of the lobster fishery, some people recommended that all lobster fishermen should be licensed, that they should apply to the fishery overseer in the spring and take out a form of license, they probably would not have to pay anything for it, and on this license the regulations would be printed, and they would be signed by the fishermen. The idea is that having signed the regulation the fishermen would be more careful about violating the law and would liberate the small lobsters and see that the berried lobsters were protected, and that perhaps they would be ready to inform on their neighbour if he were violating the law?—A. It would be a very good idea to have extra men to look after such work, and to see that no small lobsters were taken.

Q. I do not mean that, but that every fisherman, having taken out his license, it would practically make him a fishery overseer himself?—A. If every man knows the law he knows what he has to do.

Q. What I mean by that is, do you think that the fishermen having taken out their licenses would feel themselves bound to observe the regulations more than if they had not, would it have that effect?—A. I do not know, we all know now what are small lobsters and what are big lobsters, and we know what are 9-inch lobsters now.

Q. Would you favour closing down the canneries altogether?—A. I do not know what to say about that, I would not like to hurt people if I could help it; of course lots of poor people like to can lobsters and to make their living out of it. I know one man out here, Mr. Wamboldt, is a poor man, and if he could not have his factory going it would do a lot of harm to him.

Q. Is it a large factory?—A. No, I do not know that it is.

Q. How many cases does he pack, do you know?—A. I do not know, I could not tell you that, I have heard them say 400.

Q. You know that a strict enforcement of the 9-inch limit would close up the canneries?—A. Yes.

Q. Would you find a large enough market for your lobsters above the 9 inches if all were exported and none canned?—A. There are quite a lot of fishermen and a lot of lobsters, and I do not know that every man around here could crate his own lobsters and send them away, I do not know anything about that.

Q. How are they sent to the market?—A. You have crates, and you put so many in a crate, 75, 80 or 90.

Q. How do you ship to Boston?—A. They go to Halifax, and from there to Boston.

Q. The steamer comes along and takes them how often?—A. I could not tell you how often they are shipped from here.

9-10 EDWARD VII., A. 1910

Q. Do you think that there is any combination on the part of the packers to keep down the price paid to fishermen?—A. I suppose they like to get the lobsters as cheaply as they can, anyhow.

Q. You told us that the smackmen came along, and sometimes one smackman would offer a little more than the other?—A. Yes, I know that has been done.

Q. That would mean that there is some competition?—A. Yes, I know that has been done pretty often.

Q. Did you ever have more canneries here than you have now?—A. No, we never had any more.

Q. How near is the nearest cannery?—A. There was one year two factories were running here, but I think it was only one year.

Q. What are the nearest factories to you?—A. Mr. Wamboldt's, out here.

Q. I mean the others, on each side of you?—A. There are none nearer than 25 or 30 miles on each side of us.

Q. So that there is not much canning done here?—A. No.

Q. Can you give me any idea of the number of boats engaged in this neighbourhood in lobster fishing?—A. I could not.

Q. I think you have told us that the best of your fishing is in April and May?—A. Yes, the best of our fishing.

Q. Do you think that the lobster comes inshore to spawn?—A. Oh, yes, I should say that they would, no doubt about it, I guess they work on shore more than any other fish, according as the warm weather comes on, they work to the shore.

Q. We generally suppose they come into the warm water to spawn?—A. Yes.

Q. When you used to fish longer than you do now did you find more seed lobsters inshore?—A. Oh, yes, when we used to fish later.

Q. It has been suggested by some of those who gave evidence last winter before parliament, that we should do away with the size limit altogether and regulate the space in the traps so that it would allow a fair proportion of small lobsters to escape. You know that the size limit is a difficult thing to enforce?—A. The small lobsters go into the traps, no doubt.

Q. Do you think if we had a $1\frac{1}{4}$ or a $1\frac{1}{2}$ -inch space that the small lobsters would go out of the traps, or would they stay in them?—A. No, they would go out of the traps.

Q. You think we would gain something by regulating the space between the slats in the traps?—A. There would not be as many small ones caught, I suppose.

Q. What would be a fair mesh to have in the heads of the traps?—A. $2\frac{1}{2}$ or 3-inch, that is a pretty small mesh, and the lobster that crawls in or out of it is a pretty small lobster, but that would not save all the small lobsters from getting in the traps, because no matter how large the net or the space is you will get some small lobsters.

Q. It appears that all the small lobsters that stay in the trap are taken and go to the cannery?—A. Yes.

Q. The idea is that if we have a larger space between the slats a larger proportion of them would escape?—A. Oh, yes, there would be some that would.

Q. It is from the practical fisherman, you know, that we have to get information as to that?—A. Oh, yes, there would be small lobsters getting into the traps, but there would not be so many of them taken.

Q. Do you think a 9-inch lobster would go out through an inch and a half opening?—A. No, he would not go through one and a half inch.

Q. A very considerable lobster will go through a small place sometimes, I think?—A. A 9-inch lobster will not go through a one and a half inch space.

By Mr. Whitford:

Q. Would he go through $1\frac{5}{8}$ inches?—A. I would not say that he would not go through that, but he would not get through $1\frac{1}{2}$ inch.

Witness discharged.

SESSIONAL PAPER No. 22a

CHARLES HIRTLE, fisherman, LaHave Island, called and sworn:—

By the Commissioner:

Q. How long have you been connected with lobster fishing, for how many years did you fish lobsters?—A. About twenty years off and on.

Q. Always from this coast?—A. Always from this coast.

Q. What is the condition of the fishery now, or what was it when you left off a year ago, compared with when you began?—A. It has gone down to nothing compared to what it was when we commenced first.

Q. Has it been going down steadily year by year?—A. All the time.

Q. And is it still decreasing?—A. Yes.

Q. When you began fishing what number of traps did you fish?—A. I used to fish up to 150, 160 and 175, and then I came down until I only fished about 75 at last.

Q. In what depth of water did you usually fish?—A. I never fished outside, but in the harbours, the other men fished deeper than I did.

Q. In fishing around the harbour would you get as good a run as the others did in deep water?—A. Generally we do at the latter part of the season, we would not at the first part of the season, but as the season advances the fish come in.

Q. Do you always fish in the same water, or do you move inshore?—A. I used to fish closer inshore towards the last.

Q. What was the season when you first began?—A. We could fish the whole year through, that was at the time before any regulations were made but during recent years the regulations were that we could only fish during the spring, and then when the winter fishing came on we had two fishings, but I think the fall fishing was the worst one.

Q. In early times you did not have any fall fishing?—A. No.

Q. When did you first begin to fish in the winter?—A. About five years ago.

Q. I think you must have begun fishing earlier than that, I think the winter fishing began in 1898.—A. They fished to the west before we did here, this has been about the last county, I guess, around here, to fish in the winter.

Q. To what do you attribute the falling off in the lobster fishery?—A. I claim they must be reduced, because the fishery will not hold up to it.

Q. What brought that about?—A. Taking too many fish out of season, the fish cannot grow fast enough.

Q. What proportion of the lobsters caught would be under 9 inches when you began fishing?—A. There would not be many, they ran large.

Q. And what is the proportion now?—A. Well, now there are one-half.

Q. What was the practice with regard to the berried lobster, was she always put back in the water?—A. Most generally, I know from the time I commenced to fish I used always to put her back in the water.

Q. Because in some places you know we find that the berried lobster was either taken directly to the cannery with the eggs on her, or where the canner refused to accept her in that state the eggs were brushed off. Do you think that the practice was ever followed here, because if it was, it must have had a bad effect.—A. I never saw it in all the years I have been around here.

Q. You think the seed lobsters have always been protected?—A. I think so, as far as I know.

Q. You think the fishermen understand the necessity of preserving that lobster?—A. They all claim they do, and they claim they put them back in the water again.

Q. How many boats are selling lobsters to this cannery here?—A. There were about seven boats, I think, last year.

Q. Only seven boats supplying the cannery?—A. Oh, selling lobster. I thought you meant buyers.

9-10 EDWARD VII., A. 1910

Q. You mean there were just seven smacks?—A. Yes, I could not give you the exact number of boats fishing, but I suppose it would be 75 or 80 fishermen.

Q. Are most of the fishermen here engaged in the lobster fishery?—A. Lots of them are, all around our way.

Q. And do these men when they have done fishing lobsters follow the deep sea fishery?—A. Yes, all our fishermen that fish lobsters go to the deep water fishing, they fish the year around.

Q. Is there any other fishing here in April and May? Is there cod fishing, herring, mackerel or anything of that kind on then?—A. Yes, last April or May the cod fish struck here, and the mackerel struck here about the 15th of May; this year we had the herring in April, some seasons they are earlier than others.

Q. That depends a good deal on the weather?—A. Yes.

Q. Is there a great deal more gear in the water now than there would be 15 or 20 years ago?—A. Yes, any amount of it more.

Q. Do you think an increase in the number of factories would mean more fishing, or is everybody fishing lobsters to-day that could fish out there?—A. Yes, everybody; I suppose it would average 100 traps more to a man than it used to, and the number of fishermen is increasing all the time.

Q. And are they going further out into deeper water?—A. Yes, more than they used to.

Q. How far out do they go?—A. Not very far on this shore.

Q. How deep do they go?—A. Seventeen or 18 fathoms, I think they take for it, that is some of them, others do not go as far, they cannot.

Q. Do you think that the female lobsters come into shore to spawn?—A. I have an idea that they do.

Q. What is the spawning time here, do you think?—A. July and August.

Q. When you used to fish later in the summer than you do now did you notice there were more female lobsters about the shoal waters?—A. I guess there were.

Q. When the hoop nets were used, they were generally used in shoal water and late in the season?—A. Yes.

Q. Do they catch a larger proportion of seed lobsters?—A. The way it has been they are not used here at all.

Q. But where they do use them, in some places, they claim they get a larger proportion of female lobsters and small lobsters?—A. Oh, they kill more seed lobsters in that way, because the egg fish comes to the shore, and when you begin to use these hand traps you will catch them, more so than in the ordinary trap, so that I say those hand traps should not be used at all now.

Q. Are all the fish over 9 inches sent away to the market, or are some of them canned?—A. A good many of them are canned around here.

Q. Is there a very large export trade around here?—A. It is not much any more.

Q. The principal trade is canning.—A. Yes, the prices were small, but this last season was pretty fair, that is where we were fishing, there are not many of our fishermen who ship around here, but they sell to the canners. The lobster fishing has gone down so far now that we do not get enough to make any shipment at all now.

Q. As to the matter of price paid by the canners, has the fisherman any hand in that at all, or is it fixed by the canner?—A. I guess the price is fixed by the canner, at least it was during the last twelve months.

Q. Is there any competition? Does one smackman offer more than another?—A. Often times they do offer more than the other man in order to get the fish.

Q. Then if that is the case there must be some competition?—A. Oh, yes.

Q. The fishermen in some places have complained to us, and they complained to the committee last winter, that the canners have fixed a price and will not go beyond that?—A. They would not go beyond that, and it was a very small price that we had around here.

SESSIONAL PAPER No. 22a

Q. Does the canner take everything you bring to him?—A. I guess not.

Q. In what way?—A. They take what is lawful.

Q. You think they do not take the small lobsters?—A. I do not know anything about that part of it.

Q. If the canner were confined strictly to the 9-inch lobster, do you think he could continue to pack?—A. They claim they do.

Q. Have the regulations been generally enforced here?—A. Yes.

Q. Would you suggest any change in the regulations?—A. Well, there should be, I think.

Q. What would you say?—A. I rather think we should not have that winter fishing.

Q. For what reason?—A. They say that the fish will not run up to it at all, they do not grow fast enough for that.

Q. You think the season is too long?—A. The season is too long.

Q. How would it do to shorten it at the latter end, take the month of May off instead of the month of December?—A. I think that the fishermen would like to have the spring fishing for a few months and not the winter fishing.

Q. What would you fix the spring fishing at?—A. April and May, those are the two principal months, they do not fish a great deal before that, I think that is what they would like most to have; it may be all right to have winter fishing in some places but it is not right around here; no doubt if we had never had the winter fishing our fishery would have stood just as good as it ever did.

Q. It is generally supposed you know that during that winter fishing you do not catch so many of the female lobsters?—A. My idea is that the female lobsters come ashore to egg, and that in the fall they trap, that is my idea about it.

Q. Do you know anything about fish hatcheries and pounds and anything of that kind?—A. No, I never went through them, and I do not know anything about them.

Q. Would you venture to say whether there should be more fish hatcheries or not?—A. They have them in other places and I guess they turn out all right.

Q. In other places they fish later in the season than you do; where they fish much later, in June and July, they get egg-bearing lobsters for the hatcheries, but the question is, where your fishing ends at the last of May whether you would get enough egg-bearing lobsters to run a hatchery?—A. Well, there are always some around, but you might not have enough to supply the hatchery.

Q. Do you think the fishermen would make more money generally by doing the canning themselves instead of selling lobsters?—A. I do not know anything about that part of it.

Q. Would the fishermen in this district find a market for their lobsters if the canneries were closed?—A. They would only have one market to go to, the American market, and if they all commenced to ship their lobsters into that market the price would soon be quite small.

Q. Would not that be what would happen if we stuck to the 9 inch limit closely, it would put the canner out of business?—A. I suppose it would.

Q. And then you would have to fall back on the market fishing, and if everybody went into that would not the price drop?—A. Yes, lobsters would drop. A good many of us went into the shipping and the price went down.

Q. Have you shipped lobsters yourself?—A. Yes.

Q. What was your experience of it, did you make a fortune at it?—A. The fortune was small, some shipments were all right and some were not, and on the whole we could not get much out of it.

Q. Did you lose many lobsters between here and the market?—A. I found it was just as much gain to sell to the packers as it was to ship in crates to the market.

Q. Do you think that taking it altogether the fisherman will do as well by continuing to sell to the packer as he would by shutting the packer up and driving all the fish to market?—A. I tell you the way it was, last year things were looking pretty dull

9-10 EDWARD VII., A. 1910

for the packers, the price was small, they cut the price very small on the fishermen, they had it all their own way.

Q. Was that not due to the condition of the market? Do you not think they overstocked the market the year before?—A. They claim that was the case, they say that the market was flooded with fish, and I suppose they had a lot to do with it, there is no doubt about that.

Q. Did they stick at the same price all season, or did it come up towards the end?—A. No, they did not come up in price.

Q. Have you any idea of the price for this next year?—A. No, I do not know, but it is not likely to improve now; if they got it for less price this year there is not likely to be an increase.

Q. How would it do to issue more licenses and let the fishermen do the packing themselves? The department has been doing that for the last two years, if 15 fishermen come and say, 'We are not satisfied with the price we are getting and we think we can do better to take out a co-operative license and can the fish ourselves.' Do you think that would give the fishermen a chance?—A. Yes, there is no doubt it gives the fishermen who want to go into packing a chance.

Q. What do you think of the proposal to regulate the openings in the traps? There is no doubt about it, I am not speaking for here alone, but you know all over the Gulf of St. Lawrence, when I first became connected with the fishery service, we used to fish the old-fashioned trap with an inch and a half between the slats, and we got big lobsters.—A. Yes, that is what there should be.

Q. But as the fishery got poorer it has been narrowed down until in some places it is down to half an inch?—A. We do not find any down to half an inch here.

Q. And in some places they can down until it takes 12 or 14 lobsters to fill a pound can?—A. That is pretty small.

Q. Do you think we could cover the matter, so that a fair percentage of the small lobsters would escape, if we insisted on a regulation space between the slats?—A. Oh, there is no doubt about it, I believe that myself, that the small lobsters if they went in would then have a chance to go out, but when you have a trap with the slats that close together they cannot go out.

Q. Some fishermen tell us it does not make a bit of difference, that the tendency of the lobster when they move the trap is to grab on, and he will not try to get out; what is your experience?—A. I have seen enough of them to know that they will get out if they have a chance, if there is an opening as soon as they have the bait the small fish will crawl out again.

Q. Do you know anything about the matter of pounds? In some places now they are establishing pounds where they put the lobster, the fisherman catches the berried lobster and brings her in and she is put in the pound and retained there until the season closes and then the gates are opened and the seed lobsters are let out. Are there facilities around here, do you think, for the establishment of a pound? You want fairly deep water because the lobster will not live in warm water.—A. Oh, there are places around here, and I suppose if they had a pound around here and you got hold of an egg lobster you would be sure to save her if you had a place to take her to.

Q. There are certain things you must have in order to make the pound a success, a rocky bottom, with deep salt water, a good current running through it and a small mouth or entrance so that it could be easily barred off. Are there any places around here which meet those requirements?—A. I do not know anything about it, but I dare say there are some places around here that if they were hunted up would be all right.

Q. Is there any fishing done around here after the close of the season in May?—A. Sometimes.

Q. Has there been any canning done?—A. Oh no.

Q. What is done with the fish that are taken, are they only for domestic use?—A. For their own use, and sometimes they peddle a few around for a change.

SESSIONAL PAPER No. 22a

Q. That is nothing very serious, if it is as small as that?—A. No.

Q. There are no canneries around? In some places they can in the woods you know.—A. Yes, I know that, they get some old building and put a pot in it, but there is nothing of that kind done around here.

Q. And the only change you would suggest is to do away with winter fishing?—A. Yes, I think so, but I am only one man talking.

Q. Do you know the feeling among the fishermen generally on that point?—A. Most of the men I have talked to thought it was a good idea.

Q. Do you think that the live lobster trade is a trade that is increasing?—A. I guess they do a lot of it farther on.

Q. But here there is not much of it done?—A. There is not much of it done here.

Q. Is that because you haven't a chance to do it?—A. Yes, we have a poor chance to do it here. I suppose there would be more men shipping if they got an opening.

Q. At what time do they ship here?—A. They used to ship in the winter time, but they do not ship now.

Q. Is there anything else you would like to add to what you have already said, or have you any further suggestions to make?—A. No, I have nothing more.

Witness discharged.

WILLIS WOLFE, fisherman, La Have Island, called and sworn:—

Q. How many years back does your experience go with lobster fishing?—A. About 20 years.

Q. Have you always fished in this neighbourhood?—A. Yes.

Q. When you are not lobster fishing what do you do?—A. Cod fishing.

Q. Do you fish from the shore or do you go away?—A. Of late years I fish from the shore; I used to go away schooner fishing.

Q. Can you give us any idea of the average amount of lobsters caught by a lobster fisherman here? What weight of lobsters do you catch in your season?—A. I could hardly say; this last year I think it was about 4,000.

Q. Is that canning lobsters?—A. No; altogether, large and small.

Q. That is your catch in the whole season?—A. Yes, to a boat.

Q. Do you think that is about the general run?—A. I should say it would be, as near as I can tell.

Q. Do you do any December fishing?—A. Yes.

Q. How is the fishing in December?—A. Very good.

Q. The lobsters in December are smacked and taken to the cannery, are they? Is the cannery open in December?—A. Yes.

Q. Is the cannery kept open all the winter through?—A. No, not all the winter; they run up to about the last of January.

Q. And then they shut down?—A. Yes.

Q. When do they open again?—A. In April.

Q. At the beginning of April?—A. Yes.

Q. And they keep on canning then up to the close of the season?—A. Yes.

Q. What proportion of your total catch would you say goes to the cannery and what proportion goes to the market?—A. Three-fourths of it go to the cannery.

Q. Then about one-fourth of the catch would be market lobsters?—A. Yes.

Q. Do you think that all of those market lobsters are sent to the market, or are some of them canned?—A. I do not know.

Q. Who sends them to the market, is it the canner?—A. Yes.

Q. Is the bulk of the live lobsters that are shipped from here shipped by him?—A. Yes.

9-10 EDWARD VII., A. 1910

Q. Are there any fishermen here that ship their own lobsters?—A. Not this last year that I know of.

Q. What number of traps do you fish?—A. 100.

Q. Is that with two men in a boat, or do you fish them yourself?—A. Myself and a boy.

Q. Are they all fished on single lines?—A. Yes.

Q. And are they all the diamond trap?—A. Yes.

Q. What is the particular merit, according to your idea, of the diamond trap over the old-fashioned double-ender?—A. It is lighter to haul and stands more use; that is no doubt the only difference.

Q. I have always understood that the great merit of the parlour or jail trap and the diamond trap was that if you missed a day's fishing the lobsters stayed in them better?—A. Yes, I think probably they may.

Q. But you think that the only advantage of these traps is that they are lighter and you can haul them better?—A. Yes.

Q. You make your own traps?—A. Yes.

Q. How do you regulate the space between the slats?—A. $1\frac{1}{4}$ inch.

Q. What do you use for a gauge, the pole of the hammer?—A. Yes.

Q. And what is the gauge of the mesh in the net?—A. Two and a-half inches.

Q. What do you think of this matter of regulating the space between the slats by insisting upon a standard opening? If it were large enough would it allow a fair proportion of the small lobsters to escape?—A. It would.

Q. That is a matter on which there is a difference of opinion among the fishermen; some say it would make no difference at all and others say it would?—A. It would make a difference, no doubt; if the small lobster sees a hole he is going to get out of it if he can.

Q. How large a lobster would get out through a $1\frac{1}{4}$ -inch opening?—A. An 8-inch lobster.

Q. It is astonishing what a small hole an 8-inch lobster will squeeze through; you would not believe it sometimes?—A. Yes, they will go through a pretty small hole.

Q. In what depth of water do you fish in December?—A. All the way from 10 to 15 fathoms.

Q. In the same water as you do in the spring?—A. Yes, generally I do.

Q. Do you bring your traps ashore or do you leave them in the water all winter?—A. We bring them ashore.

Q. Is that the rule?—A. Yes.

Q. What percentage of traps do you use, taking one season with another?—A. About one-half.

Q. You have to renew about one-half of your traps every year?—A. Yes.

Q. You are not bothered with ice here at all?—A. Yes, we are.

Q. But not with floating ice, it is just ice in the harbour?—A. Yes.

Q. That does not do you any harm?—A. No, I fish in deep water all the spring and winter, I do not move in.

Q. Do you find you do as well as those who come in shoal water?—A. No, I do not do as well towards the close.

Q. Why do you not move in?—A. Because there is no room to move in to where the others are doing better.

Q. It is claimed in those places where they fish in shoal water, in the lagoons and bays, that they get an unfair proportion of egg and small lobsters, what would you think about that?—A. I guess they would get more egg lobsters and small lobsters close to the shore than they would get outside.

Q. Is there any fishing done inshore, inside this island?—A. No.

Q. It is all done outside the island?—A. Yes.

SESSIONAL PAPER No. 22a

Q. Do not the lobsters crawl inside the islands?—A. In the summer time, but not in the spring.

Q. Do they come in there to spawn, do you think?—A. My idea is they do.

Q. What is your idea of the spawning time of the lobsters?—A. My idea is that they spawn all through the season.

Q. That is, you find eggs on them all through the season?—A. Yes.

Q. Do you not think that there is some time of the season when the eggs are riper, getting lighter in colour, towards the end of the season?—A. Yes, that is true, they are lighter in colour, I have seen them.

Q. Did you ever see the female lobster with the empty eggs on her after the young lobsters have come out?—A. No, I have never seen them.

Q. As to this matter of the market fishing and canning, that seems to be a serious question for the coast between here and the state of Maine; some fishermen advocate regulations that will put the canning out of business altogether so as to develop and encourage the fresh market trade, what is your opinion about it? How would it affect you here if the canneries were closed up?—A. No doubt we would feel it pretty bad, that is my opinion about it.

Q. Do you think that in this particular place the regulations should be such as to allow the canneries to continue in business?—A. Yes, I would think so.

Q. You said that two-thirds of your lobsters go to the canneries?—A. Yes.

Q. Have the regulations with regard to size ever been enforced, within your knowledge, or has the canner always taken small lobsters?—A. To my knowledge he has always taken them.

Q. About the berried lobsters, do you think the eggs are being brushed off, or anything of that kind done here?—A. Not to my knowledge.

Q. Have you seen many egg lobsters?—A. I have seen quite a few in my little fishing.

Q. And you find them all through the season?—A. Yes.

Q. How many lobsters taken out of your traps do you see with eggs?—A. I see about eight to the hundred.

Q. That is a large average, we do not hear of more than three or four generally?—A. That is my experience.

Q. You own your own boat and gear, of course?—A. Yes.

Q. And all the fishermen here do?—A. Yes.

Q. What is your opinion of winter and spring fishing?—A. My opinion is that winter fishing should be done away with.

Q. In spite of the fact that you do pretty well in December?—A. Yes, we do, but we hurt ourselves in the spring; we would get them just the same in the spring, and we would not be suffering from the cold.

Q. You have heard of this proposition for licensing the lobster fishermen, do you think there is any need for doing that?—A. I do not think so in this place, to my knowledge there would not be any need of it.

Q. The idea is that the fisherman having signed the regulations would live up to the letter of the law, he would be a fishery officer himself practically and would inform on others who violated the law; that might be made a part of the license. Do you think that would be of any value?—A. I do not think, that is to the best of my knowledge, that it would.

Q. What did you get for lobsters when you first began fishing 20 years ago?—A. When I first began fishing we only used to get \$2.00 a hundred.

Q. Did you get as much as that 20 years ago?—A. Yes, I think so. I think I am wrong, it was only \$1.00 we got 20 years ago; they were never so low as 35 cents a hundred here in my time, although it may be that if you went back to the older fishermen you might find that to be the case.

9-10 EDWARD VII., A. 1910

Q. And what do you receive now?—A. Well, this last year we got 8 cents and \$2.50.

Q. \$2.50 for the canning and 8 cents for the big lobsters?—A. Yes.

Q. What do you call big lobsters?—A. From 10½ inches up.

Q. The 9 inch lobster is not counted a big lobster?—A. No.

Q. Is there any competition at all now? Are there rival smackmen on the ground who are trying to get lobsters each for his own factory?—A. Yes.

Q. And will one give a little more than another?—A. Generally one will give a little more.

Q. You are not bound by any agreement to sell your lobsters to one man?—A. No.

Q. How are you generally paid for your lobsters, right at the boat?—A. Right at the boat, yes.

Q. The smackman carries the cash and doles it out?—A. Yes.

Q. Do you think that the fishermen generally nowadays are more careful about this berried lobster and that they put her back in the water?—A. Yes, I can tell you that as long as I have been fishing lobsters I think she has been taken care of pretty well.

Q. Then it is not the destruction of the berried lobster in this neighbourhood that has caused the decrease in the fishery?—A. I do not think so.

Q. Did you ever remark the size of the berried lobster? What would be the smallest one you ever saw with eggs on?—A. I have seen them down as small as 8 inches myself.

Q. What would you think of doing away with the size limit altogether and fixing the space between the slats in the trap so as to allow the small lobster to escape? Do you think there would be any gain in doing that? You know the regulation about the size is a very hard one to enforce?—A. Yes.

Q. That is why it has not been enforced very generally, it is a difficult thing to do, it would need a man at every factory to measure the lobsters and almost one in every boat?—A. That is right enough, and I think that a certain distance between the slats in the trap would be as good as anything, that is my opinion.

Q. It is a pity to have a regulation like that size limit in the Fishery Act, and then not have it enforced?—A. That is right.

Q. A great many people say it had better be wiped out altogether if it cannot be enforced?—A. That is right, yes.

Q. It is just a question whether if you wipe it out and establish a standard size of trap we would not get at the same results in a different way?—A. That is what.

Q. Some people say we would and some say we would not, do you think we would?—A. I think so.

Q. Have you ever known the canners to kick about receiving small lobsters?—A. No.

Q. They pay for them?—A. They pay for them.

Q. How small have you seen them taken to the cannery?—A. I do not think I have seen them caught and sold to the cannery less than 7 inches. Of course I have seen them kept smaller than that for an ornament.

Q. Are you aware of any fisherman having lost his catch of lobsters by reason of the canner having refused to accept them?—A. No.

Q. There have been several propositions made to the department as to the regulations that should be enforced for the benefit of the fishery, some people say, 'Shut down altogether for four or five years,' what would you think of that?—A. I would not think much of it.

Q. Why, would it be pretty hard on the fishermen?—A. I think it would be coming very hard on the fishermen.

Q. I suppose at the season of the year when you carry on the lobster fishing there is not much other fishing going on?—A. Not much.

Q. As soon as you knock off lobster fishing do you go into other fishing?—A. Yes.

SESSIONAL PAPER No. 22a

Q. What fishing do you go at then, the cod?—A. Yes.

Q. Do you think an increase in the number of canneries would mean more destruction of fish?—A. No, I do not think it would mean any more here because I do not think there are many more that could get at it, everybody that can fish is already at it. Of course if there were more factories we might get more for what fish are caught.

Q. That is the idea some have, they say there would be more competition if there were more factories, but that there would not be any more fish caught.—A. No, there would not be any more caught here, because the ground is taken up.

Q. So you would not advocate closing down altogether?—A. No.

Q. Do you think the fishermen would make more money if they were allowed to can for themselves?—A. I do not know what to say about that, but I do not think there would be much of it done here.

Q. In some places where the fishermen have complained that they were not getting a fair show the department has said, 'Group yourselves together, 15 of you, or more, and we will give you a license.' Do you think that offers the fisherman a fair chance to do better for himself if he thinks he can do it?—A. Yes.

Q. You think the system of what we call co-operative licenses is one that should be continued?—A. Yes.

Q. Then if a lot of fishermen are dissatisfied and think they can do better they have a chance to try?—A. Yes

Q. Do you think there is any, or much, illegal fishing done after the close of the season?—A. Nothing to speak of about here.

Q. Was there ever more done than there is now?—A. In years gone by there was.

Q. And did they used to can these fish?—A. No, they did not can them.

Q. What did they do with them?—A. They used to peddle a few around.

Q. Then there never was anything very serious?—A. No.

Q. Are the lobsters running much smaller now than when you first began to fish?—A. Yes, they run smaller.

Q. Do you think that the hoop net fishing in shoal water should be prohibited generally?—A. Yes, it should be. Of course there is none of it done here any more.

Q. The best of your fishing is done when? When do you make your best catch?—A. Along from the 20th of April to the 20th of May is generally the best.

Q. How are the live lobsters sent to market from here?—A. Well, there were none shipped just from here this last season, but they are taken away by the smacks to Halifax and shipped from there.

Q. How do they go to Halifax, by steamer?—A. Yes.

Q. What steamers call along here, and how often?—A. The steamer that runs to the factory generally takes the market lobsters.

Q. Has this factory a steamer of its own?—A. Yes, she runs down to Halifax with the live lobsters.

Q. Does she run once or twice a week, or how often?—A. About once a week.

Q. And they are held in cars until they are crated?—A. Yes, until they are crated.

Q. Have you ever done anything in the live lobster business yourself?—A. No, nothing.

Q. Is there anything else you would like to say, or is there anything that you have not gone into?—A. No, not that I know of.

Witness discharged.

JOHN MOSHER, smackman, Dublin Shore, called:—

About shutting down the factories I do not think that would be convenient to the people around here, because we have not the facilities for shipping lobsters

9-10 EDWARD VII., A. 1910

alive to the market, they must be held here the best part of a week waiting for a smack to take them to Halifax, and then they have to wait there for the Boston steamer. We do not want to shut the canner off in Lunenburg county because it would close up the lobster business. We have not the same chance as the people farther west for shipping to the market. I think if there were no more people fishing than there were 25 or 30 years ago there would be as many lobsters taken, for where there were only 15 or 20 fishermen then there would be now perhaps a hundred. I started buying for the factory here two years ago and there were only two smackman on the grounds there and the best I could get then was 42,000, and this last year I got 57,000.

By the Commissioner:

Q. But they are much smaller now?—A. Oh yes, much smaller, I think that out of 56,000 or 57,000 there were not quite 10,000 large.

Q. How do the lobsters run to the case, or to the pound can?—A. I could not tell you, but I think it was about 325 to the case. Of course they only pack a small quantity, although they pack all they can get, but there are quite a few factories around Mahone and Chester bays and they pack 600 to 700 cases there.

Q. Is there any competition at all?—A. There was every other year except this season, but this year the factories here made an agreement, they claimed they lost so much money the year before when it started at \$3 and 10 and 12 cents for large, and advanced to \$5, and 16 cents for 10½ inch, so this year they made an agreement and started at one price and kept it, and there was not any departure from it.

Q. Have you any idea what it costs to pack a case of lobsters?—A. No, I have not, but I do not think the majority of fishermen would understand packing very well, that is the majority of them. In Newfoundland the thing does not work very well where the fishermen are packing their own catches. My idea is that it would be foolish as a general thing for them to attempt it because the packers understand the business after having worked at it for a number of years. These people around here think that if we had two months' fishing in the spring and closed off the winter season it would be to the general advantage. I get around among the men a good deal and that is the general opinion. It is generally the 25th of April before we get any lobsters, and I think it would be more satisfactory if we started in the month of April and had the December fishing shut off.

Witness discharged.

Commission adjourned.

WEST DUBLIN, September 9, 1909 (2 p.m.).

JAMES COVEY, fisherman, La Have Island, called and sworn:—

By the Commissioner:

Q. How long have you been fishing?—A. About twenty years, more or less.

Q. Always in this same neighbourhood?—A. Yes.

Q. You have never fished lobsters anywhere else?—A. Yes, I did, I fished at Labrador one season.

Q. When?—A. About 10 years ago, at Whale Head.

Q. What is the condition of the fishery to-day compared with what it was when you first began?—A. I do not think the number of fishermen was more than one-half what it is now when I started out lobstering.

SESSIONAL PAPER No. 22a

Q. When you started out first there were very few boats?—A. Very few boats at it.

Q. Is there more than double the number engaged now?—A. Yes, more than double the number.

Q. And do they fish more gear?—A. Yes, more gear, more men, and better fishermen, they know how to rig the gear better.

.. And they use a better trap, it holds the lobsters better?—A. Yes, it is safer.

Q. As to the size of the lobsters, how do you find that?—A. I do not know, we are supposed to take 9-inch lobsters, and I think that is plenty small enough.

Q. But I suppose in practice the canner takes everything you bring to him?—A. Yes, a fisherman will sell everything he gets.

Q. And the canner takes it, has that always been the case?—A. Well, for a few years it was not.

Q. When was that?—A. I should say it was 6 or 7 years ago, the law was pretty strictly enforced on the measure.

Q. How did it happen to be done just at that time?—A. Now, that is a question I can hardly answer. The fishery overseers were keeping too close watch on us then, I guess that was about the cause of it.

Q. To what do you attribute the decrease in the lobsters, what is the cause of it?—A. The scarcity?

Q. Yes?—A. I claim that the winter fishing has been a big hurt to it.

Q. In what way?—A. I will give you one reason, what little I know of it, and that is that in the spring of the year you will catch the lobster filled with spawn, or egg, whatever you may call it, and you will pitch that fish away and she will spawn. Now in the fall of the year when we start our fishing again that fish has spawned out and will trap then, she has no spawn on her and you take her and she is killed and canned and therefore spawns no more, whereas if it were not for the winter fishing that fish would not be taken. When it came to the spring again, if the same fish were caught she would be put back into the water, which would give her another chance to spawn. It is the killing off of the female lobster in the winter fishing that, I claim, is causing the scarcity of the fish. Two fishing seasons in one year are too much, the fishery cannot stand it, that is my opinion.

Q. Talking about that spawning lobster, has it always been put back in the water on this part of the coast?—A. I always put her back, I cannot speak for anybody else.

Q. The practice, as we know, in most places has been that the egg lobster has not been protected, she has been brought to the factory with eggs on her, or if the factory refused to receive lobsters with eggs on, the eggs have been brushed off outside, and it is safe to say that nine out of every ten fishermen have been doing that. The man that takes the spawn lobster and brushes the eggs off ought to be hung.—A. Yes, the man taking an egg lobster is just the same as taking a dumb animal and killing it just as it is going to have young. No doubt that is the great cause of the scarcity.

Q. If the law were strictly enforced to-day, how would it affect the fishermen, supposing we knocked off everything under the 9 inches?—A. I suppose it would be one part of the fishery.

Q. You mean by that one half?—A. About one half.

Q. Is that about your own idea of it?—A. That is my idea that on the average it would be nearly one-half.

Q. How would it affect the canner, would he be able to go on canning if the 9 inch limit were enforced?—A. He could can just the same.

Q. Could he get enough lobsters to pay him to can?—A. If he got them he would can them, if he only got a few he would have to do the best he could.

Q. It is a question whether he could keep the cannery running under those circumstances, you must have a certain amount of material to run on?—A. Oh yes, you must.

9-10 EDWARD VII., A. 1910

Q. Your season begins on the 15th of December and ends on the 31st of May?—
A. Yes.

Q. Do you begin on the 15th of December?—A. Yes.

Q. How is the fishing in December?—A. For three or four days or a week it is all right, and after that there is not much to be done at it, and all that the majority of the people get is a sniff of the wide ocean and the loss of gear.

Q. Do you set out in the deep water then?—A. Most people do, but I do not, I only fish in the harbour.

Q. You do not lose your gear there?—A. No, I do not, but I am only one man.

Q. What depth of water do you fish in the harbour?—A. Six fathoms.

Q. And what number of traps?—A. Fifty or sixty.

Q. Do you fish alone?—A. I have a boy with me, my son.

Q. What is the value of a boat to fish lobsters in, one with another?—A. It is worth about \$25.

Q. Is that the general run do you think?—A. About that, that is what they cost when they are built.

Q. What is the trap worth with its line and gear?—A. It is worth 15 cents. That is for a man to make it, but he could not make it for any one else for that, if he is making it for himself he would value it about 50 cents, but at that price he could not make any money out of it if he made them to sell.

Q. When you have to buy it what do you pay for it?—A. We never buy, we always make our own.

Q. You all fish single lines?—A. Yes.

Q. What do you do with your gear when you get through fishing in December, do you leave it in the water all winter, or do you bring it to shore?—A. I haul my gear about the first week in January.

Q. You take it ashore then, and when do you put it out again?—A. The last of March or the first of April.

Q. Where do you put it out, on the same ground?—A. Yes, generally.

Q. You do not fish offshore then?—A. I fished last spring outside for the first time in 8 or 10 fathoms.

Q. What sort of a bottom do you choose for your fishing?—A. A rocky bottom.

Q. There is not much use fishing in a sandy or muddy bottom?—A. No, there are no places for fish to conceal themselves there.

Q. Is the bottom off here good for lobster fishing?—A. Yes, very good.

Q. To what do you attribute the decrease? You say it is largely, you think, due to the winter fishing, to fishing two seasons?—A. Yes, I think it is too hard on the lobster fishery.

Q. Do you think it is wise to take lobsters that are small and have not reached the age at which they reproduce themselves?—A. That I do not know.

Q. You hardly ever find lobsters under 8 inches with eggs on?—A. No, I do not know that I have ever seen one so small.

Q. We may fix 8 inches as the limit of reproduction, do you think it is wise that lobsters under that size should ever be destroyed or taken?—A. No, nothing under 8 inches. To my way of thinking anything under 8 inches should be hove away, that is a very small lobster.

Q. In practice what is the case, how small are they taken and packed?—A. You hardly ever get them much smaller than that.

Q. Not smaller than 8 inches?—A. Eight inches, or seven inches.

Q. That is a large lobster in some places?—A. Anything under 7 inches is only just the form of a lobster.

Q. Have you any idea how many 7-inch lobsters it takes to fill a pound can?—A. I have not.

Q. We have tested the matter and we found invariably that it takes nine 7-inch lobsters to fill a one-pound can?—A. Well, I did not think that.

SESSIONAL PAPER No. 22a

Q. How are the lobsters you take in the fall in that respect? Do you think they are as full of meat as those you take in the spring?—A. At times I think they are.

Q. Have you ever been much about a canning factory?—A. No, except in the season I was in Labrador, I was around the factory then.

Q. What kind of lobsters did you get down there?—A. Large.

Q. Did they make good meat?—A. Oh, yes, they made good meat but there was a certain school of lobsters down there, with a very light shell, and they did not have any meat at all, scarcely.

Q. You went down there fishing in June and July, did you?—A. Yes.

Q. How many cases did you pack there that year?—A. One hundred cases.

Q. They never went down again to try it, did they?—A. Yes, they did, the firm went back the next season but did not do anything at it.

Q. Do you think we could provide for the escape of small lobsters by insisting on a certain space between the slats in the trap?—A. That will be putting the laths a certain distance apart?

Q. Yes. There is a difference of opinion among fishermen, a good many say that if you keep the laths a fair distance apart a certain percentage of the small lobsters will escape, but other fishermen say that it will not make any difference.—A. Of course if the laths are a certain distance apart the small lobsters will be very apt to try to crawl out.

Q. You think they will crawl out when the trap is disturbed?—A. Oh, yes.

Q. Are the slats put farther apart than they used to be?—A. I cannot answer for others, but for myself I put them as I always did, the width of the lath apart.

Q. What would that be?—A. I never measured it, but I suppose it would be $1\frac{3}{4}$ or $1\frac{1}{2}$ inch, I never measured the lath at all.

Q. We do not see many traps now with $1\frac{1}{2}$ inch space that I am aware of. I suppose you own your own boat and gear?—A. Yes.

Q. We were talking here this morning about a proposition that has been made to the department by some people to ask that all lobster fishermen should take out a license, there would be no charge for it, but before a fisherman begins fishing for lobsters he should go to the local fishery overseer and get a form, which he would have to sign, setting out the law and the regulations, and binding himself to obey the law strictly. The idea is that having signed in that way every fisherman would regard himself more or less as a fishery officer, and would not only obey the law himself, but would see that others obeyed it. Do you think that would have any good effect?—A. I think it would make him much better.

Q. Do you think he would observe the law more carefully?—A. I think he would.

Q. Some people think he should be asked to swear to it; do you think that doing that would make him keep the law if he did not otherwise intend to do it?—A. It should do so if he is sworn, he should. If he did not it is no use his taking the oath in any case.

Q. What did you receive for your lobsters when you began fishing, how were you paid then?—A. When I started fishing first it was \$1 per hundred.

Q. Per hundred count?—A. Yes.

Q. And they were very much larger then?—A. A great deal larger than they get now.

Q. Have you any idea what 100 lobsters would weigh in those days just as they came out of the water?—A. I would not have any idea for I never weighed them.

Q. And what is the price paid to you now?—A. Oh, well, they have been \$4 and \$5 per hundred.

Q. They went up to \$5, that was the year before this?—A. Yes, this year they were not as much as that.

Q. They dropped about one-half, did they not?—A. Yes, they dropped quite a bit.

Q. What did you get this year per hundred?—A. \$2.50.

9-10 EDWARD VII., A. 1910

Q. And how much for market lobsters?—A. Ten cents a piece.

Q. Taking them by count they count everything, small as well as big?—A. Yes.

Q. What proportion of the lobsters you get here are market lobsters?—A. This season they ran very small, there were not many, about, on an average, 15 or 20, something like that.

Q. That will be over 10½ inches?—A. Yes.

Q. Then your principal sale of lobsters is to the cannery?—A. Yes.

Q. If the canneries were closed, if licenses were not given to can at all and if canning were stopped, how would it affect your fishery?—A. I think it would be pretty hard for the fishermen here if the canneries were stopped.

Q. There are some people who think no canning should be done between Yarmouth and Halifax?—A. That might suit some places, but I do not think it would suit this place at all.

Q. There is no doubt about that?—A. I do not see how it would suit this place at all.

Q. The fishermen would lose the market for the principal part of their catch?—A. They could not do anything.

Q. Is there a very large proportion of the population here engaged in lobster fishing?—A. The majority on the islands, I am almost safe in saying that all on the islands fish lobsters.

Q. And some on the mainland?—A. Some on the mainland.

Q. Within your knowledge has it ever been the practice to brush the berries off along this shore; have you ever heard of its being done?—A. I did it once myself about, I would say, 10 or 15 years ago, or something like that, but I looked into the matter and I thought it was an unjust thing to do, and I emptied them from the trap into the ocean from that out.

Q. A great many fishermen justify themselves in doing that in this way: they say, 'If I throw that lobster overboard I am losing so much of my catch, and the other fellow will catch her and brush the berries off and get the benefit of selling her'?—A. I did not look at it that way, I looked at it this way: that I was committing the biggest sin I possibly could, that if a man was bad enough to do it he would commit almost any measly sin.

Q. Do you think there is a better idea among the fishermen to-day of protecting that lobster than there used to be?—A. I think to-day there are very few of them in this place that would destroy the seed lobster.

Q. So that it is not altogether to the destruction of the berried lobster you attribute the decrease in the fishery?—A. No.

Q. Do you think that you will get more spawn lobsters in the shoal water than you will in deep water?—A. I think you will, that is in the last part of the season.

Q. How about the small lobsters, do you think you get more of them in shoal water, too?—A. I think you will get more in the shoal water than in deep water.

Q. Among the many suggestions that have been made to the department for the preservation and improvement of the fishery, is one that we should stop fishing altogether for four or five years, what do you think about that?—A. I think it would be rather hard on the fishermen.

Q. Is there anything else that the fishermen could do at that time, is there any other fishery they could carry on at that time?—A. Some people could, I suppose, and some could not, he would have to take a nap until he could take the line, until the fish comes on shore in the summer.

Q. What is the first fishery you go at after you knock off the lobster fishery?—A. Cod fishing.

Q. You have no mackerel fishing in the spring?—A. We put nets out, there are all kinds of fishing after the lobster fishing is over.

Q. Do you do any other fishing while fishing lobsters?—A. No.

SESSIONAL PAPER No. 22a

Q. How often do you fish your traps?—A. Once a day.

Q. Who fixes the price that is paid for lobsters?—A. The boss at the factory, he puts the price on.

Q. When you begin fishing in the spring do you know what price you are going to get?—A. The man who buys them up in the factory, he gives you the price.

Q. That is the smackman?—A. Yes, he gives it to us about the time he is going to start buying.

Q. Is there more than one smack on the fishing ground buying for different people?—A. There are about four or five in this harbour.

Q. They are smacking lobsters for the different factories?—A. Yes.

Q. Is there any competition in the price, will one smack offer more than the other?—A. They did in years before this, but this season they were all one figure.

Q. One would not give more than another?—A. That is it, one would not give more than another.

Q. That is what makes you think there was an arrangement come to?—A. Yes.

Q. Did you ever ship lobsters to market yourself?—A. No.

Q. You never did?—A. Well, once I shipped part of a crate, I made up a crate with another fellow, that is all I ever did.

Q. How did it turn out?—A. I did not see that I gained anything by it.

Q. Do you think that an increase in the number of canneries, if more were licensed, for instance, there is only one cannery in this neighbourhood, but supposing there were two or three, would it lead to competition and would the fishermen be liable to get more for their lobsters?—A. It is quite right that there is only one factory here, but outsiders come in here from the eastward and the westward and buy, that makes opposition.

Q. Do you think an increase in the number of canneries would mean an increase in the quantity of fish taken?—A. I do not know, but I really do not think it would make much difference.

Q. Is everybody that is likely to fish already engaged in fishing?—A. I think every man that is engaged in one fishery here fishes in another.

Q. Are there any more left to engage in it?—A. No, not many.

Q. What makes me ask you that question is this: the department has refused licenses to new applicants with the idea that by doing so they are keeping down the fishing?—A. Yes.

Q. But no limit has ever been put upon the amount of gear fished?—A. No.

Q. And many fishermen have expressed the opinion that if there were more licenses to pack granted it would not make much difference in the amount of fishing done, that it would not mean the capturing of more fish?—A. I do not see that it would hurt the fishery at all. I do not think that it would encourage any more men to fish than are in the business now.

Q. Do you think there would be more competition by more canneries operating, and would not a slight rise in the price of fish induce more people to go into it?—A. It might; but I do not think there are many more people in this place that would go into that kind of fishery.

Q. It has occurred in some places that the fishermen have lost their catch of lobsters by the packer refusing to receive them, having closed up the cannery. Has that ever happened here at all?—A. Not to my knowledge.

Q. Do you think that the fishermen generally would make more money if they were allowed to can for themselves?—A. What, every man can his own fish?

Q. Yes?—A. I do not see how a man could very well do that, even if he had a chance to do it.

Q. Do you know anything at all about hatcheries or pounds as a means of preserving the lobsters?—A. No, I do not; I never saw one.

9-10 EDWARD VII., A. 1910

Q. Would you favour any change in the size limit in this district—it is now 9 inches?—A. I always kind of thought that a 9-inch lobster was pretty large to chuck away, and I rather thought that an 8-inch lobster was large, but to throw away everything below that would be about as good a regulation as we would want in size.

Q. Inside the gulf they fish a very much shorter season than you do here. They do not begin in some places until the middle of May, and they end in June or July. There they have an 8-inch limit—it used to be 9 and it was reduced to 8—and they tell us now that it ought to be reduced to 7; that if we would only make it 7 they would be all right?—A. I think every man would be satisfied in this place if we got that size, and I rather think he would feel satisfied in chucking the rest away, I think they would. I know I would, but I am only one.

Q. What is the best portion of the season for lobster fishing here, when do you do best?—A. In the spring of the year; the spring season is the best.

Q. That is in April and May?—A. April and May.

Q. When does your harbour ice go out here?—A. In the bay here it does not go out until—well, it is according to the spring—sometimes the middle of March and sometimes the last of March.

Q. It is generally all gone in April?—A. Oh, yes.

Q. Then, as I understand you, your main suggestion is that you would prefer to see the winter fishing done away with?—A. By all means.

Q. And fish in April and May?—A. April and May; and I do not think, if we have those two months in the year to fish, that it will ever be a failure, because that would give the fish a chance to increase.

Q. What would you say about leaving a fair space between the slats in the trap?—A. Well, I really think that building the traps as we always did, and leaving the slats nearly the width of a lath apart—the average lath is about $1\frac{1}{2}$ inches—and this (exhibiting lath) is about the ordinary lath that we use here, that space is wide enough.

Q. Will an 8-inch lobster go out through that?—A. I do not know whether he would or not, probably he would.

Q. They squeeze through a pretty small hole?—A. They probably would when they mean to go.

Q. Would a 9-inch lobster go through it?—A. I do not think a 9-inch lobster could crawl through that space. A 9-inch lobster will not crawl through that.

Q. Is there any considerable amount of fishing done after the close of the season?—A. I never do any.

Q. And there is no packing going on then?—A. I do not see it.

Witness discharged.

OBADIAH HIMMELMAN, fisherman, La Have Island.—All I have to say is that I am satisfied to have the winter fishing stopped.

By the Commissioner:

Q. You have heard the evidence given by the gentlemen who preceded you; do you agree with most of it?—A. Yes.

Q. Do you agree with all of it?—A. Yes. The winter fishing is hard on a body, and a person loses more than he gains by it.

Witness discharged.

SESSIONAL PAPER No. 22a

CHARLES HIRTLE re-called:—

By Mr. Whitford:

Q. It has been said here that the regulations have not been enforced, and that illegal fishing is allowed. You might tell us if that is an actual fact?—A. I do not think that it has always been enforced, as far as I know about it.

Q. What has been done in that line of enforcement recently?—A. Well, I do not know of anything.

Q. Were there not violations reported this present summer?—A. Yes, they were reported.

Q. And acted on?—A. Yes.

Q. And the fines paid?—A. Yes.

Q. And others are under consideration?—A. Yes.

By the Commissioner:

Q. That is for fishing out of season?—A. Yes, that has always been enforced when we have found it.

Witness discharged.

SAMUEL SMITH, Senior, fishery guardian, Broad Cove called and sworn:—

All the difference that our people up there at Broad Cove would want from those men on La Have Island is if they could get a little time earlier in the fall than what they have, but they want the winter fishing done away with, and April and May fishing.

By the Commissioner:

Q. They want April and May and a month and a half in the fall?—A. Yes.

Q. From when to about when?—A. From the middle of October to the last of November, or November and up to the middle of December, that would be all the difference.

Q. What do you think about the matter, have you ever fished lobsters?—A. I have fished some, but not of late years.

Q. What do you think of this matter of regulating the width between the slats? Should the traps be made with a specified space between them?—A. Yes, I think the smaller lobsters would have a better chance to get out.

Q. But will they get out?—A. That is a question you will have some difficulty in settling, some may and some will not.

Q. Do you think a fair proportion will escape?—A. I think so.

Q. No matter what regulation you make about the size limit some will pass in handling a large quantity of fish, we understand that?—A. Yes

Q. How does the 9-inch limit work here, what would the result be if it were strictly enforced?—A. It works very well up our way, and we try to keep it enforced. If they get anything outside of that they have to smuggle them through sharp.

Q. Where do they sell their lobsters?—A. They sell them to the Liverpool canneries.

Q. The smacks come here and buy them?—A. Yes.

Q. And do you think those smacks take nothing under 9 inches?—A. Not that I know of.

Q. The canners tell us that if they were cut off at 9 inches they would have to shut up their establishments, that one-half of their pack is under 9 inches, where do they get them?—A. I do not know, Mr. Bain is at Liverpool and they are pretty sharp up there, they would have to smuggle them if they got them in.

9-10 EDWARD VII., A. 1910

Q. During the month and a half in the fall would they catch many fish?—A. I think so.

Q. Would that not be burning the candle at both ends? There is already a great deal of complaint that the fishery is failing and if you make good fishing in the spring, and good fishing in the fall, would not that be killing off the fish still quicker than they have been? It appears to me that you would soon be reaching the end?—A. I think the candle would not be as long as it is now. In the winter there are more lobsters perish, they take the small lobsters in the trap, and before they are back in the water again they would be chilled and it would kill them.

Witness discharged.

Commission adjourned.

PORT MOUTON, Sept. 10, 1909.

STEPHEN HOMANS, canner, called and sworn:—

By the Commissioner:

Q. How long have you been engaged in the lobster packing or connected with it?—A. I have been connected with it about 24 years.

Q. You, at present, are running your cannery here?—A. I am manager for M. Neville.

Q. How long did you can in the Island of Anticosti?—A. I fished at Anticosti for four seasons.

Q. What other canneries are there in this immediate neighbourhood besides the one you represent?—A. Stewart and Co., and John Leslie.

Q. What is the total output here, can you give me any idea of the total number of cases packed in the three factories?—A. I can give you something in the neighborhood.

Q. We do not want it absolutely you know.—A. Well, put it at 2,000 cases.

Q. What number of boats fishing will that represent?—A. That is hard to get at.

Q. Well, give it in a general way, you know the number of boats supplying you.—A. We go over an immense scope of territory, we smack from a long way; I suppose it would be 500 boats with the whole of the three canneries.

Q. What number would you say in your own case, one-third of that?—A. Yes, I would say 350.

Q. The pack at your cannery here represents the catch of about 400 boats?—A. Yes.

Q. And among all the canners between 500 and 600 boats are engaged, would that be right?—A. Yes.

Q. The lobsters I suppose are all smacked to the cannery?—A. All smacked.

Q. For a distance of how many miles on each side?—A. We go about 30 or 35 miles west and 20 miles east.

Q. The fishermen here are all the owners of their own boats and gear, are they?—A. Nearly all.

Q. It is not supplied by the cannery?—A. No, we do not supply any gear.

Q. When does the fishery begin with you?—A. The 15th of December.

Q. And ends the last day of May?—A. The last day of May.

Q. What is the most important time of the fishery?—A. I consider that the most important time is from the 15th of December until the 10th of January.

SESSIONAL PAPER No. 22a

Q. That is your best fishery?—A. That is about the best fishery, and then from the 10th of April or the 15th of April to the 15th of May; I think the catches during those two periods are about equal.

Q. And from the middle of January to the middle of April is there very little done?—A. Very little.

Q. Is the gear lying in the water?—A. Oh, yes, a certain number of the fishermen fish all winter, and a certain number will make very good money because they ship all their lobsters.

Q. The canneries close between what dates? You do not run the cannery all the time?—A. We have it open but we do not pack every day, we have to take care of our frozen fish and fresh fish.

Q. What is the proportion of the total catch of these boats that is sent to the market alive, and what proportion is canned?—A. Well, I will look that up from the books, I will give the average for three years, here are the figures, and there would just be shipped about one-fifth of all the lobsters we take.

Q. Will you give us the exact figures for three years?—A. This would be a poor estimate, because we kept covering more ground each year. We had in the neighbourhood of 1,000,000 lobsters during three years, I have 1,380,000 in my books.

Q. In 1907, what would the figures be?—A. In 1907 we had about 340,000 small lobsters.

Q. That were canned?—A. Yes, and about 55,000 large.

Q. That were exported alive?—A. Yes.

Q. Now, in 1908?—A. There were 500,000 small lobsters canned and about 100,000 large.

Q. The large were shipped alive to the market?—A. Yes. In 1909 we had 70,000 large and about 550,000 small.

Q. That is by count or by weight?—A. By count. Now that looks like a decrease in the size of the lobsters, but you see it is on account of our not buying all the large lobsters. You understand that a lot of the fishermen—some seasons we buy all their large lobsters, and other seasons we do not handle so many—ship them themselves; any one looking at these figures would think that the lobsters are decreasing in size, but that is the explanation.

Q. It would appear that way because there is not such a large proportion of large lobsters?—A. Yes, but that is because the fishermen shipped them themselves and I did not buy them from them.

Q. And that makes a total for the three years of?—A. In the neighbourhood of 1,380,000 small and 220,000 large.

Q. That is about one-fifth, as you say?—A. Yes, but still you must take into consideration that we do not buy nearly all the large lobsters, there is a large quantity shipped besides what we ship.

Q. But you buy of course all the small ones?—A. I buy all the small ones.

Q. What is the condition of the fishery now compared with what it was when you first had to do with it in this neighbourhood?—A. That is a question that would frighten you if I were to tell you, because I saw the books and I am handling five times as many lobsters as my predecessors did the season before I came here.

Q. Have you a great many more boats fishing for you and much more gear employed?—A. Yes.

Q. Is it the tendency to increase the amount of gear?—A. It has been the last three years.

Q. The gear has been increased?—A. Yes.

Q. Is that because all the fishermen are fishing more gear or that more people are going into it?—A. There are more people going into lobstering and every one is increasing his gear.

9-10 EDWARD VII., A. 1910

Q. But apart from that, what is your opinion of the lobster industry, is it failing, are the fish averaging smaller?—A. I cannot say that they are, I cannot see very much difference in the fishery; we have some blustery seasons, but taking all into consideration, I cannot see any difference.

Q. Is there any difference in the run of the fish?—A. Last season the fish ran large; this season they ran smaller, but take it for the three years, I see very little difference in the size of the fish.

Q. What proportion of the fish that are canned, or that are caught by the fishermen, will be below the legal limit of 9 inches?—A. That is a pretty difficult question to get at, if I had time I could get it down pretty fine.

Q. A good many of those who gave evidence last year in Ottawa, and many who have been before us have stated that if this 9-inch limit were strictly enforced it would put both the fishermen and the canner out of business?—A. Well, there is no doubt about it in some sections; right here in Port Mouton Bay this season actually it would have put the fishermen out of business, that is right in the bay, while in some other places it would not affect them any, that is just how it is. That is a pretty difficult question to answer.

Q. But there is a large proportion of lobsters taken under the legal limit?—A. Quite a large portion, yes.

Q. Is the packer expected to take them from the fishermen?—A. Well, it has been the practice, although for two years we have not taken any.

Q. For two years you have not?—A. I have been here four years, but for two years out of that time we never took any, but it is slackening off a little the last two years.

Q. You live up to the law?—A. Yes.

Q. With regard to the 9-inch limit?—A. Yes.

Q. Then, actually, what became of the small ones?—A. I think they were put in the water. We haven't actually here in Port Mouton—I think the law has been rigidly enforced here, it got a little off last year, but not wholesale.

Q. As to the egg lobster, what has been the practice with regard to her?—A. They liberate all of them.

Q. The practice of washing them by the fishermen has not been followed here?—A. It is not very noticeable, not to any extent. I guess there may be a few scattered ones, but very, very few.

Q. The policy of the department in recent years has been to restrict the number of canneries, do you think it would make any difference in the fishery if more canning licenses were issued?—A. I do not think it would make any difference in the fishery; the only difference it would make would be to put an inferior quality of lobsters on the market.

Q. That is if the number of canneries were increased indiscriminately?—A. Yes. You know it is almost impossible for a fisherman to pack his own lobsters, because he has not the time to do it and take care of them.

Q. Would an increase in the number of canneries mean an increase in the amount of fishing done?—A. Not by any means.

Q. Of course, there have been, as you know, a great many complaints made by fishermen that there has been a combine on the part of the canners to keep prices down. Bitter complaints have been made to the department for years back about that, and those complaints have led the department to issue during the last few years what they call co-operative licenses; that is, if a group of fishermen were dissatisfied with what they were receiving from the canner, or whoever they sell their lobsters to, they were given a license to can for themselves. Do you think that is a fair or reasonable way of satisfying the demands of the fishermen?—A. Well, it should be.

Q. Do you think the fishermen would make more money if they were allowed to pack for themselves?—A. No, I do not think they would make as much.

SESSIONAL PAPER No. 22a

Q. What do you consider to be the spawning months of the lobster in this neighbourhood?—A. I think June and July.

Q. Do you think they approach the shore for the purpose of spawning?—A. I think so.

Q. Would you say that lobster fishing should be maintained further off shore?—A. Yes.

Q. In order that these schools of immature lobsters which come inshore should be better protected?—A. I do not think.

Q. Do you think this fishing in harbours and lagoons which is carried on at the latter end of the season is more injurious than the other?—A. Our season opens here on the 15th of December and closes on the 31st of May, and that protects the fish, which are not in there then.

Q. Do you not think, from your experience as a lobster fisherman, that a great deal of destruction to the fishery takes place by the fishing late in the season in the warm shoal water into which the fish come to spawn?—A. Certainly these fish come into the shoal water in the warm weather for breeding; that is my idea of it.

Q. What is the smallest lobster you have ever seen bearing eggs?—A. I cannot call to memory that I ever saw a lobster under $9\frac{1}{2}$ inches bearing eggs.

Q. We saw one this summer measuring $7\frac{1}{2}$ inches only?—A. That was on Prince Edward Island, was it?

Q. Yes?—A. I have seen them there, too, at that size, but not on this coast.

Q. They say there is not one in 100,000 under 8 inches?—A. I saw one that I thought was very small last year, and it was $9\frac{1}{2}$ inches when I measured it.

Q. What number of lobsters does it take in your pack to fill a pound can?—A. It will take about five.

Q. About five lobsters?—A. Yes.

Q. How many would that be to the hundred pounds, how many lobsters make 100 pounds?—A. That varies at different places.

Q. It varies with the season, too, does it not?—A. It varies with the season, and, of course, with the size of the fish. Here it is very difficult to get at it, because we separate them, and I have never packed fish by the pound.

Q. How are the lobsters you catch in December compared with those you get in the spring with regard to meat?—A. They are a little slacker in the meat than they would be in the middle of April.

Q. Some people have stated that it takes 30 per cent more to fill a pound tin?—A. In December?

Q. In the fall; they say it takes that much more than it does in the spring?—A. I should not like to say that much.

Q. Well, that is perhaps earlier in the season?—A. I will not say but what it will take 30 per cent more to the packer, because he has a lot more frozen fish which are no good.

Q. Was the practice of stripping off the eggs ever followed by the fishermen in the early days?—A. That is a question I cannot answer. I have only been here four years.

Q. Which of the two branches of the fishery, the export trade or the canning, is the most profitable?—A. Just around here?

Q. Yes?—A. Oh the canning, without a doubt; they get more out of what lobsters they sell to the canner than out of what they ship.

Q. Has there been any noticeable decline in the average size of the lobsters caught in your district within the last ten years?—A. Well, I cannot say that there is.

Q. Or within the last 30 years?—A. Oh well, I have not been here. There is undoubtedly in 30 years, but there is an increase in the lobsters here in the last ten years.

Q. They have improved?—A. They have improved, I have statistics of the pack that I go by so I know, but if you go back 30 years of course there is a decline.

9-10 EDWARD VII., A. 1910

Q. To what do you attribute that decrease, is it due to over-fishing?—A. Well, we had not protection up to about 10 or 15 years ago.

Q. There were no regulations in the early days?—A. No, there were no regulations in the early days.

Q. Has any attempt been made here to enforce the regulations?—A. Oh yes.

Q. Attempts have been made?—A. Oh yes.

Q. Is it within your knowledge that people have been fined?—A. Oh yes.

Q. Do you think that different size limits and different seasons in adjoining sections of the coast are unsatisfactory and apt to encourage violations of the law?—A. That is a question now that it is difficult to answer.

Q. It seems to be difficult you know, where the line is drawn, to enforce the regulations on both sides of it, there are always so many ways of escaping it?—A. Yes.

Q. The best way, where it can be done, is to have uniform regulations so far as possible?—A. That is quite impossible.

Q. What trap is in use here at the present time?—A. What they call parlour trap.

Q. Is that smaller trap, the diamond trap, used largely?—A. No, they use nothing here but the parlour.

Q. When did it supersede that oldfashioned double ender trap?—A. About 8 years ago, I think.

Q. What is the particular advantage of that trap over the old-fashioned one?—A. The lobsters go into it as readily, but there are not so many go out.

Q. Has there been any tendency within your recollection to narrow the space between the slats?—A. No.

Q. What space is generally allowed?—A. I should say about $1\frac{1}{2}$ inch, between 1 inch and $1\frac{1}{2}$.

Q. Do you think that narrowing that space down has anything to do with the capture of a smaller run of lobsters?—A. I do not think so.

Q. Do you think it would be possible to regulate the capture of small lobsters by insisting on a certain space between the slats?—A. I do not think.

Q. You do not think it would affect the result?—A. I do not think.

Q. Some fishermen tell us it would.—A. Of course you would not probably get as many small lobsters, but you would get some all the same.

Q. We cannot avoid that, but what I want to know is in the first place with reference to the capture of the small lobsters, they have narrowed it down in some places until it is not more than half inch, now why have they done that?—A. I was just speaking about that here.

Q. Do you think it would be wise that the department should insist on a standard width, would it protect any proportion of the small lobsters? Some fishermen say that the lobster never tries to escape from the trap when you disturb it and others say that if you allow space enough for him to get out he will always try to get out when you haul the trap. You see the proposition has been made to do away with the size limit. In some places unquestionably canning is and must be the principal industry because there is no chance of shipping anything alive to the markets, especially in the remoter districts, and it would seem almost that the best thing we can do under those circumstances is to do away with the size limit, shorten the season and regulate the escape of small lobsters by fixing a standard space between the slats?—A. I think that would be a little protection, no doubt it would be.

Q. You think there is a tendency on the part of the lobster to scuffle out of the trap if he gets a chance?—A. Certainly there is, undoubtedly.

Q. What size lobster would go through an inch and a half opening; there hasn't been a single place where we have seen an inch and a half space.—A. I am speaking from memory as to the space, I have not noticed it in recent years.

SESSIONAL PAPER No. 22a

Q. Most of them say they use the head of the hammer?—A. Well, that is what I use.

Q. That will be only about an inch?—A. Yes, about that, but even here they make them wider apart than I have been used to seeing them at Anticosti.

Q. How is the season here, is it what it ought to be?—A. As far as I can see I think the season seems to be just about right. The only suggestion I would make, but then this is only just my own opinion, would be to have it from the first of December till the 15th of May.

Q. What would be the advantage of that?—A. Well, there is generally good fishing and the best weather about the first of December, and the last 15 days the lobsters begin to slacken off a little, that is in some seasons, but that is just my own idea.

Q. You have here a standard size limit of 9 inches?—A. Yes.

Q. Do you think that limit ought to be strictly enforced?—A. No, I do not think so for a moment.

Q. What would you do with the limit, would you say do away with the size limit?—A. I would do away with the size limit.

Q. And what would you do to make up for that?—A. Strictly enforce the close season and protect the berried lobsters. While I hold to the opinion that we know that the lobster does not spawn here until she is over 9 inches; it is no protection to them if you catch them at 8 inches, you are simply destroying the lobster before maturity, and you are also doing that at 9 inches.

Q. Would you fix the size limit at 8 inches or 7, or what would you do?—A. No, I would let every packer fix his own limit, if he doesn't choose to take these lobsters all right. There should be a compulsory law for the fishermen and packers to buy by weight, it would be better for both. We have lots of fishermen that will not save these small lobsters, they will simply throw them away. They will not take one under 7 inches, but will throw it away.

Q. In the greater part of the coast now they buy by weight?—A. Oh, on the west they never have. In Lunenburg, Queens and Shelburne, except in the centre of that county they buy by weight.

Q. How is it you retain the old fashioned way of buying by count instead of by weight?—A. We have considerable opposition here, and at Lockeport the other people buy by count and we have to do the same.

Q. Is it the case that canners are compelled to take small lobsters or else lose their fishermen who would sell their whole catch to other canners not so scrupulous?—A. There is no doubt about that.

Q. It has been suggested that for the better control of the lobster fishery the fishermen should be required to register and take out a license. That has been suggested to the department from more than one source; there might not be any fee charged, but the license would be a printed form on which the regulations would be set out, and the fishermen would be asked to sign them and to bind themselves to observe them strictly. The idea is that having done so, the fisherman would be more likely to obey the law himself and to see that his neighbours did the same. Do you think there is any thing in that suggestion?—A. There is no harm in it, and I think it would be no more than right. The factories have to be licensed and why not the fishermen.

Q. You say the regulations regarding the protection of the berried lobster have been observed in this district?—A. Yes.

Q. What would be the effect of a strict enforcement of the present regulations with regard to the 9-inch limit?—A. Well, I will just speak for the district of Port Mouton; the effect would be felt the keenest by the fishermen, undoubtedly.

Q. How would it affect the canner? Would it put the canner out of business?—A. Well, it would to a certain extent curtail the pack, but it really would not affect the packer here as much as it would in other parts of the county.

9-10 EDWARD VII., A. 1910

Q. Though it might affect the pack here seriously for a year or two do you not think that ultimately it would have the effect of improving the lobster fishery?—A. Not a bit.

Q. Do you not think it would?—A. Not a bit.

Q. Do you not think it would give the lobsters time to reach maturity?—A. We would get them before they reached maturity.

Q. How would that be if the regulation were enforced?—A. We would have a year in which to get them over 9 inches, there is a very small percentage of lobsters here with berries on until they are over 10 inches.

Q. I am not speaking about the berried lobster, but the small lobster. You see the young lobster grows 2 inches a year, 3 inches the first year, so that you can tell the age by the size. Various suggestions have been made to the department for remedying the existing condition of affairs. Some people say, 'Close down altogether for a term of years.'—A. What is their idea in closing down?

Q. To let the lobsters increase and grow.—A. Actually we have over production now.

Q. That is to say you are over producing, canning too much?—A. Well, we are canning plenty for the market.

Q. More than there is any demand for?—A. All that there is any demand for.

Q. The Lobster Commission of 1898 recommended the closing down by sections, shutting off certain sections of the coast and moving around gradually until the whole coast had been given a close season?—A. That will be difficult, almost impossible to carry out.

Q. Has the number of canneries reached the maximum compatible with the preservation of the lobster industry, and should the issue of further licenses be discouraged?—A. I would very much prefer not to answer that question.

Q. Others in your position have answered it.—A. I say there are plenty of factories.

Q. Is there any good reason why if a man shows his ability and capacity to pack, one man has not as good a right to a license as another?—A. Certainly, undoubtedly he has.

Q. Do you think a reduction in the length of the open season would be an advantage, and that it would tend eventually to increase the supply and perpetuate the fishery?—A. I do not think it would.

Q. Do you think it would be possible to establish a standard of fitness in canneries?—A. In the cannery?

Q. To insist that the cannery be up to a certain standard in its outfit?—A. Oh, certainly, yes.

Q. There are a great many canneries that are poorly equipped and poorly kept. How would you go about that, what should be insisted on mainly in the cannery?—A. Cleanliness.

Q. And that the tables should be covered?—A. That the tables should be covered and kept clean, and means of keeping it clean provided, a continual flow of clean water.

Q. Do you think that the product of the canneries, that is the canned article, should be subject to inspection?—A. Yes.

Q. That is official inspection?—A. Yes.

Q. The tendency to-day is to inspect all food products?—A. Yes.

Q. And have them vouched for?—A. Yes.

Q. Are there any co-operative canneries in this neighbourhood?—A. No.

Q. What is the price paid for lobsters in this neighbourhood?—A. I pay so much a piece, three cents each.

Q. That is \$3 per hundred?—A. Yes, for small lobsters and 5½ cents the season before. Take it for the last three years the average price has been 4½ cents.

SESSIONAL PAPER No. 22a

Q. That is 4½ cents for the small lobsters, and for the market lobsters?—A. Well, they vary every week. We paid from 10 cents to 40 cents a piece.

Q. Forty cents a piece?—A. Yes, and 10 cents is the lowest.

Q. The price varies with the condition of the markets?—A. Yes.

Q. How do you ship your live lobsters?—A. We use the Halifax and South-western Railway and transport a certain quantity to Halifax on our own boats.

Q. How often?—A. Weekly.

Q. The lobsters as they are brought in are held in cars, are they?—A. In crates.

Q. Until you are ready to export them?—A. Until we are ready to export them.

Q. Are you aware of any complaints made by fishermen that the price paid by canners for the lobsters is not satisfactory?—A. Yes, that is always the case. But still we have a certain number of fishermen here in Port Mouton that we have very little kick from about the price of lobsters.

Q. Is it your opinion that there is any combine on the part of packers generally to keep prices down?—A. None that I know of.

Q. Is there some competition?—A. I should say so.

Q. How are the lobsters paid for generally, by the smackman?—A. By the smackman.

Q. And do the rival smackmen compete for lobsters?—A. No, ours do not.

Q. Yours have a fixed price?—A. Mine have a fixed price.

Q. Your smackman has a certain limit fixed beyond which he must not go?—A. He has his price which I fix, and as the fisherman puts his lobsters aboard with the one hand he takes his money with the other hand.

Q. What are the average annual earnings of a good lobster fisherman?—A. Well, that is difficult to say. In the last three years, we will go over the last three years—there are so many bad ones—but I think we can put it for a good fisherman at \$350 at least, and some of them go as high as \$1,000, but any average lobster fisherman could realize \$350 per season.

Q. Who are the men who carry on lobster fishing, are they fishermen who carry on the other fisheries?—A. Yes, they are ordinary salt water fishermen carrying on the cod, mackerel and herring fisheries as each comes in season.

Q. What does it cost to pack a case of lobsters? What is a case of lobsters worth, the canning and everything, the meat, the tin, the labour to put it up, and everything else; what would a case of lobsters be worth?—A. At four and a half cents a piece it costs in the neighbourhood of \$14.

Q. Have you any objection to giving us the selling market price for lobsters during the last two or three years? Of course we are getting it prepared for us by the Roberts, Simpson Company of Halifax. My object in getting that information is to show what reason the fishermen had for complaining about the drop in price this year and whether the decline in market value warranted it.—A. Yes, it did.

Q. It has been said that the year before everybody went crazy on price?—A. Well, they went high enough this year.

Q. That is what we want to know, because the representatives of the Union state that they have been in communication with the markets abroad, and that the low price this year was not warranted.—A. They can give it to you from their records this year, I could not give it to you. I gave you that \$14 as the average of what they cost us for the last three years.

Q. Do you think that the shipment of live lobsters should be favoured in preference to the canning industry?—A. No—well, it should be favoured to a certain extent; I will give you an explanation of that, last year medium lobsters from 9 to 10 inches brought—at times they did not net 4 cents—whereas the canners would be perfectly willing to give 4 or 5 cents for them and can them.

Q. That change in the law in Massachusetts by which they admitted the 9 instead of the 10½ inch lobster must have acted disastrously on the Boston market did it

9-10 EDWARD VII., A. 1910

not?—A. Yes, actually it has been a hurt to the majority of the fishermen in Shelburne.

Witness discharged.

Commission adjourned.

LITTLE HARBOUR, September 11, 1909.

EVERATT HARDING, President Fishermen's Union No. 2, Swansburg, called and sworn:—

By the Commissioner:

Q. You are both a canner and a fisherman, I suppose?—A. That is what I am.

Q. How far back does your experience in connection with lobster fishing go?—

A. I began as a boy about 23 years ago.

Q. In a few words, what is the condition of the fishery to-day compared with what it was when you began?—A. When I began in the lobster fishery you could get out of 100 traps, without any trouble, from 300 to 500 large lobsters; that was the usual thing, and out of that amount we would probably have from 50 to 75 that would be between 9 and 10½ inches. Now, this last season I fished 100 traps, and the most large ones I caught at any haul was 45, that was only once, but the average would be from 20 to 25.

Q. That is what you call market lobsters?—A. Market lobsters, over 10½ inches. And in getting that many large ones now we would get from 100 to 150 between 9 and 10½ inches; so you see that the lobster is diminishing in size as well as in numbers.

Q. To what do you attribute that decrease? Of course, there is a great deal more fishing done than there was when you began?—A. At that time there were only probably three or four boats fishing from here—Mr. Swim was one of them—and this season there would be 11 engaged in the lobster fishing. That has something to do with it certainly; but I attribute it to the amount of lobsters that have been caught, the lobsters are caught up, and we have here in this station, since the Fishermen's Union has been organized, been strictly adhering to the 9-inch limit until this present year, when we saw it was no use continuing to throw away the lobsters below that size, because others were taking them everywhere, and we had to do the same thing or get out of business.

Q. Previous to the organization of the union were the regulations enforced strictly, was there any attempt made to enforce them?—A. Yes, there was in some places.

Q. But was it generally done?—A. No, it was not.

Q. That is to say, some officers were more strict than others?—A. And some would be more strict in one place than in another; with certain people they would be stricter than with others.

Q. What is the official number of your union here?—A. Station No. 2.

Q. Now, as to the practice of the fishermen, in what depth of water do you fish generally? You begin to fish when?—A. On the 15th of December, and we fish until about the 15th of January.

Q. And in what depth of water do you generally fish at the opening of the season?—A. From 8 to 15 fathoms.

Q. And a boat will average how many traps?—A. From 60 to 70 traps at that season.

SESSIONAL PAPER No. 22a

Q. And those are fished on single lines?—A. Yes.

Q. Do you use fresh herring bait at that season?—A. Corned herring; we use that fall and spring.

Q. Is it your experience that corned herring is a better bait than fresh, or is it that you cannot get fresh bait?—A. My experience is that it is better than fresh. I remember some years ago I was fishing off the cape here in the lobster season and my father was fishing outside; he used to bring in the cod, and he told me he would have to let it remain two or three days to get rancid before it would be good bait.

Q. I understood you fished from the 15th of December to the 15th of January?—A. Yes.

Q. How is the fishing during that time?—A. Fairly good for about two weeks.

Q. Then does it slack off?—A. Then it slacks off, and by the 15th January you could not get enough to pay you for fishing, providing the weather would let you.

Q. What do you do then?—A. We bring our gear ashore; that is the general practice.

Q. When do you put it out again?—A. Some begin on the 20th of March, but the general practice is about the 1st of April.

Q. Do you go out on the same ground, in the same deep water?—A. On the same ground and practically the same depth; and in the month of May we come close in shore.

Q. That is to say, you really have practically two seasons' fishing, one in the late fall and the other in the spring?—A. That is right.

Q. Which of the two seasons do you make the best earnings?—A. You make the best in the winter, because you are the shorter time at it, but as a general thing you will stock just about as much in the winter season in one month as you will in the spring in two. You cannot get quite as many lobsters, but they are much better in price.

Q. For market purposes—the market is in a much better condition in December and January than it is in the spring?—A. Yes. Well, it is about the same in December as it is in April, but we hold our lobsters, and some of those caught in January are not shipped until the end of January. We keep them in cars until the price advances.

Q. And in the spring of course you have to despatch them at once on account of the season?—A. Yes.

Q. Of the two branches of the fishery which is the most profitable to the fisherman, the sale for canning purposes or the fresh market business?—A. Well, that varies in different localities. Here in our locality for the present year I have received more money for my lobsters sold to the cannery than I got for what I shipped. I shipped all from 10 inches up, and those below 10 inches, I did not save them all, I chucked away the little fellows, brought me more money than what I got for those above 10 inches that I shipped away.

Q. Is the fresh lobster market an uncertain one, does it vary much?—A. It does.

Q. Does the fisherman ship his own fish to market?—A. Altogether here, since the formation of the union, we all ship our own fish.

Q. Is that done by the union or individually?—A. Individually.

Q. How do you get to the market from here?—A. We have to put them on the ox or horse wagon and take them to the place where you got off the train yesterday, at any rate we did it all last winter, and this spring we had a boat in connection with our factory and carried them to Lockport and shipped from there.

Q. You did not ship them direct to Halifax or Yarmouth?—A. No, all by train.

Q. Is the proportion of small lobsters greater in the fall or the spring fishing?—A. It is greater in the spring.

Q. Is it greater as the season advances after you get into shoal water?—A. Yes.

Q. As to the berried lobster, what has been the practice in the past with regard to her?—A. To take her out of the trap and chuck her overboard.

9-10 EDWARD VII., A. 1910

Q. That is in recent years, has it always been done?—A. I do not think so, I cannot speak definitely, but I do not think so.

Q. In most places I do not think there is any doubt they are strict?—A. I think in times gone by they were more strict, that is when they were selling the markets, but now in recent years, it is five years since I have been in the lobster business this last time, and I do not think there has been a berried lobster sold in all that time.

Q. Do you think there is a general opinion among the fishermen now, that they realize better than they used to the advantage of protecting that lobster?—A. Yes—well now there are none to protect.

Q. There are not a great many of them?—A. No, I got one this summer in the whole season's catch.

Q. I guess you knock off here before the time when the berried lobsters come to shore in the greatest numbers, do you not?—A. Oh, yes, I think so.

Q. The spawning season it is generally conceded, is July and August, the latter part of June in some places, and the farther north you go the later it is?—A. Yes, I remember when I was a boy fishing with father we had until the middle of July, and in July and the latter part of June you would get a great many berried lobsters, sometimes six and eight a day.

Q. How is it with the fall fishing, do you see many then?—A. We very seldom see one.

Q. Are the fish in the fall as full of meat as they are in April or May, will they turn out as well?—A. I think so. I know this, of course, our canning business only ran this spring and we cannot say exactly as we never canned in the winter season, but shipping the fresh lobsters you get better weights, they will weigh better, that is, the live lobsters, some pounds to the crate, in the winter season than in the spring.

Q. Would you say whether in places that have the facilities for carrying it on it would be right to encourage the development of the live lobster trade, even at the expense of the canning?—A. I think so.

Q. There are some places where the facilities exist, they are close to the market and have the means of rapid transit, and it would seem reasonable in such places that that particular form of fishing should be encouraged. I suppose you fish altogether the baited parlour trap here?—A. Yes.

Q. The only difference in this trap, as I understand it, is that it holds the fish a little better than the other?—A. I think so.

Q. Do you think there is a tendency to narrow the space between the slats? When I first remember the lobster fishing, I go back to the time when we had no canneries in the gulf, 37 years ago, we had the slats generally $1\frac{1}{2}$ inches apart with us, and that has been gradually narrowed down so that now nothing like that is allowed?—A. Yes, but still I do not think there is any difference here; I do not think we ever had them more than $1\frac{1}{4}$ inches, and I think the practice is to have them about the same to-day; I know for the last five years we have made the traps just the same.

Q. Do you think it would be possible to fix a standard trap, that is to insist on a certain space being allowed? There are many places where we find it has been narrowed down to half an inch, and that must have been done with a view to holding the small lobster?—A. In fact I do not see what use a lobster that will go out of a $1\frac{1}{4}$ inch space, would be to any fisherman, or what use it would be to any cannery to put him up.

Q. There are plenty of places, not along here—?—A. Because he is so small there isn't any meat in him.

Q. We have been told in some places that the five or six inch lobster is the most profitable to can, because there is more meat in proportion to the weight of the shell, and there they buy their lobsters by weight and not by count?—A. That is just the way we bought them this spring, by weight, and the man we had packing the lobsters for us here is considered to be one of the best packers in the province to-day, in fact

SESSIONAL PAPER No. 22a

our pack got that reputation when it went out, and he is a man who is well qualified to express an opinion on that point. He says the most profitable lobster to can is from 9 to 10½ inches, but perhaps if you had these little lobsters by themselves and boiled them by themselves it might be different.

Q. They haven't anything else to boil in those places I refer to, and in many places they run 10, 12 and 14 to the pound tin. We tried it in one place and we found that it took nine 7-inch lobsters to the pound tin.—A. I expect it would take that many 7-inch. We find that the small lobsters make broken pack which we have to sell at two-thirds of its value. The reason is that they go into the boiler with the rest, and by the time the larger lobsters are cooked the smaller ones are done too much, and they fall to pieces, and another thing it is a great deal more expense to get the small lobsters out of the shell, so that we do not think there is much profit in them.

Q. All the fishermen here own their own boats and gear?—A. Yes.

Q. It has been suggested to the department that the lobster fishermen should be asked to take out a license. Have you read the evidence given last winter before the Committee?—A. I have read Mr. Nickerson's evidence, but I did not get time to read the whole of it.

Q. It was proposed by some witnesses that the fishermen should be asked to take out a license for which there would not likely be any fee charged, but this license would be a printed form, and would contain the regulations which the fishermen would be asked to sign. The idea is that having done so the fisherman would be more apt to obey the regulations himself and perhaps to give information if others were violating them. Do you think there is anything in it?—A. You mean that each fisherman in order to fish would have to take out a license?

Q. Yes, he must take out this license?—A. That may be some help.

Q. The idea is that if he violated the regulations his license would be taken away and he could not fish lobsters.—A. It may be all right, but it is certainly a fact that it is no use the officers trying to watch the fishermen. They can enforce the regulations if they watch the canneries.

Q. How is the price paid for the lobsters established, who fixes that?—A. The man that buys them generally.

Q. That is for the market lobsters?—A. Yes.

Q. And how is it fixed for the canning lobsters?—A. The same man, the canner.

Q. That is to say the canner sets up his price?—A. Yes, before we organized here we got three cents a piece for lobsters from 9 to 10 inches, and we were certain that it was a combination, so we held the lobsters here in the spring of the year until some of them died, and we had to sell them for 3 cents, whereas the season before we got 4½. We did not see any reason why we could not get as much as before, because we really knew they were worth it. When we organized we turned around and set the price at 4½ cents on our fish and for three successive years we got our price, but last year the time came when they would not give us our price.

Q. And the price was cut down to what?—A. To 3 cents from 5½ cents the previous year. That is for legal fish from 9 to 10½ inches; of course we are not dealing in anything else. Then we knew it was time to do something else and we built the cannery and operated it.

Q. Is there any competition in the matter at all?—A. There is none here at all, practically none.

Q. How many canneries are there operating in this neighbourhood?—A. Two besides the little one we have started here, those of M. Neville, and the Canada Atlantic Canning Company, Lockport.

Q. They go how far in each direction for their lobsters?—A. As far west as Port Latour, and east to St. Paul's Island, but between Port Mouton and Lockport they had practically the whole and sole control of the lobster fishery until we started this little factory of ours.

9-10 EDWARD VII., A. 1910

Q. Is it your opinion that an increase in the number of canning licenses would mean a greatly increased amount of fishing?—A. No.

Q. The department restricted the number of licenses with the idea of keeping down the fishing, but they made no restrictions as to the gear, do you think it did keep down the fishing?—A. No, I do not think so.

Q. An increase in the number of canneries would not, in your opinion mean a very material increase in the amount of fishing done, but it would simply be divided up more?—A. I think that is all.

Q. Would it lead to any more competition?—A. I think it would.

Q. Is it generally the case that the canners in your experience accept all the lobsters brought to them regardless of whether they are undersized or not?—A. It is.

Q. Are they any more particular about the berried lobster, do you think?—A. I could not say because I never took them one, and I do not know of anybody who did, but I do not think they would receive the berried lobster although they might, but as regards the size I have sold lobsters the whole season and never saw a measure aboard the boat, and if you ask for a measure they haven't one.

Q. These lobsters are sold to the smackman and not delivered to the canners?—A. That is it, they are sold to the smackman, he pays for them on the spot in cash.

Q. Could you give me any idea, have you been long enough in the business to form any idea as to what it costs to prepare a case of lobsters? What are they worth when they leave the factory? I do not mean what they are worth on the market, but what would they cost to put up.—A. That is according to what you have to pay for them.

Q. Say you buy them for 4 cents or 3 cents, at the average price paid for them?—A. Mr. Swim can answer that question.

Q. Now as to the recommendations? Are you still of the opinion that the recommendations made already by your union to the department as set forth in your letter of the 13th of March, 1909, should be adopted?—A. I do, that is providing it is a general thing.

Q. What do you think would be the effect upon the canning industry generally of enforcing the 9-inch limit, would it put it out of business?—A. I am afraid it would pretty nearly put the greater part of it out of business.

Q. That would only be for a few years?—A. Certainly.

Q. Because you hope that by the enforcement of the regulations the lobsters would increase in size at all events?—A. Yes, in size.

Q. There is no doubt that in the gulf and Prince Edward Island it would put them out of business at once?—A. There is no doubt because the lobsters there are smaller than they are here.

Q. Which branch of the lobster industry do you think is the more remunerative to the fisherman and the best calculated to maintain the supply unimpaired, the canning or the live lobster trade?—A. I told you that in my own experience last year I got more out of canning, but in certain localities where they can ship with better facilities than we have they get more out of the live lobster trade.

Q. You favour the present policy of the department in issuing what they call co-operative licenses to fishermen?—A. I do.

Q. Are you the only cannery of that kind licensed in this neighbourhood?—A. Yes, I think the only one in this province.

Q. There are some in Cape Breton, Prince Edward Island and Northern New Brunswick. Are you prepared to say anything about the matter of hatcheries or pounds?—A. No, I am not.

Q. Of course when the season closes here as early as it does you would hardly get any berried lobsters, and in order to operate the hatchery we have to get the berried lobsters at the canneries, they are stripped at the canneries and the eggs taken to the hatchery. Closing here at the end of May I am afraid you would not get berried

SESSIONAL PAPER No. 22a

lobsters enough to run a hatchery.—A. I am afraid it would be a very small quantity. I have a brother who is running a lobster factory in the Baie of Chaleur, and they take the spawn off the berried lobsters and put it in a jar and after a certain time he says they look like sand flies and he thinks they grow all right.

Q. Unless the work of stripping them is done carefully there will be a big loss. I do not think I have much more to ask you, have you anything you desire to say in addition?—A. For my own part I think that statement of ours of the 13th March last about covers the ground. Of course in regard to the difference between the live lobster export trade and the cannery that varies according to localities.

Q. Yes, where the facilities exist of course.—A. Where Mr. Hemean fishes it is only a few miles from where I fish, and he can get a much greater quantity of marketable lobsters than I can.

Q. Why is that, is it because of the more rocky ground?—A. It is a different ground, farther out at sea, with a rougher bottom.

Q. It has been suggested that there is a great deal of inshore shoal water fishing done, and that it ought to be prohibited, that a larger percentage of small and egg-bearing lobsters are caught later in the season in shoal water, there are places where the traps almost dry out at low water?—A. I understand that.

Q. In many places they fish hoop nets at the close of the season, after they have done trapping, and there seems to be no question that with those nets they do destroy a large quantity of small lobsters and a greater proportion of berried lobsters.—A. There is no doubt about it that the number of small lobsters increases at the close of the season.

Q. That has been stopped on the inside gulf division years ago, and it is a question whether it should not be stopped altogether. They also used to trawl for lobsters with cod heads. There are no lagoons or anything of that kind here?—A. No.

Q. Do you think the facilities exist here for the establishment of pounds as suggested by some as a good way of protecting the berried lobster? The fishermen bring her in when she is caught, and the factory takes her paying the fishermen on delivery, and she is then put in the pound and held until the season closes when she is liberated?—A. No doubt there would be good places for a pound in this neighbourhood.

Q. There must be no fresh water, a free flow of the current and pure salt water with means of barring the mouth off so as to hold the lobsters in are necessary. In a broken shore like this there ought to be lots of localities where a pound could be established.—A. It could be very easily established in Jones' Harbour. In fact the berried lobster is so scarce here that it would not pay to operate a pound, and another thing is I do not think it is required because every fisherman here deposits the berried lobster when she is caught in her natural element, and that is the best place for her.

Witness discharged.

CHARLES H. SWIM, Secretary Fishermen's Union No. 2, Arnold Post Office, called and sworn:—

By the Commissioner:

Q. How long have you been engaged in the lobster fishing?—A. It is about 26 years.

Q. Always in this same locality?—A. Yes.

Q. Are you fishing a larger amount of gear to-day and getting the same weight of lobsters than you did when you began 26 years ago?—A. We got a larger quantity of lobsters at the first out of the same quantity of gear than we do now.

Q. To what extent has the amount of gear increased within your recollection?—A. The amount of gear to a boat?

9-10 EDWARD VII., A. 1910

Q. No, the amount of gear generally and the number of boats fishing it. In some places we are told it is four or five times as much as it originally was, some more and others less?—A. This present year there has been two-thirds more gear fished on the same ground than there was 25 years ago.

Q. Is it only by an increase of the gear and by better fishing that the quantity has been kept up?—A. I think so.

Q. You have heard the evidence given by your president, and you agree, I suppose, in the main with that?—A. Yes.

Q. There are certain other questions we want to get information on, as to this matter of the cost of a case of lobsters.—A. I can only speak from experience in our own case.

Q. We do not want to enter into any minute details any more than you are willing to give us.—A. It cost us for packing last spring about \$10 a case, that is including the whole cost.

Q. That includes the cost of the lobsters, the tins, the cost of labour, etc.—A. Yes, labour and everything.

Q. At that rate of \$10 per case what do you charge as the value of the meat, the lobster?—A. It would be about \$7.00.

Q. The value of the meat in a case would be about \$7.00?—A. That is about what the lobsters would cost to pack a case.

Q. Are the fishermen practically fishing on the same ground now as they did when you began or do they go into deeper water?—A. Oh, they go farther from the shore into deeper water.

Q. In what is the deepest water you have known lobsters to be caught on this coast?—A. I do not know of anybody fishing deeper than 20 fathoms, about that, that is as far as I know.

Q. And there you found the lobsters?—A. Yes.

Q. In that depth of water do you find a better run of lobsters as to size than you do later in the shoal water?—A. Yes.

Q. What do you think of that suggested method of licensing the fishermen, have you any faith in it?—A. I do not see where it would be any benefit in any way, I do not think so, no.

Q. Would you venture to say yourself what proportion of the lobsters taken here are below the legal size limit? Out of every hundred lobsters how many would be below the size limit generally, one season with another.—A. Do you mean from the very largest down or from the 10½ down?

Q. The percentage of the whole, taking large and small, how do they run?—A. I should judge to go by count, that is by the number of lobsters, that 50 per cent in all would be under 9 inches.

Q. Of course by weight it would not be as much as that?—A. Oh, no.

Q. Has any attempt ever been made by the officials to enforce the regulations with regard to the 9 inch limit?—A. Well, as regards this district they have never had any occasion until the present year.

Mr. EVERATT HARDING.—Before this station of the Fishermen's Union was organized they made a bluff at it every little while.

Q. Our information is that the packer as a rule takes everything that is brought to him, and no attempt is made to enforce the regulation?—A. I think so.

Q. What effect do you think a strict enforcement of the 9 inch limit would have upon the fishery generally and upon the canner in particular? Some fishermen have told us that if the 9 inch limit were enforced it would put them out of business, that they could not continue fishing, and the cannery say that they would have to shut down.—A. I think that the cannery who are doing a big business would be put out of business, but where the packing is being done on a small scale it would not affect them very much.

SESSIONAL PAPER No. 22a

Q. And you would hope that by a strict enforcement of the regulations the conditions would improve in a very few years?—A. I would think so.

Q. And you take that view, that it would be better to enforce the regulation, no matter what the result in the meantime?—A. Yes.

Q. And you hold to the recommendations of your Union, to which I have already referred?—A. I do.

Q. To what do you attribute the failure of the lobster industry? It is due to over-fishing or to any other cause in particular?—A. It seems to be due to a certain extent to over-fishing.

Q. Do you think it is in any way due to the neglect to protect the berried lobster in the past?—A. I could not say that because I think she has been pretty well protected.

Q. That is here?—A. Yes.

Q. Have you sufficient knowledge of the coast to know whether the size limit that you recommended, 9 inches, should be enforced along the whole coast from Canso south and west or from Halifax west? Do you think there is any reason why there should be different seasons in this part of the coast?—A. As far as I know I do not see why it should not be enforced.

Q. It is unsatisfactory, is it not, to have different size limits in adjoining sections?—A. I do not think that would do at all.

Q. Do you think it is in the interest of the lobster fishery generally that lobsters should be taken before they reach that stage of maturity at which reproduction can take place? We suppose that stage to be about 8 inches, and it must be injurious to the fishery to destroy the immature lobsters; is that your opinion?—A. That is my opinion.

Q. Do you think that an increase in the number of canning licenses would mean an increase in the fishery?—A. I do not think it would be possible that it would.

Q. You think everybody that can is fishing to-day, that all the ground is covered?—A. All the ground is covered, and all the fishermen are fishing now.

Q. Are there any people fishing lobsters here who are not engaged in the other fisheries, or are they all deep-sea fishermen?—A. In this place there are not, they are all fishermen.

Q. There are many places where farmers engage in lobster fishing—they are not really fishermen?—A. There is none of that here.

Q. Is it your opinion that the best period of the fishery is from the 15th of December to the 15th of January?—A. They get the largest quantity of lobsters during that length of time then.

Q. Are they a larger run of lobsters, will you get more market lobsters at that period of the season?—A. Oh, yes, the very largest; they are much larger.

Q. Can you tell us how many pounds' weight of green lobsters it takes to fill a pound can with you?—A. It takes 230 pounds for a case of 48 pounds; that is just what ours averaged this spring.

Q. You buy your lobsters by weight?—A. Yes.

Q. Have you any idea how many lobsters run to the hundred pounds; it varies with the season, I suppose?—A. I think they would average about 130, that is from 10 inches down.

Q. Are the existing penalties sufficient if they were enforced?—A. I think so.

Q. How is the season; do you think that the season is the right one—from the 15th of December to the end of May?—A. I do not think it could be changed for the better for this part of the coast.

Q. Is it the practice of the fishermen to fish up to the end of the season, or do they begin to slack off before the end of May and tackle other fisheries?—A. As a rule, they fish up till the end of the season.

Q. Some people have asked for increased time in the fall, that the season commence on the 1st of December instead of the 15th, and in return for that to knock off

9-10 EDWARD VII., A. 1910

15 days at the end of May?—A. My opinion is that the time, as it is, is better for this part of the shore than any change that could be made.

Q. Do you think the present policy of issuing these co-operative licenses is the proper one, and that it gives the fisherman the relief that he wants from the position he occupies towards the canner?—A. I do.

Q. Is there any reason why a license to can should not be given to any man who shows his fitness to can and who is competent to pack?—A. I think there is. I think there should be some restriction on that.

Q. There will always have to be some; the man would have to show he was competent to go into the business?—A. Yes.

Q. Do you think the product of the cannery should be subject to an official inspection? The tendency of the day is, of course, to inspect all food products very rigidly, and it has been suggested that it would be to the advantage of the industry if the canned lobsters were also subject to official inspection and branded 'No. 1,' etc., the same as other food products—flour, butter, cheese and everything of that kind?—A. I cannot see where it would be of very much advantage to the trade.

Q. Well, the idea, of course, is that it would at once stamp as inferior all inferior products before they reached the market, that it would secure the careful packer as against the less careful one.—A. The only difference would be, as you say, that it would secure the careful packer, for the reason that lobsters not properly packed would not go on the market as No. 1 lobsters.

Q. That is the idea of those who recommend it. Of course it would require a competent inspection, probably an expert inspector.—A. Yes, it would.

Q. Now, is there anything else you would like to state yourself, I have gone into a good many features of the business, but if there is anything else you would like to call particularly to the attention of the committee bearing on the subject, we would be glad to have it.—A. I do not know of anything, we have had this matter discussed dozens and dozens of times trying to get the very best ideas we could, and you have already our general recommendation. I do not think of anything else I can add.

Q. Do you open your cannery in the fall?—A. We plan to.

Q. And do you propose to can what you do not supply to the market?—A. Yes.

Q. Is that generally the practice of the canners?—A. Yes.

Q. And do they run all through the winter?—A. Not very many of them in this district, they run along until, well, I do not know of any that go later than the middle of February.

Q. And they do not open up again until the middle of April?—A. The 20th of March or the 1st of April.

Q. It has been asserted that in some places there has been a loss to the fishermen by reason of the failure of canners holding licenses to operate their factories, although a sufficient supply of lobsters has been available?—A. It has not been the case in this district.

Q. Which branch of the lobster industry do you think is the more remunerative to the fisherman and the less calculated to injure the fishery, the canning or the fresh lobster industry?—A. That is rather a hard question to ask, I can hardly judge.

Q. Of course it will depend more on locality; there are localities where the fresh fish trade is out of the question, where they are too remote from means of transportation, and there are other localities which are more conveniently situated?—A. You see that the difference in locality means a big difference.

Q. Where the facilities exist for carrying on the fresh lobster trade and developing it, do you think it should be encouraged?—A. I think so.

Q. Of course that is where they have the proper facilities for exporting alive to market?—A. Of course that should be encouraged there, because actually, you take this locality, if you shut off the export of live lobsters the fishermen would have to go out of the lobster business, they could not make it pay.

SESSIONAL PAPER No. 22a

Q. What is the average revenue of the lobster fisherman who fishes actively throughout the season?—A. What does that mean? What his stock amounts to?

Q. What will he receive at the end of the season, an active fisherman, for everything he sold in connection with the lobster fishery, one with the other? Of course there is a great difference in fishermen? There is of course what he sells alive and his trade to the canner.—A. Well, I should say on an average it would go \$300, not more than that, on the average.

Q. What is the value of his boat as a rule?—A. Oh, his boat is worth about \$25.

Q. And he fishes, what would you say, 150 traps?—A. He will not average over 100 here.

Q. No, but he has to keep up his stock, has he not, he has to renew them?—A. Yes.

Q. What do you call the life of a trap, how long does it last? Our information is that a trap lasts about three years, that is making up for everything that is lost, and that the fisherman requires to renew his whole outfit of traps once in every three years.—A. I do not think it will go three years, he will have to replace those traps in less than three years here.

Q. If they will not last three years a man will have to renew his stock inside of three years—A. He will have to do so inside of three years, that is sure.

Q. What is the value of the trap with line, buoy, and everything?—A. No man can get a trap ready for the water for less than \$1.

Q. I suppose most of the men supply their own traps?—A. Yes, and they have to work pretty cheap at it to put them in the water at \$1.00.

Q. Would you say anything about hatcheries or pounds?—A. I have no experience as to the benefit they would be.

Q. I do not think they would amount to anything down here where you close the fishing so early. Is there much illegal fishing done after the close of the season?—A. None in this district.

Q. And no packing done?—A. None.

Q. What provision is made generally for the comfort and privacy of the girls that are working in the factories? It has been told us in some places that proper provision is not made, that is where the girls are obliged to live in boarding houses or cook rooms attached to the factories. Here, I suppose, most of the girls live at their own homes?—A. As far as we have gone we have had no experience of that, because we have only two and they board at home.

Q. Have you any idea as to the larger canneries whether proper provision is made for the seclusion and comfort of the girls working there?—A. I haven't any idea at all.

Q. There should be in any case?—A. There should be if they are not properly provided for already.

Q. Do you think any good purpose is served by labelling the lobster cases? Has it been the means of preventing the sale of illegally packed lobsters?—A. That is lobsters packed out of season?

Q. Yes?—A. I should think it would.

Q. What are the average prices paid to the leading hands about the cannery? Do you have a foreman or sealer?—A. Yes.

Q. What is the sealer's wage generally?—A. About \$60.

Q. Does that include board?—A. That includes his board.

Q. And what do the girls receive generally?—A. From \$10 to \$12 per month.

Q. And they board themselves?—A. Yes.

Witness discharged.

9-10 EDWARD VII., A. 1910

GIDEON HEMEON, fisherman, Arnold, called and sworn:—

By the Commissioner:

Q. Are you actively engaged in lobster fishing?—A. Yes.

Q. How long have you been engaged in it?—A. About 21 years.

Q. Have you always fished in this place?—A. Always in this place.

Q. Will you tell us, in a few words, how you find the condition of the lobster fishery to-day as compared with what it was when you began?—A. I find a great change.

Q. Has that change been a steady one?—A. Yes, continuous.

Q. And is it still going on?—A. It is still going on.

Q. To what do you attribute the decrease?—A. I think it is the catching of everything, the taking of small lobsters and the destruction, no doubt, of the seed lobster as formerly.

Q. Before the existence of the union do you think it was the practice to bring to the cannery everything that was caught?—A. Not right in this locality, but I think all down the shore generally it was, within a very few miles of here.

Q. You begin to fish in the fall, the season opens on the 15th of December, do you start right off as soon as it opens?—A. Yes.

Q. And you fish generally then about how many traps?—A. About 60 to the single boat in the winter time.

Q. With two men?—A. Two men.

Q. In what depth of water do you begin fishing?—A. In about from 20 up to probably 8 fathoms.

Q. Those traps are all set on single lines?—A. Single lines.

Q. Are they hauled more than once a day or only once a day?—A. Once a day.

Q. At that season of the year what quality of lobsters do you get? Is it a good fair run of lobsters then?—A. In the first of the season they always run larger, but as the season advances we get some small ones. I think they are a better quality of lobsters than what we get in the spring.

Q. When do you knock off, about the 15th of January?—A. Well, the season will not permit us to fish longer; we generally have to knock off with the loss of all our gear.

Q. The season gets rougher, does it?—A. The season gets stormy.

Q. It is not actually due to any great scarcity of lobsters that you knock off, or is there a scarcity of lobsters; do they back off?—A. They get scarce; we cannot get them. I do not think they crawl; the water gets too cold, that is my opinion.

Q. Do you notice they are dull and loggy at that season of the year?—A. When it is cold they are.

Q. Then you bring your gear ashore about the middle of January?—A. What we have left. Sometimes we are unfortunate enough not to have any to land.

Q. When do you go out again?—A. We begin again about the 1st of April, some times about the last of March.

Q. Is it the practice generally for fishermen to bring their gear ashore, or do some of them fish all through the season?—A. I have only known of one man who left his traps out all winter, and I think he only had three or four left when the spring opened.

Q. Do you know enough about the coast conditions to say whether that is the general practice on the coast?—A. I would not like to say that.

Q. You only speak for your own immediate neighbourhood?—A. Yes.

Q. What are the conditions when you begin again in the spring season? Do you go in the same depth of water?—A. We generally go off from 12 to 20 fathoms.

Q. And you fish in that depth up till when? When do you move into the shoal water, or some men perhaps do not move?—A. Well, they are generally moving in now by the 20th of April; they begin to move then. It is just like this, we begin in from 12 to 20 fathoms of water and, as a general thing, after the first fortnight we begin to move in probably 50 yards a day and keep moving in towards the shore.

SESSIONAL PAPER No. 22a

Q. I suppose the idea is to follow the lobsters?—A. The lobsters are so scarce generally in the spring that we do not know what to do; we cannot get them anywhere outside of that, and we move in.

Q. Has any attempt been made to catch the lobsters in deep water?—A. We have tried it at 25 fathoms, but we have to go a long way off shore to get deeper than that.

Q. How far off?—A. We have to go three miles off to get 25 fathoms.

Q. Do you get any lobsters there?—A. I do not know. One man has tried it, but I do not think he got many lobsters there.

Q. If the lobster fishing stops altogether for a term of years, what will be the result?—A. It will be very serious.

Q. It has been proposed to shut down altogether?—A. I do not believe that would do at all.

Q. Do you think it would be too severe a measure?—A. Too severe.

Q. It forms now a very important item in the fishermen's revenue?—A. The most important in this locality.

Q. And it is a cash business?—A. A cash business.

Q. And it is almost the only branch of the fishery where the fisherman gets an immediate cash return?—A. Well, I suppose it is practically that; there are times when we get cash for other fish, but we have to wait sometimes for the live lobster returns.

Q. How long do you have to wait for the live lobster report?—A. Not more than a week unless there is delay in the mail.

Q. Is there much loss in the live lobster trade?—A. Sometimes there is none and then again at other times it is pretty heavy. The transportation facilities are not nearly as good as they ought to be.

Q. But generally the returns are better?—A. I do not know that they are any better, sometimes in the spring we have them cooked, and in winter they are sometimes frozen, but we do just as well then as in the spring, we get probably 25 to 50 per cent more for them in the winter time than we do in the spring.

Q. The winter is the best market for them?—A. Oh, yes.

Q. That is due to the fact that there are not many lobsters coming in from other directions?—A. Yes.

Q. Has the decrease in the size limit in the Boston market injured that market?—A. I think probably it must have; it is my opinion that the Massachusetts people wanted to get cheap lobsters and that they are getting them at the expense of the Nova Scotian fishery.

Q. Would you venture to tell us what is the percentage of small lobsters taken and sold?—A. I think Mr. Swim's evidence was somewhere near it.

Q. You have already heard what he said, 50 per cent I think he said it was.—A. Probably not quite as much as that.

Q. I suppose it varies with the season?—A. Yes, it will, at the last of the season.

Q. And with the locality?—A. Yes.

Q. Do you think you get more small lobsters late in the season in shoal water than you do in deeper water?—A. I think so, and the reason for that is that the large lobsters are caught off more quickly, before they get into the shoal water.

Q. Do you think there is anything in the proposal that a certain space be allowed between the slats? Do you think if that space were fixed at 1 or 1½-inch it would permit the escape of a larger percentage of small lobsters?—A. What do you mean by that?

Q. That if the traps were built to a certain standard with a much larger space between the slats than there is now?—A. I understand.

Q. In many places the space has been narrowed down, and that could only have been done with the object of holding the small lobsters.—A. No, I differ from you there, I would not like to see any man building those traps to suit somebody else for

9-10 EDWARD VII., A. 1910

this reason that our shore in a good many places is covered with sea eggs, wrinklers, and if your traps are not reasonably close you will have them full of sea eggs.

Q. There is no question that in the early days of the fishing we had a very much larger space between the slats than we are allowing now.—A. Yes, and I tell you another thing, I do not think there is any question that in this locality the bottom used to be covered more than it is at the present time, and where the kelp is you do not get these sea eggs, they are only to be had on a white bottom.

Q. To what do you attribute the decrease in the kelp?—A. I do not know, I suppose it must be something that eats it; I have an idea myself that it is these sea eggs. Four or five years ago they came ashore in windrows on the beach in large quantities and just as soon as they did the kelp began to fail.

Q. A great many people have suggested to the department that a standard of trap be established?—A. I do not think that would do, I do not think it would protect the fishery.

Q. You do not think the small lobsters that get into the trap would go out again?—A. There are lots of them get out, and lots of them will go out without having a standard trap, and lots of those who have their laths 1-inch apart will have their traps full of these wrinklers. There is no trouble about the lobsters going out.

Q. Is it your opinion that the existing regulations have ever been enforced?—A. I think they have in some cases, I think so; our fishery officers always seemed to be quite active in this locality up to the last four or five years, until we organized our Fishermen's Union, when there was not any need of it, we protected them ourselves.

Q. Do you think the practice of stripping the berried lobster was ever carried on here?—A. I do not know whether they were ever stripped or not, but I think they have been sold as they were with the seed on them for the American market.

Q. Do the American smacks come up here continually to purchase lobsters?—A. At the present time?

Q. Yes?—A. Oh, yes, they do.

Q. They are buying them for the pounds in the State of Maine, I suppose?—A. I think so, there is no doubt, but we can hardly tell because sometimes they say they are going to put them on the market and sometimes they say they are going to pound them.

Q. How does their price compare with the local price?—A. Oh, they are away above the local price, of course they only buy the large lobsters.

Q. Are they particularly anxious to get the berried lobsters, do you know?—A. I do not know that they are, I have not sold any to them for two or three years.

Q. Farther up, in New Brunswick, they are buying up the berried lobsters and carrying them off to put them in their pounds, and if that is so, it is a very serious matter?—A. I think so.

Q. What do you think of the proposition to license the fishermen?—A. I do not know. I do not think it would be of any use; we have handicaps enough now.

Q. Do you not think it would make the fisherman more likely to obey the regulations or to inform on his neighbour if he did not?—A. No, I do not think it would.

Q. What do you think of the season as it now exists here? Is it the best season for the purpose?—A. I think so.

Q. Will it stand any shortening?—A. Well, I do not hardly think so. We have only about three months' fishing, that is the best we can get, and if it is going to be shortened the latter end would be the best, but it would make the spring almost unprofitable. Do you see any reason for shortening it?

Q. What do you think of the matter of licensing, do you think that any man who shows his competence to pack should be granted a license as well as another man?—A. I think that any man who can show his competence to pack lobsters should be allowed to do so as well as any other man.

SESSIONAL PAPER No. 22a

Q. Do you think an increase in the number of canning licenses would mean an increase in the amount of fishing?—A. It would where the packers own the boats and gear and hire the men but here it would not.

Q. In the case where the canner supplies the boat and gear would you approve attaching a condition to the packing license limiting the number of boats to fish for that license?—A. That I would not like to say.

Q. Do you think it would be reasonable to say on that license that the canner would be allowed to fish so many boats and gear? Otherwise there would be no limit to the amount, and in some places where the cannery are providing the gear and boats they are fishing too much and overrunning their neighbours?—A. Yes, that is right, and I think perhaps in that case it would be wise.

Q. Do you know anything else you can suggest?—A. I think you have covered everything pretty well. I approve of the recommendation of the union, and if there is any change in the size limit I would say go to 10½ inches instead of 9; put the limit higher instead of lower.

Q. But that would put the canner out of business?—A. Yes, I think it would perhaps in some places, but I would rather put the canner out of business than put the fishery out of business.

Q. I might perhaps compromise in my report by recommending a minimum size for Charlotte county of 10½ inches?—A. I do not believe the law will ever be enforced unless it is put in that way, so that circumstances will enforce it.

Witness discharged.

Messrs. George S. Decker, jr., David F. Harding, Robert Swanburg, Austin Swanburg, John Ringer, Gordon Taylor, Langille Decker and Ralph Harding, fishermen, being present, endorsed the evidence given by the previous witnesses as expressing their views.

The Commission adjourned.

CLARKE'S HARBOUR, September 13, 1900.

ARNOLD C. NEWELL, fisherman, Newellton, Cape Island, called and sworn:—

By the Commissioner:

Q. I understood you to say you did fish lobsters for a number of years?—A. Yes.

Q. How far back does your connection with the lobster fishing go?—A. 1882.

Q. And then you remained in the lobster fishing?—A. I was in the exporting. I ran a smack from here to Boston with live lobsters.

Q. How long were you engaged in that phase of the business?—A. Eight years, probably.

Q. In those days you used to buy the fish offshore from the fishermen?—A. I used to buy them right here in the harbour.

Q. They fished close in?—A. Close in.

Q. In what condition was the lobster fishing then?—A. They were plentiful and very cheap.

Q. What was the price?—A. From 3 to 5 cents for 10½-inch lobsters.

Q. You never took any small lobsters in those days?—A. 10½ open measure. That was the law in the state of Massachusetts then.

Q. Had you any difficulty in getting all that you wanted then?—A. No.

Q. Were there other smacks engaged in the business?—A. Yes.

9-10 EDWARD VII., A. 1910

Q. Was that the only way in which they were exported in those days?—A. In the first two or three years that was, but after about 2 or 3 years the exportation of crates commenced.

Q. In those days how did you carry them?—A. In well smacks.

Q. And a few years afterwards they exported them in crates by steamer?—A. Yes.

Q. Where did they export them from, from Yarmouth?—A. Yes, and after I did the smacking I engaged in the export of fish in crates for several years.

Q. Did you ever do any actual fishing?—A. Oh, yes.

Q. When?—A. From that until within four or five years.

Q. You carried on the fishing from where?—A. I fished from Woods Harbour in this county.

Q. When did you begin the fishery, at what season of the year did you begin to fish then?—A. We commenced, I think, on the 15th of December, the same as it is now and on through the first of January to the last of June.

Q. In what condition was the fishery then?—A. In what way do you mean?

Q. How was the fishing, when you were fishing compared with what it was at the time when you went smacking first; were the lobsters still abundant and of good size?—A. They were not as abundant as when I commenced smacking.

Q. And what was the practice of the fishermen then, canneries had been established then?—A. Canneries were established before I ever went fishing, a few.

Q. Have you any idea when canning was first established here?—A. I think it was in the '70's, '71, I can remember it very well, there were two or three canneries here.

Q. In the beginning of your connection with it, when you went smacking, did the fishermen at that time catch the immature lobsters?—A. What do you call immature?

Q. Under 8 inches, we will say?—A. I do not believe they did.

Q. When you began fishing yourself what was your practice?—A. To throw away all under the legal size of 9 inches.

Q. Was that the general practice?—A. Yes.

Q. Were they not brought to the canner?—A. No.

Q. Did you sell any to the canner at all when you were fishing?—A. Yes, in the first year I was fishing I never sold any, they would not buy them.

Q. Why would they not buy them?—A. I cannot tell you that, probably they had as many as they could can without them, and probably they were afraid of the law, but I cannot tell you, that is supposition on my part.

Q. How did you dispose of your lobsters when you were fishing?—A. I shipped the legal lobsters in the United States to Boston, 10½ inches, and just passed the others to the cannery.

Q. That is those between 9 and 10½ inches?—A. Yes.

Q. Did you catch any proportion of berried lobsters in those days?—A. A great many.

Q. What was done with them?—A. Threw them away.

Q. Was the practice of brushing them off at all general among the fishermen?—A. No, nobody but a rascal would do that; I suppose there were some rascals would do it.

Q. There is a great deal of it done, they say.—A. I do not believe there is a great deal of it done here.

Q. How many years did you carry on the fishing?—A. Fourteen or fifteen years.

Q. And did you notice a decrease in the lobsters both as to size and quality?—A. Yes.

Q. Was it going on steadily?—A. Yes, they were gradually becoming scarcer because we had to go farther away for them.

SESSIONAL PAPER No. 22a

Q. What number of traps do you fish per boat?—A. When I first commenced it was 75 and when I knocked off 150.

Q. When you began to fish on the first of January where did you fish?—A. Practically on the same ground as we fished in June, but not as far back.

Q. In what depth of water?—A. From 3 to 15 and 20 fathoms.

Q. And you fished on the same ground in the winter as in the spring?—A. In the winter we did not put them in the shoal, because we had less traps.

Q. Did you fish all through the winter?—A. Yes, I always fished through the winter, when I commenced to fish I fished the season through.

Q. How was the fishing in January, February and March?—A. Not as good as it was in the other parts of the year; though comparatively good, it was very much less in those months.

Q. And was there any improvement as the spring came on?—A. Certainly.

Q. And when had you the best of your fishing?—A. In April and May.

Q. Did you increase the number of your traps as you moved farther off shore?—A. I increased the number of traps when I moved farther in; we could not fish in the winter because it would be rough and break them up, but when it got finer we went out farther.

Q. How were the traps fished, on trawls or single lines?—A. Single lines; we fished the old-fashioned double ender trap, and after a few years we gave it up for the improved trap.

Q. How long since the improved trap was first used on this coast?—A. About 15 years I should judge.

Q. What is the particular merit of that trap as compared with the old trap?—A. Once the lobsters get into that trap they cannot escape.

Q. What price would you receive when you smacked lobsters first?—A. Three or four cents was paid; at the extreme outside it was six cents, and not only that, but then of the legal lobsters 15 out of 100 we would throw away because they were lacking one claw or something of that kind, but now they take anything.

Q. That is what you used to pay for market lobsters?—A. Yes.

Q. What did you receive from the canner for those sold to him?—A. You mean now when I shut off fishing?

Q. Yes?—A. From 10½ to 9 inches you are speaking about?

Q. Yes?—A. From 3 to 5 cents a piece.

Q. That was by count, not by weight?—A. I always sold by count.

Q. You never sold by weight?—A. No.

Q. What is the practice here now as regards that, are they all sold by count?—A. Here, in the immediate vicinity, they are sold by count, but in some other places by weight.

Q. When you were fishing did you export your own market lobsters?—A. If I thought the man was paying a good price I sold them to him, but if I thought there was more in it to export them I exported them, but, on the whole, I sold a great deal more than I exported.

Q. What is the practice of the fishermen here to-day?—A. Most of them export on their own account.

Q. Do they consign them to a commission agent or consign them to Boston?—A. Yes.

Q. Are there fishermen who sell to the local exporters?—A. Yes, the small ones from 10½ to 9, the majority of those are sold here; they do not export them, but it is like everything else, some sell and some export them.

Q. Why is it that the smaller run from 9 to 10½ are sold here? Why do they not export those fish themselves?—A. There is a big expense; the small lobster business is mostly done with New York, and the fishermen have never had a success with the New York market.

9-10 EDWARD VII., A. 1910

Q. It was always a 9-inch limit in New York, but it was 10½ in Boston?—A. Yes, the exporters know the markets better. They watch them, and they have large cars here so that they can hold the lobsters if they want to in order to wait for better prices.

Q. That is the case generally, the large ones are sent to Boston and the medium run are sent to New York?—A. Yes.

Q. That is in spite of the change in the law at Boston?—A. Yes, the fishermen that are shipping their own lobsters generally ship them to Boston, but the dealers there do not want many of the mediums. They cannot do as well with them as the New York dealers can.

Q. What proportion of the fishermen's total catch goes to Boston and New York?—A. I can hardly get at your meaning.

Q. I was asking you about the proportion of the fishermen's catch that is exported and the proportion that is sold here?—A. By weight or count?

Q. Put it either way you like?—A. In weight, I presume, half the lobsters they catch would be sold here.

Q. That is in weight?—A. Yes.

Q. And in count how would it be?—A. It would be different, because the large ones are three or four or five times as much as the others in weight.

Q. What percentage would it be by count?—A. On the average, we would have to take that, that is the only way we can get it, it would be 25 probably.

Q. 25 out of 100?—A. It varies, of some catches it would be 50 perhaps, and in other catches a great deal less.

Q. That depends upon the season, the locality and the bottom?—A. I think 25 per cent would be about it.

Q. And of the 75 per cent remaining what proportion would be between 9 and 10½ inches?—A. In count you say?

Q. Yes?—A. Well, I should think probably 30 or 40 per cent in count.

Q. That is 40 per cent and 25 per cent and the balance would be large ones?—A. I mean 30 or 40 per cent after the big ones were taken out.

Q. And the balance would be what we would call illegal lobsters?—A. We do not call them illegal; here everything is legal.

Q. Tell me, have the regulations ever been strictly enforced?—A. Yes.

Q. When?—A. When I had to throw them away.

Q. When was that?—A. The first four or five years I lobstered we were scared of the fishery officer then.

Q. Was that simply because you were scared of him? Or was he active in enforcing the law?—A. Yes, he was, we would not have been scared of him if he wasn't.

Q. At what date was that, how long ago?—A. I cannot fix it, it was a good many years ago.

Q. Of recent years has there been any attempt to enforce the regulations?—A. Not here.

Q. Is the close season observed?—A. Yes, strictly, the fishermen enforce that themselves. If a fisherman two miles from here saw a string of traps out he would immediately report it to the officer, there is no fishing at all here out of season.

Q. And consequently no packing out of season?—A. No.

Q. When you were smacking, did you smack in January as well as April and May?—A. No, the first of April. When I first commenced smacking there was no fishing in the winter time practically.

Q. What number of canneries are in operation in this locality?—A. What do you mean, on this island here?

Q. Yes, in this immediate neighbourhood?—A. Four.

Q. Who are they owned by?—A. F. T. Nickerson, M. J. Neville, A. S. Swim, and the Cape Sable Packing Company.

SESSIONAL PAPER No. 22a

Q. Have these canneries been in operation for many years, licensed to these same people?—A. Yes.

Q. Were there ever more canneries than there are now?—A. I do not believe there were.

Q. Have you any idea of the output of these canneries, what is their average pack?—A. I have an idea, but you could get that better from them.

Q. Which of the two fisheries do you consider the most remunerative to the fishermen to-day, the export of live lobsters, or the sale to the canner?—A. The export trade is far more I think; but you might think I was biased in that, yet I think everybody will admit that.

Q. When the fisherman exports his lobsters how soon does he get his return from them?—A. Three or four days, that is from Boston, it would take a week from New York.

Q. Is there much loss of lobsters between here and the market, owing to the death of the lobsters?—A. Occasionally there is.

Q. That occurs generally at what season?—A. There is more in May than at any other time. Yes, I think at the first and at the last of the season, the first shipping in December and the last in May.

Q. Why should there be much loss in December?—A. Because the lobster shells are not so hard and the lobsters do not stand transport as well then, and in May it is getting a little warm to ship to Boston, and then again owing to the difficulty of transportation, the piling of other commodities on top of the lobsters.

Q. How long does it take the lobsters to get to Boston?—A. The lobsters leave the water here at 2 o'clock, and they are in Boston at 10 the next day, they go to Yarmouth by the small steamer and from there to Boston by the big boat.

Q. Are there none shipped by rail from here to Boston?—A. No, some go by rail along the shore here to Yarmouth, by rail the price is enhanced a great deal by the bulk of the crates in which they are carried.

Q. Has the change in the law in Massachusetts from 10½ to 9 inches affected the sale of the lobster in the Boston market?—A. I think it has made them cheaper in Boston.

Q. And how has it affected the market here?—A. If the lobsters are cheaper in Boston, certainly they must be cheaper here. At the time Mr. Prince was around here taking evidence I found by observation that the decrease in the quantity of lobsters had been totally offset by the increase in the price. If a man got half as many lobsters at the time he was here it paid him better in the end. I paid the winter before last 50 cents a piece for 10½-inch lobsters and I paid 7, 8 and 9 cents for mediums.

Q. Can you give me any idea of the number of fishermen engaged on this island in the lobster fishery?—A. If a man and a boy were engaged you would call them one man, would you?

Q. How do they generally fish?—A. Two, sometimes three and sometimes four.

Q. Do they fish single handed at all?—A. A man will go in his own boat and hire a man to tow his boat, and when he gets on the ground he will drop his tow and will be picked up again after he is through fishing.

Q. How many boats do you think there are on this island engaged in the fishery?—A. There must be 500 boats, but you see that a man will go in his own boat and tow another one, that will be two boats, but I think there are that number.

Q. And these boats are fished by from two to four men?—A. Yes.

Q. Can you give me any idea of the average revenue of an active fisherman fishing in that way?—A. Do you mean the gross revenue for the season?

Q. Yes.—A. On an average the man's gross earnings, I should think, this is only my judgment, you know—

9-10 EDWARD VII., A. 1910

Q. I know, that is all we can get.—A. It would be \$700, I should think, if he does not earn that much he is going astern, some earn \$1,400 or \$1,500 and some not more than \$200 or \$300. But if it costs him \$700 to go fishing——

Q. That is for his outfit?—A. Yes, but of course it does not cost a great many as much as that.

Q. What do you reckon a trap to be worth with all its gear?—A. It would be \$1 I should say.

Q. Do the fishermen generally make their own traps?—A. Yes.

Q. Is there any standard space left between the slats?—A. No.

Q. Has there been any tendency to narrow that space down?—A. If I were fishing now I would make it so narrow that it would hold everything that got in.

Q. Is that the general practice?—A. I guess it is.

Q. And what was it when you began fishing?—A. We had it much wider than that when I was fishing. When I was engaged in the fishing I used to swear at the little fellows that got in the trap because it took up my time to throw them out, but I would not do that now because I would take everything I got.

Q. How would a strict enforcement of the law regarding a 9-inch limit affect the fishermen and the canner here?—A. It would drive the canner out of business.

Q. And the fisherman?—A. Well, I think he would have to go out of business.

Q. You think it would put him out of business if the law were enforced?—A. I am not advocating the limit, but if that law were enforced in the winter there would be no lobster canning because the market takes all the legal size, but in April and May there would be some for him; it would practically put him out of business, although the market cannot take them all then.

Q. And what about the fisherman?—A. He would not make as much money and some of them would have to go out of it. I think it would be a very unwise thing. I have always said this, that the lobster law was a laughing stock to the people. It should either be enforced or wiped off the statute book. But, as I said before, I do not know what the result would be if it were enforced, or whether it would result in any increase in the fish, but I am not in favour of a 9-inch law. That, however, is only my own personal opinion.

Q. We would like to have your personal opinion, what law would you have?—A. I am in favour of either making a shorter limit and rigidly enforcing it, or else making no limit at all, one or the other.

Q. And retaining the same season?—A. By all means.

Q. From the 15th of December to the end of May?—A. It has been a question with many people, and I am not settled in my own mind, whether it would be better to make it from the 1st of December to the 15th of May, or to continue the same season as we have now, but there is a great difference of opinion upon that point; the man who gets his lobsters late in the season wants it extended one way and the man that does not wants it extended the other way; if the man wants to engage in mackerel fishing he wants the season a little earlier; practically I do not believe you will find anybody wants the season varied more than 15 days.

Q. You were talking about the size limit, what would you fix it at if you reduced it?—A. I think 8 inches. I was talking to a packer the other day and he said that a lobster 8 inches was full of meat so that he could do something with it, but with the little fellow of 7 inches or 6½ he could do nothing. I think that a limit of 8 inches and properly enforced would be better.

Q. Would it be easier to enforce an 8-inch law than it would be a 9-inch?—A. I cannot say, but in my opinion it would be pretty hard. I have to take people by observation, by what I see them do, and I think the people in this vicinity are in favour of catching small lobsters. That is my honest opinion.

Q. You judge that by the practice?—A. Yes, they make the excuse: 'Oh, well, my neighbour catches them and I might as well, but I do not want to catch them if the other fellow doesn't.'

SESSIONAL PAPER No. 22a

Q. We hear that in all directions?—A. I think that is a poor excuse.

Q. And the same excuse is given for brushing the eggs off the berried lobsters?—

A. That is just about the same reason that a man gives for not doing statute labour, but that is no excuse at all.

Q. Do you think any increase in the number of canneries would mean an increase in the number fishing?—A. No.

Q. Practically all the fishing that can be done is done?—A. I think that is very wrong; allow every man who wants to pack to do so. Every packer can pack more than he can get now, and the people fishing are just the same; it would make no difference at all.

Q. The policy of the department, I suppose, of course I do not know the reason for doing it, in limiting the number of canning licenses, was that in keeping down the number they were keeping down the fishing?—A. That is a mistaken idea.

Q. It did not have that effect at all?—A. It did not.

Q. Is there any reason in your mind why one man should not have the right to pack as well as another, provided he can show his ability to pack?—A. It is nobody's business whether he can pack or not.

Q. Do you think any inspection should take place as to the condition of the pack?—A. What do you mean?

Q. There would have to be some check of some kind on that?—A. In what way?

Q. There would have to be some inspection of the canneries to see that the packing was properly done?—A. There is none now.

Q. There is none now, but the number of canneries is limited?—A. That makes no difference; if there were only one factory here, and the canner puts up poor stock, or if there were a dozen putting up poor stock, what is the difference?

Q. I fancy that, as far as the factories now existing are concerned, they put up pretty good stock, but you can easily fancy that if every Tom, Dick and Harry were allowed to pack lobsters there would be some need of inspection?—A. I think it is a hardship to give one man a license and refuse it to another. Every man who wants should be allowed to pack.

Q. What do you think of the policy of the department in issuing co-operative licenses to can?—A. I think it is wrong to discriminate. It is my business to belong to a union or not, as I please. I am not expressing an opinion whether it is an advantage to belong to the union, but I do not think you should discriminate against us and say that if we do not belong to a union we will not be allowed to pack.

Q. What do you think of the proposition to require every lobster fisherman to take out a license?—A. If he takes out a license has he to pay for it?

Q. He need not have to pay for it, but the idea is that before he begins fishing in the spring he would have to come to the fishery officer, or the overseer would come to him, and he would have to take out a form of license to which he would subscribe, and which would recite the conditions and the law. It is thought that having done that the fisherman would himself obey the law and inform on others who did not.—A. I do not think he would, I have no use for an informer anyway.

Q. Do you think that the product of the cannery should be inspected, that is the canned article?—A. I think it should.

Q. That is by an official inspection?—A. I think so. I see that they inspect meat and all those things, and when that is done I cannot see why there should be any discrimination with regard to anything that is packed; if one article is inspected everything should be.

Q. It has been alleged that in some cases the fishermen have suffered injury by the failure of the canners to operate their canneries although there was a sufficient supply of fish available, have you any knowledge of anything of that kind occurring?—A. Not in this district.

Q. Not even when there was a sufficient supply of lobsters available?—A. That has never occurred here.

9-10 EDWARD VII., A. 1910

Q. Should the shipment of live lobsters be favoured in preference to the canning?—A. Anything should be favoured that brings more money than something else, and I told you that the export trade is a great deal more productive than the canning business, but you should not ask me that question because I am a buyer for the trade.

Q. Are the present facilities adequate for the proper handling of the live lobster trade? If they are not, what should be done to improve them?—A. If we had four boats a week instead of two it would be better for us, and they should have cold storage too. Do you know whether the Railway Commission have any jurisdiction over those people?

Q. Over which people?—A. Over the steamer people? They have over the D.A.R., and certainly they should have over the steamers.

Q. They are supposed to have over all railways.—A. But there are some boats that run in connection with the railway, and they are charging us exorbitant rates on our fish. Has the Railway Commission any right to remedy that?

Q. If they are running to a foreign port I do not know how far the Commission will have jurisdiction?—A. They operate in connection with the D.A.R.

Q. What do you think of the matter of hatcheries, have you had any experience with hatcheries?—A. No.

Q. What do you think about pounds?—A. I think they are a grand thing to put berried fish in.

Q. Do the facilities exist in this neighbourhood for the establishment of pounds?—A. I think they do.

Q. Have you any opinion to offer about the method of labelling cases?—A. No.

Q. Has that been the means of restraining or of putting an end to illegal packing, do you think?—A. I think it has, I think it is a good thing.

Q. I think you have already told me there is no fishing out of season?—A. There is not.

Q. I do not think there is anything else I am particularly anxious to ask you, have you anything further to state?—A. There is one thing, I do not know whether it is your jurisdiction or not, but we are discriminated against by the inspector.

Q. By the inspector?—A. Yes.

Q. In what way?—A. I will tell you——

Q. Is he the local officer or the provincial inspector?—A. The overseer we claim is unfair to us. We do not export illegal lobsters knowingly, if there are any in the crate they are there by mistake.

Q. What do you mean by illegal lobsters?—A. Short lobsters, if they are there it is by mistake. You are making up crates of lobsters to ship, and a few small ones may slip in occasionally by mistake, and then again sometimes you may be a little short of the quantity to fill the crate and a man may sometimes put in a few that he would not if he had larger ones, and if a crate is found to contain 5, 6 or 10 lobsters under size, the whole crate is confiscated.

Q. Where does that happen?—A. In Yarmouth, right in the town, it is done by the overseer there, while right in that very town thousands and thousands of small lobsters are being canned illegally. These lobsters are not put in intentionally, often, there is no doubt about that, but even if we did it intentionally we should have the same rights that those people in Yarmouth have.

Q. I can quite understand that now and then a small lobster may escape your observation?—A. A man necessarily has to guess at the length, he cannot measure every one.

Q. That undersized lobster is not worth anything at Boston, is it?—A. No, they throw them away, and in New York we are warned repeatedly to be careful because there is a \$5 law there, and they rigidly enforce it, so that if the small lobsters are found in the crates there they are thrown away. I know of a man who had one crate of lobsters worth \$30, sold in New York for \$5 or \$6. We do not object to a

SESSIONAL PAPER No. 22a

strict enforcement of the law, but what we do object to is, to use a homely expression, making fish of one and flesh of another. It is all very well if they have a law to enforce it, but they should treat us the same as they do the canners, we should receive the same consideration; if we deserve it, fine us the same as they would the canners, but to confiscate all our fish because a few small ones get in unintentionally, it is not fair. We buy the fish and we have to pay for them, and if the small fish are found in our crate when they get to New York they are thrown away, so that we lose them, but we should not lose all the rest of the crate.

Q. They do not pay you for the lobsters?—A. No, we do not get paid for them. If they happen to catch them at Yarmouth they seize our crate, they open the crates, they throw them out, after we have carefully packed them in moss or something of that kind, and then they throw them back in the crate again. It does harm to the fish, and we would not object to their examining them if they would throw away the little fish and fine us. We would not think so much of it, but when they confiscate the whole crate we object. It is an open secret that illegal lobsters are sold to the canner and packed, and for the overseer to enforce the law rigidly against us and allow that to go on in his own town, we claim is not a fair thing. In any event we claim that after those crates have passed muster here they should not be inspected at Yarmouth, but Mr. Hatfield told me that if he wanted to open a crate of lobsters, even if there was a tag on it, it would make no difference to him. We have a certificate, printed in Ottawa, and sent here for the local officer to attach to the crates, stating that they have been inspected and they contain no illegal fish.

Q. And is that signed by the local officer?—A. Yes, and those fish are not supposed to be opened at Yarmouth, but Mr. Hatfield himself told me it would make no difference to him, that his orders to his men were to open the crates in Yarmouth, so that he is not obeying the order of his superiors. Mr. Robertson has told me repeatedly that it is sufficient if the local man here inspects them. There is another thing I would like to say, that I think the men are making as much or more money now than they did when I first went to lobster fishing.

Q. That is due to the price?—A. It is the increase in the price.

Q. Is there a very considerable increase in the number of fishermen fishing and the gear fished?—A. Yes, they go a great deal farther. When I first went fishing a man who had a boat worth \$25 was well equipped, and now they have gasoline boats that cost \$700, but of course they are used for other fishing.

Q. Do they use the same boats for lobster fishing here that they do for the other fishing?—A. Yes, the same boats, but the price has gone up so tremendously owing to the scarcity of fish. I suppose that they have pretty nearly reached the limit now so far as the price goes, but I do not know if they keep on fishing the small ones what it will amount to in the future. I know that when I first commenced to save the small lobsters a good many years ago they said: 'That will soon ruin it,' but it has not ruined it yet.

Q. Is the proportion of large lobsters decreasing?—A. Oh, well, if you fish on the same ground they fished on 20 years ago there would not be anything to catch. They do not catch them there at all now. If you go off here 7 or 8 miles and string out a lot of gear the fish would get into it freely, but if nobody fished there you would catch them in here. They head off the school. In the spring when the season breaks up and lobsters are coming on the fishermen go away off and catch them up before they get in. The proportion of large lobsters has not increased, I don't think.

Q. We hear that a considerable number of United States smacks or vessels come down and fish offshore here?—A. There was one came this last year, and the same one came again this year, and my opinion is there will be more next year unless it is stopped. I think they will be here as soon as the lobster fishing opens.

Q. They will not come here through the winter?—A. No, not before May likely. They come in here and buy the fish then; down east they buy more than they do here,

9-10 EDWARD VII., A. 1910

but as soon as the lobster season closes here they go and fish outside. I want to ask your opinion on that, what is the remedy for that?

Q. I do not see what we can do if they fished outside the 3-mile limit; I do not see that we have any control of them, but if they come in here to transact or do any business in here I think we can reach them?—A. But supposing he comes in here out of a storm and you are in here in your cutter, can you seize him.

Q. That is a ticklish question. We always have to act very gingerly in these international questions, but I am inclined to think that these lobster vessels have no right to be in here at all?—A. You see this is an important question.

Q. If they increase the number of their fishing boats down here they may drive you off altogether?—A. Outside of the line they fish the same grounds as our own boats. We fish a great way off shore here, outside the 3-mile limit.

Q. No one within our territorial limits has the right, I think, to have lobsters in his possession during the close season?—A. I presume if I went off here with a Canadian vessel and took lobsters and then came into harbour here, and you came along with your cutter, I would be liable to be seized, but in this case this man is in here for shelter.

Q. I do not see why he should be treated any differently from you?—A. But you would not like to seize him under the circumstances.

Q. I would not like to seize him without consulting headquarters. New cases are arising all the time?—A. He does not come here as a fishing vessel, but under register and he comes here, takes aboard this stuff, and has an outward manifest that he is going to land it in Portland, but he goes fishing instead and uses part of it, and when he comes in he says 'I lost part of this on the way over,' and that covers the thing when he gets to Portland. This American vessel will come back and anchor in the harbour overnight with the lobsters aboard, and if one of the fishermen were to do the same thing his vessel might be seized, but apparently you cannot do that with the American vessel. It is not at all fair, and I am afraid if our fellows see that thing is going on they will say, that if the other fellow is going to be allowed to fish out of season they will do the same. With reference to the discrimination against us at Yarmouth, I do not think the question will ever be settled until Mr. Hatfield dies.

Q. How long has it been that way there?—A. Eighteen or twenty years.

Q. I think the department considers that he is quite an active officer, and is attending to his duties, that is as far as I know.—A. He is too active, but he will not protect the fishery by taking money out of my pocket. Here you have a canner and you let him go on canning illegal lobsters, you know that he is doing it, and by and by you just say to him, 'You pay \$25 fine for canning illegal lobsters.' But you let him continue doing it until the end of the season.

Q. I do not know anything of this sort of condition in my own region, but I see by the evidence before the committee last session that that sort of thing is done here. It depends upon what becomes of the money collected in fines in that way.—A. It does not make any difference, the department is as bad as he is; of course if the department say that they are going to get as much money out of these fellows as they can, then it is all right. But when a fishery officer tells you that he knows the canneries are canning small lobsters, and that he makes it a rule to fine them once a year and then let them go on, do you call that enforcing the law? That has come under my observation, and one of the fishery officers told me that.

Q. We have that in evidence last winter, has there been any change this summer?—A. They have fined them, yes, but they do not fine them here, they say, 'If you are going to can them go ahead, I am not going to take the money out of your pockets.' I do not think the 9-inch limit can ever be enforced here.

Q. What would you do, it is necessary to do something to preserve the lobster fishery, it is failing is it not?—A. I have told you that people are making more money now than they did twenty years ago.

SESSIONAL PAPER No. 22a

Q. But there must be an end to it sometime.—A. Yes, I suppose there will be.

Q. Supposing you had the making of the regulations, what would you do?—A. I say that if you were here and had charge of the fishery here, and you knew that by enforcing the law you would make your life miserable, and have everybody hating and growling at you because you were enforcing the law, you would go into the asylum, that is human nature.

Q. If that is the case, if it is as bad as all that, you had better let the lobster go until he is killed out and then shut down for a number of years?—A. My theory is that the world was made and the people were put in it to live, and they never will be allowed to starve, I think there should not be any limit put on anything, that I should be allowed to go and kill the moose in the woods if I wanted him, so long as I did not waste the meat, and it is the same with the lobster; a man should be put in the penitentiary if he wasted the lobsters. I would make the short limit 8 or 7½ inches and keep the close season as it is, and rigidly enforce it, but I do not believe it ever can be enforced at the 9-inch limit, not only that, but I do not think it is a wise law.

By Mr. Moses Nickerson:

Q. Would you not give the lobsters a chance to breed?—A. They have plenty of chance to breed.

Q. If you take them down to 8 inches they will not?—A. It is a rare thing to find a small lobster with seed on it.

By the Commissioner:

Q. Do you think they should be destroyed before they reach the age at which they can reproduce themselves?—A. All the big sized lobsters are berried lobsters at some time. I have noticed that if you take the she lobsters and cook them you will find seed in them.

Q. Of course all the lobsters you find with berries on are female lobsters?—A. Some people say, 'Do not catch any big ones.'

Q. Yes, Dr. Field says that, I believe, but I think the general opinion is we have to protect the small and berried lobsters, no doubt about that.—A. Yes, I think that is the general opinion.

Q. Perhaps it has been neglected and the people have become careless about it, so that it will be hard to hark back, but something has to be done.—A. I think myself that something has to be done, but it will be a hardship perhaps for two or three or four or five years.

Witness discharged.

MANASSES NICKERSON, canner, Clarke's Harbour, called and sworn:—

By the Commissioner:

Q. Would you just recite the nature of your connection with the industry, and when it began?—A. Well, in 1884, I was fishing for lobsters, I do not know but what I might have fished the year before that, I have forgotten, but in 1884 and 1885, I was catching them, and in 1886 I engaged with a canner and acted as his weigher and buyer; in '91, I began buying and exporting for myself, and in '97, I began canning.

Q. That was reversing the order?—A. I was still buying the live ones, but I began canning them and in 1905 I sold out my canning interest.

Q. Is your cannery still in operation?—A. The same cannery is now in operation by Mr. Neville.

9-10 EDWARD VII., A. 1910

Q. In short, what is your view as to the present condition of the lobster fishery compared with the condition existing in '84 and '85 when you were fishing?—A. Well, the difference is that we used to catch more lobsters inside the ledges than we can catch now by going miles off shore.

Q. Has there been a very great increase in the number of boats and men and the amount of gear now compared with what it was then?—A. There has certainly been a very great increase. I should say there is about ten times as many men, there must be. I remember I had 116 names on my list of men fishing; the number of men has not increased so much as the quantity of gear that they handle.

Q. And they have larger and better boats?—A. Oh, yes, altogether different.

Q. Do they fish the same ground now that they did in the early days, or are they fishing farther off?—A. They may fish the same ground, some, but not very much; they go farther off.

Q. I suppose all the ground around here is favourable to the lobster industry?—A. I think it is.

Q. You have ledges and reefs and a rocky bottom?—A. Yes.

Q. In what season did you fish then?—A. I was trying to call to mind about what the season was; it seems to me that when I first went lobster fishing we never did any fishing until March. I do not remember that we fished in the fall of the year. We began in March at that time and then we began fishing in January; then they did away with the August fishing, which was supposed to be the month of shedding.

Q. And after the two years' fishing, '84 and '85?—A. I was clerking then for the canner.

Q. What was the practice then with regard to the purchase of the lobsters from the fishermen? Did the canner as far back as then take everything?—A. Not everything.

Q. The law was observed then?—A. No, the law was not observed; it could not have been.

Q. What was the limit in those days?—A. I think it was 8 or 9 inches. My instructions were not to take too small lobsters because they were not profitable.

Q. Then your recollection is that there were no attempts made by the officers in charge to enforce the regulations?—A. Yes, there was some effort, but there was a small staff of officers, and we could keep clear of them pretty well.

Q. Were the same number of canneries in existence then as there are now?—A. No, there were not so many; there was only one in existence at that time.

Q. Who was that being run by?—A. By John M. Shand for the Portland Packing Company.

Q. Were the American packers the pioneers of the industry in this part of the country?—A. No, you could not exactly call them pioneers, because there had been packing done before any Americans came here.

Q. There were Canadians packing before the Americans came?—A. On a very small scale and in a crude style. The modern packing commenced with American packers.

Q. Did you, during the time in which you were engaged purchasing lobsters, notice any decrease?—A. No.

Q. I suppose this decrease in the condition of the lobster fishery has been a gradual one?—A. We did not notice it then because our people would keep going farther off and they would get more lobsters.

Q. What did you pay for lobsters in those days? How were they bought? By count?—A. Well, yes, and we bought by weight as well as by count. I was buying mostly by weight, that is the small ones.

Q. Did you make any distinction then between export lobsters and canning lobsters?—A. No.

Q. Did the factory people export the large lobsters then?—A. No.

SESSIONAL PAPER No. 22a

Q. Then the fishermen, even as long ago as that, were exporting their own lobsters?—A. They were selling them to smacks.

Q. To the local markets or the United States?—A. To the smacks from the United States.

Q. Smacks that came and purchased the lobsters directly from the fishermen?—A. Yes.

Q. Their limit was 10½ inches?—A. Yes.

Q. And only lobsters under that size came to the packers?—A. That is all.

Q. Was there any attempt in those days to bring in berried lobsters to the cannery?—A. Well, at the time I am talking about we did not take berried lobsters if we knew of it, but we were not so very particular in the first few years.

Q. Is it to your knowledge that the practice existed then of brushing the eggs off?—A. Not very much to my knowledge personally, but still I believe it did exist among some people.

Q. The reason I ask is that it must have had a destructive effect on the fishery if it were carried on long?—A. I think it has been carried on to a limited extent in this locality.

Q. In recent years your season has ended so early that you would not see a very large percentage of berried lobsters?—A. Not very many.

Q. What would you say is the percentage of berried lobsters taken by the fishermen here?—A. I do not know, but it is very small.

Q. Our evidence shows that there are more taken at the end of the season?—A. Yes, you see lots of them at the end of the season; it would be a very small percentage; I would not like to say it would be more than 1 or 2.

Q. As between the two branches of the fishery which, in your estimation, is the more profitable one for the fishermen, and which one should be encouraged; that is to say, the live lobster export trade or the canning?—A. Certainly the export trade is the best one for the lobsters.

Q. It brings the largest return to the fisherman?—A. Oh, yes.

Q. And is the least destructive to the lobster fishery?—A. Yes.

Q. What is your view about this matter of a size limit? Do you think the present size limit of 9 inches is the right one and that it should be enforced?—A. That is a question I would not like to say much about; I do not know anything about it myself.

Q. But you must have some opinion? What effect would a strict enforcement of the regulations have on the cannery?—A. Well, at the present size it would, I think, practically put me out of business.

Q. How would it affect the fisherman if he were not allowed to take lobsters under 9 inches?—A. If they were not allowed to take lobsters under 9 inches it would affect some of them very materially, and some others it would not affect so much.

Q. Do you think the ultimate effect would be beneficial, that after a few years the fishery would certainly be benefited to some extent by the enforcement of the regulation? Do you not think it is ruining the fishery to take the immature lobsters?—A. I do not know what to say about that.

Q. If it is true, as we are assured it is by the scientists, that the lobster grows about 2 inches a year, do you not think it is a pity to destroy the immature ones?

Mr. MOSES NICKERSON.—I would like to ask the witness if he does not think that the best policy would be to enforce the 10½-inch limit and thus close up all the factories?—A. Probably that is the right thing to do, but I do not care to say anything about it.

Q. Have you any idea of the proportion of lobsters taken that are under the legal limit?—A. Well, I have an idea, but I do not know. The number is very large.

Q. Would you say 50 per cent is a fair estimate; that one-half of every hundred taken are of illegal size?—A. I think so; I think they are.

Q. What do you think of the present season from the 15th of December to the end of May?—A. That is another thing which is just like my expressing an idea as

9-10 EDWARD VII., A. 1910

to the size limit. I kind of feel that, the way I am out of business, I should not say much about that.

Q. You must have formed an opinion about it?—A. Yes, I have an opinion.

Q. And being out of business your opinion might be free from prejudice?—A. I know that, but those who are more directly interested in it may think I have no right to express my opinion. My opinion is, I believe it would be better in general although there are some localities where it would probably be bad for them to make any change, but I think that 15 days taken off the last of the season and put on to the first would be beneficial.

Q. Can you tell me what reason there is for having different size limits and different seasons in the counties to the west of you here? Is there any necessity for it?—A. I do not see hardly where there is.

Q. Does not that sort of thing lead to breaches of the law?—A. I think so—going over the line you mean?

Q. Having different sized limits and close seasons in neighbouring sections?—A. It is a very fortunate thing for the persons living near the line.

Q. Are they not able to begin really as early as you do? I see some of them begin only on the 6th of January and they must to the west of you, have even a milder fall than you?—A. I do not see any reason why it should be any different with them.

Q. Then I understand afterwards you went into the canning?—A. Yes.

Q. And for some years you were engaged in the live export trade?—A. Yes.

Q. You purchased the live lobsters here from the fishermen?—A. Yes.

Q. And exported them to Boston?—A. And to New York.

Q. That is the 10½ inches to Boston and they sent the 9-inch to New York?—A. Well, we sent a great many of our large lobsters to New York.

Q. But you could send them down to 9 inches?—A. Yes.

Q. Had you the same facilities then that you have now for that trade?—A. Not quite as good.

Q. The same boats were running regularly to Boston in those days that there are now?—A. There was only one boat at that time.

Q. What is the practice with regard to those large lobsters? Are they held in cars, or are they packed and shipped every day?—A. The cannery used to hold them for a number of days and follow the market.

Q. How was the market for live lobsters then as compared with to-day? Were the prices as high as they are now?—A. The prices were lower and they fluctuated more than they do now. I think they are steadier now.

Q. Then you afterwards went into packing. What was your practice with regard to the purchase of lobsters for packing purposes?—A. When we first began we observed the law pretty well, and on several occasions we made a desperate effort to maintain the strict letter of the law, but we found that in every case we were simply losing our fishermen; they sold the fish to somebody else, and in some cases we did not get our fishermen back at all.

Q. And in self-defence you were obliged to do as the others did?—A. That is what we did.

Q. And did that continue all the time you were in that branch of the business?—A. Oh, yes, pretty well; we were fined a number of times.

Q. What did you do, as they did in Yarmouth, pay an annual fine?—A. No, we did not. We did not happen to get any very heavy fines; in some cases we paid \$5, I think, and in other cases we did not pay any.

Q. Could you give us any idea of the run of lobsters you did pack, how many did it take to fill a case or a pound can; have you any recollection of how they ran?—A. We did not use to keep any record. Well, back at the time I was clerking for Mr. Shand they used to run about a little less than five to the can, sometimes they would go a little over, but anyway from 4¾ to 5¼.

SESSIONAL PAPER No. 22a

Q. That is of green lobsters?—A. That is as they were weighed, it did not make much difference whether it was by weight or count, they used to average 100 pounds for 100 lobsters.

Q. And what were the fishermen paid for them at that time?—A. At that time they were paid 65 or 75 cents a hundred, and then a little later the price went up.

Q. Have you any idea of the present price?—A. I think at present they are worth about \$3 per hundredweight; last year and the year before they were worth \$5 to \$4.50.

Q. Could you give me any idea what it cost to put up a case of lobsters, what they are worth as they leave the factory?—A. We generally reckon on about \$2 for the expense of canning a case of lobsters.

Q. That is to say it costs that much to can it, but what did the meat, the tins, the package and the labour cost altogether, \$2 was for the labour?—A. I do not know, I would have to have a little time to figure that out, in some cases it would cost more than others.

Q. The prices have advanced greatly in the market for the canned article, have they not, during the past twenty years?—A. Yes, they have increased very much.

Q. What were the lobsters worth in the market when you first went into the canning business?—A. When I first served with Mr. Shand, lobsters were worth from \$4.50 to \$7 per case.

Q. And now they are worth?—A. At the present time they are worth somewhere from \$12 to \$14 a case; they went to \$18 last year which was the highest price they ever reached.

Q. Are the present penalties sufficient to deter packers from violating the law if they were enforced?—A. I think they are, if they were enforced.

Q. What do you think of the matter of giving aliens licenses to can? Professor Prince seems very urgent about that.—A. I do not see why one man should not have a license as well as another.

Q. Even if he is an alien?—A. Yes.

Q. It has been suggested that the only thing they bring in here that is alien is their capital, that they employ Canadian labour and buy their material in Canada?—A. Yes.

Q. Is the present regulation restricting the number of canning licenses satisfactory?—A. I do not think so.

Q. What would you advise?—A. I think I would allow any man to pack lobsters who thinks he can earn a dollar out of it.

Q. Without any further question, without assuring yourself it is going to be done properly?—A. Well, if his stock was no good when he tried to sell it he would be the loser, that is all.

Q. Do you think that an increase in the number of canneries would mean more fishing?—A. I do not think so.

Q. Do you think it would lead to more competition?—A. I do not think it is possible to have any more competition.

Q. Do you think there is any combine on the part of the packers to keep the price down?—A. My experience in that line is that although we attempted a number of times to keep prices down, so that we could make a dollar out of it, we never could hang together long enough to do any good; I think we made matters worse instead of better, that is we made it better for the fishermen.

Q. Then there always has been a certain amount of competition?—A. Oh, yes, no doubt about that.

Q. Would you favour an inspection of the product of the cannery by an official inspector?—A. Well, I think it would be all right—but still I do not know.

Q. The tendency nowadays is to inspect all food products?—A. Yes, I believe it would be all right, but I believe from what I know about it myself that the factories aim at packing their fish as well as they can, because the price depends upon it.

9-10 EDWARD VII., A. 1910

Q. Would the present official staff be sufficient to make that inspection?—A. I do not think so.

Q. Would it require experts in the business?—A. Yes.

Q. What do you think of the policy of encouraging the fishermen to co-operate in canning; will they do better that way than they will by selling their lobsters to the canner?—A. I do not know what to say about that, the co-operative concerns, as far as I know about them, have never been very much of a success.

Q. I suppose it will depend upon their ability to manage and operate the canneries, the same as in any other business?—A. Yes.

Q. How is the price paid for lobsters established?—A. Well, the quantity regulates the demand and the demand regulates the prices.

Q. And the export trade is governed by the price abroad?—A. It is governed by the foreign market, yes.

Q. And the price for canning lobsters is fixed pretty much by the packer?—A. That is also governed by the foreign market.

By Mr. Moses Nickerson:

Q. I would like to ask the witness if the case is not a little different from what he has stated out on Tusket Island where the fisherman rents his stand from the so-called proprietor and one of the conditions is that the fisherman is warned from the island unless he obtains the right to land there and carry on his fishing, and unless he agrees, either by verbal or written contract that he will always turn over these small illegal lobsters to the proprietor at a certain price, and if any other smack comes in and tempts that fisherman to sell them for a few cents more, then as sole proprietor, he orders the fisherman to get off his island?—A. That is right, in a way.

Mr. ARNOLD NEWELL.—On Flat island they turned one man off this year.

Q. Is not that the case, that the proprietor regulates the price in that neighbourhood for the fishermen belonging there?—A. Yes, but I do not think it generally amounts to much.

By the Commissioner:

Q. Has the question of the ownership of some of those islands ever been settled?—A. Only with respect to one island, but the others have never been settled.

Q. How far does your ownership extend? To the high water mark?—A. Yes.

Q. And is it not possible for the fishermen to establish themselves between the high water mark and the foreshore?—A. It does not seem to be.

Q. We have that trouble on the Labrador, and we allow them to set their traps and nets so long as they do not go on the shore line above the high water mark, because if they did that would be trespass. We have never recognized the private owner's rights below high water mark. Have you any remarks to offer about the establishment of hatcheries? I suppose it would be difficult to establish hatcheries down here, would it not, owing to the fact that your season ends when it does?—A. It would be quite difficult.

Q. Or pounds either? The suggestion has been made to us along this shore that the fishermen ought to be able to retain their lobsters caught during the legal season in pounds, to be sold after the close of the season. What do you think about that?—A. Well, I think there should be some provision on that line. I certainly think it is very wrong to force a man to sell his goods on a certain date.

Q. Do you think the matter could be safe-guarded so that it would not lead to violations of the law?—A. I believe it could be governed. I do not see why it could not be.

SESSIONAL PAPER No. 22a

Q. What do you think about this matter of the traps? Do you think it would be wise to establish a regulation—it has been suggested that the taking of the small lobsters should be regulated by having a trap so constructed that while retaining the large lobsters it would permit the small ones to escape, and the question is what kind of trap is best adapted for that purpose—providing that there should be a certain opening between the slats in the trap?—A. Well, that would let a lot of them go out, there is no doubt about that, if the opening were large enough.

Q. Would a fair proportion of the small fish escape, do you think, through a $1\frac{1}{4}$ -inch opening?—A. I am afraid $1\frac{1}{4}$ inch would let out the large ones; the old style of making the trap was to allow 1 inch between the slats. You could enforce that regulation by having the fishermen's traps inspected. But when we were making traps—I used to make them—we allowed the width of the lath between the slats; the lath was the gauge.

Q. That lath was generally $1\frac{1}{2}$ inch; it was oftener $1\frac{1}{2}$ than 1 inch?—A. They may have been more than 1 inch, probably $1\frac{1}{4}$ inch would be right. I think they put the laths closer together now than they used to.

Q. And that can only be for one purpose?—A. Yes, that is so, no doubt.

Q. Is there much gear left in the water at the close of the season? I suppose where the fisherman owns his own gear he is careful about that?—A. Well, I think there is quite a bit of it left.

Q. We have had quite a lot of complaint about the quantity of gear abandoned in the water when the season closes?—A. I do not think they leave gear that would be of much service to them in the water, but very often when they have gear that is not going to be of much use next year they cut the traps away, sever the lines, and allow them to go to the bottom.

Q. Do you think that has a detrimental effect in any way?—A. I do not think it has. They might kill a few lobsters, but not many. I should think in the case of the fishermen who use packers' gear that could easily be gotten over by charging the fishermen who wilfully neglect to bring in the gear for so much of it as they do not return.

Q. Is it within your experience that a larger quantity of lobsters are required to fill a one-pound can in the fall than in the months of May and June?—A. I think so.

Q. They are not so full of meat in the fall?—A. No.

Q. But it is supposed they are getting fuller as the fall advances?—A. Well, I have almost forgotten just about the condition of the lobsters for canning that way, so I would hardly like to say.

Q. It is not particularly here I was wanting to find out about, but the general experience.

Mr. NEWELL.—They tell me that the lobsters early in the fall are not so full, but in April and May they are better meated than they are in the fall.

Q. Is the fishery prosecuted at all in the fall between the 15th of December and the 15th of March?—A. Oh, yes.

Q. It is kept up here steadily the whole winter?—A. Well, that is according to the winter; if it is a severe winter February is generally pretty well closed up, but at the last of January I have seen pretty good work being done.

Q. Then it is not the practice to bring the gear ashore; the gear remains out?—A. Yes.

Q. A little to the eastward of here they say they generally bring the gear ashore and put it out again later?—A. They do not bring very much of it ashore here that way.

Q. How are traps baited here?—A. Of late years mostly with herring.

Q. Is the herring caught here on the spot? Do you catch the bait here generally?—A. Not generally.

Q. Do you import it?—A. Yes, from the north shore of New Brunswick.

9-10 EDWARD VII., A. 1910

Q. Have you any further remarks to make or are there any suggestions you would like to offer?—A. No.

Witness retired.

Commission adjourned.

DOG FISH REDUCTION WORKS, Clarke's Harbour.
September 13, 1909. (2 p.m.)

Captain JOB A. CROWELL, fisherman and smackman, Clarke's Harbour, called and sworn:—

By the Commissioner:

Q. How long have you been connected with the lobster industry?—A. Between 40 and 50 years.

Q. Have you been fishing steadily from this place, or have you been fishing steadily all that time?—A. Not fishing all that time, but carrying on the fishing business and running lobster smacks.

Q. You have actually fished lobsters yourself?—A. Oh, yes.

Q. You first began fishing lobsters how long ago?—A. 45 years ago.

Q. Were there any canneries in existence at that time?—A. Yes.

Q. They were in existence then?—A. The biggest one was established here about 37 to 40 years ago.

Q. Who was it owned by?—A. The Portland Packing Company.

Q. How long did they operate here?—A. I think 15 years or thereabouts.

Q. How came it that they abandoned it?—A. They started other factories on the eastern coast and away down in Newfoundland and along there.

Q. And they gave up here?—A. Yes, they gave it up here because the lobsters were much cheaper down there than they were here.

Q. What is the condition of the lobster fishery to-day as compared with what it was when you first remember it?—A. Oh, well, the lobsters are not so plentiful inshore as they were then, there are as many lobsters taken, but they have to fish very much more gear.

Q. How does the amount of gear and the number of people engaged in the fishery compare with what it was then?—A. I do not know, but they fished as many lobsters then as now, but there are no doubt twice as many people engaged in the fishery—well I would hardly say twice as many, but probably one-third more.

Q. And how about the gear?—A. I suppose there is as much again gear run now as there was at that time.

Q. Is the fishery conducted on the same ground?—A. On the same ground, but they are shifting farther off shore; of course there will be some on the same ground, but the majority of them are farther out.

Q. In those days on what ground did you fish?—A. We fished in and around the Islands, we did not go outside at all 30 or 40 years ago; they used to go down around the cape close in shore, but not away off 2 or 3 miles off.

Q. But the fishery was kept close in shore?—A. Yes.

Q. And now?—A. We fish them 4 or 5 miles from the land.

Q. Is there any fishing beyond that?—A. Yes, just as far as you want to go you will find lobsters off there.

Q. In what depth of water do the fish here? What is the outside depth?—A. Away out, about 18 fathoms, I guess, here; west of Seal Island that way they go off 30 fathoms.

SESSIONAL PAPER No. 22a

Q. How far off shore would they be in 30 fathoms?—A. They would not be any farther off shore there than we would be here.

Q. During those early days there were no regulations at all, when did you begin?—A. We began in April and fished right up to August it seems to me.

Q. I thought you generally fished up to October?—A. There was a little close season in August, I guess.

Q. But in the beginning they used to fish all the season, whenever they could. I think?—A. Yes, of course they did, you are right, I had forgotten.

Q. What proportion of small lobsters did you catch in those early days?—A. I do not know but you got as many as you do now.

Q. What was done with them then?—A. The canner took the whole business then.

Q. Even then the custom was to take everything that was caught?—A. As far as I know.

Q. Did the market fishery amount to much then?—A. The market lobster, do you mean?

Q. Yes?—A. No, there was nothing shipped abroad at all; I think the 2 or 3 last seasons there were lobster smacks from the United States came up here and the fishermen then commenced to sell the large lobsters from 10½ inches up.

Q. Was that the first live export trade?—A. I think that the first export trade in live lobsters that was ever done here was when I carried over 4 barrels of lobsters and sold them in Boston. Those were the first live lobsters ever shipped from here that I know of, and that was about 37 years ago.

Q. What means of conveyance to Boston had you in those days?—A. Nothing but schooners.

Q. The steamers were not running then?—A. There was only one small steamer from Yarmouth, but she did not amount to much; all the traffic was in schooners.

Q. Has the traffic increased from that date to this?—A. Yes, it has.

Q. How large a proportion of the total catch is the trade in fresh lobsters? What portion of the fishermen's total catch and earnings would it be?—A. I should think two-thirds.

Q. That is in the fresh lobsters over 9 inches?—A. Yes, I do not know but that it is more than two-thirds, it is quite two-thirds anyway.

Q. Is that trade increasing?—A. The price is increasing, we are getting better value for our goods every year.

Q. Your market trade is better and the conveniences for shipping them are better?—A. Yes, everything is better.

Q. You think that the natural tendency of the business is to increase?—A. It has been increasing right along.

Q. And as the facilities for it increase and they are able to reach the market in better condition the larger the price they will get for their lobsters?—A. That is what they are trying for all the time.

Q. Has the canning industry decreased or increased of recent years?—A. It has decreased this year, but last year it was a pretty fair year.

Q. What do they pack? Do they pack everything that is not shipped abroad?—A. They pack everything they can get, I guess.

Q. I suppose there is always a certain proportion of large lobsters that comes in the class of doubtful and defective?—A. Anything that they see will not carry to Boston they sell to the canner.

Q. So that the canner is practically dependent on the small lobster?—A. Well the cannery have got, up until last year, all that were under 10½ inches here; we could not ship anything to the United States under 10½ inches until last year, we could ship to New York, but we could not to Massachusetts, we could not to Boston.

Q. But two years ago they reduced the limit in Massachusetts to 9 inches?—A. Yes.

9-10, EDWARD VII., A. 1910

Q. And as a result there is a still smaller proportion going to the canner?—A. Yes.

Q. If the regulations were altered or re-framed in any way do you think it would be fair to encourage the export trade even at the expense of the canner?—A. I do not know, I could not say as to that.

Q. In framing the regulations for this section of the coast?—A. Oh, I think it should be most encouraging for the export trade, sure.

Q. That is if it were necessary to make any distinction between the two branches?—A. Yes.

Q. The canning here is taking a second place there is no doubt?—A. It is taking second place.

Q. Do you catch as many large lobsters on the whole, taking into consideration the increased amount of gear, as you did in the early years?—A. I think so.

Q. They still keep up?—A. Yes, it still keeps up; some years we have a great deal better fishing than others in those places where we used to fish; of course when we have to go outside in rough seasons we do not get as many, but with a smooth season we get more.

Q. Your fishing commences here on the 15th of December?—A. Yes.

Q. What class of lobsters do you get in that fishery? How will they run when you first begin in December?—A. About the same as all through the season.

Q. There is not a larger proportion of small lobsters then?—A. Take in the harbour, inside, you will catch more large ones when you first start in than you will later on, more than you do in two or three months' fishing.

Q. I suppose the conditions for lobsters here, in the shape of bottom, are good?—A. Oh, yes, they are, and I guess they are all along the coast.

Q. You begin fishing in the middle of December, and it is actively prosecuted then, I suppose?—A. Yes.

Q. Up till when?—A. Until the last day of May.

Q. Is it prosecuted with equal energy all through the winter?—A. February is the worst month we have here.

Q. But with the exception of February you fish steadily?—A. Well, sometimes we fish right through February unless we are bothered a little with ice.

Q. Is the percentage of loss of traps very great here?—A. Yes, it is.

Q. Especially in shoal water?—A. Especially in shoal water.

Q. At what period of the year would you expect to lose the most gear?—A. Some years are off seasons, of course, but it is hard to say; we lost most this year in May, more than we lost in the whole year, that only happened this year, that has not occurred for the last ten years, but when it comes to these awful gales of wind they just take away a man's gear.

Q. What would you say is the life of a trap?—A. Well, three years is the longest here unless when you are fishing inside where, of course, it will last longer, outside two years will pretty well use them up.

Q. Is there any difference in the trap now compared with what it was when you first began?—A. Yes, we use a stronger trap now than when we began.

Q. And you use also a Wheeler trap?—A. No, we do not call them the Wheeler trap.

Q. What do you call them?—A. We have what we call the four bow trap, and we have one that we call the bedroom trap, with one bow at the end and another at each side.

Q. It is not the Wheeler trap, but on the same principle?—We call it the bedroom trap, and when the lobsters get in they cannot get out.

Q. Are they putting the slats closer together than when you began fishing?—A. I think they are.

Q. Do the fishermen own their own gear and boats?—A. Yes.

Q. The canners do not furnish them with an outfit?—A. Well, the fishermen buy it, they may get advances sometimes from the merchants and others.

SESSIONAL PAPER No. 22a

Q. What would be the effect here on the fishermen, in the first place, if the 9-inch limit were strictly enforced?—A. I think, myself it would be a great benefit to the people here; I am speaking now of this place here; that is what I voted for first, and I vote for the same thing to-day; I think it will be a benefit to the community altogether, in the first year they may feel it a little, but after the second year they would have the benefit.

Q. How would it affect the canner?—A. I do not know but that it would affect them a little bit the first year; of course these cannery here are all shippers, too, they buy all the lobsters, they get all the lobsters anyway, the most of them, and what they do not ship they can, but I think it would be a benefit to them too in the long run.

Q. What do you think of the present season from the 15th of December until the end of May?—A. I think we ought to have 15 days added to it when first starting.

Q. You think it should commence on the 1st of December?—A. The 1st of December.

Q. Can you tell me how far east that would hold good?—A. To Halifax, from Halifax to Digby, anyway.

Q. How about Charlotte County and Annapolis, and Yarmouth?—A. Yarmouth is all right to come in with that, but I think Digby should come in.

Q. How about Annapolis?—A. I do not know about that.

Q. Is there much lobster fishing in the Bay of Fundy, does it amount to a great deal?—A. Not in the winter time.

Q. What would you say about New Brunswick?—A. I do not know about that.

Q. Would that apply there, too?—A. I do not know anything about it and I would not like to say anything about it.

Q. If you added anything on in December would you take anything off in May?—A. No, I do not think so, because May is our best month here around the Cape.

Q. If the season remained the same length as it is now, whatever the number of days from the 15th of December to the end of May, do you not think that an equal number to that added at the beginning when the fresh markets are supposed to be good?—A. Oh, it is good then.

Q. Do you not think some compensation should be offered to the lobsters by taking an equal number of days off the end of May? Are there not other fisheries that the fishermen could go to at that time?—A. Yes, but the month of May is the best month in the lobster season.

Q. In that case it would be better to leave it as it is then?—A. Unless you can add 15 days at the beginning.

Q. Could you give me any idea of the average price paid for lobsters of recent years for market purposes?—A. The average here would run probably about 15 or 16 cents, that is for large lobsters.

Q. For the 10½ inch?—A. Yes.

Q. And for the mediums, between 9 and 10½?—A. They pay all the way for mediums—on the average probably 4½ or 5 cents.

Q. And about what price for canning?—A. For the canning lobsters, from 9 inches down, they pay about 1½ cents.

Q. That is by count, it is all by count here, is it not?—All by count.

Q. That is only \$1.50 per hundred?—A. That is all.

Q. Has the price ever been higher than that?—A. Well, 2 cents is the best I guess they had.

Q. Two cents is the best they ever paid here for the small run of lobsters?—A. Yes.

Q. How many lobsters of that class does it take to make 100 pounds in weight?—A. Under 9 inches?

Q. Yes?—A. It will take about 120, I should think, I have seen them weighed often enough but I do not remember just what it would take.

9-10 EDWARD VII., A. 1910

Q. They take them down to what? Four or five inches?—A. Just as small as they can get them, yes, I think it will take 175 all right to make 100 pounds.

Q. What has been the practice with regard to the berried lobster?—A. They throw them away, I guess.

Q. There is a better disposition in that respect than there used to be on the part of the fishermen?—A. I think there is as far as I know, I know if I got one I would throw it away.

Q. Has it ever been the practice here to brush the berries off?—A. Oh, I think it is likely, I would not say but what some do it even yet. The lobsters are worth 25 or 30 cents apiece, and when a fellow gets them in the winter time with only a few seeds on them he will probably brush them off.

Q. Is it not a fact that in that case the berried lobster would not reach the market alive?—A. I guess they reach there alive all right.

Q. We have been told that a lobster that has been brushed is very apt to die in transit?—A. I was talking with one of the packers over in Boston, and he says that they often get them, they will come through all right if the weather is cold and they are kept damp, but they are not as good a sample of lobster.

Q. Have you any idea of the date of the spawning of the lobster?—A. No, I do not know, but I think they have spawn on them the whole year round, that is according to what I have seen.

Q. Is the percentage of egg-bearing lobsters large, what would you say it runs up to?—A. I do not think it is very large.

Q. Have the canners ever objected to accepting berried or undersized lobsters?—A. I do not think they have, I never washed one.

Q. If the canners refused to accept berried or undersized lobsters would it not have the effect of inducing the fishermen to return them to the water?—A. Oh, yes, of course they would if they could not find a market for them. With regard to the undersized lobsters, at one time when this law was first enacted, we started out to drop them overboard as soon as we took them out of the trap; I will not say we started to measure every one, but we would let them all go as far as we knew, and if we found when we got in, that we had any small ones among the lot we would at once put them overboard.

Q. Is it the practice to avoid the canner who is known to be careful on that point and to go to another who is less scrupulous? Some canners have told us that they had to do it in order to keep their fishermen?—A. I do not think there is anything in that, I never found it so myself.

Q. Do you think it would be possible to make any arrangement with the fishermen by which we could purchase from them the berried lobsters and hold them in a pound until the close of the season?—A. Yes, I think we could do that with any fisherman.

Q. Do conditions exist here for the establishment of pounds, deep water, a free run of the tide, and the means of fencing it in?—A. I think probably there are many places that could be found here, I am sure you could find them.

Q. Would you say there is any period in the season when the berried lobsters are more numerous than they are at any other time?—A. I think you get most in the spring of the year, about the month of April. I think they are as plentiful around here then as they are at any other time, and in the first part of May.

Q. Do you think they come in towards the shore then?—A. Yes, in the month of May they crawl into the shore, that is why I say it is the best month with us here; they crawl right into the rocks, and when we knock off fishing at the end of May they are as plentiful as they are at any time of the season, that is, the large ones.

Q. Do you think that an increase in the number of canneries would mean an increase in the fishing?—A. No, I do not think there would be any increase in the fishing.

Q. You think there is as much lobster fishing done now as there would be if the number of canneries were increased?—A. Yes, I think so.

SESSIONAL PAPER No. 22a

Q. Do you think the policy of the department in keeping down the number of canneries is a good one? Do you think there are canneries enough?—A. There are canneries enough as they are, but I do not think they are altogether right, because they cut the fishermen who get the lobsters from the privilege of canning them if they want to. If 20 or 30 fishermen gather together they should be allowed to can their own lobsters and make all that there is in it, but they cannot do that now.

Q. They can do that for the last two years, and we have one co-operative cannery operating at Little Harbour. The department decided when the fishermen complained they could not get a license and were not satisfied with the price they received from the canner, they claimed there was a combine between the canners—

A. Yes, that is the case, every time they have met before the season opened, and they set a price on the lobsters which the fishermen either have to take or throw their lobsters away, and if they are not allowed to put up a cannery they have to sell them at the canner's price.

Q. The fishermen made that complaint to the department, and two years ago the department decided to issue, and these are the only new licenses that are issued, what they call co-operative licenses. Fifteen fishermen are required to club together, and if they apply for it the license is granted to them under those conditions?—A. I would say it would meet the difficulty; I should think it ought to anyway.

Q. How would it affect the fishermen if the canneries were closed down altogether for a term of years, not only here but everywhere?—A. I do not know, I think it would be a benefit to the fishery generally. I do not think it would hurt those people but very little, and after the first year the people would, I think, get all the benefit of it.

Q. How are the lobsters collected here? Are they all collected on the fishing ground by smacks?—A. No, they are all brought in by the fishermen, right in shore.

Q. The fishermen bring them in themselves?—A. No, they bring them into the harbour here and when they export them they do so in steamers or schooners, but they bring them all into the harbour and every fisherman divides his own lobsters, what they call 'culls' them and he sells them, if he is going to sell them to the canner, or if he is going to ship them he puts them into shipping crates.

Q. That system of smacking them to the factory does not exist here?—A. No, not here, but they have smacks here that go away off from here and collect them from a distance.

Q. And in that case the fisherman is paid on the nail for the lobsters as the smackman receives them?—A. Yes, they get the cash, but some let their account run along until the close of the season and settle it up then.

Q. Do you think that different size limits and different open seasons in adjoining sections of the shore are likely to encourage violations of the law? From here going west you see we have different size limits and different fishing seasons?—A. Well, from Cape Sambro to Digby County we all have the one season.

Q. But there are parts of Digby county where they have a different season, do they not?—A. Yes, in some parts of Digby county they fish differently to what we do.

Q. Do they begin at the same time as you do?—A. No, I think they come a little later than ourselves, some fifteen days later.

Q. The season is: St. John county, January 6th to June 29th, size limit 9 inches; Bay of Fundy, bordering Kings and Annapolis counties, June 15th to June 30th, size limit 10½ inches; Charlotte County, N.B., and Digby County, N.S., January 6th to June 15th, size 9 inches, except in Bay of Fundy portion of Digby county; there it is 10½ inches; Yarmouth county, inclusive, around Atlantic coast to Halifax harbour, December 15th to May 31st, 9 inches?—A. Yes, that is ours.

Q. Have you any idea why that distinction is made in Digby county? Can they not begin at the same time as you do?—A. I do not think there is any reason why they cannot.

9-10 EDWARD VII., A. 1910

Q. And if they do they should knock off at the same time as you do?—A. They should, certainly; I think the season in Digby county should be the same as ours.

Q. You think that the same season should exist as far as Halifax?—A. Yes.

Q. North of that the conditions are different, they cannot fish in the winter there?—A. No, they cannot fish there in the winter, that is right.

Q. Do you think there would be anything in insisting on a standard of trap, that there should be a standard space between the slats so that a large proportion of the small lobsters would be allowed to escape?—A. Oh, I think so.

Q. Of course what I want to get your evidence about is not solely with reference to this immediate neighbourhood, but take in the Gulf of St. Lawrence the traps I remember, when I first had any connection with these things about 32 years ago, were the old fashioned traps with the double head and a hoop in the end; the slats then were generally $1\frac{1}{2}$ inches apart, the width of a lath, but they have now in many places in the Gulf, especially around Prince Edward Island and the Straits of Northumberland, narrowed that space down until there is only half an inch.—A. I think they have done that around the western shore, they have been putting them closer together with the view of holding the small lobster under 9 inches, in order to keep them from getting away.

Q. It would almost follow that if the space were left larger the smaller lobsters would get out?—A. Oh yes, lots of them.

Q. There is a question now in the Gulf Division where they are too far removed from the market fishery, canning must always be the principal industry there.—A. No doubt.

Q. It has been proposed there, and I think there is some show of reason in it, that we should do away with the size limit altogether, and in return for that shut them down to a very short fishing season?—A. Yes.

Q. A good many, both cannery and fishermen, have told us there that if they could get two months, May and June, they are willing to close up, and would be satisfied. But if we did away with the size limit and shortened the season down to two months it has been suggested that we establish a standard of trap which would allow a fair proportion of small lobsters to escape. That is a matter of experience as to what size that opening should be and the Department would have to be guided by the experience of those who can speak independently on that question. You see you fish a long season here and you have the opportunity of sending your fish alive to market, so that we can very fairly insist on a size limit of 9 inches and try to enforce it, but there may be trouble in doing so.—A. Oh, no trouble to do that.

Q. You think not?—A. If the men say so there will be no trouble at all, but if you are going to make a law which will allow one man to do it and not another it would be a different thing, but if you are going to set in right now and be prepared to stop it, that is all we want.

Q. You recognize the conditions in the Gulf of St. Lawrence?—A. Yes.

Q. They are canning very small fish there, it takes 12 or 14 to the pound tin?—A. I know, I have been there.

Q. You could not enforce a size limit of 9 inches there?—A. No, I do not think so, but we are differently situated here.

Q. The suggestion of a good many intelligent people is to do away with the size limit and in order to compensate for that to insist on a standard trap and the shortening of the season?—A. Well, I do not think that would do altogether here.

Q. Oh no, I am not alluding to here, it is impossible here, and we could not dream of such a thing here; but do you think that by insisting on say a $1\frac{1}{4}$ inch space on all traps made after a certain date, we suppose the life of a trap to be 3 years, in 3 years the fisherman has to renew his whole outfit I understand, and it would be fair to insist that all traps after a certain date are to have a certain width between the slats which would allow a large proportion of the small lobsters to escape. Do you think it would

SESSIONAL PAPER No. 22a

do that?—A. Yes, I think it would. If the department did not enforce that regulation better than the existing one then I would say, throw them overboard. If you have a law enforce it.

Q Have you ever been connected with canning, or operated a cannery?—A. No, I have no knowledge of canning. I would like to say that I have held lobsters until after they have shed, and I have found that a $7\frac{1}{2}$ inch lobster after it has shed its shell would go 9 inches, so that they grow from $1\frac{1}{2}$ to 2 inches in the shedding. Now that lobster at $7\frac{1}{2}$ inches would be sold for $1\frac{1}{2}$ cents, whereas if it had reached its growth in a single year it would have sold at from 5 to 10 cents, according to the market. When we haul our traps, five or six miles away, in busy times, we put these lobsters in our boat, and we cull them as we are coming in; sometimes we are in the harbour before we put them all overboard. Now if those lobsters under 9 inches were put overboard instead of being brought into the factory, in a year they will be market lobsters and they will be found inshore in the waters where we put them overboard.

Witness discharged.

STEPHEN M. GOODWIN, fisherman, Clarke's Harbour, called and sworn:—

By the Commissioner:

Q. How long have you been engaged lobster fishing?—A. I have been engaged at it 24 years.

Q. Have you fished pretty steadily all that time?—A. Right along, I have been two or three summers at the Banks.

Q. And you have not been at the lobster fishing continuously?—A. I went lobster fishing 24 years ago, then I went 3 years on the Banks, and then 20 years steady at the lobster fishery.

Q. How is the fishery, put it in your own words, compared with what it was when you first began fishing lobsters?—A. The fish are scarcer, I think myself.

Q. In what way, how would you describe it, do you catch as many big lobsters as you used to?—A. We do not begin to catch as many big ones, we catch the same number of small ones, but we do not catch as great a weight; there is a great deal more gear in the water than when I first commenced; we have from 150 to 200 traps to one boat, two men, in a dory, that makes one boat the same as two.

Q. How are these traps fished, on trawl lines or single lines?—A. All single lines now.

Q. When do you begin fishing lobsters?—A. On the 15th of December, and we knock off the end of May.

Q. Do you fish pretty steadily all that time for lobsters?—A. No, we knock off in February.

Q. Do you leave your gear out?—A. We leave it out, yes, sometimes we lose some of it.

Q. Do you lose much gear during the season?—A. Yes, quite a lot.

Q. What proportion of your gear have you to renew every year?—A. Well, myself I lose about 100 traps; every year from 80 to 100 for the last three or four years.

Q. Some years you escape and some years you do not?—A. This last year I lost not less than 80 traps.

Q. You have to renew pretty nearly one-half of your gear every year?—A. Pretty nearly that.

Q. What is a lobster trap worth with all the gear and line?—A. On an average, I expect, 75 cents.

Q. Do you make your own traps generally?—A. We make our own traps.

Q. What is the value of a lobster boat?—A. It varies according to the boat, some are worth \$300, while a dory would cost \$20; I fish from a dory.

9-10 EDWARD VII., A. 1910

Q. You fish from the outer island, do you?—A. Yes.

Q. You own your own boat and gear?—A. Yes.

Q. Is there any fisherman's union here?—A. Well, there was one, but I guess it has gone down—it is in existence yet.

Q. Is there any one around here who is a member of it?—A. Yes, the engineer at the works here is, I think, the head man of it.

Q. Has the number of men who are fishing lobsters increased greatly during the last few years?—A. I think they have.

Q. During the last ten years?—A. I would not say they have within ten years, but within twenty years, since I first commenced at it.

Q. How much more gear are you fishing now than when you began?—A. 100 traps more.

Q. You have doubled your gear?—A. I have about doubled it from what I had the first two or three years.

Q. And did you have to do that in order to keep up the average of your catch?—A. Yes.

Q. What depth of water are you fishing in when you begin in December?—A. About 20 fathoms as a general thing.

Q. And you fish in that depth of water until when?—A. Until along in April.

Q. What do you do then?—A. We leave some of them in deep water and shift some into shoal water.

Q. And do you come into the shoal water in May? —A. As soon as it gets fine weather we get into as shoal water as we can, around the shore we get in three or four fathoms, but generally in seven fathoms.

Q. You have to keep out in order to save your traps?—A. Yes, we do.

Q. Do the fishermen around here use hoop nets?—A. No, nothing of that kind is used around here.

Q. I suppose you catch like everyone else, a certain proportion of market lobsters; how much of your catch is fit for the live market trade, out of every hundred you get how many of them are over 9 inches?—A. In numbers there are about one-half, that is from 10½ inches up, you mean?

Q. I said from 9 inches, because 9 inches is the legal size with us?—A. Yes, over one-half.

Q. And the 9-inch are shipped abroad?—A. Yes.

Q. You have one-half of your catch above that?—A. Yes.

Q. Then one-half of the catch in number are under the 9-inch limit?—A. Yes, in number, but of course there will be more of the larger ones in weight.

Q. But you sell them by number; what do you get for your market lobsters?—A. We get two prices, we sell the small lobsters and the large ones, and there is about \$2 to \$3 difference.

Q. What is your practice?—A. We own our own crates and ship our own lobsters.

Q. Do you consign them to a commission merchant in Boston?—A. To commissioners and dealers both.

Q. You ship to both Boston and New York?—A. Yes.

Q. The medium ones you send to New York?—A. Yes.

Q. And the smaller ones you sell to the canner?—A. Yes.

Q. Does he send for them or do you deliver them?—A. He sends for them.

Q. Has he ever protested against taking the small lobsters, do you know, or is it his practice to take the small ones you give him?—A. I guess they take all they can get.

Q. Does he draw the line at all?—A. Oh, yes, I guess he draws the line somewhere.

Q. What is the lowest limit he will take?—A. I never got any that small.

SESSIONAL PAPER No. 22a

Q. Does he take them 4 or 5 inches?—A. I have never taken them that small, of course you may see a few in the traps sometimes around 3 or 4 inches.

Q. What would you say was the lowest limit?—A. I guess the lowest limit is likely 7 or 8 inches.

Q. If you found anything smaller than that you threw it overboard?—A. If they did not take them you would have to.

Q. That may carry a dozen meanings; do they take them at the full count, will they count every lobster as one?—A. They weigh them.

Q. Oh they weigh the small ones?—A. They weigh the small ones, yes.

Q. Can you give me any idea how many run to the hundred pounds by weight?—A. I guess it takes about 115 or something like that.

Q. Those are very good lobsters you know that will run 115 to a hundred pounds, that is not so bad.—A. Yes, they are pretty good lobsters; we weighed them and counted them and they ran 115 to the hundredweight.

Q. You must have counted a number of large lobsters that had been disabled?—A. No, they were not disabled.

Q. Do you think that 115 small lobsters would make a hundredweight?—A. Yes, I think they would.

Q. There would not be very many very small ones at that rate?—A. No, they are not small ones like I have seen them down around Cape Breton.

Q. Has there ever been any attempt, to your knowledge, to enforce the regulations with regard to the size limit?—A. To enforce it?

Q. You know what the law is, that you should begin fishing on the 15th of December and end on the 15th of May, that you must not take the berried lobsters or have them in your possession, or anything under 9 inches? Has there ever been any attempt to enforce that law?—A. Yes, they have dumped the lobsters.

Q. How would it affect the fishermen here if that law were strictly enforced and you were not allowed to take anything under 9 inches and if you were fined for everyone under that length when you came to shore?—A. It would affect us some, yes.

Q. To what extent would it cripple you?—A. A couple of hundred dollars in the season if we were cut off at 9 inches.

Q. Do you not understand that if that law were enforced it is after all for the general good?—A. I think so.

Q. Do you think the fishermen generally understand it? Is it your opinion we ought to enforce that law?—A. That is my opinion, after a year or two we would reap the benefit.

Q. But it would not put the fisherman entirely out of business to enforce it?—A. Oh, no.

Q. It would hurt him for a year or two?—A. Yes.

Q. How would it affect the canner, do you think?—A. I think it would hurt the canner.

Q. What is the practice here with regard to the berried lobster when you catch her?—A. I guess they are all dumped overboard from the boat here, I do not know of anybody here ever keeping them.

Q. Do you think the fishermen are beginning to learn that it is to their own advantage that the female lobster should be saved and protected?—A. I think so, and they do put them overboard.

Q. In your early days do you think they were washed or scraped off and brought in?—A. Some of them used to be.

Q. Do you think it is done at all now?—A. I could not tell you, I know what I do myself.

Q. Do you think the close season is strictly observed here, do you think there is any fishing done after the end of May?—A. I do not think there is any lobster fishing of any kind done after that date.

9-10 EDWARD VII., A. 1910

Q. I suppose somebody may take a few lobsters for his own use?—A. Yes, just for a mess, but I think that is all right.

Q. There is no general attempt to break the law?—A. Only by the American boats coming over here.

Q. Yes, we have heard of them, they are fishing outside the 3 mile limit during the whole summer?—A. Yes, and they should be stopped, because they are getting the lobsters we ought to get.

Q. Then the most profitable part of your lobster fishery to you, is that part of it which you sell alive to the market?—A. Yes.

Q. Is that the case generally for all the fishermen? Do you think those who fish closer in shore, those that do not go so far out, are able to get as many large ones?—A. I think they perhaps make more money out of the small lobsters that are sold to the canner, that is where they fish inshore.

Q. Do you think that the berried lobsters are more numerous towards the close of the season than they are during the early part of the season?—A. Yes, where I fish we do not find many in the first part of the season, but the last of May we do have them.

Q. That is when they are coming inshore late in the season?—A. Yes, the lobsters are coming in shore late in the season.

Q. Do you think that an increase in the number of canneries, it does not apply so much to you here, where, after all, the canning is a secondary affair, would mean an increased catch of lobsters, or is everybody fishing lobsters now that is likely to go into it, and is the ground pretty well covered?—A. I guess the ground is pretty well covered in spots.

Q. You see the fishermen in some places where they have to sell to the canner, complain that the policy of the Department in restricting the number of canning licenses is not a fair one to them, they think that if they had more canneries there would be more competition and they would get a better price for their lobsters. They say that an increase in the number of canneries would not mean an increased amount of fishing, but that it would simply mean the fishermen would have more market for their lobsters, but that there would not be more lobsters caught.—A. There would not be the small ones caught if there were no canneries here.

Q. But where there must always be canneries, the fishermen in the Gulf cannot send their lobsters alive to market, you say the best of your fishing is in May or June, and in June it is impossible to ship lobsters alive to market from away up in the Gulf.—A. We can hardly ship them from here in June.

Q. The Department by keeping down the number of canning licenses has sought to keep down the fishing, but no limit has been put upon the amount of gear?—A. No.

Q. What I want to get at is the fact whether an increase in the number of canneries, supposing a license were given to every man who applies and shows he is able to put up his own cannery, and do the canning properly, would mean any more fishing?—A. No, I do not think it would mean any more fishing here.

Q. I am not alluding to here especially, but anywhere?—A. Or anywhere, I should think.

Q. You think that the fishermen would be divided up among more canneries?—A. The fisherman would have a better chance of getting a higher price for his small lobsters. Now there are only two or three to buy them, but if there were half a dozen there would be competition and we would stand a better chance to get higher prices; the more factories there were the better opportunity of getting improved prices, I should say.

Q. Do you think the fishermen would make more money if they were allowed to can for themselves?—A. Yes, I think they would, if they were allowed to can for themselves and understood canning.

SESSIONAL PAPER No. 22a

Q. And of course, if they had the capital to go into it. Have you any idea how much capital a fisherman would require to go into canning?—A. He could go into it on a small scale in the first instance.

Q. He need not have a cannery like Mr. Menier at Anticosti that is worth \$25,000?—A. No.

Q. Is there anything you think of that I have not asked you about, or is there anything anybody would like any question put to this witness? I forgot to ask you when is the best time of your fishing, when do you get the most fish?—A. About when we first start in lobstering, in April.

Q. And how is May?—A. It is pretty poor with us.

Q. Would you rather fish in the beginning of December and knock off the last half of May?—A. Yes, for my own part I would rather have the whole month of December and knock off a part of May.

Q. What other fishing do you do when not engaged in the lobster fishing?—A. Cod, mackerel and herring fishing; I have not done much at the herring fishery this year.

Q. I suppose the most of those who fish here are all regular deep sea fishermen?—A. Yes, all regular fishermen.

Q. There are no farmers coming here to fish lobsters and then go back to the farm afterwards?—A. No, that is not the case here.

Witness discharged.

Commission adjourned.

CLARKE'S HARBOUR, September 13, 1909 (8 p.m.).

WILLIAM T. ATKINSON, fisherman, West Head, called:—I was going to say that I would not care about giving any evidence under oath.

By the Commissioner:

Q. All the evidence is supposed to be under oath. What is your own idea as to the regulations, how do they suit here? You know what they are, you fish from the 15th of December to the end of May, do you not?—A. Yes.

Q. And you are supposed to put all berried lobsters back in the water?—A. Yes.

Q. And you are not supposed to take anything under 9 inches?—A. We are not supposed to.

Q. We know, of course, in practice everything that is caught is dealt with in some shape, that seems to be the evidence we have had so far?—A. I think the berried lobsters are put back in the ocean, according to law, that is what I actually believe, but so far as the other part of the regulation is concerned, I could not say because it would not be proper for me to do so, I would not be able to say how they are dealt with; of course the fishery overseer could tell you better about that. He is paid for doing that business and I would not be supposed to know as much about it as he does. But of course the fishermen, the way they are doing, is to make their own law to suit themselves as to what they do actually want.

Q. That is what we want to get at, what you think the law should be?—A. I think it should be just as the fishermen want it, that is that whenever they can make it they should fish from the 15th of December to the last of May.

Q. What do you think about the 9-inch limit, should it be enforced?—A. I do not see how it can be enforced any more. We are told that the fishermen should form

9-10 EDWARD VII., A. 1910

their unions and make their own law, so as to save everything they want to, which seems to be the object of the union, and which perhaps really they do. I do not see what is going to be done outside of that. It would take two overseers to one fisherman to stop it that way, and of course I do not suppose the government would agree to do that.

Q. Well, do you think the fishery will stand the drain upon it very long?—A. No, I do not think it has declined greatly in the last 5 or 6 years.

Q. Do you not think something should be done to prevent it going too far?—A. I would not know how to get at it myself to answer that question even.

Q. Of course if you do not make any statement under oath we can hardly submit it to the Committee?—A. No, I did not come with that intention; I thought it was a general town meeting and I thought you gentlemen would be speaking on the subject; I was misinformed, that is why I came.

Q. We did not come for that purpose, we came here to hear the fishermen's views on the fishery. We are not here to make any speech, we have no opinion to offer even, nothing of that kind. I am not here to make any statement myself, but merely to take the evidence of the fishermen.—A. With regard to the close season, I think it is kept very strictly here. From the last of May to the 15th of December, I believe it is observed very, very strictly.

H. NELSON NEWELL, fisherman, Clarke's Harbour, called:—

By the Commissioner:

Q. We are trying to get some information in regard to the lobster fishery, and what may be for its betterment, but we are not able to get very much here; the fishermen do not apparently want to furnish their opinions and testimony on the matter; of course if they do not care to do so, they cannot complain if anything happens that does not satisfy them later on?—A. As far as my own opinion goes, I think that the present lobster law is good enough as it is if it were only enforced, but we haven't really any law now.

Q. You haven't any law?—A. No.

Q. And you have never had any?—A. I wrote to the Department sometime ago, I really forget how long it is, but I think it is three or four years ago, they have my communication at any rate before them at the present time, and in that I gave them my opinion.

Q. How long have you been lobster fishing?—A. I do not remember just the date I started in but it was a late date, not as early as some of them, but 12 or 15 years ago.

THOMAS P. NICKERSON, fisherman, West Head, called and sworn:—

By the Commissioner:

Q. How long have you been engaged in lobster fishing?—A. I could not exactly tell you.

Q. About how long?—A. Something like 15 years, probably a little more.

Q. Always in this place?—A. Always about this coast, between here and Yarmouth.

Q. What other fishing do you do?—A. Cod fishing and net fishing sometimes.

Q. About what time do you begin your lobster fishing?—A. In years gone by we used to put out our traps about the 15th of December, but of late years we did not commence that time, we commenced before.

Q. How many years has that been?—A. Oh probably 3 or 4 years.

Q. What time do you begin?—A. Sometimes about the 10th or 11th of December, according to how the weather is, whether it is fine or not.

SESSIONAL PAPER No. 22a

Q. Has that been very generally done?—A. It has been quite a practice about this Island for the last ten years.

Q. How do you find fishing at that early part of December?—A. We do not haul our traps at that time, we only put them in the water.

Q. Then you do not commence fishing until the 15th of December?—A. We reckon that we commence when we put the traps in the water.

Q. But do you haul them before the 15th of December?—A. No, we do not usually haul them before that.

Q. Are the factories ready to take the fish at that time?—A. No, they do not, but we usually have a place in which to put the fish that we get before that date and keep them there until we find a market for them.

Q. What market do you find for them?—A. We find a ready market right here, and oftentimes we find it over in the United States.

Q. Do you ship your market lobsters yourself to the market?—A. I do sometimes, it is according to the catch, if I have anything worth while I ship it, and if I have not I sell it to the local dealers here.

Q. Is there very much difference in the return between selling locally or shipping it abroad?—A. Well, I generally send them abroad if I can.

Q. What difference in price do you receive when selling abroad from what you get when selling locally?—A. It varies considerably, almost every week, according to the demand.

Q. What would you say is the lowest price you get for market fish?—A. Is that abroad, do you mean?

Q. No, here, locally?—A. When they are down, somewhere about 7 cents.

Q. What is the best price you ever got locally?—A. The best price I ever got was 30 cents on the spot here.

Q. What led to that tremendous price here on that occasion?—A. Abroad or here?

Q. No, here?—A. Well, they received more for them abroad, I suppose.

Q. Fish happened to be up and you received the benefit?—A. Yes.

Q. As to this sale of lobsters abroad, what is the average return from them?—A. Somewhere about \$12 and \$14 and upwards.

Q. That is for the crate?—A. Yes.

Q. How much is there in a crate, it is usually supposed to be 140 pounds?—A. We do not put any more than the number in it, we put 115 or 120 in a crate according to the size of the lobsters. If the lobsters run medium size it runs more, and if they run larger, we do not put in as many, they fill up the crate quicker.

Q. Can you give any idea of the average return for export lobsters; does it vary in different seasons?—A. Yes.

Q. What is the best time for them?—A. Along in February and March.

Q. And how about December?—A. December does not give as good market returns as February does.

Q. The lobsters are scarcer then?—A. Yes, and the weather is rougher.

Q. You put your traps out early in December?—A. In December.

Q. And you fish right along up to when?—A. The first of June.

Q. Is there any slack time in the winter?—A. Yes, it sometimes slacks off, but the gear is in the water all the time.

Q. Do you meet with much loss of gear?—A. Yes, there is quite a loss of gear.

Q. What is the usual loss of gear, taking one season with another?—It is pretty heavy sometimes, I could not average it, I hardly know what to say; if the season runs quite smoothly we do not lose so much gear, but if it is rough we lose lots of it.

Q. Do you have to renew your gear every two or three years?—A. We have to renew it every year.

Q. That means you lose it all?—A. We have to renew part of it every year.

9-10 EDWARD VII., A. 1910

Q. We were told in the Gulf that the life of a trap is only 3 years?—A. If the trap does not break up or go adrift on us it will last two or three years.

Q. Are the traps that remain in the water destroyed by the borer?—A. Yes, they are.

Q. The borer does attack the trap?—A. Yes, it does.

Q. Out of your total catch of lobsters, what percentage are sold as market lobsters?—A. I never figured it up to see what the percentage would be.

Q. What do you sell to the canner for canning purposes, and what to the market fishery?—A. I could not say as to that, I do not know what the average would be.

Q. Do you sell one-half your catch?—A. To the canner.

Q. Yes?—A. Oh, no, not a half, not more than one-quarter of it.

Q. Is that in number or in weight?—A. That is in weight.

Q. You do not sell more than one-quarter to the canner in weight?—A. No.

Q. Then three-fourths of your total catch in weight would be market fish?—A. I should think so.

Q. What would that amount to in number?—A. I do not know what it would amount to in number, I am sure.

Q. What I want to get at, you see, is the percentage of small fish, if it is possible to do so?—A. I understand you all right, but I could not very well tell you what the percentage would be; it is hard to make an estimate, I would like to come pretty nigh to it.

Q. Well, there is a considerable quantity of small fish?—A. Yes, there is.

Q. How would it affect you, as a fisherman, if the 9-inch limit were strictly enforced?—A. I do not know but what it would be all right for me.

Q. You might suffer a little for a time?—A. For the first season or two I might, but after the first two or three years I think we would be the gainers.

Q. I think there is no doubt about that. Now you think the 9-inch limit should be strictly enforced?—A. I think so.

Q. And you think it would be to the benefit of all concerned, ultimately?—A. Yes, I think it would benefit everyone engaged in lobster fishing.

Q. How do you think it would affect the cannery?—A. It would not suit them at all.

Q. It would not affect them so seriously, after all, if so large a percentage of your catch goes alive to the market?—A. No.

Q. Are the cannerys also purchasers of the market fish?—A. Yes, some of them are.

Q. And they export fish on their own account?—A. Yes.

Q. What number of traps do you fish, what is the average of a fisherman here?—A. I should think it would be about 150 or 175.

Q. That is for a two-man boat?—A. Two men in a boat.

Q. That is about the run, is it not?—A. Yes, that is about the average run, I should think.

Q. When you begin to fish in the fall, in what depth of water do you begin?—A. Anywhere from 8 fathoms up to 15 or 20.

Q. How far off shore would 20 fathoms take you?—A. It would carry you about three miles, I should think, in some places.

Q. That would be outside then?—A. Yes, the outside fishery would not be over 20 fathoms, I do not think.

Q. What sort of weather do you have in December, is it generally rough here?—A. Some years it is quite smooth, and in some years it is quite rough here.

Q. What sort of a month is January here?—A. January is, well it gets considerably frozen up here.

Q. Do you lose many days' fishing in December and January?—A. Out of the 15 days we have in December we do not lose very many days as a general rule, but in January some seasons it is quite open and in some other seasons it is not.

SESSIONAL PAPER No. 22a

Q. When the weather is worse in February and March is the fishing still good?—A. Sometimes there seems to be pretty good fishing.

Q. Do they trap then, are they lively and well and not loggy?—A. They are hardly as smart as they are in the spring, in April and May; they are not as smart at that time as they are later on when the water gets warmer, then they get smarter.

Q. How is the fishing towards the end of May?—A. We always have fairly good fishing to the end of May. This year at the end of the season I do not know but what it was the best I have seen for the last five years.

Q. You fish up to the end of May?—A. Yes.

Q. It was not slack before that, or do the fish come in runs?—A. Yes, the fish along in March begin to increase if the weather is fine, along about the 20th of March, and they hold up that way until some time in April; then they slack off some inshore, and offshore they begin to increase.

Q. Do you think the fish are coming in then from the deeper water?—A. They seem to be travelling along the bottom some way.

Q. They must be coming in again?—A. Oh, yes.

Q. Is there any part of the season when you get more small lobsters than you do at any other period?—A. I think when the weather is fine in December we get as many small lobsters as we do at any other time.

Q. When the weather gets fine in March and April do you move your traps farther in?—A. We move them offshore then; we get them farther away from the land. When we first commence fishing in the middle of December we do not go so terribly far off, and they seem scarcer along in the last of December and January, and we move offshore if the weather is fine.

Q. I suppose most of those engaged in the lobster fishery here are also deep sea fishermen?—A. They fish the year round, for some other fish after the lobsters.

Q. What is the most profitable fishery, apart from the lobster fishery?—A. Cod fishing.

Q. Can you give me any idea of the average earnings of a lobster fisherman? What is the fishery worth to him in an average year?—A. Oh, for the year it would be about \$600 or \$700 on the average.

Q. Is that to one man, he must bear the cost of his outfit and everything else out of that, that is the gross amount he would receive?—A. That would be the average of his gross earnings.

Q. Can you give me any idea as to the weight of fish that would represent?—A. I think probably the last of April or the first of May would be the best fishing that we have, from the middle of April to the middle of May. I fancy that is the period when we get the most fish.

Q. Do you use the same trap now as you did when you began fishing?—A. The same kind, there are some improvements on the old.

Q. And the improvements have been made with the idea of holding the fish, and making it more difficult for them to escape from the trap?—A. Yes.

Q. They do not catch any more fish in reality?—A. I do not think they do, but I think they hold them better. We think they do anyhow.

Q. That is the general impression. Is there any tendency here to narrow the distance between the slats, do you allow as much space now as you did when you began fishing?—A. No, I do not think we do.

Q. Do you make your own traps?—A. Yes.

Q. What space do you allow between the slats, how do you establish the gauge generally?—A. Between the slats would be about 1-inch, or 1½-inch, about an inch I should say, that would be about the average distance.

Q. Is that the same distance you always had?—A. About the same, we might have them a little closer together than we used to have them probably.

Q. What size mesh do you use in the net for the head?—A. About 2½ inches.

9-10 EDWARD VII., A. 1910

Q. These traps are all fished on single lines?—A. We use all single lines.

Q. There are no trawls; you never fished on trawls here at all?—A. Not of late years, not within the last ten years.

Q. What is supposed to be the advantage of the single line fishing over trawls?—A. We think that the traps can be handled with a great deal more ease, and that there is quite an advantage in fishing them on single lines.

Q. Do you ever fish them more than once a day?—A. We could fish them the two tides, but we do not go both times to the same lot of gear. We have them out at different places so that we can make them at the different changes in the tide, you know. The length of the season, I think, is all right, but I think these fishery overseers are not of much benefit to us, I do not think they attend to their business as they ought to.

Q. You think they are not strict enough with you?—A. I do not think they do as they promised to do, in fact I know they do not, I need not say I do not think they do.

Q. What would you expect them to do?—A. I would expect them to do just what the overseers ought to do; that is what I expect an overseer to do with me, he should sue me if I do wrong just the same as he would some other person.

Q. I hope they do not discriminate, I hope they treat you all alike.—A. I do not know whether they do or not. I think I have seen the time when I haven't been used just the same as some person else, and probably, on the other hand, there have been times when the overseers have not used the others as they have used me.

Q. Has the number of traps and of gear generally in use increased a great deal since you began fishing?—A. Oh, a great deal. When I first commenced fishing, sixty traps were as many as I would want, and now, with another man, I want 160 or 175, and sometimes I have 200.

Q. Has the number of fishermen increased largely?—A. Along this shore that I am acquainted with, it has increased.

Q. And do you fish farther offshore than you did in the early days?—A. Oh, yes, when I commenced fishing we did not go any more than one-third as far as we go now, I know we did not.

Q. Is it your opinion that the supply of lobsters is kept up by fishing a greater amount of gear and by taking smaller lobsters than you used to when you first began fishing?—A. I think when we first commenced fishing lobsters probably they were not any more plentiful than they are now, but there are so many more after them in these days than there were then that it makes them scarcer, they are not scarcer, but there is less stock to each man.

Q. There is a great deal more gear used to catch the same quantity of lobsters?—A. Yes.

Q. Do you not think you are taking a smaller run of lobsters now than you used to?—A. Yes, I think we are.

Q. In the years when you began fishing you would not have brought ashore the small lobsters that you do now?—A. Because we could not sell them.

Q. Was the packer more particular then than he is now?—A. Yes, he was so; he was very, very much more particular when I first commenced to sell lobsters than he is now.

Q. He cannot afford to be so particular now?—A. I do not know whether they can afford to be so particular or not, but I know they are not; I think the fishery overseers are not as sharp as they should be.

Q. It has been proposed to make all fishermen overseers to a certain extent. Some people have proposed to the department that the lobster fisherman should be required to take out a form of license, he need not be required to pay anything for it, and on this license the regulations would be printed and the fisherman would be required to subscribe to a statement that he was going to obey those regulations. The

SESSIONAL PAPER No. 22a

idea was that if he were an officer himself he would not only observe the law, but would be more apt to inform on those who did not. Do you think any regulation of that kind would be of any effect in securing a better observance of the law?—A. I do not think it would be of very much use.

Q. At all events it is your opinion, you have stated that before, that the regulations are not enforced?—A. That is what I think.

Q. And that they never have been?—A. No, they never have been, sure.

Q. Yourself, you favour a strict enforcement of the law?—A. Yes.

Q. And the same season, from the 15th of December to the end of May, as you have at present?—A. That is good enough for me.

Q. That is good enough for you?—A. I feel satisfied with that anyway.

Q. What would you think about beginning on the first of December instead of the 15th, as it is now, and knocking off on the 15th of May, how would that appeal to you?—A. I think that would be all right, I think I would be satisfied with that all right enough.

Q. What has been the treatment of the egg-bearing lobster within your recollection?—A. Oh, well, I do not know.

Q. At present I believe that the fishermen pretty generally understand that if they want the lobster industry to continue they should protect the berried lobster?—A. That is so.

Q. Do you not think the fishermen are more careful about that now than they used to be?—A. I think so.

Q. Was there ever a time when the berried lobsters were brushed off and brought to the cannery here?—A. I never saw anybody bring them to the cannery myself.

Q. Have the canners refused to accept them?—A. Oh, yes, I think so; if they have been brought into the cannery the fishermen have brushed the seed off them before bringing them in, and the canner did not know it.

Q. Is any attempt made to send them to market?—A. I think so.

Q. It has been stated by some witnesses that the berried lobsters will not bear transport as well as the others?—A. I think they send them, but whether they get there all right or not I do not know.

Q. Do you know whether it is the case that a lobster which has had the seed brushed off is less likely to stand transport than the other?—A. I do not think the lobster will live very long if she has had the seed brushed off; she will not stand it as well after the seed has been brushed off.

Q. I want to ask you something about the licensing of canneries; it does not refer to here especially but to the case generally. The department has been keeping down the number of canning licenses with a view to keeping down the extent of the fishing. Do you think an increase in the number of canning licenses would mean much more fishing than there is at present?—A. I do not think so.

Q. Is the extent of the lobster fishing as great as it possibly could be? Is it a fact that everybody that can go into it is in it already?—A. I think they are.

Q. If the number of canneries were doubled here it would not mean any more fishing?—A. No, it would not mean any more fishing.

Q. It has been urged by many fishermen that it would simply mean a little more competition?—A. That is what it would mean, more competition.

Q. And the fisherman would have a better market for his canning lobsters, do you think?—A. Yes.

Q. You know there are some parts of the coast where they have no opportunity to send lobsters to market alive as you have here?—A. I know it.

Q. And there canning must always be the principal industry?—A. Yes, that is so.

Q. In such places there are complaints that the department is doing wrong in not increasing the number of licenses, that it does harm to the fishermen to restrict the number in that way; it is claimed that if there were more licenses issued there would be more competition among the packers, and the fishermen would get more for

9-10 EDWARD VII., A. 1910

their lobsters. That is the point I wanted to get at when I asked you if an increase in the number of factories would necessarily mean an increase in the number fishing?—A. No, I think there are as many in it now as can get into it. I suppose as time goes on there are younger people coming into it and the old ones dropping out, but I think there are as many fishing now as there would be.

Q. Are the fishermen satisfied with the prices they get for their canning lobsters?—A. Not always, no, sir, they are not.

Q. Is it your opinion, or do you think there is any arrangement between the canners by which they restrict themselves to a general price?—A. I think so.

Q. You think there is a general understanding among them to that effect?—A. I think so.

Q. The fishermen have complained to the department about that, and as a way out of the difficulty what are called co-operative licenses have been issued to fishermen who were dissatisfied, and who combine to the number of 15 at least, to apply for a license to can on their own account. Do you think that is all the fishermen need for their protection in that respect, and does it give them another market for their fish apart from the ordinary canner?—A. I do not think it makes any difference how many canneries there are; I do not think the number of canneries would make much difference to the fishermen.

Q. Suppose the fishermen have no opportunities of sending their fish alive to the market, where the canneries are few, and they are dissatisfied with the price paid by the canners, and want to group themselves together, does it give them a chance to do better?—A. Oh, yes, it gives them a chance to can their own fish.

Q. Which branch of the lobster industry do you think the more remunerative to the fishermen and the best calculated to maintain the supply unimpaired, the canning or the live lobster trade?—A. Oh, the live lobster trade.

Q. Is there any fishing done here, as far as your knowledge goes, out of season?—A. No, I do not think there is very much done out of season.

Q. There is none done after the close of the season?—A. I do not think there is very much with us. I do not know what they may do abroad. Probably they may take two or three days at the first end of June, taking up their gear, but it would not be anything of any account.

Q. Do you think there is any reason why the size limit—it is 9 inches here—should be smaller in some districts than in others; should there be a universal rule?—A. I think if you make it a little smaller than 9 inches it would not do any harm. I do not think it would.

Q. Still, it is fixed at 9 inches, and you told me you thought it ought to be enforced?—A. I think so; if it is fixed at 9 inches I think it ought to be enforced, but if it is made a little smaller I do not think it would make very much difference.

Q. I think you have told us also that you thought the fishery was at its best in April and May rather than in December?—A. April and May, yes.

Q. Is the market generally as good in April and May for market lobsters as it is in December?—A. Yes, I think it is about the same.

Q. Is there anything I have forgotten to ask you about, or would you like to make any statement yourself?—A. I do not know there is anything else I want to speak about, unless we have this law enforced. I would like to see that.

Q. You would like to see the law enforced or have it wiped off altogether?—A. One or the other. I do not see that it is any use to pay these overseers for nothing. I do not see that we are getting any benefit from it.

Q. They have to have some officers to label the boxes and to make the returns generally?—A. When a man is put on to look after the small lobsters, and when you take the small lobsters into the factory he turns his back, why there might as well be no officer at all.

Q. Wherever we have been we have found that this same difficulty exists; that this law, particularly with regard to the size limit, is not enforced anywhere. There

SESSIONAL PAPER No. 22a

was originally an attempt made to enforce it, and that attempt was carried on more rigidly in some districts than in others, but when the fishery overseer found that his neighbour a few miles away was not enforcing the law he became more lax in his efforts, and that has got to be the case all around. Perhaps they do want a little livening up?—A. Yes, I think so. About three years ago a fishery overseer came where I was fishing. I had a few lobsters under the legal size; in fact, I hadn't hardly time to cull them out, but he didn't stop to see whether I had lawful lobsters or not, he cut the gear adrift.

Witness discharged.

Other fishermen present expressed their approval of the evidence that had been given.

WILLIAM T. ATKINSON, Clarke's Harbour.—I think it is a pretty fair statement.

ALFRED F. NEWELL.—Having heard the evidence given I endorse it. I am satisfied it is a fair statement of the conditions which exist here.

WILLIAM LEBLANC, fisherman, Clarke's Harbour.—I would sooner see the season a little earlier.

The COMMISSIONER.—You would sooner see it begin on the 1st of December and end when?

Mr. LEBLANC.—Commence on the 1st of December and end on the 15th of May: I do not fish over here.

The COMMISSIONER.—Where do you fish?

Mr. LEBLANC.—In the bay. I approve of the evidence except that I would suggest a little earlier beginning and a little earlier knocking off.

Commission adjourned.

YARMOUTH, September 14, 1909 (2.30 p.m.)

BENJAMIN HERSEY, fisherman, Port Maitland, called and sworn:—

By the Commissioner:

Q. Are you engaged in lobster fishing?—A. Yes.

Q. For how many years have you been carrying on the fishery?—A. Twenty years.

Q. Always in the neighbourhood of Port Maitland?—A. Yes, not far from Port Maitland, a part of the time in Clare, less than five miles away.

Q. What is the practice among the fishermen here, do they own their own boats and gear entirely?—A. Yes, they do at Port Maitland.

Q. About what number of boats are engaged in the lobster fishery in that neighbourhood?—A. Twenty or twenty-two.

Q. Those are double-handed boats, with two men in them generally?—A. Yes.

Q. The lobster fishing season in this division is from the middle of December to the end of May?—A. Yes.

Q. About what time of the year do you begin your fishing generally?—A. About the 15th of March we commence to put out a few traps.

9-10 EDWARD VII., A. 1910

Q. You do not fish in December?—A. One boat has fished in December for two years, that is all.

Q. In what depth of water do you fish your traps then?—A. Where we fish now we have about six or seven fathoms at low water.

Q. You begin in the middle of March and you fish right up to the close of the season?—A. Yes.

Q. Then there is, as I understand it, only one boat carrying on the fishing all through the winter in that neighbourhood?—A. Yes, that is all.

Q. Has that boat been doing it long?—A. Only two years, the winter before last was the first.

Q. Can you tell us what the experience of that boat has been?—A. It has not done much.

Q. What is the trouble? Are the lobsters not in there?—A. They are too far off, the water is too shoal.

Q. Do you fish in the same depth of water and the same distance off shore all through the season?—A. We vary, we go off five or six miles in about the same depth of water, but we have to keep in shoal water in order to keep where the fish are.

Q. Do they not come inshore as the season advances?—A. Yes, they come inshore in April, we have a school that comes inshore then, but they are offshore at the same time.

Q. Have you always fished over the same ground?—A. Always.

Q. Have you always fished the same number of traps? What number do you fish now?—A. I have increased the number the last two or three years. When we first commenced to fish we had 100 traps to the boat, and now we have reached 200 and over.

Q. Do you fish the same style of trap now as you used to in the beginning?—A. No, it is a smaller trap.

Q. Is it a patent trap?—A. A double-headed trap. We can fish more traps now that we have a better boat, we formerly used to row in a dory, and now we use a motor boat.

Q. What do you think is the value of a trap here?—A. \$1.

Q. How long do you consider is the life of a trap?—A. About three years.

Q. Do you find that it requires a larger amount of gear now to catch the same quantity of fish than when you began?—A. Well, yes.

Q. And how do the fish compare now?—A. When I first began to lobster fish I could land five and six crates a day out of 100 traps, all right.

Q. And to-day?—A. And to-day we cannot nearly do that.

Q. How do the fish compare to-day with the time when you began fishing?—A. That is in quantity?

Q. Are they run down in quantity and in quality, is the catch as large?—A. There are not as many large ones.

Q. What proportion of small ones would there be, under the 9-inch limit?—A. That is with the large ones too?

Q. Yes.—A. In number or in weight.

Q. Say in number?—A. Well, there are more than double the number.

Q. More than double in number would be small fish.—A. Five to one, I would say would be small fish.

Q. What do you do with your catch, how do you dispose of it?—A. Ship to Boston, and sell some to the factories.

Q. That is, all that are over 9 inches are shipped?—A. Yes.

Q. And all that are under 9 inches?—A. The factories take them just the same.

Q. And you export the live fish yourself?—A. Yes.

Q. Do the fishermen generally do so?—A. Yes, the fishermen in our district.

Q. How does the market fishery, the fish exported alive, compare with what you

SESSIONAL PAPER No. 22a

sell to the canners?—A. I should judge we sell two crates to one that we ship, or three crates to one.

Q. Which is the most valuable part of your fishery?—A. To the cannery.

Q. How would it affect you if the 9-inch limit were strictly enforced?—A. It would not affect me very much, that is after a little while; of course it would for the first year affect the lobster fishermen considerably.

Q. To what do you attribute the decrease in the fishery?—A. Oh, well, I do not know; I am not prepared to say what it would be.

Q. Is it not due to over-fishing?—A. Well, it is, a good deal due to over-fishing, yes, and to the greater number of boats. When I first commenced fishing I think there were four other boats fishing at Port Maitland, making five in all and I was fishing then at Black Point just above, and now there are twenty odd boats at Port Maitland, and where there were 1,000 there are now 2,000 traps on the same ground.

Q. Would you attribute the decrease in part to the destruction of the immature or small fish?—A. That would have something to do with it.

Q. Do you see a great many berried lobsters?—A. Yes, quite a number.

Q. Are they more numerous at one part of the season than another?—A. I only fish in the summer months, I would not know anything about the winter.

Q. In the summer months are they more plentiful than they are in the early part of the season?—A. No, there are more in the early part.

Q. You do not think they come into shore to spawn?—A. No.

Q. What is done with the berried lobsters?—A. They are chucked overboard as far as I know.

Q. Is it to your knowledge that brushing the berries off has been practiced on this part of the coast?—A. I have never done it myself and I have never seen anybody do it. I doubt if there is much of that done now.

Q. Do you think the fishermen are beginning to appreciate the fact that, in their own interests the seed lobsters should be protected?—A. Yes, the seed fish should be protected of course.

Q. Are you putting the slats closer together now than you did in the old traps?—A. Yes, I think so.

Q. What is the object of doing that?—A. To save the small lobsters.

Q. Within your experience have the regulations in so far as the small lobsters are concerned, ever been enforced?—A. Strictly enforced? Yes, it has been. When I first commenced to fish for lobsters I do not know what I would have done had I sent any 8-inch lobsters to Yarmouth, to the canner.

Q. What regulation was in force when you began fishing?—A. From 9 inches up.

Q. You did not fish then in the days when there were no regulations at all?—A. No, it was 9 inches by strict measurement.

Q. Was that regulation enforced for a while in the beginning?—A. It was with me.

Q. When did it begin to be less rigidly enforced?—A. I should judge it would be 12 or 14 years ago, I have not the dates, however.

Q. To your knowledge, have the canners ever made any scruples about taking small fish?—A. They have never refused to take them from us.

Q. Do you sell by weight or count?—A. Always by count until this year.

Q. And this year there has been a change?—A. Yes.

Q. What was the price paid for them this year?—A. We had 3½ cents a pound.

Q. For the smaller fish?—A. For all the fish under 10½ inches, we sold about all our 9-inch lobsters to the cannery.

Q. What was the price you realized for your larger fish that went to market? Of course that price varies throughout the season?—A. Sometimes we get \$14, and our first crate we sent we got \$20 or \$22; \$14, was I think, the lowest we got.

Q. What will a crate average?—A. A crate will go about 160 or 170 pounds when they are well packed, 140 is a crate.

9-10 EDWARD VII., A. 1910

Q. You ship to Boston?—A. To Boston.

Q. How often do you get your returns generally?—A. Oftentimes by return boat.

Q. Is there sometimes a large percentage of loss?—A. Sometimes there is, but as a general rule they hold out all right.

Q. How many canneries are there in operation in your neighbourhood?—A. Only one.

Q. To whom is it licensed?—A. Mr. Shand is the licensee, George A. Shand.

Q. You know, I suppose, that the policy of the department for a number of years past has been to restrict the number of canning licenses?—A. Yes.

Q. Do you think it would make any difference to the fishery generally if the number were increased? Would more canners mean more fishing?—A. I do not think so.

Q. Do you think that practically everybody that could fish is fishing now?—A. I think so, everybody that wants to fish is fishing.

Q. Therefore an increase in the number of canneries would not, you think necessarily mean more destruction of fish?—A. No.

Q. Do you think an increase in the number would lead to more competition as to price?—A. It might have a little to do with that, there would be more opposition.

Q. Are fishermen generally satisfied with the price they receive from the canner?—A. Well, hardly this year, no.

Q. It has been the policy of the department during the last two years, in cases where fishermen are not satisfied with the price they received, to issue what they call co-operative licenses to groups of 15, or more, fishermen to can for themselves. Do you think that gives relief as far as the fishermen are concerned?—A. I do not know that it would hurt.

Q. You think that the fishermen would not go in for canning themselves?—A. I do not think so.

Q. Do you think the fishermen would make more money canning for themselves than by fishing?—A. I do not see how they would, I do not think they could attend to it.

Q. Do you think there is any competition at all in the price paid by the canners for fish, or are the fishermen obliged to accept what they offer?—A. Well, we did not accept what they offered there this last spring, we threw away our small lobsters and shipped the others until we got our price, or nearly our price.

Q. Now, as to the season, do you think that the season as it is now arranged from the 15th of December—of course you are not obliged to begin fishing then if you do not want to—to the end of May, is the most suitable season we could have both with a view to your own interests and to that of the lobsters?—A. Well, the opinion of the fishermen at Port Maitland is that the season should be from the 20th of March to the 20th of June, they want three months, and all the rest of the season closed.

Q. They want an increase in the length of the season practically?—A. No, that would be a great cutting off, from December.

Q. Yes, but you say you do not utilize that portion of the season?—A. No, we have that length now, from the 15th of December to the 31st of May. There is a change at Yarmouth, but it should be cut, and if we got the other 20 days it would not make very much difference one way or the other as regards that.

Q. That is to say, Digby has up to the 15th of June?—A. Yes.

Q. And you come over the boundary then?—A. Yes, we fish over the boundary, the principal amount of our fish is caught in Digby county.

Q. Have you given any attention to the matter of the spawning lobster? Have you any idea what the spawning season of the lobster is in this locality?—A. We get them at all times.

Q. Do the berries appear to be riper later in the season?—A. Well, no, I have seen seed lobsters with berries very small and dark coloured, and I have seen them pretty ripe in the beginning of the season.

SESSIONAL PAPER No. 22a

Q. Have you ever remarked, as to the egg-bearing lobster, the size of the smallest one you have noticed?—A. 9 inches.

Q. As a rule they are good fair fish?—A. Yes, it is not very often you will see them under 9 inches with eggs on.

Q. They do bear spawn less than that sometimes?—A. I suppose they do, but we never see them here.

Q. Have you any idea what proportion the berried lobsters bear to the total catch?—A. No, I could not say.

Q. The statement has been made that the berried lobster is more fragile, that it will not bear transport as well as the others, can you tell me anything about that?—

A. I do not know whether it would or not, but I would assume that the berried lobster is more delicate; I never undertook to pound one or to keep it in custody in order to see how long it would live.

Q. You never saw one nor handled one, of course, but do you know whether the lobster that has been stripped of its berries is certain to die?—A. I do not know about that, I never practiced it.

Q. Have you any remarks to offer upon the subject of hatcheries or pounds?—A. No.

Q. Are you aware of any fisherman having lost his catch of lobsters by reason of the canner having refused to accept them?—A. No.

Q. Are the present regulations restricting the number of canning licenses satisfactory to the fishermen?—A. As far as I know they are.

Q. Would you favour issuing a license to every man that applied for it?—A. Well, I do not know that it would be any benefit to me.

Q. Has that question ever entered your mind?—A. I have never thought anything about that question at all.

Q. Have you ever thought that one man might have as good a right to can as another?—A. Yes, if there is any fishing industry and a man wanted to start canning I do not know but what he should have the right.

Q. If the present size limit of 9 inches were enforced what effect would it have on the canner?—A. I think it would put the canner out of business.

Q. Would you favour the encouragement of the live lobster trade in preference to the sale to the canner?—A. No, I do not think I would.

Q. Is not the live export trade the least destructive to the fishery, and would not the fishermen make more by that?—A. They would not at first, but in a few years after they would.

Q. The lobsters are supposed to increase in size 2 inches every year, so that the small lobsters would not be long in reaching the legal limit?—A. Yes.

Q. Various recommendations have been made to the department at different times with regard to the condition of the fishery, and the best method of checking the decline. Some people have recommended closing down altogether for a term of years, what would you think of that?—A. That would give them a chance.

Q. That would be a thorough way?—A. Yes, that would be a thorough way, but it would drive a good many people out of the business, and scatter them about in different parts of the world so that they would never return again to the lobster business.

Q. Are all the lobster fishermen here regular deep sea fishermen, who after the lobster fishery is over return to the other branches?—A. About all of them are.

Q. Is there any other deep sea fishing going on at the time of the lobster fishery?—A. Yes, the other fishing commences about the same time or a little later.

Q. That is the cod and the herring fisheries?—A. The cod fish and halibut, there are not many herring here.

Q. And no mackerel?—A. No, only in May.

Q. Which branch of the lobster industry do you consider the more remunerative to the fishermen, and the best calculated to keep up the supply unimpaired, the canning, or the live lobster trade?—A. I should say the live lobster trade would be.

9-10 EDWARD VII., A. 1910

Q. You think it would be less likely to impair the fishery with its high size limit?
—A. Yes.

Q. Do you think it would be wise to insist on a standard trap, that a certain space should be allowed between the slats?—A. And then allow the fishermen to take all that they can catch in the trap?

Q. It has been proposed, not so much for this part of the coast, as for the inner gulf for instance where the fish run very small?—A. That would avoid catching the smaller lobsters.

Q. You think it would?—A. Oh, yes.

Q. Some people maintain that the lobsters would not try to get out of the trap when it was disturbed?—A. Yes, you will at any time catch very small lobsters in the trap, but as a general thing you will not get nearly the number if the slats are wider apart.

Q. The fact that the tendency is to narrow down the space speaks for itself, does it not?—A. Yes, if we did not intend to catch as many small lobsters we would put our laths farther apart, because then they would not hold the water as they do when hauling them, and they would stay on the bottom better.

Q. Do you think, yourself, that by merely enforcing strictly the present size limit it would be all that the department need do to protect the lobster fishery in this district?—A. I do not think it would ever play out.

Q. Do you not think it would return to something like its former abundance?—A. Yes, I think it would be a great gain if it could be enforced strictly everywhere.

Q. There would be no use trying to enforce it in one place and not in another?—A. No. Of course these small lobsters would be caught and destroyed in other ways, but not nearly so many of them.

Q. Do you think that different open seasons and different size limits in adjoining sections of the coast are satisfactory? Do you not think they tend to encourage violations of the law?—A. By having an open season in one place and a close season in another?

Q. Yes, different seasons and different size limits?—A. It would to a certain extent; yes, they would only smuggle them across the line.

Q. Is there any smacking or fishing of lobsters by United States vessels done upon this coast?—A. I do not know that there is myself, I never saw one fishing.

Q. It has been reported to us that they are coming across to our shore here and are beginning the practice of fishing lobsters outside the 3 mile limit?—A. I do not know anything about that, I have never heard our fishermen who fish off shore report that.

Q. How are the lobsters delivered to the factory, do the smacks come around for them?—A. We deliver them to the factory at Port Maitland, but the factory has a smack that goes a little way from home, 3 or 4 miles.

Q. Do you think it is in the interests of the lobster fishery generally that lobsters should be taken before reaching that stage of maturity at which reproduction takes place? We suppose that the lobster cannot reproduce itself before it is 8 inches at least?—A. Yes.

Q. Do you think it is right to destroy them before they reach that age?—A. I do not know.

Q. Is it not very wasteful to take a 7-inch lobster which next year would reach 9 inches; would it not be worth a great deal more when it reached that size?—A. There are two ways to look at that.

Q. In what way do you look at it?—A. We see everything else killed in its younger days, when it is small, before it mothers; we go on the land and we see the cows and the lambs are all slaughtered when they are small——

Q. Not all of them?—A. Well, the greater part of them are, and I do not know why it would not be the same with the lobsters.

SESSIONAL PAPER No. 22a

Q. Do you not think the destruction is greater in the case of the lobsters? The parent animal brings forth only one, but in the case of the seed lobster there are so many thousands of eggs, which although they do not possibly all come to life the destruction is a great deal more?—A. We could take more anyway, and perhaps have enough left.

Q. Perhaps you agree with Dr. Field, he would kill off the young ones and leave the old ones?—A. Well, if you only catch the 9-inch lobsters, then you are killing off the old ones and leaving the young ones.

Q. Could a size limit of 10½ inches be maintained without detriment to the lobster industry?—A. I do not think so.

Q. I see in the Bay of Fundy here bordering on Kings and Annapolis counties the size limit is fixed at 10½ inches?—A. Yes.

Q. Do they do no canning there at all?—A. No.

Q. Have you any idea of the extent of the export trade there?—A. No.

Q. During what portion of the season is the fishery most actively prosecuted, when is the best time of your fishing?—A. In May.

Q. In your opinion would a shorter open season, without any restriction regarding size, result in arresting the decrease of the lobsters?—A. Well, I think it would, a shorter open season.

Q. With a removal of the size limit altogether?—A. Yes, let them catch all they can, but give them a shorter time to catch them in.

Q. What would you think of that as a method of conducting the fishery?—A. That would be my decision.

Q. How much would you cut off?—A. I would give a three months' open season and a nine months' close season.

Q. At what time is the market for live lobsters at its best?—A. For those that are shipped?

Q. Those that are shipped abroad?—A. I think in February, that is what I think, but I do not ship any then myself, but we see that they are at a good price then. They do not fetch as good a price when the season opens, or through December and January, but in February they are at about the best price.

Q. Are the facilities adequate for the proper handling of the live lobster trade?—A. I think they are.

Q. It has been said that in a few years the live lobster trade will altogether replace the canning, have you any opinion on that?—A. I have no opinion on that, no.

Q. Has the shipment of live lobsters proved a success financially, and have the prices realized been more remunerative than the prices obtained from the canner?—A. I think the canning lobsters return as much or more than the live lobsters with us, that is as far as I know. It may be that some other fishermen may receive a better revenue from their shipping lobsters than from the canning, but we can answer that for ourselves, that we get more from the canning than from the live lobster trade.

Q. Is that on account of the larger proportion of small fish?—A. Yes.

Q. Though the price you receive from them is less?—A. Well, there is no expense in connection with the canning lobsters, we go right to the factories and sell them and there is no expense. We have to pay \$1.00 per crate on all lobsters shipped, and 50 cents each for hauling from Port Maitland to Yarmouth, besides the other expenses, commission, etc.

Q. So on the whole you consider canning the most profitable?—A. Yes, there is more clear money, not quite as much in the gross, but we clear more.

Q. Can you give me some idea of the number of pounds weight of fish sold to the canner by the average fisherman?—A. Well, I could, but I am not prepared to do so today.

Q. Could you not give me an estimate of it?—A. No, but if I had thought you would ask the question I would have been prepared to give some idea.

9-10 EDWARD VII., A. 1910

Q. Is there anything you would like to suggest yourself in connection with the lobster fishery that I have not asked you about?—A. I do not know that I have anything further to say except that the fishermen of Port Maitland want to have the season from the 20th of March to the 1st of July.

Q. And they want to be able to flop over into the adjoining section and fish in December, do they?—A. There is no fear of that in Port Maitland now, there is no fishing done in St. Mary's Bay that pays anything at all, there has been good fishing there but it does not pay now, and they are gradually going out of it.

By Mr. Law, M.P.:

Q. What is your opinion, suppose the Department made an open season of 12 months and put a size limit of $10\frac{1}{2}$ inches, what effect would that have on the fishery?—A. It would be an injury to us at Port Maitland.

Q. I only want your opinion, that is all I am asking for; do you think it would be an injury?—A. Yes, we can do better with the hand lines after the first of June in the deep sea fishing.

Witness discharged.

C. E. CHURCHILL, fisherman, Short Beach, called and sworn:—

By the Commissioner:

Q. What is the extent of your connection with the lobster fishing industry?—A. 15 years time.

Q. How does the fishing compare today with what it was when you began?—A. I think I made more a year ago this summer than I have at any time within the 15 years.

Q. Were you fishing more gear than you did when you began?—A. More than I did at first, but not more than during the last 5 or 6 years.

Q. What is that due to, was there a good run of fish that year?—A. The price was better than ever before.

Q. It was not so much that you got more fish, but a higher price?—A. I think I got more for the small ones than I ever did before.

Q. Is the proportion of small fish greater than it was when you began fishing?—A. I do not think it is, of course small fish mean more money now than they did.

Q. How many canneries were in existence when you began fishing?—A. Only one in Yarmouth County that I know of.

Q. I do not mean in Yarmouth County particularly, but in your immediate neighbourhood?—A. Only one.

Q. That is this same lone cannery?—A. Yes.

Q. How far is it from your fishing ground?—A. It is three miles from where we get the lobsters to the factory.

Q. Do you deliver them yourself to the factory or are they smacked?—A. Sometimes the smack comes for them and at other times they are trucked across.

Q. At what time do you begin your fishing?—A. Well, the season opens in December.

Q. How do you find the fish then?—A. They are scarce in my experience.

Q. Do you begin on the 15th?—A. Yes.

Q. Do you put your gear out before that time?—A. No, I have never put a trap out before that yet.

Q. And you find the fish scarce at that time of the year?—A. I have, in my experience.

Q. How long have you been fishing in December?—A. I think about five years.

Q. And are they always scarce then?—A. Well, there has been up to last year a school of lobsters in close that would last until about the first of January when they are quite plentiful.

SESSIONAL PAPER No. 22a

- Q. Were these fair sized lobsters, were there many market lobsters among them?
—A. Very much the same run as those we catch in the spring.
- Q. How did you find the market price then as compared with April and May?—
A. The live lobster trade is the more remunerative.
- Q. I mean the price, I have heard they are stiffer in December than they are in the spring?—A. I do not think there is much difference in December, but later in the winter they are.
- Q. You begin then and you fish steadily right along, do you?—A. No, indeed, not in my locality, it is very much exposed.
- Q. Do you leave the gear in the water all the winter?—A. Yes.
- Q. How often do you bait the traps?—A. Sometimes we would get at it twice during the week, and sometimes once in two weeks.
- Q. Do you meet with much loss of gear?—A. Yes, sir, and of fish too.
- Q. The inshore gear suffers the most?—A. Yes, we expect to lose that when we put it out.
- Q. Can you give me any idea of the extent of the loss of gear, what percentage of gear do you lose each year?—A. In the fishing gear itself we lost 50 per cent last year and nearly that much lobster, after they were caught and before we could get them to market, that is in our particular locality because we have not a place to keep them after we get them.
- Q. You are on an exposed shore?—A. An exposed shore.
- Q. Where did the greatest loss occur, at home or while the lobsters were in transit?
—A. At home, trying to keep them in the water until we could ship them.
- Q. Is there a Fishermen's Union in your locality?—A. There is not.
- Q. I forgot to ask the previous witness if there was a union in his locality?—
A. No, there is not.
- Q. What is the number of boats fishing your particular locality?—A. 17 in the summer season.
- Q. And not as many as that in the winter?—A. There was only one that did much at it, fished off shore, the others fished inshore.
- Q. Where do you fish?—A. Offshore, my traps are in 20 fathoms of water, six miles off the shore.
- Q. Is it to your knoweldge that foreign fishermen are coming in and fishing lobsters?—A. It is very much to my knowledge that people who fish their ground in winter come up and fish in our ground in the summer and I have had to take their gear that got entangled with mine.
- Q. Do you fish in the same depth of water all through the season?—A. Yes, in the summer we have some gear close in in shoal water.
- Q. Do you find any difference in the quality of the fish? Is there a larger percentage of small fish in shoal water than there is in deep water?—A. The shoal water inshore has more small fish and very few large, but if we strike shoal water fellows outside they run large.
- Q. What do you mean by the shoal inshore?—A. Close into the land.
- Q. You ship the large lobsters yourself?—A. Yes.
- Q. And you sell all the small ones under $10\frac{1}{2}$ inches to the canner?—A. Yes. This season we contracted with the canner for all under $10\frac{1}{2}$.
- Q. Have you ever shipped the smaller market lobsters to New York?—A. Yes, in times past.
- Q. How did that pan out?—A. They were uncertain with me, I have got extra good returns on a shipment, and probably the next shipment would be all loss or nearly so, so that as a whole they were unsatisfactory.
- Q. And how was it in connection with the Boston market?—A. We have done at our particular location very little of it, because we gave them to the canner as he could not live without them. We let him have them this season.

9-10 EDWARD VII., A. 1910

Q. Did he export them himself or can them?—A. He canned them.

Q. What proportion of the whole catch would be under 9 inches?—A. 20 per cent.

Q. Were the regulations regarding size ever strictly enforced to your knowledge?—A. Yes.

Q. When?—A. I cannot just say, up to probably six years ago, but I cannot say for certain.

Q. And after that they became laxer?—A. Yes.

Q. Has the canner ever objected to receiving small lobsters?—A. Not to my knowledge.

Q. How small do you capture them, down to what size?—A. I cannot answer that because I never measured.

Q. You have no idea as to how small they really take them; in some places we found they took them 4 or 5 inches.—A. I have an idea that we do to 5 inches, but I would not say positively because I have never measured the smallest ones.

Q. Have you any idea yourself how many 5-inch lobsters it would take to fill a pound can?—A. To fill a pound can, no.

Q. Are you keeping up your catch by fishing an increased amount of gear?—A. Keeping up my catch in comparison with former years?

Q. Yes?—A. Not in large lobsters, in 10½ inch lobsters.

Q. What I mean to say is, if you fished the same gear, and the same traps as you fished 20 years ago?—A. No, I would not.

Q. Can you give me any idea of the average returns to an active fisherman from the lobster fishery?—A. From year to year?

Q. Yes, one year with the other, including the large lobsters and the small.—A. I think that for our 17 dorys the average stock from the 20th of March would be \$450.

Q. That is the gross earnings?—A. That is the gross, that is all our stock and out of that we have to take our expenses.

Q. What do you value the trap at?—A. The trap rigged for 20 fathoms of water would be \$1.00 and a little less of course for shoal water.

Q. Do you fish them all single lines?—A. Yes.

Q. Is there any difference in the trap used now as compared with the trap you began to fish with?—A. Yes.

Q. What is the difference?—A. They are so made that the traps will hold the fish better.

Q. That is the only difference, no more lobsters get into them?—A. No more get in, and I do not think there are as many.

Q. Is the tendency to narrow the width between the slats?—A. Yes.

Q. What is the average space to-day?—A. I measure it with the pole of the hatchet.

Q. And what is the size of the mesh in the net at the head?—A. Probably 2½ or 3 inches.

Q. Do the fishermen generally make their own traps?—A. Yes.

Q. And I suppose the fishermen all own their own boats and gear?—A. Yes.

Q. Among the many suggestions that have been made to the Department there is one that the fishermen should register, that before they begin lobster fishing they should each apply to the fishery officer and take out a form of license in which the regulations would be printed and the fishermen would have to subscribe to them. The idea is that the fishermen having done that would feel themselves bound to live up to the regulations and would be apt to lay information against others who violated the law. Do you think it would have that effect?—A. I think it would add just one more to the fisherman's many sins.

Q. There are some good people that have recommended it, the intention being that if a fisherman violated the law he would not be allowed to take out a license, and therefore would not be allowed to fish?—A. It might work in some localities.

SESSIONAL PAPER No. 22a

Q. Who fixes the price paid for lobsters that are sold to the canner?—A. Of course they all fixed it together last season.

Q. What was the trouble last season, that the prices were low?—A. Yes.

Q. How did the price compare with the season before?—A. About 40 per cent less, I think.

Q. What was that due to?—A. That is a pretty hard question to answer. The fishermen maintain that it is due to a combine among the packers, and the packers claim that it was due to a glut in the market.

Q. That is the drop in the price of a case of lobsters?—A. Yes.

Q. Did the price remain the same during the whole season last year, or did the packers advance the price?—A. No.

Q. Did you get more at the close of the season than at the opening?—A. Not in our locality.

Q. What did you receive the year before?—A. Where we got \$3.50 this season, we got six cents per pound for a part of the season before.

Q. You think there is no competition in the matter at all, that you are obliged to accept whatever is offered to you?—A. I think there has been very much competition, but last season that seems to have dropped.

Q. That is to say that when there was an active demand for lobsters there was competition?—A. Yes.

Q. Have you ever known a packer to refuse to accept under-sized lobsters?—A. No.

Q. If the regulations were to be strictly enforced, where should we go to effect it? To the cannery or to the fisherman?—A. Well, I do not think there would be any fishermen in our locality to go to if the season remained the same.

Q. What is your opinion about enforcing it, do you not think it would be to the interests of the industry to enforce it?—A. Not under the present circumstances, and probably under future circumstances I would not.

Q. Do you not think it would improve rapidly after a season or two?—A. Not under the present circumstances, I do not, the way our neighbours are. I am referring to the American fishermen who come right in here where we can almost see them and we have to sit here, and watch them, and cannot help ourselves.

Q. Do they take many undersized ones, do you think?—A. I do not know about that, I think very probably they do.

Q. Have you noticed the United States fishermen catching lobsters off shore?—A. This present season is the first I have heard of them coming in so close.

Q. Were there many vessels?—A. No, I have heard of one only.

Q. That would be a welled smack if they are keeping the lobsters alive?—A. Yes.

Q. Have you any idea as to the spawning season of the lobster?—A. I think I have, I think I have seen them with eggs on pretty much all through the season.

Q. You have never noticed whether those eggs were riper as the season advanced?—A. I never could see any difference.

Q. You found no more spawn lobsters at any particular season than you did at another?—A. No, only that in some weeks we would find more than in other weeks.

Q. They come in runs?—A. Yes, in runs. There are more offshore than inshore it is very seldom we see them close in.

Q. Do you know whether the lobster comes into shore to spawn or not?—A. There is every indication that they do not, however, that is comparatively speaking, they may come from the deep water into our shoals a few miles off, but as to coming into our shore, they do not.

Q. Have the regulations for the protection of the berried lobster been strictly observed here?—A. Yes, that is as far as I know.

Q. They have always been observed?—A. As far as I know.

Q. You never heard of the practice of stripping the eggs off?—A. Not in our place, I have heard of it outside.

9-10 EDWARD VII., A. 1910

Q. You have heard what?—A. I have heard of it some years ago, but not of late.

Q. Do the canners object to receiving them, do you know?—A. I do not know, I never heard of one being brought in.

Q. Then you think that a strict enforcement of the 9-inch limit would put the fishermen out of business?—A. In our particular locality with the present length of season, because we have only two months in which we can catch the lobsters to any advantage at all.

Q. And those two months are?—A. April and May.

Q. Do you do any fishing in June?—A. Yes.

Q. You go over into the other district?—A. Yes, that is about the only month we can fish there with any degree of safety or comfort.

Q. Have you any idea or any experience as to the matter of hatcheries or pounds?—A. No.

Q. Do you think the conditions exist here where pounds could be established? You want a certain depth of water, a clean bottom, good current, and the means of barring off the opening so that the lobsters can be held in the pound.—A. There are none that I know of close to our locality, I do not know how it would be down here.

Q. On what bottom do you generally fish, on a rocky hard bottom?—A. Yes.

Q. What do you think of the method of licensing canneries, do you think there are a sufficient number of canneries under license already for the good of the industry, or would you advocate the granting of more licenses?—A. Well, I do not know that I would, except the granting of fishermen's licenses if they wished it, that is when the canners were too hard on them; if we have the privilege of canning our own lobsters it would be a good thing.

Q. In order to furnish a way out of that trouble, the fishermen have complained that in some cases the canners have refused to operate their canneries, leaving the fishermen in the lurch, and in such cases the Department have granted co-operative licenses. Do you think that furnishes a sufficient way out of the difficulty for the fishermen?—A. I do.

Q. There are no canneries of that kind in this neighbourhood?—A. No.

Q. So far you have always got along all right with your canner?—A. Yes.

Q. I suppose if the present size limit were strictly enforced it would put the canner out of business too?—A. I think it would.

Q. Do you think an increase in the number of canneries would mean an increase in the number of fishermen?—A. No. And with regard to the question before this I think I would like to take my answer back, I do not know that it would put the canner out of business at all because I think there would be so many less canned that we would get a much better price for the canned article than we do now for the live lobster, I do not think it would put him out of business, no.

Q. What is your idea with regard to the destruction of immature lobsters, do you think it injures the fishery?—A. I certainly do under the present circumstances.

Q. Would you favour the encouragement of the live lobster trade in preference to the canning of lobsters if it were necessary to make a distinction?—A. If only one branch could be carried on, and we could carry on the live lobster trade the year around, I would, but not under the present season limit.

Q. Do you think that the fishermen would make more money if they were allowed to can for themselves, I mean the fishermen generally?—A. That is a pretty hard question, I think they would if they could hold together like a body of men should under such circumstances.

Q. Do you think the number should be restricted to 15, or might that number be lower?—A. The number of fishermen who combine together?

Q. So far the Department has insisted on 15 clubbing together before they can get a co-operative license.—A. I should think it would be all right.

Q. Do you think that 15 would be more likely to disagree than 7 or 8?—A. I do not think their interests would be so large, I have had no experiences of hatcheries or

SESSIONAL PAPER No. 22a

pounds, any more than that I have often wondered why the lobsters were not distributed along here like they are on the other coast.

Q. You have no hatchery here?—A. Have they not one in Halifax?

Q. Yes, but they only distribute them from the pounds where they gather the eggs. You see they gather the eggs from the canneries within a certain distance on each side of the hatchery, and when the eggs have been hatched the young lobsters are distributed over the area from which the eggs were collected. Where the season ends as early as it does here, in May, it is doubtful whether the hatcheries would be any good, because we would have to hold the eggs so long in the hatchery. Of course if the season were lengthened and you caught your lobsters nearer the hatching-time it would be all right. Has there been any noticeable decline in the average size of the lobsters caught within your district within the last ten years?—A. Yes.

Q. Do you think the decrease is going on all the time? Some people tell us they think it has been arrested, that now there is no decrease taking place, and that the fishery is stationary.—A. I do not know that there has been any large proportion of lobsters under 9 inches the last few years.

Q. That is in the last ten years?—A. In the last ten years.

Q. But there has been in the last 15 or 20 years? Are you not bringing to shore a larger proportion of immature lobsters now than you did when you began fishing?—A. Of course, until 5 or 6 years ago they were not brought to shore, but were thrown out day by day, and it seems to me that we were throwing out then more than we are bringing ashore now.

Q. Do you think there is any good reason why the size limit should be smaller in one district than it is in another?—A. No.

Q. Have you ever fished in any other neighbourhood than your own?—A. I have fished the first half of June in Digby county waters.

Q. That is in this neighbourhood. Do you know whether the lobsters run smaller in any one locality than they do in another?—A. No.

Q. Have you any idea as to whether the lobsters are as full in the fall as they are in the spring. Some people say it will take 30 per cent more lobsters to fill a pound tin in the fall than it will in the spring?—A. I never found it so, we occasionally find a trap that has been left over sometimes in the fall and we fetch it in, when we are going in we haul it and get a few lobsters to eat, and I can never see any difference myself in them, they are apparently just as full of meat as in the spring.

Q. You would not notice perhaps, unless you were canning them.—A. If there was any great difference we would notice it.

Q. I think the idea is that in the soft shell period they are not as full, and they have not filled up again. Should the department adopt the policy of so framing the regulations as to allow the taking of large lobsters, leaving the small ones untouched, what style of trap is best adapted for that purpose?—A. Well, I think the trap should be made so that it would let out all the small lobsters that are not supposed to be taken.

Q. Have you any idea how large a lobster would get out through a 1½ inch opening?—A. I think an 8 inch lobster would go through that all right.

Q. Has any fishing been done here in the bays, the lagoons, and the shoals and inshore waters?—A. No.

Q. What is the best time of your fishery, which is the best month?—A. Well, May, anyhow, but June I think would be if we had it, because we could get at it every day, and there are as many brought into our end of Yarmouth County out of Digby waters in the last month than in any other equal time in the year.

Q. In your opinion would a shorter open season with no restriction as to size and some regulation as to the space between the slats result in a depletion or an increase in the supply of lobsters?—A. Well, if we only had our own fishermen to contend with it would result in an increase, but under the circumstances I do not think it would.

9-10 EDWARD VII., A. 1910

Q. You would not advise any shortening of the season, in your case, from what you say?—A. I would not advise any shortening if you shortened it at one end to tack it on another.

Q. How would fall fishing work here?—A. I think if we could have six months of the year in our locality, three in the fall and three in the spring, it would be protection enough for the lobster and far better for the fishermen.

Q. Of course you are not bothered with ice here at all?—A. Not to any extent, only occasionally.

Q. That is shore ice?—A. Shore ice.

Q. Are the existing facilities adequate for the profitable handling of live lobsters?—A. No, not in one way.

Q. What could be done to improve it?—A. I do not suppose anything could be done under the present circumstances. We are charged \$1.00 for getting the crate across the Bay, and it comes back smashed up in 9 cases out of 10 and the lobsters are injured.

Q. What do you mean by "crossing the bay"?—A. Going from Yarmouth to Boston.

Q. Are the crates broken up on board ship?—A. From the time they leave until they get back, somewhere.

Q. Have you any recourse against the ship?—A. I think not, not to amount to anything.

Q. Is it your opinion that in a few years the live lobster trade will altogether replace the canning, that statement has been made to the department?—A. No, I do not think so.

Q. Do you think it will ever entirely supersede canning?—A. I do not just understand the question.

Q. The live lobster trade is now from 9 inches up. There are a number of people in this neighbourhood, and some not far from here, who advise the department that the regulations should be so framed as to encourage the live lobster trade in preference to the canning, the idea being that the live lobster trade will altogether supersede the canning in the near future along this coast?—A. I do not think it, I think the canner can pay more for the lobsters than they can pay for them alive, a certain quantity of them.

Q. Do you receive the larger portion of your income from the fish sold to the canner or from the live lobsters exported to market?—A. Of late years, yes.

Q. How used it to be, before?—A. Well, before, the first few years, I got three-fourths from the live lobster trade.

Q. And now you do not get as much?—A. On the average I get more now from the canning.

Q. What is that due to, the increase in the lobsters shipped abroad?—A. No, the first year I got 1½ cents each for the live lobsters, and the year before last I got six for the small lobsters, that was for the ones I had to throw away before.

Q. When you got 1½ cents each how were you exporting them?—A. Hauling them by teams to Yarmouth town, nine miles, and paying our own freighting.

Q. How was it your market return was so small for the market lobsters?—A. You mean by the market lobsters canned, or what?

Q. We are at cross purposes, I think. What I wanted to find out was what proportion of your revenue from the fishery did you make from the canning lobsters and what from the export lobsters?—A. Well, as I say, when I began I got three-fourths from the export and one-fourth from the canning.

Q. That was because?—A. Because the canned lobsters gave me 1½, or less than 1½, 1¼, and the ones that would go 10½ inches would give me probably 15 cents.

Q. Do I understand you to say that the season from December to March is of no value to you, and that you would recommend opening the season at the middle of

SESSIONAL PAPER No. 22a

March and extending it to the middle of June?—A. No, not exactly that, it is of some use to us but nothing as compared to what the month of June would be. If we had to sacrifice anything we would like to make it along our shores during the winter, and be able to fish during the month of June when we can do so with more safety.

Q. There is very little fishing done prior to March?—A. There is very little prior to April, or the 20th of March.

Q. Is there anything you would like to say yourself, anything else you would like to add?—A. No, I do not think there is at present.

Witness discharged.

JOHN BURNS, fisherman, Sandford, called and sworn:—

By the Commissioner:

Q. What section of the coast do you speak for?—A. Sandford.

Q. How does that lie from here?—A. Northwest from here, I guess.

Q. To what extent is the lobster fishery carried on there, what number of boats are fishing?—A. 22.

Q. Who does the canning in your neighbourhood?—A. We have no cannery there, we sell to the smacks. G. A. Shand, M. J. Neville and Ellis & Beveridge all send smacks there.

Q. Has the number of canneries increased or decreased in that neighbourhood?—A. There never has been any cannery there.

Q. I mean on either side of you, at the places where they are smacked to?—A. There are about the same number as for many years.

Q. Are these large canneries?—A. No.

Q. Have you any idea of the extent of their output or pack?—A. No.

Q. Is there any station of the Fishermen's Union with you?—A. No.

Q. How many years have you been connected with lobster fishing?—A. About 3 years.

Q. And do you carry on any other fishery besides the lobster?—A. Yes.

Q. You go to the deep sea fishing?—A. Yes.

Q. Within your recollection, 8 years back, has there been any decrease in the fishery?—A. Well, I do not think so; I think that the year before last I made my biggest year.

Q. Was that due to the very favourable conditions for fishing?—A. The weather, we had good fishing.

Q. What time do you commence fishing?—A. We fish a little in the winter months.

Q. You begin in December?—A. Yes.

Q. The middle of December?—A. Yes.

Q. And do you fish right straight through the winter?—A. Yes, we have a few traps out, just a few, we do not fish largely, just a few traps.

Q. How is the December fishing compared with the spring fishing?—A. It does not compare at all; it is very small in the winter compared with the spring.

Q. And how are the prices in the fall?—A. The prices in the fall are no better than in the spring.

Q. Is the cannery open in the fall?—A. Yes.

Q. And is it kept open all the winter?—A. I think so, as long as they get lobsters.

Q. And the smacks go around regularly to collect the lobsters?—A. Yes.

Q. All through the winter?—A. Yes.

Q. What proportion of your catch is sent alive to market, and what proportion is sold to the canner?—A. Thirty per cent is sent alive to the market.

Q. So that the best part of your fishery is the canning?—A. Oh, yes.

9-10 EDWARD VII., A. 1910

Q. Has that always been so?—A. I cannot say as to that, because I have only been in the neighbourhood seven or eight years.

Q. What number of traps do you fish?—A. The average will be about 150 to the boat.

Q. That is two men to the boat?—A. Yes.

Q. How far off shore do you fish?—A. As far as 7 or 8 miles.

Q. Are you aware of any fishing being carried on by foreign vessels?—A. Not any more than what I heard.

Q. You have heard of it?—A. Yes.

Q. When did you first hear of it?—A. I have heard of it before to-day, but I just cannot remember when. I know that I heard of one fact, that they said a foreign vessel was fishing out on the Lurcher, but I know that is not so because I have seen the fishermen from there and they say there has not been any there this year.

Q. Do you fish on the same ground, winter and summer?—A. Mostly.

Q. You do not shift in as they do farther east along the coast?—A. Oh, yes, we shift in.

Q. You do shift in shore?—A. Yes, we come in.

Q. That is as the weather gets finer?—A. Yes, then we come in.

Q. How do you find the fishery off shore before that?—A. In the spring when the lobsters come in the best proportion is in shore.

Q. Do you get a larger proportion of small fish in shore?—A. I think so.

Q. Have you ever noticed that the female lobster with berries on comes in shore, that you get more of them in shore than you do outside?—A. I do not think so.

Q. What has been done with the egg lobster generally? Has she always been returned to the water?—A. Yes.

Q. Is she returned at once?—A. Oh, yes.

Q. Is it to your knowledge that any other practice was ever followed?—A. Not to my knowledge.

Q. Are you fishing the same amount of gear now that you did when you began?—A. No, I am fishing more gear.

Q. Does it require more gear to keep up your catch?—A. I think so.

Q. Is there any difference in the trap you use now from that you used when you began 8 years ago? I suppose the old fashioned trap has gone out?—A. Well, I think to-day they are making a smaller trap.

Q. You do not use the full length of a lath now?—A. No.

Q. What space do you allow between the laths?—A. The head of the hatchet.

Q. How much will that be, a little less than an inch, will it not?—A. I could not just say, but it is quite small.

Q. Do you think there is a tendency to narrow the space between the slats?—A. I think so.

Q. And there is only one reason for that, I suppose?—A. Only one.

Q. What would happen to you if the 9-inch limit were strictly enforced?—A. Well, it is very hard to say. It would have a tendency to injure me for the first few years, for sure.

Q. Do you not think that ultimately you would be the gainer by it?—A. I think so myself.

Q. I suppose that in your time of fishing the custom has been to take to the canner everything you catch except the berried lobster?—A. Well, no, I think I fished a couple of years there when we threw away all up to the 9-inch.

Q. How was it you gave that practice up?—A. Of throwing away all under 9 inches?

Q. Yes?—A. Because you could sell them.

Q. And because you knew, I suppose, that other people did so?—A. Oh yes.

Q. What do you think of that suggested plan of asking fishermen to register?—A. Well, it might have a tendency to do good.

SESSIONAL PAPER No. 22a

Q. Have you seen the evidence given before the Committee in Parliament last year? That matter was suggested there by more than one person, I think. Do you think it would have any effect on the fishermen?—A. Yes, if a man takes an obligation he would be more apt to keep it, that is for myself; but a man may not fine his neighbour although he would keep the obligation himself.

Q. Would you advise it being done or tried as an experiment?—A. I do not know.

Q. As to the matter of price, is there any competition in that, or are you obliged to take what is offered you by the canner?—A. I do not know that we have any choice.

Q. In the year preceding this one was there any competition when the price of lobsters was running up?—A. There might have been some.

Q. Were different smacks offering one more than another?—A. I think they were.

Q. Then there was some competition?—A. Yes.

Q. And it was only this year when the price dropped that the idea became general of a canners' combine?—A. Yes, still, this year we had some competition.

Q. You had some competition this year? That is among the smackmen?—A. Yes.

Q. Did rival smackmen offer more one than another?—A. Not just that way, but in the next neighbourhood they were getting more than we were in our neighbourhood.

Q. And did that result in your getting an increase in price?—A. Well, after a time we did, I think. We started at \$2.50, and our neighbours were getting \$3.50, and we got an advance after a while.

Q. Was that satisfactory, and did that remove all cause of friction?—A. Well, it had to be satisfactory.

Q. Now, as to the matter of licensing canneries, what is your opinion about it, do you think an increase in the number of canning licenses would mean an increase in the amount of fishing, more destruction of lobsters?—A. I do not think so.

Q. Do you think there is any reason why one man should not have as much right to can as another?—A. No, I think that opposition is the life of trade.

Q. Do you think any inspection should be required in connection with the canneries, or that the food product of the canneries should be subject to inspection the same as other food products are nowadays?—A. I do not see why it should not be.

Q. That is an official inspection, so that the product of the cannery would be branded the same as other food products are?—A. I do not see why it should not be.

Q. Within your recollection have you ever known the canner to refuse to accept undersized lobsters?—A. No.

Q. Now as to the matter of season, what is your opinion, are you satisfied with the season as it is or what would you recommend?—A. For myself, I am representing Sandford, we had a meeting there, and we thought we should have the season extended from the 1st of December to the last of June.

Q. From the 1st of December until the last of June, that is to say you would add one month at the latter end, and two weeks at the beginning of the present season?—A. That is of course if there is an extension, but if we have to sacrifice any of the present season we would rather sacrifice the first end.

Q. You would rather sacrifice the December end?—A. Oh, yes.

Q. With regard to the berried lobster, have you ever remarked the size of the smallest lobster you have ever seen bearing berries?—A. I do not think I have ever seen a very small one, I do not think I have ever seen a berried lobster under 10 inches.

Q. You have never seen one under 10 inches?—A. No.

Q. What proportion of the lobsters in your catch would be female lobsters with the eggs extruded?—A. That is hard to say.

Q. There is a very small proportion is there not?—A. I do not think there is a very large proportion.

Q. It is said to be between 3 and 5 per cent?—A. It is that, and I do not know but what it is more than that sometimes.

Q. You think it would be more than that sometimes?—A. It is more than 3 at least.

9-10 EDWARD VII., A. 1910

Q. What would you think of that suggestion to shorten the season, to do away with the size limit, and to provide a standard trap, that has been suggested by some people as a way out of the difficulty?—A. You mean that would have a tendency to decrease the number of small lobsters taken?

Q. Some people claim that we could regulate the escape of the small lobsters by fixing a standard space between the slats in the trap?—A. I think it would.

Q. You think it would have that effect?—A. Yes.

Q. Say that we insist on an inch and a half between the slats?—A. That will leave out a larger lobster than we generally let go.

Q. How large a lobster would go through that?—A. It would let out an 8 inch lobster I think.

Q. I think you told me, as far as you know, the practice of stripping the lobster has never been followed here?—A. No, not as far as I know.

Q. If the canner refused to accept undersized lobsters would the fisherman be compelled to return them to the water?—A. Oh, yes.

Q. Do you know whether it is the practice to avoid dealing with a canner who is known to be careful on this point?—A. I do not think so.

Q. You never had that excuse for changing?—A. No.

Q. Have you any opinion to offer on the matter of hatcheries or pounds?—A. No, I do not think we have a place adapted for them here.

Q. Nothing of that kind?—A. No.

Q. What would you think of the proposition to stop fishing altogether for a term of years?—A. Well, it would have a tendency to increase the lobsters sure, but it would put a lot of people out of business, they would suffer by it.

Q. Is there any other fishing they could turn their attention to?—A. Oh, yes, they could go cod fishing, and they could go to the other fishing, still those fisheries would not give the return that the lobsters do.

Q. It would not give the same return. Could you give me any idea of the average return of a good active fisherman from the lobster fishery that is both branches of it?—A. Well, I should judge between \$400 and \$500.

Q. That is the gross return, from that he must deduct the cost of his outfit and help?—A. Yes.

Q. How is the extra hand in the boat paid, is he generally a shares man or a wages man?—A. It all depends, some go alone, some hire a man and others take one on shares.

Q. It is generally a man and a boy, often times the father and son?—A. Yes.

Q. Do you think that the present policy of the department in issuing co-operative licenses to the fishermen who desire to can for themselves is one that should be encouraged and developed?—A. I think that is all right.

Q. I think you have already told me that an increase in the number of canneries would not mean more fishing?—A. No, it would not.

Q. It is said that in some districts no canner can continue in business and observe the law regarding the size limit, what do you think of that?—A. Well, it is a question to my mind. If the small lobsters were not caught there would be very few canned, and that would have a tendency to raise the price of the canned article, and the canner would be able to pay more for the lobsters so that he could can the 9-inch.

Q. Would you advise a strict enforcement of the law as the best way out of the difficulty of making that change?—A. That would be one way.

Q. Would it be the best way, would it be a fair way?—A. I cannot see where it would be unfair.

Q. Do you think that the decrease apparent in the condition of the lobster fishery is due to over fishing and the destructive method of fishing?—A. To catching small lobsters, but not to over fishing so much.

Q. Not so much to over fishing as to the destruction of the immature, the small lobsters?—A. Yes.

SESSIONAL PAPER No. 22a

Q. What do you think about this question of different open seasons and different size limits in adjoining sections of the coast; do you think it would be better as far as possible to have the same season and the same size limit everywhere?—A. I think so.

Q. These changes do lead to violations of the law do they not?—A. Yes, because you have only to step across the line.

Q. Is there any fishing in inside shoal waters, or in lagoons or anything of that kind here, or is it all off shore fishing?—A. It is all a straight shore here.

Q. When do you make your best catch of fish?—A. Well, it all depends on the weather a lot, if it is a fine spring we make the best catch of fish in April, if it is not fine we make it later on.

Q. As I understand, you do not advise any shortening of the season but rather a lengthening of it at each end?—A. Yes.

Q. It has been said, that in a few years the live lobster trade will altogether replace the canning? Have you any opinion to offer on that head, especially for this western shore, that is the opinion of some who call themselves experts?—A. I think there are as many live lobsters shipped to-day as ever there were—or not as ever there were, I will not say that, but for the last seven or eight years.

Q. Do you think the tendency is to develop that branch of the fishery?—A. Well, I am afraid it is, I think it is.

Q. Is there anything you would like to state that I have forgotten to ask you about or have not touched on?—A. I guess you have about covered it all.

Witness discharged.

WILLIAM O. PORTER, fisherman, Pembroke Shore, representing Bluff Head, Pembroke Shore, and Chegoggin Point, called and sworn:—

By the Commissioner:

Q. I understand that you represent certain portions of the coast?—A. Three sections, that I think is going to put me in a kind of a hard box because I do not understand thoroughly the whole ground.

Q. What length of coast do these three districts cover?—A. Two or three miles, I should think; I have never measured it, but approximately that is it.

Q. All these places lie within two or three miles?—A. I should think so.

Q. About what number of boats are there in the three places, would you say?—A. I figure that there are somewhere about 20 or 21.

Q. Are these large boats with two men each?—A. Partially gasoline launches, and partly boats.

Q. What would be the average number of traps?—A. Oh, the average would be from 175 to 300.

Q. When do you begin fishing?—A. Usually as soon as we can get the traps in the water after the season opens.

Q. How do you find the fishing at that season of the year?—A. When we first put out there is nothing off shore, but there is in shore, there is where we put what we call boggy gear in the water, gear that we know we will lose, and we get fairly good fishing for a number of weeks.

Q. That is old gear, is it?—A. Yes.

Q. And usually you begin fishing in shoal water?—A. Yes; we plan to get our gear off shore as soon as we can so that it will be there when the lobsters strike.

Q. When they do strike, what sort of a run of lobsters do you mostly have?—A. They are mostly large on our ground.

Q. Are they nearly all export lobsters?—A. Yes, that is since the Boston market has been opened for 9-inch.

9-10 EDWARD VII., A. 1910

Q. That has been for the last two years, has it not?—A. Yes, last year I believe was the first.

Q. Do you export your own lobsters yourself?—A. I do, unless I hold out part of a crate to sell on the wharf sometimes, but if I have a full crate I ship myself.

Q. For sale where, on the wharf at Yarmouth?—A. Yes.

Q. Do you take your own lobsters to Yarmouth?—A. Yes.

Q. What distance are you from Yarmouth?—A. Somewhere in the neighbourhood of five miles.

Q. After the month of December passes do you still continue fishing through January and February?—A. Usually, the full season; speaking for myself, after I lose my in shore gear I do not put anything out until February, but speaking as a whole, the fishermen fish the whole season.

Q. Do they fish as actively in February and March as in the other months?—A. They do not, on account of the weather; we have fearful gales on this coast.

Q. What loss of gear do you meet with?—A. Well, speaking for myself, I know exactly what I lost last year. I put out 211 traps and I picked up in all 130.

Q. That would be an excessive loss, you would not average that every year?—A. Oh, no.

Q. In some places we find that most of the fishermen tell us they expect to have to renew their gear every three years, would that be the case with you?—A. I think so.

Q. What do you estimate as the value of a trap with its gear?—A. There are different ways of taking it; you mean with the gear, the rope? That will depend on the depth of water, if we are out where we put the winter gear we have to have 30 to 45 fathoms of rope, and if it is in 10 fathoms we do not require as much rope. The average cost of the trap would be about \$1, and I think we put considerable work into it for nothing at that.

Q. The use of gasoline boats is pretty general now, is it not?—A. Yes.

Q. As I understand it, you slack off in February and March?—A. On account of the weather.

Q. And you begin again about the end of March?—A. We keep following our gear up and baiting it as often as the weather will allow us, we do not slack off entirely.

Q. When do you begin full operations again?—A. After the 20th of March.

Q. Do you find the lobsters coming in again then from off shore?—A. Yes.

Q. When they first strike in how do they run?—A. They are a good size.

Q. What percentage of under-sized lobsters do you get?—A. You mean under 9 inches?

Q. Yes?—A. That is hard for me to say; I should think it would run with me that it would be about one-half, that is in the number.

Q. Do you sell by weight?—A. By weight, that is of late years.

Q. Do you ship your own large size lobsters to market or sell them to a commission merchant or agent, or do you ship direct as a rule?—A. Unless I have a broken car, then I sell on the wharf.

Q. Do you ship to New York at all?—A. No, sir.

Q. What has been the average price received from Boston in recent years? Does it vary very much?—A. Oh yes, I have not been long in the business, only about 5 or 6 years, and it has varied anywhere from \$40 down to \$12 in different parts of the season and in different years. I think \$44 is the highest price at which the lobsters have sold since I have been in the business, but some of the people I am representing can tell of bigger figures than that.

Q. What would you give as the average earning of an active fisherman from the lobster industry?—A. That is a difficult question to answer. There are lots of fishermen, and many are more daring than others.

Q. But you would know what a man's average earnings is to-day from the industry?—A. Probably \$400 or \$500, that is a man who is a fully fledged fisherman and keeps right at it.

SESSIONAL PAPER No. 22a

Q. I suppose the most of those who fish lobsters here are full fledged fishermen?
—A. Yes.

Q. Well, in the gulf you find a great many men fishing lobsters who are farmers?
—A. There are a few so-called farmers here, who keep cows, if they did not they could not live; I am one of those myself, I do not deny that I keep cows, the fact is this year I had to keep cows to pay my lobster bills.

Q. Were you canning on your own account or what was it?—A. No, I had a poor season, I had lost all my gear, the prices were low and we had poor weather.

Q. Is the lobster fishery the most prosperous industry here?—A. I do not think there is anything better, taking one year with the other.

Q. But outside of that, what would you say about the cod fishery, the mackerel and the herring fishery?—A. I could not say, I should have to go back to the farm myself instead of to the other fisheries.

Q. How do prices this season compare with those of past seasons?—A. Well, the factories were lower.

Q. Do you know the reason the price was lower; was any reason given you for that?—A. Only the talk among the fishermen who were saying that the packers had combined or had formed a trust.

Q. How are your fish taken to the factory, by smack, or do you deliver them yourselves?—A. I deliver mine myself.

Q. Last year you got a better price for them?—A. Yes, nearly double.

Q. And was it a good fishing season too?—A. Yes.

Q. Now as to the matter of regulations, what do you think is the best thing to do under the circumstances? I suppose you admit that the fishery is failing?—A. Oh I do, under the present circumstances.

Q. What in your idea is the best thing to do to protect the fishery?—A. To protect the fishery or the fishermen?

Q. The fishery first?—A. To protect the fishery? Shut off short lobsters.

Q. That is enforce the law you mean?—A. Enforce the law to protect the fishery, it may drive some fishermen out of the business to some other employment.

Q. But it would not do it for very long would it?—A. I suppose if the law were enforced the lobsters would come back, breed up, and finally become plentiful again.

Q. It is known that the lobster will grow 2 inches every year, he grows that much at the time he sheds his shell.—A. Then that shows plainly enough that if we left all these 7 inch lobsters alone this year we would get them 9 inches next year.

Q. Where they have impounded the lobsters in large aquaria they have found out that they grow two inches in a year. You think if the fishermen would suffer for a season or two they would benefit by it afterwards?—A. No doubt the fishermen would suffer until it got back to what it was a few years ago.

Q. How would it affect the canner by enforcing the 9 inch limit?—A. That would depend on the Boston market; if the Boston market asked for a 9 inch lobster they would have to go out of business, but it might affect us if the canners shut down; when the prices were high for the 9 inch lobsters in Boston, it would be all right for us, but if the canner shut up we might have to throw our 9 inch lobsters away because there might be a time we could not get rid of all of them in Boston.

Q. Would you advise any shortening or lengthening of the season?—A. That puts me in a hard place, as I am representing those who are in favour of yearly fishing.

Q. That is all the year round?—A. Yes, all the year round and a 10 inch limit.

Q. A 10 inch limit and yearly fishing is what you want?—A. Yes.

Q. That is practically what they do in Maine is it not?—A. 10½ inches in Maine.

Q. That matter was discussed at a meeting of the fishermen was it?—A. At a meeting last night, of course there was not a large meeting, but it was discussed by those who were there and they cast a vote to that effect, but whether they were all solid thinking men on that I would not say.

Q. However they passed that resolution, that is their idea, they want all the year fishing and a 10 inch limit?—A. Yes.

9-10 EDWARD VII., A. 1910

Q. Can you give me any idea of the practice in the past with regard to the berried lobsters? In a very great number of places where we have been we find that the berried lobster has never been protected, they are brushed a good many of them.—

A. I have never known a canner to take one, and I have never known a fisherman to strip one; when I find one I handle her with care and put her over the side at once.

Q. Do you think there is a better disposition on the part of the fishermen to protect and save the lobster than there used to be?—A. Really, in my opinion I think there is. I think I never knew of any one disposing of it in any other way, but really I think they know that the lobster fishery needs protection.

Q. And they must help to protect the fishery in that way?—A. Yes.

Q. Is the destruction of immature lobsters injurious?—A. Do you mean by catching them?

Q. Of course, that is the only way.—A. I think it must be.

Q. Have you any idea of the percentage of egg-bearing lobsters you will find?—A. I have not kept any record, and I have not any idea.

Q. It is not a large proportion is it?—A. No.

Q. And it would not be a very serious loss to the fisherman to return them to the water immediately?—A. Not in money, it would not amount to enough to pay for a man's shoes.

Q. What is your opinion about the matter of the trap, do you think that the taking of small lobsters could be regulated by insisting on a certain legal trap with a fixed space between the slats?—A. I do not think there is any doubt but what you could build traps so that all of them below the proper size would find their way out, because they are very active in hunting their way out of the trap. I have found them nearly out when hauling the trap.

Q. Some fishermen hold that once the trap is disturbed the lobster will not try to get out?—A. I suppose that is a matter of opinion. I know that if I put a trap in the water with the laths wide apart I do not get as many small lobsters, it is a question whether they get in or not.

Q. Is there a tendency in recent years to narrow the slats?—A. There has been with me I know.

Q. What do you think of that matter of licensing canneries, do you think that an increase in the number of canneries licensed would necessarily mean an increase in the amount of fishing done? It is generally supposed that the idea in restricting the number of canning licenses was in that way, to restrict the fishing. Do you think it has had that effect?—A. No, I think not, I think about everybody on the coast that could fish is fishing now.

Q. What do you think of the present policy of the department in issuing co-operative licenses to fishermen to can for themselves? Do you think that it is a way that enables a fishermen to get fair play?—A. That would be a question I think of whether you could get fishermen enough to hold together.

Q. The number of fishermen has been fixed at 15, it is supposed because it takes 15 members to form a station of the Fishermen's Union under the Provincial law, do you think that a smaller number would be more workable?—A. That depends altogether I suppose, on whether there was capital enough behind them to enable them to run it and make a success of it.

Q. What would you think of insisting on the product of the cannery being inspected? You know the tendency to-day is to inspect all food products?—A. I do not quite understand.

Q. That is to say, have the goods, the canned article itself, inspected and branded?—A. I do not know how to answer that.

Q. Have you any wish to say anything about the matter of hatcheries and pounds and those things?—A. I do not know that I have, because I haven't experience to know whether they would be a benefit although I think lobsters hatch in our waters.

SESSIONAL PAPER No. 22a

Q. Have you any idea of the hatching out season?—A. I think they hatch at all seasons of the year.

Q. I do not think that has been the experience, I think they are supposed to hatch out during the very warm weather.—A. I will tell you why I think so, I often, I cannot say just what time of the year it was, but I have experienced it, I have pulled up traps and found what I have proved to be in my estimation, young lobsters, white in colour and very small in size, and I take it they must have been spawned there or they would not have been so small.

Q. I think the young lobsters when they hatch out come to the surface of the water and swim forward, it is the only time in their lives they go forward, for about six weeks, and they then furnish one of the principal foods for the mackerel; after that they go to the bottom and begin to crawl backwards and keep on shedding their shells every few days so that they grow in the first year 3 inches. Now is there any particular statement you would like to make, if so I will be glad to have it taken down?—A. I was charged to come here as a delegate and plead for a season of yearly fishing and a limit of 10 inches, that is all the resolution the meeting passed.

Q. Is there any illegal fishing here to your knowledge, fishing after the close of the legal season?—A. Well, no, not as a general thing.

Q. Of course, we understand?—A. I have been guilty of placing a trap out and placing a net for myself, but not to sell them.

Q. That would not have any bad effect on the fishery I suppose?—A. No.

Q. Do you think there is any combination on the part of the packers to keep prices down?—A. Honestly I do this last season.

Q. Do you think the fishermen generally would make more money if they were canning on their own account?—A. That is a hard question for me to answer, I have not experience enough about the canneries to know whether they would or not.

Q. Some fishermen have expressed the opinion that they could not, that knowledge of a good many other things is required besides catching fish?—A. That is right, too.

Q. Do you think there has been any noticeable decline in the average size of the losbtters caught in your neighbourhood for the last ten years?—A. I could not say that, because I have only been 8 years at it.

Q. What do you think about different size limits and different seasons in adjoining sections?—A. That would encourage me to go to the Lurcher, and squeeze around to Digby County with my lobsters and I suppose it would make other fishermen do the same.

Q. Do not the fishermen in other districts make complaint about that?—A. I did hear complaints about it in this district, and I think it is an unfair thing.

Q. But it is the natural consequence of having different size limits and different seasons in different districts?—A. Yes.

Q. Do you not think, that as far as possible, these seasons and limits should be uniform?—A. Yes.

By Mr. B. B. Law, M.P.:

Q. Will you tell the Commissioner what led the fishermen to ask for the 12 month season and the 10 inch limit?—A. I believe, Mr. Law, it was with a view of bringing up the Boston market and protecting our fish at the same time. We thought that in a few years from now it would give us a better living than to kill them off at two or three years as we are going now.

Q. Was it on account of the American smackers coming over here this year and fishing on the very same ground that our folks have to fish on when you commence your season on December 15th?—A. That was originally what started it, and we thought it was only right we should be able to go out and catch a few lobsters while they were taking them away from us.

9-10 EDWARD VII., A. 1910

Mr. LAW.—I would like to call the attention of the Commissioner to that fact that this year American smacks are fishing on the very ground our fishermen will have to take up on the 15th of December when the season opens, and the only way they can protect themselves against that is to have an open season for 12 months instead of sitting idly by and seeing the American fishermen take the lobsters from them. I think it will be found in some of the evidence that is to come that some of our fishermen have sent out smacks.

By the Commissioner:

Q. It is only lately the Americans have commenced doing that?—A. I have never seen them, but I have heard of them, and I have heard that they are making big money, \$90 and \$100 for each man on the trip.

Q. That has not been going on long?—A. I think this is the first season.

Q. I have heard it is possible that others will be here next year?—A. We may have 40 or 50 here next year but I hope not.

Q. How far off shore, off the nearest land do they go?—A. I should think it is 2 miles.

Q. Then that is within the limit?—A. In our line fishing 5 or 6 of our boats go to the Lurcher, 15 miles.

Witness discharged.

CHARLES FEVERS, fisherman, Yarmouth Bar, called and sworn:—

By the Commissioner:

Q. Do I understand you have a statement you desire to file, Mr. Fevers?—A. Yes. I have here the minutes of a meeting held at Yarmouth Bar on the night of September 11th, 1909, which I will put in as follows:—

“Lobster fishermen met at the Bethel to discuss the lobster question. Meeting was called to order by appointing Charles Fevers chairman, W. E. Mg. Gray, secretary. After a lengthy discussion a resolution was laid on the table that whereas the American smacks are beginning to fish on our ground during our close season, that we petition the Government to remove our close season altogether and give us a 10 inch limit.

Resolution passed unanimously after which Charles Fevers was appointed to lay the same before the Commissioner now in Yarmouth.

(Signed) W. E. MG. GRAY,
Secretary.”

Q. What particular section of that coast is that in?—A. Yarmouth Bar.

Q. That is between Yarmouth—A. And the Cape.

Q. And the place represented by the preceding witness?—A. Yes.

Q. What length of coast does that represent?—A. It represents the bar itself, I could not exactly say but I should judge the bar itself is something like one mile long, and the fishermen that I represent extend over and cover a distance of about 5 miles from the upper end of Overton to the lower end of the Cape.

Q. How many boats are there?—A. Something like 50 boats are engaged in the fishery in that district.

Q. Is there any station of the Fishermen's Union there?—A. We have no station of the Fishermen's Union.

Q. You begin fishing when?—A. On the 15th of December.

Q. And you prosecute your fishery actively up till when?—A. Up till the end of the season, the 1st of June.

SESSIONAL PAPER No. 22a

Q. Do you carry it on actively all the winter?—A. Yes.

Q. Whenever the weather is fine enough?—A. Whenever the weather will permit.

Q. What is the most stormy weather you generally meet with?—A. It varies.

Q. How many days a week do you lose?—A. I think, taking from the 1st of January till the last of March, we will probably average two hauls a week.

Q. And when you begin there on the 15th of December, what class of fish do you find?—A. I might say that there are really two classes of fishermen, there is a class of fishermen that fish inshore, and they take their chances, they set a quantity of pots out, and if there comes a gale of wind that breaks them up, well and good, but if the season happens to be fine at the first opening of it they do well inshore. There is another class of fishermen that put their pots at once in the deep water, with very few inshore, the men that fish inshore get a larger percentage of small lobsters, and the men who are fishing off shore get a larger percentage of large lobsters.

Q. What is the percentage of what we call market lobsters that the inshore men get?—A. The percentage possibly, as near as I can judge inshore, well I will take one man in particular that always makes a business of that, and he will have possibly one crate of large ones, one crate of 9-inch lobsters, and one crate under 9 inches; while off shore they would average perhaps on my part of the coast two crates of 10½ and over, one crate of 9-inch and lots of times you could take in your hands what I would have under 9 inches when fishing in the winter and in deep water.

Q. What about the summer and spring months?—A. There is not as much difference, but there is still a large difference between the catch inshore and the catch off shore, the off shore catch runs larger.

Q. The inshore men will be fishing in what depth of water?—A. Five to twelve fathoms.

Q. And the off shore men?—A. From 12 to 32 fathoms, that is about the deepest they get in off Yarmouth bar for fishing.

Q. What number of traps do you fish in that depth of water?—A. 25 and 30 is the highest. 25 to 30 traps are all that you can haul.

Q. Do you use the same style of trap there that you do inshore?—A. The same style of trap, yes.

Q. In your experience is there much difference in the condition of the fishery now compared with when you began fishing?—A. Yes.

Q. In what way?—A. The lobsters now, in my opinion, do not appear in anywhere near the same quantities they did when I commenced fishing.

Q. You require more gear to keep up your catch?—A. More gear and better gear, and then I cannot keep up the catch.

Q. How many years have you been engaged in lobster fishing?—A. I fished lobsters some 30 years ago, and I have been steady at it now for about 15 years.

Q. Thirty years ago when you began there was very little lobster fishing done?—A. Very little.

Q. And there were no canneries here then?—A. No, I do not think so.

Q. They have been introduced since?—A. Yes.

Q. Who were the first to introduce canning here, local men or people from Maine?—A. I am not prepared to answer that question, the first cannery introduced in our locality was introduced here by a Yarmouth man, but I have forgotten his name.

Q. Now, as to the matter of the traps, what is your experience about that, do you think there is a tendency to lessen the space between the slats since you began fishing, or do you make them with the same space?—A. My experience was years ago, and it is a good deal the same to-day, that even for large lobsters a trap built with the laths about the distance of the thickness of the head of the hatchet apart will hold the large lobsters better than the traps with the laths quite a piece apart. I always build my traps with the laths about that distance apart to prevent the large lobsters poking their claws through between the laths and getting them caught; you have to be very careful

9-10 EDWARD VII., A. 1910

in taking the lobster from the trap or if he has his claw caught in that way he will shed it himself.

Q. Broken and mutilated lobsters are no use for the export trade?—A. Not with both claws gone.

Q. Will they tolerate him in the Boston market with one claw gone?—A. Yes.

Q. Have you any experience with the berried lobster? We have been told in many places that there is no use trying to export that lobster, that she is more delicate than the others, and will not stand the crating and handling and the delay on the way to market, and that if she is brushed off, especially if the eggs are brushed off roughly, she will die in transit?—A. Back in the first of my fishing I can remember men that brushed those berries off, and the lobsters would die, they would not stand it for any time. But I think as long as the berries are not disturbed that the lobster will stand pretty nearly as much handling as the other ones.

Q. Have you ever noticed that as the season advances the eggs look riper? We suppose that the lobster spawns in July and August, during the warm weather the eggs are ripened partly in the warm shoal water; have you noticed that the eggs look riper, and that when they get thoroughly ripe you can see the eye of the young lobster beneath the covering?—A. I have noticed that as the season advances the seed is larger, but still I have got lobsters at the beginning of the season that almost looked ripe for spawning.

Q. In your neighbourhood the fishermen all own their own boats and gear?—A. Yes.

Q. And they are all regular fishermen who devote their time to the various branches of the fishery?—A. Yes, very few do anything else but fish for a livelihood, they have not anything else to fall back on.

Q. Is it the case that the fishermen trust more for their cash earnings to the lobster fishery than to any other branch of the fishery?—A. Yes.

Q. Do you do any mackerel trapping on your part of the coast?—A. There is some done, yes.

Q. There used to be more done than there is now?—A. There used to be more than now, I think there are only two or three traps now used at the most.

Q. What do you think of this matter of canning licenses, do you think an increase in the number of canneries would necessarily mean an increase in the amount of fishing done?—A. In some instances. Some years ago I was talking with a party about going to a certain part of the coast which is not generally fished and the facilities for transporting the lobsters were not good and where we would have to can them, but he said, 'We could not get a license.' In such cases, where new localities for business were being opened up, of course there would be an increase in lobster fishing.

Q. At present in those localities there is not much fishing done, is that the idea?—A. That is the idea, but in localities where canning is already done I do not think it would increase the number of men fishing.

Q. What is your idea about registering or licensing the fishermen, is there anything in that?—A. I think if the Government would strictly enforce the law connected with it it would be a good plan.

Q. Do you think that the fishermen having registered and signed a form of that kind would be more likely to observe the law than they are at present, and do you think it would lead them to inform on their neighbours who are violating the law?—A. It should not be left altogether to the fishermen, some men are bad enough to do wrong, even after they have taken out a license, and if I inform on that party he is bad enough to cut my pots adrift or smash my boat.

Q. You think that if there is any information to be lodged it would be better for the departmental officers to do it than to expect the fishermen to do it?—A. Yes.

Q. Has it been the practice to take to the cannery all the small fish that are caught?—A. For some time past it has.

SESSIONAL PAPER No. 22a

Q. Have you any idea as to the usefulness of such things as hatcheries or pounds?
—A. I think I have an idea, I am certain it would be a great benefit to the fishermen on this shore; during the months of July and August the condition of the water on our coast is right for hatching lobsters.

Q. Then you would advocate the introduction of hatcheries wherever it is possible to do it?—A. Yes, by all means.

Q. Have you ever remarked as to the size of the berried lobster? Have you ever seen any very small ones?—A. Not as a custom, the smallest one I have ever seen was about 9 inches but I very seldom see one less than 10.

Q. As a rule they are a fair run of lobsters?—A. Oh yes.

Q. How do you think the strict enforcement of the present regulations would affect the fisherman and the canner, that is with regard to the 9 inch limit?—A. I understand; of course I am not well enough posted in the canning business, and probably I cannot see far enough ahead to tell the effect, but I think it would be the best thing that ever happened to the fishermen themselves.

Q. You think that ultimately they would benefit by it?—A. Yes.

Q. Do you think there are any facilities along the coast you represent for establishing pounds? Some people prefer pounds sometimes to hatcheries?—A. I am not positive, but I think there are.

Q. Are you prepared to give us any idea of the percentage of egg-bearing lobsters you see?—A. I should judge that I have, taking the season through this year, seen very nearly 5 egg-bearing lobsters to the hundred.

Q. That would be quite a large percentage. Which branch of the lobster industry do you think the more remunerative to the fisherman and the best calculated to maintain the industry unimpaired, the canning, or the live lobster trade?—A. The live lobster trade.

Q. Do you think there has been any combination on the part of the packers to keep prices down?—A. Yes.

Q. Do you think that combination was of old standing, or was it last season you got that impression?—A. I think before this last season there was considerable opposition among the cannerymen, so much so that it caused them to come together and agree to give so much and no more.

Q. What do you think of the present policy of the Department in issuing licenses to any group of 15 or more fishermen who apply for a canning license? Do you think that policy is one that should be developed and continued?—A. I think it is; but I think that the number of fishermen required is large on account of the conditions to which I referred a short while ago, where a few fishermen might wish to start in a new locality, they might not be able to get that number of men together, but it would give a few a chance.

Q. Do you think that number might reasonably be reduced from 15?—A. I do, yes.

Q. What do you think of having different size limits and different lengths of fishing seasons in neighbouring localities? Do you think it is wise, or do you think that as far as possible they might be made uniform?—A. I think they should be made uniform as far as conditions will allow, there should be as few dividing lines as possible.

Q. Have you ever fished lobsters anywhere else than on this shore?—A. Only on the Nova Scotia shore.

Q. Have you fished very far from here?—A. I have fished over to the northward on what we call Trinity, about 8 miles from the land.

Q. What is the most active season of the fishery with you, what is your most profitable time?—A. It depends on the weather, when it is good weather to fish at the opening of the season I can make more money then than at any other time of the year for a short while, but on the whole with fine weather I think from the middle of March to the middle of April is the best.

Q. When is the market for live lobsters at its best, do you think?—A. Generally in February.

9-10 EDWARD VII., A. 1910

Q. Do you export your own live lobsters?—A. Yes.

Q. You bring them yourself to Yarmouth and export them by steamer from here?

—A. Most of them.

Q. Is your percentage of loss great?—A. Not in the winter, but in the summer, at the last of our season sometimes we lose a few of them through the heat, but at the bar and at other places where I have done some lobster fishing there are good facilities for keeping the lobsters, that is we can get them into smooth water, good salt water, and take care of them.

Q. I do not know there is anything else—I particularly think of to ask you about, but if there is anything else you would like to say, or if you have any suggestion to make I would be glad to listen to it.—A. I would like to say, with your permission, just a few words about the American smacking; I would just like to explain to the different delegates present all that we know about this new departure. It appears to me, and it appears to the fishermen that I represent, that this is a case where it does not matter what our different opinions may be about the old law, of course we all have different opinions of what we want and it is right for one man to express an opinion as well as another, but when the American smacks come to fish on our shore during our close season, even although they are outside the 3 mile limit they are on the same ground that we fish on during the open season, and if we are to fish for one six months' season and take say everything from 8 inches up, and then the American smacks come right on at the end of our season and commence to fish, and continue at it for all the rest of the summer months, taking everything over 9 inches, which is the lawful lobster in Massachusetts, and not only taking the 9 inch lobsters, but taking our seed lobster which is worth \$2.50 at the hatchery in Boston. If they take away everything over 9 inches and the seed lobsters how long is it possible for the fishery to stand it, and how long would it be possible for our men, who depend altogether on that business to make a livelihood? If that goes on a very few years, it will not be over two or three, we will be compelled to leave our country because we cannot get a living here, and that is something we do not wish to do, especially men of my age; there are a lot of middle-aged men here who are getting too old to move and do not want to go to a new country to seek a living, we are all fishermen that depend on fishing for a living and it is impossible for us to do anything else. There are a certain number of men who have a trade or something else to which they can return, but all the men that I represent, with the exception of a very small percentage, all that are employed on those 50 boats, with the exception of not more than 5 at the outside, depend upon the fishing. Now, I would like to say one thing farther, and that is that it is not the Americans that have come in here to catch our lobsters, but it is the Nova Scotian fishermen who are coming here and bringing the American vessels, and introducing them to our shores. Now take this vessel that is here at present, she has been in Yarmouth harbour, I have seen her and the boys aboard her; she first started to do business off the harbour bar. But although there are Nova Scotian fishermen aboard her now, after this season they will not need our fishermen to take her around our coast, the American who is aboard her will have learned our shore and everything about it, and next season he will not need our men, and he will probably get a crew from the other side. If we have to stay on the shore and watch these American vessels fish our ground during the close season, we simply will have, in self-defence, to help ourselves. The point I wish to make is that we want the government to take action some way, I will not pretend to say, make it a 9-inch or a 10-inch limit, although I am here to say that I represent a 10-inch limit, that is what I was sent for, but one thing that looks to me to be a mistake, is to have an open season the year round. As far as I am concerned, personally speaking, I would leave the limit with the government, or with a Commission appointed by the government, to say what they think is best. But with regard to the American smack business I think it is wrong for Nova Scotia fishermen

SESSIONAL PAPER No. 22a

to introduce the American people here, and to teach them our shores, and it should be put a stop to. Now, one more point and then I am through, and I am thankful to you for this privilege. I know Nova Scotia men who are selling lobsters in Boston, and one of them told me that he stood alongside a man this spring who applied for a smack and heard the conversation and the smack-owner said to the man who applied, 'My dear man the lobsters on the Nova Scotian shore are inside the 3 mile limit, and I am not going to let you have a vessel to poach in Canadian waters and have my vessel seized.' That is the way with the American people today, they are ignorant of the fact that the best fishing is outside the 3-mile limit, on Trinity Shoal, back of the Cape Shoal. It appears to me that as soon as the American people are educated to the fact that there is good fishing outside the 3-mile limit, that minute we will have the American fleet on this coast. I hope every fair-minded man will look at it squarely and will realize that it is a fact our own fishermen brought the Americans here, and if there is a remedy to at once provide it so that it will stop any more of our fishermen from introducing these American smacks.

The COMMISSIONER.—Your remarks will be laid before the Committee just as you have made them, and I think you have put the matter very fully, very clearly and very distinctly, and it will be for the gentlemen composing the Committee to deal with the question. No doubt some steps will have to be taken to deal with the condition to which you have called attention.

Witness discharged.

GEORGE H. GARDINER.—I agree with the last speaker right straight through, I think that he put the matter very clearly.

Mr. H. C. BEVERIDGE.—I do not desire to give any evidence.

Captain GEORGE M. CUSHING, called and sworn:—I will tell you what I have done in the old days when I was fishing, I hauled my pots one day and I got enough market lobsters to buy a yoke of oxen with what I got for them. Well now, how many days would I have to haul now in order to do that? I hauled the whole of this spring and did not get as many as I got in the one day then. I tell you we have, as our member says, to have something done in order to protect us; we will be all right in the lobster fishery if we only have protection, and I do not think it will make much difference about the canneries, because I would not go lobstering more than 40 or 50 years longer myself.

By the Commissioner:

Q. Would you give us some idea as to the best shape that protection should take? —A. I would have the fishing season right through the 12 months with a size limit of 10½ inches. That would protect the lobsters enough. I tell you what I think, perhaps I am wrong, but I think that if the canner would buy the 9 inch lobsters he could make it pay; it ought to be that the canner should have all the 10 inch and keep the whole industry in the country, and not ship to New York and Boston, there are a great many lobsters lost that way, and if the canners would take them it would be a benefit to us. I would go in right now to stop these 9 inch lobsters going in to the market altogether; if the canners would say that they would be fair with the fishermen I would rather they would have my 9 inch lobsters than to send them across to the other side. I think I was the first man that ever set a lobster trap on this shore. I had 23 traps, and out of those traps I shipped 73 crates of big lobsters to Boston, and that is more than I ship now in two years. That will show you how the decrease has gone on.

By Mr. Law, M.P.:

Q. How many years ago was that, Captain?—A. About 25 years ago. There was a party told me that one of the men on board this American vessel that is fishing on

9-10 EDWARD VII., A. 1910

our ground here now told him that they made three trips and cleared between \$80 and \$90 per man on the average, and I have also heard that they had been out for 2 weeks and took 1,750 large lobsters in the Seal Island ground. They have been entering and clearing at Woods Harbour every day I understand.

Witness discharged.

Mr. WALL, representing the Roberts, Simpson Company, Mr. POOLE, representing the Mud Island Lobster Company, who were present, decided to give evidence.

The Commission adjourned.

YARMOUTH, September 14 (8 p.m.)

A. E. CARLAND, fisherman, Pubnico Head, and Secretary of fishermen's meeting, called and sworn:—

By the Commissioner:

Q. How long have you been engaged in the lobster fishery?—A. About 8 years.

Q. You never fished lobsters before that?—A. No.

Q. Were you in any way connected with the lobster industry, in a cannery or anything of that kind previous to commencing fishing?—A. No.

Q. How is the lobster fishery carried on with you, is it pretty well off shore?—A. Yes, it is pretty well off shore, and inshore also.

Q. You begin to fish at the commencement of the season on the 15th of December?—A. Yes.

Q. How many traps do you fish generally per boat?—A. The average will be, I would think, from about 125 to all the way—well some fish 200 and some 300 to a boat.

Q. A man fishing in shoal water will fish more traps?—A. Yes, those who fish in deep water have farther to go, and fish fewer traps.

Q. In your case when you begin to fish in what depth of water do you start?—A. It will range from 5 to 10 fathoms.

Q. How far off shore is that?—A. Some go deeper than that, up to 20 fathoms.

Q. How far off shore would the bulk of the fishing be carried on?—A. That will depend on where you are located, if you are located on the islands, the islands there all have fishermen on them, and they would be from 8 to 10 miles off the shore.

Q. That is outside the 3 mile limit?—A. No, that will be in the bay.

Q. There are headlands near?—A. Yes.

Q. How long do you fish in that depth of water? In that region do you fish right through the season in the same depth?—A. Yes, right through the season.

Q. Do you continue to fish all through the season, or is there a time when you let up?—A. Oh, yes, during 1½ or 2 months there is practically no fishing.

Q. When is that time?—A. That will be February and part of March.

Q. Is that the rough season?—A. A rough season, too much ice, and there is such a desperate loss of traps and gear that the fishermen think it pays them better to take their traps ashore and wait until the spring.

Q. Then the bulk of your fishing in the early part of the season is done in December and January?—A. Yes, there is probably only 3 or 3½ months fishing in the whole season.

Q. When do you begin again, in March?—A. Yes, well this spring we commenced about the 28th or 29th of March.

Q. And you fished then up to the end of May?—A. Yes.

SESSIONAL PAPER No. 22a

Q. Are the most of those fishermen who are engaged in this lobster fishing also engaged in other kinds of fishing afterwards?—A. Yes, most of the fishermen engaged in it are also engaged in the deep sea fishing.

Q. They have no other calling than that of fishermen?—A. There are a few that have other callings and do not go to the deep sea fishing, farmer fishermen.

Q. How do your fish run, what proportion of them are shipped abroad to the market alive?—A. What proportion of the quantity do you mean?

Q. Say in number, out of every hundred fish, how many are sold to the canner and how many are shipped abroad?—A. There is about—more than one-third of mediums and large shipped, according to where you fish; take it right through there is not one-half.

Q. From which branch of the fishery do you derive your principal revenue, from the sales to the packer or from that portion of it that you ship abroad?—A. Well now, that is coming pretty close. I think there would not be much difference when you are through, perhaps we get more from the factory than from the live lobster. The year before we got from the packer about twice as much as we got for what we shipped; we shipped about one-third in value.

Q. Then there is about two-thirds in value sold to the packer?—A. Yes, but they are not nearly the same in number.

Q. As far as you are concerned, which is the most valuable part of your fishery, the sale to the packer or the export business?—A. Take it right through, do you mean?

Q. What proportion of your total catch will be below 9 inches, that is the legal limit, we want to find out whether the regulations are observed at all or not, in fact we know they are not?—A. I think there is a shade over one-half below the 9 inches.

Q. How do you sell your fish to the packers, by count or by weight?—A. By weight.

Q. What do you receive?—A. Well, it is according to the season, some seasons we get 3 cents a pound, some seasons 4 cents, and sometimes 5 cents a pound.

Q. You did not get that this last season?—A. No.

Q. What was paid this last season?—A. From $2\frac{1}{2}$ to 4.

Q. By the way, is there any station of the Fishermen's Union where you live?—A. No.

Q. Then the price rose towards the end of the season this year, did it not?—A. Yes.

Q. What number of canneries are operating in your neighbourhood?—A. Well, taking in the Tusket Island, there are factories at Abbot's Harbour, a large factory, and one at Ram's Ledge.

Q. To whom do they belong?—A. They belong to G. H. Shand and Company, they have both of those, then take it in the Tusket there are a number of factories there, George Bates, H. B. Cann, James S. Gray, William Seeley and John Shand, who moved up last year.

Q. So that there are quite a number of canneries?—A. Yes.

Q. Have they been operating for long?—A. Yes.

Q. Are they large canneries?—A. Yes.

Q. Have you any idea of their average pack?—A. I think this one at Abbot's Harbour packs around 3,600 to 4,000 cases in the season.

Q. That is a large cannery?—A. Yes, it is a large cannery.

Q. Have you any idea of the number of boats supplying that cannery?—A. The number of boats, do you mean buyers for them?

Q. Yes, the lobsters are all smacked to them, are they?—A. Yes, there are about 17 or 18 boats altogether.

Q. I suppose these smacks are sent out by the different canneries?—A. Yes.

Q. Is there much competition? Do the different smacks offer different inducements?—A. Oh, yes.

Q. So that, in your case, do you think there is any combination among the packers to keep the price down, or is there competition?—A. I think there is competition, there

9-10 EDWARD VII., A. 1910

has been of course, when they kind of run out of lobsters they cannot keep the price down and there is competition both in the price and in the cull.

Q. That is they cull differently?—A. Yes.

Q. Are some more strict in culling than others?—A. Yes, that is how the price gets started.

Q. How do you ship your market lobsters, do you ship them yourself?—A. Yes.

Q. Direct to Yarmouth and Boston?—A. Yes.

Q. How has the market price held up this last year?—A. Last year it was not as good as it has been, but it was very good.

Q. Did the fact that they took 9-inch lobsters cause a drop in the Boston market, do you think?—A. It caused the price of the big ones to drop, I think it did.

Q. Have you noticed whether as the season advances, as you get towards the end, you get more small or berried lobsters?—A. Yes, more berried lobsters.

Q. What is the percentage of berried fish?—A. Very small, all the time I have been in it. In the 8 years I have not come across more than a dozen or 15 in all the time I have been handling lobsters, up till the end of May, but you will get them at that time of the year, I never get them before then.

Q. What has been the practice with regard to the berried lobsters?—A. They heave them away.

Q. Has it ever been the practice to strip them along this coast?—A. Yes, they have been stripped.

Q. Are the packers refusing to receive them?—A. Yes, and I think the fishermen are enlightened enough themselves to look after them.

Q. The disposition of the fishermen in that regard is much better?—A. Yes.

Q. Has there ever been any attempt to enforce the size limit?—A. No.

Q. You take everything you catch to the cannery, and there they make no bones about taking it?—A. Yes.

Q. How would it affect you if the present size limit of 9 inches were strictly enforced?—A. It would mean starvation to most people down this way.

Q. But that would only be for a season or two, do you not think the ultimate effect would be good?—A. Yes, I think it would because if it had been done ten years ago I think our lobster fishery would have been on a much better basis today.

Q. There is a decrease you think in the condition of the lobster fishery, it is failing?—A. Yes, I think it is, and still I do not know, when you consider there are more people in the business now than there were then.

Q. That is what is keeping up the supply?—A. Yes.

Q. Do you not think you need more gear and more application to get the same quantity of lobsters now?—A. Yes, I think so.

Q. Of course you began late, so that you have not as much experience as to what the fishery was years ago?—A. No, but we have heard it from the old men who were fishing then, and who told us what it was in their time.

Q. Do you fish the same sort of trap you did in the olden times?—A. No.

Q. You use the patent trap?—A. It is not a patent trap, but we call it a bedroom trap.

Q. Some call it the parlour trap?—A. It is on the same principle.

Q. The idea is to prevent the lobsters getting out once they get in?—A. Yes.

Q. Do you think there is a disposition on the part of the fishermen to put the slats closer together than they used to?—A. Yes, they have them closer together.

Q. What is about the distance you set them, how do you make your gauge to establish that distance?—A. We put them about that far apart (illustrating) so that they cannot pass through.

Q. Do you think if we established a standard of trap and insisted on the slats being a certain distance apart it would prevent people catching too many small lobsters? Do you think we could regulate the capture of lobsters in that way?—A. There was one year we did put them 1½ inches apart and it did not make any difference at

SESSIONAL PAPER No. 22a

all, we did have small fish all the same, but we did not catch as many, they came in, but after they had eaten up the bait they would crawl out, that is what they will do if you leave them long enough, they will go out when the bait is all gone.

Q. I understand that you recommend reducing the size limit to 7 inches by this memorandum?—A. Yes.

Q. What is the idea in doing that?—A. Well, the idea is that they do not want to close the factories; practically an 8-inch or a 9-inch law would close the canneries, and that would practically close the fishery in regard to making it pay the fishermen; they think that a lobster under 7 inches is no good to the canner, nor is it any good to the fishermen in a way, because they do not weigh anything, and the few cents they would get for the lobsters under 7 inches would not make it worth their while to take them, it would be better value to them to let those small lobsters go and to protect them until they become larger, that was the idea.

Q. A good many fishermen that we have heard, think especially in view of the fact that these American smacks are going to fish offshore here, it would be better to establish a 10 inch limit and do away with the close season, so that they could fish all the year round, what do you think of that plan?—A. I do not think it would be any good to us in Pubnico, it would cripple the industry around Pubnico.

Q. You say that the practice with regard to the berried lobsters is to put them back in the water, and that that is carefully followed now?—A. Yes.

Q. Apart from that you take, as a rule, to the factory, everything that is caught?—A. Yes.

Q. Except those that are shipped abroad?—A. Yes.

Q. Do you ship those over 9 inches, or only over 10½?—A. We ship the 9 inch ones too, that is a matter of price; when the American market is glutted we sell the 9 inch lobsters, a good many of them to the cannery, and when the market is better they are shipped.

Q. Do the canners along your coast ship any live lobsters themselves or do they can everything they get?—A. I think they ship some.

Q. In some places we find the canners shipping some of the large lobsters?—A. Well, yes, they do.

Q. Do the canneries operate all winter?—A. Well, they do not operate all the winter, they do not operate in the season when the fishermen are not fishing.

Q. What do they do then, do they just can once a week, or what do they do?—A. Oh yes, they have the cannery open, and they only can once a week, just when they can get the lobsters.

Q. Have you any idea as to the spawning season of lobsters, when do you think they spawn?—A. Well, they spawn—to tell you the truth I do not know, but in my judgment and experience I think that through the summer months probably you will find spawn on the lobsters most any time.

Q. Do you notice that the berries become more ripe as the season advances?—A. Yes, and the lobsters are not meated out in August like they are later on when they have shed their shell.

Q. How do you find them when you commence fishing in December, are they full of meat then?—A. Yes, they are pretty firm.

Q. Are they as full as they are in the spring?—A. Yes.

Q. In your experience in shipping lobsters alive to the market, have you to be very careful whether they are injured or not? Is it the case that a lobster with a cracked shell will die —A. Yes.

Q. And you have to send the lobsters in perfect condition?—A. Yes.

Q. Must they have both claws on?—A. Well, no, but it would be better if they had; if they have one claw on they would be counted as a good lobster, but if both claws are gone they would be of no use.

Q. And in that case they would go to the canner?—A. Yes.

9-10 EDWARD VII., A. 1910

Q. Do you think you find more spawn lobsters inshore than you do off shore?—

A. I do not know, I do not think there are very many found in our season.

Q. No, there are very few found?—A. Very few, yes.

Q. Are they more numerous towards the close of the season, as the weather is getting warmer do you think the female lobster is making for the shore to spawn?—A. Yes, I think they do take advantage of the shoal water.

Q. As to the matter of licensing canneries, do you think any considerable increase in the number of canneries would mean, I am not referring to your case, but speaking generally, a greater destruction of the lobsters, or that it would mean more fishing?—A. No, I do not.

Q. You think the fishing has practically reached its limit, that there are as many people at it and as much gear out as there would be?—A. Well, I do, but it is like everything else, there are some going into it that have not got into it yet.

Q. But would there be any material difference?—A. No, I do not think there would.

Q. The idea of the department in restricting the issue of canning licenses for a number of years back was that in that way fishing would be limited. Do you think it has had that effect?—A. No, I do not.

Q. Do you in common with many other fishermen entertain the opinion that the more canneries there are the more likely it is to lead to competition and the more benefit it will be to the fishermen?—A. Yes, I think so.

Q. If the canner refused to accept the undersized lobsters the fishermen would be obliged to return them to the water, they would not bring them in?—A. No, but I think the canner is practically forced to take them because if one canner refused another one would take them.

Q. And his smack would get the fish?—A. Yes, that is about it.

Q. You speak in this memorandum of the matter of a pound, are there facilities at Pubnico for the establishment for a pound?—A. Yes.

Q. What is the nature of the place you refer to?—A. It is a natural salt water pond.

Q. What depth of water is there in it?—A. The depth of water in it at high water would probably be 5 or 6 feet, and at low water there probably would not be more than 3 feet in some places.

Q. You know that one of the difficulties is that you cannot keep lobsters where the water is too shallow?—A. Yes, but they claim that with a little work this place can be deepened.

Q. What is the extent of the pond?—A. It is about 8 acres, with a narrow outlet and the rock is broken away so that it lets the tide have a free flow in and out, and by building a sluice something like that it could be fixed, in fact they do have the lobsters coming in there now; the lobsters have been put in there to spawn, and the young fry have gone out to sea again.

Mr. LAW, M.P.—I may say that a survey has been made of it by the Marine and Fisheries Department; Mr. Halkett, one of the officials was down there and made a thorough examination of it.

The COMMISSIONER.—Mr. Halkett has been most of the summer at the Baker pound, I understand, watching the conditions there.

Mr. LAW, M.P.—This is a very important matter, it has an admirable situation right down on the point there, and with a very small expenditure it could be made suitable, I was down there myself.

By the Commissioner:

Q. Your idea is that this pound could be made, and the fishermen would send their seed lobsters there and have them put into the pound?—A. Yes.

SESSIONAL PAPER No. 22a

Q. There is no doubt that where these facilities exist that does offer protection to the female lobster?—A. Yes.

Q. As I understand it then in your case there is not much friction between the fisherman and the packer?—A. No.

Q. In some parts of the coast there is a great deal of discontent on the part of the fishermen who say they are not getting enough for their fish, and the department has been obliged to issue canning licenses to the fishermen where a number of them, 15 at least, have grouped themselves together and applied for what is called co-operative licenses. They are doing that at Little Harbour and some other places?—A. Yes.

By Mr. Law, M.P.:

Q. You have some competition down there, have you not, in the number of canneries?—A. Yes, there is no doubt about that, in fact I think myself that the canners pay sometimes more than they can really afford to pay.

By the Commissioner:

Q. There is very little doubt they did in 1908, and I think they found that out for themselves?—A. Yes.

Q. And then they went to the other extreme this last year, that is the general opinion?—A. Yes.

Q. You recommend the establishment of a pound in this neighbourhood; have you any experience in the matter of hatcheries?—A. No, I have not.

Q. In some parts of the coast the department have a number of hatcheries, there is one off Pictou, at Cariboo Point, it has been there for a number of years and the general impression is that it has done good there, but in your case you recommend pounds?—A. Yes.

Q. To what cause do you attribute the decline in the lobster fishery?—A. To taking the small lobsters, the little chicks.

Q. A lobster is not supposed to have reached maturity until it is about 8 inches long, I think there are a very few berried lobsters found under 9 inches?—A. Very few, all I have found have been nine inches.

Q. Do you not think it must have an injurious effect on the continuation of the lobster fishery to destroy the immature ones, the young, before they reach the age of reproduction?—A. Yes, Naturally I should think it would.

Q. With regard to the different open seasons and size limits do you not think that it is apt to encourage violations of the law to have different size limits and different seasons in immediate neighbourhoods. Here on this coast, for instance, at different places we have different seasons and different size limits; do you not think that as far as possible the law ought to be uniform?—A. I think so, but I do not think it would after the factories are closed; there should be no violation—what do you mean?

Q. We find for instance that we have in some parts of the coast, here in St. John County the season is from January 6th to June 29th with a 9-inch limit; and in the Bay of Fundy, bordering Kings and Annapolis counties, from January 15 to June 30 with a 10½ inch limit; in Charlotte County, N.B., and Digby County, N.S., from Jan. 6th to June 15th, and a 9 inch limit except in the Bay of Fundy portion where it is 10½ inches; then again from Yarmouth to Halifax Harbour, December 15, to May 31, 9 inch limit. Do you not think, as far as possible there should be a uniform season?—A. Yes, as far as it can be I think it should be uniform, but it is pretty hard to get it uniform because the conditions are so different in different localities.

Q. We found here this afternoon that fishermen who fished in one section after fishing in their own district when the season closed there moved over into the next section.—A. Yes.

9-10 EDWARD VII., A. 1910

Q. Now with regard to this matter of the American smacks fishing outside there. You realize, I suppose, that it is going to be pretty hard on our fishermen if the Americans can fish just outside the 3 mile limit and catch off all the fish before they come inshore; the fish do come inshore from the deep water, do they not?—A. Yes, they must come in from the deep water of course.

Q. Have you any idea as to how you could counteract that in any way?—A. No, I have not, they are outside the 3 mile limit, and I do not know, it is beyond me to suggest any way of remedying it.

Q. We have had suggestions made to us to-day that the only thing for us to do is to do the same as they do, not exactly the same thing, but to wipe out the close season and fish all the year round, and raise the limit.—A. Raise the limit, yes.

Q. But you do not think that would suit at all?—A. That would not suit the majority of our people at all.

Q. It is quite possible any arrangement of that kind would affect the fishermen seriously for a year or two, but ultimately the gain would be great.—A. Yes, I agree with you there, it certainly would, but in the meantime it would be pretty hard for the fishermen to get along, to hold on for that time.

Q. Well, most of those who fish lobsters are deep sea fishermen and have they not something else to turn to even though it were not so profitable as the lobsters, there are deep sea fisheries off here.—A. Yes, but of late years they have not done much on the other fisheries, and you take the lobster fishery, the way they are in these counties here, that is what the majority of the people, the merchants and everybody else, are depending on now, the cod fishery has been very dull these last two seasons.

Q. And how is the mackerel, you have that too?—A. Yes, but it has been very dull, I believe this last spring there has been a few mackerel, but there has been no mackerel caught for several years.

Q. How do you fish mackerel, in traps?—A. Yes, we do catch them in traps.

Q. Almost any regulation you can put on the lobster fishery, if strictly enforced, will cripple the fishery for awhile?—A. Yes.

Q. But it is all done with the idea of ultimately improving it?—A. Yes.

Q. Which of the various seasons that you fish lobsters now do you consider the best? When do you make your best fishing?—A. Well, as to the quantity of lobsters it is better in the spring, but as to the markets and everything of that kind, the fall fishing is the best.

Q. The bulk of the market is firmer in the fall?—A. Yes.

Q. I suppose there are fewer lobsters coming in from the other regions then?—A. Yes, on account of the weather.

Q. And the lobsters transport better in cold weather?—A. Yes.

Q. How are the existing facilities for the transport of lobsters; are they all they might be, or is there any way in which the department could improve the situation by providing better facilities for the transport of lobsters?—A. Yes, they could improve it some; of course it is pretty hard to get a steamer to call at very small places where they export lobsters, but if we had a steamer calling on us, there is one steamer but she does not call at the Harbour, it would be a convenience to the fishermen.

Q. Is she a subsidized boat?—A. Yes.

By Mr. Law, M.P.:

Q. She is subsidized by the provincial government. You do not ship any by way of that boat?—A. No, it is handier for us to ship by rail.

By the Commissioner:

Q. The policy contemplated by the department in framing the regulations is evidently to allow the large lobsters to be taken, leaving the small ones untouched. Do you think there is any kind of trap particularly adapted to carry out that intention?—

SESSIONAL PAPER No. 22a

A. Not the way they have the traps now, but I suppose there could be traps made that would catch only the large lobsters.

Q. What is the life of a trap, how long does it last?—A. A trap will last about two or three seasons.

Q. I think the bulk of the evidence goes to show that every three years a fisherman has practically to renew his outfit of traps?—A. Yes.

Q. A good many of the fishermen, in their evidence, have stated that the matter of taking the small lobster can be regulated by insisting on a certain trap with a certain space left between the slats; others again say that there is nothing in that, that it would not make any difference. There is, however, one thing that we do notice, within my recollection which goes back 32 years, originally the traps were made with the slats $1\frac{1}{2}$ inches apart, and now they have got the space down to a half inch in many places; that can only have been done with one object, to retain the small lobsters?—A. Yes.

Q. There are many places where they are canning lobsters that it takes 12 or 14 lobsters to fill a pound can, have you any idea how they run with you?—A. I do not know.

Q. The department had packers make experiments and they found that it took 9 7-inch lobsters to fill a one-pound tin.

By Mr. Law, M.P.:

Q. As I understand you, an open season all the year and a 10-inch limit would be detrimental to the industry in your section?—A. Yes, it would be to the fishermen at present, but of course, as the Commissioner says, we would benefit by it in three or four years, but that is a long time to wait.

Q. That has been suggested because this American lobster smack business has changed the whole feature of the question?—A. There is only one place they are fishing, I do not believe they are in any other place, and of course they can only fish for lobsters outside the three mile limit, and the limit is outside of Seal Island.

By the Commissioner:

Q. There are a great many places you can fish in 20 fathoms of water?—A. That is a fine lobster ground in Argyle bay, one of the finest lobster grounds in the world.

Q. Yes, all around Cape Sable Island is a good lobster ground, and it is shoal a good way out?—A. Yes, it is.

Q. In the state of Maine they began the canning industry there, and the canning ran out the fishery completely, and it was only when the canners found that the fishery was exhausted that in many cases they came into Canada, and they were really the pioneers of the packing industry here; Burnham, Morrill and Company and other firms have only moved in here after they have fished out their own grounds. Maine has done away with the close season and allows fishing all the year around on a $10\frac{1}{2}$ -inch limit, and now they have improved their fishery there a good deal?—A. There is no doubt about that, and I am quite sure that their lobsters do not invade our own coast; I heard some time ago they liberated a lobster at Wood's Hole and he was caught at Seal Island.

Q. Some fishermen have told us that they caught a tagged lobster from Maine at the Island of Grand Manan, and I can quite understand that, it is not so very far away. Will you file the minutes of the meeting at which you were appointed secretary?—A. I will place it on record. (Document filed as follows):

‘A meeting was held at West Pubnico, September 13, 1909, by the fishermen and others to appoint delegates to meet Commissioner Wakeham in the interests of the lobster fishery.

‘Hon. H. S. LeBlanc, being nominated as chairman, the meeting was called to order at 8. p.m.

9-10 EDWARD VII., A. 1910

‘Resolved that A. E. Carland act as secretary.

‘The subject being thoroughly discussed by all the fishermen present, it was unanimously resolved that whereas on account of weather conditions there are about 2½ months of the lobster season in which practically no fishing can be done, it would be more satisfactory to the fishermen in this end of the county to have the season changed from the 15th of December to the 1st of December, and that the size limit be reduced to 7 inches.

‘Resolved that A. E. Carland, Leon de Amiro and Alfred Dean be appointed delegates.

‘Resolved that the delegates bring to the notice of the commissioner about a pond at Lower West Pubnico to be made into a natural lobster hatchery.

‘The meeting adjourned.’

Witness discharged.

ALFRED DEAN, fisherman, Pubnico, called and sworn:—I have heard all the evidence of the previous witness and I agree with it, and have nothing to add to it. There is one thing I want to speak about and that is illegal fishing after the close of the season which ought to be stopped.

By the Commissioner:

Q. Is there anything of that kind done?—A. Yes, they say there is; I was out in the harbour the other day and I could count 150 pots.

By Mr. Law, M.P.:

Q. What do you suppose they are doing with the fish they catch?—A. They are selling them.

Q. But where do they go to sell them?—A. They go to the boarding houses and other places.

By the Commissioner:

Q. Is there any canning done after the season closes?—A. Not that I know of.

Q. In some places we have heard of the fishermen canning in their own houses and in the woods?—A. I do not think there is any canning being done down our way.

Q. That is a question which has come up on several occasions, what we might call a matter of domestic fishing. At the summer hotels we have people complain that they came down to the sea coast for the summer and that they cannot get fresh lobsters because they happen to be here in the close season, and they have asked if the department would not allow a certain amount of local fishing for local purposes, but I do not see how it could be done.

Mr. CARLAND.—I think the most of the fishing that we complain of is done before the fishing season commences, but I do not think there is very much fishing done at this season.—A. Well, there are hundreds of traps set out and some men have made \$50 this summer fishing out of season.

By Mr. Law, M.P.:

Q. Are there any cases down around your way where the fishermen fish before the season opens and keep their fish confined waiting for the season to open? And are there a large number of those fish die and have to be thrown away absolutely?—A. There is nothing of the kind in Pubnico, but there are some among the islands there that do that.

SESSIONAL PAPER No. 22a

By the Commissioner:

Q. We have heard that fishermen are in the habit of fishing before the 15th of December, and holding their fish?—A. Yes, there are some do that.

Mr. CARLAND.—Two years ago they did it quite extensively, and the inspector came up with the 'Coastguard' and liberated a lot of them at Dark island, and since that I do not think it has been done very much; last fall hardly any of it was done to my knowledge.

Q. We have had complaints from other fishermen below here that their fish sent up here in cars are very severely treated by the local officer here who they say is much harder on them than he is on the people in this district.

Mr. LAW, M.P.—And these men here complain that the same officer has let the fish in from outside when he would be keeping them down here.

Witness discharged.

LEON DE AMIRO, fisherman, Pubnico, called:—

By the Commissioner:

Q. What do you say with regard to the evidence of the other two witnesses?—

A. I think Mr. Carland has given it about right.

Q. Of course if there is anything you wish to say it will be taken down. You have heard his evidence?—A. Yes.

Q. And you fully approve of it?—A. Yes.

Q. And you have nothing to add to it?—A. Not that I know of.

Witness discharged .

Commission adjourned.

YARMOUTH, September 15, 1909.

JOSIAH HARDING, fisherman, Lower Argyle, called and sworn:—

By the Commissioner:

Q. Is there any Fishermen's Union where you come from?—A. No.

Q. Do you appear as a representative of any meeting of fishermen or anything of that kind?—A. Yes, we are here to represent a meeting.

Q. You represent the interests of a meeting held where?—A. Lower Argyle.

Q. What extent of the coast does that comprise?—A. It is only a small section of the coast, it is divided up, there are four Argyles within 3 miles.

Q. What is the number of fishermen carrying on the lobster fishery in that locality?—A. I am not prepared to tell you that, there are quite a number in Lower Argyle.

Q. How many would you say, I do not want it absolutely with minute details, but about how many boats are there, fifty?—A. Well, at Lower Argyle——

By Mr. Law, M.P.:

Q. Take your Argyles altogether, you represent all the Argyles?—A. I should think there would be about 350 boats altogether.

Q. Engaged in the lobster fishing on that coast?—A. Yes.

9-10 EDWARD VII., A. 1910

Q. What number of packing houses are there served by these boats?—A. Well, there are a lot of houses there that are not running, they only run a few.

Q. What becomes of their catch of lobsters, are they smacked?—A. Our lobsters that we catch are packed at Abbott's Harbour.

Q. How long have you been engaged yourself at lobster fishing?—A. I have been engaged in it myself 20 years.

Q. Were you ever engaged in it for anybody else before that?—A. Only with my father.

Q. That was as a lad?—A. Yes; well it has been 22 years since I started, and of that time there were 2 seasons I was not in it.

Q. Have you ever fished lobsters anywhere else except on this part of the coast?—A. That is in this bay?

Q. In a few words what is the condition of the lobster industry to-day compared with what it was when you were working for your father?—A. There is quite a difference, they are scarcer.

Q. They are much scarcer?—A. Very much scarcer.

Q. In what proportion has the number of boats and the quantity of gear increased?—A. Quite a lot.

Q. And does each individual boat fish more gear than it did when you were younger?—A. Yes.

Q. To what extent; have you doubled your gear?—A. Well, off-hand, I think I would be safe in saying that it is increased by one-third. I would not say one-half, because that is quite a lot.

Q. What are the fishery regulations in your district; when do you commence to fish and when do you end?—A. We commence on the 15th of December and end on the last of May.

Q. And you are supposed to take nothing under the 9-inch limit, that is the regulation?—A. That is the regulation.

Q. But these regulations have never been enforced?—A. What regulations do you mean?

Q. The 9-inch limit?—A. Well, to a certain extent.

Q. When? When you began or lately?—A. Oh, all along.

Q. What am I to understand from that? Do the fishermen generally throw overboard all undersized lobsters?—A. Well, they are supposed to.

Q. Yes?—A. That is what they are supposed to do.

Q. On the other hand, do you not take to the cannery everything you catch?—A. We do not take anything to the cannery.

Q. Do you deliver to the smack everything you catch? Our experience along the coast is that the regulation with regard to the size limit has never been enforced, that it is not the practice of the fishermen to live up to it, that some did follow it, but when they found their neighbours did not they got into the way of ignoring it, too?—A. Well I do not say that it is enforced as it might be.

Q. You begin your fishing on the 15th of December, how is the fishing in December?—A. With us it is the best part of the winter.

Q. For what reason?—A. Well, you see as the winter comes on it shuts it off, you understand, by ice and cold weather.

Q. The winter months with you here will be February and March, or from the middle of January?—A. Yes, we call January, February and March our winter. You see December is the best.

Q. How do the fish run in December, are they plentiful and a good size?—A. Yes.

Q. How is the market for fish in December?—A. It is fairly good.

Q. The market is fairly good?—A. Yes.

Q. What proportion of fish you catch is sold for canning purposes, and what proportion is sold abroad, fresh?—A. About one-third.

SESSIONAL PAPER No. 22a

Q. That is one-third goes to the market?—A. About that, of course I could not tell you exactly.

Q. I do not expect you to give it to me absolutely and definitely, no man can do that?—A. The way I get at it is by keeping a small book of account, and I notice that it is generally about one-third.

Q. Is that one-third in quantity?—A. Yes, one-third in quantity.

Q. And how much in value; how does the value of one compare with the other?—A. It is the value that I have reference to, I would not know about the quantity, I could not tell about that.

Q. Do you fish all through the winter, do you leave the gear in the water all through the winter?—A. Very few do.

Q. When do you bring it to shore?—A. We begin to bring it ashore, we have to by the first half of January.

Q. You bring it ashore altogether and give up the fishing?—A. Yes, most of them do. I do not bring it ashore myself, because I fish farther out, so far that I cannot bring it ashore, but that is only me personally, the majority have to bring it ashore.

Q. When you leave it out, do you fish the traps regularly and bait them?—A. Yes, as often as we can.

Q. How do you find the fish then?—A. We find them scarce.

Q. Do you think that they are outside or inside? Do they go outside in cold weather?—A. That is my idea, I think they go out.

Q. And when do they come in?—A. They commence to crawl as the weather gets warmer, about the middle of March.

Q. Do you notice there is a migration then towards the shore?—A. Yes.

Q. And about the middle of March the fishing will improve again?—A. Yes.

Q. And you fish right on until the end of May?—A. Yes.

Q. What is the condition of the fishery in April and May?—A. April is our best month, that is in our vicinity. May gets down fine.

Q. You have to hunt them up then?—A. We have to hunt them up.

Q. Do you move in shore or off shore in May? Do you fish in the same water or follow the fish in?—A. Well, along in our river we cannot change much, sometimes they come in on the kelp.

Q. What depth of water do you generally put your traps in?—A. Along that river it is quite deep water, about 6 or 3 or 4 fathoms of water.

Q. How far off shore are you?—A. It is just on the river.

Q. It is a lead?—A. Yes, it is just a salt water river, and then we fish right out to the end of May.

Q. Do you fish right up to the end of May?—A. I do.

Q. Do the majority of the fishermen?—A. No, there are a lot of them haul out and go to the other branches of the fishery.

Q. The other branches of the fishery are more profitable?—A. Yes, it is to some of them, but there are one-half or two-thirds fish right up to the end of the season.

Q. Can you give me any idea of the total revenue of an ordinary fisherman from the lobster fishery?—A. That would be quite hard to say.

Q. A man ought to know what return he gets from it, should he not?—A. Well, there are some do not get very much, and some get quite a little, so that it is pretty hard to average it up.

Q. What would it amount to, \$300 or \$500? We want to get some idea of the consequence and the value of the fishery to the individual so that if they stop it altogether they will know what the loss will be?—A. Yes, I could tell you about my average, but you see that there are such a lot engaged in it it is quite hard to give an average. I should think a common average of stock would be \$350 or \$400. Of course there are some, I know, in recent years would go beyond that, but if I said \$500 I think I would be about right, and may possibly be a little over the mark.

9-10 EDWARD VII., A. 1910

Q. And of that revenue one-third comes from the market fishery and two-thirds from the sale to the cannery?—A. That is pretty near.

Q. So that in your case the revenue derived from the packing is the most considerable part of your revenue?—A. Yes.

Q. Has that decrease in the fishery that you have alluded to been constant; is it steadily going on year by year? Do you notice it every year?—A. You mean in the fish?

Q. Yes?—A. Well, I think it is; of course there are some years better than others.

Q. Certainly, even in the old times that was the case?—A. And even now it is the case. Of course in years gone by it was hard to make money; you could not get the price.

Q. As to the price, what price do you receive from the packer?—A. Some years one price and some years another.

Q. Is it the practice for the fishermen to be paid on the nail?—A. Yes, spot cash.

Q. Is there any competition among these smacks? Do they sometimes offer a little more or offer you any inducement?—A. Oh, once in a while.

Q. So that there is competition?—A. Oh, yes.

Q. And the other packers are trying to get the fishermen?—A. I would not care to say there was much competition among the packers, it may be more among the smackmen.

Q. It must be ultimately among the packers because the packers have to pay?—A. Well, sometimes when they get to know of it they will cut it out. I do not think there was much competition among the packers this year.

Q. Do you think, on the other hand, there is a combine; that they agree not to pay beyond a certain price; that they fix the price?—A. I could not say.

Q. Is the price satisfactory?—A. Sometimes it is, but I tell you that the way it has been, this last year we were not satisfied with the way it turned out; the price was very low, and I myself was not satisfied, although probably I was getting all they were worth, but there were years when I thought they were paying a big price for the lobsters.

Q. Do you think they ever paid too much?—A. I did not think that they did, but possibly they might have paid too much sometimes.

Q. I think myself that for a year or two they did pay too much?—A. Well, I do not know, but perhaps they did.

Q. What style of trap do you fish?—A. I fish two or three different kinds.

Q. You make your own traps?—A. Yes.

Q. Do you find any difference in the catch in them?—A. Sometimes, some kinds will get fish better than others.

Q. What is the particular merit of the new trap, the last that you invented?—A. Well, the last one I invented I do not know whether it is as good as the one I had before.

Q. What particular patent did you try then? These are all varieties of what you call the parlour trap, are they not?—A. Yes, they are.

Q. The doors are placed a little different?—A. Yes, some are what we call the double parlour trap and some the single parlour trap.

Q. The object of all these variations is to make it more difficult for the fish to escape?—A. Yes, that is the idea.

Q. In building the traps do you put the slats closer than they were originally?—A. Not much, at least I do not.

Q. Do you think there is any tendency to put them closer?—A. I could not say. I do not know that I have put them much closer.

Q. What is your gauge or mark?—A. The pole of the hammer.

Q. That is a little less than an inch?—A. Probably, my motive in that is to keep the lobster from putting his claws through.

SESSIONAL PAPER No. 22a

Q. It is not to keep the small lobsters?—A. No.

Q. These laths when you put them on the trap are pretty dry, and they swell while in the water, thus reducing the opening still farther?—A. It is mostly green laths we use.

Q. I suppose you own your own boat and gear?—A. Yes; part of the time I did neither, of course.

Q. What I mean is, does the canner supply the boat and gear to you?—A. No.

Q. And the fishermen are paid by weight and by count?—A. Both ways. Sometimes one way and sometimes another; the large lobsters are by count.

Q. But the undersized lobsters go by weight?—A. Yes, by weight.

Q. Was that always the case?—A. Years ago they used to sell by count.

Q. What led to the change? Were they getting too small to be paid for by count?—A. I do not know I am sure. All we know is that they commenced buying by weight; that was among the packers you see, and that is all I can tell you.

Q. Of course you realize that the lobster fishery is failing very much. There are more small fish proportionately, I think?—A. Well, I think so.

Q. And you have now to put forth greater exertions in order to keep up your catch? What is your remedy for the existing trouble? What did your branch of the fishing community say at the meeting at which you were chosen to represent them?—A. To keep the catch up, do you mean?

Q. What did they recommend, or did they make any recommendation?—A. They did not make any.

Q. Did they leave it to you to make any suggestion you thought fit? What is your remedy? How does the present season suit you and how does the 9-inch limit suit you? Should it be enforced strictly or not? You see it is the suggestions of fishermen we want to guide us in any future regulations that may be made?—A. Yes, I see.

Q. How would it do to shorten the season?—A. The way it has always been with me is that my policy has been to get all I can.

Q. That, I suppose, is the policy of the fishermen generally?—A. Well, you cannot get too many.

Q. But the lobster may suffer?—A. Of course, when it comes to the question of protection, as I said, I think they are getting a little scarcer and we have to make more exertions in order to get them; still I can make a dollar now easier than I could 10 years ago.

Q. Than when you began, because you get so much more for them now?—A. That is so.

Q. Do you not see that the active demand for lobsters will perhaps lead to your being fished out shortly?—A. Probably.

Q. What would you recommend, closing down altogether for a term of years until the fish grow up and recuperate? Some people have recommended that as the easiest way out of this difficulty?—A. I think it is pretty hard to protect them any other way. That is my personal opinion.

Q. That would be a pretty severe way, would it not?—A. Yes, it would.

Q. Do you think the fishing community can stand that for a term of years? Are there other fisheries they could fall back on?—A. I think a good many would have to get out of the country. That is my opinion.

Q. How would it do to enforce the present 9-inch limit strictly, and by that means protect the small lobsters until they grow up? They grow a couple of inches every year, and it would not take long to have them, or at least a large proportion of them, of decent size?—A. It may be all right. I have not a doubt it will save them to a certain extent, but they will not increase too fast because there will be a good many of them killed just the same.

Q. How?—A. Well, they die.

9-10 EDWARD VII., A. 1910

Q. Do you think the small lobsters would die?—A. Yes, the small lobsters would. You see I have worked where they have culled strictly in my time and where they dumped them, and you would find lots of them dying right around the docks and the cars.

Q. Yes, but you would not cull them inside, you would cull them outside when you take them out of the trap?—A. You cannot, because two-thirds of our fishermen have to work on the tide, and it takes such a long time to haul traps, and where you have so many traps to haul in in a given time you cannot stop to pick out the small ones there, so that they cannot begin to cull them until they are coming back.

Q. But you have to take the lobsters out of the traps?—A. Yes, I know we have, but if you have to measure every one you will have to have a stick.

Q. I do not think anybody would wait for that, but any fishermen of practice and experience would judge the size of the lobster pretty correctly.—A. Well, but if you heave them overboard outside you would probably have the same thing to do again to-morrow.

Q. I know it would probably mean some loss of time and trouble.—A. Yes, they will crawl right back into the trap again and eat the bait.

Q. And so you will sacrifice them?—A. No, only to carry them into where you can grade your fish and cull them, that is where you will naturally separate them; another thing is there you have lots of time to play on and to do it properly.

Q. Do you not realize that something must be done to protect the fish, and do you not think it is wrong to destroy the young ones before they have reached a profitable age?—A. Yes.

Q. What are you getting for these small fish? It is a very small sum, so that it is not worth much to you, whereas in a few years the same fish would be worth a great deal more. Is it not worth while for the fishermen to wait until those fish are of proper size?—A. Till you could make something out of them?

Q. If the 9-inch limit means anything at all it should be enforced strictly everywhere?—A. I may be spending my time out there culling my fish and when I get into the dock there will be another man there who will have just exactly the same class of fish that I have thrown away; that would be pretty hard.

Q. What solution would you suggest, something must be done, how is it going to be done?—A. To protect them?

Q. To protect the lobsters, it is pretty clear that they need some protection or else we will not have them very long; the general opinion is that the fishery is reaching a crisis and that it is necessary to do something?—A. Yes, well if that is the opinion of the people they should be protected all right.

Q. How would you protect them, shorten the season?—A. Well, about shortening the season, I think it is short enough.

Q. What are we going to do then; you say we cannot avoid catching small lobsters?—A. I do not say, it is difficult but we can stop that.

Q. In what way?—A. We can stop the fishermen catching them or making use of them.

Q. And you think the season should not be shortened?—A. I think it should not, because it is short enough now if you have to go to the expense of rigging up and fitting out.

Q. Do you think we could allow a fair proportion of small lobsters to escape by requiring the fishermen to build a trap with sufficient space between the slats to let them out?—A. I think it could be done all right by that means.

Q. You think it could be done that way? Some people say it is no use attempting to do that, that the fishermen would alter their traps when they got them outside.—A. I do not think we could do that; you could make him build the trap right so that he could not do it outside, if the trap is properly built.

SESSIONAL PAPER No. 22a

Q. I have not yet got through my mind what your idea is as to the right thing to be done to protect the lobsters.—A. Of course it would not take me long to give my idea, but as a representative here I do not know what I should do.

Q. You might give your idea as a representative, and your own idea also; you might give us both, or you might split the difference, perhaps?—A. Of course there are several ways by which you might, according to my idea, protect the lobster; you can do it either by making the trap as you suggest or by a close season, or by shortening the cull; you see there are several ways. I do not know that there is very much difference anyway, I haven't a doubt but what the season would do it more rapidly.

Q. That is shortening the season?—A. Or closing the season altogether, but that is a very hard thing to do, I think.

Q. We want to find out if we can the least harmful way to the fishermen.—A. Yes.

Q. There is no doubt that shutting down altogether would be easiest, quickest and most thorough way, from the lobster point of view.—A. Almost anybody will agree to that, but, you see all the property will go to destruction.

Q. We understand that, and therefore we may set that aside as being impracticable, now we want something more reasonable. How would it do to follow here the practice in the State of Maine, fish all the year round and fix the limit at 10½ inches? That has been suggested as one way out of it.—A. Yes, well, that will protect the lobster.

Q. How would it affect the fishermen?—A. It would affect them all right, it would be just this way, I suppose you could fish all through, but there are lots of times during the year when you could not make it pay.

Q. Do you not think the result in a year or two would be to very much increase the catch of lobsters?—A. I do not know but what it would, but when you come down to that, money comes slow.

Q. Well, we have failed to get any definite suggestion from you; what is it that the majority of the fishermen in your district wish you to say?—A. Well, of course they did not decide that matter of protection other than asking for more time in the fall, that is in our locality.

Q. That is more time to fish?—A. Yes, because they are cut off by ice in the winter at the time the fishery opens.

Q. What more time do they want in the fall?—A. Two weeks or 15 days.

Q. And no shortening in the spring?—A. They did not say anything about that, but the last part of the season does not make much difference one way or the other, it is getting pretty small then.

Q. Do you know anything about the fish hatcheries or pounds?—A. No, I do not know anything about hatcheries.

Q. Do you know anything about pounds where the female lobsters are held until they have spawned or until the season is over?—A. I have no knowledge of that either.

Q. You have no recommendation to make on that score?—A. No.

Q. In the matter of licensing the canneries, what do you think? Do you think there are canneries enough, or should the department grant more licenses?—A. No, it is all right if there are not too many canneries conducted by the one man; I do not know but what there are canneries enough to pack all the fish.

Q. You think there ought to be a limit to the number of canneries licensed to one firm or corporation?—A. I think it makes it harder for the fisherman when there are too many licenses held by the one firm.

Q. Do you think the policy of the department in allowing fishermen to get co-operative canning licenses, if they are not satisfied with the conditions and group themselves together to can on their own account is a good one? Do you think that covers the ground as far as the fishermen are concerned, and that it gives them no

9-10 EDWARD VII., A. 1910

reason to complain?—A. We are not bothered much in that way, I have not had much experience in that.

Q. I do not think there is very much more I need to ask you. Have you any statement to make on your own account either from yourself or as the representative of the fishermen?—A. Well, we haven't anything more, that is what they are asking.

Q. For an increase in the fishing season?—A. Yes.

Q. In the fall?—A. Yes, it is so short with us that the winter is on us before we have a chance.

By Mr. Law, M.P.:

Q. Did the meeting have any recommendation to make with reference to the size limit?—A. No.

Q. You do not do anything outside in the deep water fishing?—A. No, it is all river fishing with us.

Q. It would be 10 or 12 miles to go outside?—A. Yes, it is too far.

Q. Do you catch as large a run of big fish as those who fish further off?—A. No, I have fished in, what I am referring to as the bay.

Q. Do you think in the tag end of the season, where you fish, you get more small fish and more breeding fish than in the early part of the season?—A. We get more small ones.

Q. You think the fish come towards the shore as the weather gets fine?—A. Yes.

Witness discharged.

A. D. RANKIN, fisherman, Lower Argyle, called and sworn:—

By the Commissioner:

Q. You have heard the evidence of the gentleman who preceded you, do you agree generally with all he said?—A. Yes.

Q. Is there any matter wherein you differ from him, or that you would like to say anything more about or explain more fully?—A. I do not think there is.

Q. What is the length of your connection with the lobster fishery, how long have you been fishing lobsters?—A. I have been fishing probably 15 or 18 years.

Q. How do you find the condition of the fishery to-day as compared with what it was when you began fishing?—A. Well, they are a great deal scarcer, I think.

Q. Is it that they are getting scarcer and smaller? Are they running smaller?—A. No, I do not think they are.

Q. You think you get as large a proportion of good sized fish as you used to?—A. These last two years, I know, where I fish, we have got more large lobsters than for the last six or eight years.

Q. What proportion of the lobsters you catch are within the legal size of 9 inches, and what proportion are below that?—A. I should think probably one-third would be small, that is below the 9-inch limit.

Q. What do you do with all the fish above the 9-inch limit, do you sell them all to the smacks, to the canners, or do you export any of them yourself?—A. We ship some of them, sometimes we sell to buyers, there are buyers who are not packers, and who buy large fish.

Q. So that two-thirds of your fish are market fish?—A. I think they are.

Q. In that you differ from the gentleman who preceded you; I understood him to say one-third of his fish would be market fish.—A. It makes a difference where a man is fishing.

Mr. HARDING.—I meant one-third large, one-third between nine and ten and a half and one-third below nine inches.

SESSIONAL PAPER No. 22a

Q. Do you fish on the same ground?—A. No.

Q. Do you fish off shore in deep water?—A. No, I am fishing in closer.

Q. From which branch of the fishery do you derive your largest revenue, from the sale for export or the sale to the packer?—A. I do not know hardly, it depends on the price in the United States, on the Boston market where we ship them; in the winter we get better prices than we do in the summer.

Q. How is it with you, do you fish all through the winter or do you slacken off through January?—A. I knock off about the end of January.

Q. Do you bring your gear ashore then?—A. I land it.

Q. And when do you put it out again?—A. The first of March if the ice is out of the river, sometimes it is the 10th before we can get out.

Q. What do you call the river, is it the channel among the islands?—A. It is the harbour there.

Q. Is there any fresh water river discharging into it?—A. Not very much.

Q. Are the lobsters as plentiful at the head of the bay as they are in other parts?—A. In the fall there are as many at the head as there are outside, but when the water gets cold they shift off again, that is my idea.

Q. When you put your gear out again about the first of March you fish right up to the end of the season, do you?—A. Yes, unless I have to go away or something of that kind, I might then take it up before the end of the season.

Q. Is it the practice of the fishermen to knock off before the end of May?—A. No, the majority fish right up to the end.

Q. And at the end of the season do they begin other branches of the fishery, they are regular fishermen?—A. Yes, there are some who stay at home and fish.

Q. Are there many who go abroad in fishing vessels?—A. Yes.

Q. Have the number of boats and traps increased in your time?—A. Yes, quite a lot.

Q. And the number of fishermen too?—A. Yes.

Q. Practically everybody who can engage in the lobster fishery is already engaged in it?—A. Yes.

Q. And some go farther out?—A. Well, we have islands, with little houses on them and some of us will go outside, but others who cannot get outside have to fish inside the islands.

Q. Do you fish on the same ground regularly, or is the same ground fished over generally by everybody?—A. On the island where I fish I have the same ground, and I fish there regularly, probably nobody else could get handy to me very well.

Q. Is there any trouble in your neighbourhood—in some places we have heard that the islands were held by private individuals who charged rental to those who fished there, is that the case with you?—A. Yes, most of them are rented to us there.

Q. Well, now, with regard to the island that you fish from?—A. I bought a piece of that island and I own it.

Q. So that you are independent?—A. Yes.

Q. I suppose the fishermen all own their own boats and gear?—A. Yes.

Q. Now, as to the regulations, there is no use going over a great deal of what the other gentleman has told us, are the present regulations being enforced strictly, and will it be sufficient protection for the lobsters if they are enforced? Of course they have not been enforced?—A. No, I do not think so. My idea would be to have a seven inch limit.

Q. What would be the advantage of that?—A. Well, we need the fish and we have to make a living out of it.

Q. And do you think you can continue to fish very long and destroy the fish before they have a chance to reproduce themselves?—A. Yes, I think so.

Q. You do think so?—A. Yes, I do.

9-10 EDWARD VII., A. 1910

Q. What is the practice with regard to the berried lobsters among you fishermen?
—A. We heave them away.

Q. Has that always been the practice?—A. I do not know that it has always been the practice, but for the last few years, I think for the last ten or twelve years, I have never seen a man save them, they are always put overboard.

Q. And they are caught over and over again?—A. Probably they will be, and probably they will not, they may go somewhere else.

Q. Do you think they go very far?—A. I will not say that they do.

Q. Your idea is the same as the other gentleman's as to the season, what season do you want?—A. Well, I would like to have the same time, if we could get it.

Q. And you want the same time and a 7-inch limit; do you think that will protect the lobsters?—A. No, I do not think it will protect them any.

Q. Do you not think it is necessary to protect the lobsters? Or do you think we had better go to work and catch them all up?—A. My idea is that the lobster comes into the harbour in the fall of the year, and when the weather is cold they go out and they may strike somewhere else.

Q. Do you think they travel far?—A. I think they do.

Q. The general impression is that they do not go very far?—A. They move in in the spring.

Q. Oh, they do move backwards and forwards off and on the shore? So that you have nothing to suggest with regard to the matter of the protection of the lobsters, simply that the fishermen want to fish a longer season and to catch lobsters down to 7 inches?—A. Yes, that is what will suit me, and it will suit most people in our district.

Q. And you think you can continue to do that with impunity?—A. Oh, I think so.

Witness discharged.

CAPTAIN JESSE MOORE, fisherman, Lower Argyle, called:—

By the Commissioner:

Q. You were also appointed on the delegation to represent the fishermen's meeting?—A. I was.

Q. Do you wish to endorse the statement of the last witness, or have you anything to say?—A. No, I have nothing to say.

ZEBULAH LEBLANC, fisherman, Tusket Wedge, called and sworn:—

By the Commissioner:

Q. Do you represent a certain community of fishermen?—A. Yes.

Q. You had a meeting?—A. No.

Q. What part of the coast do you come from?—A. From Tusket Wedge.

Q. What number of fishermen are fishing in that particular locality?—A. There is a large community there, about 600 fishermen.

Q. And what is the practice there, how many do they fish, two or three to a boat?
—A. Some of them, we have 10 fishermen and we fish in a steamboat that we have. We fish about 5 miles from our island in the winter and in the spring we fish 14 miles off shore.

Q. You go out in a steamboat and fish from dorys?—A. Yes.

Q. How many men in a dory?—A. Two.

Q. Then you carry on lobster fishing the same as you do cod fishing?—A. Yes.

Q. What number of traps do you fish to a dory?—A. About 75.

Q. Do you go in and out every day?—A. Yes, when it is fine.

SESSIONAL PAPER No. 22a

Q. Do you haul your traps more than once a day?—A. No, only once.

Q. When do you begin to fish, the same as most of the others, the middle of December?—A. Yes.

Q. And how do you find the fishing when you begin?—A. We find very good fishing, we fish further in in the winter, last winter was very good.

Q. How long do you continue fishing in the fall, do you fish all through the winter?—A. Last winter we were only two weeks home, we had our traps out.

Q. You kept them all out?—A. Yes.

Q. Did you haul your traps during that two weeks?—A. Some we hauled up and baited, some were brought in and some were left out.

Q. When was that two weeks you knocked off?—A. In February.

Q. And when you began again after that, you fished how long?—A. Up till the last of May.

Q. How is the fishing during that spring season?—A. We did quite well.

Q. Do you own the steamer yourself, you ten men that fish in her?—A. I do not own her, I have one share in her.

Q. Who is she owned by?—A. Gaspard LeBlanc and others; we have the steam-boat hired and give him so much.

Q. What size steamer is she?—A. 50 feet.

Q. Have you been fishing that way long?—A. Since spring.

Q. Are there any others fishing with a steamer in the same way?—A. Yes, there is another one, they have been fishing 5 years that way.

Q. Is that a profitable way of fishing, do you get more fish that way?—A. Yes, I guess we get quite a share of the fishing.

Q. Have you any idea of how your shares will divide up as a result of that fishery?—A. I know about what it will be.

Q. What comes to you as a result of your share in that fishery; have you the same share as the others?—A. Yes, I have the same share.

Q. What does it amount to for the season when you wind up the business and divide the earnings?—A. About \$500.

Q. How do you handle your fish, does the steamer bring them in?—A. Yes.

Q. And delivers them where?—A. On the island.

Q. Are they sorted out there?—A. Yes, they are culled there.

Q. How do you divide them?—A. 10 inches and up, between 9 and 10 inches, and those below 9 inches.

Q. What becomes of them, how do you sell them, or dispose of them?—A. We ship the biggest away.

Q. You ship them on your own account?—A. Yes.

Q. That is on account of the company that fish in the steamer?—A. Yes.

Q. And what do you do with those between 9 and 10½ inches?—A. We ship some.

Q. And what do you do with those you do not ship?—A. We sell them to the packer.

Q. And what do you do with all that are under 9 inches?—A. We sell them to the packer.

Q. What proportion will be under 9 inches, one quarter or one half of your catch?—A. About one quarter.

Q. About how many crates do you get a day, big and small?—A. Some days we get six, some four, some three and some two.

Q. That is of what, market lobsters?—A. Yes.

Q. And what proportion of small lobsters?—A. We get three or four hundred weight some days.

Q. Are the small lobsters as numerous outside where you fish with the steamer as they are farther in?—A. No.

Q. You get a better proportion of large lobsters?—A. Yes.

9-10 EDWARD VII., A. 1910

Q. How are the small lobsters in December, do you get many in December and January?—A. No.

Q. When do you get the most?—A. In May.

Q. Are you fishing in May on the same ground, or do you fish closer in then?—A. No, we do not fish in the same ground, we get more in the first of the season, small ones.

Q. The first of what season? The first of the spring season?—A. No, the fall season.

Q. You get more small lobsters in the fall?—A. Yes, I was making a mistake there.

Q. Is the cannery running in the winter, are you able to sell to the cannery all the winter?—A. Some run all the winter when they have any fish.

Q. Then the cannery is not running every day, just so many days a week?—A. Yes.

Q. Now what is your idea as to the best regulations to have; how would it affect your fishing if we insisted on an enforcement of the 9-inch limit?—A. That will be all right, we are catching more small ones outside than we used to catch; we never used to catch one outside, and now we are catching more every year. They are catching everything and they do not get the chance to crawl inside, we catch them outside, and there are lots of sail boats catching them; if you sell the smaller lobster that long (illustrating) you do not get much for him, whereas if you would allow him to grow until he gets 9 inches, you would get something.

Q. Do you think the present law as it stands should be enforced?—A. Yes.

Q. And what do you think about the present fishing season?—A. I think it is all right.

Q. From the middle of December to the end of May would suit?—A. Yes.

Q. Some people have proposed the same regulations as they have in the State of Maine, that we should let you fish all the year round and fix the size limit at 10 or 10½ inches, how would that effect you?—A. It would be all right.

Q. How would it affect the canner?—A. It would be rough on the canner, but it is a hard job to suit everybody. Some of them were saying that we should leave the big ones and catch the small ones. If you catch a small one about 3 inches long you may get a half a cent for it, and for a big one 11 inches long you would get 50 cents.

Q. How long do you think it would take a small one to grow?—A. I cannot say.

Q. They say they grow 2 inches every year, they are 3 inches at the end of the first year and they grow 2 inches every year afterwards. You have discussed this matter, you have talked it over among the fishermen when you gathered together?—A. Yes, we talked it over but we did not have any meeting.

Q. Do you often talk about these things?—A. Yes, we talk them over.

Q. What in the opinion of the fishermen is the right thing to do?—A. Have the size limit enforced and try to stop them fishing before the season commenced.

Q. Is there much fishing before the season opens?—A. In some years there is quite a lot before the season opens, some of them fish all the summer.

Q. We have heard of that, I know they do it in some places.—A. We want some officer with backbone that will prevent it.

Q. Is there any fishing after the season is over, after the end of May do they still fish?—A. No, they haul up, but some of them may stay on the island, although I do not know what they stay there for; they may be cod fishing, and sometimes you see some pots, but I do not know whether they are fishing for their own use or to sell.

Q. Your idea is that the season is all right if it is strictly enforced, if no fishing is allowed before or after the season, and the size limit is strictly enforced?—A. Yes, strictly enforce the law. Now with regard to these fellows who fish inside if you stop at the 10 inch lobsters they would get hardly any. When I fished first, 15 years ago,

SESSIONAL PAPER No. 22a

we used to catch with 22 traps 2½ crates and over of large lobsters, and in some traps there were three or four seed lobsters, but now where we were catching all these big ones they are all small, they do not get a chance to grow, whereas if they would throw them out these fellows who fish inside would get more 9-inch after a year or two.

Q. What has been the practice with regard to the seed lobsters?—A. I heave them away, of course I do not know about the others, but I do know that all of our ten men heave every one away. We chuck them overboard outside, as soon as we notice the seeds we throw them over right away.

Q. What price do you receive for your lobsters?—A. Large or small?

Q. Well, the different kinds, take the small ones, those you sell to the canner, what do you get for them?—A. Last year we got 2½.

Q. Is that by weight or count?—A. By weight.

Q. Have you always sold by weight or is it only lately?—A. Lately.

Q. I suppose as the lobsters got smaller they preferred to buy them by weight?—A. Yes, and it is better for the fishermen, too.

Q. It is more satisfactory?—A. Yes.

Q. And the big ones, do you ship the market lobsters yourself?—A. Yes.

Q. You ship them directly to Boston?—A. Yes.

Q. Do you ship through Yarmouth?—A. Yes.

Q. And you get your ordinary market price?—A. Yes.

Q. At what season of the year do you generally get the best price?—A. In February up to the spring, we have got as much as \$52 a crate.

Q. What have you in the crate, 140 pounds?—A. They call it 140, and sometimes we have 60 pounds more than the ordinary crate.

Q. That is by careful packing?—A. Yes.

Q. And I suppose in cold weather you can venture to crowd them more?—A. Yes.

Q. What is your idea about the matter of licensing canneries, are there canneries enough now, do you think?—A. Yes.

Q. Have you any idea whether the fishermen would do better if they were allowed to can on their own account? Do you think, as a fisherman, you would make more money canning lobsters than by selling them?—A. No, we would not have the time to look after it some days because we start at 2 or 3 o'clock and get back at 9, and we could not do that ourselves, we require to have some sleep.

Q. If they want to run a cannery they must employ men to do the work? That is if they want to fish at the same time. But do you think that the fishermen had better stick to fishing and let others do the canning?—A. Yes.

Q. Has there ever been any attempt to enforce the regulations in your time?—A. Yes, there was a time when we stuck to the 9 inches.

Q. How long ago is that?—A. About ten years.

Q. It is a little more than that, I think?—A. It may be a little more.

Q. I think it was about 1892 or 1893, was it not?—A. I can hardly tell you; I think it was about ten years ago I commenced selling them openly.

Q. Do you know anything about the question of fish hatcheries or fish pounds?—A. No.

Q. You have never been down in the state of Maine where they hold the lobsters in pounds?—A. No, I never saw any of those pounds.

Q. Do you think if the 9-inch limit were strictly enforced and the fishing were only carried on during the legal season that is all it is necessary to do to protect the fishery?—A. Yes, I think that will do it all right.

Q. You think that will save the small fish and give them time to grow?—A. Yes.

Q. Have you anything more you would like to say?—A. No, I was requested by the fishermen to come, they coaxed me and as there was no other fisherman to come, I came.

Witness discharged.

9-10 EDWARD VII., A. 1910

ALBERT A. POTHIER, merchant, Tusket Wedge, called and sworn:—

By the Commissioner:

Q. You are from the same locality as the previous witness?—A. Yes.

Q. You are not engaged in lobster fishing?—A. I am not engaged in fishing myself.

Q. Were you ever engaged in lobster fishing?—A. No.

Q. Are you interested in the lobster fishery?—A. I am interested in furnishing supplies to the fishermen generally.

Q. You are a merchant down there?—A. Yes.

Q. Do you export lobsters?—A. No, we do not deal in lobsters at all.

Q. You were born and brought up in that same place?—A. Born and brought up there.

Q. You know the condition of the lobster fishery?—A. I know something about it.

Q. How do you think it compares to-day with what it was when you were a boy?—A. I do not think it is as good to-day as it was then.

Q. To what do you attribute the decrease now?—A. The fishermen attribute it to the fishing of small sized lobsters.

Q. I suppose it is pretty generally understood that the size limit is not enforced?—A. I guess so

Q. And never has been in recent years?—A. Not to my knowledge.

Q. Do you think that the fishermen are beginning to understand that that is wrong and that it is necessary to do something to stop it?—A. I think they do.

Q. What is their general feeling on the subject?—A. The general feeling according to the fishermen that I have been talking down there is that they should have a fortnight earlier in the fall and that there should be an 8-inch limit strictly enforced, that the limit be enforced very strictly.

Q. And how about the spring fishing, would you continue to the end of May just the same?—A. Yes, because it would be very inadvisable to close in midwinter because some would have their pots out.

Q. What I mean to say is if you fish two more weeks in December would you take off two weeks at the end of May, or would you fish till the end of May?—A. Continue to the end of May, because there are parts of January and February and the first of March when there is not much fishing done.

Q. Although their pots are out then the fishermen lose so much time going forward and backward.—A. Not only losing their time, but losing their gear.

Q. Do you think if that were done they would be more likely to give up fishing in the winter time or would that always continue?—A. That would continue.

Q. I suppose in some winters the fishing is poor?—A. Yes, the weather is bad, although some winters are mild, the season is not so rough and windy.

Q. Is the percentage of loss of traps very great?—A. In some years it is very large, I know that some springs the loss of traps is about one-third and sometimes even more, on the average it is very heavy.

Q. Have you any idea through your own business of the average earnings of a fisherman from the lobster fishery?—A. It is all according to where they are fishing; those that are fishing inside, what we call 'inside fishermen' average \$150, \$160 and \$200.

Q. That is the gross earnings?—A. No, the net earnings. Those that are fishing outside, such men as Mr. Leblanc refers to, in steamer, gasoline or big sail boat, they go from \$300 to \$400 or \$500.

Q. Can you tell us about how much of that would be from the sale of market lobsters and how much from the sale to the canner? What would the proportion be about?—A. I really cannot tell you that.

SESSIONAL PAPER No. 22a

Q. There are some people tell us that one branch of the industry is not as destructive as the other, and that it should be favoured and protected, and others tell us that it is the other branch of the industry should be encouraged, and we would like to know just which is the most valuable one to the fisherman. Which branch of the industry does he derive his largest revenue from and which is he likely to derive the most from?—A. My candid opinion is that if you were to close off the small lobsters altogether, from 9 inches down, it would not be profitable to fish at all, because they get the little ones to pay for their gear and provisions, and all those that go over 9 inches they can ship across.

Q. There are very few of them canned?—A. There are so very few that you can't see them.

Q. Do you not think that in the interests of the fishery, it would be wise to enforce a limit, you say 8 inches?—A. I think it would be in the interests of the fishermen.

Q. Do you not think that in a very few years the small lobster would have grown and the fisherman would have more than made up for the loss of the first year or two?—A. I think so.

Q. If the regulations were adopted and enforced strictly it would be hard on somebody?—A. For a few years.

Q. But ultimately it would be for the general good?—A. Yes, it would be for the general good. I think myself there should be an export duty on anything under 10-inch lobsters.

Q. You think there should be an export duty?—A. On everything under 10-inch, so that the canners would have a nice class of fish to pack, so that they would not bother about getting these 'tinkers,' and they would be able to afford to pay a bigger price, and their meat would be better in the cans and everything else. You understand, according to my idea the canners would profit by it as well as the fishermen, and by not shipping the lobsters from 8 inches to 10½ or 10 inches they would not be filling the market on the other side so full, so that they would reap a greater benefit from their shipments of the large lobsters in an improved price.

Q. That is the first time we have heard that suggestion.—A. The effect of shipping the 9 inch lobster over there has been that it has glutted the market and has forced the price down, so that the net result has been that the fishermen are getting smaller returns for their lobsters, and if that export duty were put on the mediums the market would not be glutted over there and they would get a better price for the large ones. Our American cousins would pay a bigger price for good fish instead of paying a poor price as they do now. I have been to the island myself among the canneries, and I thought it was very small meat they were putting up, but when I saw the shells I saw that the lobsters were only a few inches long. If the law were enforced strictly I think the canner would profit by it, but I think it would be disastrous to close the canneries.

Q. Do you not think the majority of the fishermen would complain about having their business interfered with if an export duty were levied on their fish?—A. I do not think so.

Q. You think they would simply regard it as a means of overcoming the effect of the change in the law in Massachusetts?—A. I would keep the small lobsters here for the canners, and instead of having say 2,000 crates of large lobsters go over there I would only send over say 1,600, and you would get a much larger price for them, and then the packers would get all the 9 inch lobsters to can.

Q. What improvements have been made in the matter of boat fishing the last few years?—A. Oh, there have been lots of improvements, instead of dorys with two men rowing all over the world, they go out now in steamers and gasoline boats and large sail boats. I was in one place this year where they were turning out the seventh gasoline boat since January.

9-10 EDWARD VII., A. 1910

Q. Have you heard anything of the United States vessels fishing lobsters outside of the 3 mile limit here?—A. I have heard of them, and I have known people who have seen them, and they say that the Americans make harbour around Seal Island somewhere.

Q. How would that affect the fishing?—A. I think it would affect it very much, because they would meet the lobsters coming in and prevent them coming inside. The only way you could meet it is to give our fishermen an open season for the whole twelve months. I do not see why they could not fish all the time, and I think our fishermen could compete with the Americans if they had an open season all the year round.

Q. If you had an open season all the year round what would you do about the size limit?—A. You would have to make the size limit a little larger.

Q. Do you know anything about the conditions in the state of Maine? Is the 10½ inch regulation strictly enforced down there?—A. It is enforced.

Q. I have heard some people from there say that it is enforced and others again say that it is not; that the conditions there are very much like our own?—A. I could not vouch for it myself, but I have known our fishermen to go over there and they have seen the lobsters come into the market, and they say you can tell a case of Maine lobsters every time you see it; as soon as you come to the limit they are cut off.

Q. Then they are very regular?—A. Very regular.

Q. Have you any idea of the effect of passing the present regulation there? Has it had a good effect?—A. It had a good effect in Maine. They are doing better there now than they used to.

Q. Are the conditions in Maine any different from what you have here?—A. I do not think so.

Q. Have they as much rough weather as you have?—A. Yes, or worse.

Q. They have not as much local ice as you have here?—A. No, they have not.

Q. Does the ice running out from the rivers, harbour and channels seriously interfere with the fishing?—A. Sometimes, but not for very long.

Q. At what time of the year would that be?—A. January and February, and sometimes in March there is drift ice.

Q. It is light ice, I suppose?—A. Sometimes it is, and sometimes it is good and heavy.

Mr. WALL.—They have a 9-inch limit in Boston, and I think if you have an open season here you must have the same limit as in Maine.

A. I did not say it was 10½-inch limit in the state of Maine. I said we would want a larger size limit; it is 9 inches.

By the Commissioner:

Q. Is there any close season in the state of Maine?—A. I could not tell you that.

Q. I fancy if you fish all the year round we will have to insist on a large size limit?—A. Yes.

Mr. WALL.—If we have a 10½-inch limit that will allow a man from Boston to come down here and catch our lobsters down to 9 inches and take them to Boston?—A. They can do that now.

Mr. WALL.—If you limit our men to 10½ inches it will amount to this, that the Boston men will come down here and have the benefit of our fishing?—A. They cannot come inside the 3-mile limit.

By the Commissioner:

Q. If we are shipping large fish steadily all the season it would spoil the market for anything under 10½ inches, would it not?—A. Certainly.

Witness discharged.

SESSIONAL PAPER No. 22a

ARCHIE BRENNAN, fisherman, Rockville, called and sworn:—

By the Commissioner:

Q. What part of the coast do you represent?—A. Teller's Cove.

Q. Do you come simply to give your own evidence, or do you represent a community of fishermen who met and sent you down here as their representative?—A. Yes.

Q. You have certain views of your own to express?—A. Yes.

Q. Before we do anything else, what were the suggestions your community had to make?—A. The majority of the fishermen there sent me here to advocate a 10-inch limit and the whole season to fish in.

Q. What was it that led them to make that suggestion do you think?—A. I think it was on account of the rumour of an American smack coming here. I think that was the principal reason for it.

Q. Has she been fishing off your part of the coast?—A. No, right below where we were.

Q. What number of fishermen are there engaged in your neighbourhood, roughly speaking? What number of boats are fishing from the section you came to represent?—A. About 50 boats and 100 men. I have nothing to do with the eastern harbour; I do not know what their views would be.

Q. I want to get some idea of the number of boats?—A. Between 50 and 60 boats, representing practically two men each.

Q. What is your season of fishing, from the middle of December to the end of May?—A. Yes.

Q. But when do you get best fishing?—A. Well, the best fishing is according to the season; sometimes, most generally, in April.

Q. Then you do more in your spring fishing than you do in your winter fishing?—A. From the 15th of December we have good fishing, as good as it is in April.

Q. What are the conditions in each different part of the season? Do you get the same run of fish, the same proportion of large fish or a larger proportion of small fish at any part of the season?—A. Yes, I think we get a larger proportion of small fish after the ground is fished over.

Q. Then the later you go the smaller run of fish you would expect to get?—A. Yes, that is the idea.

Q. What proportion of your fish are small, under the legal limit?—A. Well, I should think 70 per cent very nearly; that is to take the ground from inshore right off.

Q. Then a larger proportion of your revenue is derived from the sale to the packer than from the export trade?—A. I do not know that because—did you refer to the number of fish or the value?

Q. Well, to the quantity of fish; you sell your fish by weight?—A. Yes.

Q. Well, give it by weight?—A. I should think it is pretty nearly an even thing; that is take the stock from the factory and the live lobster export trade.

Q. That is you sell the same weight to the one that you do to the other?—A. The same weight, but in the money it is different.

Q. If the weight is evenly divided then the revenue derived from your market fishery must be greater?—A. I was not referring to the weight, but to the money we get.

Q. Then it is about equally divided?—A. Yes, I should think it is pretty nearly.

Q. Has the regulation with regard to the 9-inch limit ever been enforced within your knowledge? Did you ever find any fishery officer insisting that you should live up to the standard?—A. Not of late years; it was done at one time lately by the *Curlew*. She came in and seized some boats in the harbour.

Q. Were they released afterwards, or how did they come out?—A. They all got clear, but I do not know how they did it. They were charged with taking small lobsters.

9-10 EDWARD VII., A. 1910

Q. Do you think the taking of small fish is destructive to the fishery?—A. In a certain sense it is.

Q. In what sense would you not think it to be destructive?—A. Because we are not saving all the fish; if we did it would not give them any chance at all, but if we let a certain proportion of them go they would grow to make bigger lobsters; all that escape would go to make larger lobsters.

Q. Do you not think that the continued destruction of immature fish must be hurtful to the industry?—A. Yes, I think it is.

Q. Would you say that it should be stopped?—A. I do not know about that, but I say something has got to be done.

Q. What would be the effect of fishing all the year round on a 10-inch limit?—A. Well, I think——

Q. That limit would have to be strictly enforced?—A. Yes.

Q. And then the small fish would be allowed to grow would they not?—A. Yes.

Q. And is your idea that you would do better after two or three years after the fish had sufficient time to grow up to make up for the loss of the first year or two?—A. It is a question in my mind whether it would or not, but there is a general opinion that it would.

Q. Why would it not? What is the cause for your idea?—A. I believe that if we only caught the large lobsters there would be more boats fishing on the offshore grounds, and I believe that most of the breeding fish we are getting come from there.

Q. But they would put them back in the water outside in that case, would they not?—A. Yes, but where you get one with berries on you would get many more without any berries showing, and you would not know anything about it. There are lots of female lobsters taken.

Q. It is generally supposed that between 40 and 50 per cent of the fish taken are female?—A. That is what they say.

Q. You know the difference between the male and the female fish?—A. Yes.

Q. How do you think they run?—A. I think they are practically equal, and at the last end of the season when we fish offshore we get a rather large proportion of mother fish.

Q. With the berries outside?—A. No.

Q. The general impression is that the female lobster comes into shoal water, warm water, to develop her eggs. Do you think that is the case?—A. Well, I think in the case of the inshore lobsters, that is those that are ashore. it is.

Q. Do you not think that all the female lobsters come inshore to spawn?—A. No, I do not.

Q. Do you think they hatch out in deep water?—A. Oh, yes, I think so, because I have caught them anywhere from the 15th of December to the 15th of May both on and off the shore.

Q. With berries attached?—A. Yes.

Q. But I think you will find that the berries are dark and firm and hard, and not so near hatching when you get them early in the season?—A. Well, I do not know so much about that either.

Q. Is the amount of gear fished now very much greater than when you first began fishing?—A. To a certain extent they fish more boats now.

Q. They fish more boats and more gear?—A. Yes.

Q. To what extent has it increased? Has it doubled within your recollection?—A. Yes, it has more than doubled since I started.

Q. What do you think about this question of traps? Do you think we can regulate the proportion of small lobsters that escape by fixing a standard size of opening between the slats? We have a size limit in regard to the mesh in the nets used in the herring fishery in the great lakes, and why could we not have a standard opening fixed for the lobster traps?—A. Of course to a certain extent it would allow small fish out, but I

SESSIONAL PAPER No. 22a

do not know that it would let very many of them out. I think the small fish will crawl in and out of the trap.

Q. But do you think if a certain space were allowed between the slats that when the traps were disturbed they would go out?—A. No, I do not think they would; as a general rule I think the pressure of the water on them will keep them in the traps.

Q. There are certain parts of the coast where canning must be the main feature of the industry; there is no prospect of making the live lobster trade a success, and the proposition there is to do away with the size limit and only allow them to fish two months, regulating the capture of the small lobster by a standard trap. We are anxious to get the opinion of the various fishermen who can speak from experience whether we can provide for the escape of the small fish by that method?—A. To a certain extent it will provide for their escape, but if you put the slats very much farther apart than you do now the big fish will work their claws through, and when they cannot get them back they will bite them off and injure them.

Q. What distance do you allow between the slats in making your own traps?—A. Generally we use the pole of the hatchet.

Q. That will be a little under one inch?—A. It is under one inch.

Q. And the slats will swell some in the water, will they not?—A. Yes.

Q. Is it the case that you expect the canner to take everything you send him in the way of fish?—A. I do not know that I expect it, but most generally I do get clear of all that I have that way.

Q. They do not make any bones about accepting them?—A. No, I have heard them make kicks sometimes about too small fish.

Q. That is that they were unreasonably small?—A. Yes.

Q. What length would those lobsters be that were objected to?—A. I had always an idea that you catch lobsters anywhere from 3 inches up, but I do not believe on the average there are any lobsters caught in our community under 6 inches. It is very rarely you see one under 6 inches.

Q. There is another matter I forgot to ask some of the witnesses about. It has been suggested by some of those who have given evidence that the lobster fishermen should be registered, that every man before he goes lobster fishing should go before the fishery officer and take out a form of license and register himself, and that he should sign an agreement to live strictly up to the regulations, a copy of which would be furnished him with his license. The theory of those who suggest this is that a man having done this will feel himself bound by the regulations, and will not only live up to them himself, but will be very likely to see that any other fishermen will do the same, and that if they do not he will inform against them. Of course there is the further idea that a license would not be issued to any man who was found to be violating the law. How would that work do you think?—A. I do not know but that it would work all right, provided it did not cost us anything to get it.

Q. I do not think the idea is to derive any revenue from it at all, but do you think it would have a good effect?—A. I think it would, because if the government enforced the law I would be willing to take out a license and help it out all I could.

Q. Do you think it would answer that way generally?—A. I could not say about the others.

Q. Do you think that a fisherman knowing the law would abide by it without any formal arrangement of that kind?—A. I should think he would.

Q. Having done that himself do you think he would be more liable to inform on his neighbours than he is now?—A. I do not think I would inform on my neighbour if there were any other way out of it, because, supposing there was a man bad enough to break the law and I should inform on him, perhaps next morning I would awake to find I did not own anything.

Q. That is one of the risks you would have to take?—A. It is a risk that I am not going to take.

9-10 EDWARD VII., A. 1910

Q. Have you heard of fishermen avoiding canners who were known to be scrupulous about taking small lobsters?—A. No.

Q. Some canners have said they have been obliged to take small lobsters because if they did not they would lose their fishermen?—A. Well, in that case I think they would. I think if there was one man ready to take them the others would lose their fishermen.

Q. Do you think the berried lobsters are returned to the water?—A. I think so of late years.

Q. That has not always been so?—A. There was a time I think it was more the fault of the canners than anything else that it was done. When they first commenced to ship lobsters to Boston it was done, but of course they found that the fish would not live to reach Boston.

Q. Have you any experience in the matter of hatcheries and pounds?—A. No, I have not.

Q. The smackmen in the case of the hatcheries take the berried lobsters from the fishermen, remove the berries and send them to the hatcheries, but, of course, the best way is to put the female lobster back in the water?—A. I think if you could get the mother fish from some other place it would be a benefit, but I believe from what I have read and observed the mother lobster will do as well at the hatchery if you only give her a chance.

Q. Is there any fishing done in your district before the opening of the season?—A. Not in our locality, but they will perhaps put out their traps a day or two before in order to be ready for the opening, though not to fish.

Q. Just to secure the ground?—A. Yes, but not to fish.

Q. Is there any fishing done after the close of the season?—A. Not very much.

Q. We have been told there is a great deal of fishing going on all through the year?—A. Yes, there are some who do not stop with the season.

Q. What is done with the fish they get? Do they can them themselves?—A. No, I think the local market takes them.

Q. That would not be very considerable, if it is only the local market that takes them?—A. It takes quite a lot.

Q. But there is no canning done?—A. Not to my knowledge.

Q. The fishermen do not can for themselves outside on the islands and other places?—A. Not to my knowledge.

Q. There are some places where they do can on their own account, in cellars, wood-houses, stables and other places?—A. Not to my knowledge.

Q. Now, as to the matter of licensing canneries, do you think that more canneries would mean more fishing?—A. Would mean more fishermen?

Q. Yes?—A. No, I guess every one is at it now that could go at it.

Q. How are the facilities for the export of fish alive to the market, are they all that you require, all that can be done or that you could expect?—A. Well, I do not know, but what they are.

Q. How do you send your fish; you ship them through Yarmouth, and they are exported from there; how do they come to Yarmouth?—A. On teams.

Q. You haul them?—A. Yes.

Q. What distance have you to haul them?—A. Between two and three miles, I think.

Q. That is the shortest way and the handiest way, in your case?—A. Yes.

Q. What would be your suggestion about this matter of fishing offshore here by United States vessels; how do you think that can be counteracted or met?—A. Well, I do not know, it is a pretty hard question.

Q. Some people say that we should do away with the close season and establish a limit of 10 or 10½ inches, and allow fishing all the year round.—A. Yes, but if you do that, have they not quite an advantage as they can take them down to 9 inches.

SESSIONAL PAPER No. 22a

Q. Would it not be the case that there would be so many large fish coming in, because you would have the whole year to fish, that the market for the 9-inch lobsters would be affected?—A. Yes, I think it would.

Q. If there were such a large amount of large fish.—A. I believe that if the 9-inch fish were not allowed to go to the American markets we would have a better price than we get now.

Q. Has the market price for lobsters fallen since the 9-inch lobsters went into the American market?—A. Yes, this last year the market price has not kept up to what it has been in past times, and with regard to the American vessels, they are our own people that are running those smacks, and if they had the winter season to fish here perhaps they would not go across and come back in these vessels, and perhaps the well smack after all would be the best thing for fishing offshore long distances away.

Q. Would there be any probability of the fishermen here going into a similar business with well smacks, carrying it on in the same way?—A. It would be if the Americans came.

Q. Would you not be in a better position to carry it on if you were fishing all the year round?—A. Yes, I think we would be in as good a position as they are for carrying it on if we had the whole season.

Q. Now, is there anything you think of I have not asked you about?—A. I do not think there is. I think with regard to the suggestions from some other districts in favour of a 10-inch limit that they would be prepared to modify that because the Americans would have a chance to take the 9-inch lobsters and we would not, so that it would not save them. The Americans might take the 9-inch lobsters and can them themselves.

Q. Do you not think that a strict enforcement of the law and raising the limit would tend to increase the number of large lobsters?—A. I think it would.

Q. What would be the result of shipping that large quantity of large lobsters to Boston, would it affect the price?—A. I think it would tend to bring the price down.

Q. Then it would be impossible to say that such a regulation would result in better returns?—A. It might not, but still the way that I see it is, that it would protect the lobsters.

Q. But if you catch more large fish and ship them to Boston you might not get any more money?—A. No, we might not.

Q. It would protect the fish but not the fishermen, is that it?—A. That is about it. I believe a man that had the interest of the lobster fishery at heart would not violate the law without registering any more than he would after he had registered. I do not think it would be any advantage anyway. My experience is, I have caught fish fifteen miles to the west of Seal island, and I have hauled up my pots and found them full of these small lobsters. If you take fifteen or twenty traps and go off on the best of the ground that I have usually fished you will have just as good fishing as we had twenty years ago, but after you have fished for a week you will see them commence to shorten up and you will get the small ones. There is one more question I would like to put, and that is, where does the three mile limit extend to?

Q. From island to island.—A. Does it take in Seal island?

Q. Certainly.—A. Then this American vessel must have been fishing three miles inside of Seal island.

Q. The very fact that Seal island belongs to Canada makes it very clear.—A. These Americans have been fishing inside of Seal island, and therefore they are within the three mile limit.

Witness discharged.

MR. LAW, M.P.—I would like, Mr. Commissioner, to put on record the following communication which I received from Messrs. H. & D. Entremont:—

9-10 EDWARD VII., A. 1910

' LOWER EAST PUBNICO, N.S., September 14, 1909.

'From what I hear them talk the fishermen would prefer the season to open one month or fifteen days earlier in the fall and to close earlier in the spring, say the 1st of May or not later than the 15th May, as there are very few lobsters taken by the inshore fishermen when May comes in, this would give other branches of fishing a better chance; our cod fishermen would get crews to start earlier in the spring. Mackerel used to frequent our shores and we have an idea that lobster buoys, lines and probably old bait break up the schools of mackerel and keep them from coming in. A great many lobster fishermen are netters as well and as mackerel make their appearance on this shore about the 15th to the 20th of May they would like to see all lobster traps taken up then, or before, to give the mackerel a chance to come in. As regards the size limit I think the law is all right now, only enforce it. Of course the factories cannot run on 9-inch lobsters, but the fishermen can send them with the large lobsters to the States; that would protect the fisheries to a certain extent by enforcing the present size limit law. The seed lobster could be bought from the fishermen and put in a pound or hatchery.

Yours, &c.,

H. & D. ENTREMONT.'

The Commission adjourned.

TIVERTON, September 16, 1909.

E. A. GIDNEY, packer, Mink Cove, called and sworn:—

By the Commissioner:

Q. How long have you been engaged in the lobster packing industry?—A. For eleven years, but the last two years I have not packed any.

Q. You have always been engaged in the same locality?—A. Yes.

Q. Are you a native of this place?—A. I am a native of Mink Cove, I was born and brought up there.

Q. When you were operating a factory what was the extent of your operations, what was your best pack or average?—A. I would average about 150 cases.

Q. That was the product of how many boats?—A. I bought them wherever I could buy them, all around here.

Q. You collected them with smacks?—A. Yes, I had a gasoline boat, and went up the neck and down the bay.

Q. What was the condition of the fishery when you began compared with what it was when you left off?—A. It was much better when I began, there were more lobsters taken then.

Q. How many packers were operating here?—A. There was only one before I commenced, 30 years ago there was another factory but it went up, Mr. Botelier was packing on the opposite side, in the same cut.

Q. When you first began what were the regulations?—A. We heard about the regulations but never saw them enforced.

Q. Even as early as that?—A. Yes.

Q. Within your recollection away back in '92 and '93 was there not an attempt made to enforce the regulations?—A. We heard some talk about it, but never saw much enforcement, I guess I was the only man they hauled up in the county, they had me hauled up one time for canning short lobsters.

SESSIONAL PAPER No. 22a

Q. And how is it to-day?—A. The canner to-day cannot can lobsters over 9 inches because they are worth more in the shell.

Q. If he cannot can the 9 inch lobsters he must take the smaller ones?—A. Yes.

Q. How small do they take them?—A. Oh, the size of 4 inches.

Q. 4 and 5 inches?—A. Yes. A year ago last year I worked at River West on Gaspé Coast in J. W. Winsor's factory and there they threw nothing away.

Q. It is your opinion that the pack is being kept up by undersized lobsters being packed?—A. That is my opinion, but I also know that no man can buy lobsters at the price at which the 9-inch lobsters are and pack them at a profit, and no man will pack without a profit.

Q. Which is the most profitable branch to the fisherman, the live lobster export trade or canning?—A. The export trade.

Q. What proportion of the fishermen's revenue is derived from the export trade?—A. The other is very small in comparison with the export, I cannot estimate it, but it is very small, you see you can nothing but the snappers.

Q. What would it run to when you began?—A. It ran five lobsters to the can and then I was buying 9 inch lobsters, eleven years ago it would average 5 to the can.

Q. How many 7 inch lobsters does it take to fill a pound can?—A. I do not know.

Q. By actual count it takes 9?—A. I was going to say 8; our lobsters are very well meated here, a great deal better than they are up in the Bay of Chaleur.

Q. What is the practice here with regard to the fishermen, do they own their own boats and gear?—A. Yes.

Q. Are any supplied by the packer at all?—A. No, it is nothing like it is up there, in the Bay of Chaleur, every man owns his own; I do not know of any case where a man does not own all his boats and gear himself.

Q. Have you ever done any lobster fishing yourself?—A. Yes, I have.

Q. Have you any idea of the percentage of egg-bearing lobsters in this neighbourhood?—A. It would vary, at some times in the year it is larger than at other times. In the winter you would not probably get one seed lobster out of 60, but in the summer there would be more.

Q. Is it the case that you find more of these seed lobsters in shoal water than off shore?—A. No, I do not think so, I think you will find just as many off shore.

Q. Is it not a fact that they gravitate towards shore to spawn?—A. They might, I have never fished in June, I have seen the time when you could go out at low water and every third lobster you would pick up would be a seed lobster, and that would be in the middle of winter.

Q. If the canners positively refused to accept any undersized lobsters do you think the fishermen would take them?—A. I do not think they would, they might take some home to eat them but I do not know what other use they could make of them.

Q. Have you noticed any general decrease in the space left between the slats in the traps of recent years?—A. Well, I think they are closer than they used to be, in fact I know they are closer than they were 12 years ago when I made traps; I used to leave the width of a lath between them and now they are closer than that.

Q. That would give you about one inch space?—A. Yes, the width of the lath it used to be, but to-day they are much closer.

Q. Would you venture to say what proportion of lobsters taken in the traps are below the legal size limit?—A. That depends upon the locality you fish in; if you fish out in the Bay of Fundy you will get more big ones than small ones, but in St. Mary's bay, you would get six small ones for one big one, and in fact when it comes to March in St. Mary's bay you get nothing but small ones, the large ones have all been caught off.

Q. Do you think that an increase in the number of canneries would mean any increase in the amount of fishing?—A. Not a bit if every man were canning there would be no more lobsters taken than now.

9-10 EDWARD VII., A. 1910

Q. Every man that can fish is doing so now, you think?—A. Yes.

Q. Is there not a great deal more gear in the water now than when you began?—

A. Yes, but I do not think it has increased very much in the last three or four years, although it has increased greatly in 14 years.

Q. Do you think the decrease in the fishery is still going on? Some people say it has been arrested?—A. I think it is, I think the fishery is gradually decreasing.

Q. You think it must be wrong to take the immature lobsters, besides being very wasteful?—A. If you eat the chickens you cannot get the eggs.

Q. You say there is some difference between the lobsters on this coast and those caught in the Bay of Chaleur?—A. Yes, they are fuller of meat here than they are on the Bay of Chaleur, and it will take fewer lobsters to fill a pound can here than it will up there.

Q. To what do you attribute the decrease in the fishery, to overfishing?—A. Yes.

Q. And to the destruction of the immature fish?—A. Yes.

Q. What has been the practice here with regard to the destruction of the berried lobster?—A. I think the fishermen here are very careful, I never knew of one man that tried to smuggle any seed lobsters.

Q. Was that always so?—A. As far as I know, I never knew the seed lobster to be taken, it is immediately put back in the water.

Q. Do you think there is a better disposition on the part of the fishermen now to save the seed lobster, do they see the necessity of it?—A. Yes, I think there is, I think there is a great deal of difference here, it is not like the Bay of Chaleur where they take everything.

Q. Do you think that short districts and many divisions with regard to seasons and size limits are apt to encourage violations of the law?—A. Yes, some advocate one thing and some another, in some districts they throw away the small lobsters and in others they take them.

Q. How about different seasons in adjoining sections, do you not think that as far as possible there ought to be as few sections with different size limits and seasons as possible?—A. Speaking for our own place where I live, and from my own observation, I should say that in February two lobsters are worth as much as three at any other time, they bring a higher price.

Q. You do not begin fishing until the 6th of January here?—A. The 6th of January.

Q. And you fish up to the 15th of June?—A. Yes.

Q. And in the other districts at the other side of you they stop at the end of May?—A. Yes.

Q. What led to that increase in the length of the season here?—A. I really do not know.

Q. Do the fishermen as a rule fish right up to the end of the season?—A. Some do and some do not.

Q. Are there other fisheries then that they might go to?—A. Yes, I think that right in this locality had the fishermen knocked off earlier they would have done better in the other fishery than with the lobsters.

Q. There is nothing to prevent your fishing here all through the winter, you are not bothered with ice or anything of that kind, it is only the rough weather?—A. Only the rough weather.

Q. Can you fish in February and March?—A. They do.

Q. Is there much loss of gear during February and March?—A. No, not in the Bay of Fundy, there is no need to lose it, but the ice sometimes comes down in St. Mary's bay and cuts the ropes off.

Q. What is your idea as to the protection of the lobster, there is no question as to the failure of the industry, what do you think should be done to bring it back to its former state?—A. I should say, close the canneries, every one of them, and allow nothing to be landed under 10 inches.

SESSIONAL PAPER No. 22a

Q. How far on the coast would you carry that?—A. St. Mary's bay and the Bay of Fundy anyway.

Q. And how far to the eastward?—A. Go around to Seal island.

Q. How about farther around the coast?—A. I do not know anything about that coast at all.

Q. Do you know anything about Charlotte County?—A. No, I do not.

Q. Is it the case that canners are compelled to accept undersized lobsters for fear of losing their fishermen who could take them to the other canneries and sell them?—A. They cannot get anything else but snappers anyway to can. I have had to shut my cannery up for two years on account of the high price.

Q. How are the lobsters bought here?—A. By count.

Q. Do the small lobsters count, every one?—A. No, two for one.

Q. What did you pay?—A. 3½ cents for small lobsters is the highest I have ever paid.

Q. The price was a little lower than that last season?—A. Yes, but I think they paid higher towards the close of the season, they went up a little.

Q. How are the lobsters sent to market?—A. From here we export them to Yarmouth by the D.A.R.

Q. Are the facilities adequate for carrying on that trade?—A. Oh, I think so, in a way.

Q. Some people have suggested that the lobster fishermen should be required to register. Have you seen that in the evidence given before the Committee last winter?—A. No, I have not.

Q. It has been suggested that they should take out a license and that they should sign a form containing the regulations, the idea being that any fisherman who signed that would be more apt to live up to the regulations and to inform against any neighbour who violated the law, and that anyone convicted of violating the law would not be allowed to fish in future?—A. Certainly it would have a good effect.

Q. You think it would have an effect.—A. Certainly, I think so, without a doubt.

Q. The effect of enforcing the present regulations strictly would be to close the canneries?—A. Sure, they could not can without the small fish, I could not can without the snappers and I do not see how anybody else could.

Q. Various suggestions have been made to the department as to the best thing to do, some people say shut down all lobster fishing for a term of years?—A. I do not think so.

Q. The Lobster Commission of 1898 recommended temporary reserves, shutting down by sections all around the coast?—A. That means that John could catch them and Jim could not.

Q. Shut off a couple of counties for one year and move that section around to the next two counties next year and so on until all the different counties had been treated alike.—A. It would be just as beneficial to shut them all down at the same time, if you did not they would come across our line and we would go across theirs.

Q. That is what is done to-day, is it not?—A. Yes, one man on one side is chucking over his lobsters and the other man is catching them.

Q. What is the best time for lobster fishing?—A. In the beginning of the season, because the big ones get gobbled up and they get scarce outside, in April they may come in again in the warm weather.

Q. Have you heard this complaint about United States smacks fishing off shore, they are off Yarmouth and Shelbourne?—A. I have heard of it but I haven't any personal knowledge.

Q. What effect is that having?—A. It will produce a scarcity of lobsters there, they are very pretty to come over here and catch our largest lobsters and take them over there.

9-10 EDWARD VII., A. 1910

Q. Is the present regulation restricting the number of canning licenses satisfactory?—A. I suppose it is satisfactory, but if there were any more canning there would not be any more canned.

Q. Do you think the canneries should be subject to inspection, that is as to their condition and cleanliness?—A. I do not know what benefit it would be, the factory owners are very particular, they are proud of their goods and like to keep them as neat as possible.

Q. There are a great many canneries that are not in such good condition?—A. It affects their own pocket more than anything else.

Q. The tendency of the day is to inspect all food products, and should not the product of the lobster cannery be inspected?—A. The buyer is an inspector himself, and if bad goods go to the market they are not going to be sold.

Q. You do not think an official inspection, such as is given to flour, meat and other foods should be applied to the lobster cannery?—A. It has not any merit, each man's goods stand on their own merits.

Q. How about giving canning licenses to aliens?—A. Oh well, we have Canadians enough to do all our own canning without allowing the aliens to come in; I have a plant that cost over \$2,300 and I cannot run it at all at present.

Q. As the canning failed in Maine, they moved over to Canada, were they not the pioneers in the industry here?—A. Yes, the first canneries we ever had were established by the Americans.

Q. Are the fishermen satisfied with the price they have received from the canners?—A. They have received just what they can get for them.

Q. Is there any competition at all in the matter?—A. No, there is not.

Q. Has there been any case of one factory paying more than another?—A. I never heard of one, the easiest cannery they can smack them into they are going to do so, it would be an awful lot of night work to smuggle them in.

Q. There is no need of doing it at night, is there?—A. You would have to do it at night if there was going to be any smuggling.

Q. It has been said that in some cases fishermen have suffered the loss of their catch because the canners refused to buy their lobsters and to operate their canneries although there was a sufficient supply?—A. The only lobsters the fishermen cannot sell are the snappers.

Q. In some cases it has been said that the canners have shut down their factories and refused to buy their lobsters?—A. That has more reference to the Cape Breton shore than it has here.

Q. Which branch is the best for the industry and the best calculated to continue it?—A. The live lobster trade, there is no comparison whatever.

Q. Should the shipment of live lobsters be favoured in preference to the canning in drafting new regulations?—A. Yes, by all means.

Q. Are the present facilities adequate for the proper handling of the live lobster trade?—A. Oh, yes.

Q. Are any further steps required to benefit that trade?—A. I do not know what further steps would be required unless it would be refrigeration, sometimes some of our lobsters are placed in the boat, when she is heavily loaded, close to the engine and boiler rooms, and they are cooked when they reach there, whereas if there were cold storage facilities they would all be alive.

Q. You think it would be a good thing to establish hatcheries, do you, or what have you to say in reference to that?—A. No doubt it would increase the supply if the berried lobsters were put back in the water, and St. Mary's bay is a natural hatchery.

Q. As to the matter of pounds, what do you say?—A. I do not know anything about them at all.

Q. It has been suggested that the fishermen should bring in their berried lobsters and be paid for them, and in certain instances where the facilities exist, they should

SESSIONAL PAPER No. 22a

be placed in pounds and held there until the close of the season?—A. I do not know about that, I have seen the hen sitting on the eggs and bringing them all out, and bring them all up, and I have seen the same number of eggs put in the incubator and the chicks all died; they do best under natural conditions, and possibly it would be the same with the lobster. There could be no more natural condition than to put them back in the water.

Q. If the fisherman is at work off shore and there is any inducement given him to bring the berried lobster in she may be safer?—A. That inducement may be injurious to the lobster.

Q. Is there much fishing done here out of season, either before the opening of the season or after the close?—A. One of the cutters came up St. Mary's Bay the other day and had a lot of work smashing up the traps, and found a lot of boiled lobsters around; I think it was 8 days after the season closed. I saw a load of lobsters going up to the cannery.

Q. Was that the man that was fined heavily?—A. I never heard of him being fined. The only opinion I would like to express is to close up the factories, make the fishermen build their traps with sufficient width between the laths to allow the undersized lobster to go through and protect the seed lobsters so that the fishery will be worth something to the country.

Q. What would you say to the introduction of the same regulations on this coast that exist in the State of Maine?—A. What is that?

Q. The 10½-inch limit and the open season?—A. I think it will be better than it is at present; enforce the law and appoint officials who will carry it out.

Q. Do you think it is wise to have an officer from the place?—A. Yes, have a man who knows all about it.

Q. Our experience is that it is better to have a stranger?—A. That will be all right if he does his work, but if the officer is going to sit in his office with his feet on the chair smoking a pipe there will not be much enforcement of the law.

By Mr. Jameson, M.P.:

Q. You are an expert fisherman, did you ever do any fishing?—A. Yes.

Q. From your experience can you say whether the lobsters crawl on or off the coast or along the coast?—A. Oh sure, they move up and down the coast; for instance, I have heard the fishermen say when I fished, that on the 28th of March they expected a school of lobsters off Westport, and in three days they would be in St. Mary's Bay, that is pretty good proof they move up and down the coast.

Q. What effect would the destruction of berried and small lobsters on the eastern coast of Nova Scotia have upon our water?—A. I think it would affect us very much, the Cape Breton coast you are referring to now.

Q. I might say anywhere east of Halifax?—A. I do not think it would hurt this part of it, but from Cape Sable up I think it would.

Q. From any point west of Halifax?—A. I do not know that anything east of Cape Sable would affect us at all.

Q. You have made a suggestion that all the canneries be closed; should they be closed what would you consider a reasonable notice beforehand in order that they might close up their operations?—A. Close them now at once, give them notice at once; I had to close down myself without any notice because I would not can small lobsters.

Q. You will understand that in the case of the ordinary canneries there will be a quantity of tools and materials on hand from year to year such as cans, &c., and the question is what would be a reasonable notice in order to enable them to evade the loss which would follow from a general closing of these factories without notice?—A. As regards tin and cans, I do not think there are any on hand, we never make up any

9-10 EDWARD VII., A. 1910

more cans than we think we can use up because they will only rust and deteriorate if left over.

Witness discharged.

AUGUSTUS HARRIS, member of the Executive, Fishermen's Union, Long Beach, called and sworn:—

By the Commissioner:

Q. Do you speak as a fisherman or a canner or a representative of the Fishermen's Union?—A. I am a representative of the Fishermen's Union, I suppose.

Q. Have you been delegated by your union to represent them and speak for them?—A. Nothing more than that I am one of the executive for the western part of Nova Scotia.

Q. How many years experience have you in connection with lobster fishing?—A. Twenty.

Q. And do you devote your attention to any other branch of the fishery?—A. No.

Q. You fish lobsters only, has that always been so?—A. Yes.

Q. Are there many of your local fishermen here who fish lobster only, farmers and others?—A. Yes, there are farmers who fish for lobsters.

Q. And who do not do any deep sea fishing?—A. Yes.

Q. Do these people own their own boats and gear in every respect?—A. Yes, all of them.

Q. How far off shore is the lobster fishery prosecuted here? You have two sides to this peninsula, you have the Bay of Fundy side and the St. Mary's Bay side; is there a majority fishing in the bay?—A. They fish all the way across St. Mary's bay and out from the headland, anywhere from 4 to 9 miles, and they also go out to shoal water as far as 9 miles from Westport.

Q. And on the Bay of Fundy side?—A. They do not go very far, the water is too deep when they get very far off shore.

Q. What is the greatest depth of water into which they go?—A. Perhaps 30 fathoms.

Q. I suppose the traps are all fished on single lines, there are no trawls here?—A. Most of them are single.

Q. Do some of them fish trawls in shoal water?—A. A very few.

Q. What do you consider the average value of a trap with its line?—A. 75 cents and over.

Q. Do the fishermen as a rule make their own traps?—A. That is unless for very deep water when it costs a little more for the rope than 75 cents, and they generally make their own traps.

Q. Is the annual catch decreasing?—A. Very rapidly.

Q. Are there many more fishermen fishing now, and do they fish more gear than when you first began fishing?—A. Oh, yes, nearly double what it was years ago.

Q. Then it is safe to say that it takes an increased amount of gear in order to keep up the average of the catch?—A. Yes.

Q. Is the average size of the lobsters as great now as it was when you first began to fish?—A. No, it is not as large, they are decreasing in size.

Q. What proportion of the lobsters now taken would you say are below the legal size limit?—A. About 8 illegal lobsters under the 9-inch limit are taken to every one of the large ones.

Q. That is to every one from 9 inches up?—A. Yes, from 9 inches up—at least I do not just mean that, I mean from 10½ up; take 11 lobsters, and one will be large, 2 will be from 9 to 10½ and 8 will under 9 inches, that is in St. Mary's Bay; the proportion will not be so large in the Bay of Fundy.

SESSIONAL PAPER No. 22a

Q. What is it in the Bay of Fundy?—A. There will be 4 tinkers, 2 from 9 to 10½ and one 10½.

Q. Is there any difference in the trap you now fish with compared with that in use when you began years ago?—A. Yes, I doubt if the space between the laths will now average three-quarters of an inch, and it used to be one and three-quarters.

Q. That reduction must have been made for the purpose of holding the small lobster, was it not?—A. Certainly, that is the only reason.

Q. Do you think we could protect the general run of small lobsters by insisting on a standard trap with a certain space between the laths, say one and a half inch?—A. Yes, I have always been of that opinion.

Q. You think that would govern it largely?—A. Yes, I could give you the figures of lobsters that I counted myself and the number of traps; one man fished 38 traps and he had 381 lobsters, 152 from 9 to 10½, and he had only 12 tinkers; another man had 96 traps closely lathed, and he got 36 large lobsters, 156 from 9 to 10½ and over 400 tinkers. Three boats with the same number of traps will make just about an average of that, in other words a man with what you call the legal trap that will not hold the tinkers had just as many shipping lobsters as the man had with three times as many traps with the laths close together.

Q. What do you think of that proposal to have the lobster fishermen register, do you think there is anything in it?—A. I think it would have a good effect if you took away the right of a person to fish if he were detected fishing illegal lobsters; I think that would have a good effect; I think the best effect would be to have a fishery inspector to inspect all the traps before they leave the shore.

Q. Of course that would have to be done if any such regulation were adopted. And you think that would be of good effect?—A. Oh, yes.

Q. Some fishermen say it would not make any difference.—A. I know it makes a difference.

Q. The fact is that the space in the traps has been narrowed down gradually, and that could only be for one reason, that is to take the small fish?—A. Yes, certainly.

Q. Do you think the regulations with regard to the berried lobsters have always been strictly observed here?—A. No, they have not.

Q. Which branch of the fishery do you consider is the one that should be protected, if they have to make any discrimination, the fresh lobster industry or the canning?—A. The fresh market industry of course.

Q. And any regulations that are proposed, any new regulations that may be adopted, should be made with a view to protecting the market fishery which is the least destructive branch?—A. Yes.

Q. Even if that were done at the expense of the canneries?—A. Yes, I think the cannery should go, especially where we have the United States markets open to us.

Q. Have you a general knowledge of the coast; how far along the coast do you think a 10½ inch limit could be safely imposed from here to the eastward? Would it be safe to do that as far as Halifax?—A. It would be best for the fishermen if it could be done, and there is no doubt but it would be best until this 9-inch market was opened up in Boston, but now the conditions are different to what they were at that time, and I think that if we had a 10½ inch law it would probably give the fishermen more money and protect the fishery better than anything else.

Q. Do you think if we established a 10-inch limit we could venture to open the season all the year round?—A. I do not think it would be profitable at all, the fish would be caught up in the summer time when the prices are low, and we would not have half as many fish in the winter when the prices are high.

Q. But they need not fish if the prices were not good?—A. But one-half the people would fish.

Q. And if there is a loss it would be their own affair?—A. Well, I know, but it would be better not to fish. I know of parties who have fished during the illegal

9-10 EDWARD VII., A. 1910

season, and you can catch more lobsters on our coast here in five traps between the 1st of September and the 1st of November than you can in 80 traps in the winter season. I know it to be a fact that in the fall you can take these large quantities, I have seen 40 taken out of a trap, and in the same place I have seen in the winter time 5 large lobsters taken out of 80 traps, and perhaps 10 and 15 for an average.

Q. Do you think you would ever deplete the fishery if you enforced strictly the 10½-inch limit?—A. I do not think you would, if you also protected the spawn lobster.

Q. That goes without saying. Talking about that spawn lobster what, in your idea, is the best way to protect her?—A. If the fishermen were paid for her, either to throw her overboard or to bring her in and put her in a suitable pound, every one.

Q. Do you think that you find more female lobsters with eggs on in shore late in the present season than you do when you first begin fishing; do you think they gravitate towards the shore?—A. There is no doubt they gravitate towards the shore, I know on the southern shore they come in in great quantities.

Q. As to the movements of the lobster, does he move along the shore or back off into deep water?—A. I think the lobsters do both, those that are coming in shore come in from the deep water.

Q. Do the lobsters winter in this bay?—A. Yes, they winter in this bay, but they are off in deep water, they are not so much in shore as they are at other times.

Q. You think in this bay there is a movement in and out?—A. Yes, there is a movement in and out, no doubt there is a class of lobsters that come in in the spring of the year in March, a lot of spawn lobsters coming up into the bay into the shoal water for the purpose of laying the eggs and hatching them out.

Q. Have you any idea what is their spawning month?—A. Yes, August this year, but principally in June and July.

Q. By spawning you mean that they carry the spawn, the eggs were extruded?—A. What I mean by spawning is laying their eggs which do not hatch until August and September.

Q. Do you think it would be fair to charge the canner a larger fee with which to establish a fund for the purpose of paying the fishermen for the berried lobsters?—A. I do not think you should allow the cannery to remain in business at all.

Q. There are some places where you must have canneries, you cannot avoid it, because it is the only branch of the fishery that can be carried on?—A. I see the idea, but where we have the fresh fish market to send our lobsters to I do not think any cannery should be allowed. East of Halifax, of course, they have no market of that kind, and they must have canneries. In those places, of course, it would be all right to charge an increased fee as you suggest.

Q. Do you think it would be feasible for the department at Ottawa to send somebody down to meet the fishermen and to explain to them the necessity for certain regulations and the advisability of protecting the berried lobsters themselves? The Agricultural Department sends out men to instruct the farmers as to the best rotation of crops, the best classes of stock and so forth to raise, and do you think anything would be gained by doing something of that kind for the fishermen?—A. Yes, I am a very strong advocate of something of that kind, I have been advocating it for years.

Q. The members of the Fishermen's Union tell us that it is part of their creed to invariably protect the berried lobster and put her back in the water; do you think there is a better feeling on the part of the fishermen with regard to that matter, that they are beginning to see the necessity of protecting that fish particularly?—A. I think so, in fact I know that in very many places they are protecting it better than ever they formerly did.

Q. As to the matter of hatcheries, have you any experience in them, and would you advocate the establishment of more hatcheries for lobsters?—A. What kind of hatcheries do you mean?

SESSIONAL PAPER No. 22a

Q. I mean a hatchery where the eggs taken from the female lobster at the canneries are hatched in jars?—A. I think where the canners are allowed to can the spawn should be taken from the seed lobster and sent to the hatchery to be hatched. I think that is a very good idea.

Q. There are those who advocate pounds rather than hatcheries; of course there are some places where pounds could be established, but there are many places where that could not be done.—A. Well, in this part of the country it will have to be done, because no one here ever saves the spawn lobster to bring it into the market, they do not take the spawn lobsters to the cannery here.

Q. In this locality you are in favour of a pound rather than a hatchery?—A. There is no other method.

Q. Taking the coast generally, what do you think about the issue of canning licenses, do you think there are licenses enough issued now or would you advocate the granting of more licenses? The fishermen generally have the opinion that if there were more canneries there would be more competition and they would get a better price for their fish?—A. I think every man should be treated alike, all should be allowed the same privilege.

Q. That is, you would give a license to every man that applied for it?—A. To every man that applied for it with the assurance that he could put up good goods.

Q. Do you think that an increase in the number of canneries would mean an increase in the amount of fishing done? The department has been keeping down the number of canning licenses because it was thought in that way that the amount of fishing done could be kept down?—A. It would in places where they have no fresh fish market; of course this would apply more to eastern Nova Scotia than to western Nova Scotia.

Q. I understand you to say, of course, that you would favour the encouragement of the live lobster trade in preference to the canning?—A. Oh, yes.

Q. Do you think that any lobster cannery can exist to-day and observe the size limit?—A. No, not where the fresh fish market is open.

Q. Well, can they do so anywhere?—A. Oh, I should think they could down in Cape Breton and the eastern coast, there the large lobster ought to be sufficient to allow them to do so, but perhaps they could not.

Q. What they say is this: that some of them might struggle on for a few years in the hope of conditions improving, but most of them say that they would be put out of business?—A. Yes, it would depend a good deal on the conditions, but if they opened up hatcheries and protected the seed lobster they might be all right.

Q. Do you think there is any combination on the part of the packers to keep the price down?—A. Not here, that I know of.

Q. Who fixes the price paid for the lobsters?—A. Well, the Boston market rules.

Q. Have the fishermen anything to say in the matter?—A. Well, we know all about that for the live lobsters.

Q. But for the canning?—A. The price of the live lobsters rules it largely, if they are down the canners drop the price here, or it is dropped anyhow.

Q. Would you favour any change in the existing size limit for this district?—A. Well, as I said before, a 10-inch limit all over here would be better.

Q. A 10 rather than 10½?—A. Yes, 10 inches rather than 10½.

Q. Why did you put the ½ inch on?—A. Because it was the large lobster going into the Massachusetts market, and 10 would be small, but the fact is they could not ship the 10-inch lobster into the Massachusetts market at that date, but they could to New York.

Q. It always seemed odd to me, and I could never understand why they put that half inch on?—A. Well, 10 inches is just as good a lobster as 10½.

Q. Can you give any reason why the limit should be larger in one locality than in another?—A. Yes, I think that in eastern Nova Scotia the lobsters run smaller.

9-10 EDWARD VII., A. 1910

Q. Was that always the case, even before they were run out as they are now?—A. I think so, I think they are a smaller breed of lobsters anyway.

Q. What is the largest lobster you ever saw, what did it weigh?—A. Seven and a half pounds.

Q. The policy contemplated by the department in framing the regulations is the taking of the large lobster and leaving the small ones untouched. Is there any kind of trap you think better adapted to carry out that purpose than another?—A. One with a wide space between the laths and a larger mesh in the net.

Q. Is it true, as stated by some, that a larger percentage of lobsters is required in the fall than in May and June, to fill a pound can?—A. Well, yes, they have shed their shells just a short time before and are not as full of meat; the December lobsters are not as full of meat as those caught in January and February, they are meating all the time, and get up to their best in May and June.

Q. What would you say is the most active period of the fishery?—A. When they commence to catch them in January for the first two weeks is the time they catch most.

Q. Is the present regulation regarding the close season satisfactory, if not, what would you suggest by way of change?—A. I think the present season is all right, I do not see that you can better it much, it is a little less than five and a half months.

Q. As to the existing facilities are they adequate for the profitable handling of the live lobster industry and if not what would you suggest to improve the condition?—A. We want cold storage from Yarmouth to Boston, there are heavy losses made every year and it is a great disadvantage to shippers to be obliged to put ice in the crates, it takes up space that might be filled with lobsters instead of ice and then on account of heat on board the steamer there is a great loss of lobsters.

Q. Do you think that in the course of a few years the live lobster trade will have altogether replaced the canning?—A. On this coast west of Halifax I think it will.

Q. Has the shipping of live lobsters proved satisfactory?—A. Yes.

Q. And have the prices been more remunerative than the price obtained from the cannery, that is to the fisherman?—A. Oh, yes.

Q. Is there anything you want to suggest in addition to what you have already said?—A. Well, the local inspection.

Q. I forgot to ask you about that, do you think the cannery should be subject to inspection, that is the cannery itself?—A. Oh, yes.

Q. There are many canneries that are not properly equipped, in some places we found tables rough and sour, uncovered so that they could not possibly put up good meat.—A. Yes, and such canneries lower the price of canned goods because there is no inspection. But I was referring to the local inspection of lobsters, to have them inspected here before they go to Yarmouth, and not allow them to reopen them up in Yarmouth. Oftentimes the inspector there will throw away or confiscate a crate, or several crates of lobsters that come from some other place.

Q. For what reason?—A. If he finds a few undersized lobsters in a crate he will confiscate the whole lot and about two hundred yards away the canners are allowed to put up hundreds of thousands of the same size of lobsters all over the country, I have seen them going by the inspector openly to the cannery, not two hundred yards away from the very place where he is seizing the crates belonging to the fishermen here. We have to contend with that every year, and I would advocate a better system of inspection at the point of shipment instead of having it done at Yarmouth; after they are inspected at the point of shipment they should not be allowed to be opened there.

Q. On the other side of Yarmouth we found that they are often inspected there by the local officer whose certificate was attached to the crate and still they were opened.—A. It is a little difficult to do that, but I think we should have an official tag to put right on the car when they are inspected at the point of shipment so that they would not be inspected at Yarmouth. Imagine a farmer if he has packed a

SESSIONAL PAPER No. 22a

barrel of apples ready for shipment having that barrel turned upside down at Halifax for examination and then filled up again to go forward, they never can put them back again as well as they were packed before, and it is just the same with the lobsters, they can never get the same quantity back in the crate again and there is a good deal of 'cabbaging' done there, they like to inspect them so as to be able to 'cabbage' them. I do not quite gather the import of your question about the inspection of canneries; I should advocate the inspection of not only the lobsters, but of the haddock and all other fish.

By Mr. Jameson, M.P.:

Q. With regard to the seed lobster, Mr. Harris, I would like to ask you what your experience has taught you with regard to the seed lobster. I asked the department to consider the advisability of establishing a lobster hatchery in this county and I was told by one of the officials in that particular branch of the department that it was impossible for us, in Digby County, to obtain the seed lobster in sufficient number to supply such an institution, I thought he was mistaken, and I have since been informed in different parts of the county that we can get them in sufficient number and ample quantity before the season is closed. What do you think about it?—A. Well, they take the seed lobsters from the first day of the season, but once they carry that spawn through the winter, and once the eggs have been laid so late in the season that the water is not warm enough to hatch them, they have to carry them all the winter until they get the heat in the spring of the year to hatch; they will not hatch in cold water.

Q. But what time of the season do you take them in any quantity?—A. They commence to come in numbers the last of March when this school comes in that Mr. Gidney mentioned, that comes in from off-shore into the warm water to spawn in St. Mary's bay and places like that, my experience in the pound is that by the 1st of July one-fifth of the lobsters have spawned.

Q. They are fairly plentiful along towards the close of March?—A. Yes.

Q. Then you have the months of April, May and June?—A. In June, yes. In June I should say that one-half of those that are going to spawn have spawned.

Q. Then the boats fishing lobsters will take a good many on the average per day or per week?—A. The spawn lobsters are not as easily caught as the other lobsters.

Q. I know they are not?—A. I say they are not myself, and the reason why they are not is that they are like a setting hen, you cannot catch as many setting hens as you could hens that are laying, for the reason that as soon as the hens begin setting they get off by themselves and you cannot get them; so it is with the lobsters, you do not catch them, but I know they are there all the same.

Q. How many seed lobsters would the ordinary boat take in the course of a week?—A. They would average from one to three, it would depend on the locality; get up in St. Mary's bay, for instance, and there are quite a number of them.

Q. How many fishing boats are there employed in the lobster industry in Digby county?—A. I have not struck that question before, but I think there might be 500.

Q. Would it be safe to say that during the months of April, May and June, they would average three per week to the boat?—A. Oh yes, all of that.

By the Commissioner:

Q. I expect what the officer meant was that it is very difficult to take the eggs off the lobsters before they are fairly ripe; if you get a lobster very early in the season you will destroy the eggs in taking them off unless they are beginning to ripen. Where they have hatcheries they take the eggs late in the season. I think myself that the lobsters here should be farther advanced, here the eggs should ripen earlier than they do farther eastward?—A. There is another thing I learned by experience, and that is that at the time I had 30,000 lobsters in the pound, I put no spawn lobsters in, but

9-10 EDWARD VII., A. 1910

when I shipped them in July 6,000 of them were spawn lobsters. Now a large proportion of this spawn would hatch in August and September, however quite a number of them spawned after that and carried their spawn all through the winter, and in shipping again in February I found a large number with spawn on them, and that spawn which was wintered over would hatch in June, in the pound, and I have seen them and shown them to other persons.

Q. I suppose that many of the lobsters when you put them in the pound had no berries attached, they were extruded after you put them in there?—A. Yes, all of them, we never buy spawn lobsters here you know.

Witness discharged.

HIRAM OUTHOUSE, fisherman, Tiverton, called and sworn:—

By the Commissioner:

Q. How long have you been engaged fishing lobsters?—A. Five years.

Q. What other fishing do you do besides lobsters?—A. All kinds.

Q. You are a fisherman rather than a farmer then?—A. Yes.

Q. What are the particular fisheries carried on here apart from the lobster fishery?—A. The herring fishery, cod, pollock and hake.

Q. What is your earliest fishing in the spring?—A. We go at the halibut fishing early in the spring which ends in February sometimes, or in March.

Q. When do you begin the cod fishing?—A. About the 15th of April.

Q. And when do the herring strike?—A. About the last of May.

Q. Do you do anything in mackerel here?—A. We have no mackerel.

Q. In the lobster fishing you own your own boat and gear?—A. Yes.

Q. When do you first start in the lobster fishing?—A. The 6th of January.

Q. You always go out promptly at the opening of the season?—A. If it is not too rough.

Q. How long does it take you to set your traps in the fine weather?—A. From the time it gets light to dark.

Q. You do it all in one day?—A. Yes.

Q. You fish how many traps?—A. 100.

Q. All on single lines?—A. Yes.

Q. In what depth of water on the average?—A. About 20 fathoms.

Q. That is the first time you set out?—A. Yes, I am fishing off shore in the Bay of Fundy, in St. Mary's Bay in about 10 fathoms.

Q. Do you fish in the Bay of Fundy all the time?—A. Yes.

Q. What distance will 20 fathoms put you off shore?—A. A quarter of a mile out.

Q. You never go to the outlying reefs?—A. No.

Q. How do you find the fishing first in January?—A. Good fishing.

Q. How are the lobsters do you think, are they there then on the ground or are they moving in?—A. They are there already.

Q. Do you notice there is any disposition on their part to move on?—A. They are always moving on shore.

Q. Do you ever find them moving off shore?—A. No.

Q. Do you fish throughout the whole season in the same depth of water?—A. Yes, about the same.

Q. You do not move closer in?—A. Oh yes, we move as far in as it will allow you.

Q. Into what depth of water?—A. Into about 3 fathoms.

Q. How is the fishing in 3 fathoms?—A. When you first get your traps there there is good fishing for two or three days, but after that you have caught them off.

SESSIONAL PAPER No. 22a

Q. How is the fishing to-day as compared with what it was when you first began?
—A. As to size?

Q. Yes.—A. Only about one-half in size.

Q. They are only about the half of the same size?—A. Yes.

Q. Is there a large proportion of market lobsters?—A. No.

Q. Are you fishing more gear now?—A. Almost double.

Q. In former years you made much better fishing than you do with double the amount of gear now?—A. In the early days you only had two or three boats, and now we have 25 boats with more gear.

Q. Is it the fact that every one who can fish lobsters does fish practically?—
A. Well, yes, all are at it that can make it pay.

Q. Are there any fishermen who do not fish lobsters at all and who carry on the other fisheries?—A. Oh, yes.

Q. How is that, are they disgusted with the lobster fishery or is the other fishery more profitable?—A. They find it more profitable, if every one went catching lobsters they would not make expenses, there are only so many lobsters to catch.

Q. What proportion of your catch are market lobsters and what proportion are sold to the canners?—A. We sell none to the canners.

Q. Do you sell them to the smack?—A. No, they are all shipped.

Q. What do you do with the small ones?—A. We throw overboard all under nine inches.

Q. You do not bring them in?—A. Only if some fellow wants a mess we bring them in sometimes.

Q. They you live strictly up to the law?—A. As far as the nine inch limit goes.

Q. That is about the only part of the law that is violated?—A. Well, in the Bay of Fundy they have a 10½ inch lobster, and on the boundary line we can take a nine inch lobster if we wanted to, so we are safe in that.

Q. How would it affect you if the limit were fixed at 10½?—A. 10½, 10 inch would be a great deal better.

Q. Do you not think if the limit were fixed at 10½ inches that these small lobsters would in a very few years grow to be large ones?—A. Yes.

Q. They are supposed to grow 2 inches in every year so that it will not take them long to get up to a standard size?—A. They soon grow.

Q. And if the fishermen did have to tighten their belts for a year or two they would all hold up better in the end if the regulations were fixed at a higher limit and strictly enforced?—A. I do not think it would tighten the belt at all because these small lobsters going to the market hold the price down.

Q. When is the market at its best?—A. The last of February or March.

Q. I suppose that is because the lobsters get to market in better order and there are not so many coming in?—A. That is it.

Q. You lose in lobsters in that way?—A. We lose in lobsters in that way after they are shipped.

Q. What do you think about that proposition to register or license the lobster fishermen, do you think there is anything in it?—A. I think it will be all right.

Q. You think so?—A. I think so, if it is carried out at all. If the man saw that he would be driven out of business and could not go into it again if he violated the law he would be apt to carry on his business carefully.

Q. Do you think the fisherman would inform on his neighbours or friends?—A. One fisherman would hardly inform on another, that is the way it is.

Q. What has been the practice here in the past with regard to the berried lobster?—A. Of late years since they commenced to ship their own live lobsters the fishermen have thrown them overboard, but when selling to smacks they scraped those lobsters and put them into the smack getting paid for all of them, although they died afterwards, but now if the fisherman has one in the crate she is dead and he does not get any pay for her.

9-10 EDWARD VII., A. 1910

Q. If the slats in the trap were set wider apart would it allow the small lobsters to escape?—A. I know it would, I have proved it.

Q. Tell us in your own words what you think about it?—A. We always used to set our slats one and a half inches apart and we would not get anywhere near as large a share of small lobsters, from 9 to 10½-inch, but after we had got down so that the small lobster got up to a good price, we had to take laths and put them in between the others so that we could catch our 9 to 10½-inch lobsters which we were losing before.

Q. What size opening do you think would be reasonable?—A. I think one and a half inch.

Q. A lobster can go through a pretty small hole?—A. Yes.

Q. And for the mesh at the end?—A. Two and a half inch for the mesh, but the mesh hasn't very much to do with it, it should be the laths.

Q. The laths all over?—A. The laths all over except the actual bottom.

Q. Do you find more spawn lobsters at any one time of the season than another?—A. No.

Q. About the same average?—A. About the same average.

Q. How many would you say there were in the season, from the first to the last what would be the percentage of berried lobsters caught?—A. We would not get one out of a hundred, I am speaking of the Bay of Fundy only.

Q. And in St. Mary's Bay, have you any idea what the percentage would be there?—A. Well you might average one out of a hundred, but you haul up the seed lobster today in your trap and you throw her overboard, and the next day the fellow next to you may get her, and two weeks afterwards you may get her again, the same lobster.

Q. Have you ever marked them?—A. I have seen marks on them that I can tell them by.

Q. That is the general impression, that there will not be more than 5 per cent of berried lobsters?—A. Not in the winter, I have never fished in the summer.

Q. You are only a winter fisherman?—A. Yes.

Q. What is the smallest sized lobster you have ever seen with eggs on?—A. I have only seen one under 10½ inches.

Q. What suggestion would you make with regard to the regulations; what would you favour if it were left to you to do it yourself?—A. If I had my way I would throw all away up to 10 inches.

Q. That is to say you would enforce a 10-inch limit?—A. A 10-inch limit.

Q. And how long a season would you have?—A. I think up to the 1st of June would be sufficient for us here.

Q. What is the average price in the Boston market, what would it run at one season with another?—A. The price of lobsters?

Q. Yes, the price of the lobster?—A. A single lobster?

Q. A single lobster about 10½ inches?—A. About 30 cents that is taking the winter season up till April.

Q. What is the highest figure you have ever received?—A. About 45 cents.

Q. Was that after all costs were paid?—A. After all charges were paid.

Q. Can you give me any idea of the average earnings of a good lobster fisherman, what he makes in the season?—A. It is the average you ask for?

Q. Yes.—A. I think \$180 a year is a big average.

Q. That is a much lower rate than a good many others have confessed to, we have heard of a boat, a fisherman and his helper who have made \$500 you know?—A. Yes, I have heard of that too, but you asked me for an average.

Q. Yes, that is it, some do not go to deep water at all?—A. Some lobster fishermen hardly pay their expenses.

Q. Do you think the fishermen are getting to be more careful about the berried lobster than they used to be?—A. Yes, certainly.

SESSIONAL PAPER No. 22a

Q. Do you belong to the Fisherman's Union?—A. No.

Q. Have you any idea whether it would be better or worse for the fishery to establish hatcheries or pounds or any of those things?—A. I think that a lobster in its own natural water would be better than anywhere else. I have seen it tried often.

Q. Yes, But there are some places where we cannot be sure that the fishermen are going to put the berried lobsters back and there we have to get him to bring those lobsters in, and when he does so we must buy them from him and secure them in a hatchery or in a pound. Have you ever given the matter any thought?—A. No, I have not.

Q. Is there any fishing done before the season opens here or after it closes? Any considerable quantity?—A. Not much, now and then there may be some.

Q. Did you ever hear of any canning being done after the season closed?—A. No.

Q. What do you think about the matter of licensing canneries, do you think the policy of the department is correct, to keep down the number of canneries?—A. I think if there is going to be canning done you should let everybody that applies have a license.

Q. If there were more canneries would it mean more fish being caught?—A. No, I do not think it would mean any more fishing.

Q. You think that practically everybody who is likely to engage in the lobster fishery is at it already?—A. Yes.

Q. Would you favour the encouragement of the live lobster trade in preference to the canning?—A. Oh certainly.

Q. Do you think the fishermen generally would make more money if they were canning on their own account?—A. Putting up their own small lobsters?

Q. Putting up their own lobsters, we will not say anything about the small ones?—A. I think he would be getting all that there is in it if he did so.

Q. But it requires some practical business knowledge, do you think every fisherman possesses that?—A. Well, all around here they do, they understand putting them up very well.

Q. What do you think about this matter of having different open seasons and different size limits in adjoining sections?—A. I think it is a good plan. Take the County of Yarmouth which opens on the 15th of December, they have their lobsters in the market now, and they have the market before Digby County comes in and that gives us a good deal better price; if we went in at the same time as they did we would have a smaller price, and in February we would have no lobsters to ship, our lobsters would have been all caught up, and we would not make nearly as much as we do now.

Q. If the fishermen have other fisheries in which they could engage do you think it would make much difference to cut something off the end of the season?—A. It would not make very much difference here, after April because only half a dozen men continue at it, the others knock off, they could not make it pay.

Q. I think you have told me that the best part of the season with you is at the beginning?—A. At the beginning.

Q. Have you all the facilities for the shipment of live lobsters that you could expect? Is there anything that could be done to help on in that matter?—A. Well the first shipment when it is made the weather is generally too cold, that is in January, and we lose quite a lot of lobsters, and after April comes in it is a hard job to get the lobsters to the market before they die because the weather is too warm for them. If we had cold storage to ship them it would be better. Another thing we have against us here is that we have to put our lobsters aboard the boat a day earlier than we ought to in order to catch the Boston boat; we have to ship on Tuesday morning in order to catch the Wednesday boat and that makes the lobsters too long on the way.

Q. Have you only one boat by which you can ship?—A. Only one boat.

Witness discharged.

9-10 EDWARD VII., A. 1910

The following fishermen were present, Hadley Blackford, Newman Small, Rayland Raymond, Charles Brown, Byron Blackford, William Walters, Arden Small, Irvin Pyne, Thomas Clifford, Warren Powell, Nicholas Outhouse, Murray Small, Foreman Outhouse, John Clifford, Elden Elliott, Reeve Mackay, Edgar Outhouse, Gorham Elliot, Hobson Outhouse and John Clifford, Senior, fishermen, Tiverton, and in reply to the question:—‘Do you approve of this evidence favouring a 10 inch limit with a strict enforcement of the law?’ did not dissent.

GEORGE CLENNAN.—The fishermen of Little River, five miles above here will approve of the evidence and the recommendations.

Mr. JAMESON, M.P.—You are familiar, Mr. Harris, with the fishing in the Bay of Fundy and St. Mary’s Bay?

Mr. HARRIS.—Yes.

Mr. JAMESON, M.P.—I think in your evidence you intimated there is a difference in the size of the lobsters taken in these bays, you said the St. Mary’s Bay lobsters were really smaller in size?

Mr. HARRIS.—Yes, they are shorter and stouter.

Mr. JAMESON, M.P.—Is there any way of distinguishing between them in any way?

Mr. HARRIS.—Yes, I can tell them as soon as I see them; the St. Mary’s Bay lobster is darker in colour and stouter, and the Bay of Fundy lobster is lighter in colour and slimmer.

The COMMISSIONER.—I think you told me that there is some fishing done out of season.

Mr. HARRIS.—I mean more particularly on the other shore; the fishery officer gave them the privilege of catching lobsters for cod bait during the close season, they are allowed to put out four traps, and they can catch more large lobsters in those four traps, during the close season than they can catch in 80 traps during the season.

The COMMISSIONER.—About the difference between the lobsters you get in the Bay of Fundy and those in St. Mary’s Bay?

Mr. OUTHOUSE.—The St. Mary’s Bay lobster has a short nose, he is generally a good lobster, while the Bay of Fundy lobster has a nose anyway from an inch and a half and over and is not as dark as the St. Mary’s Bay. The St. Mary’s Bay is a dark lobster whereas the Bay of Fundy lobster is a brighter colour. Mr. Harris said that there were more of those tinker lobsters caught here by five to one in St. Mary’s Bay than in the Bay of Fundy; that means that there are more lobsters hatched in St. Mary’s Bay which is a natural hatchery.

The Commission adjourned.

METEGHAN, September 17, 1909.

J. A. ELLIS, canner, Cape St. Mary, called and sworn:—

By the Commissioner:

Q. Are you a canner?—A. Yes, I have been a fisherman, but I am a canner at present.

Q. How long have you been engaged in the canning?—A. About 8 years.

SESSIONAL PAPER No. 22a

Q. What has been the average output of your cannery, one year with the other?
—A. I should think about 600 cases, sometimes more, sometimes less; we have gone as high as 800.

Q. What did you do this year? Was this a poor year with you, it seems to have been generally?—A. We only canned just a shade over 300.

Q. What did you attribute the small pack this year to, the bad weather?—A. To the market in the United States for the 9-inch lobsters, we could not pay the price for the 9-inch lobsters to get them.

Q. Is there a very large proportion of lobsters caught in the bay shipped to the Boston market?—A. Well, this last year there was a large proportion.

Q. Since the law was changed in Boston reducing the limit to 9 inches in the United States, do you notice any difference here?—A. Oh, yes, the year before last it made no difference on account of the high price of canned lobsters, we got a good price and we could afford to buy and can all the 9-inch lobsters.

Q. That is from 9 to 10½ inches, I suppose?—A. Yes.

Q. What do you call them here, mediums?—A. Mediums, yes.

Q. What number of boats are engaged in supplying your factory?—A. It is pretty hard to estimate that, we have plenty of boats right in our own place, but we do not get all the lobsters there, we have to go to other places and we may collect from 25 boats.

Q. Are most of the lobsters smacked to you, or do the fishermen deliver them generally?—A. Last year we got nearly all of the lobsters delivered in our own place.

Q. Delivered by the fishermen at the cannery?—A. Delivered right at the wharf.

Q. How do you find the condition of the fishery now compared with what it was when you first operated?—A. Well, when we first started in the lobster fishery we used to get \$7, that was the highest price we got for lobsters when we shipped to the United States.

Q. That is \$7 per?—A. \$7 per crate, that is 140 pounds, and sometimes we got as low as \$2.50, and for the cannery lobsters, that is the 9-inch, we got 1½ and 2 cents, and now they are up to 4 and sometimes as high as 6 cents for the 9-inch lobsters. Of course, there were only three boats then when I first started, and now there are engaged in the lobster fishery in our place and thereabouts about 20; the first year we made a stock of about \$350, and now I think there are very few lobster fishermen but what stock that, and some of them go up to \$1,000.

Q. Do most of the fishermen ship lobsters on their own account?—A. Oh, yes, very nearly all, there are only a few who do not.

Q. You do some shipping too?—A. Only just a few.

Q. I suppose it depends on the state of the market?—A. Yes, we do not have any large lobsters, the fishermen ship all their own large lobsters.

Q. What percentage of the total catch of the fishermen will be market lobsters?—A. Well, I think this year it was over three-fourths.

Q. Three-fourths of the total catch would be fit for the market trade?—A. Yes, for the Boston market.

Q. Is that in weight or in number?—A. That would be in either number or weight.

Q. How do the lobsters run here generally, what will 100 lobsters weigh, or how many lobsters does it take to make 100 pounds?—A. That is according to the size, you take strictly the 9-inch and they are supposed to weigh about one pound each, then as you go up in size they increase in weight, and as you go down they diminish.

Q. How do they run in the cannery; how many lobsters do you consider it takes to fill a pound can here?—A. About 4.

Q. How have the regulations been observed here in the past as to the size limit?—A. Well, they have not been kept at all.

9-10 EDWARD VII., A. 1910

Q. Do you can anything under 9 inches?—A. The regulations have not been kept at all.

Q. That is not the case here alone, that is universal?—A. I know we have been compelled to start in at it.

Q. Are there other canneries about here?—A. There is one here and another at Port Maitland.

Q. About what distance are they on either side of you?—A. Eight miles on one side and eight on the other.

Q. Do you control most of the fishing between those points?—A. They divide it.

Q. The smacks run in all directions?—A. The smacks are collecting in different directions.

Q. What has been the ordinary price paid this year and last year for canning lobsters?—A. Last year we paid 6 cents and this year there was quite a little difference in the price, $3\frac{1}{2}$ cents was the highest price we paid.

Q. Do you consider that it takes a larger number of traps now to keep up the average catch?—A. Yes.

Q. Could you do it with the same amount of gear that you used when you first commenced fishing?—A. It takes more gear now.

Q. Do the fishermen own their own boats and gear?—A. Yes.

Q. There is none of it supplied by the canner?—A. No, not here. In our district the fishermen own their own boats and control their own fish.

Q. What are the men who are engaged in the lobster fishery, are they men who go into the other branches of the fishery, or are they farmers?—A. They are fishermen, most of them.

Q. When the lobsters are over they go into the deep sea fishing?—A. Yes, they go to the deep sea fishery.

Q. To the halibut, cod and mackerel fishing?—A. Yes.

Q. Now as to the berried lobsters, what has been the practice with regard to them?—A. We put them over, the fishermen all understand that part of it, that is what the practice is with our fishermen.

Q. Was it ever the practice to brush the eggs off them?—A. Oh in the very first it was, we did not understand it at that time, but they always let them go now, they understand that is the salvation of the fishery, and always put them back in the water.

Q. What is the best time of the fishery, as a canner when do you find that you are running at your hardest?—A. In April and May, they are the best canning months we have.

Q. Are there many lobsters brought to can in December or February?—A. No, very few, we never pack them.

Q. Is there much fishing done in January and February?—A. In our place they are just starting in, they did a little last winter.

Q. Are most of those lobsters exported?—A. Very nearly or practically all.

Q. Is the cannery open then? You say you did not open?—A. No, we never can any then.

Q. What do they do with the small lobsters then, do they throw them back into the water?—A. Oh well, they only catch a few, they set 7 miles off in deep water in the winter and they only catch a few, nothing of any consequence.

Q. Not enough to keep you going?—A. Oh no.

Q. Is that the case with the canners generally here, are they not operating?—A. Not in Digby county but I think Mr. Comeau above here cans a few.

Q. What is your opinion with regard to licensing canneries, do you approve of the present policy of the Department in restricting the number of canning licenses, or do you think that any man who applies for a license to can should have one?—A. I would not like to give as many as all that.

SESSIONAL PAPER No. 22a

Q. Of course the policy of the Department has been to keep down the number of licenses?—A. I know that there are about all in the business that can make a success of it, if it is divided up any more some will have to go out of business.

Q. The business will be cut up so much?—A. Yes.

Q. The idea in restricting the number of licenses has been that by so doing the volume of the fishing would be kept down, do you think that has been the result of the restriction?—A. No, an increase in the number of canneries would not mean any more fishing at all.

Q. Do you think that practically everybody who can engage in the lobster fishing is engaged in it now?—A. Yes, everybody that can make a success of it is in the business now.

Q. Have the fishermen generally been satisfied as to the price they get; do you hear much grumbling as to the price they receive for canning lobsters, complaints have been made to the Department?—A. Oh, of course some people are never satisfied, and others again think they are getting all we can afford to pay them, and that is what we are doing.

Q. Do you think the large drop in price this year was entirely warranted by the drop in the prices abroad?—A. Yes, it was.

Q. You have been a fisherman, what do you think of the department establishing a standard trap? It has been noticed that there is a disposition generally, not only here but more particularly in the Gulf of St. Lawrence region to narrow down the space between the slats, of course that must be in order to get the small lobsters and to hold them once they get them?—A. Yes.

Q. Do you think by establishing a standard space between the slats it would be possible to allow the escape of the small lobsters?—A. Yes, I think it is. Of course the narrower you have the space between the slats the smaller lobsters you will hold; you will let out the very small lobsters if you have a little more space between the slats.

Q. The fact is that within my recollection the slats used to be placed 1½ inches apart, the width of the lath, and now we have them only half an inch, which can only be for the purpose of holding the small lobsters. What would you say would be a reasonable distance to insist upon, not perhaps for the traps already in existence, but say that from a certain date in the future all slats must be a certain distance apart.—A. I do not know, I think it would be well to establish a limit as to the size of the lobsters.

Q. Do you think that could be easily enforced?—A. I do not know, the law could be passed but whether it could be carried out is another question.

Q. We have the past experience to guide us in that, and the general opinion is that it is almost impossible to accomplish it that way?—A. Of course it would be a better way to have the slats a certain distance apart and to allow them to take everything that gets into the traps then.

Q. With regard to the size limit, what would you suggest?—A. Well, you would have to put it down pretty well in order to have the law kept at all; some people, of course, would allow the small ones to go, but they would be very small, 7 inches, or between 7 and 8 inches.

Q. In the United States the limit is 9 inches as it is with you, and you think it should be put down to 7 or 8 inches?—A. Yes.

Q. What about the fishing season, what would you do with that, would you shorten or lengthen it?—A. It is my opinion that the season is very well regulated now; it seems to me that the way it is now it protects the fishery. I have noticed that at the very last of the season, of course we have all large sized lobsters brought to us, I have noticed that the she lobsters showed no eggs outside, but when you cooked them and broke them open they always have eggs inside, that is at the very last of the season. It seems to me they are just forming their eggs then, and if they are protected during the next month or two it is going to help the fishery.

9-10 EDWARD VII., A. 1910

Q. What time do you think is the spawning season?—A. I have no idea, I know that they catch them at all times with eggs on, during the winter months, and at other times during the year.

Q. Have you noticed much decrease in the average size of the lobsters within the last twenty years?—A. There has been quite a noticeable decrease in the size of the lobsters.

Q. When did the export trade in lobsters first begin here?—A. In the very first of my lobster fishing I commenced to ship my lobsters, and that is twenty years ago.

Q. And had there been any shipping before that?—A. Well, we started in at the commencement of the fishery, about the first.

Q. How do you ship your lobsters?—A. We ship them by Yarmouth.

Q. You send them by steamer to Yarmouth?—A. By steamer from Westport to Yarmouth.

Q. That is the only means of conveyance you have?—A. We have other means of taking them there, sometimes we take them by our gasoline boats, we are only 18 miles from Yarmouth.

Q. But there is only one regular steamer?—A. There is only one regular steamer that calls at Westport.

Q. Do you meet with much loss between here and Boston?—A. At some times during the year, we do not know really whether they die in course of transportation, or whether they are taken over there dead, sometimes they cull them very strictly over there.

Q. And you of course only get paid for those that are alive in the crates when they reach there?—A. In our experience in business we find that in that short time actually no lobsters can spoil when they are shipped fresh from our place.

Q. Could anything be done to prevent that loss, do you think; have you all the facilities required for the profitable exportation of lobsters alive?—A. Yes, I think we have from our place.

Q. Some people have suggested that if cold storage could be provided on board the boats from Yarmouth to Boston it would mean less loss?—A. Sometimes they would require to have the whole boat in cold storage because she is practically full.

Q. It would be difficult then to provide cold storage enough?—A. Yes.

Q. To what do you attribute the decrease in the size of the lobsters?—A. I think it is because the smaller ones have been caught up.

Q. That is to say over-fishing, and the destruction of the small lobsters?—A. Yes.

Q. And, I suppose, in the early days the destruction of the berried lobster, to some extent?—A. Yes, I have not noticed very much decrease in the catch in our place, but of course, they are discovering new grounds all the time; where they only used to fish a mile off shore they fish now seven miles, and they find new grounds every year.

Q. Every year they go farther out?—A. Yes, there is one new trouble coming up but I do not know whether I should mention it.

Q. That is the American smacks?—A. Yes, they are commencing to come over on our shores fishing outside the 3-mile limit.

Q. How is that going to affect the fishery here?—A. I think it is going to be bad for the fishery, that is if they run it to any extent.

Q. Have they found it profitable to follow it up?—A. Yes, there is no doubt about it.

Q. It is reported they have done fairly well with this smack this season?—A. Our best grounds now are outside the 3-mile limit.

Q. That is pretty generally the case all along the coast, it will affect the fishery seriously, you think?—A. Oh, it will affect it.

Q. Will we not have to alter our regulations in order to meet it?—A. I do not see how we can do it, but if they do make a business of it we will have to do something or we will have to go out of business altogether ourselves.

SESSIONAL PAPER No. 22a

Q. We cannot prevent them fishing outside the 3-mile limit though they propose fishing there all the year round, they are fishing there now when we are closed down, and that means they will catch off all the lobsters there?—A. And during the present month and next month there are always plenty of fish around on those grounds.

Q. What is your idea of the best way to meet that condition of affairs; have you any suggestion at all to offer on the matter?—A. I have not thought much of the matter yet, I have only heard of it lately.

Q. If we were allowed to fish all the year round on the same grounds do you think we are in a better position to compete with them than they are to compete with us, when they have to come so far?—A. Most assuredly, but it must deplete the fishery, if we do so, more rapidly than it has been depleted.

Q. There is only one way we can meet that, by raising our size limit. How would a strict enforcement of the nine inch limit affect the canners here?—A. I think it will close them up.

Q. It would put them out of business?—A. Yes.

Q. And how would it affect the fishermen?—A. The fishermen? Well, it would injure them I think a little at the commencement, but I think they would do about as well.

Q. In the future?—A. Yes, in the future.

Q. You think that a strict enforcement of that limit would after a few years build up the fishery so that it would ultimately pay them for the loss they might have for a year or two?—A. Yes, but of course I do not know much about that.

Q. Do you think it is right to destroy the immature fish; you very seldom see a breeding lobster under 9 inches, occasionally you will find one 8 or 7½ inches.—A. I have known of one of that size but we hardly ever see any under 9 inches here; in fact I do not know that I have ever seen any under 9 inches.

Q. Then it is reasonable to say that a lobster must have reached that size before it has reached the age of reproduction?—A. Yes.

Q. And it must be injurious to any fishery to destroy the immature fish?—A. I think of course that the season as it is regulated now does in our vicinity protect the fishery; I have not noticed any decrease in the actual catch for these last 7 or 8 years; it seems to me they catch just as many lobsters.

Q. You think that the decrease occurred before that?—A. Yes, we used to have until the first of August when I first started in.

Q. Originally they had no regulation at all?—A. There was no regulation, I know.

Q. Then for a while we had only the month of August shut off, and then afterwards it came down to take up to the first of August?—A. I think our fishermen do as well now as they ever did; well, I know they do better than we did at first.

Q. They are getting more for their lobsters?—A. They are getting more for their lobsters, but I think, of course, if there is an increase we have it brought right home to us that the more there is shipped to the United States the lower the drop in price; they drop right down when there is an extra shipment sent in there.

Q. Is it the case that the canners are compelled to accept undersized lobsters from the fishermen?—A. If they want to can they have to.

Q. Some canners say they objected, but they were forced to do so because the fishermen would take them to somebody else if they could not take the small lobsters?—A. That is the case, I do not like to break the law, but I have to if I want to keep going.

Q. It has been suggested by some people that the lobster fishermen should be required to register and to take out a license, signing an agreement in which the regulations are recited, that they would stand by them; and if a fisherman were found violating the regulations he would not be allowed to have a license the next year, and consequently would not be allowed to fish lobsters. What do you think of that pro-

9-10 EDWARD VII., A. 1910

position as a remedy, how would it work?—A. I do not think anything like that ought to pass.

Q. Some people have suggested it as a way out of the difficulty, they think that if the fishermen were bound in that way they would be more likely to live up to the regulations and would inform on others who did not.—A. I do not think that ought to pass, that is too strict.

Q. Are the existing penalties sufficient, do you think, if they were strictly enforced, would they cover the matter?—A. Yes, I think so.

Q. Have you any experience in the matter of hatcheries or pounds?—A. No.

Q. Do you think that it would be wise to have something of the kind established in this neighbourhood; would the canners get a sufficient number of berried lobsters here for the purpose, it would have to be pretty well towards the close of the season, in April or May at all events?—A. You could get a lot of them, we have a place 7 miles off the Trinity where they get lots of them, it seems to be a place where they gather, I do not know whether it is for spawning or not, but they get large numbers of them in from 3 to 20 or 30 fathoms of water.

Q. Do they get a larger proportion of berried lobsters in that particular spot?—A. Yes, I think so.

Q. Is it a hard rocky bottom with plenty of kelp on it?—A. Yes, it is a hard rocky bottom. This season there seem to have been more berried lobsters than usual, some years there are more than others.

Q. How is the bottom in the bay, generally?—A. I have not much experience here.

Q. It seems to me there must be a great deal of muddy bottom in here?—A. They say there is quite a lot of rocky bottom.

Q. Do you think it would be wise to insist on any inspection of the canneries, in order to see that they are kept clean and that every provision for the proper putting up of the meat is made?—A. Well, that would be a good rule.

Q. There are a great many canneries that are not by any means fitted up as they should be, but at present there are no means of shutting down on them?—A. I think that would be all right.

Q. Do you think the product of the canneries, that is the canned article, should be subject to an official inspection, the same as flour and other kinds of food?—A. That is already inspected by the experts when it is sold, the buyers will not accept anything without testing it, they always test before buying.

Q. It has been proposed by some that there should be an official inspection of the canned lobster the same as we have for pork, flour, cheese and other articles. Do you think that the fishermen would be better off if allowed to can on their own account?—A. I do not hardly see how they could can if they are going to run their fishing business; that takes up all their time, but of course I suppose they could hire help.

Q. Of course that is what they would have to do. A great many fishermen have the idea that they are not getting a fair return for their fish, and they have applied for permission to can; lately the department have granted what they call co-operative licenses, where a number of fishermen, not less than 15, have combined together and said they were not satisfied with the price they were getting and wanted to can on their own account. Those are the only new licenses that have been issued for some years back.—A. I should be in a position to know something about it, I have fished and canned both, and I have found that when I was fishing I did just as well as I have since I have been canning; there is only one thing, the work is made a little lighter for me.

Q. And there is less anxiety?—A. Well, there is just as much anxiety in canning lobsters as there is in fishing, you know just what you are doing when you are fishing, but in the canning business you do not know what moment the lobsters are going to drop.

Q. Which branch of the lobster industry do you think is the most remunerative to the fisherman, and the least calculated to deplete the fishery, canning or the live

SESSIONAL PAPER No. 22a.

lobster trade?—A. Well, the export trade, I think, is the more benefit to the fishermen.

Q. Is it to your knowledge that there is much fishing done out of season, before or after?—A. There is none either before or after in our district.

Q. Nor any illegal canning?—A. No, the law is strictly observed.

Q. Do the fishermen fish right up to the close of the season?—A. In our district they fish right up to the close of the season, and they do not attempt anything else until the season is over.

Q. What are the average prices paid in the cannery to the superior hands, do you keep a foreman?—A. No, we do not have any foreman.

Q. What are the sealers paid in this district?—A. We usually pay \$40 per month.

Q. And do you board them?—A. Yes, we board them.

Q. And the other hands, what do they receive?—A. To our girls we pay \$3 a week, and to our men, we have other help, we pay \$30.

Q. In your case, do the girls live in the cook room or at their own homes?—A. They live at their own homes, they live right handy to the cannery.

Q. Is there anything else you would like to say now, I do not think I have anything else to ask you?—A. No, I think we have covered the ground pretty well. I have been thinking over the question of this American vessel, and if we had to have a season the year around we could have it possibly arranged in the size limit so as to give the factories a chance to can for the same season as they do now, and then increase the size limit, that would protect the fishery.

By the Commissioner:

Q. Would you say close up the factories?—A. Well, give them the season they have now, they only can for a couple of months, allow them to can for that period, and then of course they would have to close up, and increase the size limit for the rest of the season, that will protect the fishery and give the fishermen a chance to meet the Americans on their own ground. Then, with regard to this berried lobster question, we could supply a hatchery all right with the spawn from the lobsters; I am sure of that, we could commence to hatch them right off as soon as the season opened.

Q. If that were done what months would you say to give the canners? Our canners in the Gulf say: 'Give us two months good canning and that is all we will ask.'—A. That is all we can get here along the shores of Digby county.

Q. The canners generally say: 'If we cannot exist with two months we will go out of business?—A. Give them March April and May.

Q. That is three months?—A. That is about the time I would give them, and I think it would be a good plan to take these seed lobsters, if we were to start a hatchery, and put them in a pound. It seems to me there would be a greater percentage of them stay around and hatch out there than if we were leaving them out to get in the traps all the time, and there would be no fish there to destroy the spawn.

Witness discharged.

ARTHUR DOUCETT, fisherman, Mavillette P.O., Cape St. Mary, called and sworn:—

By the Commissioner:

Q. How long have you been engaged in fishing lobsters?—A. I have been engaged in it five years.

Q. Did you ever fish anywhere else than in this neighbourhood?—A. No.

Q. Were you connected with the lobster industry in any way at all before you commenced fishing?—A. I was living among the fishermen, and I have seen the lobster fishing right along since they started fishing.

Q. You do not know very much about the condition of the fishery 30 or 40 years ago?—A. At that time there was no lobster fishing carried on here at all.

9-10 EDWARD VII., A. 1910

Q. It has not been prosecuted here as long as that?—A. Not 40 years ago.

Q. It really began about that time along this coast, did it not?—A. That was long before I was born, and I remember when it was started here.

Q. Do you notice any decrease in the last five years?—A. There is a little decrease.

Q. What number of traps do you fish?—A. 125.

Q. That is from a boat manned by two men?—A. Yes.

Q. In what depth of water do you fish?—A. I fish from 7 fathoms to 33.

Q. You fish of course all single lines, no trawls?—A. All single lines.

Q. As a rule you look for a rocky bottom?—A. Always.

Q. It is no use fishing on a muddy bottom?—A. Not around here.

Q. Is there any station of the Fishermen's Union in your locality?—A. No.

Q. What would you say is the number of boats engaged in your locality in lobster fishing?—A. I should say there are 20 odd boats, two men to a boat.

Q. And do they all fish about the same number of traps?—A. Yes, on the average, I should say 100, these gasoline boats fish 125 traps, and the dory will fish about 100.

Q. When do you begin your fishing?—A. We began it this last winter in January.

Q. On the 6th of January?—A. We set off our traps before that, and they have complained and fined us; we started when they fished in Yarmouth county and put the traps out 7 miles off shore and complaint was made, and the second time we went out they caught us. We set the traps outside the 3 mile limit on the 15th of December, the same time as they commenced in Yarmouth county.

Q. How did you find the fishing when you did begin?—A. We caught a few.

Q. Were the lobsters coming in from the outside or were they on the ground?—A. The lobsters I think in the winter drop into the deep water, we were fishing in 33 fathoms.

Q. How are they in that depth of water, do they trap well and are they lively?—A. They are pretty numb, but I think it is only when they come to the surface of the water, when the cold climate hits them it kind of paralyzes them.

Q. How long did you fish on the winter side?—A. All the winter to the 15th of June, and we hauled up on the 20th.

Q. When do you find the fishery at its best?—A. April and May are the two best months for catching lobsters.

Q. Do you expect to get more large lobsters at one period of the season than at another?—A. Well, you will get more, compared with the quantity you catch, more big ones in winter when fishing in deep water.

Q. And as to the berried lobster, the lobster with the eggs on it, where will you find them?—A. You will find them everywhere.

Q. Will they be more abundant at any one time than another?—A. Towards the last of the season there are more, but the reason you get more then is I think that you fish the same lobster three or four times over.

Q. How often do you go out and fish your traps in the winter?—A. Not more than once a week, as a rule, sometimes once a fortnight.

Q. What is the season of the roughest weather?—A. February and March, I do not know but that March is about as rough as any.

Q. March is a very stormy month, you say?—A. Yes, I think so.

Q. And you say you go out less frequently in February and March than in January?—A. Yes, I think March is about the roughest month.

Q. What proportion of your total catch do you ship alive to the market and what proportion do you sell to the canner?—A. About three-fourths of the catch is shipped across.

Q. That is all over 9 inches?—A. Yes.

Q. And you sell to the canner the small lobsters?—A. From 9 inches down.

SESSIONAL PAPER No. 22a

Q. I suppose there are none of your large lobsters sold to the canner?—A. None at all.

Q. Only those that are mutilated?—A. Oh well, if you find one that has been bitten by another one, and it is pretty nearly dead, you give him to the canner, but that does not amount to more than one in a fortnight.

Q. You ship your export lobsters on your own account?—A. Yes.

Q. What do you put in the crate?—A. Do you mean the count?

Q. Yes?—A. Well, of course we put from 65 to 103 according to the size.

Q. The weight of the crate was originally supposed to be 140 pounds?—A. Yes, but when a crate is well filled it weighs more, I have had one that turned out 203 pounds.

Q. Do you put much ice on them?—A. We do not put ice on them at all.

Q. Not in the summer time?—A. We used to put ice on them when we started, but it isn't any good, it does more harm than good, because when it melts it pours fresh water on them and kills them.

Q. What percentage of loss do you count on?—A. It is pretty hard to count on the loss, of course we lose quite a lot of what we ship in the latter part of the season when it is warm weather. In this last season, at the latter part of it, we had crates that should have brought us about \$22, and all we got in return was \$3.45 on account of the others being dead.

Q. Is there anyone in Boston who looks after the interests of the fishermen here?—A. The commission man, that is all.

Q. You have to trust him?—A. Yes, we have to trust the commission merchant, and some of them we ship to are actually boilers.

Q. How long does it take to get a return?—A. We ship on Wednesday and we get a return on Saturday, that is as a general rule.

Q. They are paid for promptly?—A. Yes, as a general rule, but sometimes we lose one boat.

Q. By what route do you export?—A. All the lobsters go to Yarmouth and are exported from there.

Q. As to the matter of the trap, you build your own traps?—A. Yes.

Q. What space do you allow between the slats?—A. I allow the head of the hammer, according to the width of the head.

Q. If it is an old hammer it will be wide, and if it is a new one it will be narrow?—A. Yes.

Q. There is no doubt a tendency in building traps to put the slats closer together, especially in places where there is no live export trade and it is all canning. Do you think the capture of small lobsters can be regulated by fixing the space between the slats?—A. If the space were made bigger the smaller ones would escape, but the big ones would put their claw through between the slats, and if they cannot get out again they will let that claw go, and that fish loses value because it is the claw that weighs. I think it should be done by some other regulation, otherwise it will cause a loss to the fishermen.

Q. How would you deal with that if you were making the laws, what would you say?—A. Put on a size limit.

Q. What would you put the size limit at?—A. About 8 inches.

Q. Do you think the size limit could be strictly enforced? Who would you punish?—A. I would punish both the canner and the fisherman.

Q. During the time you have been fishing what is the average price you have received for your canning lobsters?—A. For the factory lobster, as we call it, we have received from 3½ to 6 cents.

Q. That is by weight or by count?—A. By weight and by count, at first we were selling by count, we calculated the 9-inch lobster as a pound, it weighs about that, and now lately we sell them by the pound, by weight.

9-10 EDWARD VII., A. 1910

Q. Was it ever the practice here to take two small ones for one?—A. Yes, when they were buying by count we used to put in two small ones for one.

Q. As to the matter of the berried lobsters, in your time they have been put back in the water?—A. Always.

Q. Do you think the fishermen understand the necessity for saving and protecting those lobsters?—A. It is no benefit for the fishermen to keep the seed lobster and strip her of the spawn, because in 24 hours she will be dead.

Q. Is it the case that the berried lobsters will not stand transportation as well as the others?—A. If the seed is on them they will, but if you wash them off they will die.

Q. Is it the case that if a lobster is injured, if it has a crack in its shell or anything like that it will die quickly?—A. He will die, especially if it is on the back, he will soon die.

Q. Do the berried lobsters generally run of good size, what is the smallest one with seed you have ever seen?—A. There was one landed this spring under 9 inches, that is the smallest one I have heard of.

Q. As a rule there are not many as small as that with eggs on?—A. Not many.

Q. What do they run at, as a rule?—A. As a rule they will run from 10 inches up, probably there are a few under that.

Q. Have you heard of this American smack fishing outside the 3-mile limit?—A. Yes.

Q. What do you think of that; if it becomes a general practice how will it affect our fishery?—A. It will harm our ground here, or else we will have to do the same as they do.

Q. That is fish all the year round?—A. Yes, fish all the year round.

Q. Do you think we could fish all the year round without damaging our fishery?—A. No, I do not believe we could.

Q. Supposing we fix a high size limit for the fish, have it the same as the State of Maine, there they fish all the year round and have a 10½-inch limit.—A. They have a 9-inch limit now.

Q. Then it must have been changed lately?—A. They changed it last year, they fish now down to 9 inches.

Q. That is since they changed in Boston?—A. Yes.

Q. I did not know about that.—A. Maine and Massachusetts have 9-inch laws in force, I am pretty certain that it is a 9-inch limit in Maine now.

Q. Do the canners make any bones about receiving small lobsters?—A. Well, it is no use for them to kick.

Q. How would a limit of 9 inches, and enforcing it strictly, affect the fishermen?—A. I do not believe it would affect the fishermen much; it would the first year, and they would probably feel it the second year a little, but after that I think they would do just as well.

Q. How about the canner?—A. Of course it would affect the canning particularly.

Q. Do you know anything about hatcheries and pounds?—A. I have had no experience in them, but I think it would be all right to have a hatchery, for the reason that it would help the fisherman, he would get a little for his seed lobsters, he would get a little more for them than he would for those he ships away: it would be a benefit to him in that respect, and I think it would increase the fish on our ground after a year or two.

Q. Now, as to the pound? In the state of Maine, for instance, they hold their lobsters in the pound, they keep them there and they only send them to the market when the price is up. What would you think of permitting that system here; how would it affect you, could you establish pounds here?—A. At home it would not be very difficult to have a pound, and probably there are several places in the county, but I do not believe it would do as a rule.

SESSIONAL PAPER No. 22a

Q. Is there much fishing done out of season?—A. No, none to speak of, that law is pretty well observed.

Q. What is your opinion about this matter of licensing canneries; the policy of the department has been to keep down the number of canneries with the idea that by so doing they were restricting the fishery?—A. No, I do not believe it has had that effect, I think that if there were three or four canneries they would have their smacks to gather their lobsters all along the coast just the same.

Q. What do you think of the proposition to have the lobster fishermen register?—A. I do not think it would be kept up at all; for one thing, suppose I am going to sign the license this year, and they catch me violating the law and cancel my license the next year, I will hire a man and have the license made out in the name of the hired man, and if they cancel his license I will hire another man in the following year.

Q. What is your idea with regard to the fishermen doing their own canning?—A. Of course as long as we have a market like we have now for the lobster from 9 inches up I do not care about the canning.

Q. You think the fishermen had best stick to fishing?—A. As long as we have a good market for fresh lobsters it is far ahead of the canning for us.

Q. In framing the regulations which branch of the industry would you favour, the fresh market export or the canning?—A. The fresh market is far ahead, we get three times the price for the markets that we get for the canning.

Q. Three-fourths of your revenue is derived from the fresh market fishery?—A. Yes.

Q. I do not know that there is much more I desire to ask you, is there anything you think of yourself you would like to say, that I have not covered?—A. Is this going to be a general law?

Q. All this evidence will go before a committee of Parliament and they will decide.—A. I think Digby county should have the same season as Halifax, at present it is not exactly the same; they are supposed to stop but they do not, they just come here and ship their crates from Digby county into Yarmouth county just the same so that they are fishing 21 days more than we are. We fish right up to our line. We cannot ship our lobsters to Yarmouth county, and if we do set traps on the 15th of December there will be somebody put the law on our backs; it should be the same regulation all through.

Q. It is your opinion, is it, that as far as possible the regulations should be uniform?—A. They should be uniform, that is to say that from Halifax to Digby county it is the same regulation now, and Digby county should be included in that regulation.

Q. You think it is a mistake to have different regulations?—A. It is a mistake to have a different regulation between Yarmouth and Digby counties, they have an advantage of 21 days.

Q. Would it be better to cut them down to your line?—A. It would not make any difference for my part, I would not complain if they made Digby county like Yarmouth county, or cut them off as we are here, it would not make any difference at all which way it was done.

Q. I think, as far as possible the new regulations will be based, of course I cannot speak positively, I am only one and I will not have much to say in the matter, but the desire of the department is to make the regulations uniform from Halifax, that has been suggested.—A. You cannot have the same regulation here as you have north of Canso, but on the line of Digby and Annapolis there are only a few fishermen there, but between Yarmouth and Digby counties there are the largest number of fishermen.

By Mr. Jameson, M.P.:

Q. When you speak of having the same regulations to the west of Halifax and the same regulations in Yarmouth and Digby counties, did you refer also to the size

9-10 EDWARD VII., A. 1910

limit?—A. The size limit should be the same; you do not mean that it would be right for them to catch 8-inch lobsters and us, a quarter of a mile from them, have a larger size limit. The size limit should be the same and the season should be the same.

Q. Do you fish in St. Mary's bay or the Bay of Fundy?—A. Well, we fish off Cape St. Mary.

Q. Are you familiar with the fishing in the Bay of Fundy?—A. No.

Q. Do you know the difference between the fish taken in St. Mary's Bay and those taken in the Bay of Fundy?—A. I have no experience in this place.

Q. You speak of losing lobsters in your shipments to Boston, in what months do you principally lose them?—A. We lose more in the latter part of the season.

Q. Is that owing to the lack of refrigeration or cold storage, on the boats?—A. Of course there are some lobsters that are cooked on board the boat, you can see the scar right across the crate sometimes where it has been laid against the steam pipe, it is burnt into the wood.

By the Commissioner:

Q. I suppose the lobsters comprise the principal part of their freight?—A. Yes, sometimes there are 1,500 crates and they stow them away to the best advantage, they do not look to see if there is a steam pipe or anything of that kind to hurt the lobsters.

Q. It is only the lack of proper facilities to handle them on the boat?—A. That is all.

Witness discharged.

FRANK J. DEVEAU, fisherman, Saulnierville, called and sworn:—

By the Commissioner:

Q. How long have you been fishing?—A. I have been 30 years at all kinds of fishing.

Q. Were there any fishermen before you?—A. I guess there were a few.

Q. Do you fish in the bay?—A. I have been lobster fishing here 11 years.

Q. Do you fish in the bay?—A. In the bay, at Saulnierville.

Q. What is the condition of the fishery here to-day compared with what it was when you began?—A. I do not see much decrease in the fishery, all I see is more men fishing and more traps, but I am catching about as many lobsters as when I began.

Q. Are the lobsters as good on the average as they were when you began?—A. I cannot say anything about the canners' report, but my report is that last season I caught as many lobsters as ever I did.

Q. The same in number?—A. And my neighbours here who represent Saulnierville can say the same, that is in number.

Q. How were they as to size?—A. About the big ones we do not get a great many up there, but I think we caught as many or more last winter then we ever did.

Q. What proportion of the lobsters you catch will be over the 9 inch limit, and what proportion will be under?—A. In the average do you mean?

Q. Yes, out of every hundred lobsters how many will be over and how many under 9 inches?—A. I have made catches there, now I will give you one that I remember, I got 800 lobsters in one haul, and I have had 200 large ones over 10½ inches for Boston.

Q. And between the 9 and 10½ inch how many did you have?—A. Probably between 200 and 300 over 9 inches.

Q. And you had 600 below 9 inches?—A. 600 below 9.

Q. When do you begin fishing?—A. We begin on the 6th of January.

Q. Do you always start out at the opening of the season?—A. We generally start out on the 5th, a day ahead of the season.

SESSIONAL PAPER No. 22a

Q. You put out your gear then, what number of traps does a man fish generally?—A. About 150 at our place.

Q. That is with two men in a boat?—A. Two men in a boat.

Q. Are you using gasoline boats?—A. We do mostly.

Q. You can get backwards and forwards and do more fishing with them than other ways?—A. Yes, we can move very much more quickly.

Q. In what depth of water do you go when you first put out your gear?—A. We put it out in from 7 to 18 fathoms.

Q. What is the average depth of water in the bay?—A. About 12 fathoms I should think, shoal water a great deal.

Q. What is the nature of the bottom on the greater part of the bay?—A. Well, it is rocky bottom and kelp, there is sand in some places.

Q. Beginning on the 6th of January, how do you find the fishing for lobsters there?—A. There are not a great many close inshore.

Q. Do you think they winter in this bay or do they go out of it?—A. I think they go out into deep water.

Q. Do you think they back down to the mouth of the bay at all?—A. I could not say about that, our bay is narrow and the fishermen do not go far offshore, we fish trawls and hang in pretty close.

Q. Do you mean to say that you fish your lobster traps on trawls and not single lines?—A. They are all trawls, not trap pots.

Q. How do you find fishing in general, what are your best months?—A. March, April and May.

Q. I suppose March here is the spring month, the spring is coming with you then?—A. Yes, they generally strike in about the 10th or the 15th.

Q. Is there much ice in the bay?—A. Quite a lot.

Q. It forms on the bay, but it does not interfere with your gear.—A. It does not interfere with the gear.

Q. Is the percentage of loss on the bay large?—A. There is more or less with the larger pots, that is the reason why we set trawls so as not to lose our pots.

Q. What do you consider the life of a trap, how long does it last you?—A. Four or five years.

Q. What do you consider the value of a trap with its line?—A. I never figured it up, but when it is ready for the sea I should say it was worth a dollar.

Q. How is it about the space between the slats in your traps? Is it large or small?—A. We use the head of the hammer, and we do not take a stone hammer either.

Q. Do you make it narrower now than you used to?—A. Yes.

Q. Why is that done?—A. We make it narrow to catch the small lobsters and to prevent injury to the big ones who slip their claws into a big space and lose them.

Q. Is it a different run of lobsters in here from those you get on the Atlantic coast or in the Bay of Fundy?—A. I think our lobsters here do run smaller than they do down below in the deep water.

Q. Is there any other difference?—A. I do not see any, some say they are lighter when they are caught in shoal water than they are when caught out in the deep water.

Q. We have heard that they are shorter in the nose, and not as long, and that they are thicker?—A. I think that on the average crate that we ship to the States we get about the same price as they do down below.

Q. Once you put your traps out do you stay on the same ground all the season?—A. We shift, when there are no fish there we shift.

Q. Late in the season do you put them in shoal water?—A. We do.

Q. Do you find that later in the season and in shoal water you get a larger percentage of small fish?—A. Yes, they strike in the first of March, and often along towards the last of the season we shift in again.

Q. As to the female lobsters with eggs, when do you see the most of them?—A. From March out.

9-10 EDWARD VII., A. 1910

Q. Do you see a larger proportion at one time than you do at another?—A. There is not a great deal of difference from March out, because we keep throwing them overboard and catching them again once in a while.

Q. Out of every hundred lobsters how many will bear berries?—A. I could not say exactly about that, some weeks we get one dozen to a boat on the average and sometimes we get more.

Q. The percentage is not very great?—A. Well, take all the boats, where we catch them very far off we catch a dozen a week to a boat.

Q. We generally suppose that the limit is about 5 per cent; that 5 out of every hundred lobsters caught bear eggs?—A. In the spring, yes I should think so.

Q. That is the average all the year round, some seasons there are more than others, you do see more later in the season than you do earlier?—A. Yes.

Q. Do you think we could provide for the escape of the immature lobsters by insisting on a space of 1 or 1½ inches between the slats?—A. I do not think it would be any good, I do not believe such a law could be enforced.

Q. The 9-inch limit has not been enforced, has it?—A. I think it would be a good deal easier to stop men catching the small lobsters by putting a limit on them.

Q. What is your objection to building a trap of a standard size?—A. I do not think it could be done, that is all I know about it, but I do not think it could be done; some would think they were making it big and at the same time they would be making it small.

Q. Supposing that we insisted on 1½-inch space between the slats, could not that be enforced?—A. 1½-inch?

Q. That is to say if that would be the right space?—A. I think there would be quite a lot of trouble about that, we would have a lot of overhauling to do.

Q. The traps would all have to be overhauled before they went into the water?—A. They would be fixed after they got them out.

Q. It is a question if any law cannot be enforced, if the department is in earnest about protecting the lobsters it will have to be enforced?—A. I do not see why the small lobster cannot be protected under the size limit the same as the lobsters that are shipped to Boston. When I am shipping to Boston I am positive that I am not putting any under 9 inches in the barrel, because I know if I put one in I am going to be at the loss of the barrel, and I do not see why I could not do the same thing with respect to the lobsters going to the factory.

Q. Well, it has not been done?—A. I know it has not been done.

Q. Then whose fault is it that it has not been done?—A. Nobody's.

Q. What do you think about the size limit?—A. I think 8 inches is about right.

Q. You think it will be easier to enforce an 8-inch limit than it is the 9-inch?—A. I think an 8-inch limit will be all right.

Q. Do the fishermen own their own boats and gear outright?—A. I guess they do, yes.

Q. Do you expect the canner to take all the lobsters you take to him irrespective of size?—A. I have.

Q. Do you deliver the lobsters to the canneries or do they collect them by smacks?—A. No, they collect them by teams.

Q. What do you think of the proposition to expect the fishermen to register and take out a license before they can fish lobsters?—A. I do not think anything about it, I do not believe it is right for a man to bind himself.

Q. You think it is not right for a man to bind himself to obey the law?—A. Not for a thing like that, not in fishing anyhow, it is too hard a life for a man to confine himself to that.

Q. I should not think fishing in the bay here is a very, very hard life?—A. Oh, I guess it is not.

Q. Not as compared with fishing on the Atlantic?—A. I have been at it 11 years myself and I am pretty well used up.

SESSIONAL PAPER No. 22a

Q. Where the fishermen fish 40 miles off shore in open boats, that is a pretty hard life. Do you accept the price paid by the canners?—A. We accept the price, sometimes in the spring a man says he will pay us a certain price if it does not get higher or lower, and we agree to that.

Q. And if you do not agree as to the price?—A. We take what is coming.

Q. What price have you received this last year?—A. I think four cents.

Q. And what was it the year before?—A. Then we got six.

Q. What are the average earnings of a lobster fisherman, a good active fisherman?—A. Well, in my locality it is from \$800 to \$1,000. I know boats that have made from \$800 to \$1,000 in five and a half months.

Q. From which branch of the fishery does he get his largest revenue, from the export trade or from the sale to the canner?—A. From the export trade.

Q. Then which branch of the fishery should be protected in framing the regulations for governing the lobster fishery, which branch is of the most consequence to the fisherman?—A. You mean in money?

Q. Yes?—A. Well, I think the United States market trade should be protected, that is for our business.

Q. Is that a trade that is increasing?—A. Well, I do not see that it is decreasing any.

Q. Well, are the people looking after that market more, are they devoting more attention to it than they used to, or did they always ship, within your recollection, the large lobster?—A. They always shipped.

Q. How are the facilities for shipping lobsters alive to the market?—A. They are very good with us, we ship from our station on the Dominion Atlantic Railway, which is only three miles from shore, to Yarmouth, and from there by steamer.

Q. How often do you ship by steamer?—A. Wednesdays and Saturdays.

Q. Have you met with much loss of lobsters in transit?—A. Not a great deal, and the reason is that when they commence to cut down in price in the spring we sell to the factories, that is when they will bring five cents in Boston, and we can get four cents here, we sell them at four cents, large and small.

By Mr. Jameson, M.P.:

Q. You have not lost many on the boat through the heat?—A. Not a great many.

By the Commissioner:

Q. West of here some people have complained that they have met with a great deal of loss, do you think it is from careless packing?—A. I think it is with some, and I daresay if they happen to get their lobsters put near the pipes they lose them, but the way our lobsters get down there in good condition is that they probably get put somewhere where it is cool.

Q. What percentage of female lobsters do you think get in your traps here?—A. I could not say, of course some weeks we get a dozen or more during the week.

Q. Do you know anything about hatcheries and pounds?—A. No, I am not acquainted with them at all.

Q. Have you ever thought over it, do you think it would be advisable to establish more hatcheries?—A. I think it would, I think it would be of benefit to us.

Q. Of course you require a number of canneries or places where the female lobsters can be collected near a hatchery because you cannot go too far to get your eggs.—A. I think they can be kept quite a while if they are looked after carefully.

Q. What number of fishermen are fishing lobsters from your locality?—A. There are four right where I am fishing, but take from my place in the Bay there are probably 100 boats.

Q. That is up to the head of the Bay?—A. To the head of the Bay, I could not say exactly the number, but there are quite a number of them.

9-10 EDWARD VII., A. 1910

Q. I suppose that practically everybody that can go into the lobster fishing is at it?—A. I guess so, yes.

Q. Have the regulations for the protection of the berried lobster been well observed?—A. Well, I do not know of anybody who has taken any at all.

Q. Is there any washing done at all?—A. No, I do not see what benefit it would be to anybody; I know one man that carried one ashore once and washed it, but that man is out of business now.

Q. Has the practice of stripping ever been followed by the fishermen here?—A. I have never known anyone to do it.

Q. Not even in the beginning?—A. No.

Q. Do the canners object to take berried lobsters or not?—A. I do not know whether they have or not, because I do not know of anybody that has brought them in.

Q. What number of canneries are there in your neighbourhood?—A. Well, there are two, one at Meteghan River here and one at Comeauville, which is right handy.

Q. What others are there above that?—A. There are none up above.

Q. Are you aware of any fisherman having lost his catch of lobsters by reason of the canner having refused to accept them?—A. No.

Q. Do you think that an increase in the number of canneries would mean an increase in the amount of fishing?—A. I do not see why it should.

Q. Do you think that the fishermen generally would make more money if they were allowed to can?—A. I cannot answer that question, I know I would not have time to do it myself.

Q. Is there any fishing done in the bay before the opening or after the close of the season?—A. I do not think there is.

Q. Have you ever known any canning to be done after the close of the season?—A. Oh, no.

Q. What do you think about the season?—A. I think we ought to have the same as it is in Yarmouth county.

Q. That is the same season?—A. Yes.

Q. How was it that the season here is different, do you know how that came about?—A. No, I do not.

Q. What do you think about this fishing by the American smacks offshore here, is it going to affect your fishing seriously?—A. I should think it would.

Q. Have you any idea how we can best meet it; we cannot prevent them fishing outside the 3 mile limit, can we?—A. I do not see how it could be prevented if they are outside the 3 mile limit.

Q. The season in Yarmouth county is from the 15th of December to the end of May, is it?—A. Yes, they have a longer time than we have, and after the season closes they jump into Digby County and fish there, and it injures us of course.

Q. So you favour as far as possible having a uniform season, that is where it can be done, not to have different size limits and different seasons in adjoining sections?—A. Well, according to the size limit, I guess if I knew what the other counties have proposed I could talk on that.

Q. Well, we know what the other counties think?—A. Our proposition here is for an 8 inch limit, and if you were to compare our time limit with the time limit of the other counties of course probably it would be all right. There may be counties that do not want anything under the 9 inch limit.

Q. Some say they want a 10½ inch limit?—A. Well, of course we would not want that, we would have to take to the woods if we had to come down to that, that is where we fish here in the Bay.

Q. I think you told me that a large proportion of your catch went to Boston?—A. I will say that two-thirds or more of my catch go to Boston.

SESSIONAL PAPER No. 22a

Q. Then why would you have to take to the woods?—A. If we could not catch anything under 10½ inches we could not catch enough of that size where we are up in the bay to make a living.

Q. What is the best period of your fishing, when is your fishing at its height?—A. March, April and May.

Q. Do you fish right up to the close of the season generally?—A. Yes.

Q. You do not go into other kinds of fishing?—A. Oh, no.

Q. What other fishing is done here generally?—A. Cod fishing, and we cannot handle the cod fishing, we haven't time to do so with the lobster fishing, but in the fall we generally get cod fishing.

Q. Before the advent of the lobster fishing did they use to carry on the cod fishing?—A. I guess they did, I was not here.

Q. Would you like to have your season cut short 15 days in June?—A. I would not mind having it cut off then if I could get the 15 days earlier. I would like to get it as it is in Yarmouth County.

Q. You think it would suit the majority of the fishermen in St. Mary's Bay?—A. I do not know anything about that, there are lots in St. Mary's Bay differently situated to what I am, I do not see anything to catch in June myself, all we are getting is the small lobsters then.

Q. Are there any more berried lobsters in June than at any other period of the season?—A. Oh yes, there are berried lobsters in June.

Witness discharged.

DOCITTE DESAULNIER, fisherman, Meteghan, called and sworn:—

By the Commissioner:

Q. Are you engaged in canning or fishing?—A. Fishing.

Q. How long have you been engaged in fishing?—A. 12 years.

Q. Have you ever fished lobsters in any other ground than here?—A. No.

Q. What is the condition of the fishery to-day compared with what it was when you began?—A. I believe it is decreasing.

Q. To what extent would you say it has decreased?—A. It is getting smaller.

Q. How much has it decreased?—A. Quite a lot, I think.

Q. Has that decrease been going on all the time you have been fishing, or has it become worse lately?—A. It is worse lately.

Q. How do you notice it most, are you catching fewer big lobsters and more small ones?—A. Well, yes.

Q. I would rather you tell us in your own words if possible, you think the proportion of small lobsters is greater?—A. Well, no, I do not.

Q. What do you think then?—A. I think we catch less of all kinds.

Q. When do you begin fishing?—A. On the 6th of January.

Q. Do you export your big lobsters when you first begin fishing?—A. Yes.

Q. So that you have fallen off in that respect?—A. Yes.

Q. How were the prices you got for the markets this year compared with what you got then?—A. We used to get \$5 a crate and we get from \$40 odd now.

Q. The price has risen then?—A. Yes.

Q. And as to the canning lobsters, how does that price compare?—A. That has gone up too.

Q. What did you get for the canning lobsters in the beginning?—A. Two cents.

Q. That was at the beginning?—A. Yes.

Q. Are you still selling by count or by weight?—A. No, by weight.

9-10 EDWARD VII., A. 1910

Q. For your catch of lobsters, from which branch of the fishery do you get the most returns?—A. From the canning.

Q. That is from the 9 inches down?—A. Yes.

Q. What proportion of your total revenue is derived from the sale of lobsters for the market, the export trade, and what proportion from the canning?—A. Well, I do not know about that.

Q. What is your fishery worth to you, I do not want anything definitely, but one year with the other what does the lobster fishery amount to with you?—A. \$500 a year.

Q. Of that \$500 how much do you get from the canner and how much from the export trade?—A. I get three-fourths of it from the canner, that is from the 9-inch lobsters that I ship.

Q. Do you ship everything over 9 inches?—A. I did last year.

Q. Before that you used only to ship the 10½?—A. Yes.

Q. And you used to sell all under 10½?—A. Yes.

Q. And that was when you had your largest revenue from the canner?—A. Yes.

Q. Of the two branches of the trade which one should be encouraged the most?—A. The cannery I think.

Q. You think the cannery should be encouraged?—A. Yes.

Q. What has been your practice; to take to the canner everything you catch?—A. Yes.

Q. And the regulation has never been enforced; was it never enforced at any time?—A. Oh yes, it was.

Q. When?—A. Well, we only took them about 6 years ago.

Q. Before that you used to take only the 9 inch lobsters?—A. Yes.

Q. And you put the small ones back?—A. Yes.

Q. How was it that that regulation was done away with?—A. They did it in other counties and we did the same.

Q. Do you begin to fish as soon as the season opens on the 6th of January?—A. Yes.

Q. Have you any idea why they fixed it at the 6th of January instead of the first?—A. I have not.

Q. Or why you have not the same season here as they have in Yarmouth?—A. I have not.

Q. Is there any reason why you should not have the same season as they have in Yarmouth?—A. I should not think there was any.

Q. It would suit you just as well if your season began on the 15th of December and ended on the last day of May, would it not?—A. Yes, I think it would be all right.

Q. When you begin how many traps do you fish?—A. From 125 to 100.

Q. That is 2 men to a boat?—A. Yes.

Q. How far offshore do you go when you begin fishing?—A. 1½ to 2 miles.

Q. You fish entirely in the bay here?—A. Yes.

Q. What depth of water do you get at that distance?—A. About 12 fathoms.

Q. You select a rocky bottom?—A. Yes.

Q. How many fishermen are engaged in fishing from your neighbourhood?—A. There were 13 boats last year.

Q. What canner do you deliver your fish to?—A. To Mr. Thereault mostly.

Q. What canneries are there in this neighbourhood?—A. There are two factories that we sell to at Meteghan river and Meteghan here.

Q. Are there any further down?—A. Yes, at Cape Cove.

Q. How far off is that?—A. 8 miles.

Q. So that you have a number of canneries you can sell to?—A. Yes.

Q. Is there any competition in the matter, does one canner sometimes offer more than the others?—A. Well, yes they do.

Q. Do you deliver the lobsters to the cannery or to the smack?—A. To the smack.

Q. The smackman pays for them on the nail?—A. Yes.

SESSIONAL PAPER No. 22a

Q. But never makes any bones about it, he takes everything you give him?—
A. Yes.

Q. Do you sell by weight or count?—A. By weight.

Q. In the early days you sold by count?—A. Yes.

Q. And when the lobsters began to get small they took them by weight?—A. Yes.

Q. What is the best time of the fishing for you?—A. March, April and May.

Q. When you begin in January, is it not good then?—A. It is not so good, it is rough weather.

Q. What is your opinion about the movement of the lobsters in the bay; do you think they go out of the bay in the winter and come in in the spring?—A. Yes, I do.

Q. And in the warm weather they come into shoal water?—A. Yes.

Q. At the end of the season, if you fish up until June, will you get a larger proportion of small fish then?—A. Well, yes, we do.

Q. And do you see more breeding fish then, do you think?—A. I think so.

Q. But, of course, you find them all through the season?—A. Oh, yes, all through the season.

Q. Have you ever noticed whether the eggs are getting riper at that time?—
A. Oh no.

Q. Now with regard to the traps, are you putting your slats closer together than you used to when you first began to build traps?—A. Yes, I do.

Q. What was the space you allowed when you first began?—A. An inch and a half.

Q. And now it will not be an inch?—A. About an inch.

Q. Do you think there is anything in the proposition that we could provide for the escape of the small lobster by going back to the inch and a half space?—A. No, I do not think it would help them very much for I think you would get just as many small ones as when the trap was larger.

Q. You think when you disturb the traps the small lobsters would not go out?—
A. Not much, I guess in one night's fishing you would get about as many.

Q. Then why is it that the space between the slats has been made smaller?—
A. Because it would keep them longer.

Q. That is why you have adopted the parlor trap, to keep them longer?—A. Yes.

Q. Do you not think that the space has been made smaller in order to hold the small lobster?—A. Yes, to hold them longer.

Q. But you hold them altogether, do you not?—A. Yes.

Q. Do the fishermen here own their own boats and gear?—A. Yes.

Q. Do you use gasoline boats here?—A. No, I do not.

Q. Do you do any other fishing after the lobster season?—A. I follow the cod-fishing.

Q. Regularly?—A. Well, yes.

Q. Do you call yourself a fisherman or a farmer?—A. A fisherman.

Q. Are there many who fish lobsters and do any kind of fishing?—A. Yes.

Q. We find in a great many places that people who fish lobsters do no other kind of fishing?—A. They do not around here.

Q. In framing the regulations for governing the fishery, what would you favour, the encouragement of the live export trade or the canning?—A. Well, the canning I think.

Q. The canning appeals to you as being the most important?—A. Yes.

Q. How would it affect you as a fisherman if that 9-inch limit were strictly enforced?—A. I believe it would injure us quite a lot.

Q. It might hurt you for a year or two, but if the lobster grows two inches a year, as we are informed it does, do you not think that in a very few years you would benefit more?—A. If the limit were put at 8 inches it would be better for us.

Q. Do you think we would be any more likely to be able to enforce an 8-inch

9-10 EDWARD VII., A. 1910

limit than we have been able to enforce a 9-inch?—A. Yes, I think you could put the 9-inch limit in force all right and the 8-inch, too.

Q. You think we could enforce the law?—A. Yes.

Q. Do you not think it would be well to enforce the law, then?—A. I think it would be.

Q. Do you not think that the 9-inch limit, if it were enforced, would in the course of a year or two result in your getting a greater percentage of large lobsters?—A. I suppose we would.

Q. Do you not think it is wrong, we know that the lobster does not reach the full maturity until it is 9 inches long, to take them before they reach that age?—A. Of course, if you put it down to the 8-inch limit it would be all right.

Q. Do you see many 8-inch lobsters with eggs on them?—A. No, I do not.

Q. Have you any idea what is the spawning month of the lobster?—A. No, I have not, we find them at all seasons with eggs on.

Q. Do you think they come into the shoal water during the warm weather to spawn?—A. I do not know about their coming in to spawn, but they come in in the warm weather.

Q. Do you think they spawn in deep water off shore?—A. I do not know.

Q. What do you think of the proposition to license the fishermen?—A. I do not think there is anything in it at all.

Q. You do not think it would make the fishermen any more likely to live up to the law?—A. No.

Q. The idea of those who recommend it is that if the fishermen signed the agreement to live up to the law they would not be liable to break it?—A. I guess you could get the law enforced without doing that.

Q. How is it with regard to the berried lobster, do you think she has always been well protected here?—A. I guess so.

Q. Was there never any stripping or washing done?—A. I never knew of anybody stripping any, not to my knowledge.

Q. Where would you go to enforce the regulation as to the size limit, to the canner or to the fisherman?—A. I would go to the canner.

Q. You would punish him?—A. Yes, if the canner would not take them we would not fish them.

Q. What do you think about hatcheries and pounds, have you ever given that matter any consideration?—A. No, I do not know about pounds.

Q. Do you think it would be well to establish a hatchery here?—A. I believe a hatchery would be all right.

Q. The department has received lots of recommendations as to how the fishery may be improved, some people say shut down altogether for four or five years?—A. Then we would starve.

Q. You think so?—A. I am sure we would.

Q. Is there nothing else the fishermen could turn to, are there not other fisheries they could devote the same time to, or could they go on farming?—A. I have no farm to work, and I believe that even if 9-inch lobsters were stopped we could not live.

Q. What do you think of this question of packing, do you think the fishermen would do better for themselves if they could pack lobsters?—A. I do not think so, they have all they can do to fish.

Q. Do you think there has been any combination on the part of the packers to keep prices down?—A. No.

Q. The fishermen generally are satisfied with the price they have received from the packers?—A. Oh, yes.

Q. Is there any station of the Fishermen's Union where you are?—A. No.

Q. Is there much illegal fishing done here before the season opens, or after it closes?—A. No, none at all.

SESSIONAL PAPER No. 22a

Q. What do you think of this matter of having different seasons and different size limits in adjoining sections; do I understand you would prefer to have the same season as Yarmouth county?—A. Well, of course, I would not mind about that, but I believe that for here we should have the same law as it was before, and have an 8-inch limit.

Q. You would have the season from the 6th of January?—A. Yes, and have an 8-inch limit, that is what we would like to have here.

Q. What is your reason for wishing to have an 8-inch limit here, do the lobsters run smaller here in the bay than they do on the coast?—A. Yes, sir, smaller than they do in deep water.

Q. Do you think they always did that?—A. A. Oh, yes.

Q. Is there any difference in the size, weight and colour of the lobsters here compared with those caught on the other shore?—A. I think so.

Q. What is the difference?—A. I think they are darker here.

Q. And is it the case that they are shorter and thicker?—A. I do not think so.

Q. Is there anything you would care to say yourself, anything that I have not touched on, if so, I will be very glad to have it taken down and lay it before the Committee?—A. No.

By Mr. Jameson, M.P.:

Q. Have you fished in the Bay of Fundy?—A. No, I have not.

Q. You are not very familiar with the Bay of Fundy conditions?—A. No, I am not.

Witness discharged.

JOSEPH B. ROBICHEAU, Meteghan, called.—I am not a fisherman, but I think that unless St. Mary's Bay is made a spawning ground and treated as such our lobster fishery will very shortly be lost and gone forever. I remember some years ago there was good fishing, and now there is hardly any; we used to go out at low water and gather them up on the rocks and now we can hardly get any fish. Unless you make St. Mary's Bay a spawning ground you cannot do very much by regulating the size limit at 8 inches or 9 inches.

By the Commissioner :

Q. What do I understand you to mean by treating the Bay as a spawning ground?—A. About the spawning ground I do not like to give any opinion on that; you should get some expert opinion with regard to it. But St. Mary's Bay is a shoal place, and one-half of the bottom is sand and mud, and it is salt water and sheltered. This would seem to indicate that it is the proper place for all kinds of fish to spawn, the haddock and all sorts of fish. I was one of the first to set lobster traps here 20 years ago and as far as I can see the lobsters have very greatly diminished, there are not nearly so many large ones now.

Mr. FRANK DEVEAU.—Mr. Robicheau says there is a big decrease in the lobster fishing. He does not think about the number of traps that are set in this bay now. When he commenced to fish, you could go along the beach and pick up the lobsters. I say that the lobster is like any other fish, they spawn like the codfish, the herring or the hake, and we keep on catching them. I have been here this last spring, and I caught as many lobsters as ever I did. Mr. Trudeau and I have fished together, we used to stock 1,400 in one boat, and now we are fishing in two boats and we are stocking 1,600 or 1,700. I would say there should be some little bonus for the men who save the seed lobsters and take good care of them. I know for my part if there is a hatchery here in St. Mary's Bay, at the head of the bay that the fishermen would

9-10 EDWARD VII., A. 1910

take care of those seed lobsters and there would be an ample supply of eggs and the result would be that there would be a great increase in the fishery. I think myself there should be a hatchery in this bay if it could possibly be arranged.

The Commission adjourned.

DIGBY, September 18, 1909.

HART HAYDEN, fisherman, Bay View Post Office, called and sworn:—

By the Commissioner:

Q. How long have you been interested in lobster fishing?—A. About 12 years I think, somewhere about 10 or 12.

Q. Have you always fished in this same locality?—A. Yes.

Q. You never fished anywhere else but in this neighbourhood?—A. No.

Q. I suppose the most of the fishermen here own their own boats and gear?—A. Yes.

Q. As a rule how many traps do you fish?—A. Anywhere from 50 to 100 traps, 2 men in a boat would have about 100 traps.

Q. Do you fish them on trawl lines or single lines?—A. On single lines now, we used to set trawls and we have two-ended traps, with doors at either end.

Q. That is the old fashioned trap?—A. Yes.

Q. You have not adopted the new trap?—A. We have tried them, but did not find they were any better.

Q. Do you build your own traps?—A. Yes.

Q. What does the line and trap cost?—A. About \$1.

Q. In building the trap what distance do you allow between the slats?—A. No regular distance, we used to put them about an inch and a half.

Q. You have kept to the old fashioned trap?—A. Yes.

Q. In most places we find that they use the parlour trap and they have narrowed the space down gradually in order to catch the small lobsters?—A. Yes.

Q. When does your season begin?—A. 6th January.

Q. And it ends when?—A. The 15th June.

Q. Do you generally begin fishing at the opening of the season?—A. Yes.

Q. You begin sharp at the opening of the season?—A. Yes, if the weather is such that we can get out.

Q. How do you find the fishing then?—A. Very good when we once start in usually.

Q. How far off-shore and in what depth of water do you begin?—A. Anywhere from 15 to 25 fathoms.

Q. You generally select a rocky bottom, you do not set your traps on sand or mud bottom?—A. Oh, no.

Q. Do you fish on the same ground all through the winter?—A. No, we shift our gear. of course you have to fish more or less on the same ground, but you shift your traps a little each time you haul.

Q. What number of boats are engaged in the fishery in this locality?—A. Oh, I suppose there are—well where would you want from, this whole county?

Q. From this part of the county. I do not want it very accurately?—A. Annapolis county just joins us down here you know.

Q. Yes.—A. Do you want them in that county?

SESSIONAL PAPER No. 22a

Q. No, just Digby.—A. 40 or 50 boats.

Q. You fish here I suppose all through the winter?—A. Yes.

Q. You do not lay off?—A. No.

Q. Do you leave your gear out?—A. Yes.

Q. Does the fishery improve during the winter or is there a slack time?—A. It keeps getting slacker through the winter until the spring opens when it is usually a little better.

Q. Does it improve with you in March?—A. No, not much before May, it is the middle of May before it increases very much, when the weather gets warm they come in.

Q. What is your opinion, are the lobsters coming in from off-shore?—A. Yes, that is what we think.

Q. You fish up to the 15th June?—A. Yes.

Q. You generally fish up to the end of the season?—A. Most of us do; I generally knock off myself and go to the cod fishing.

Q. Are most of the men engaged in the lobster fishery here regular fishermen who fish all through the season at the other branches of the fishery?—A. Yes, most of them.

Q. You know that in a great many places there are many farmers who engage in it for a time and who go to no other fishing?—A. That is not the case here, I do not believe you can name one of that kind.

Q. Is it your experience that late in the season the fish move towards the shore?—A. Yes.

Q. And would you expect to get more then in shoal water and warm water?—A. Yes.

Q. What is the best time of your fishery, the early or the late fishery?—A. Well, in the warm weather we would get the most fish.

Q. You catch the most fish then?—A. Yes.

Q. When do you get your best supply of market fish, is it then too?—A. Yes.

Q. What proportion of your fish are exported alive to the market, and what proportion to the cannery?—A. We sell none to the cannery here.

Q. Are there canneries licensed in this neighbourhood?—A. No, not in this neighbourhood, there are some down below here, but the nearest one is at Trout cove.

Q. How far is that from here?—A. About 15 miles below here.

Q. You supply nothing but the legal demand, I suppose?—A. Yes, I ship all my lobsters to the Boston market.

Q. By what route?—A. By the D. A. railway.

Q. By Yarmouth?—A. Yes.

Q. And by boat from there to Boston?—A. Yes.

Q. How long does it take for your fish to get to Boston?—A. 17 or 18 hours.

Q. Do you get an immediate return for the sale of your fish?—A. Yes.

Q. What is the condition of that market fishery, how will the lobsters obtained to-day compare with those you caught years ago?—A. Well, a few years ago they were better than they were ten years ago, but they have not been as good the last two or three years as they have been in previous years.

Q. Has that change in the size limit in the state of Massachusetts from 10½ to 9 inches affected the price do you think?—A. Yes, I think so.

Q. So that here you are really market fishermen and you have no dealings with the canner to any extent?—A. No, none at all.

Q. Using the kind of trap you are do you get many small fish?—A. Not really small, but we get quite a number of 9-inch lobsters.

Q. In hauling up your traps do you find there are many fish below 9 inches?—A. No.

Q. Do you think they escape through the space between the slats?—A. Well, the smallest would.

9-10 EDWARD VII., A. 1910

Q. As to the berried lobster what proportion of them do you find in your catch?
—A. Of course we do not get very many.

Q. Out of every hundred can you say what percentage you get?—A. I dare say they would average perhaps 5 to the hundred.

Q. Is that the general average?—A. Yes, about that.

Q. And they are generally a fair sized lobster?—A. Yes.

Q. What is the smallest lobster you have ever seen bearing eggs, or did you ever remark any very small?—A. No, I never did, I should not say that I have ever seen one less than a four or five pound lobster anyway.

Q. That would be a big lobster?—A. Yes.

Q. What is the average weight of the lobsters you do catch, what would they run?
—A. I suppose they would average perhaps three pounds.

Q. How many do you put in a crate?—A. About 80.

Q. Do you put more than 140 pounds in your crates?—A. We ship in barrels.

Q. Oh you ship in barrels?—A. Yes.

Q. Do you use the ordinary flour barrel or is it a packing barrel?—A. No, we take the ordinary sugar barrel, generally, in shipping.

Q. What weight is each barrel supposed to hold?—A. They would turn out anywhere from 150 to 180 pounds.

Q. So that there is a little more than there is in the average crate?—A. Yes, a little more.

Q. What freight do you pay on that barrel, what does it cost to get that barrel to Boston?—A. \$1.41 this last year.

Q. That covers the railway freight, the steamboat freight and all charges?—
A. We have to pay commission besides that.

Q. That is another thing, of course?—A. Yes.

Q. Do you meet with much loss of lobsters in transit?—A. Not a very big loss, there are times of course when we have some loss.

Q. Is that loss greatest during the warm weather?—A. Yes.

Q. You ship everything now over 9 inches?—A. Well, yes.

Q. When the size limit in Boston was $10\frac{1}{2}$ inches what did you do with those between 9 and $10\frac{1}{2}$ inches?—A. We threw them out.

Q. What has been the practice here by the fishermen with regard to the berried lobster?—A. I think as far as I know, of course there may be exceptions, we throw them overboard; I know I always do and most of the fishermen do.

Q. In some parts undoubtedly a large proportion of them are brushed off and they are brought ashore?—A. There are very few would do that around here.

Q. Is it the case that the egg bearing lobster is more tender and will not stand transportation as well as the others?—A. I think so.

Q. Is it the case that a lobster from which the eggs have been brushed will not live long?—A. She will not. I should not suppose she would.

Q. Do you notice any decrease in the average size of the lobster compared with when you began fishing?—A. Yes.

Q. Is it that they run smaller generally or are there as many big ones?—A. There are not as many large or small either, I mean there is a decrease in the whole thing.

Q. Are you fishing more gear now than when you began to fish?—A. Yes.

Q. Has the number of boats here increased greatly?—A. Not to a very great extent.

Q. What would you put—I do not want to know your own private business, but what would you put the average earnings of an active fisherman from the lobster fishery at? You see we want to show if possible to the Committee the value of the lobster fishery to the fishermen as compared with other fisheries?—A. Well, anywhere from \$100 to \$200 per year, of course it varies some years.

Q. And we understand that some men do much better than others?—A. There are some boats get as high as \$200 to the man.

SESSIONAL PAPER No. 22a

Q. That is clear of everything?—A. Yes.

Q. Now as to the other fisheries, which is the most important branch of the fishery here, the cod, halibut, herring or what?—A. It is between the haddock and the codfish, there is not much difference between them.

Q. What other fishing have you?—A. In the fall of the year we fish for haddock until away up in January, and cod fishing anywhere from March we can fish right through, but the best is from March to August.

Q. Is there no mackerel fishing done here?—A. No, none.

Q. To what do you attribute the decrease in the lobster fishery?—A. To the destruction of the small lobster.

Q. That, of course, has existed to a great extent elsewhere, I suppose you have no canning in this immediate neighbourhood?—A. Yes.

Q. Have you any idea as to the time the lobsters spawn, what do you think is the spawning season?—A. I do not know, I think they spawn almost any time.

Q. That is to say you find them with spawn on?—A. Yes, I have found them at any time of the year with spawn on.

Q. Do you not think they come into the shoal water for the purpose of spawning?—A. I suppose so.

Q. Do you find a larger proportion of egg-bearing lobsters towards the close of the season in shoal water, and in the warm water?—A. Yes, I think so.

Q. There is no use saying anything to you about the practice of the canneries since you have not one here. Do you know whether it is the practice of the fishermen who do deal with the canners to take everything they catch to them?—A. I cannot say anything about it, any more than from hearsay, I have never seen it myself, but I have heard it said that such is the case. Of course there are lobsters taken from this port to the cannery.

Q. If the canners refused to accept those berried lobsters what would the fishermen have to do?—A. They would have to let them go.

Q. Your limit here is 9 inches is it not? What is your size limit here?—A. 10½.

Q. You are in the Bay of Fundy part of Digby county?—A. Yes.

Q. Have you any knowledge or experience in the matter of hatcheries or pounds for holding the lobsters?—A. No.

Q. Has any attempt ever been made to enforce the regulations, such as they are, to your knowledge?—A. No.

Q. What is your opinion of the present policy of the department in having different size limits and different seasons in adjoining sections of the coast?—A. I think it should not be, I think it should all be one regulation.

Q. What reason have you for objecting to the present conditions?—A. Well, there is a manifest difference in the fishing between us and Annapolis county, right adjoining; they fish on the same ground as we do, and they start in at the same time as we do and fish right along and when we take up our traps they still keep right on. That is not giving us an equal show. Another thing, small lobsters can be caught in St. Mary's bay, we are fishing on one side of the bay and they are on the other, and we are catching small lobsters and throwing them out, and the next boat to us is catching them up and carrying them to the factory, I do not think that is fair at all.

Q. Is any attempt made by the local officers to regulate that matter of the season?—A. No.

Q. And it is the case that the fishermen from Annapolis county come down and fish all the year round in Digby county?—A. Yes.

Q. During the season that would be closed to them if they observed the regulation?—A. Yes, they fish right along, boat for boat sometimes.

Q. To what extent is fishing carried on in Annapolis county?—A. It is carried on to a pretty large extent.

Q. Are there many lobster fishermen fishing from that county?—A. Yes, quite a lot.

9-10 EDWARD VII., A. 1910

Q. And they come down, you say, and fish in the early part of the season on your ground?—A. Yes, with us, and on the opposite side of the gut from us, only three-quarters of a mile away, and they fish right along.

Q. There are no canneries in that county?—A. No, they ship all their lobsters.

Q. Where do they ship to?—A. They sell mostly to Boston, of course Mr. Sproule here is the buyer who buys more or less there.

Q. And they are shipped through Digby to Yarmouth?—A. Yes.

Q. They do not go to St. John?—A. No.

Q. As far as you know, do you think the canner could continue in business if the law were strictly enforced?—A. No.

Q. That is the 9-inch limit?—A. No, he could not.

Q. Have the canners always within your knowledge been unwilling to receive any undersized lobsters?—A. Yes, I think so.

Q. I suppose there is hardly any use for me to ask you which branch of the lobster industry you think is the most remunerative to the fishermen and the best calculated to maintain the supply unimpaired, the canning or the live lobster trade?—A. The live lobster trade.

Q. There is not much use going into the question of the canning here because it does not exist and does not immediately bother you. Now, what is your opinion as to the regulation, what do you think would be best for the future; what should the law be?—A. Well, I think we should have an open season for the year round and a restriction on the lobsters.

Q. What would you put the restriction at, what size would you suggest?—A. $10\frac{1}{2}$ inches.

Q. In view of the change in the Massachusetts law, do you think it would not be well to cut the size down to the same limit they have, or would you prefer to see it remain at 10 or $10\frac{1}{2}$?—A. I should not care about seeing it cut down to 9, but 10 would be all right.

Q. You would say an open season all the year round and a 10 inch limit?—A. Yes.

Q. And a strict enforcement of the law?—A. Exactly.

Q. With proper provision for the care of the berried lobster?—A. Yes.

Q. You think if that regulation were strictly enforced the fishery would improve and there would be no fear of depleting it?—A. Yes, I do.

Q. You made a statement a few minutes ago that Digby county did not have as long by a month as Annapolis county. I think you are a little off there. Annapolis county has from January 15 to June 30, whereas Digby county has from January 6 to June 15, that is not quite a month?—A. Well, I understood it was a month, but I see it is not quite that much.

Q. During what month do you lose the most of your time?—A. Well, there is quite a lot of time lost anyway through January which is usually a cold and rough month and then there is February and March is also quite a rough month, we are more apt to lose time in that month than any other.

Q. Do you lose your gear here from rough weather?—A. Not very much, of course we make our traps heavy and we fish in deep water, of course there is a lot of loss from ice which comes down through the bay and cuts off the buoys.

Q. About how long is the life of a trap with you; how often do you renew your gear?—A. It is supposed to last one season if it is not carried away.

Q. Will the traps not last more than one season?—A. We never count on them for more than that, we reckon to supply traps every year.

Q. Although your season is apparently long you lose a great part of your time through rough weather?—A. Yes.

Q. How often do you visit your traps during the winter months; how often do you visit them when you begin in January?—A. There will be a day now and again that we do not go to them, but we will make an average right through the season, I should think there would be about two days a week that we haul them, that is in Jan-

SESSIONAL PAPER No. 22a

January, February and March, of course there will be other months that we do it oftener.

Q. You fish in the Bay of Fundy, not in St. Mary's bay?—A. We fish in the Bay of Fundy.

Q. How far is it from the gut here to Tiverton; what is the extent of the coast line here. I hav'nt a chart with me?—A. 28 miles.

Q. And how far down that length of shore do you go from here?—A. We usually go outside in the Bay of Fundy two miles down, the fishermen from the gut here, and the fishermen from Broad Cove come up and join us.

Q. How many fishing stations are there between here and Petit Passage?—A. I do not know exactly, but I should think there must be at least ten anyway.

Witness discharged.

LEANDER ELLIS, fisherman, Bay View, called and sworn:—

By the Commissioner:

Q. How long have you been engaged in the lobster fishing?—A. Five years.

Q. Always in the same locality?—A. Yes.

Q. You never fished lobsters before that anywhere else?—A. No.

Q. During the time you have been fishing have you noticed any decrease in the fishery?—A. Yes.

Q. Is it not as good now as it was when you began?—A. No.

Q. To what extent would you say it has failed?—A. I should say one-third or more.

Q. Is it that you are seeing more small lobsters or do you not see as many lobsters of any kind?—A. We do not see as many of any kind.

Q. Are you engaged in the export trade altogether?—A. Yes.

Q. You export all the lobsters you catch?—A. Yes.

Q. Are you engaged in any other kind of fishing, do you fish generally?—A. The hand line fishing.

Q. How came it that you only began the lobster fishing so late?—A. I was away from here, I only moved here six years ago.

Q. Were you brought up to the fishing?—A. Yes.

Q. You fish on the same ground as the gentleman who gave evidence before you?—A. Yes.

Q. And in the same depth of water and under the same conditions?—A. Yes, right in the same place.

Q. To what do you attribute the decrease in the lobster fishery?—A. Well, the destruction of the small lobster.

Q. That is to say not on the particular ground where you fish?—A. No.

Q. But on the ground below you, or where?—A. As a rule everything is taken that we catch.

Q. Do you sell anything to the cannery in your case?—A. No, we do not sell any to the canner, but there are buyers who buy the small lobsters and export them.

Q. What do you call small lobsters in that case?—A. From 9 up to 10½ inches.

Q. Those are what we generally call mediums in other places, those small lobsters, as you call them, are exported to the same market as you ship your larger lobsters to?—A. To the same market.

Q. Why is it you do not ship those lobsters yourself if the market is open to you and you are shipping the other lobsters?—A. We do not very much around our locality, some of the people do, sometimes they will have a barrel half full of big ones and fill it up with small ones.

Q. Is there much difference in the price between those mediums and large-sized lobsters in the market?—A. There is a difference.

9-10 EDWARD VII., A. 1910

Q. What would you say are the average earnings of a competent fisherman from the lobster fishery?—A. From \$150 to \$200; I know three or four years ago two of us in a boat stocked \$590, and this year two of us in a boat stocked \$100 to a man.

Q. Was that due to the poor season, was there rough weather and a poor market or what?—A. The weather is always rough enough with us, but the prices were not quite so high, and there was a falling off in the lobsters.

Q. What style of a trap do you use?—A. The old style double ender.

Q. About what space would you say is left between the slats?—A. Fully an inch and a half.

Q. And what size mesh have you in the net at the end?—A. Well, about one and a half to two inches.

Q. Do you think that the practice of putting the slats closer together than they used to be was introduced with a view of holding the small lobsters in the trap?—A. Well, it would hold more small lobsters, these little chickens.

Q. Where everything is taken to the cannery we found that the traps in some places were made with a space not big enough to put your finger through?—A. Two years ago I picked up a trap that had got adrift, I suppose it came out of St. Mary's Bay, it was flat on top, and I noticed that the laths were very close together and the mesh in the head was very small, it was all baited and set out, and it would hold little lobsters not more than three or four inches long.

Q. You noticed that it would hold smaller lobsters than you fish yourself?—A. Yes.

Q. Do you think it would be reasonable to insist that the traps be made with a certain space between the slats?—A. I think it would be advisable.

Q. By doing that we would secure the escape of a certain quantity of small lobsters, a certain proportion of them would escape you think?—A. Yes, those little ones would escape.

Q. You own your own boat and gear of course?—A. Yes.

Q. What number of traps do you fish?—A. 50 or 60, in fact in the winter time we fish 50 and towards the spring we fish more.

Q. What is your experience as to the winter months, to what extent is the fishery carried on during the rougher months of the winter?—A. Well, there is an increase in the lobsters towards the spring.

Q. But what I mean is you begin to fish in January?—A. Yes.

Q. What sort of a month is January with you, do you lose much time in January?—A. Quite a lot.

Q. And what about February?—A. In February we lose a lot.

Q. And in March?—A. We lose most all the time then.

Q. It is usually a stormy month?—A. It is a stormy month and generally we do not want to go out in the Bay of Fundy any oftener than we can help; after the 20th of April we plan to haul quite frequently.

Q. You can attend your traps more regularly?—A. Oh, yes.

Q. At what time do you find the market generally is the best for the market lobsters?—A. In February and March.

Q. Those are the best months?—A. Yes.

Q. I suppose there are fewer lobsters coming into the market then and the price is higher?—A. Yes, that is the idea.

Q. And they are fewer because the season is rough, and the fishing is not carried on so extensively, is that the idea?—A. Yes.

Q. Do you ship your lobsters to a commission merchant in Boston?—A. Yes.

Q. What is your idea of the spawning season of the lobster, when do you think they spawn?—A. I could not just say when they spawn, but we have caught them right along in the winter with eggs on.

Q. With the spawn on them then?—A. Yes, with the spawn on them.

SESSIONAL PAPER No. 22a

Q. The berries then are generally black and hard are they not?—A. Yes.

Q. Do you notice that as the water gets warmer and the season advances, the eggs get ripier and change colour?—A. Yes, they get larger.

Q. Do you ever get far enough advanced for you to notice the eye of the young lobster under the shell?—A. No, I have not noticed that.

Q. Do you think you find more egg-bearing lobsters late in the season and in shoal water than you do off shore?—A. Yes.

Q. You think they come into shore then?—A. Yes, towards the shore, I think all lobsters do.

Q. Is there much fishing done in the bay itself here, inside the neck?—A. In the basin do you mean?

Q. Yes, in the basin.—A. Yes, quite a lot.

Q. Do you fish close in?—A. No.

Q. You fish outside?—A. Yes.

Q. Who carries on the fishing inside, in the basin?—A. There are three boats I think from our town here, that fish inside, but those boats that fish inside do not fish outside.

Q. What is the nature of the fishing inside, do they get market fish in there too?—A. Yes.

Q. And they generally export their lobsters?—A. Yes.

Q. Do they get as large a run of lobsters inside as you do?—A. Larger, but not quite so many of them in number.

Q. Is there any season when there are no lobsters in the basin, do they ever move out of it?—A. Not to my knowledge.

Q. You can catch them in the basin at all seasons of the year?—A. At all seasons.

Q. What is the average depth of water in the basin?—A. Twenty-five to thirty fathoms.

Q. How is the bottom over the basin generally?—A. Well, it is hard bottom except in places up through the channel, but I think it is a pretty hard bottom.

Q. Has there ever been any canning done in the basin to your knowledge?—A. Not since I have been here.

Q. Was there ever a canning factory in the basin here?

Mr. HAYDEN.—Yes, there was now that I think of it, at one time there was a canning factory here.

Q. What is the practice of the fishermen with regard to the berried lobsters?—A. Well, the most of the fishermen I think just take them out of the traps and put them overboard, I know I always do.

Q. Do you think the practice of stripping the lobster has ever been carried on?—A. Brushing the lobster, do you mean?

Q. Yes.—A. Not to my knowledge.

Q. It has never been practiced here to any extent?—A. No.

Q. Of course on some parts of the coast it has been practiced and is practiced still?—A. No doubt of that, you might find men occasionally that will do it.

Q. Do you think the fishermen generally are beginning to recognize the necessity for protecting that lobster?—A. Yes.

Q. And they have a better idea of the injury they are doing to the fishery by destroying the berried lobster?—A. Yes, I think they appreciate that now.

Q. Is there any fishing done off shore here by smacks from the United States?—A. No, I do not think so, now.

Q. You have never known of American vessels carrying on the lobster fishing outside?—A. No.

Q. Have the American smacks come up here to buy lobsters?—A. Yes.

Q. Are they still doing that?—A. Yes.

9-10 EDWARD VII., A. 1910

Q. Do they come in large numbers?—A. This last year I think there were four different ones.

Q. Where did they hail from?—A. I do not know exactly, I never sold any lobsters to them, but I know that I have often seen them pass in and out.

Q. Is there any lobster fishing done out of season?—A. Yes.

Q. In what way?—A. Well, there are men to-day, I suppose, who have a full gang of traps in the water round our shores.

Q. Is that in the basin or off shore?—A. In the basin and outside.

Q. What becomes of the lobsters they catch?—A. They supply the boarding houses and the hotels in town, I guess they find a home market for them in the close season.

Q. Is that done extensively, is there a great deal of that done?—A. Yes.

Q. Now what is your view with regard to the regulation; what regulation would you suggest for the better protection of the lobster fishery?—A. Well, I think if we had fishing all the year round with a ten inch limit and nothing taken smaller than that it would be the best.

Q. And you would have the regulation strictly enforced?—A. Yes, the regulation should be strictly enforced.

Q. There would be no use allowing fishing all the year round unless the law were absolutely enforced?—A. Well, if the small lobsters are not protected we cannot expect to catch big ones.

Q. Then, of course you think that the branch of the fishery which should be provided for in this district is the live lobster trade and not the canning?—A. Certainly.

Q. The canning is altogether out of the question and a secondary matter?—A. Yes, it is out of the question, because I do not think they deal with the large lobsters at all, it is the small lobsters the canners are after.

Q. Are there any local dealers exporting the large lobsters who purchase them from the fishermen here?—A. Yes.

Q. So that all the fishermen do not export their own lobsters?—A. No.

Q. I do not think of anything else to ask you, is there anything else you would like to say yourself that I have not asked you about?—A. I would like to say that the fishermen to-day that call themselves lobster fishermen want to see this fishing out of season stopped, they want to see something done about it because they are not going to put up with it.

Q. They want that as well as some changes for the protection of the small lobster?—A. Yes, I know that the cutter was around here a month or six weeks ago and cut away a lot of gear, but there is still a lot of it in the water yet.

Witness discharged.

J. M. HAYDON and ISAAC ELLIS, Fishermen, Digby, who were present, stated that they fished on the same ground as the previous witnesses and fully approved of all that they had said.

DAVID SPROUL, canner, Digby, called and sworn:—

By the Commissioner:

Q. Do you figure as a canner or what are you?—A. Well, I am interested in canning.

Q. In what locality do you carry on canning?—A. The cannery is in Canso.

Q. Oh we were up there, and we had a witness of the same name as yourself there, still we are very glad to hear anything you have to say in connection with the lobster industry?—A. That was my brother you met at Canso.

SESSIONAL PAPER No. 22a

Q. What is your connection with the lobster industry in Digby county?—A. Well, I have not very much connection with it in Digby county, we buy small lobsters here, but not to any great extent; we operate in Annapolis, Kings and Cumberland counties farther up the bay.

Q. To what extent is the fishery carried on in those counties?—A. Well it is all a live lobster trade there, but there are as many fishermen fishing lobsters in those counties as there is room for.

Q. Can you in a general way give us any idea of the number of boats engaged in the fishery in those counties; have you been up there among them and know the conditions?—A. Oh yes, I have been up there among them.

Q. What number of boats would you say are fishing lobsters in Annapolis county?—A. I think there are a hundred.

Q. And how many in King's county?—A. About 70 probably, along about that.

Q. And in Cumberland county?—A. Not over 50.

Q. Where do they find a market for their lobsters?—A. They sell to the buyers, the principal part of their catch, and a part of it they ship themselves.

Q. They sell to buyers who reside there and do other business in the various counties up there?—A. No, they sell—well there are only two firms that go up there, ourselves and Captain Anderson.

Q. They sell to smacks that come along and collect the fish there?—A. Yes.

Q. And bring them up here?—A. We bring ours here, and Captain Anderson takes them to Carter's Cove where he resides; he ships in American smacks.

Q. Is there any canning done along this section of the coast?—A. No.

Q. So that their trade is entirely in fresh lobsters?—A. In fresh lobsters.

Q. Their size limit is fixed at 10½ inches, is it not?—A. Yes.

Q. Is that regulation enforced any better there than it is elsewhere, or do they catch small lobsters?—A. It has been observed pretty well heretofore, but they say up there that the fishermen down here catch them and they might as well catch them too.

Q. What do they do with them?—A. They sell to us.

Q. That is down to 9 inches?—A. Yes.

Q. And what about those below 9 inches?—A. They get very few below 9 inches, the lobsters run larger up the bay than they do down here.

Q. Are they as plentiful up the bay as they are here?—A. Yes, I think they are, in fact, more plentiful.

Q. Have you any idea what is the best season with them?—A. The best season with them is the month of June.

Q. Do you think that the lobsters come up and down the Bay of Fundy, that they back out of the Bay of Fundy in the winter?—A. I do not think they do very much, apparently they do not seem to come and go like other fish.

Q. They winter in the bay, you think?—A. I think they do, off shore, and they come in in the spring.

Q. How is the fishing generally carried on with them, do they catch them in deep water or shoal water?—A. Shoal water.

Q. Towards the shore?—A. Yes, when they come in.

Q. Have you any idea of the percentage of the egg-bearing lobsters they see in the month of June up there?—A. I should think there would be one or two to the hundred.

Q. Have you any idea of the practice of the fishermen up there with regard to that lobster?—A. Yes, they generally let them go, in fact I think they always do, I never knew any of them to save the berried lobster.

Q. I understand that you carry on business here, of course you export to Boston in the same way as the fishermen do, by way of Yarmouth?—A. Yes.

Q. Has the change in the size limit in the State of Massachusetts affected the market to any considerable extent?—A. Yes.

Q. Has it depreciated the market?—A. It has.

9-10 EDWARD VII., A. 1910

Q. For the large lobsters as well as the small?—A. Yes, it has depreciated the large as well as the mediums.

Q. What is your own idea as to the best regulation to enforce for this district?—A. For Annapolis, King's and Cumberland counties?

Q. Well, the whole region around here?—A. Well, my idea of it is that east of Digby Gut, January, February and March months are of no use whatever to the fishermen, they will all agree with me I think, that they do not want January, February or March.

Q. That is east of Digby Gut?—A. East of Digby Gut, well they might right around here handy to the Gut for a couple of miles or so, but for all the rest of the section they do not want the winter months; the water is shoal and gets rough, and no one would like to go up there for them, they have no way of getting them to market, so that they do not pretend to fish. During the last twenty years they have not fished lobsters until about the middle of April, except as I told you right handy around the Gut for a mile or so where they go out a little, so that they can get back easily.

Q. Is it the case that the fishermen up there come down here and engage in fishing in the early part of the season?—A. No, I think you misunderstood Mr. Hayden, it is just around the entrance to the Gut that they come across, within a mile or so.

Mr. HAYDEN.—Yes, that is so.

Mr. ELLIS.—January, February and March are not worth much to the lobster fishermen, because it is very rough weather then.

Q. But you get a better price in February for the lobsters you do export?

Mr. ELLIS.—Yes, but there are very few caught.

A. Beginning on the 15th of April and extending to the 15th of July is what the fishermen want in that region.

Q. Do you not think that by extending the season to the 15th of July you would be encroaching very much on the regular spawning season of the lobster?—A. No, not in the waters of the Bay of Fundy up there.

Q. When do you think the lobsters spawn up there?—A. Well, I think they spawn in August and September, but I have always noticed that there are berried lobsters in every month of the year.

Q. Oh yes, they carry eggs all the year round some of them.—A. But I have noticed them quite often when they turn a kind of reddish colour, that is when they are getting ripe in the latter part of July and in August.

Q. How would a size limit of 10 inches and a fishing season all the year round affect the question? It is very difficult to have these different size limits and different seasons in adjoining sections, it leads to complaints of infractions of the regulations?—A. I do not think that the catch would warrant fishing all the year round; our lobsters are scarce here they say even in April and by the first of July the catch gets very small so that many fishermen haul their traps before the season is over.

Q. Is it not the case that in Maine where the lobster fishery was depleted undoubtedly by the canning the doing away of the canning and the enforcement of the 10½ inch limit, in spite of the fact that they fish all the year round, there has been an improvement in the fishery?—A. Well, I see some are of the opinion that the lobsters are plentiful in the State of Maine, but they have not canned any over there.

Q. No, they gave it up over there and they moved in here, in fact the pioneers of the canning industry, in the Gulf of St. Lawrence at all events, were the people that came from Maine who gave up the canning there after they had played it out?—A. Yes.

Q. And since the canning has been abandoned in the State of Maine and they have had a large size limit their fishery seems to have improved?—A. Yes, some say it is improving, that is in price, but the size is not so large.

SESSIONAL PAPER No. 22a

Q. Do they live strictly up to the regulation of 10½ inches in the State of Maine?
—A. Well, they have been taking 9 inch lobsters for a couple of years there.

Q. Did they alter their regulations at the same time as the State of Massachusetts?—A. Yes, they have been shipping 9 inch lobsters to the State of Maine for the last 2 or 3 years.

A Fisherman.—At what port in the State of Maine?—A. Eastport.

A Fisherman.—I have been all through there and I have never seen it, the American government paid \$1.00 each for their seed lobsters.

A. The lobsters are taken in by American smacks, and they buy everything, so they say, from 9 inches up.

Q. Some people say that the practice is in the State of Maine to put the lobsters in a pound and hold them there until the market reaches the high figure, and it has been suggested that should be done here?—A. It has not been done here.

Q. Some people think it might be done to advantage?—A. Oh, of course it might be done to advantage.

Q. Do you think it is possible that might be done here without any chance of violation of the law?—A. It might give them an opportunity to cover up what they caught during the close season.

Q. As regards the rest of Digby county, going the other way, what would you say as to the regulations?—A. I would say that the size limit should be enforced.

Q. At what size?—A. Well, I should say nothing less than 9 inches.

Q. Is it to your knowledge that it is not enforced?—A. I am certain it is not enforced.

Q. Was it ever enforced?—A. No, not for a number of years back.

Q. To what extent is canning carried on here, if that 9 inch limit were strictly enforced how would it affect the canners?—A. I think they would give up canning and go into the live lobster business.

Q. There is practically not much canning done in this immediate neighbourhood?—A. No, 15 miles away there is a small factory.

Q. Was it ever carried on here?—A. It was 12 or 15 years ago.

Q. Who operated the cannery?—A. The Digby Canning Company. We were a branch firm then.

Q. How was it you gave it up, was it to develop the live lobster trade?—A. We could not get enough small lobsters to keep it going.

Q. Is there any further statement you wish to make in connection with the fishery?
—A. There is one thing I have always had in my mind and that is the reason the law has never been enforced is that the fishermen will not inform on one another. The fishery overseers apparently think that the fishermen should inform, and bring complaints of the violation of the law to them, well the fishermen will not do that and I think the fishery overseer should do that and that he should be paid enough money to look after the enforcement of the size limit properly.

Q. Talking about the matter of informing, some people have suggested that the lobster fishermen should be required to register before commencing to fish, that they should take out a license, there need not be any charge for it necessarily, which would recite the provisions of the law and the fishermen would sign an obligation to respect the law and live up to it strictly. The idea of those who suggested this was that having done that the fishermen would feel themselves bound to obey the law, more so than they do at the present?—A. Yes.

Q. And they would in all probability inform on others who did not obey the law, that each fisherman would regard himself as in a sense, a fishery officer. Of course the intention is that those who were proved to have violated the law would be refused a license and would not be allowed to fish lobsters another season; do you think that would work, would it be advisable to make such a law?—A. The fishermen

9-10 EDWARD VII., A. 1910

will not inform on one another, they are afraid of getting their traps cut away if they did.

Q. You say that it is the duty of the fishery officer to look after violations of the law?—A. Yes. I think it would be a good thing to have the fishermen take out a license that would not cost anything, and to have him bound by a certain regulation, because I think he would have a certain respect to his oath. Of course the conditions are quite different below here from what they are in Annapolis, Kings and up the bay.

Q. They are different everywhere, they are different in St. Mary's Bay, but the conditions in the Bay of Fundy are the same as exist all along the coast.—A. The fishermen in these three counties do not attempt to fish in the winter months, and they think if they had a little later season it would help out on the prices that the other fishermen get.

Q. And the price in July would be higher than it is when the other fish are coming on?—A. Yes, that is it.

Q. The fishermen in some places have said that if they were allowed to go into the canning it would be better for them; you do not want to go into the canning here?—A. No, none of us want it. I might say something I omitted to say with respect to the weather in the Bay of Fundy. The fishermen and all those that are acquainted with it know that it is a very rough piece of water with very strong tides, and they cannot go off shore far because a little wind makes it very rough, so that they cannot attend to their traps but two or three days a week, and sometimes they have to go a whole week without attending them. It might be as fine and as free from wind as it is to-day, but a little wind springs up and you cannot go out.

Q. Are the conditions any worse up the Bay of Fundy than they are at the mouth?—A. Yes, the water is shoaler and wind makes it rougher.

Q. Have you all the facilities for the encouragement of the live lobster trade; do you meet with any loss in the export of those lobsters that could be prevented?—A. Yes, in May and June we lose a considerable number of lobsters, in fact we have to ice them, and even then we lost a lot because we used to put the ice on the top of them, but we have learned now that the fresh water from the melting ice running down on them killed them and now we put it underneath them. It would be much better if they had a particular part of the boat set apart for the lobsters where the heat from the engine and boiler room would not affect them so that they would arrive in much better condition.

Q. That is to say if they were fitted with cold storage or a cool chamber?—A. Yes, that would be all right.

Q. How are these lobsters generally carried, between decks on a steamer?—A. Between decks.

Q. Do they put them in the hold at all?—A. Yes, a great many have to go down in the hold and there they suffer from the heat of the boiler. This summer we lost one whole lot of lobsters, they said every one of them was dead when they reached Boston, and we lost \$75 on one shipment.

Q. Is there any endeavour made on the part of the owners of these steamers to encourage, foster or protect this live lobster trade which seems to furnish a very large part of their freight?—A. They seem to talk that way, but they ship from Yarmouth in the season any where from 600 to 1,500 crates of lobsters at a time, and when they go in such large quantities as that some of them get next the boilers and have to suffer.

Q. One would think having in view their own interest they would do all they could to encourage that trade?—A. Yes, you would think so.

Q. Then there is no doubt that if these steamers were furnished with cold storage a large proportion of those lobsters that are now lost would be saved?—A. Yes.

Q. The loss occurs between Yarmouth and Boston, it is said?—A. Yes, between Yarmouth and Boston. But I think it would be good business on the part of

SESSIONAL PAPER No. 22a

the government to provide proper cars for the transport of lobsters on the railway as they do now through New Brunswick from Shediac to Campbellton.

Q. They ship them in refrigerator cars there.—A. Yes, there are refrigerator cars supposed to go once a week.

Q. I think the government agreed to pay part of the freight on fish?—A. That is for the fresh fish for the Canadian trade, but I think they should do something for the Boston trade, the greater part of our lobsters go to Boston.

Q. Would you say that some arrangement should be made for the extension of that system of refrigerator cars to which you have referred, so that the live lobster trade of this section might benefit by it?—A. Yes, I think it would be a good thing for the development of the live lobster trade, and it would be in the best interests of the fishermen.

Q. I suppose that refrigerator car service was provided with the view of encouraging that trade from Prince Edward Island?—A. Yes.

Q. But of course that is a very small proportion of the trade and always will be?—A. It is just a matter of time, the lobster cannot stand more than 40 or 50 hours and arrive in the market in any kind of fair condition. If they can be taken to any part of Quebec inside of 48 hours I think the trade will develop; in fact I know parties that are already thinking of trying to develop the lobster trade up there if they could get the right kind of cars.

Q. Of course these are all facts that it will be just as well to lay before the committee, as they concern the future of the industry.

By Mr. Jameson, M.P.:

Q. Do you think there can be any shipment of live lobsters to Ontario? Or has there been any shipment?—A. Yes, there have been some shipments; quite a lot have been shipped by express to Montreal and Quebec, and as far as Detroit, and they have arrived in good condition.

Q. How does that business pay compared with the Boston business? It pays, but not quite as well.

By the Commissioner:

Q. There is a steamer fitted with cold storage running along the north shore of the gulf, and several of our cannerys there have given up canning and are exporting their lobsters alive by that route?—A. It is only a question of time when canning will go out.

Q. There is a feeling on the part of a good many people that it will be better to boil the lobsters in this country, as they are taken fresh from the water, and have them exported in cold storage?—A. Well, the boilers in Boston do not think so, they think they must have the lobsters alive, and then they can express them to their customers pretty quickly; in fact even the Boston boilers are now shipping most of their lobsters to Chicago and the west alive.

Q. Do you think lobsters kept for some time in a boat packed in a crate, and then packed on the steamer to Boston, and held in cars there in the polluted waters of the harbour will reach the consumer in as good order as they would if they had been cooked on the coast as soon as they were taken from the water and then chilled or frozen?—A. I think they would.

Q. Do you not think the lobster is deteriorating every hour it is out of the water?—A. I do not know, but I think that experience has shown it is best to ship alive as far as possible and then cook them; when boiled here they turn slimy and they waste in shipping, and get sour very quickly.

Q. I have seen lobsters cooked in Anticosti, held in cold storage for a year and then served in perfect condition. Mr. Menier has tried that experiment there, he

9-10 EDWARD VII., A. 1910

has had a cannery operating there, and he has the idea that he can do better that way than by canning, and he would even export them to France if he could keep them cool enough?—A. There is always a prejudice against frozen fish, they lose a certain amount of the flavour they had when they were fresh; there is just about the same difference between frozen and fresh fish as there is between the canned lobster and the fresh one.

Q. Has it never been proposed to export lobsters to the old country, to Europe?—A. I have heard it mentioned this winter, that it is possible to ship them over in tanks, and I do not know but what it will come around all right.

Q. Has it come to your knowledge that a considerable quantity of lobsters are bought by the United States smacks off the coast here?—A. Yes.

Q. Where are they taken to generally?—A. To Portland.

Q. Those lobsters are taken to supply the pounds along the coast of the State of Maine?—A. Yes, they are kept in pounds until our season is all closed up here in the early part of the winter.

Q. That will be one reason why we should be allowed to establish pounds on our coast?—A. I should think that would be a good reason.

Q. Would our harder winter hurt the pounds at all, they might freeze over?—A. It would, we have more to contend with on this side than they have on the other side.

Q. Could the lobsters be held in a pound that was frozen over?—A. Yes, the ice would not affect them.

Q. Are there any stations of the Fishermen's Union in this part of the world?

Mr. HAYDEN.—No.

A. There was one partly organized a little further down but it has never amounted to anything.

Q. What was the matter?—A. The fishermen did not take enough interest in it to attend the meetings.

Q. What is the nearest factory?—A. The only one I know of would be about 15 miles below here.

Q. Is there only one between here and Petit Passage?—A. Only one.

Q. Have you any idea of the average pack there?—A. 200 or 300 cases.

Q. So that canning, as far as this part of the county is concerned, is an industry of the past?—A. Yes, the price for canning lobsters during the past year has been so low that even down there I do not think they have canned very many this year, for the simple reason that the live lobster trade can pay more for the lobsters than they can. Except those under 9 inches, they can all under that size, but that is all they do can.

Q. And I suppose the culled and mutilated lobsters?—A. Yes, I think it would be a very wise thing to enforce a regulation specifying the space between the slats in the trap, the overseer could see that it was carried out, and that would allow the small ones to escape.

Q. I am inclined to think it would be a good thing, although some fishermne tell us it would not make any difference, but I think after thirty-two years' experience I have noticed that where the laths used to be 1½ inches apart they are gradually narrowing them down, and there can only be one reason for doing that, to hold the small lobster?—A. Yes, no doubt about that. I have heard and read a great deal about the wisdom of the government paying the fishermen for bringing in the berried lobsters so that they could be held until after the season is over, but I do not think that would affect us very much here as the fishermen all say they let them go, and it is better I think to liberate them on the ground where they belong.

Q. There is no doubt the best way to allow the lobster to survive is to let her do her own work?—A. Yes.

SESSIONAL PAPER No. 22a

By Mr. Jameson, M.P.:

Q. Do you think that pounds or a lobster hatchery would be any benefit to the industry in these waters, I am very strongly of the opinion myself that it would?—A. Yes.

Q. It would serve to advantage in either one of two ways, the pound would allow the lobsters to propagate and reproduce naturally, and on the other hand, it would ensure that the lobsters would be allowed to reproduce, if the fishermen were assured that he would get a better price for her, undoubtedly he would sell her to the pound.—

A. But I see the difficulty that it would be robbing the head of the Bay of Fundy of their lobsters, and bringing them to a place where the fishermen up there would get no benefit from them.

By the Commissioner:

Q. If there are to be hatcheries established they must not be too far apart, because the fishermen already object to that where they are in existence, and if we had pounds it would be better to have a number of small pounds scattered along the coast than to have one large pound.—A. I never could see the wisdom of taking care of the seed lobster and letting them spawn and then allowing the fish to have a chance to destroy the young lobsters.

Q. Where they spawn the other fish do prey on them, the mackerel especially?—A. The pollock and other small fish prey on the spawn and I think in that way they destroy them. If it is possible they should be protected until they get a little size.

Q. You cannot protect the young lobsters very long because they devour each other, they are their own worst enemies, if you put a dozen of them in a glass jar to-day you will only have a half a dozen there to-morrow.—A. And it is the same with the large ones also.

Dr. JONES.—Has anything ever been done yet to re-stock the waters by means of hatcheries?

The COMMISSIONER.—Oh, yes, there are several hatcheries in operation, there is one at Cariboo Point, Pictou county, and the fishermen there maintain that they have derived great benefit from the work carried on there.

A. I remember once attempting to hatch lobsters from spawn in a hatchery up at Gaspé, and the attempt was a failure.

Q. Thereby hangs a tale, they built the hatchery in a fresh water pond, trying to combine the lobster and the salmon hatchery, and it did not work together.

Witness discharged.

The Commission adjourned.

(Memo. subsequent to the adjournment Mr. Sproul, Mr. Hayden and Mr. Ellis, waited upon the Commissioner and informed him that having talked the matter over they had agreed it would be better to have a 10 inch limit for the whole of the Bay of Fundy in order to make the regulation uniform, if possible, for the whole district.)

9-10 EDWARD VII., A. 1910

NEW BRUNSWICK.

LEPREAU, September 20th, 1909.

ROBERT ELLIS, fisherman, Mace's Bay, called and sworn:—

By the Commissioner:

Q. How long have you been engaged in the lobster fishery?—A. I suppose I have fished lobsters twenty-three years.

Q. Have you always fished in this neighbourhood?—A. Yes.

Q. Your season of fishing here begins January 6th and ends on June 15th, does it not?—A. Yes.

Q. Have you any idea how that date came to be fixed at January 6th, instead of January 1st?—A. It beats me, I do not know why it was.

Q. What is the practice with the fishermen here, do they own their own boats and gear?—A. They own their own boats and gear.

Q. What type of boat do they use, do you use mostly gasoline boats now?—A. Mostly gasoline boats.

Q. What is the value of a lobster boat?—A. You mean gasoline engine and all?

Q. Yes, I suppose they almost all use them?—A. \$150, some more, some less.

Q. What number of traps do the fishermen fish?—A. Sixty on the average.

Q. Trawls or single lines?—A. All single lines.

Q. How many men work to a boat?—A. Some two men, some one; some work singly and more with two men.

Q. How do you find the fishing when you begin?—A. It is pretty poor.

Q. In January?—A. Yes, oh, well it is better then than it is later.

Q. What is the condition of the fishery on this coast compared with what it was when you began twenty years ago?—A. It is not nearly so good.

Q. To what extent has it diminished?—A. I am quite sure it is not one-half.

Q. What is the cause of the decrease in the fishery, to what do you attribute it; there must have been some reason for it?—A. I believe it is just on account of the little ones being caught, there is no doubt about it.

Q. Because of catching small lobsters for canning purposes?—A. I believe so.

Q. What depth of water do you fish in when you begin on January 6?—A. From eight to twelve fathoms.

Q. Is that right in the bay here?—A. No, that would be right around the ledges, all around here.

Q. What number of boats are there altogether from Lepreau fishing lobsters?—A. There will be as many, I think, as ten boats fishing.

Q. Are there not more than that?—A. I do not think there are more than that.

Q. Not from Lepreau?—A. Not any more I think from Lepreau, there might be one more or less, but that is about it.

Q. Do you fish steadily all through the winter?—A. Yes, right through the winter.

Q. When do you have your best fishing?—A. When you first set out.

Q. Of the total quantity of lobsters you catch, what proportion are market fish, what do you market now, everything over nine inches?—A. Yes, well ten and a half is the shipping lobster.

Q. And you are not supposed to catch any below nine inches?—A. To catch anything short of nine inches.

SESSIONAL PAPER No. 22a

Q. And you do not ship between nine and ten and a half inches now that the Boston market is open to them?—A. Oh, yes, we have shipped what we call little ones.

Q. That is the lobsters between nine and ten and a half?—A. Yes.

Q. How do you ship, by what route?—A. Well, most of the lobsters caught here are sold to the smacks, but a few are sent by rail.

Q. Where are the smacks from?—A. From Eastport.

Q. They come over here and buy the lobsters direct from you?—A. Yes.

Q. What proportion of your total catch will be fit for market, over nine inches?—A. That will be the large ones and the mediums.

Q. Yes, what proportion are sold to the canner?—A. I think there will be two-thirds sold to the canner.

Q. What canneries are operating here? We had one canner I think before the committee in Ottawa, Mr. Connors?—A. That is the man.

Q. You have only one cannery?—A. There is only one that I know of.

Q. Only one license is issued here?—A. Yes.

Q. And he buys all the small lobsters?—A. Well, there are some shipped away, of course.

Q. What I mean by small lobsters are those under nine inches, you do not ship them?—A. Oh, no.

Q. Has there been any attempt to enforce the regulations here?—A. That is to throw away the small lobsters?

Q. Yes?—A. No, I do not believe it has been done, there was some talk about it, but I do not think it was carried out; well, yes, there was a time for about two years that they did enforce it, and I know there was a great improvement in that time.

Q. Is there any station of the Fishermen's Union here?—A. No, there is no lobster fisherman's union here, but there is a weir fishermen's union.

Q. Do you fish lobsters on the same ground all through the season?—A. Well, about the same ground, we keep shifting off and on.

Q. As the season gets near the close, as you approach the middle of June do you move into shoal water?—A. Yes, we do.

Q. Have you ever remarked whether at that time you get a larger proportion of small fish than you do when fishing in deep water?—A. Yes, I think you do get a few more.

Q. As to the berried lobster, what proportion of your total catch bear eggs?—A. I do not think there will be more than one lobster in a hundred, about 1 per cent. In my fishing last year I have not seen more than that, they might run more or they might run less, that is all I could say about it.

Q. What is done with those lobsters?—A. I know what I do, I put them overboard as soon as I can, but I have heard that there are men who sell them to the American boats, and I am afraid that is too true. It is an awful mistake for men to do that.

Q. No wonder your fish are becoming scarce if that is the case?—A. Yes, there is no doubt about that, it is an awful thing for any man to do.

Q. What will market lobsters bring you here?—A. Do you mean the year round?

Q. Yes, give it to us at the various seasons if you can; the highest price is in January and February, is it not?—A. Yes, about 30 cents a piece is the most we ever got here.

Q. That is for the 10½ inch?—A. Yes, for the market lobsters.

Q. And what are those between 9 and 10½ inches worth?—A. Those are worth 4 cents.

Q. What do you get for those you sell to the canner?—A. Well, that will be about the way they go, about 4 cents.

Q. Are you supposed then to sell him all under the 10½ inches?—A. Oh yes, because the fishermen would not like to sell anything that would be 10½ inches for 4 cents, so it will be sure to be under 10½ that they sell for 4 cents.

9-10 EDWARD VII., A. 1910

Q. How does that compare with what you used to get, has it ever been more than that?—A. No.

Q. Then it is at its best now?—A. Yes, it is the highest we have got.

Q. Did the change in the size limit in Massachusetts affect the price of the fish here; did the big fish drop in price on account of that change?—A. Sometimes we think it did make a difference, but whether it did or not I do not know.

Q. Now as to your arrangement with the canner, how has it worked out, is there any competition in the matter of price, or does the canner set his price and are you obliged to take it?—A. Well, he sets the price and we are obliged to take it; we would not be getting even 4 cents for the little ones only there have been a few buying for other smacks, or really they would not pay that; I think all they have been paying is 3 cents, they set the price.

Q. How do you deliver to the cannery, do you deliver the lobsters yourself or does the canner send a smack for them?—A. He sends a smack for them.

Q. And that is the only cannery buying lobsters?—A. I am not quite sure about that, there used to be a cannery at Campobello, but I am not sure whether they are operating now or not.

Q. There are four canning licenses issued in Charlotte county?—A. Oh well, there may be more canneries then, and I hope there are.

Q. Do you know anything about the regulations in the State of Maine?—A. No, I am not posted on that.

Q. Now as to the regulation for the future government of the fishery, what is your opinion, what would be best for this locality with a view first of all to protect the lobster fishery and second with a view to the greatest profit to the fishermen?—A. About as to the time of setting out the traps, do you mean?

Q. As to the regulations, what would you say would be the most suitable regulation for this locality, the first object we have in view is to protect the fishery and the next is the betterment of the fishermen?—A. Just so.

Q. There is no doubt that on that part of the coast around Yarmouth and Digby and that way, the largest revenue is derived from the fresh market sales, so that with them, canning is quite a secondary matter?—A. Yes.

Q. And they are quite prepared to see the canneries closed up, and there is no doubt that if the 10½ inch limit were enforced everywhere and there was no canning of small lobsters the fishery would improve rapidly?—A. Yes, there is no question about that.

Q. What is your idea as to the regulations that should be enforced for the county of Charlotte, speaking as a fisherman?—A. Well, I do not know.

Q. The present regulations are that you fish from January 6 to June 15 and that you have a 9 inch limit. Have these matters been discussed by the fishermen?—A. Yes, of course there has been a lot of talk down here about it, but I have not thought much lately about it.

Q. A lot of recommendations have been made to the department, one is that the fishery should be shut down entirely for a term of years, in order to let it recuperate, there is no doubt as far as the fishery is concerned that would be the easiest and the readiest way, but in the meantime it would be hard on the fishermen, would it not?—A. Yes, there is no doubt it would be hard on the fishermen.

Q. What is the ordinary return to an active fisherman for one season from the sale to the canner and to the market?—A. I think that a good active fisherman, fishing the season round, would probably make about \$200.

Q. Would that be his gross returns?—A. I think that will be his gross return now the way the lobsters are.

Q. In some places they run up to \$1,000.—A. Yes, I know that, but the fish around here now are pretty small.

Q. How are these people who are fishing lobsters around here engaged during the rest of the year, do they go to any other fishery after the lobster fishing is finished?—

SESSIONAL PAPER No. 22a

A. They do lobster fishing, and they do other work, but not much other fishing, some of them do a little trawling but not much.

Q. Has the practice of stripping the female lobsters been followed here?—A. I could not say about that, I am not sure, but I have no doubt that it has been done by some.

Q. Now, we would like to get your ideas, as I say, the first proposition made to the department is to close down the fishing altogether, and the Lobster Commission of 1898 recommended that the whole coast be closed down by sections, taking one section at a time, do you think that would be much of an improvement on the first proposition?—A. No.

Q. Then some people have said do away with the size limit altogether, shorten the season somewhat, and provide for the escape of the small lobster by insisting on a standard trap with a certain space between the slats?—A. Quite so.

Q. Others again, most of the people below here, are in favour of a 10-inch limit, some say 10½ and others 9 inches, but I think myself the fishermen on the Atlantic coast and around the Bay of Fundy here are in favour of a 10 inch limit with a strict enforcement of the law.—A. Yes, I think a 10 inch limit would be all right, and throw away all the rest.

Q. Whatever change is made in the law, there would be no use in making any suggestion or any change unless the regulations were strictly carried out?—A. Oh yes, they want to be carried out.

Q. And at present no attempt is made to carry out the regulations?—A. Yes that is true.

Q. What style of trap do you use here?—A. The three-headed trap.

Q. That is a sort of parlour trap?—A. Yes, a parlour trap.

Q. Do most of the fishermen make their own traps?—A. Yes, most of them do.

Q. What distance do they allow between the slats?—A. They are pretty tight, so that they will be sure to keep everything that comes in anyway.

Q. Down to how small will they really take them, four or five inches?—A. That is the canners you mean?

Q. Well, the fishermen, they have to take them in the first place?—A. The fishermen will sell anything they can get.

Q. What will stay in a trap?—A. Nothing will stay in the trap short of a 7-inch lobster the way they make the traps.

Q. You think not?—A. I think not.

Q. Some fishermen tell us it will make no difference what the width is between the slats because the lobsters will not go out, and the others say that if we have a 10½ inch limit and insist on the slats being 1½ inches apart, as they used to be, that it will let the small lobsters out. When you first made the trap there was a much larger space than there is now, and the small lobsters used to get out of the trap?—A. Yes, I believe they will go out.

Q. You had the International Commissioners around here recently I believe?—A. Well, I heard they were at Mace's Bay, and then again I kind of heard that they were not there, so I am not sure of it.

Q. How would the same regulations as they have in the State of Maine, a 10½ inch limit and fish all the year round, work here?—A. I believe it would work all right; of course just now I know that the way the lobsters are there would not be much for a man to fish all the year round, but after they once got started it would give them a chance.

Q. Is there anything else you think of that I have not touched on?—A. Of course if they stop us taking the little ones I suppose they will lengthen the season out so that a fellow can start in earlier than he does now.

Q. You say yourself that your opinion is that the decrease in the fishery has been caused by the capture of the small lobsters?—A. Yes, I do think so.

9-10 EDWARD VII., A. 1910

Q. And you say that these small lobsters are only used by the canners?—A. Yes, principally, a few go into the market.

Q. That is a few over 9 inches?—A. Yes, a good many over 9 inches go into the market.

Q. But none under 9 inches?—A. No, you could not do that you know; of course the canners do take them and will take them.

Q. And when the market is low you sell some 9 inch to the canner, and he also gets some of the large ones which are mutilated.—A. Quite so.

Q. But it would not hurt the fishery or the fisherman if the canning were stopped altogether for a year or two?—A. No, I think not.

Q. And it would be very much in the interests of the fishermen to do so?—A. Yes, I think so.

Witness discharged.

FRED ELLIS, fisherman, Mace's Bay, called and sworn:—

By the Commissioner :

Q. How long have you been engaged in lobster fishing?—A. Twenty years.

Q. How is the fishery to-day compared with what it was when you began fishing?—A. It is about one-tenth, I should say, as good, not any more than that.

Q. It has fallen away as much as that, has it?—A. Yes, without a doubt.

Q. To what do you attribute that decrease?—A. Well, to different causes, the taking away of our spawn lobsters from this place into the United States is one cause, and, well, of course, the catching up of the little lobsters is another.

Q. The destruction of the small lobsters and the shipping of the spawn lobsters to the United States are the two great causes?—A. Yes.

Q. Has that decrease been gradual, has it gone on all the time, or is it much worse lately?—A. It is going on gradually.

Q. Have these conditions, the destruction of the small lobsters and the shipping of the berried lobsters to the United States, been going on all the time?—A. Well, for this last ten years I should say they have, and it might have been for ten more years. At the beginning of my lobster fishing we caught and sold them by the hundredweight and we only had 80 cents to a dollar for a hundredweight.

Q. You did not send any to the market then at all?—A. No.

Q. Were there any canneries here then?—A. Only two.

Q. You begin to fish here on the 6th January?—A. Yes.

Q. And your season ends on the 15th June?—A. Yes.

Q. Beginning on the 6th of January, how is the winter here, are you able to fish all the winter?—A. It is very stormy.

Q. Do you meet with much loss of gear?—A. I should say somewhere about three-quarters, between a half and three-quarters.

Q. Is there that much loss of gear every winter?—A. Yes.

Q. What is the best period of your fishing?—A. When we start in, whenever that is.

Q. On the 6th of January or as soon after as you can start?—A. Yes.

Q. Is it the practice to begin a little before?—A. No.

Q. There is not much fishing done before the season?—A. Well, a fellow might want a feed.

Q. Is there any fishing after the season?—A. No, none after the season.

Q. Are most of those who fish lobsters here fishermen or do they go to some other kind of fishing?—A. They mostly all do different kinds of fishing.

Q. So that when they knock off lobstering they go to some other fishing?—A. Yes.

SESSIONAL PAPER No. 22a

Q. But the best fishing is at the beginning of the season?—A. Yes, but if the fishing began on the first of October it would be just as good, it is best at the beginning whenever that is.

Q. Does the fishing improve in the spring?—A. No.

Q. Not in April and May?—A. Generally the fish are more scarce; we fish more gear, but we do not get any more fish. Two men fish together and in the winter we will fish fifty traps, and then in the summer season after April, we will put out 100.

Q. You are all using motor boats now?—A. Pretty nearly all.

Q. What proportion of the fish you catch are sent to the market and what proportion are sold to the canner?—A. I should say about one-tenth probably in number.

Q. One-tenth are shipped to market?—A. One-tenth are shipped to market and the rest go to the canner. Where you get ten or twelve market lobsters you get 130 to 150 small ones.

Q. And the canner takes everything you send to him without regard to size?—A. Yes.

Q. What size will the canner take them down to, 4 inches?—A. No. 8 inches, in fact the canner will take anything you bring him.

Q. In some places we have found that it takes from 12 to 14 to fill a one pound can, that is a pretty small lobster?—A. It is a small lobster.

Q. Are you shipping as many to market now as when you first began, or are your fish dropping off? Are you getting a fair proportion of large ones?—A. I might get about half as many large ones.

Q. And when you first began fishing you sold everything to the canner?—A. Everything.

Q. When did you first begin to ship to the market?—A. I think it was about 18 or 20 years ago.

Q. How did you get to the market in those days?—A. The buyers came right here from the United States and bought them as they do now.

Q. They came here by smacks?—A. Yes.

Q. And that is the way you sold most of your lobsters? The smacks came from where?—A. The United States.

Q. But from what port?—A. From Eastport.

Q. How do they ship them?—A. Well, of late years they generally ship them by express, in barrels, by train. I have bought and carried a great many of those lobsters myself.

Q. Were you in charge of a smack?—A. Yes, for seven years.

Q. And you delivered them to Eastport?—A. Yes, and I delivered the small ones to the factories on the Canadian side.

Q. What canneries have you here, there are four licenses in Charlotte county?—A. Yes, two of them do not amount to very much, the biggest factory we have is at Campobello.

Q. Who runs that?—A. Calder. the fishery overseer used to run it, but it was owned by an American canner, and Mr. Connor has a factory.

Q. Where is his factory?—A. At Black's harbour.

Q. Do those cannerys operate all the winter, do they begin when the season opens and operate all winter?—A. No, they do not commence until I should say the first of April would be about the date.

Q. What is done with the small lobsters in January, February and March?—A. Some go into the United States, and some ship their catch themselves.

Q. Do they ship anything over nine inches?—A. Yes, anything over nine inches.

Q. But below nine inches what becomes of those lobsters?—A. They are thrown away.

9-10 EDWARD VII., A. 1910

Q. Do you use the same kind of trap now that you used when you first began fishing?—A. Well, about the same, it is something about the same, although I should say that the trap used nowadays is greatly ahead of the one that we used at first.

Q. In what way, does it catch more fish?—A. It catches more fish.

Q. And it holds the fish better after they are caught?—A. Yes, that is right.

Q. The fishermen all build their own traps?—A. Yes.

Q. Do you put the slats any closer together than you did when you were first making traps?—A. Yes, I should say we do.

Q. What is the object of that?—A. To catch the small lobsters.

Q. Has there ever been any attempt to enforce the regulations within your recollection? Did any one ever warn you not to catch the small lobsters, or threaten to fine you or anything of that kind?—A. Yes, I have been warned by the old captain of this craft, the Curlew, Captain Pratt.

Q. But not by the shore officers?—A. Well no, because probably they thought we did not violate the law, and I have never been told by them.

Q. We have heard many fishermen say they did not know there was any law to violate?—A. Well, I know there is a law.

Q. Will the American smacks buy the small lobsters too?—A. No, not under 9 inches.

Q. Will they buy the berried lobsters with eggs on them?—A. Oh my, yes.

Q. Do they give a larger price for them?—A. I should think so, they give about double the price they do for any large lobster.

Q. They want the berried lobsters?—A. Yes, for the spawning lobsters they give about 25 cents a-piece.

Q. What do they want them particularly for, what do they do with them?—A. They take them to the fishery overseer in Eastport and he has a crate built for himself and they put them in there, and there is another man comes around from the hatchery and takes them farther west, I could not say where the hatchery is.

Q. Is it a hatchery or a pound?—A. I heard it was a hatchery, I am not perfectly sure, but I think it is a hatchery.

Q. And they buy them for the sake of the eggs?—A. Yes.

Q. And they give more for them than ordinary lobsters?—A. Yes.

Q. Do you not think it unwise for our fishermen to sell them; are they not cutting their own throats in doing so?—A. Yes, and they are cutting off their own bread, which is worse.

Q. Now, as to the decrease in the fishery, there is no doubt that is caused by the destruction of the small lobster and the shipment of the berried one, what is your idea as to the best regulations to adopt and enforce in this particular locality for the preservation of the industry?—A. I will tell you my opinion, the fishermen should not be permitted to catch any lobsters under 10½ inches, all lobsters shorter than that should be thrown away.

Q. They should be put back in the water?—A. Yes, put them back in the water, and the spawners also ought to be protected.

Q. And what would you say as to the fishing season?—A. Well, when we appointed our delegates we talked it over, we discussed everything and we came to the conclusion from the 1st of October or the middle of September to the middle of June would be about right, and the reason they want that is this, that in October, November and December there is fine weather, and they can catch more lobsters out of \$10 worth of gear, that is ropes and traps, than we would get out of \$50 worth of gear in the winter time and in stormy weather.

Q. Do you know anything about fishing in Maine, have you been on that shore?—A. Yes.

Q. What are the regulations there to-day?—A. I do not know what the regulations are this year, but other years they have had a 10½ inch limit and fished all the year

SESSIONAL PAPER No. 22a

round, throwing away all the small lobsters, and if I am not mistaken the government officials there take all the spawn lobsters from the fisherman, and pay him for them, and take the fish away to the hatchery.

Q. Of course they used to can there some years ago?—A. Yes.

Q. A number of the canners we have operating to-day in Canada came from the State of Maine?—A. Yes.

Q. And they came here and established themselves after exhausting the fishery there, as ours is being exhausted to-day, by the canning of small lobsters?—A. Yes.

Q. Do you know whether the fishery is improving in the State of Maine?—A. Oh yes, it has improved greatly of late.

Q. They have a practice there of holding the fish in pounds, have they not?—A. Yes, they come here and buy our fish when they are low in price and put them in pounds in the State of Maine and hold them there until the market rises. Of course they also buy on their own side for the same purpose.

Q. That is the object of the pound, to keep the lobsters in good condition until the market is favourable?—A. Yes, I ran a smack one winter and we all came to the conclusion that it would be to our interest to throw away the small lobsters and buy only the 10½ inches, so consequently we threw them all away that winter and that spring; and do you know that by throwing away those small lobsters that one winter it increased our fishery I would say over one half.

Q. Well, you know the lobster grows two inches in a year?—A. Yes.

Q. So that it does not need many years for a six-inch lobster to become 10 inches long?—A. Yes, I am proud to meet you to-day because I know that you see the taking away of the small lobsters and the canning of them is ruining our fishery. All the fishermen in our place would like to throw away the small lobsters, and they do not want to supply them to the canneries; they would like to see an end put to it.

witness discharged.

JOHN M. MAHONEY, fisherman, Mace's Bay, called and sworn:—

By the Commissioner:

Q. Having heard all that the previous witness has said do you approve of it or have you anything to add to it?—A. I approve of everything he said, and there is nothing further I can add to it.

Witness discharged.

JOHN MAHONEY, fisherman, Mace's Bay, delegate from Fishermen's meeting, called and sworn:—

By the Commissioner:

Q. How long have you been engaged in the lobster fishery?—A. It must be 20 years, all of that, ever since I was able to fish.

Q. You fished in all probability before you were 26, most fishermen have?—A. Yes.

Q. What is the condition of the lobster fishery to-day as compared with when you first started?—A. I think they are much scarcer.

Q. Would you venture to say to what extent they are scarcer?—A. I could not say exactly.

Q. Are there many more boats fishing than there used to be in those days?—A. Yes, more gear and more boats.

Q. The fishermen fish more gear, do they?—A. Oh sure.

Q. Are all the boats and gear owned by the fishermen?—A. Yes.

9-10 EDWARD VII., A. 1910

Q. What number of traps do you generally fish?—A. Sometimes 55 or 60, and some fish as high as 70 per boat.

Q. The fishery begins with you on the 6th of January?—A. Yes.

Q. Do you generally begin fishing sharp at the opening of the season?—A. Yes, we generally begin making preparations.

Q. You fish right straight along uninterruptedly until the close of the season?—A. Most generally.

Q. Are you able to fish up to the end of the winter?—A. Not all the time.

Q. Do you take your gear in?—A. Not after it is once set out.

Q. Do you lose many traps?—A. Yes, a good many, the ice troubles us cutting off our buoys.

Q. What number of fishermen are engaged in the lobster fishery from this part of the Bay, from Lepreau, and all around this neighbourhood?—A. Honestly speaking I should think there would be 25 or 30 more or less.

Q. These boats are generally manned by two men, are they?—A. Generally.

Q. And they fish from 50 to 75 traps?—A. Yes, sometimes in the spring season two men will fish 100, but in the winter season we cannot fish over 50 or 60.

Q. Do you fish in trawls or single lines?—A. All single lines.

Q. What depth of water do you fish in?—A. 15 to 25 fathoms.

Q. Does that take you far off shore?—A. It takes us quite a way off shore, about 3 miles off.

Q. You are not troubled by any fishing by United States vessels outside the 3 mile limit here, are you, I mean for lobsters?—A. I do not know of any.

Q. What proportion of your catch is shipped fresh to the market and what is sold to the canner?—A. I can hardly tell you that, to tell you the truth, but I think about 85 per cent goes to the canner; if you get 60 lobsters you might get 20 shippers out of the 60.

Q. You only call 'shippers' those over 10½ inches?—A. Yes.

Q. Do you not ship those from 9 to 10½ inches?—A. No, those generally go for canning purposes.

Q. In a good many places since they have reduced the size limit they have been shipping the 9 inch lobster to the Boston market?—A. Yes, and they go to St. John too.

Q. How many canners are operating in this neighbourhood?—A. There are none here.

Q. Where is the nearest?—A. Connors at Black's Harbour is the nearest.

Q. I see there are four canneries licensed in this county?—A. There are lots of canners here, but I do not know of any who can lobsters outside of Connors.

Q. Is there any station of the Fishermen's Union here? Or you have not the same union they have in Nova Scotia?—A. No.

Q. But you have a union of the weir fishermen, I think?—A. Yes, that is all the union I know of.

Q. What is the best period of your fishery, when do you consider it the best part of your lobster fishing season?—A. I can hardly tell you, but I think that about the first fortnight after you put out in January it is generally good fishing.

Q. Are the canneries open then?—A. I do not think so.

Q. So that all you catch at that season of the year are shipped fresh to market?—A. Yes.

Q. You do not save the small lobsters?—A. Yes, certainly we save them and sell them in St. John and Montreal.

Q. What do you mean by that?—A. Anything between 9 and 10½.

Q. What we call small lobsters is anything under 9 inches?—A. Well, we never keep anything under 9, the small with us is between 9 and 10½.

Q. What do you do with the lobsters that are under 9 inches?—A. We throw them away.

SESSIONAL PAPER No. 22a

Q. Do you always throw them away?—A. Yes, always.

Q. Will the canner not take them?—A. He will take them if we give them to him, the canner will take everything you give him.

Q. In some places they will can everything down to 5 inches?—A. And the fisherman is worse.

Q. Well, the fisherman says: 'If I do not take them my neighbour will, and I might as well have them as let the others take them'. That is the condition at other places, and I suppose it is not different here?—A. The fishermen are a pretty hard crowd to watch, no doubt about that, and I am one myself.

Q. When you first began in the fishery were there canneries here then?—A. No, unless Connors', that is all I know of, and Ned Holmes at Campobello.

Q. Do you ship your own lobsters on your own account to Boston, or do you sell to buyers here?—A. I guess they are sold to the American buyers who come here to buy them.

Q. You are paid for them on delivery along side the smack, are you?—A. Generally.

Q. What are the average prices paid by these smacks for market lobsters?—A. All the way from 15 to 25 cents, and as high as 30 cents.

Q. That will be according to the condition of the market?—A. Yes.

Q. These smacks come here all through the winter, do they?—A. All through the winter.

Q. Where do they come from?—A. From Eastport, I expect.

Q. With respect to the berried lobster, what has been the practice in this locality?—A. I do not know what you mean.

Q. I mean these egg or spawn lobsters, what is the practice here with regard to them?—A. Oh, I know now, we have always thrown them away when we got them in our trap, to my knowledge.

Q. It has been stated that the practice here, is, very largely to sell them to the smacks?—A. Yes, I have heard of that. There is certainly a market for them, no doubt about that, but I must say I never knew any man in this vicinity around here who did that.

Q. Is it to your knowledge that it is done?—A. It is not.

Q. Do you fish all through the season on the same ground?—A. Generally.

Q. Is it the practice to move closer in towards the shore in May and June?—A. Yes, sure.

Q. How close in do you come then?—A. We come in to about 6 or 7 or 8 fathoms of water.

Q. Have you ever noticed whether at that season you get a greater number of small lobsters in your traps?—A. In the spring of the year, certainly, when we are coming in on shore we get more spawn lobsters than we do in the winter.

Q. And will you get a larger proportion of seed lobsters in shore too?—A. No, I do not think so; it is like a harbour here, and the lobsters in the warm season come on the shore and it is reasonable that the lobsters would be more plentiful on shore than they will be off shore where they are scattered broadcast and where you will not have the privilege of being among them all the time.

Q. The fact of the matter is that the female lobster comes into the shoal water near the shore where the higher temperature of the water helps to develop the eggs; that is the experience everywhere, and especially towards the end of the season, in July, where the fishing is carried on later than it is here, the proportion of the seed lobsters caught in shoal water and in the harbours, bays and ponds is greater than it is when fishing outside. That same general condition will prevail here?—A. I suppose I have out in the best ground, near the islands, swept off the trap 75 or 100 small lobsters just hatched out.

Q. Do you find the egg-bearing lobsters bearing eggs all through the season?—A. Yes.

9-10 EDWARD VII., A. 1910

Q. Do you find them when you begin to fish?—A. Yes, we do.

Q. Have you ever noticed that the eggs get riper as the season advances?—A. I never did.

Q. To what do you attribute the decrease in the fishery; undoubtedly the fishery is falling away, and to what do you attribute that decline?—A. To the taking of so many small lobsters.

Q. Why are those small lobsters taken?—A. I cannot tell you, except that it is that the factory men and most people want them.

Q. They are taken for sale to the cannery, are they not?—A. I think so.

Q. And you attribute the decrease of the fishery to the destruction of the small lobster?—A. I do. It is like this that the cannery have more influence with the present government than we fishermen have, and therefore they have the opportunities for getting all our small lobsters, and the fishermen are all anxious enough to get a dollar as long as the law allows them to take it.

Q. But the law is all right, it says that the small lobsters under 9 inches shall not be taken?—A. Yes, but if they only put the limit as low as 9 inches it will give them a chance to increase.

Q. The fault is that the law has not been enforced?—A. That is where it is.

Q. Has it ever been enforced to your knowledge?—A. Not that I know of.

Q. What style of trap do you fish now?—A. All three kinds, the two headed trap, some with four heads and some with three heads.

Q. Do the fishermen make their own traps?—A. Sure.

Q. Is it the tendency to put the slats closer together than when you first began fishing?—A. Yes, the traps are made shorter as a rule and we put the frames closer together.

Q. Do you put the slats closer together?—A. I know what you mean now, no I do not think they do, some may and some may not.

Q. When the lobster fishery first began the ordinary practice was to use a lath for a guage?—A. Exactly.

Q. And that left a space of $1\frac{1}{2}$ inches between the slats, and the tendency, as shown by my own experience as well as the evidence everywhere is to narrow that space down?—A. Of course that is to hold the small ones.

Q. It must have been for that purpose?—A. Sure.

Q. Do you think if that space were made larger, if we insisted, as part of the law, that the traps be made in a certain way that would allow a larger proportion of the small lobsters to escape?—A. I do.

Q. What price do the cannery pay for the lobsters?—A. 3 cents.

Q. That was the price paid last year, was it not?—A. I think it was about three on the average, but you know as much about it as I do, I have been buying small lobsters the last two or three years.

Q. You have not been fishing?—A. No, not for two or three years.

Q. What do you do with them?—A. I sell them to the St. John market.

Q. Do you sell them alive?—A. Some alive and some boiled.

Q. You are selling them around?—A. Yes.

Q. Is there a considerable market for that sort of thing?—A. I think so, much more than there was some years ago.

Q. Do you think you get better returns than by exporting the lobsters to Boston?—A. I do not know that I do, but I never sent any of them there, so I cannot tell you.

Q. Is it the practice of the fishermen to ship the lobsters themselves or to sell to the smacks?—A. Some ship them themselves.

Q. The practice at Yarmouth, Digby and other places is to consign their lobsters to a commission merchant in Boston, is it not?—A. And they have a better chance than we have, because we have not the facilities which they enjoy. When we ship them we take them to Eastport or to St. John and send them by boat, and sometimes we send them by the shore line to Calais, Maine.

SESSIONAL PAPER No. 22a

Q. Can you tell me how long it would take them to reach the market?—A. If I ship to Moncton they will be there about eleven o'clock the next day, and at St. John the same evening at six o'clock.

Q. Can you give us some idea of the discussion that occurred at your meeting?—A. I can.

Q. You are one of the delegates that were appointed at the meeting of the fishermen of this neighbourhood to give evidence before the commission?—A. Yes.

Q. And what was the opinion of the meeting?—A. It was a unanimous vote.

Q. How many fishermen were there, in the first place?—A. About thirty-eight were present.

Q. Would that be a majority of the fishermen?—A. Yes, a good majority.

Q. And what did they do?—A. They had a unanimous vote that the season should open on the 15th of September and close the last day of June, and that we should throw away the small lobsters.

Q. What size limit did they approve of?—A. That we should not catch anything under ten and a half inches.

Q. Did they say anything at all about the canning licenses?—A. No, nothing was said about that at the meeting, it was not brought up at all.

Q. Did the question of the berried lobster come up at the meeting?—A. No, it did not.

Q. There was nothing said about it?—A. No, we did not mention it.

Q. Is there any fishing done here before the opening or after the close of the season?—A. I am not prepared to answer that question.

Q. I do not mean yourself, but what is the practice among the fishermen?—A. I am not prepared to answer any of those questions.

Q. What is done with the fish that are caught out of season?—A. I could not say anything as to that.

Q. Who fixes the price paid for the lobsters?—A. The boatman generally fixes the price when he comes up.

Q. And he acts for the canner?—A. The same man that buys the big ones generally buys the small ones, sometimes Connors' boat comes for the small ones.

Q. What do you get for the small ones?—A. Three cents.

Q. What are the average earnings of a fisherman?—A. From the time the season opens until it closes?

Q. Yes?—A. I do not think any one man realizes nearly \$100 clear.

Q. Are you aware whether the regulations are enforced in the State of Maine?—A. I am not in a position to tell you.

Q. Did your meeting discuss the question of hatcheries or pounds or anything of that kind?—A. They did not discuss it very much, but everybody at the meeting said they thought we should have a hatchery here. We understand that Prince Edward Island and other places have hatcheries, and we know this that there are an awful lot of spawn lobsters here.

Q. Will you see that a copy of the resolution passed at the meeting is sent to us at St. John?—A. Yes, I will, sure.

Q. I think you did say that the best part of your fishing was in the early portion of your season?—A. Yes, that would be the first two weeks in January.

Q. When you begin fishing in January do you think they are coming in from the outside?—A. I think they are going out.

Q. And when do they come in?—A. In the spring.

Q. You think that when you first commence to catch them they are leaving the shore?—A. Yes, I think they are going into the deep water in the cold weather.

Q. Is there any statement you would like to make in addition to what you have already said?—A. I would like to say this that I do not see why it is that they keep the poor fisherman back until the 5th of January to put out his traps when they could

9-10 EDWARD VII., A. 1910

be fishing with five or six fathom strings during the fall, and in January we have to have 25 or 30 fathom strings? We are differently situated here to other places, with cold northwest winds we cannot get out, and it is important that we take advantage of good weather, even when there is a fine day, unless there is a drift to the eastward to carry the ice off we cannot get out, and when the ice does go out it cuts off one half of our buoys.

Q. How would the same regulation as they have in the State of Maine suit you here, a 10½ inch limit and fish all the year through?—A. Well, I think that to commence on the 15th of September would be better.

Q. If you had the whole season you would begin when you liked?—A. I know we would, but I think we would derive just as much benefit to have the close season from from the 15th of June to the 15th of September, because there are two months you have to allow altogether for spawning and the soft shell, and then you will have a chance to prepare before the time the cold weather would come.

Q. If that is the case how would it do to omit July. August and September and fish nine months?—A. Well, that would be all right, it would be only 15 days difference, but from the first of October it would be all right, I would not object, as far as I am concerned to that.

Q. And a strict enforcement of the 10½ inch limit?—A. Yes, that is sure.

Q. What effect would that have on the canner?—A. I think he would be put out of business, and unless you do put him out of business they will still kill the small lobsters, unless you make every fisherman a guardian.

Q. There is a proposition of that kind, it has been proposed that every lobster fisherman should take out a license, that he should register himself; he would not be charged anything for it, before the lobster fishing begins, and every man would have to agree to respect the law, whatever it may be, and to live closely up to the regulations. The idea of those who make the proposition is that a man having assumed an obligation of that kind would be careful to observe the law himself and would see to it that others who were fishing in his neighbourhood did the same as he did and perhaps if he saw they were violating the law he might lodge an information against them himself; it would also follow as a consequence that any man who was shown to have violated the law would not be allowed to register and get his license another season: how would that work?—A. It is a very good idea, but there is one thing—

Q. Do you think that would have a good effect among the fishermen generally?—A. I think it would be all right. We had a unanimous vote that we should have one man as a lobster guardian in this vicinity provided we got that law we asked for, just for that purpose only. We want a man living right here among us, because the warden lives a long way from here, and he cannot look after the matter, but we do not want to interfere with him in any way.

Witness discharged.

JOSEPH ELLIS, fisherman, Mace's Bay, called and sworn:

By the Commissioner:

Q. How long have you been engaged lobster fishing?—A. I suppose I have been engaged at it about 30 years.

Q. Did you ever fish anywhere else but here?—A. In the Bay of Fundy, that is away up in St. Martin's.

Q. What is the condition of the lobster fishery to-day compared with its condition when you began?—A. I think it is about 90 per cent falling off. In those days we had a large supply of lobsters, and if we had the same gang of lobsters now that we had then there would be no limit to the supply, but now there are ten traps to one that we

SESSIONAL PAPER No. 22a

fished then; the bait is better, but we cannot get the lobsters; in those days we had the lobsters and now we haven't got them and that is simply due to the canners, nothing more or less.

Q. It is due to the practice of the canners in receiving the small lobsters?—A. In taking small lobsters, certainly.

Q. If it were not for the small lobsters they would not be able to can?—A. No.

Q. Because there is a better market for the legal lobsters shipped alive?—A. Yes, where we catch one shipper that we receive 25 cents for, we get eight small ones that we get three cents for.

Q. And if those were allowed to grow they would be worth, in a short time, as much as the others?—A. Yes, the lobsters grow mighty fast.

Q. They grow two inches a year. At the end of the first year they are three inches long and after that they grow two inches a year.—A. The idea is simply this, say we have 500 lobsters in a car and there is a lobster that we call a 'doubter,' and if he is a good fellow the buyer will take him and there may be twenty-five lobsters that will just come to the measure, and sometimes he will throw them over into the three cent lot, and you can see what we are losing by that.

Q. The most of the lobsters are sold right here?—A. Yes, right here.

Q. And mostly to American smacks?—A. All American smacks.

Q. Do the American smacks take the very small ones?—A. No, they do not.

Q. The very small ones are sold to your own local smacks that are running for the canneries?—A. Yes.

Q. Can you tell me anything about that matter, it has been reported and we have some evidence as to the truth of the matter too, that the practice of the American smacks coming here is to buy the berried lobsters and to take them over to their hatchery in the State of Maine.—A. That is so, I bought for about five years myself for the American people, and I bought those seed lobsters.

Q. Where were those lobsters delivered?—A. At Eastport, we were never asked to buy them, but the fish warden was there to attend to that business, for the Fishery Commission, and if you had them he would buy them and pay you twenty-five or thirty cents for them, and he would ship them away.

Q. Do you know where he sent them to?—A. To the hatchery, I suppose.

Q. Or to the pound?—A. Whatever it may be, hatchery or pound.

Q. I do not know that they have hatcheries in Maine, they have pounds?—A. I think they have them there, in some part or other.

Q. Is it the case, to your knowledge that the traps are being made with a narrower space between the slats with a view to holding the small lobsters?—A. Yes.

Q. Do you think it would be possible to so regulate the space between the slats that a fair proportion of the small lobsters would be enabled to escape?—A. I do not think so.

Q. What is your idea about that?—A. I think if you made the law for a ten and a half inch limit and put a strict watch on it that is all that is necessary.

Q. If the lobsters are sold directly to smacks off shore by the fishermen it would be pretty hard to follow them?—A. It would be pretty hard to follow, but the small lobster business is different, the smacks take nothing but ten and a half.

Q. Yes, but how could we enforce that, they do not bring them to shore?—A. The American smacks do not buy them under ten and a half inches.

Q. Do they not take them here down to nine inches?—A. Yes, anything at all that has a shell on it they buy, so we know from experience here, that if the small lobsters from ten and a half were cut out altogether, making a ten and a half inch law, we would have a living right here without doing anything else. As to leaving the traps so as to allow these small lobsters to escape, the fishery guardians cannot watch us now and they would not be able to look after that.

9-10 EDWARD VII., A. 1910

Q. Do you not think where the traps are built on the shore it would be possible to regulate the size; I am not alluding to you here, but I want to know from your experience as a fisherman, take for instance in the Straits of Northumberland, where we must have canneries and we want to regulate the destruction of the small lobster, it is a fact to my certain knowledge, that with the original old double-ender trap made the whole length of the lath it was always the practice to allow one and a half inch space, the width of a lath, between the slats, but that has been narrowed down until now there is barely half an inch allowed, and that can only have been done for one purpose, to hold the small lobster?—A. Yes, that is right.

Q. Can we not by insisting upon having a certain space between the laths allow a certain proportion of the small lobsters to escape?—A. Certainly it would.

Q. Of course it may be said that the distance between the slats might be measured when the traps were ashore and the fishermen would carry laths out and alter the traps when taking them out to set them, but we would have to look after that somehow?—A. Yes.

Q. What do you think of that scheme of asking the fishermen to register and take out a form of license?—A. Well, I would not object at all, but you know that the world at large, all over the universe there is a class of men that do not care what they are destroying so long as it does not come out of their own pocket, and there is a class of men, no matter what the law would be, that you cannot bind by any agreement or oath they may take.

Q. What price do you receive for the market lobsters, over ten and a half inches, are they the same price all through the season?—A. The price varies according to the supply on the market.

Q. But it is fixed, there is a price for all over ten and a half and you will not get any more than that?—A. Not at all.

Q. And that price varies according as the market is good or bad?—A. Just so.

Q. Do you think that the most of those lobsters taken here by the smacks are taken right to the market direct or to the pound?—A. They are taken right to the market.

Q. With regard to the berried lobster, do you think a larger proportion of those fish are caught later in the season in shoal water than you would get when fishing off shore?—A. Certainly, yes.

Q. How do you think it will be possible to induce the fishermen to return the berried lobsters to the water; of course any regulation that may be framed will be sure to insist that it is done, but how are we going to get it done?—A. I do not know I am sure about that.

Q. The fishermen ought to understand that they cannot have good fishing if they destroy the mother fish?—A. It is too bad that they do it at all, but the way that they do it now many fishermen catch the lobsters and there is a boat provided that goes round and buys the lobsters and they are taken to the hatcheries; it is quite a scheme, and I think if it were tried here it would be a good thing.

Q. Of course where we have a hatchery they do that now?—A. I bought lobsters for about six years, and I do not think there ever was a man asked me to buy a spawn lobster.

Q. Is there anything else you would like to have explained?—A. No, I do not think that there is.

Q. It is your opinion, and you do not mind saying so, that in this district canning should be put an end to?—A. Certainly. In a way of speaking it has robbed us of a living, that is right here with us. We know it, because we have proved it; one year, I forget that year, we did not have over a month of close season, and there was no market for the small lobster, so they were put back in the water, and when the season opened again it trebled we just got a boat load of lobsters, and there were more than 140 shippers. But the way it is now a man could take from the first of September—I would like to go back a little to the meeting, I suggested there that

SESSIONAL PAPER No. 22a

January, February and March is practically a close season to us on our coast, the water is so shoal and the ice and weather is so rough, that the lobsters are driven off shore, and you put out 30 or 40 traps and you are only able to get very few of them back again in the spring, and those traps cost us some seventy-five cents each. In the winter season no man can make anything at all. We are all deeply interested in lobster fishing, it is the only industry we have here, it is our living, and at the present day there is not a thing in it, because anything these few canners down here ask for they get. We have asked for it a long time and we want this law and we understand perfectly well what we are asking for. As it is now here are men who have to sit in idleness with their families around them who could go out and earn seventy-five dollars each which would be a help to him and his family, but the law says 'Don't you go out and catch lobsters.' As to the open season all the year round I would not say a word about it but there is no use making a law here about a close season unless you have a fishery warden right here among us and then you have to swear every man.

Witness discharged.

Commission adjourned.

ST. ANDREWS, September 21, 1909.

E. L. CONLEY, lobster buyer, Leonardville, Deer Island, called and sworn:—

By the Commissioner :

Q. Has there been any meeting of fishermen at all, or any attempt to discuss this question of the lobster industry?—A. Well, no, no special meeting but from time to time when I see the fishermen I put the question to them; I am around among the fishermen all the time, I buy lobsters.

Q. How long have you been connected with the lobster fishing industry?—A. Ever since I was fourteen or fifteen years of age, I am now forty-one.

Q. That is for some twenty odd years?—A. Yes.

Q. What is the condition of the fishery to-day compared with what it was when you began?—A. There are not as many fish.

Q. That is to say they are short in quantity now?—A. And higher in price; a man can make more money to-day catching lobsters than he could then, because he gets a much higher price.

Q. But the lobsters themselves are scarcer?—A. Yes.

Q. In what way are they scarcer, do you not get as many large lobsters?—A. Not as many large ones nor as many small ones.

Q. What proportion of the lobsters you do catch will be market lobsters; we have lobsters that we call markets, from ten and a half inches up, and then we have what we call mediums from nine to ten and a half inches, and then there are the small lobsters under nine inches?—A. What we call the large lobsters, that is the large ones, vary according to the ground you catch them on. Around Deer Island they are mostly all large lobsters, there are very few small ones, in one hundred barrels I would not get over ten barrels of small ones.

Q. What do mean by small lobsters?—A. From nine to ten and a half inches, that is what I mean, we do not save anything else and there are lots of men there will not save them at all, many of them will not catch anything under ten and a half inches, they throw all the others overboard.

Q. When does the fishery open with you, on the 6th of January?—A. The 6th of January.

9-10 EDWARD VII., A. 1910

Q. Do you begin fishing just as soon as the season opens?—A. Yes.

Q. In what depth of water do you fish then?—A. Anywhere from 5 fathoms up, we generally put out in shoal water first, and along later we fish in deeper water. We usually have fifteen fathom lines first and fish anywhere from five to ten fathoms of water.

Q. What number of traps do you fish?—A. Anywhere from thirty to sixty.

Q. That is for a single fisherman?—A. Yes.

Q. When a boat is manned by two men will they not fish more traps?—A. A few more.

Q. How does the number compare with the number when you used to fish, are you fishing more gear now than you did then?—A. No, I do not think we are. We used in days gone by to fish with trawls, and now that is not done at all, we all fish on single lines.

Q. What trap do you fish?—A. We have in some places the two-headed trap and in some places the three-headed patent trap.

Q. Is there any tendency on the part of the fishermen here to narrow down the distance between the slats?—A. No, they make them just the width of the lath now, they take the lath and put it between as a gauge.

Q. Then you begin fishing on the 6th of January, and do you fish right straight through the winter?—A. There is not much to fish after February comes in, there isn't much to catch, the lobsters I suppose crawl into the mud or somewhere, there is not much fishing after the last of January.

Q. What do you do, do you leave the gear in the water?—A. Some fish a few, four or five traps and probably get one or two a week, there are not many fishing and along in March there is hardly anybody fishing at all; they do not begin to start in again until about the 10th of May, with the first tide in May they begin to come in.

Q. How is the fishing up to the 15th of June?—A. Pretty good, that is the best we have.

Q. On the 15th of June you knock off?—A. Yes.

Q. Is there any fishing done after the close of the season, or before the season opens?—A. Yes, there is.

Q. As to the fish, what do you do with the large market fish?—A. They all go to Boston.

Q. Do you ship for yourself?—A. Well, most of them are sold here to local buyers, to the shippers and dealers.

Q. Do the smacks from Eastport come along here?—A. No, the gasoline boats come around and pick them up.

Q. They collect the lobsters from the fishermen?—A. Yes.

Q. They collect them on the spot?—A. Yes.

Q. And do they pay for them as they get them?—A. Yes.

Q. What is the average price of the market lobster?—A. Anywhere from 15 to 45 cents.

Q. Has the average been about the same for two or three summers?—A. For two or three years. When I first fished we got anywhere from three to six cents which was the highest we could get for them, that was in the spring of the year, but the last three or four years they have been up.

Q. What do you do with what you call the small lobsters?—A. They go to Boston, the whole of what we get on the Island goes to Boston, but on the mainland what they catch, the main of them goes to the cannery.

Q. When you do catch small lobsters what do you do with them; I mean very small ones under nine inches?—A. We throw them overboard.

Q. What is the practice with regard to the female lobster with eggs on it?—A. I could not just exactly tell you, all I know is that what I get I throw overboard, but whether the others scrape the berries off them or not, I could not say.

SESSIONAL PAPER No. 22a

Q. Is it true that it is the practice of the fishermen in this neighbourhood to sell the berried lobsters to the gasoline boats?—A. I have heard that they do up the shore, but I cannot swear to that, but as far as our fishermen are concerned I do not think any egg-bearing lobsters go from our island.

Q. To what do you attribute the decrease in the lobster fishery?—A. In my opinion it is due to fishing the small lobsters. From what I can hear in Maine they have stopped catching the small lobsters and they have a hatchery down there, they save all the berried lobsters and put them in the hatchery, and now their fishing is increasing.

Q. What do you mean by hatchery, is it a hatchery or a pound they have?—A. They have a real hatchery, I understand.

Q. Where is it situated?—A. I think it is in Booth Bay. I know they come to Eastport and pick them up there in their little boats, and there are no lobsters except the Canadian lobsters going to Eastport. They come to Eastport and pick up those seed lobsters, and they told me that they put several millions of young lobsters that they hatched in these waters. They are supposed to bring back the fry of those seed lobsters that they take from Eastport and put them in the water around there.

Q. You have no cannery on Deer island?—A. No.

Q. Where is the nearest cannery to you?—A. Welshpool.

Q. Who is that owned by?—A. I think it is owned by Merriman.

Q. I do not know, I think there are only four lobster packing licenses issued at all in Charlotte county. A. Well, Merriman is at the head of the one I refer to, at Welshpool; it is an American concern who bought the island. Holmes used to have it but he gave it up, that is on Campobello island at Welshpool. I never sold any to him this year, I shipped all mine to Boston.

Q. All the fishermen here own their own boats and gear, do they, they are not supplied by the canners?—A. No, the fishermen own their own.

Q. You say your opinion is that the decline of the fishery in New Brunswick is caused by the destruction of the small lobster?—A. That is my opinion.

Q. What is your solution of the difficulty; as a fisherman what would you recommend? What is the best regulation to be enforced in this neighbourhood with a view to protecting the lobsters?—A. Well, I think that what is good for one country is good for another, and if the lobster law as they have it in Maine is good for them I do not see why it is not good enough for us.

Q. So you would recommend a 10½ inch limit?—A. Yes.

Q. And have it strictly enforced?—A. Yes.

Q. And the protection of the berried lobster either by a hatchery, a pound, or anything of that kind?—A. Yes.

Q. And what open season of fishing would you have?—A. Well, they want a uniform law with the State of Maine, whatever that will be; our fishermen would be satisfied with the uniform law, that is what they want. If they have the year around in Maine give our men the same, and if it is 6 or 8 months in Maine, whatever it is over there let us have the same.

Q. Your market is Eastport?—A. Our market is Eastport, of course they all go to Boston, I send mine direct to Boston, I ship my own lobsters.

Q. By what route do you ship?—A. By express in the winter time and by boat in the summer time.

Q. I think you said a while ago that they fish in close season; do they catch much in the close season?—A. Certainly they do, and it is impossible to stop it because if they dare not catch them in the day time they will catch them in the night; it does not give us fellows a chance against those fellows over there, on the other side of the line, those fellows get the benefit, I cannot compete with them at all, it does not give us fellows an even chance with the other fellows as dealers, whereas if we had the same law as they have we would tie them up in a while.

9-10 EDWARD VII., A. 1910

Q. You have lately had among you the International Fishery Commissioners, Mr. Jordan and Professor Prince, did you give evidence before them?—A. No, I did not meet them.

Q. I do not know, but I think it is quite likely that they will provide for an even season between you people and the men in Maine.—A. Those people in Eastport do not want the same season, because it gives them quite a pull.

Q. About the canneries here, what do they can?—A. What sized lobster, do you mean?

Q. Yes, what size?—A. Well, you are asking too much now, of course I do not know.

Q. It is not likely they can the market lobsters?—A. Yes, they can anything under $10\frac{1}{2}$ inches, they are supposed to can from 9 to $10\frac{1}{2}$, but they do not can any large lobsters.

Q. Since the change in the law in Massachusetts by which they take the 9 inch lobsters in Boston are you not shipping the mediums there?—A. Yes.

Q. Then there cannot be many left for the canner?—A. Well, he only gets a few in the spring, when they begin to rise in price they do not get them, it is only before that. Along about the middle of June we have to sell our lobsters while those fellows over in Eastport can hold theirs, that leaves us in a hole, we have to sell ours for whatever we can get for them. If we could hold them for a little while the same as the others can we would be able to make a dollar out of them too. June is an extra good month for fishing, the whole of June.

Q. Have the regulations, to your knowledge, ever been strictly enforced in Canada?—A. Not to my knowledge, no, but they try to enforce them, they are around every day cutting away the traps, but the truth of the matter is that if you cut away one trap the fisherman would put out two, or another one anyway in its place.

Q. Is there much gear lost here in the winter fishing?—A. No, there is no gear lost here.

Q. What do you consider the life of a lobster trap, how long will it last, one year with another?—A. A trap will probably last three or four years.

Q. You think you have still the same space here that you always had between the slats, it has not been narrowed down?—A. It has not been narrowed down, it may have been a trifle.

Q. Would you favour the encouragement of the live lobster trade in preference to the canning?—A. Well, I think so, because the canning as you see is narrowed down so now that they only have about a month of it, they do not get much beyond that here, you see they cannot put up any in the winter time because they are all shipped then.

Q. In the interests of the lobster industry would you favour closing down the canneries altogether?—A. I think I would.

Q. That is for your particular neighbourhood, of course, there are many parts of the coast where canning must always be the principal industry, because the people cannot ship their lobsters alive?—A. Oh yes, but I do not see what benefit the cannery is to us here now because they can only get a few lobsters in the spring.

Q. Those who can lobsters here are all engaged in some other branch of canning, are they not; they can sardines, I believe?—A. Yes, I think so; well, that factory at Welshpool does not can anything but lobsters, I think.

Q. Have you any idea of the extent of their pack?—A. I could not say, no.

Q. Which branch of the lobster industry do you think is the most remunerative to the fishermen and the least calculated to diminish the supply of lobsters, the live lobster trade or the canning?—A. I should say the canning would injure the fishery the most because they take the small lobsters.

Q. You think the live lobster trade is the most remunerative to the fisherman?—A. Sure, because the large lobster, you see, fetches anywhere from 15 to 45 cents, while the small lobster generally sells at from 3 to 5 cents, whereas if you let him

SESSIONAL PAPER No. 22a

grow in a very short time he will be a large lobster and we would get 15 or 25 cents for him.

Q. What have you to say with regard to the matter of hatcheries, would you favour the establishment of a hatchery in this neighbourhood?—A. I certainly would.

Q. That would keep the eggs from our berried lobsters at home instead of having them shipped over to the United States hatchery?—A. Yes, sure.

Q. Do you know anything about pounds, what have you to say about them?—A. I do not know anything about pounds at all.

Q. The practice in the State of Maine is to hold the lobsters in pounds and not to ship them until the state of the market warrants it?—A. It is a good thing, I think, we hold them in cars now that way, we have to do it, those fellows over there can pay more for them than we can, they have the trade all the year round and they certainly get all these little opportunities; we have to buy our lobsters and hold them until we get a price for them.

Q. You hold them in cars instead of pounds?—A. Yes.

Q. And at present you are obliged to sell out at a sacrifice as the end of the season approaches?—A. Sure, and this spring we had to cut them in a pitiful fashion, but just as soon as the season closed the price went up. We pay seven cents a pound, and I sell at eleven cents, and just afterwards, I had to buy them at 12 cents, they went up that fast, but that was just before the season closed.

Q. I do not know that there is anything else I want to ask you particularly, is there anything I have not alluded to that you would like to refer to yourself?—A. Nothing that I know of. We want a uniform season, uniform size limit and uniform conditions with the State of Maine. Instead of having 10½-inch lobsters in Eastport they have 4¾ on the back, there is no stretching. The buyers in Eastport have a great influence, they want the lobsters the year round, and I know just how they are putting it over us fellows. The lobsters over at Grand Manan are pretty small, I do not know the proportion, but they get a good many more small ones than they do large; the heft of the small lobsters come from Grand Manan, I do not know how small they really are. I have seen those fellows from there and they tell me, whether that is the view of the people or not I do not know, that they want a short lobster law enforced, they want to stop the short lobsters; that is what they tell me. I have talked to several of those fellows who are buying there, and they say that is what they want over there too. It is the lack of uniformity in the season that makes our men violate the law; if you could only go down here and see the way they destroy people's gear, it is scandalous. There are lots of old men around here, the fish are plentiful, and they might earn a dollar or two, but they are not allowed to go out and get it, they cannot do anything in the winter time when the weather is rough, but they have to sit by and see the men from the other side go out fishing in the summer time when they are not allowed to do so. Another thing here are those fellows running sardines, they live on the island there, but they are all American people and they put out their traps to catch fish with ours. That rouses the lobster fishermen, our fishermen do not like that.

Witness discharged.

HANFORD THURBER, fisherman, St. Andrews, called and sworn:—

By the Commissioner:

Q. How long have you been engaged in lobster fishing?—A. About 40 years.

Q. Have you always fished in the same place?—A. Well, no, I have only been here 23 years.

Q. Before that where did you fish lobsters?—A. Campobello.

9-10 EDWARD VII., A. 1910

Q. That is practically the same neighbourhood?—A. Yes.

Q. What is the condition of the fishery to-day compared with what it was 40 years ago?—A. I find there is just about as good fishing, I find it about the same.

Q. You do not find any decrease?—A. Yes, if you take it for 400 years, but in the last 20 years, I think it is about the same now as it was when I fished 20 years ago here; of course 40 years ago there were plenty of lobsters anywhere, but I do not see any decrease in the last 20 years.

Q. But there is a decrease?—A. Yes, from what it was 40 years ago.

Q. But that decrease you think occurred years ago?—A. Yes.

Q. To what do you attribute that decrease? What is the cause of it?—A. I think that in former years it was the canning of so many small lobsters, that is the cause of it, I do not see anything else that could have done it; you see there would be about on the average in this place two-thirds small lobsters canned.

Q. And they were all taken to the cannery?—A. They were all taken to the canneries.

Q. Do you think they are not still used?—A. Well, not around here, I do not think there are any go to the cannery at all that we catch here.

Q. Are you still engaged in fishing lobsters?—A. Well, for a while in the spring.

Q. You do not carry on any winter fishing?—A. No, you see the time I could fish lobsters is cut off.

Q. I see, you are getting a little too old to fish in the winter season?—A. Well, there is nothing in it for us here in the winter, it is too rough a place, and the fish drop off in the winter, so that you do not make enough to pay for the gear.

Q. Has the number of boats greatly increased since your first recollection?—A. I do not think they have—well, I suppose they have, they have increased with the lobster business.

Q. There could not have been as many boats fishing 40 years ago as now?—A. No, not nearly as many.

Q. Do the boats fish any more gear now than they used to?—A. About double; there is also a great deal of difference in the traps they use now.

Q. In what way do they differ, are they improved?—A. I should say it would be one-third more.

Q. You mean they do not catch any more lobsters, but that they hold all that do get in?—A. Yes, they hold them better, there will be no more in each trap, but when they do get in it holds them.

Q. Within your recollection has the space between the laths in the trap been narrowed down at all?—A. No, not to my knowledge, in building the traps we always leave the width of a lath between.

Q. What would that be?—A. Oh, one inch.

Q. Just one inch?—A. Yes, that is the width of a lath—well, they say it is one and a half inch, I do not know exactly.

Q. When you do fish, in what depth of water do you set your traps?—A. All the way from 10 to 20 fathoms.

Q. Are most of those who fish lobsters engaged in any other fishing?—A. A great many of them are.

Q. What other fishing do they engage in?—A. Trawling and weir fishing.

Q. At what particular season are these other branches of the fishery most prosecuted, when is the weir fishing on?—A. It commences about the first of May.

Q. And it lasts until when?—A. It lasts up till the 15th of December.

Q. And the trawl fishing, when does it begin?—A. We begin here on the first of May and that lasts up till Christmas, a little after Christmas sometimes.

Q. What do you do with your lobsters, where do you find a market for them?—A. Right here, we sell all our lobsters here.

Q. Who do you sell them to?—A. Gardner & Doone buy most of them.

SESSIONAL PAPER No. 22a

Q. What are they, export merchants?—A. They send most of them to Montreal, I think.

Q. You do not ship yours?—A. No, we sell to the smacks.

Q. What is the practise of the fishermen here generally, do they ship on their own account or generally sell?—A. They generally sell.

Q. Is there any time of the fishery when you see more egg-bearing lobsters than at another?—A. I never find any difference in that here, you will catch an odd one all through the season.

Q. Have you never noticed the eggs are riper at one time than they are at another?—A. I do not know that I ever noticed that.

Q. When do you think is the spawning season of the lobster?—A. I should say late in the fall from the appearance. The last lobsters we get seem to be the most advanced.

Q. When do you catch the last lobsters?—A. The 15th of June.

Q. That is a long way from the fall, we generally suppose that they spawn in the warm months?—A. I do not know, we get them in the depth of winter with eggs on.

Q. Yes, but those eggs will remain on them until the next July or August. Do you think they come into shoal water to spawn?—A. I could not say as to that because I have never noticed whether they do or not, I know I have caught them on the trawl in September.

Q. Do you think there is any movement on and off shore?—A. Yes.

Q. When do they commence to go off shore?—A. Away in October.

Q. When do you expect them to come back again?—A. We do not begin here again until the first of May.

Q. Then you think there is a movement on shore at that period?—A. Yes.

Q. Have you ever sold to the canners?—A. No, I have never sold to the canners.

Q. You have never sold any?—A. No.

Q. Not at any time in your fishing?—A. At no time in my fishing have I ever sold to the canner.

Q. Then you cannot tell me anything about their practise?—A. No, I cannot, because I have never sold to them.

Witness discharged.

JOHN DOONE, buyer and shipper (Gardner & Doone), St. Andrews, called and sworn:—

By the Commissioner: ,

Q. Your residence is at St. Andrews?—A. Yes.

Q. What is your particular connection with the lobster industry?—A. We buy the lobsters from the fishermen here and ship them.

Q. How long have you been engaged in that particular branch of the industry?—A. I have been engaged, myself, about 20 years, and for about 8 years I have been in the firm of Gardner & Doone.

Q. Were you ever interested in the canneries?—A. I have sold to the canneries.

Q. How do you collect your lobsters, do you send out a smack and buy them?—A. Yes.

Q. Within what limits do you operate, how far do you go?—A. To Briar island, and around the head of the bay, and we get some from St. Mary's bay, from Digby and around the Bay of Fundy.

Q. What size lobsters do you collect in the smack?—A. Shippers, we collect nothing under 9 inches.

Q. And those lobsters are brought in here direct?—A. Yes

9-10 EDWARD VII., A. 1910

Q. Are they exported from here?—A. Yes.

Q. How do you keep them in the smack, is she a welled smack?—A. No, sir, they have a car.

Q. What class of vessel do you use for the purpose?—A. About fourteen tons.

Q. With a gasoline engine?—A. Yes.

Q. And those lobsters are brought here all packed in cars?—A. They are put in a car here and kept until we get a sufficient quantity to export.

Q. How do you export them?—A. The most of ours go to Montreal and Ottawa. We only shipped this year about fifty barrels to Boston.

Q. Can you give me any idea of the quantity of shipments to Canadian points?—A. I think it was about 20,000 pounds to Montreal and Ottawa.

Q. How long does it take them to reach Montreal from here?—A. They leave here at five o'clock at night and get to Montreal next day at ten.

Q. Do you meet with much loss in shipping to these points?—A. No.

Q. Are they sent by ordinary express or do you send by refrigerator cars?—A. No, we sent them by ordinary express with a notice to keep them away from heat, and we put ice on them from the 1st of May until the season closes.

Q. Speaking from your experience, what do you find to be the condition of the lobster industry?—A. It is falling off.

Q. Have you any difficulty in getting the same proportion of market lobsters you used to?—A. I have books to show that when I was running it fell off nearly one-half. In the month of January up about Point Lepreau it was no trouble to get 8,000 to 10,000 lobsters per month, and now you cannot get 4,000, besides that the quantity of appliances in use has been greatly increased.

Q. Although the gear and the number of fishermen have increased you cannot get the same volume of lobsters?—A. No.

Q. To what do you attribute the falling off?—A. I suppose it is to the small lobsters having been taken.

Q. Is it to your personal knowledge that the small lobsters are taken largely, that everything that comes into the traps is disposed of?—A. Oh, no, not that I know of.

Q. Of course all the evidence that we have taken away from here is universal, and the canners themselves admit it, and so do the fishermen, that the practice is that everything that is taken in the trap goes to the canner, unless it is exported.—A. I have heard it, but it is eight years since I was connected with the factory.

Q. When you were connected with the cannery what was the practice?—A. You were supposed to measure them, but when you got in a hurry, when you were taking a large load of lobsters, some little ones would creep in.

Q. There was an attempt to avoid taking the small ones?—A. Yes, there was an attempt.

Q. In many places they take them down to four or five inches, and they are counted as two for one, and the fishermen are paid for them that way, they take in practically everything they find in the trap?—A. I have no knowledge of that myself.

Q. Have you all the facilities you require for the transport of your fish to the Canadian market?—A. Have we all the facilities?

Q. Have you all the facilities you require, for instance, if you had cold storage on the route, or refrigerator cars to carry the lobsters, would your loss be less, would it improve matters?—A. Yes, I think we could ship a great deal farther west.

Q. How far west have you ever gone, have you ever shipped to Toronto?—A. Yes, we send some to Toronto, but not many.

Q. How did they turn out?—A. Very good.

Q. Was your loss heavy in transit?—A. No, we never lost any.

Q. Your shipments were made in the cold months?—A. No, we have sent them to Toronto in June.

SESSIONAL PAPER No. 22a

Q. But Montreal and Ottawa are the principal markets?—A. Yes.

Q. Do you find a demand for all you can ship at certain seasons?—A. June and July are the months they are most plentiful, but in March and April we cannot supply the demand.

Q. They would take more than you can send them?—A. Yes, more than we can send them.

Q. When you ship to Boston what route do you take?—A. They go by boat generally.

Q. You send by Eastport?—A. Yes.

Q. Has the change in the Boston regulations, which used to be ten and a half inches, and is now reduced to nine, affected the market price here?—A. Yes, it has affected the price, the lobsters have not gone as high.

Q. Have you any personal knowledge of the condition of affairs in the State of Maine; you know of course they carried on canning there largely at one time, and it was when the canning gave out, when they had exhausted their own fishery that the canners there came into this country, and became the pioneers of the industry here?—A. Yes.

Q. Is it to your personal knowledge that since canning has been abandoned in the State of Maine the condition of the fishery there has improved?—A. Yes, they claim it has. When I was running to Eastport they used to collect the spawn lobsters in a little steamer and bring them back after they had hatched them and distribute them back of Campobello, or around there, generally in their own launch.

Q. Is that lobster hatchery run by the United States Fish Commission or by the state authorities of Maine, do you know?—A. I do not know.

Q. Is there anything else you would like to say, is there anything I have not touched on.—A. I would like to make a statement as to what we would like the law to be.

Q. Yes, what regulation would you favour here?—A. I would favour throwing away all under ten inches and fishing all the year round.

Q. That is the same conditions that they have in the neighbouring state?—A. Yes.

Q. Would you venture to say that it is practically impossible to enforce regulations here if they are not the same?—A. I think it is.

Q. And would you venture to say that it is hardly fair to the fishermen living on the border to have different regulations on the other side and to expect them to obey the regulations here?—A. Yes, I think it is hardly fair.

Q. Has the number of fishermen greatly increased?—A. The lobster fishermen have increased, years ago they used to get herring in the winter time, but after that they all went into the lobster fishing; I have the books at home which I used to keep when I was running lobsters showing how many I gathered, and there is a big falling off now.

Q. If you had any written statement of that kind you could prepare showing the altered conditions I would be very glad if you would mail it to me?—A. Well, I have my book commencing about 1899.

Q. Anything at all you can give me, figures showing the catch then and now I will be very glad to have and it will be published with the evidence and submitted to the Committee; of course figures are exact and they tell their own tale?—A. I have the book at home and I will send a statement to you.

Q. The method of measuring in Maine, I understand differs from ours, they measure the back?—A. Yes, it prevents the stretching of the lobster and is more quickly done, and I think is a fairer way; some fishermen would stretch the lobsters out so that they die. You spoke about the spawning season. Now in the winter season when I carried lobsters, we would only get one or two out of 1,500 or 2,000 and in the months of June and July I used to get ten or fifteen, the proportion of seed lobsters is greater then.

9-10 EDWARD VII., A. 1910

Q. Of course it is known to be the case that the lobsters come towards the shore in the warm months, and that the female lobster comes there to develop her eggs and hatch them out, she requires warm water to do that. If the lobster remained always in deep water she would not hatch out the eggs. What would you think of establishing a hatchery here?—A. I think it is a good idea to gather up the seed lobsters and have a hatchery here.

Q. As to that matter of holding lobsters in pounds, what is your idea? The practice in Maine is to hold the lobsters in pounds, the dealer holds them there until the market conditions warrant him in shipping?—A. That would be a good thing for the shipper here.

Q. That would place him on an equal footing?—A. Yes.

Q. The object, as I understand it, of any regulations is to place the Canadian fisherman and dealer in as good a position as their competitors on the other side.—A. I can give you an illustration on that point, now we got an order from Chicago for about ten barrels of lobsters a week, but as soon as they found we had no pound they cancelled it, because they said they could not depend upon any one who hadn't a pound to give them a constant supply, therefore we did not get the contract.

Q. But if you had a pound you could have filled that order?—A. Yes, they were wanted for hotels and places of that kind where they have to have the lobsters regularly, you know.

Witness discharged.

WHEELER MALLOCK, fisherman, St. Andrews, called and sworn:—

By the Commissioner :

Q. Do you figure as a lobster fisherman?—A. Well, lobster fishing is not my business, that is generally, but I fill in the time fishing.

Q. How long have you been engaged in the practice, how far back does your recollection of lobster fishing go?—A. I think it is about twenty-three years since I came to St. Andrews, and off and on from that time I have fished lobsters every year.

Q. Where did you reside before that?—A. Campobello.

Q. And had you fished there too?—A. Not very much.

Q. What is your opinion of the present condition of the lobster fishery as compared with the time when you began?—A. Well, from the standpoint of our own district, I can only talk of that, because I do not know much about the outside, St. Andrews Bay looks to me to have the best quality of lobsters there is within miles around, for 500 miles around, the largest lobsters and the best, and since twenty-two years ago up till this spring I cannot see very much difference in the fishery. They come in shore about the first of May so that we can get at them to fish through the month of May, and I think this year there was just as good fishing apparently as there was twenty-two years ago, we caught about the same number in the trap, but the season is so short for us that we cannot go to any big expense in fitting out traps, because by the time we get our traps located the season is pretty nearly over, and we have to commence taking them in again.

Q. Do I understand you to say that there is actually no decrease in the fishery? That there is no falling off in the quantity of lobsters, and that they are as abundant as ever they were?—A. That is this way, there may be in the small lobsters outside, but I am only just talking for St. Andrews district, and it seems to me that the big lobsters are just about the same as when I fished here twenty-two years ago.

Q. And you get as many of them?—A. Well, in general, some weeks there will not be as good fishing, we have high tides and strong currents, but the lobsters will crawl in just the same as any other kind of fish make movements.

SESSIONAL PAPER No. 22a

Q. Do they winter in St. Andrews Bay?—A. Well, I think some do and some go out; I think what we call the ground keepers, the same as the small cod and the small haddock and fish like that, you will find home breeds, they stay here all the year around. I notice down here there will be a stray lobster make his home under the rocks somewhere, but as for fishing in general you may as well fish for wild geese because they have gone south in the winter time.

Q. What is your practice as regards the disposal of your catch, do you export your own lobsters?—A. No.

Q. You sell them to the local dealer?—A. We sell them mostly to Mr. Doone, he buys them, there is a risk for us in shipping, and he is acquainted with all the dealers everywhere.

Q. Are there any other smacks or dealers buying in the neighbourhood, there is competition in the matter, is there?—A. Well, hardly any here.

Q. At all events if you are not satisfied with the price you get in the local market you can ship them yourself, you have that opportunity always?—A. We can, we are not confined to that one buyer.

Q. The fishermen who sell to the packer tell us that in some places there is one price, and they either have to take it or leave it, but that is not the case on this shore?—A. No, they give a fair price, and the little that they take for commission is more than covered by the risk that we would have if we shipped ourselves.

Q. As to these female lobsters, what is your experience, are they more numerous at any part of the season, do they come in shore?—A. Well, my opinion of this female lobster, just how long it takes to mature the eggs I do not know, but I find them the season round; more or less all the months that we fish we find the berried lobster almost ripe.

Q. At what particular time is that?—A. That would be in June, then we find the same lobster, I have marked them and caught them three times over in the same season in the trap, and I think they come inshore to spawn more than the other fish.

Q. And you think they spawn during the warm months?—A. I think so.

Q. What has been the practice here with regard to that spawning lobster, has she been protected, returned to the water?—A. Well, to my knowledge she has.

Q. The practice of brushing and stripping her eggs has not been carried out here at all?—A. Oh, I do not know, I do not think so.

Q. Various propositions have been made to the Department with regard to the best measures to take for the protection of the lobster. One is to require the lobster fishermen to register, and to take out a license, reciting the regulations and that he would bind himself, by signing it, to obey the regulations. The idea is that the fisherman having done that will feel bound to strictly obey the law himself and that he will be very likely to see that his neighbour does the same; of course anyone found violating the regulations would lose his license and would not be allowed to fish lobsters. How does that strike you as a means of protecting the lobsters?—A. I should think there could be no law made but what would be all right for the honest man, I do not think that would hinder him a mite, for myself I do not think that will be any hurt to me at all, make all the laws you have a mind to.

Q. Some people have suggested shutting down all lobster fishing for a term of years until the fishery has come back to its original condition, what do you think of that as a remedy?—A. Well, my view has not scope enough, I am just confined to a small district, and I am just telling you what I think about that. There are not, to my knowledge ten pounds of lobsters going out of St. Andrews Bay to the canners, and that is the secret of the success of the lobsters in St. Andrews Bay. Grand Manan, Nova Scotia and these places complain about a falling off in the lobsters, and that is natural enough because there are multitudes of them being taken into the canneries and you will find a decrease there, that is my idea about it, I do not know whether that is correct or not.

9-10 EDWARD VII., A. 1910

Q. To make a long story short, what is your suggestion, what is the best regulation to enforce for this particular district not St. Andrews bay alone, but for the whole county of Charlotte? How would the same regulations that exist in the State of Maine suit you—A. That would be the nearest you could get at it, to protect your lobsters, and any man that wants to let him fish the year round. Now, for instance, right across in Maine here, on one side of the border one man goes out and puts out his traps, and on our side we have to haul ours up; that is not right, it induces men to break the law. If I were allowed to fish the season round and to take all above ten and one half inches I would not be a bit afraid to take my chance in St. Andrews bay to make provision for my family.

Q. Can you give me any idea of the average earnings of an average lobster fisherman during the season as it is at present?—A. Here?

Q. Yes, what is the amount a good lobster fisherman would receive for his season's work, it varies some, and some are more industrious than others?—A. Some men fit out more expensively than others, but I think one man for the two months' work would get \$120 to \$140, something like that.

Q. That is for the two spring months?—A. Yes.

Q. From the middle of April to the middle of June?—A. We cannot count on April, we get our traps out maybe in April, but we can never count on anything until May, from about the middle of May until the last of June.

Q. Have you any idea with regard to the State of Maine when the best of their fishing is done?—A. I could not say.

Q. Have you anything else you would like to add to what you have already said?—A. Well, no, there is nothing; the dead fact is I have been so disgusted with the thing that for 3 or 4 years I haven't done much at it at all because the last convention we had here I supposed that we would have had a 10½ inch law and instead of that we got the limit shortened so that we were under the necessity of turning our attention to something else.

Witness discharged.

Messrs. Arthur Barteau, Willard Tewkesbury, Robert Worrell, Arthur Heubert, William Cyrill, John Malloch and Arthur Cyrill, fishermen, Deer Island, were also present and stated that they approved of a 10½ inch limit, a uniform season and the establishment of a fish hatchery.

Commission adjourned.

GRAND HARBOUR, GRAND MANAN ISLAND, September 22, 1909.

EDGAR COOK, fisherman, Grand Manan Island, called and sworn:—

By the Commissioner:

Q. How long have you been engaged in the lobster industry?—A. I have just fished one season.

Q. When was that?—A. That was about ten years ago.

Q. You have always lived in this harbour?—A. Yes.

Q. And you are familiar with the lobster fishery?—A. Yes.

Q. Within your recollection, what is the condition of the fishery to-day compared with what it was when you first remember it?—A. There has been a gradual decrease.

SESSIONAL PAPER No. 22a

Q. How long has that decrease been going on?—A. As far as I can understand it has been going downhill, always has.

Q. Since the fishery first began?—A. Yes, since the American factory used to be here, I do not know just what year that was.

Q. The American factory? Is that the one owned by Burnham & Morrill?—A. No, Underwood.

Q. And Underwood gave up when?—A. I could not tell you that.

Q. Was he succeeded by Burnham & Morrill?—A. No, there were a number of years that we carried the lobsters over to the factory on the American shore, Holmes used to buy a good many of them.

Q. What about the present factory, when was it established here, Burnham & Morrill's have a factory have they not?—A. Yes.

Q. How long has that been in operation?—A. 8 or 10 years or more.

Q. Are there any other canneries in operation here?—A. Captain Ingersoll has one at Seal Cove.

Q. How long has that been in operation?—A. Five years.

Q. What number of people are engaged in the lobster fishing from this centre?—A. Do you mean from this harbour?

Q. Yes, what number of boats?—A. I think I would be safe in saying there are 30 fishermen in this harbour.

Q. What is their practice, do they all own their own boats and gear?—A. Yes.

Q. How do they fish generally, two men to a boat?—A. Yes. A good many of them do, they set all single traps.

Q. How many traps do they generally fish?—A. About a hundred on the average.

Q. And they fish all single lines, not trawls?—A. No.

Q. They begin fishing when?—A. I do not know what the law is now.

Q. They do not begin before the legal term?—A. No.

Q. That is the 6th January; and they commence in the beginning of January at all events?—A. Yes.

Q. Do they fish all the winter through?—A. It all depends upon what kind of winter it is.

Q. But the traps are there?—A. Yes, but if they get a big storm they take them up; lobsters are scarce at the last of the season and they do not continue until the end.

Q. How is the fishing in January when they first begin to fish?—A. It is at its best.

Q. What is done with the fish they get at that part of the season?—A. Well, they have to sell them for counters, in the American market.

Q. That is all over 10½?—A. The American market takes the small lobsters now.

Q. They take the 9 inches now in Massachusetts. What becomes of those under 9 inches?—A. I could not tell you that.

Q. Are the canneries in operation at that season?—A. No.

Q. Are the small lobsters shipped to other places where the canneries are in operation; are smacks here to buy them and carry them to the canneries?—A. Yes. That is just the argument men will use in favour of the canning business, that they might just as well be canned here as taken away.

Q. We know that the small lobsters are caught and utilized in some places, and we want to get at the truth; how is it in February and March, is the fishery carried on vigorously?—A. I think it is carried on just about the same.

Q. That is whenever they can get out or when the weather is fit?—A. Yes, but they do not crawl as well in February or March as they do in January, they slack off.

Q. When does the fishery begin in earnest again, in April or May?—A. Yes, that is the time, most everybody who is a lobster fisherman gets into it again then; they start in at it in earnest then.

9-10 EDWARD VII., A. 1910

Q. Do they fish on the same ground in April, May and June as they do in January?—A. They fish on the ground all round here.

Q. How far off shore do they go with their traps?—A. 8 or 10 miles off.

Q. In what depth of water do they generally fish?—A. They go as high as 20 fathoms.

Q. You have only fished one season so you must not have much idea about the fishery, but can you tell me what percentage of the fish caught in the traps are marketable fish over 9 inches, and what percentage is less than that?—A. I could not say exactly, but a very small proportion of them are counters.

Q. A very small proportion of them are market fish?—A. Yes, of those caught on this part of the island.

Q. Can you give me any idea of the percentage of egg-bearing lobsters that are found in the trap?—A. I could not.

Q. Are they more numerous at any particular part of the season than they are at another?—A. Well, I do not know that they are, I think our breeding season here is late.

Q. There has been a decrease in the fishery according to your statement, to what do you attribute that decrease?—A. To over fishing.

Q. To over fishing in what way; is it legitimate over fishing, that is to say catching only the large fish, or is it the destruction of the small fish?—A. Both ways.

Q. And what suggestion would you make as to the remedy for the future?—A. Well, I would favour the enforcement of the law, taking the lobsters when they get their growth so that we would get the benefit of their growth.

Q. What would you call the limit?—A. $10\frac{1}{2}$ inches.

Q. You favour taking nothing under $10\frac{1}{2}$?—A. That is what I would favour.

Q. And what season would you favour?—A. Our fishermen here all claim that February is the high priced month for lobsters, they get a high price for them in February, but they say you cannot catch them then; I would say, January, February and March.

Q. You would fish in January, February and March?—A. Yes.

Q. And not at any other time?—A. Not at any other time.

Q. How are your market lobsters disposed of, do you send them direct to the market yourself?—A. No, very few do that, most of them are bought by the American smacks which come here for the purpose.

Q. Where do the American smacks come from mostly?—A. Some of them come from Portland and some from Eastport, a good many of them are from Eastport.

Q. What do they do with the lobsters, where do they take them, have you any idea?—A. No, I haven't any idea what they do with them.

Q. What I want to find out is whether the lobsters carried from this neighbourhood are held in pounds that are established all along the American border?—A. I do not know.

The CUSTOMS OFFICER (Grand Harbour): Yes, they do, because I know from the entries they make here that is what they do with them?—A. I will say that this is the best lobster ground in North America; my grandfather was the first man who ever canned lobsters here.

Q. How long ago was that?—A. I cannot tell you exactly, it is 45 years anyway.

Q. How long did he continue canning?—A. Well, he only canned I should think, about 12 years.

Q. Have you any idea why he gave it up?—A. He got too old.

Q. Did none of his children succeed him in the business?—A. They all did, but not here; he canned lobsters here at that time and one lobster would fill four 1-pound cans.

Q. Have you within your recollection had any very large lobsters here?—A. Not in my time, but there have been quite large lobsters of course here.

SESSIONAL PAPER No. 22a

Q. Have you any idea how many cases Burnham & Morrill pack during the season?—A. About 2,500 cases is the limit, but I cannot tell you how many they pack.

Witness discharged.

CHARLES BROWN, fisherman, Grand Harbour, called and sworn:—

By the Commissioner:

Q. How long since you fished?—A. I have not fished lobsters for eight or ten years.

Q. How long did you fish lobsters, 20 or 30 years?—A. No, not as long as that, but I did fish for about 15 years.

Q. How long since you first began fishing lobsters?—A. Forty-five years.

Q. What was the condition of the fishery then compared with the present?—A. It was as good as it could be.

Q. Describe it yourself?—A. I have taken 80 of those old-fashioned traps and set them out in the morning, and hauled them at 11 o'clock that day, and I have taken 1,400 large lobsters out of them.

Q. What would those lobsters average?—A. There were no small ones, we did not get any small ones then of any consequence; all our small lobsters in those days would be 'counters' now. Then I have had my dinner and gone out in the afternoon and hauled again and took 1,400 more lobsters out of the traps, making 2,800 in one day.

Q. How long did that continue?—A. That would be about 12 years.

Q. There were very few people fishing then?—A. Quite a number.

Q. Did the number of fishermen increase steadily?—A. Yes.

Q. How is the number now compared with what it was then, the number of boats?—A. There are three-fourths more now than there were then.

Q. That is there are three times as many?—A. Yes.

Q. And they are fishing more gear?—A. Yes.

Q. Are they fishing the same ground or are they farther off?—A. No, they are not fishing the same ground, we caught most of our lobsters right in here in Grand Harbour.

Q. And now they have to go farther afield for them?—A. Yes.

Q. When you gave up fishing, how greatly had the fishing fallen away?—A. Very little; when Mr. Mitchell came here there was good fishing then.

Q. When did he come here?—A. I could not tell you that, but I think it was about 30 years ago.

Q. And did you notice then that it was beginning to fail?—A. No, not much; it hung out well because they shifted their traps farther out.

Q. Just describe in your own words what the condition of the fishery was, how long after that was it that you first began to notice there was a serious decrease?—A. I could not tell you that, the decrease was going on all the time, it was impossible almost to tell when it commenced to decrease because they were shifting out into deeper water gradually. The number of fishermen was increasing and we were going farther off shore to get the lobsters, and in that way the fishery was maintained for a number of years.

Q. But at present even in spite of all they are doing, can they maintain it that way?—A. I think they have caught the lobsters off, the lobster fishing is played out, we have been taking big, little and all kinds. We fish all the year round nearly, we fish in the fall and then we go at it again in the spring, and the lobsters have no chance.

9-10 EDWARD VII., A. 1910

Q. Do you think that the canning is more injurious to the fishery than the live lobster trade?—A. No, I do not.

Q. That is to say if they can only the legal lobsters?—A. Yes, that is it.

Q. Could the canner exist to-day if the 9-inch limit were enforced?—A. Yes, they could if they would sell them to the factory to can, but they will not give them to the factory, only the culls.

Q. They pick them out and sell them because they get a better market for them that way than the canner can afford to give?

Mr. Cook.—Yes, they get as high as 30 cents apiece for counters.

A. That is in the winter, but they do not get that for them in the summer or spring season.

Q. What will the average be in May and June?—A. Ten or twelve cents.

Q. Who do they get that price from, the smacks that come round here and buy them?—A. Yes, the smacks come around and buy them.

Q. What has been the practice here with regard to the berried lobster, has it been the practice of the fishermen to brush the eggs off and sell them?—A. No, they do not do that, they take the lobster with eggs on it and throw it out of the trap.

Q. Have they always done that?—A. They have always done that, but there may have been a few that did not, although they are pretty honourable here; the fishermen here are keen enough to know a spawn lobster even without the eggs being out, I can tell them just as soon as I see them.

Q. It is curious that the lobster fishery should decrease as it has if they all do that?—A. That is not my idea at all, because the lobster fishermen have increased terribly during the last thirty years, they have increased the number of traps by thousands and they have fished winter and summer so that the lobsters do not get a chance at all.

Q. How do they do in the State of Maine, there they have a size limit of 10½ inches and they fish all the year round?—A. They fish almost out of sight of land in the winter time, they do not fish in shore the same as we do here.

Q. What depth of water do they fish there?—A. I couldn't tell you that, but I guess it is pretty deep, it would be 40 fathoms all right. I think the mother lobster has been protected pretty well here by the fishermen, I do not think there are very many who have taken them. The fishery has decreased because the lobsters cannot stand it, they are over-fished. Look at Whitehead and other points around there, in deep water the ground is covered with traps, and the lobsters cannot stand that, it is over-fished.

Q. Do they use the same trap now they used to?—A. No.

Q. What is the difference in the trap?—A. Well, the difference is these traps were made with large bows, three or four bows in each, and some of them have got down to the square trap with four heads in it.

Q. Do they put the laths any closer together than they used to?—A. No, they are about the same size.

Q. What space do they allow between them?—A. Well, they put about the width of your two fingers, which will be about 1½ inches.

Q. What is the advantage of the present trap compared with the old-fashioned trap?—A. Well, that is wonderful now, I could not explain that.

Q. Can you tell me wherein the new trap is better than the old one?—A. Well, with the old one the lobster would crawl out of it and the head of it was nothing but a round bow with a net, and four lines up to that, and when you were hauling it sometimes you would see one-half of them crawling out of the trap.

Q. What name do you give to that new trap, the parlor trap?—A. I never heard the name.

Q. It is generally supposed that the only advantage that trap has over the old-fashioned one is that it holds the lobsters better?—A. Yes, that is it.

SESSIONAL PAPER No. 22a

Q. And in many places they have put the slats closer together with a view of holding the small lobsters?—A. I have always used the head of the hatchet as a guage, leaving the space about $1\frac{1}{4}$ inch, and everybody else does about the same, as far as I have seen, and they make these parlor traps with the slats about the same distance apart, but they are so constructed that the fish cannot get out.

Q. What is your remedy for the trouble, what would you say?—A. My remedy would be to stop winter fishing entirely.

Q. And when would you commence?—A. Start to fish in April.

Q. And you would fish how long?—A. Until the first of July. In that way the lobsters will have a chance to increase and in no other way. I think the lobsters have spawned when they shed their shell.

Q. You think the lobsters have generally spawned before they shed their shell?—A. I suppose some do, but in July or August is the month when they shed their shell.

Witness discharged.

JEROME DAGGET, fishermen, Grand Harbour, called and sworn:—

By the Commissioner:

Q. How long have you been connected with the lobster fishery?—A. About 30 years.

Q. What is the condition of the fishery to-day compared with what it was when you began?—A. It is very limited, only the advance in the price makes it possible to carry on the industry at all.

Q. How did you fish thirty years ago?—A. We fished on trawls, the same kind of trap practically that we do now, it was nearly as good, there might be a little improvement, some little change in the way of baiting and the like of that.

Q. What number of boats were fishing in those days compared with the present?—A. I could not just tell you that.

Q. There are a good many more now?—A. Yes, a great many more.

Q. Has it doubled or trebled?—A. I think it has trebled, in my opinion.

Q. How are they, do they fish two men to a boat?—A. Yes, they fish two men to a boat as a rule.

Q. How many traps will an average boat fish now?—A. An average boat will fish about 100 traps.

Q. What number of traps did you usually fish when you began?—A. About 50.

Q. Did you usually go as far off-shore then as they go now?—A. No.

Q. What season did you have?—A. May and June in the beginning.

Q. Only those months?—A. Yes, and April with some fishermen, but they were the principal months.

Q. What market had you for your lobsters then?—A. There was a factory here and the smacks ran from Jones' Port in the State of Maine.

Q. Were there factories in existence when you began fishing?—A. Yes, one operated right here in this place.

Q. Who operated it?—A. William Underwood, of New York.

Q. Have you any idea how long he operated here or why he gave up or disappeared?—A. Well, I imagine he operated about 10 years, but I am not positive on that point.

Q. How many canneries have you here?—A. We have none for the present year.

Q. Who is it operated by?—A. Burnham and Morrill.

Q. They did not operate it this year?—A. No.

Q. Have you any idea why they did not?—A. No, I have no idea why they did not.

9-10 EDWARD VII., A. 1910

Q. What proportion of the fish caught is exported to the market, what would be market lobsters?—A. Well that varies so that it would be pretty hard to tell. The off-shore fishermen export a large proportion of their catch, but the in-shore fishermen get a smaller lobster and they go to the factory.

Q. What would you call the in-shore fishermen, those who fish around in the bays, harbours and shoal water generally?—A. Yes, in ten and fifteen fathoms of water and in the bays.

Q. And those that fish off-shore get a larger proportion of market lobsters?—A. Yes.

Q. What has been the practice of the cannery, to receive and can everything that is brought to them?—A. No, I fancy not, I think they have observed the law fairly well.

Q. And that they have not canned anything under nine inches?—A. No, I do not know that, because I do not work in the factory.

Q. Well, do you know what is the practice of the fishermen; do the fishermen expect the canner to take everything they bring them?—A. Well, the fishermen as a rule catches what he can market.

Q. No matter whether he markets it at the cannery or elsewhere?—A. Yes.

Q. Now tell me, what has been the practice of the fisherman with regard to the berried lobster, the female lobster with the eggs extruded? In a great many places, in fact over the bulk of the coast, we find that the eggs are brushed off and the lobster goes to the cannery, the smack or somewhere?—A. I think the practice has been here that that particular law has been well observed; I do not think that has been the practice here at all.

Q. Have smacks come here from the United States to buy the berried lobster?—A. Not to my knowledge.

Q. Now, with regard to the trap, the one you began to fish with I suppose was the old-fashioned double-ender, the whole length of the lath?—A. Yes.

Q. And now you fish with the shorter trap, do you not?—A. Yes, a shorter trap and it has three doors instead of two, and then it has an inside chamber in it so that it holds all the lobsters that may get in.

Q. The only difference is that it holds the lobsters better than the old one?—A. It holds the lobster better, but I do not think there are any more lobsters get into it than in the old-fashioned trap.

Q. Has there been any considerable narrowing down of the space between the slats; forty years ago the trap was always made with one and a half inches between the laths, and to-day we find that in many places it is not more than a half inch.—A. There are none built on that scale here.

Q. What is the scale here?—A. I should think about one and a quarter inches.

Q. Is it as much as that?—A. Yes.

Q. That ought to allow a pretty good sized lobster to escape?—A. Yes, any space that a lobster can get his right claw through he will go through, a broken mesh, or if you miss a thread in the mesh in the head of the trap it will let him out.

Q. What is the market price of lobsters, what are they worth?—A. That fluctuates?

Q. To what extent does it fluctuate?—A. From twelve to thirty cents.

Q. That is for the lobsters over ten and a half inches?—A. Yes.

Q. What is the price for mediums between nine and ten and a half?—A. Well, the standard is about four cents.

Q. Are they exported abroad or do they mostly go to the canner?—A. They mostly go to the canner, under the Massachusetts law they accept them down to nine inches.

Q. That made a difference?—A. Yes, that made a slight difference.

SESSIONAL PAPER No. 22a

Q. Have you any idea of the conditions prevailing in the State of Maine at all, you know there they have a ten and a half inch limit and no close season, they fish all the year round?—A. Yes.

Q. Have you any idea how the fishery is in the State of Maine; has it improved or is it still falling away?—A. I am under the impression that it is still falling away, two years ago I was told by a practical fisherman who had fished for twenty-seven years that that was the poorest season he had ever seen.

Q. What is your own view as to the regulation that would be best calculated to preserve the lobster fishery here?—A. My own personal view is that a close season with two months' open season would do the most people the most good and would give the greatest protection that could be afforded to the lobster fishery.

Q. What open season would you have?—A. May and June.

Q. And no fishing at any other season?—A. No fishing at any other season, I believe that protection should commence with the parent lobster and not at the little snapper.

Q. I understand you to say that you would have that season, and how would you protect the parent lobster?—A. Well, the seed lobster with regard to her the law without any regulations would be sufficient, that is the spawn lobster I am referring to.

Q. Would you fish two months without any size limit?—A. Without any size limit.

Q. You would just govern it by the short season?—A. Yes, well you might put a clause in too providing that a man for shame's sake would not catch them too much under nine inches.

Q. I think some of them would stand a good deal of shaming, they get them down to four and five inches in many places.—A. It is no use, you must admit that you cannot expect a man to throw away a fish that he knows his neighbour will pick up and sell, because by so doing he is not benefiting the fishery, he is only helping out his neighbour who, is ready to violate the law; it would take an officer on every boat to stop it.

Q. Has there been any regular and steady attempt on the part of the officers to enforce the law?—A. I think there has, I have no complaint to make against the officers; an officer soars down on a poor lobster fisherman, after the season has closed, after the slaughter has been made, and it only makes the poor man \$10 poorer and does not help the fishery.

Q. What does the officer pounce down on them for?—A. For catching small lobsters.

Q. Have you ever known any fisherman being fined for catching small lobsters —A. Yes, years ago they did, but now people have got so steadfast in their opinions that they do not need that. Now in regard to the canning licenses.

Q. Yes?—A. Why is it that a man who makes a legal application and pays for his license should not have it?

Q. That is to say you think one man has as much right to a license as another? —A. Yes, provided he complies with the conditions of the law, in my opinion that is how it should be.

Q. Well, would you allow canning to go on indiscriminately, that any man that applied for it should get a license?—A. Yes.

Q. Would you not require some guarantee that his cannery would be up to a certain standard?—A. Well, I do not see why that would be necessary.

Q. We have seen a good number of canneries where it was impossible to put up a good product in the cannery the way we found it with dirty tables and foul surroundings.—A. Well, that is to their own detriment.

Q. There must always be some regulations, some inspection of the canneries?—A. What for?

9-10 EDWARD VII., A. 1910

Q. I think the idea of the department was not to discriminate in any way, but that by limiting the number of canneries they were limiting the amount of fishing. Is it a fact that if you had a half a dozen of factories here instead of one it would not increase the number of fishermen?—A. No it would not increase the number of fishermen by one.

Q. Would an increase in the number of canneries mean an increase in the amount of fishing done?—A. No, it would not. In regard to the protection of the short lobsters I would make the suggestion that the smackmen should have a license, which should not be burdensome, but so that every man who ran a smack would make his deposit as security that he would carry on his business according to the regulations, and that would be all the protection necessary; as far as protecting it by the fishery overseers it is impossible.

Q. A good many propositions have been made to the department, some people have proposed that the lobster fishery should be shut down altogether for a term of years in order to allow it to recuperate, that undoubtedly would be a thorough way to do it; then the Lobster Commission of 1898 recommended the closing down by sections, moving around gradually until the whole coast had been given a close season?—A. Yes.

Q. Then another suggestion is that every lobster fisherman should take out a license before he commences fishing, without any charge, probably, by which he binds himself to fish according to the law, and signs a statement to that effect; the idea is that the fishermen having done that would strictly obey the law and would inform on others who did not, the penalty for violation being the loss of the license.—A. I think that could be embodied right in this, so that it would cover those that are carrying on the trade in lobsters; a man will not violate the law unless he is getting money out of it.

Q. Do you mean the United States lobster smackmen; how would you get at them?—A. They deal in all kinds of lobsters you know, and we should get at them.

Witness discharged.

WILLARD A. INGLES, fisherman, Grand Harbour, called and sworn:—

By the Commissioner :

Q. Have you always been a resident of Grand Harbour?—A. I was born in Grand Harbour, and at six years of age my parents moved to Eastport, Maine, at twelve years of age my parents moved back here and I have been here ever since.

Q. How long have you been engaged in lobster fishing?—A. I have only missed three summers since I was eighteen.

Q. And you are now how old?—A. Forty-nine.

Q. How do you find the condition of the fishery now as compared with when you first began?—A. Well, under the same conditions it would be just as good.

Q. That is if there were as few people fishing?—A. Yes.

Q. Do you think there is the same volume of lobsters on the ground?—A. Well, I think in two years it would increase.

Q. In two years?—A. Yes, it would go back to the old standard in two years.

Q. If it were reduced to the same number of fishermen?—A. Yes, but it would be practically no use to stop fishing for two years unless we had some observation of the law afterwards.

Q. Has the law ever been enforced?—A. Not to my knowledge, except in the case of Captain Pratt, when he used to first come here he made us toe the mark for a couple of years, and the effect lasted for three or four years.

Q. Can you give us any idea of the number of boats fishing here when you commenced to fish?—A. Not on the whole island, I could not.

SESSIONAL PAPER No. 22a

Q. Well, take it out of this harbour, in this neighbourhood?—A. I should think there were at that time, in this neighbourhood, about twenty boats.

Q. And what amount of gear was usually fished then per boat?—A. From seventy-five to one hundred traps.

Q. And now there are about how many boats?—A. Well, I could not tell you off-hand.

Q. We want to get at the increased amount of fishing if possible?—A. I should think that in the same locality it has increased to about double.

Q. Are they fishing any more gear, will they average more gear now?—A. Yes.

Q. And do they go out into deeper water?—A. Yes.

Q. They go further off?—A. Yes, and in my opinion that has been the chief cause of the depletion of the lobster grounds, that is the off shore fishing with the large lobsters.

Q. Do you get a better run of large lobsters off shore than in shoal water?—A. Yes, we get five times as many count lobsters.

Q. Is the tendency to go off shore all the time?—A. Yes.

Q. What would be the limit of depth at which you could fish, do you think?—A. Here we have high tides that bar us from fishing outside the shoals, it is a matter of how much tide there is, in deep water you could fish as deep as you wanted to, seventy-five or eighty fathoms but with a swift tide such as there is here you could not do that, because the tide would run the buoys away.

Q. Is there any general movement of the lobsters towards the shore in the spring?—A. Well, my experience has led me to think there is.

Q. That is generally the case, the lobster is not supposed to move a great distance along the shore, but to move off shore and on shore.—A. I noticed from experimenting that along towards the first of the year, about the middle of November, and some years a little later than that, there is generally a movement off shore, and along about the 20th of March there is generally a movement of lobsters in shore.

Q. Do you think that the female lobster comes in shore to spawn?—A. I have every reason to believe she does, but I could not swear that she does not spawn in deep water.

Q. Of course you find them in deep water with the spawn attached?—A. Yes, and very ripe.

Q. What seasons of the year would you expect to find them very ripe?—A. Along in the warm weather.

Q. You would not find them very ripe in the fall of the year or along in January or February?—A. Oh, no.

Q. And as a rule then they are moving on shore in the spring?—A. Yes.

Q. What proportion of the catch in the early days were market lobsters; of a fisherman's catch, how many out of a hundred would be fit for market?—A. In the first of my fishing do you mean?

Q. Yes?—A. Well, you know at that time we used to catch everything that went into the trap, and sell it at sixty cents a hundredweight, and I know that the first year I fished I put off sixty traps and I earned \$210, that was at sixty cents a hundredweight. But Mr. Cole a few years ago figured out the proportion of large lobsters that there would be in it, and that catch would now come to between \$1,400 and \$1,500 at the present prices.

Q. Everything caught went to the cannery in those days?—A. Yes.

Q. You did not export any alive to market then?—A. No.

Q. They all went to the canner?—A. Yes.

Q. To-day what proportion of your lobsters would be market fish?—A. In shore if you hauled out 100 lobsters you would not get more than ten or fifteen markets.

Q. That is over ten and one half inches?—A. Yes, and off shore you would probably get from thirty to forty.

9-10 EDWARD VII., A. 1910

Q. How are the market lobsters disposed of here, do the fishermen export them to the market, or are they sold to the smacks?—A. Up to the last year or two back they were sold to the smacks chiefly, but now the people who catch them are in the habit of doing their own shipping to the western market.

Q. That is principally to Boston, I suppose?—A. Yes.

Q. And you ship by way of Eastport?—A. Yes.

Q. And with regard to the smaller lobsters, what is done with them now?—A. Well, we dispose of them wherever there is a market.

Q. What is generally the market for them?—A. The cannery has been the market here up to recently.

Q. Are there any small or berried lobsters shipped abroad to your knowledge? In some places we have heard that along this shore smacks take the female lobsters with eggs and pay more for them, to take them to the pounds along the coast of Maine?—A. To my knowledge I never knew a smackman to take berried lobsters, never in all my fishing, I have never sold one, but probably those who told you knew what they were talking about.

Q. It is a foolish thing to sell them out of the country, but it is reported that this has been done, and that it is done very generally; that they gather the eggs from the Canadian lobsters and carry them to the United States hatcheries?—A. I have heard it stated on very good authority that such is the case, but I never took much stock in it.

Q. Is there any change in the trap? My first recollection of lobster fishing goes back quite a way, I live on the coast myself. I know when our people first began to make lobster traps they made them out of a whole lath, and the space was always the width of a lath, one and one half inches. A. Yes.

Q. And now on the coast they have cut that space down to a half an inch?—A. Between the slats?

Q. Yes, I suppose it is about three-quarters of an inch when they put them on, but the swelling of the laths in the water makes it only a bare half inch?—A. Is that so.

Q. That can only be done with one object, with a view to holding the small lobster?—A. Yes.

Q. What is the practice here?—A. The best trap we have to-day is not over one half the size of the trap we had twenty-five years ago, and the heads are different.

Q. It is not that they catch any more fish, but they hold those they do catch?—A. They hold those they do catch better, I do not think really that any more fish go in.

Q. Do you think that the space is narrowed down?—A. cannot say that the space is changed because we do not want to catch the small snappers which would go through the small space, they are not worth very much.

Q. Has the canner ever refused to take small lobsters?—A. Yes, I have known him to send the boats away, he would not take them at all.

Q. Was there any number of canneries running at the time?—A. Yes, there were.

Q. Because the practice of the canneries in some places is to take everything that is offered, we have found them taking them so small that it required 14 to fill a pound tin, it takes nine 7-inch lobsters to fill a pound tin, so that you can guess how small they would be?—A. I have known lobsters to be taken where they were hardly any measure at all.

Q. Would they be carried to the canneries in the neighbourhood of Digby or towards the United States?—A. They went to Nova Scotia and Campobello.

Q. What would you propose as the best thing to do in order to restore the lobster fishery to its former state? Some people have recommended that we should stop lobster fishing universally in Canadian waters for a term of years?—A. In my opinion that is an utter impossibility unless they are prepared to put on about three additional fishery cruisers and keep them going steadily; as long as there is a market for them

SESSIONAL PAPER No. 22a

lobsters will be caught and sold. They are being caught to-day on Grand Manan and sold.

Q. Not only on Grand Manan, but at other places?—A. On the whole shore.

Q. Another proposition is to close down by sections, to stop fishing we will say on Grand Manan for a year, and then on the mainland, different sections there, changing backwards and forwards?—A. In my opinion if they were to stop fishing for five years, and let the grounds get stocked thoroughly, if they put no more limit on it when we started fishing again than there is to-day, in three years it would be as bad as ever again. The law that we have to-day, if enforced, would give us good lobster fishing; it is no use trying to cover up facts, I know that.

Q. What is your proposition, do you think that a strict enforcement of the present law is all that is required? Or have you any other suggestion to make?—A. I have a suggestion to make, I believe in selling an article when it is worth the most money, and I believe in fishing when they are plentiful, and my experience has led me to think that under the present conditions as far as markets and men are concerned, that we should be allowed to fish lobsters from the first of October until the first of February, and then close down; have the law strictly enforced and not let a thing be taken until the next October when once the season closes. When the lobsters are high and plentiful that is the time to catch them.

Q. And how about the size, what limit would you enforce?—A. If they would enforce it strictly, I think a ten-inch lobster should be the limit.

Q. Would not that put the canner entirely out of operation?—A. Well, I do not know but that he ought to be put out of business. Of course it is no benefit to the country in general to put him out, but he had better go out than have a thousand fishermen go out. I do not think I ought to give my living to the canner, I think the Government ought to protect my living, because I do not see that I have any right to suffer for the benefit of the canner.

Q. You think that the canning, and the inducement held out by the canner who buys the small lobsters is very much to blame for the present conditions?—A. My experience, and I have tried to find out for myself, has led me to that conclusion.

Q. Is it not the case that the cannery themselves are beginning to slack off, that they feel they must give up here?—A. Yes.

Q. There are none in operation here this year, are there?—A. Yes, I am not prepared to say why they slacked off, but they cannot apparently get enough lobsters, and the canner here was right under the fishery officer's eyes, and if he had been disposed to break the law he did not have much chance; he was, I think a very fair man.

Q. What do you think of the matter of lobster hatcheries?—A. I do not know that I have ever given it much thought.

Q. Of course if you establish a lobster hatchery you have to allow the fishermen to catch the berried lobster and bring her ashore, there she is stripped of her eggs which are taken to the hatchery?—A. Yes, has the experience in connection with these hatcheries proved that they are a benefit to the locality where they are run.

Q. I do not think there is any doubt where the hatchery is in the hands of a suitable man who is careful and attends to his work, and shows enthusiasm in it, they do hatch out a very large percentage of the eggs, there is no doubt about that.—A. They do.

Q. Yes, and the young lobster is put back in the water under the same conditions that he would be if he had been hatched out naturally.—A. My objection to the hatcheries has been that there has been such a conflict of opinion about their usefulness.

Witness discharged.

9-10 EDWARD VII., A. 1910

CLYDE BROWN, fisherman, Grand Harbour, called:—

By the Commissioner:

Q. You have heard the evidence given by Mr. Ingles?—A. Yes.

Q. Do you agree with what he has said or do you differ from him?—A. I differ only in one particular, that is in regard to the open season for fishing.

Q. What season would you approve of?—A. I think that the season we have now is just adapted to Grand Manan Island, because there are lots of fishermen in the winter time wouldn't have anything to do. If they made a poor fall, and if they were restricted from fishing in the winter they could not make anything, that is the only objection I have.

Q. You want spring fishing as well?—A. Yes, that is my idea.

Q. And you go in for a season as it is at present?—A. Yes.

Q. How about the size limit?—A. I think 10 inches would be all right.

Q. And you would have it strictly enforced?—A. Certainly, it would not be any good if it were not.

Q. Beyond that you agree with what the last witness has stated?—A. Yes.

Witness discharged.

SYDNEY GUPKILL, smackman, Grand Harbour, called and sworn:—

By the Commissioner:

Q. How many years' experience have you in connection with the lobster fishery?—A. Well, on my own account about 17 years, but I have been at it from a boy up.

Q. Previous to that you fished in what particular fishery?—A. I never fished lobsters, but I always bought them and carried them in smacks, except I fished as a pastime.

Q. What is the condition of the fishery to-day as compared with your first recollection of it?—A. It has depreciated all right.

Q. Would you venture to say to what extent?—A. I should think perhaps one fourth.

Q. Of course there are a great many more people fishing and a great deal more gear in the water now?—A. Yes, that is true.

Q. I suppose it takes more gear to keep up the supply?—A. Yes, in the last ten years I do not think it has changed a wonderful lot here.

Q. That is what a good many people all along the coast and in the Gulf say, that the decrease took place some years ago, and that recently it has not been so great.—A. I think our trouble here was when we fished in the month of December, the lobsters had all congregated on the shore to shed in these coves and creeks and they were caught before they got out, for three or four weeks it was slaughter.

Q. How long was that carried on?—A. For three or four years ago when the law was changed until the 6th of January, and that allowed the lobsters to get off the shore so that the fishing has been a little better since then.

Q. What proportion of the total catch here are market lobsters, and what proportion are sold to the canner for canning purposes?—A. Well, in different localities the proportion will vary. In this place right here a fisherman would not catch more than from one to 6, 7, or 8 per day, and six or seven miles offshore he would get a large quantity, perhaps one half.

Q. When they begin to fish on the 6th of January how far offshore do they go?—A. Not far, about the same distance as in the spring.

Q. In what depth of water do they fish?—A. 5 or 6 fathoms.

Q. I suppose in that depth of water they lose a great deal of gear?—A. Sometimes they do and sometimes they do not lose any.

Q. Do they do much fishing in February, March and April?—A. All the time.

Q. From the time the traps are put out in January they fish all the time?—A. All the time.

SESSIONAL PAPER No. 22a

Q. Does the fishery keep up during these months?—A. No, January is practically the only month until April again with us.

Q. How is it with April, May and June?—A. Well, from the 1st of April to the 20th of May we get the bulk of our spring fishing, and then it begins to decrease again.

Q. Do the fishermen continue fishing until the end of the season or do they go to other branches of the fishery?—A. Nearly all of them fish the entire season.

Q. Most of them who are engaged in lobster fishing are engaged in other branches of the fishery?—A. Yes, mostly in herring fishery; the spring of the year is the only season when there seems to be nothing else to do but fish lobsters.

Q. About what number of boats are engaged in the fishery in Grand Harbour?—A. I should think there would be 25 or 20, somewhere about that.

Q. There have been no canneries in operation here this year, have there?—A. No, not on Grand Manan.

Q. What is the reason of the canneries having gone out of business?—A. One of the chief reasons as explained to me was there was a large pack of lobsters on the northern shore of New Brunswick and Prince Edward Island, and the market being low, and us being so near the United States that it paid better to ship the small lobsters than to can them.

Q. By small lobsters you mean those between 9 and 10½ inches?—A. Yes.

Q. What has been the practice of the canner here, has he canned everything brought to him? In other places we find that the canner has taken and canned everything down to 4 and 5 inches?—A. There has never been anything as small as that canned here, but at the same time the law has not been observed.

Q. What has been the practice with regard to the berried lobster?—A. I think the bulk of them have been put overboard, there might occasionally be a man who would strip one and sell it, but I do not think that has been done to any great extent.

Q. What has been the market here for market lobsters, how are they disposed of? Are they shipped by fishermen on their own account or sold to smacks?—A. Most of them are sold to the smacks, a few people at White Bay ship their own lobsters.

Q. Are they shipped from Eastport?—A. Through Eastport where they catch the Boston boat.

Q. Otherwise most of them are sold to smacks on the ground?—A. Yes.

Q. Where do those smacks hail from generally?—A. Well the local smacks generally, they have a hold on the fishermen who get things from them and they sell to the smacks from the United States.

Q. There are other smacks from the United States?—A. Yes, and they buy what they can.

Q. Are those smacks generally welled smacks?—A. Yes, they are almost all welled smacks.

Q. What size vessels are they as a rule?—A. 25 or 30 tons.

Q. Is there any fishing done by those smacks outside the limit?—A. I do not think so.

Q. We have met with a condition in Yarmouth and Shelburne counties that rather alarm the fishermen there, that is that smacks are coming down from the United States and fishing outside the 3-mile limit?—A. I do not think they have done anything of that kind here.

Q. There is no question of course as to the decrease of the fishery, and various methods of remedying it have been suggested to the department; some say, stop all lobster fishing for a term of years and then frame new regulations and enforce them; how would that appeal to you?—A. I would not like that.

Q. There are various other propositions, some say adopt the same regulations as they have in the State of Maine, a limit of 10½ inches and fish all the year round?—A. I do not like that either.

9-10 EDWARD VII., A. 1910

Q. Others say, enforce the present regulations as they are, strictly?—A. Well, I honestly believe that with the law as it stands to-day, if it were strictly enforced here with us, we would always have big lobsters.

Q. That is a season from the 6th of January to the 15th of June, and a 10-inch size limit?—A. Yes, that is honestly what I think, but if I had power to change it I would make it something else.

Q. If you were commissioned to make the lobster law what would you do?—A. My idea is to have a law that will enforce itself, because you cannot get anybody to enforce it, all our fishery laws are in the main all right, but they are not enforced, we cannot get any one to enforce them.

Q. It is very difficult to enforce that size limit, it does not appear to have ever been enforced.—A. I claim that our fishermen in Grand Manan are one of the most law-abiding people to be found anywhere in the world. Now one man can take all the short lobsters that are going, and here it is just like it is everywhere else, you know that in any community you will always find a class of people who are going to violate any law, and if these men are allowed to do that sort of thing others have to do as they do, and that is what has ruined the thing here to such an extent.

Q. That is the destruction of the small lobsters?—A. I can remember 17 years ago, my first year in the lobster smack, we did not think of taking the small lobsters, there was no market for them. The old officer, Mr. W. B. McLaughlin, kept the thing clean, and since then it has not been enforced.

Q. What would be your suggestion?—A. My suggestion probably would not amount to anything because I might stand alone. I do not believe in a size limit because it cannot be enforced, nor would it be enforced, but if you make a close season long enough so that the lobsters will protect themselves, then every man who is found lobster fishing after the close of the season is violating the law; every man who puts a trap in the water does so, but with a size limit you would have to have an officer over every fisherman in order to see that he did right. I would say, give the lobster 9 months of the year and let the fishermen have three months, and during the three months let him take everything but the berried lobster, which should be thrown overboard. In that way the law would enforce itself without any fishery officer.

Q. What three months would you fish?—A. Well, I would say the three months that we have the least to do with the other fisheries, that would be April, May and June.

Q. Do you think that any proportion of small lobsters could be allowed to escape by regulating the width of the space between the slats?—A. No, I did not.

Q. We find in a great many places that the slats have been put closer together; in the olden time they used to be $1\frac{1}{2}$ inches apart, but now in the Straits of Northumberland, especially, they have been narrowed down to a bare half inch which can only have been done with a view of holding the small lobsters?—A. I tell you, if you have the space $1\frac{1}{2}$ inches the lobsters' claw or tail would drop out through it, and when you are hauling the trap over the side of the boat it will smash it, and a lobster without a tail or a claw is not worth much, that is the idea in putting the laths closer together.

Q. What is the standard width of the opening here?—A. I guess about an inch, these traps here are at least an inch.

Q. How would your proposition affect the canning industry, would it put the canner out of business?—A. It would not affect them at all.

Q. Do you think it would not affect them at all?—A. Oh, no, that would be their best season.

Q. They would only can the shorts, a great many of the large lobsters would go to market?—A. Yes, and a good many shorts would go too.

SESSIONAL PAPER No. 22a

Q. There isn't any canning anyway outside of Canada and Newfoundland?—A. I mean in the province here, and part of Nova Scotia where they can reach the American market successfully with the live lobsters, they will take about all of them we can send because their lobster is about extinct and they have to have them; but if they cannot get the large ones they will take the small. In New Brunswick and the Gulf they will always have to can them there, it is too far for the live lobster trade to be carried on.

Q. You think that the thing can be more easily governed and controlled by doing away with the size limit and shortening the season?—A. Yes, certainly.

Q. And by always strictly protecting the berried lobster?—A. Yes.

Q. What have you to say about the matter of pounds and hatcheries?—A. I think the hatchery is a good thing, we ought to have one here.

Q. That is one way of protecting the berried lobster, because it pays the fishermen to bring her in and sell her, so that she is not likely to be brushed?—A. That is the practice of the bulk of the fishermen in Grand Manan and Charlotte county, and I think we ought to have a hatchery here; there has been some talk of a hatchery in Campobello which will, I think, stock up the ground for the Americans, but this is the spot where the hatchery should be.

Q. Is there anything more you would like to say?—A. No, nothing, unless it is that I think the law as it stands now strictly enforced would be a good thing.

Q. But you know a still better thing, and a law that it will be easier to enforce, three months' fishing in April, May and June with a strict enforcement of the law and a perfect protection for the berried lobster?—A. Yes.

Q. My own idea is that in the Gulf we should do away with the size limit and give them a two months' season?—A. Two months is all right, that would suit me better, but there are others who might think different.

Q. The fish are coming in shore for the breeding month, which is in July?—A. July, August and September.

Witness discharged.

W. J. MORSE, fisherman, Whitehead, called and sworn:—

By the Commissioner:

Q. What is the extent of your connection with the lobster fishery?—A. We have somewhere in the vicinity of 30 or 40 boats fishing in my neighbourhood.

Q. And those boats are generally manned by two men?—A. Yes, two men.

Q. What is the average number of traps fished?—A. In the winter season it will average nearly one hundred, and in the summer season 125 to 150 traps to two men.

Q. How long have you been connected with the lobster fishing?—A. Ever since I was large enough to get out.

Q. That is for 30 or 40 years?—A. Yes, I am 57 now, and I went at it as soon as I was big enough.

Q. Then you have been fishing at least 40 years?—A. Yes.

Q. In a few words will you tell us what the present condition of the fishery is?—A. It is very poor. My brother and I used to gaff a boat load in the summer around the shore here, and now we can't find one to gaff.

Q. Of course there are a great many boats and a great deal more gear used now?—A. Yes.

Q. To what extent has the gear increased? There were no lobster traps used then?—A. Not in my first experience.

Q. You caught them all by nets?—A. Yes.

Q. You generally used an iron hoop with a net on it?—A. Yes.

Q. And when that played out you went to the traps?—A. Yes.

9-10 EDWARD VII., A. 1910

Q. That was the old-fashioned trap with a hoop in each end and laths an inch and a half in width?—A. Yes.

Q. And now you use the patent trap?—A. Yes.

Q. Has the space between the laths in the trap been narrowed down?—A. Not very much, they are much the same in that respect.

Q. Have you any cannery at Whitehead where you belong?—A. No.

Q. Has there ever been one there?—A. No. -

Q. What do you do with your lobsters?—A. We ship them usually, and the small ones are carried to the factory.

Q. When you first began fishing there were no regulations at all?—A. No.

Q. And you fished as you please?—A. Yes.

Q. What was the first regulation enforced?—A. Well the first to my remembrance is that, by the American laws, we were governed by the length at which the fish were taken in the United States, we were shipping to that market, and of course we had to ship that length.

Q. And you let everything else go?—A. Yes.

Q. But the first Canadian regulation that was enforced here, what was that?—A. That was a 9½-inch.

Q. Originally there were no regulations?—A. Exactly.

Q. I do not know how it was here, but with us inside the Gulf they first put on August as a close season; we were not allowed to fish in August.—A. At the end of June there was a close season up till December, I think.

Q. That was your first close season?—A. That was about the first I remember.

Q. You knocked off fishing about the end of June?—A. Yes.

Q. And you did not begin again again until December?—A. No.

Q. Can you tell me how long ago that was?—A. No, I cannot remember just what time it was.

Q. When is the principal time of your fishing here?—A. We commence of course on the 6th of January.

Q. And you fish right along until the 15th June?—A. Yes.

Q. What is the best time of your fishing?—A. December is the best month.

Q. Is that the best because your lobsters are a better price then, or are there more lobsters?—A. It is a better price and there is a good catch of lobsters at that season.

Q. How about February and March?—A. February is a dull month but March is better, they begin to crawl again and we get more of them, they circulate round.

Q. I suppose they are dull and loggy in the winter time?—A. Yes.

Q. And how about April?—A. April is a good month.

Q. And what would you say about May?—A. And May is good up to June.

Q. When do you see most berried lobsters with eggs extruded?—A. Not along until the month of May; we find the most of them in June and I suppose if we were fishing we would likely find them in July.

Q. Have the regulations as regard size ever been strictly enforced?—A. Well, it has been tried, but it is not enforced so much as it should be.

Q. How do you generally dispose of your lobsters, do you ship your market fish yourself or do you sell all kinds to the smack?—A. We ship most of them nowadays, we used to sell them to the smacks; we have been shipping for the last two or three years by express to Boston through Eastport.

Q. How many do you put in a crate?—A. We barrel a lot of them, and we can only get about 100 of them in.

Q. As to weight?—A. About 140 pounds in a crate.

Q. Is the size of the crate limited to that?—A. There are no restrictions as to that, if you can get it to overrun that it is beneficial to the fishermen.

SESSIONAL PAPER No. 22a

Q. You consign to a commission merchant in Boston?—A. Yes, we have different ones now, we are not tied down to only one man, but the one who does the best and returns the money quickest to the fishermen is the one we go to.

Q. Is there much loss of lobsters by death between here and the market?—A. No, we make quick despatch of them by express, they leave here in the morning and the next morning they are in Boston.

Q. What has been the practice of the fishermen with respect to the berried lobster, has she been stripped and sent to market, or sold to the smackmen?—A. Oh no, they are looked after, the fishermen have sense enough for that.

Q. Has that always been the case?—A. Yes, ever since I knew anything about it, I never knew a fisherman to strip the berries off a lobster.

Q. We have been informed that in this section and in southern Nova Scotia a good many berried lobsters have been shipped to the United States to be planted in the pounds there?—A. If there has been anything of that done I do not know it.

Q. And that they are taken to Eastport and that there the eggs are taken from them and shipped to the hatcheries in the United States?—A. That has not been done here to my knowledge.

Q. To what do you attribute the decrease in the lobsters?—A. To using up so many small ones.

Q. Nine inches is supposed to be the limit?—A. Yes.

Q. But practically the very smallest lobsters have been taken?—A. No doubt.

Q. What becomes of them, do they go to the canner?—A. They go to the canner.

Q. If they do not go to the canner here they go to the canner over the way?—A. Yes, they go in different ways.

Q. Do any of them go to the American market?—A. No.

Q. Most of them go to the cannery in our own province who send smacks here to collect them?—A. Yes.

Q. And they make no bones about accepting anything offered to them?—A. That is about the way it runs.

Q. Now what is your idea as to the best regulation to adopt and enforce for the protection of the lobster for the future? There seems to be very little doubt that if things go on as they have been the lobsters will be practically exterminated?—A. That is right.

Q. And they will go very quickly as things are now?—A. That is true.

Q. What would you suggest?—A. I would suggest that the lobsters should not be taken under 10½ inches, and that they should not be caught before the first of December and that we should be given an open season till June.

Q. Does that include June, or wipe June out?—A. I think we ought to have the month of June; that gives the poor fishermen a chance to make a living, and to go to the other fisheries.

Q. We recognize the needs of the poor fishermen, but we are also trying to look after the poor lobsters; there are very few seem to think of what the lobsters need.—A. Well, to protect the lobster that is the best thing that can be done, I do not think anything better can be done, because if we kill off these little fellows we will have no lobsters in the future at all.

Q. Have you ever remarked the smallest size lobster that you have seen bearing eggs?—A. The smallest sized lobster we ever saw here we found in a cod fish, we got it from a boatman down at the Moro Rock, he took 9 lobsters 4 inches long from one cod fish.

Q. What is the smallest lobster you have ever seen bearing eggs?—A. I do not think I ever saw one under 10½ inches, I do not think I have, generally they are a pretty good size, they are all very large.

Q. Occasionally a lobster is found with spawn attached at 8 inches, but most of them are larger than that?—A. I do not think I have ever seen one as small as that.

9-10 EDWARD VII., A. 1910

Q. Now is there any other suggestion you would like to make or any further statement in connection with this matter?—A. There is nothing that I can call to memory now that would be beneficial.

Q. Have you any idea the number of crates of lobsters exported from your neighbourhood in a season?—A. I could give you an idea if I had my book. but I did not think to bring it. I carry about half of them, there is another boat on the work.

Q. What is the extent of your shipments?—A. We make our trips every two weeks, we hold them between whiles, and we get from 50 to 60 crates each week for my boat, that will be 120 crates in all for the two boats each week.

Q. When is the market at its best?—A. In the month of February.

Q. Is that because there are fewer lobsters going in at that season?—A. Yes.

Q. Do you think we could regulate the escape of the small lobsters by insisting on a standard trap, with a specified space between the slats?—A. Well, it should be pretty carefully done, because the lobster will go through a pretty small space, they are a very strong thing.

Q. We find in very many places that the space is not more than half an inch. but you have nothing as small as that here?—A. No, we have nothing like that here. about $1\frac{1}{2}$ inches is what all our men have, because the little fellows are no good and our fishermen would rather have them escape and not catch them until they are worth something.

Witness discharged.

Commission adjourned sine die.

CARLETON, October 14, 1909.

I, BERNARD LECLERC, of Carleton, in the County of Bonaventure, P.Q., being duly sworn, declare and say as follows:—

That I have engaged in fishing and packing lobsters for over thirty years. I began fishing here for the Messrs. Hoegg—who were the first to pack lobsters at Carleton. I also fished lobsters at Port Daniel, and Pabos, on this coast, and at Grande Anse, in New Brunswick. For the past 19 years I have been packing on my own account at Carleton. When I first began to fish here for the Hoeggs lobsters were very abundant. We then fished all the season long. I find the lobsters now about the same size—but not so many of them. I got them this season as big as ever I saw them here. The second summer I began packing here for myself I put up 200 cases, with 300 traps fished by four men. We used then to fish to the 20th August. Sometimes then we had an extension of 15 days. I have gradually reduced my fishing, as with the present short season it does not pay me to go to any great expense. My experience is that owing the immense amount of herring spawn in Carleton bay, among the seaweed, the lobsters will not trap in May. This was the same always. When I was with Hoeggs they did nothing in May, they only began in June, but they then had a long season to August and began again in September and packed in the fall. On the New Brunswick shore abreast of here they get lobsters early in the spring but the herring do not spawn on that shore as they do here. All the lobsters we get here are large, very few under nine inch lobsters. I do not find it pays me to pack smaller ones, and I do not take them, my experience here is that we see more egg bearing lobsters in June, and May even, than we do later. When I notice that a lobster has eggs outside I put her back, but we never see very many of them. This season I only packed eleven boxes. I sold a good many fish boiled. This season I fished 150 traps. I fished myself with one man. I do my best fishing from the 15th June up to the 10th July, but I would do much better here if I could fish in September and October. I am confident that I could put up then 100 cases with 150 traps. I am the only one fishing for, and canning lobsters here. The nearest cannery on this coast operating this season was near Port Daniel, 75 miles below here. There is one at New Mills on the New Brunswick shore 12 miles across. It is run by Hoeggs. If I am ever to can lobsters profitably here I can only do it with a much longer season, or by canning only in September or October.

(Signed) BERNARD LECLERC.

Sworn before me at Carleton, this 14th day of October, 1909.

WM. WAKEHAM,
Commissioner of Police.

RETURN

(22a)

REPORT of Commander Wm. Wakeham, Special Commissioner and Inspector of Fisheries for the Gulf of St. Lawrence, on the Lobster Industry of the Maritime Provinces and the Province of Quebec.

GASPÉ BASIN, January 6, 1910.

The Honourable L. P. BRODEUR,
Minister of Marine and Fisheries,
Ottawa, Canada.

SIR,—In compliance with the terms of an order in council, approved June 21, 1909, appointing the undersigned a commissioner to visit the chief points in the maritime provinces and the province of Quebec, where the lobster industry is carried on, and to take evidence concerning the condition of the fishery, for the information of the Standing Committee of Parliament on Marine and Fisheries, I beg to say that I began the work in question at the Magdalen islands on July 12 and finished it at Grand Manan on September 22.

I was assisted during the first half of the inquiry by Mr. W. H. Dickson, of Ottawa, and for the latter half by Mr. C. A. Matthews. As both these gentlemen had assisted in taking the evidence already gathered by the committee at Ottawa during the session of 1908 and 1909, and were fully aware of the wishes and views of the committee in the matter, it is needless to say that they were of the greatest assistance to me in many ways.

I was also fully instructed by the Superintendent of Fisheries in a very ample letter of directions dated June 1 as to the nature and trend of the evidence already taken, and the main points which it would be necessary to establish with a view to the preparation of further regulations for the future control of the lobster industry.

An itinerary had been prepared after consultation with the members of the committee by the gentleman whom it was first expected would be detailed to hold the inquiry; a copy of this programme was furnished me, and as far as it went I followed it closely. It began at Lamèque, in northern New Brunswick, and ended at Liscombe, Nova Scotia, taking in all of northern New Brunswick, Prince Edward Island and the coast of Nova Scotia from the boundary line in the Strait of Northumberland as far along the Atlantic coast as Liscombe, including the whole of Cape Breton. From Liscombe to Grand Manan we prepared a further itinerary, after consultation with the members of the committee and others whom we considered competent to advise us.

As the time was limited the work had to be hurried, and we were obliged to restrict the number of meeting places to two, or at most three, for each county. The dates of meeting had to be established beforehand, and naturally had to be lived sharply up to or confusion would have followed. Posters were sent to the postmasters at all the points fixed for taking evidence, and where the gentlemen of the committee or others consulted wished to have a further supply of these, they were furnished.

In some cases when requested by the members interested, notices of the meetings were published in the local papers or special invitations to attend sent to gentlemen whom it was desired to have testify. In view of the long seacoast line to be covered,

9-10 EDWARD VII., A. 1910

and the short time at our disposal, I do not see that we could have done much better than we did.

No time has been lost in preparing the evidence, which should be ready for the first meeting of the committee.

As might have been expected, the evidence is extremely conflicting, and from it alone it would be difficult to base any regulations for the future of the lobster fishery.

It is not necessary for me to go into any detail as to the life history of the lobster; all this has been already submitted to the committee by the Commissioner of Fisheries much more thoroughly than I could ever hope to do it; nor is it necessary for me to furnish statistics as to the history and condition of the lobster packing industry or of the live lobster trade; all this I find has been very thoroughly done by the Superintendent of Fisheries in the Departmental Report for 1908-9 just published.

It therefore only remains for me to submit a synopsis of the evidence taken, together with such remarks and suggestions as my personal knowledge of the fishery may warrant me in making.

The pioneers of the lobster canning industry in Canada were either United States citizens, who had been engaged in it along the northern shores of the United States, or Canadians who had learned the methods of the industry from our neighbours and saw the wonderful opening which our own waters offered for its continuance here. This was hastened by the fact that the fishery was already being exhausted wherever lobster canneries were operated from Massachusetts to Maine.

Some canning of lobsters had already been done in the Gulf of St. Lawrence before the arrival of the United States canners. It had been customary to can salmon, as in those days prior to the construction of the Intercolonial railroad the trade in fresh salmon had not developed, refrigerator cars and freezers being then unknown, the bulk of the salmon caught was either salted or smoked. Those who put up canneries for salmon usually canned a small quantity of lobsters; but there was no distinct and general lobster fishery carried on. Lobsters were found everywhere in great abundance, and when washed ashore after a heavy gale of wind were collected and spread on the land for manure; a few old country people fished lobster pots made of willow or alder twigs laced over a framework, much in the shape of the old-fashioned straw beehives, with an opening in the top through which the lobster crawled to find the bait below, or a simple meshing of net was laced in an iron hoop on this netting, being lashed the bait, usually a cod head. This hoop was sunk off the end of a wharf or from a boat, and when the lobster was felt at the bait or seen on the hoop the whole was rapidly hauled up.

A favourite amusement for young people in those days was the flambeauing of lobsters, when they were hauled out of their nests and hiding places among the rocks and kelp with a cod hook on the end of a pole. Where scores of lobsters could be gaffed in this way in a couple of hours in the inner bays and harbours forty years ago simply for amusement, not one can be found now.

As soon as canneries were established and the use of the present traps became general, the lobsters seemed to be held outside by the bait, and we ceased to find them, until later in the season, in the harbours and coves where they formerly abounded.

A noticeable instance of the way lobsters are held by the bait is furnished at Carleton bay, in the head of the Bay Chaleur. At one time lobsters were as plentiful there as anywhere else in the Bay of Chaleur; but now they are never found until after the close of the open season, when the baiting having stopped below, they move up into the shoaler waters at the head of the bay. This same thing is noticeable everywhere where the same conditions exist. I think that there can be no doubt that lobsters travel further and go into deeper water than we have been used to believe.

I am aware of several instances where cod fishermen have taken lobsters in ninety fathoms of water.

There are certain facts clearly established by the evidence in connection with the history and methods of the fishery which are known to every one who has had any-

SESSIONAL PAPER No. 22a

thing to do with the matter. These seem to me to offer very clearly a guide to the regulations which should be ordained for the future control of the industry.

1. That when the canning industry was first established on our coasts lobsters were abundant everywhere from Grand Manan to the Strait of Belle Isle, which is the northern limit of the lobster.

2. The evidence of the older fishermen and packers shows that the lobsters have decreased in size everywhere, and that the pack is being maintained by the greatly increased efforts of the fishermen, more boats are fishing, more traps are used, the traps used are improved in that they hold practically everything that enters them; with lighter traps, and motor boats, fishermen are fishing in deeper waters and covering more ground generally.

3. The amount of gear used has steadily increased, and the tendency is still further to increase it, instead of the old-fashioned trap or double-ender made the full length of the lath, with an opening in each end and a space of at least one and one-half inches between the slats we now have in general use smaller and lighter traps, known as the 'wheeler,' 'diamond,' 'parlour' or 'jail' trap, and the space between the slats has been reduced in some localities until there is but little more than half an inch left. The entrances in this modern trap all lead to a chamber, 'parlour' or 'jail,' which it is difficult for the lobster to escape from, by the road he has entered, while he cannot escape between the slats as the undersized ones did in the old trap with its wider space.

4. The universal practice of the fishermen is to meet the incoming schools of lobsters in deep water at the opening of the season, and as the season advances to follow the fish into shoal waters.

5. The great preponderance of the evidence shows, that as the season advances the proportion of small undersized lobsters taken in the inshore shoaler waters, increases. It is also very generally admitted that as the season advances the catch of female lobsters with extruded eggs is greatly increased. All this tallies with what we know must occur if the lobster approaches the shoaler, and consequently warmer water, for the purpose of hastening the development of the egg and facilitating the moulting process. It therefore follows that the greatest destruction and waste takes place towards the close of the ordinary fishing season, and that when extensions have been granted fishing has been permitted at a time calculated to do the greatest possible injury.

6. It is shown that it is impossible to have one universal close time for the whole coast, the climatic and ice conditions are such that different sections of the coast demand different seasons.

7. It is clearly proved that the regulation as regards the size limit is not observed, that it never was observed; that from the earlier times cannerymen never refused small lobsters; that they are to-day taking smaller lobsters than they did years ago is shown beyond doubt by the style of trap now used, which captures and holds lobsters that would easily have escaped from the old fashioned engine.

8. It is almost universally admitted that a strict enforcement of even an eight inch limit would close up the canneries and shut off the fishermen. Captain Gordon's report of twenty years ago shows that a strict enforcement of the then nine inch limit would have closed down both cannerymen and fishermen; that it was necessary to put an armed guard on the cannery to enforce the regulation. This condition is intensified to-day and it is true not only of the Gulf of St. Lawrence but also of the fishery everywhere. In fact, the conditions are really worse on the Atlantic coast, as with a nine inch limit for market lobsters the cannerymen have only the undersized ones left to can. Wherever the facilities for carrying on the live lobster trade exist the cannerymen must be reduced to the use of undersized lobsters.

9. The evidence as regards the berried lobster regulation is very doubtful. A few acknowledge to, at some time, having violated this themselves, a great many believe

9-10 EDWARD VII., A. 1910

that others than themselves have violated it. There is no doubt that it has been constantly violated. Berried lobsters have gone into the boilers intact and where the canners have tried to be strict the berries have been washed off outside. There is, however, no doubt that an increasing number of fishermen are becoming alive to the necessity for protecting this lobster, and it is the case, that the formation of Fishermen's Unions with the consequent bringing together of the fishermen and the resulting discussions as to the regulations, and future of the fishery, has greatly conduced to a better observance of the regulations.

10. As regards the traps the evidence undoubtedly shows that the tendency has been to narrow the space between the slats and to lessen the size of the mesh in the end, so as to hold the smaller lobsters required to keep up the pack. The trap as now built has generally a space of less than one inch between the slats and when the trap has become water soaked the space is still further contracted.

The first indication of a failing fishery, due to over fishing, is always a decrease in the average size of the fish, and this is invariably met by the fishermen by making the mesh of the trap or gill-net smaller. We have this plainly shown in the gill-net fisheries of the great lakes and just the same practice has been followed by the lobster fishermen in reducing the 'mesh' in his trap. As the average run of the lobsters became smaller it became necessary, if the catch had to be kept up, to narrow the outlets and to make them more complicated so as to hold everything that entered the trap. Some difference of opinion exists as to the extent to which small lobsters try to escape out of the trap; but by the fact of the increasing ingenuity which is everywhere being exercised to hold them, it is shown more clearly and positively than it could be by any verbal evidence that they did escape under former conditions with the original traps and that the modern engine is being perfected so as to hold them. We know that when disturbed and alarmed a lobster can move short distances with great speed and wonderful accuracy. Any one who has ever fished for lobsters must have noticed how quickly and accurately they can shoot themselves out of the funnel-like openings in the end of the traps.

There can be no doubt whatever that at least a proportion of small lobsters would escape out of the traps were a sufficient opening allowed and it is just as reasonable to insist on a fixed opening between the slats, and in the mesh of the net, at the end of the traps as it is in the case of salmon or whitefish gill-nets.

11. As regards the matter of licensing canneries some difference of opinion exists; but a majority are of opinion that any one showing his ability and competence to operate a cannery should be allowed to do so. All are agreed that the canneries should be subject to inspection and that a certain standard should be insisted upon. The general opinion of those most competent to judge is that it is not necessary to have the product inspected officially; that this is pretty well provided for already by the purchasing agents, who visit the canneries to inspect and check the work during the packing season. There are certain marks or brands, particularly of the older packers, which are accepted everywhere. No official inspection would carry as strong a guarantee as these well known brands already do.

All are agreed that the recent decision of the minister to grant what are known as 'co-operative licenses' furnishes fishermen with the means of freeing themselves from any disposition on the part of the canner to unfairly keep down the price paid them for their product.

I would strongly advise against the practice of issuing a great number of licenses to one firm or individual, especially along the same stretch of coast. This is neither in the interest of the fishermen or the fishery. It is quite reasonable that large operators should expect to control a number of licenses; but these should be scattered over the coast, and even to the larger operators there should be some limit to the number of licenses issued.

12. As regards the proposition of licensing the fisherman before allowing him to fish for lobsters, a great difference of opinion exists. The majority of fishermen

SESSIONAL PAPER No. 22a

believe the idea to be a good one, and hold that it would have a good effect, particularly as regards the protection of the berried lobster. Others, and with these I certainly agree, think that it would only complicate matters; that it would entail a great deal of extra work; that very few fishermen would feel themselves bound by it, and that if fishermen generally became informers, one on the other, it would lead to quarrelling, with destruction of gear, &c.

13. The majority of fishermen own their own boats and gear; but in the Strait of Northumberland, northern New Brunswick and to a considerable extent in Prince Edward Island, the boat and gear is owned by the canner. Where this is the case the majority of the men fishing for the canner are not bona fide fishermen, but shore men of various callings, largely the poorer class of farmers, who find it difficult to get ready cash in any other way. The lobster fishery offers the first employment to be had in the spring, and the payments made in connection with it are generally made in cash. This class of fishermen is less likely to show consideration for laws and regulations governing the fishery than the regular fishermen, who depend upon the sea for their living, and who when they find the lobster fishery slacking off turn at once to other branches of the fisheries. These farmer fishermen, not being altogether dependent on the fishing and hoping by its aid in a short time to clear themselves, want to make all they can out of it for the present and are utterly careless of it for the future.

14. As to the existence of a combine among packers to keep down prices, the feeling is general among the fishermen that something of the kind exists; but this is only a suspicion. Packers invariably deny the existence of any such arrangement, and there is no proof whatever that anything of the kind exists. Considering the considerable number of packers and the hosts of men employed in various ways in connection with the industry, afloat and ashore, one cannot but remark as to the general good feeling that exists. In the beginning of the industry lobsters were invariably bought by count, and the price ranged as low as thirty cents per hundred. As the run of lobsters became smaller undersized ones were taken at two for one; but when they got smaller still the custom changed, and payment is now generally made by weight, market fish being still bought by count. The history of this change in the method of payment, together with the nearly universal practice of narrowing the slats and making the trap more of a jail than it was originally, offers the best possible proof of the decrease in the average size of the fish and the methods adopted, all round, to capture, hold and dispose of the undersized fish to the packer.

Competition among packers did exist in 1907 and 1908. Prices in some localities, where competition was keen, ran up to \$5.50, and even more, per hundred pounds. This was altogether too much and more than the packers were ever warranted in paying. Some retired from the competition and closed down. The thing was overdone and the natural results followed. Stocks increased, the market was glutted and in the spring of 1909 packers were forced to offer much lower prices to the fishermen. Perhaps as much too low as they were too high the year before. The result was a good deal of dissatisfaction and ill-feeling as between fishermen and canners and where the fishermen were organized and leaders came to the front among them with the instinct and training for organization and strikes the material for a very pretty row was at hand. After all, considering the conditions and the sudden drop in prices there was very little friction. In most places prices were slightly advanced before the end of the season and the feeling is general that in 1910 a fairer or more remunerative price will be paid the fishermen, in which case we will find no great demand for co-operative licenses.

In the matter of these co-operative licenses care will have to be exercised, as I am afraid that in some instances parties who have been refused licenses on their own account have managed to associate with themselves a sufficient number of fishermen to obtain a co-operative license, the fishermen having put nothing whatever into the co-operation and not even selling their fish to it.

9-10 EDWARD VII., A. 1910

15. As regards the granting of canning licenses to aliens there is really no feeling. The aliens were largely the pioneers of the industry. They have been liberal and straight in their dealings with the fishermen, their brands command the confidence of the markets. In the early days some of their managers and many of their skilled operators were brought in from the United States. This was unavoidable. This is no longer the case. These men either settled here and became Canadian citizens or their places were taken by Canadians. Every particle of the material and all the labour employed in the industry is Canadian, the only alien thing about it being the capital. Of course it is quite reasonably felt that viewing the great extent of the industry to-day, when new licenses have to be issued resident Canadians should have the preference.

I believe I have in the above clauses recited as fairly as possible all the principal facts connected with the conduct and prosecution of the fishery, as brought forth by the evidence, and there remains, therefore, only, the question of the right divisions to be made of the coast, with the regulations best adapted for each.

There is one thing to be remarked and that is the wonderful vitality of the lobster fishery. The methods and practices of the fishermen have been destructive from every point of view. The berried lobster has been destroyed from the beginning. Under-sized and immature fish have been taken and utilized by the canner from the earliest days of the industry. The pack is being maintained by taking these small fish in annually increasing numbers, while even the close season, admittedly the most easily enforced of all the regulations, has not everywhere been rigorously observed. As regards this matter there is no doubt that the regulation affecting the close season is now being more strictly enforced than it used to be. Yet it is shown by the evidence and more clearly still by Mr. Venning's statistics that the pack shows no falling off. Those of us who are on the spot know that it is being maintained, as the evidence shows, by increased effort and more destructive methods. What we have to fear and what thoughtful fishermen and cannery are anxious about is a sudden collapse. The fishery as it is being practised cannot stand the drain forever.

SUGGESTED COASTAL DIVISIONS.

Division No. 1.—All that portion of coast from the boundary of the State of Maine, east and north to a line running in a southeasterly direction seawards from St. George's Island, Halifax Harbour, this to include the waters about Grand Manan, the Bay of Fundy and St. Mary's Bay, being Division 'A' as outlined in the report of the Lobster Commission of 1898.

Division No. 2.—The waters east and north of the line running out of Halifax Harbour, including all that part of the coast of Nova Scotia, extending to the Gut of Canso and including the waters of the Gut to its western end and all that part of Richmond county to Red Point, being subdivision 'B' of the Lobster Commission of 1898.

Division No. 3.—All the waters of Cape Breton from Red Point, extending along the east and north shore to Cape St. Lawrence, being subdivision 'C' of the Lobster Commission of 1898.

Division No. 4.—The waters of Cape Breton south from Cape St. Lawrence to the western entrance of the Gut of Canso, the shore of the mainland of Nova Scotia from the western end of the Gut of Canso to the boundary line between that province and New Brunswick. All the waters of Prince Edward Island, save that portion extending in the Strait of Northumberland from Carleton Head to West Point. All the waters of northern New Brunswick from Chockfish river, north and west to the mouth of the Restigouche river, and all the waters of the province of Quebec fronting on the county of Bonaventure and the mainland of Gaspé county.

SESSIONAL PAPER No. 22a

Division No. 5.—The waters of the Strait of Northumberland comprised within the line drawn from the boundary between the provinces of Nova Scotia and New Brunswick to Carleton Head, Prince Edward Island, and extending west to a line drawn from Chockfish river to West Point, Prince Edward Island, being subdivision 'B' of the Lobster Commission of 1898, extended from Cape Tormentine east so as to include the coast line of New Brunswick up to its eastern boundary.

Division No. 6.—The waters of the Magdalen islands.

Division No. 7.—The waters of the County of Saguenay, on the north shore of the gulf, including the Island of Anticosti.

REGULATIONS.

The following regulations to be enforced in the above divisions:—

Division No. 1.—Fishing to begin on November 15 and end on May 1, with a size limit of ten and one-half inches, or better its equivalent, of four and three-quarter inch carapace measurement. In the County of Charlotte, New Brunswick, I would prohibit the canning of lobsters, as if they are permitted to be canned there will be smuggling of undersized lobsters from the waters of Maine. If it is found profitable for lobster dealers or fishermen to hold legal lobsters in licensed pounds during the legal season, so that they may be held and shipped as the market demands, I see no objection to this permission being granted, all lobsters held in these pounds to be liberated at the close of the open season.

Division No. 2.—A season extending from April 1 to June 15, with no size limit.

Division No. 3.—A season extending from May 1 to July 15, with no size limit.

Division No. 4.—A season extending from April 20 to July 1, with no size limit.

Division No. 5.—A season extending from August 10 to October 15, with no size limit.

I cannot believe that it can be right to permit the fishing and canning of lobsters in the Strait of Northumberland during the month of July. If the season, as I have fixed it, is not acceptable, then the same dates as I have suggested for the rest of the island and northern New Brunswick should be made to apply in this district. A great many fishermen on both shores favour a later fishing season than that now in force. I believe that even a two weeks later season than I have suggested would be better from a protective point of view. There is also a question as to whether the fall season would not be the best for the whole south shore of the island.

Division No. 6.—A season extending from May 1 to July 20, with no size limit.

Division No. 7.—A season extending from May 20 to August 1, with no size limit.

The use of a standard trap to be everywhere enforced after two years notice, to have a clear space of one inch and a quarter between the slats when in use, and a mesh of three inches,—extension measure—in the ends, when netting is used, and no other kind of engine to be used anywhere for the taking of lobsters.

No fishing for lobsters to be permitted anywhere in less than two fathoms of water and no fishing in lagoons or shallow bays having narrow inlets, where the lobsters do not winter and in which they seem to seek asylum during the warm weather of July, August and September.

The berried lobster to be everywhere rigidly protected. This lobster to be replaced carefully in the water by the fishermen on the ground where the trap is being fished. The number of these lobsters taken during the season is not so great that the fishermen

9-10 EDWARD VII., A. 1910

will lose much time in placing them carefully back in the water. I cannot feel that it is the right that the fisherman should have to be paid for the protection of this lobster, he more than any one else is interested in her protection, and he must be either *educated* or *compelled* to protect her. Having to compensate him for doing so, seems to me a vicious practice.

The matter of new licenses to can is one that should be dealt with by the department on a report from the inspector, who should know the conditions and necessities in each locality in his inspectorate and be prepared to say whether new licenses should be issued or not. I do not see why this matter cannot be dealt with just as easily and as fairly as we now deal with applications for salmon-net licenses or trap-net berths.

Canneries should be visited regularly by the inspectors, who should report to the department in every case where the conditions are such that a perfectly clean and pure product is not assured, and after one warning, in such a case ~~the~~ license should be cancelled. There are canning licenses now issued to people who are canning in their houses and barns, where the sanitary conditions are such as to make the food product there prepared, quite unsafe. Modern hygiene demands that this sort of thing be no longer possible. This sort of cannery is always run by the poorest class of operators. These are the people that fish themselves and can their own product. They are generally the ones who wish to fish in the lagoons and shallow bays and who operate out of season. By shutting down on them we will lay ourselves open to the charge of crushing the poor man, &c., but what will you have. Anything in the shape of a standard cannery will put them out of business at once.

I consider that the license fee for canning should be considerably raised. The present fee is a nonsensical one. A sufficient sum should be raised by means of this fee to pay, in part at least, for the extra cost of guardianship.

Any regulations imposed should be carried out universally and absolutely. They should be such as it is possible to enforce with a reasonable staff. If it is decided to adopt the standard trap and the strict protection of the berried lobster, this can best be done by officers afloat among the fishermen, and for this we will require active, reliable young men and a fleet of wholesome motor boats, able to keep about among the fishermen where they are hauling their traps. All the officers and men employed at this work will have to be better paid than most of them are at present, and we will require their whole time during the lobster fishing season.

I have recommended a long open season and a large size limit for No. 1 division, because in this division the facilities exist for carrying on the live or fresh market fishery, which if not absolutely paramount at present, soon will be. With the development of this branch of the fishery new markets will open. We will not forever be confined to Boston. With more rapid transit and increased cold storage facilities live lobsters can be sent much further west than they are at present, and even the European markets can be supplied.

I am informed by leading hotel men and club stewards that the demand is for broilers. This requires a live lobster; but for the ordinary boiled lobster I should greatly prefer one boiled in salt water, absolutely fresh when he is landed and cooked, carefully and neatly packed and held or forwarded in cold storage, to the market where he is to be consumed. I cannot believe that a lobster taken out of deep, cool water and exposed in an open boat to the sun and weather for hours before being brought ashore, then being transferred to a car, floating at the surface in shallow water and held there unfed for several days, before being again taken out packed in a close box or barrel and forwarded several hundred miles to a market where, if he is not immediately wanted, he is again placed in a surface car, floating between the wharfs in some city harbour, exposed to contamination from sewage and other pollutions, where he is again held some days, or until the demand occurs, possibly in some inland town, when he is again packed in a crate and forwarded by express to his point of final consumption, can be in perfect condition, and those who eat him have very little idea of what a

SESSIONAL PAPER No. 22a

really fresh lobster is like. The boiled lobster of the future will be cooked where he is first landed and held in cold storage until he is wanted. For several years at Anticosti it has been the practice to cook lobsters quite fresh from the water and hold them in a cool room. I have eaten these lobsters in the fall, they having been put up in June. They were in perfect condition and no one could have told that they were not fresh from the boiler.

I quite understand that protests will be made from many quarters as to the suggestions I have made for the best regulations for division No. 1, but in the face of the price received by fishermen for canning lobsters as compared with that paid for the market fish, and viewing the possibilities of the fresh lobster trade, coupled with the knowledge that in two seasons the undersized lobster of to-day will have grown to market dimensions, when he will fetch from five to ten times the price that he does to-day, I can hardly see how any intelligent person can object to the proposed regulation.

I can only see two ways of protecting the lobster. One is by means of a large size limit, when he may be safely fished for through a longer season, and the other by so curtailing the fishing season and regulating the engine in which the lobster is captured as to permit of the escape of such a percentage of immature fish that we will hope to allow of the survival each season of enough to keep up the supply.

As to the question of lobster hatcheries and pounds I do not feel that I am competent to express an opinion, this is a matter best dealt with by the experts of the department. The evidence shows that there is a pretty general feeling in favour of the establishment of more hatcheries and that wherever pounds can be supplied they should be under the direct management of the department. To the ordinary layman it would seem that the true way of protecting the breeding female lobster must be to return her at once to her natural hatching ground, hatching lobsters being a different business altogether from hatching fish.

There are a few other matters, such as the labelling of the cases, the prohibition of what are known as 'cracking houses,' &c., which I hardly need to express an opinion about. These minor questions are best dealt with by the departmental officials, after consultation with their outside agents, the inspectors.

In conclusion I beg to submit this report as the honest effort of one who has had over forty years connection with the fishing coast and its people, to suggest some practical and plain regulations for the preservation of the fishery, which it should be possible to enforce, with a minimum of friction and cost.

WILLIAM WAKEHAM,

Special Commissioner and Inspector of Fisheries for the Gulf of St. Lawrence.
